Winds.—The winds of the Atlantic, unlike its aqueous currents, are not peculiar to that ocean but identical with those that prevail in the same latitudes in the other seas around the globe. The most remarkable of these are the perennial or trade-winds which blow constantly in one direction, namely from E. to W or nearly so. They extend generally to 28 on each side of the equator but are divided by a tract of sea, usually occupying a width of from six to eight degrees of latitude, in which calms and variable winds prevail. The track of the trade-winds to the N of this zone, which is almost always found on the N side of the equator is called the region of the N E trade-wind, from blowing on one or two points N of E that to the S, the region of the S E trade-wind, from blowing S of E. The N E trade-wind blows with less steadiness than the S E. but towards the W India Islands it keeps generally steady between E. and N E. The trade-winds are constant only at a considerable distance from land, and become more steady the greater the expanse of water over which they blow. They are exceedingly gentle, as well as equable, never rising into squalls, but always maintaining a uniform rate, and as the sea is but little moved by their action, sailing in these regions is exceedingly pleasant. The voyage from the Cape de Verde Islands or the Canaries both of which are, according to the season alternately situated in the very centre of the region of the N E trade-winds, to the W Indies or Gulf of Mexico is thus the most agreeable that can be imagined and so safe that it might be accomplished without the slightest apprehension of danger in an open boat, though a distance of several thousand miles. Beyond the limits of the trade-winds in the temperate climates of both hemispheres, are the regions of the S W and N W winds, the former prevailing in the N hemisphere, the latter in the S. The most devastating hurricanes of the Atlantic occur in the region of the W Indies, they generally commence E of the Leeward Islands, blow in a W N W direction to about lat. 80° N then bend round to the N E forming a segment of a circle, whose beginning is in about lat. 10° or 15° N and the termination about lat. 45° or 50° N. They however not infrequently cross the Gulf of Mexico, and sometimes take other eccentric courses, but the former is their most usual track. Their height has been estimated at 600 and 1000 m. The W India hurricanes generally occur in the months of August, September and

October rarely in June or July. It must be observed, however generally that both the space and position occupied by the various regions of wind in the Atlantic, though subject to some precision, are in reality subject to considerable changes in both respects, according to the season of the year. The trade-wind advancing towards the N with the progress of the sun in the N hemisphere, and receding when it passes the equator on its return to the S hemisphere.

Tracks of Vessels.—Onward Voyages.—Vessels sailing from Europe to the W coasts of N America keep to the N of the Gulf stream which, if entered, would greatly retard their voyage, making a difference against them of probably about a fortnight. The usual and best course is between lat. 40° and 50° N. by which not only is the Gulf stream avoided, but, on nearing the American continent, the advantage of the counter current, which runs from Newfoundland to Cape Hatteras and Florida, is obtained. Vessels going to the W Indies, or to the N parts of S. America, direct their course to the S. W immediately on reaching the Atlantic in order to get as quickly as possible into the N E trade-winds naturally avoiding however too near an approach to the African coast, where between Cape Nun and Cape Blanco both tide and wind set in towards the shore, and have caused the destruction of many vessels that had come unprepared within their influence. In going to S. America, S. of Cape St. Roque, vessels traverse the line between lat. 18° and 24° W keeping thus far to the E. In order to avoid getting into the Guinea current which would carry them to the N W or nearly in an opposite direction to that desired. Having passed the line about the point specified, they make for the Brazil current, which, carrying them to the S. enables them to reach any part of the coast they choose. In sailing to the F. India, vessels most generally follow the track to Brazil holding S, they pass the rocky island of Trinidad on its W side, and fall in with the S. coast, meeting, or S. Atlantic current, which carries them E. but wide of the Cape of Good Hope. By this route the voyage from the English channel to the Cape has been made in 59 days, the usual time by other courses being 70 days.

Return Voyages.—On returning from N America to Europe, the Gulf stream, though flowing towards the latter, is equally avoided as in going out, it having been found that the loss sustained by the tear and wear of vessels in that stormy region, was not compensated by the gain in point of time. They therefore keep to the N of it in returning as well as in going out. On returning from the W parts of the W Indies and the ports of Central and S. America on the Caribbean Sea, vessels take the Mona passage, between Hayti and Puerto Rico and immediately afterwards steer in a N E direction so as to cut the parallel of 40° N. between the meridians of 30° and 35° W. Sometimes, however they return by the Strait of Florida, which having cleared they sail W to avoid the Gulf stream cross the Atlantic S. of the Bermuda and subsequently either pass between Flores and the other Azores or keep to the E. of the group. On returning from S. America, vessels keep near the coast, in order to take advantage of the periodical and variable winds which prevail there. On crossing the equator they steer for the Azores, and sail as close with the N E passage as they did with the S E when proceeding to the S hemisphere. In coming from the E. India or Cape of Good Hope, vessels sail with the S E passage wind to St. Helena, and crossing the line about lat. 20° W steer for the Azores, where they fall into the tracks from the W Indies to Europe.

In the centre of the Atlantic is a vast eddy or whirl, caused by the revolution of the currents, which is thickly covered with a sea-weed, called *Sargassum* or *gulf weed* (Fucus natans) in many places so closely matted as to retard greatly the progress of vessels. The grass covered by this weed is upwards of 250 000 sq. m. extending from the meridian of 80° W to the Bahama Islands between the parallels of 20° and 45° N. Much of this weed is floated down the Gulf stream from the Mexican Sea. It was formerly supposed to have been torn from the bottom of the ocean, but there is now good reason to believe that it propagates in the sea, and vegetates floating in the S. Atlantic there are evident signs of volcanic action rocks and islands having from time to time appeared and disappeared.

Ice.—At both extremities of the Atlantic vast masses of ice are accumulated in a variety of shapes and sizes. The

most remarkable are icebergs, ice-fields, and ice-floes. The first are often several miles in circumference, and rise from 180 to 200 ft above the sea, with seven times as much below as floating ice shows only one-eighth of its bulk above the surface of the water. These ice islands have the appearance of chalk cliffs, with a glittering surface, and encased great fractures pools of water of azure blue in their crevices, or fall in cascades into the sea. The icebergs come to a lower latitude by 10° from the S. pole than from the N. being often seen near the Cape of Good Hope. They appear also to be larger on observed by Captain D'Urville was 13 in long, with perpendicular sides 100 ft. high but they are more rare in the R. than in the N. Atlantic. The ice-floes are generally of much greater extent than the bergs, though, as their name would imply not nearly so thick, seldom exceeding from 10 to 40 feet. Some of them extend 100 m in length, with an average breadth of 50 m. These immense masses of ice chill the winds that blow from them, and cool the surrounding seas to a distance of 40 or 50 m on every side. Sometimes they acquire a rotary motion of great velocity and dash against each other with tremendous violence. The ice-floes are comparatively small ones rarely extending to a quarter of a mile in circumference.

Fish are met with in greater variety and abundance in the N. Atlantic than in the S. In the latter there are only whale-fisheries, while in the former there are the cod-fisheries of Newfoundland and the herring-fisheries of Great Britain, the pilchard-fisheries in the British Channel and the whale-fisheries of Greenland &c. (Lyell's *Geology*, Mr. Somerville's *Physical Geography*, Johnston's *Physical Atlas*, Blitt's *Lex. Sci. Eng. Dictionary*.)

ATLAS (Mount), an extensive mountain-system in N. Africa, the S. extremity of which commences near Cape Kun, in lat. 28° 48' N. on the Atlantic Ocean, and, after traversing the kingdom of Morocco, Algeria, and Tunisia, terminates on the coast of the Mediterranean Sea, about lat. 11° E. The general course of these mountains is from W. N.W. to E. N.E. but they do not, like most other systems, consist of one continuous and definite range, but of a congeries of elevations sometimes isolated and sometimes connected, with endless branches and offsets irregularly diffused over nearly the whole N.W. extremity of Africa. The Atlas Mountains have been divided generally into two principal and parallel ranges, running W. to E. the one called the Greater and the other the Lesser Atlas the latter lying towards the Mediterranean, and the former adjoining the Sahara or Great Desert from which it is separated by low sandy lands. The entire course of the principal chain may be reckoned at about 1500 m. measured from Cape Kun on the Atlantic, to Cape Bou or Ras Idhah, on the Mediterranean Sea. Little is known of the heights of the Atlas Mountains in some places however they rise above the line of perpetual congelation, and, in many approach it. The highest ascertained elevation is that of Mitian in Morocco stated, by Capt. Washington to be 11 400 ft high but their general altitude is moderate, as they do not shoot up into lofty peaks like the Alps, but consist principally of broad ridges and rounded summits. Of the geology history and mineralogy of the Atlas range, we know hardly anything. As respects its geology our information supplies only the fact, that granite, gneiss and sand, appear on the higher peaks, and the lower parts of the ridges are formed by secondary limestone while, as to botany the few travellers who have penetrated these regions tell us, that on the S. side, or side next the desert, the lower ranges are covered with palm-trees, more especially date-trees hence the name of this region, *Belad-el-Jerd* (the land of dates). Higher up, gum-trees, almonds, olives, and other tropical productions abound while, on the table-lands, apples, pears, cherries, walnuts, apricots, &c. are grown in great quantities. Higher up still occur forests of numerous pines. The mineral riches of the Atlas, so far as known, are silver antimony lead, copper iron, rock-salt, sulphate, &c. The precious metals, however are confined to the province of Suse in Morocco but even there they do not appear to abound the principal silver mine is situated about 150 m. S.W. from Morocco. Three hundred miles N.E. from the same place, are mines of antimony and lead copper is also plentiful in the same vicinity though there seems but little activity on the part of the inhabitants in availing themselves of these

resources. From the N. and W. slopes flow the principal rivers of Morocco and Algeria to the Atlantic Ocean and Mediterranean Sea and from their S. slopes flow numerous streams, nearly all of which are absorbed in the sands of the Sahara.

The Atlas Mountains are inhabited by large and fierce lions, and abound in antelopes monkeys, and porcupines. The inhabitants consist of various tribes of the aboriginal race, called the Berbers, a fierce and warlike people, who have always maintained an independent existence of all the neighbouring powers, with whom they are frequently at war. The name Atlas is said to have been derived from Atlas, King of Mauritania, who, according to ancient fable, having been transformed into a mountain was fabled to support the heavens on his shoulders. From the name of this mountain region came the name of the adjoining or Atlantic Ocean.

These mountains also possess a classical celebrity from the frequent mention made of them by the ancients, particularly Herodotus, and the exaggerated notions which they seem to have entertained of their elevation. The Atlas however of the writer just named was a single isolated hill, probably the highest of those at Cape Ghr or Gheer as seen from the Atlantic although several Greek authorities give the name to the branch terminating at Cape Sphel, at the Strait of Gibraltar.

ATLIXCO a town in Mexico state, Tlaxcala, in a very fertile district, celebrated for its fruits and its fine climate 20 m. S. La Puebla de los Angeles.

ATOKO one of the smallest of the Town Islands lat. 88° 30' N. lon. 20° 43' E. 4 m N. N. E. from the N. extremity of Ithaca, and 9 m S. S. E. from the nearest S. point of St. Maura. It is about 2 m in length, and 1 m in breadth.

ATOI L. a singular description of coral formation peculiar to the Pacific and Indian Oceans. It consists of a ring of coral, sometimes circular but more frequently oval varying from 2 to 50 m. in diameter about a quarter of a mile in breadth, often less, and from 6 to 12 ft. in height, enclosing a lagoon or portion of the ocean in its centre. The appearance of these singular reefs is equally striking and beautiful. The ring is often covered with lofty coconut trees or other palms while round this band of verdure is spread a beach of glittering white sand whose outer margin is encircled with a ring of snow-white breakers, beyond which are the dark waters of the ocean. The inner beach also composed of white sand encloses the still clear waters of the lagoon, which, when illuminated by a vertical sun, is of a most vivid green. The depth of the lagoon varies from 20 to 50 fathoms but outside, the walls of the ring plunge at once into the unfathomable depths of the ocean no bottom having been found in some instances with a line of 1½ m. long, within 200 or 300 yards of the reef. Ships often find safe anchorage in the tranquil waters of these lagoons to which no access is obtained by gaps or openings on the leeward side where only they occur the windward presenting always a high and unbroken wall the coral insects, by which it is reared, working with greatest vigour activity and perseverance on the stormy side of their structure, the agitation of the sea supplying them with a greater abundance of food than they can find on the still waters to leeward. Many of the atolls contain inhabited islands and as they are generally fertile, and with the waters of the lagoons in which they are situated warm with fish the inhabitants have the means of subsistence in great abundance. The most remarkable assemblage of atolls in the Pacific Ocean, is Dangerous Archipelago E. of the Society Islands, which consists of 80 generally of a circular form surrounding very deep lagoons, and separated from each other by profound depths and the Caroline Archipelago, N. of the equator which extends to atolls in 60 degrees over 1000 m. In the Indian Ocean, the most perfect specimens of this peculiar formation are the Maldiva and Laccadive Archipelago (which see). (Humboldt's *Lyell's Geology*, London *Gen. Journal*, vol. 1.)

ATOOTI or **TATAI** one of the Sandwich Islands. lat. (E. point) 22° 6' N. lon. 169° 30' W. (a) about 240 m. N. W. Hawaii or Owhyhee. It is of an oval form, 40 m. long, and more than 24 m. wide at the broadest part. Area between 600 and 700 sq. m. It slopes on all sides from an elevated centre to the sea, where it terminates in a high coast. Numerous wide, fertile, and well cultivated valleys run from

the shore inland. The only anchorage is the roadstead at Veleia, on the S. side of the island. The number of its inhabitants is stated to be 10,000.

ATOUGUA a tn. and par Portugal prov. Estramadura dist. Terra Vedra at a short distance from the Atlantic, and 27 m. W. Santarem. It was a place of some consequence during the occupation of the famous Terra Vedra lines by the British. Pop. 1940

ATRAN a river Sweden, rising in a small lake near lat. 66° N.; lon. 18° 35' E. and flowing N. for a few miles then turning rapidly S.W. It forms Lake Landan, and after receiving several affluent hills into the Kattegat at Falkenberg.

ATRANI a vil Italy prov. Salerno, about 1 m. N. Aversa, on the Mediterranean Sea. Pop. 7200

ATRATO a river S. America, New Granada, dep. Choco, having its sources in the mountains of the latter district lat. 5° 12' N. lon. 76° 45' W. It flows nearly due N. and, after a course of about 220 m. in length falls into the Bay of Choco, the coast S. part of the Gulf of Darien lat. 5° 10' N. lon. 77° 0' W. The country drained by the Atrato and its affluents is extremely mountainous and does not contain a level tract of any extent except at its mouth. Considerable quantities of gold are obtained from its sands and several Europeans have settled on its banks, to prosecute gold-washing. It is navigable for a short distance only from the mouth by large vessels. It was at one time believed that a water communication by the Atrato, existed between the Atlantic and Pacific Oceans but this is now known to be incorrect. The junction was said to be effected by a canal connecting the sources of the Atrato and the San Juan, which latter river falls into the Pacific Ocean on the W. coast of New Granada but it has been ascertained that no such canal exists and that the sources of these two rivers, though near are in no way connected.

ATRI or **ATRIA** (anc. *Hadrus* or *Hatria* *Paccus*) a tn Italy prov. Teramo district of and 18 m. S.E. Teramo 11 m. S. Civita del Penno and 5 m. from the coast of the Adriatic on a steep hill. It is the seat of a bishop, and has a cathedral, par. church, par. hospital, a theological academy, two hospitals, and a *seminario*. It is a place of great antiquity and was at one time surrounded by walls but these together with the town itself, have fallen into decay. It is said though on questionable authority to have given its name. *Hatria* or *Hadrus*, to the Adriatic. There are some remarkable excavations in a hill near the town, consisting of a number of chambers, wrought out with the greatest regularity but to what purpose they were appropriated is unknown. They are supposed to be of very remote construction. The Emperor Adrian was originally from this city. Pop. 6000

ATRIPALDA a tn. Italy prov. Avellino district of and about 1 m. E. Avellino. It has a collegiate and parish church and several manufactories of cloth, paper, nails, iron, and copper and a considerable trade in pork. Pop. 8797

ATTAH a tn N.W. Africa, 1 bank Niger 260 m. from its embouchure lat. 7° 15' N. lon. 5° 30' E. It is situated close to the water's edge, on an elevated situation, on a fine green ward, and has a beautiful appearance. It is clean, of great extent, and surrounded with fine trees and shrubs.

ATTAKEMBO one of the smallest of the Pequeas Islands; lat. 15° 25' S.; lon. 179° 0' W.

ATTIANAGH a par Ireland Queen's co. and co. Kilkeny, 2561 ac. 1 op. 719

ATTARAM a river in the Temasseru province, having its source in the lofty range of mountains that separate the Temasseru coast from Slam Proper. It flows in a N.W. direction, and falls into the Gulf of Marabian at Madras or Minicoy opposite the N. end of the island of Bala, lat. 15° 25' N. lon. 87° 37' E. having a course of about 95 m. It flows through a steep-sloped valley flanked by ranges of sandstone and limestone hills and on its banks may be seen sections of the secondary strata, composing beds of soft blue clay with ironstone nodules and thin shales of the coal basins, accompanied by a coarse calcareous conglomerate. (—*Four Ed. Araby*)

ATTENBOROUGH a par England co. Netts 2848 ac. 5 m. S.W. Nottingham intersected by the Nottingham Canal

the Birmingham and Derby Railway and rivers Trent and Ewerwell. Henry Ireston Cromwell's son-in-law was born here. Pop. 1080

ATTERCLIFFE CLM DAKKALLA a considerable vil and township England, co. York, W. Riding 1½ m. E. Sheffield; situated on an acclivity above the river Don. It has two principal streets which are tolerably well kept. The whole village which is straggling and irregular is about three-quarters of a mile in length. The houses are chiefly brick, and generally well built. The supply of water is inadequate, and the quality indifferent. It is lighted with gas, and is on the whole, improving. It is also increasing in extent. The church a handsome Gothic edifice was built between 1822 and 1826 at an expense of £14,000. There are also an Independent and a Methodist chapel and two schools, the town school for boys, erected in 1779 and the girls national school erected in 1824 both of which are numerous attended. The inhabitants are employed in the manufacture of cutlery and spades, scythes, &c. for the Sheffield manufacturers. Pop. of township 4973

ATTEKOFFE, or **KAKKESSET**, a lake. Upper Austria, 40 m. S.W. Linz, about 12 m. in length N. to S. and 3 m. in breadth. The river Ager flows from its N. extremity. It abounds in fish. The lucky village of Attersee, once cap of the district, is situated on the N.W. side of the lake

ATTILA See **ATTIKK**

ATTIGNY (anc. *Athurnum*) a com and tn. France dep. Ardennes (Champanne) 30 m. N. Rheims 1 bank, Alsace. Manufactures—cloth shoes, and laceries. It has also worsted mills, brownest tanneries, and some trade in slates, coal, wood &c. Its vast and splendid palace, of which some remains still exist, was often the residence of the Kings of France in early times. Here, too in 786 Wittkind a bold Saxon chief received baptism, in presence of Charlemagne, his conqueror and godfather and here, in 822 Louis Debonnaire was obliged to do public penance for the alleged maltreats of his brothers. Pop. 1469

ATTIKK and **VIOTIA** (anc. *Athos* and *Deotia*) a some or prov. Greece, Hionella partly insular and partly mainland. The name parts consist generally of the islands of Salamis, Agina, and Angistia (which see). The mainland part, near Phloia and Pithiota on the N. and N. is connected with the Morea, on the S. by part of the narrow tract which forms the Isthmus of Corinth. In all other directions it is washed by the sea—by the channels Talandi and Nagropont with the intervening Eurypis, on the N.E. the Archipelago on the E. the Barone Gulf or Gulf of Agina, on the S.E. and the Gulf of Lepanto or Corinth, on the S.W. This some, the territory of which anciently formed the independent states of Thebes and Athens, is now divided into three eparchies or dioceses of Attika Thiva and Viotia which again are subdivided into domes or parishes, of which Attika has 16, Thiva 10 and Viotia 8. The eparchy of the respective eparches are Atheni, Thebes, and Livadia. The territory is broken throughout by a succession of lofty ridges thrown off from the Pindus, and occasionally rising into mountains of considerable altitude. Of these, the principal are Hymettus in the S.E. of Attika, Parnes on its N. and Cithaeron on its W. border. Helicon in Thiva and on the N.W. of Viotia, the highest and most fertile of all. Mount Ikaros, or Lakaria, 7870 ft. high. The principal river is the Gyarros or N. Cephallen which, in the lower part of its course, flows through a spacious fertile plain and falls into Lake Topolia. This lake, the ancient Copais, notwithstanding of its receiving this river with smaller streams and having no visible outlet for its waters continues somewhat unaccountably to be little more than a marsh with some deep pools. After heavy rains, however it is subject to overflowing one of which of unusual magnitude, is supposed by some to be called under the name of Deionale's Flood. The only other rivers deserving of note are the Asopo, which flows E. into the channel of Nagropont, and the classic streams of the Ilissos and Cephissos, the former washing the S. part, and the latter watering the spacious plain of Athens. The minerals of the district are of great celebrity and the working of them might still be thought yield profitable returns. In ancient times Athens owed much of its wealth to the silver mines of Laurium, situated in the par. insula which terminates in the Cape Colonus, and the beautiful white marble in which its sculptures and statues embodied

their glorious exceptions, lies inexhaustible in the mountains. The snows, as a whole, is of indifferent fertility its rugged nature adapting it more for pasture than for tillage. The chief exception is to be found in the *Reoia*, whose rich plains are almost associated in our minds with the idea of fertility. Throughout the territory the most cultivated vegetable products continue to be, as before, the vine and the olive. The modern provinces embrace the whole of ancient Attica, and the greater part of *Reoia*.

ATTINGHAUSEN or **FRONZBURG** a vil. Switzerland can 1 m 1½ m. S. of Aider C. bank, Rhine. On a rising ground in the vicinity near the pretty little church, are the ruins of the castle of the Masters of Attinghausen. It was the dwelling place of Walter Furst, one of the founders of the Swiss confederacy. Pop. 507.

ATTLEBOROUGH a market to and par. England, co. Norfolk, W. division on the London road, 15 m. N.W. Norw. in the midst of a flat, open country well wooded, and highly cultivated. The town consists of one principal street, upwards of a mile in length, built on each side of the road. The houses are not constructed on any regular plan, but some of them are well built, as all are of brick. The town is supplied with water from wells it is not lighted. The church the only architectural object in the town deserving notice, is an ancient cruciform structure, with a square embattled tower built in the commencement of the 15th century. It contains many interesting monuments. There are in the town places of worship for Primitive Methodists, Baptists and the Society of Friends and a large new national school in which about 400 children are taught. Market-day Thursday chiefly for corn. Two fairs annually. Attleborough is a very ancient town, having been a place of considerable importance during the Saxon era.—THE PARISH comprises 3260 acresable to 10 p 254.

ATTLEBOROUGH a par. England, co. Norfolk 1267 re 10 p 101.

ATTOCK or **ATAC** a fort, on losing a small in Punjab, on a rock, 1. bank, India, about 1½ m. below the confluence of the Cabul 200 m. N.W. by N Lahore lat. 33° 54' N lon 72° 18' E. on the line of the great route between Afghanistan and N India. Attock commands the entrance from the Punjab into the Khyber Pass, by which it was Alexander the Great, Tamerlane and Nadir Shah, in different ages have crossed the Indus and invaded Hindostan. During the military operations against the Afghans in 1841-42 the British forces frequently marched on the same line. The former fort and town of Attock, built by Akbar in 1581 were swept away by a sudden and tremendous inundation of the Indus in the latter end of June or beginning of July 1841, when hundreds of other towns and villages were also carried away and many thousands of human beings perished. Both town and fort have been since rebuilt. The Indus at this spot, says Baron Hügel is a clear rapid, but unimportant stream, seven-eighths of its sands and bed being quite dry at this season of the year. Both banks are steep on the N they soon become nearly level, but on the S side on the contrary they increase in steepness, and lofty hills arise to all appearances, from the river itself. The banks, which rise abruptly on both sides from the sandy bed, are about 80 ft. high above the level of the water. The bridge, and the river in its present state, may be from 40 to 45 fathoms across and the stream in the middle about three deep, but the breadth between the two shores must be at least 300. During the rainy season the river is filled from bank to bank, the waters rising at this time as much as 50 ft. when the bridge which is admirably contrived and made of the very best timber is taken to pieces, the boats being employed to navigate the stream.—(Travels in the Punjab) Other authorities give 80 ft. for the lowest, and 80 ft. for the greatest depth of the river. On the opposite bank from Attock are a large fort and village named Khyberabad and by some to have been founded by Akbar by others by Nadir Shah. The port of Attock is estimated about 3000, though it once was much more.—(Hügel's Travels Thomson's Gazetteer.)

ATTEN or **ATTEN** a vil. Hindostan presid. Bengal formed by an office of the Treas. lat. 26° 22' N lon. 86° 48' E. It flows S. passes near Durgapoor traverses dist. Majahabje flowing S.E. expands into numerous marshes and small lakes, and falls into an office of the Brahmapoota lat. 28° 58' N

lon. 89° 48' E. 60 m. W.N.W. Decca total course, 238 m. navigable in the wet season for boats of 80 to 40 tons.

ATTU or **ATTOU** the most W. of the Aleutian Islands; in lat (N. point) 59° 34' N lon 173° 17' W (N) nearly 70 m. in length and about 80 in breadth. It has the same regulative and sterile aspect as the other islands of this chain.

ATTWOOD'S CAY or **RAMANA** one of the Bahama Islands lat. 25° 5' S N lon 73° 42' W; 10 m. long S.W. to N.E. and about 1 m broad.

ATTYMASS a par. Ireland co. Mayo 11154 ac. 10 p 241.

ATWICK a par. and township England, co. York E. Riding 2850 ac. Pop. 334.

AU the name of nearly 140 villages in Austria one of them in the circle of Brück, of some importance, from its extensive works for making coke, and its iron-foundries. Numerous other places, also, particularly in Bavaria, Baden and Prussia, have the same name.

AUBAGNE Latin, *Albanus, Alobanus* a tn. France, dep. Bouches-du-Rhône (Provence) on the Havennas, 10 m. E. Marseilles. The old town stood on the top and S. side of a hill of shale, overtopped by a thick layer of mudstone, but has been abandoned for the new town, which lies below on both sides of the great road from Marseilles to Toulon, and is built with some degree of regularity and elegance. It has numerous cloth manufactories a magnum-work potteries, distilleries, tanneries, paper mills &c. and a trade in wine, fruits, pot-herbs, and the products of the different works already mentioned. Various antiquities have been found in the neighbourhood. Pop. 8367.

AUBE (anc. *Abe*) a river France rising in a range of hills near the village of Truslay at the extremity of the wood of Aubertin dep. Haute Marne, and running S.E. to N.W. through the dep. of Aube, to which it gives its name. It becomes navigable at Arcis, 22 m. from its embouchure, and falls into the Seine a little above Marseilles its whole course being about 113 m.—Aube is also a name of a small river of Champagne and Picardy which flows into the Oise and of two villages in France the one in Lot-et-Garonne and the other in Normandy.

AUBE a dep. France, formed out of the S. part of Champagne and a small portion of Burgundy and comprised between lat. 47° 56' and 48° 42' N lon. 3° 24' and 4° 48' E. bounded, N. by dep. Marne, E. by Haute Marne, S.E. by Côte d'Or S. and S.W. by Yonne, and W. by Seine-et-Marne greatest length 72 m. E to W breadth, 47 ams. 600 000 hectares or 1,044,800 ac. equal to 2351 sq m. The surface is undulating with few hills of great height, and consists generally of a slight covering of loam, resting on a subsoil of chalk. It is not of equal quality throughout. In the N. and S.W. it is extremely sterile, producing only scanty crops of oats, rye, and buckwheat. The land is bare of trees and almost of vegetation large tracts deemed incapable of reaping the expense of cultivation are allowed to lie waste. In the S.E., again the soil is remarkable for its fertility. It consists of an alluvial deposit of great depth. This district abounds in all the ordinary grain and pulse crops, yields large quantities of hemp of the finest quality is well planted with vineyards, and possesses extensive forests which after satisfying the local consumption leave a large surplus of wood and charcoal for the supply of Paris. The whole arable land of the department is 983 938 ac. meadows, 85 975 ac. vineyards, 37 570 ac. wood, 199,133 ac. orchards nursery grounds, and gardens, 2635 ac. lakes &c. 5095 ac. blow and uncultivated land 50 102 ac. About 122 223 pps. of wine are produced annually one-half of which is exported. The best wines are those of Reims, Bar-sur-Aube, Bouilly, Laine-au-Bois, and Javernant. Horses, horned cattle, and sheep are reared to a limited extent. Much attention is paid to poultry and the rearing of bees. Small game, wild boars, stags, and roebucks are plentiful. The department is traversed S.E. to N.W. by the river Aube (which see) from which it derives its name. Among the streams of less importance are the Armanche the Mognon, and the Yonne. In the N. parts are about 100 tarns or ponds, which furnish carp and other fish.

Stone quarries exist in various parts, and chalk and marble are also worked, but in minerals the department is poor. The principal manufactures consist of cotton and woollen stuffs, and yarn, hosiery particularly nightgowns and stockings flax,

sals, blankets, ribbons, hardware and earthenware; brandy, beet-root sugar, glass, leather and paper. In 1844 there were 2500 looms, and 8500 workmen occupied in the weaving of cotton, producing about 80 000 pieces of cloth; 5400 looms, employing 3500 work-people, produced annually 80 000 dozen caps, and 870,000 dozen pairs of stockings. The spinning of wool furnished yearly about 500 000 lb. of yarn and that of cotton about 1 000 000 lb. of yarn. The tanneries produce yearly about 110 000 skins of leather. The trade of Aubusson is principally in grade wine, brandy, pork, cheese, biscuits, hemp, wool, fowls, and charcoal for Paris, hosiery cloth, and other articles of manufacture. Capital, Troyes; other towns, Arcis-sur-Aube, Bar-sur-Aube, Her-sur-Seine, Nogent-sur-Seine, Brienne, where Napoleon was educated, Romilly and Clairvaux. The dep. of Aube is divided into five arrondissements, subdivided into 447 com. Pop. (1846) 261,881.—(*Dict. Gen. et Stat. French Official Tables*)

AUBEL, a tn. and com. Belgium, prov. Liège, 9 m. N. Verviers, with manufactures of woollen cloth and tobacco. It has also spinning-mills, brick and tile works, breweries, freestone quarries, a considerable trade in butter, cheese, and pigs, and an important weekly corn-market at which the greater part of the province of Liège, and part of that of Limburg obtain their supplies. Pop. 2760

AUBENAS (Latin, *Ablona*) a tn. France, dep. Ardèche, at the foot of the Cévennes. It is picturesquely situated, on a height in a rich country and surrounded by the volcanic mountains of the Vivarais, but the streets with one exception are narrow, crooked, and dirty; the squares small and unpleasant; and the houses, as a whole, irregularly built. It has a court of commerce, a royal college and a high school. Its old Gothic castle, occupied during the wars of religion alternately by Romanists and Huguenots, is still in good preservation, and now accommodates nearly all the public and municipal offices. Aubenas is the great mart for the sale of the sheeps' skins of the department, and of the wools of Ardèche. Bleeding and throwing silk are carried on extensively. In the town there are manufactures of cotton, coarse cloths, and coloured handkerchiefs; also tanneries, dye-works &c. and the banks of the river are lined with oren, oil paper and other mills. Aubenas has several important fairs. At two of them silk is sold to the value of 238 000 sterling. Pop. 4232.—(*Murray's Handbook, Dict. Gen. et Stat.*)

AUBERVILLIERS, or **NOTRE-DAME DES-VEUVES**, a vil. France, dep. Seine, 5 m. N. Paris. It has a sugar refinery and is surrounded with gardens which help to supply Paris with vegetables. Pop. 2444.

AUBETERRE a vil. France, dep. Charente (Poitiers) placed in the form of an amphitheatre at the foot and on the slope of a hill, and traversed by the Dronne. The hill is crowned with an ancient castle and immediately beneath is the parish church. The manufactures are coarse cotton and paper, and some trade is done in corn. Pop. 673

AULIERE, a tn. France, dep. Puy-de-Dôme (Auvergne) 3 m. from Clermont. In the vicinity some common red wines are produced. Pop. 3195

AUBIGNY (Latin *Ablona*) a tn. France, dep. Cher 27 m. V. Bourges. It is traversed by the Ner, and is ugly and ill built. It has manufactures of cloth, druggists, serge, and leather and a considerable trade in a white wool known by the name of Sologne. Pop. 2381.—There are several little towns of the same name in various parts of France.—2 A. tn. Lower Canada r. bank, St. Lawrence, opposite Quebec. It was laid out, in 1818 in marine village for the opulent merchants of Quebec, and has a Protestant church, &c.

AUBIN, a tn. France, dep. Aveyron, 17 m. N. E. Villeneuve, consisting chiefly of one long street on the side of a hill. It is supposed to have been built by the Romans, to whom several ancient acronyms in the rock are attributed. The district of Aubin is remarkably rich in minerals—pyrites, sulphur, alum, but particularly iron and coal, which furnish materials for several blast furnaces and valuable ironworks, situated chiefly at Desmerville and La Foreste. A considerable quantity of them is sent into Aubin from the neighbouring counties, and disposed of principally at its fairs. Pop. 1857.—There are several other small towns and villages in France named Aubin

Vol. I.

AUBIN (Str.) a market in N. Jersey in a large bay of the same name, opposite St. Heller. It occupies principally of one street, and contains a parish church, chapel of ease, an endowed meeting-house for Independents, and a Wesleyan Methodist place of worship. The pier which is commodious and strongly built, projects from a rock, surmounted by a fortress called St. Aubin's Castle. At low water the rock and harbour are left dry but at high water there is a depth of 8 ft. within the pier. There are some handsome villas in the vicinity inhabited mostly by Jersey families. Pop. (1841, 2170.—(*English Channel Islands*.)

AUBONNE, or **AÏPONA** a tn. Switzerland, cant. Vaud, on a river of the same name, 12 m. W. Lausanne, and about 8 m. from the Lake of Geneva. It has an old church, in which are some curious sepulchral inscriptions. It occupies a delightful situation and commands an extensive prospect, including the Lake of Geneva, with Mont Blanc towering in the distance beyond. In this locality are made some of the most celebrated wines in Switzerland. Pop. (Protestants), 1834.

AUBOURNE, a par. and township England, co. Lincoln 2109 ac. S.W. Lincoln Pop. 365

AUBURN the name of a number of places in the U. States, the most important of which is the capital of Cayuga co. state of New York, situated on the outlet of the Onondaga Lake, 169 m. N.W. Albany. It is a thriving and beautiful village, and contains some handsome buildings, a theological seminary the Auburn female seminary, the Auburn madhouse seven churches belonging to various religious denominations, two banks and a number of manufactures of various descriptions including tanneries, distilleries, and a brewery and four weekly newspapers. It is however chiefly remarkable for its state-prison, erected with a view to the adoption of a new system of prison discipline, the principal feature of which was solitary confinement, and a total deprivation of social intercourse. Having been found when pursued in its strictest rigour to produce the most serious effects on the health of the prisoners, and to render some of them insane, the system, though still persisting largely of its original principle has been considerably modified, the prisoners being now allowed to work together but not permitted to hold any conversation. The outer wall of the prison encloses a space of ground 600 ft. square. The principal building which is within this wall is of three sides, with a front of 76 ft. each of the sides being 246 ft. long. It contains 805 cells, capable of holding only one person each being 7 ft. long 8½ wide, and 7 ft. high. They are well ventilated, and are arranged in five stories, opening into galleries. This part of the building is so constructed that the slightest whisper in the space in front of the cells can be heard on the ground story. Pop. 5626.

AUBURN or **ALDOUBERT**.—1 A. vil. and par. England, hant. Selkirk co. Wilt. N. E. Marlborough, formerly a market town, but being nearly destroyed by fire in 1780 its trade fell off, and the market was discontinued. Area of par. 8080 ac. Pop. (1841) 1856.—2 [Formerly called *Lalaby*] a hamlet, Ireland, par. and barony of Kilkenny West, co. W. 45 m. south about 8 m. N. E. Athlone, the supposed scene of Goldsmith's poem of the Deserted Village.

AUBUSSON a manufacturing town in France, dep. Creuse, 20 m. S. E. Guéret, in an arid, sterile district, in a mountain gorge, and surrounded by rocks, which give it a very picturesque appearance. It is traversed by the Creuse; and consists of but one street, broad, and well built is the seat of a court of primary jurisdiction and a communal college, and possesses a theatre a literary club and an agricultural society. The principal manufacture is of carpets, of a superior description besides which cloth, velvet, hats, silk and thread are made. Tanning and dyeing are carried on, and a good trade is done in salt, wine and pulse. Pop. 4232.—The **ARKWOLD** manufactory of Aubusson is divided into 10 cantons and 100 communes area, 840 sq. m. Pop. (1846) 106,755.—**ARKWOLD** is also the name of two villages the one dep. Puy-de-Dôme, with pop. 798 and the other dep. Orne, with pop. 601

AUCH (anc. *Emberis, Aueli*) a city France, dep. dep. Gers (Gascogne) 42 m. W. Toulouse lat. 43° 35' 59" N. lon. 0° 30' 10" E. (4.) Built in the form of an amphitheatre, on the summit and side of a hill it presents a very picturesque appearance. The Gers divides it into the upper and the lower town, which communicate with each other by means

of a long flight of stairs, of more than 200 steps. The streets are narrow and crooked, but well paved. The Place Royale, in the upper part of the town, is a fine square, ornamented by a beautiful promenade, which commands a view of the Pyrenees. The cathedral founded in 1680, but

AUCH.—From Desormes, Histoire des Departemens de la France.

not completed till the reign of Louis XIV. is one of the finest Gothic edifices in the S. of France. The vaulted roof and carved woodwork of the choir are greatly admired and the painted windows, executed by Armand de Moles in 1618 are of exceeding richness and beauty. The hotel of the prefecture is one of the finest of the public buildings and the town-house is an elegant structure. The town is the seat of petty courts of justice and a tribunal of commerce, and contains a royal college, a large hospital, a departmental normal school, a scientific seminary with a library of 15,000 volumes, an agricultural society, a museum, a drawing academy, barracks, and a theatre. The neighbouring district yields corn, wine, and brandy and is famous for its fruits. The principal trade is in wine wool, brandy of Armagnac, and sheep timber and the manufactures are of coarse woollen and cotton stuffs, thread, worsted velvet, serge, crapes, leather and hats. In the vicinity a tarqueous mine was formerly worked. Auch is one of the most ancient towns in France, and great numbers of Roman antiquities have been brought to light by means of extensive excavations. Pop. (1846) 5779.

AUCHENNAIRN a vil Scotland, co. Lanark par. Ould der about 3 m. N.E. Glasgow. Part of it, called Old Auch central, is of considerable antiquity and stands near a spot which is supposed to derive its name of The Tomb, from having been used as a burial-place during the plague. The more modern part is of recent construction and owes its existence to the iron mines which have been opened in its vicinity and give employment to the greater part of the inhabitants. There is an endowed school in the village, but no place of worship. At a short distance S.E. of Auchennairn is Robyrtston, where Wallace was betrayed by the false Montrose.

AUCHINLECK a vil and par Scotland co. Ayr. The village, which is 10 m. N. Ayr and 14 m. S.E. Kilmarnock, consists chiefly of a row of houses on each side of the Glasgow and Dumfries road.—The parish is upwards of 20 m. in length, and more than 8 m. in breadth. It abounds in limestone coal also has been found and in some places is wrought to a considerable extent. A considerable portion of the pop. subsist by headwork weaving for the Glasgow manufacturers. The more common fabrics being Right silks and muslins. Book-binding making is also a very general employment. Beeswell the biographer of Dr Johnson, resided in this parish, where he was visited by the great lexicographer on his return from the Journey to the Hebrides. Pop. of par 8897.

AUCHTERARDER, a tn. and par Scotland, co. Perth. The town is 18½ m. S.W. Perth, and about 15 m. N.E. Strathling, on the public road between these two towns. It consists chiefly of one principal street, broad, and tolerably clean, and

upwards of a mile in length. The houses of which it is formed—built of stone, roofed with blue slate, and generally two stories high—occupying both sides of the highway. It is well supplied with water and lighted with gas. There are four places of worship in the town, the parish church, the S. and N. U. Presbyterian churches, the latter a handsome Gothic edifice and the Free Church, built in 1843 and surrounded by a handsome square tower 75 ft. high and four schools, in one of which gratuitous education is given to 22 poor children. The principal occupation of the inhabitants is weaving, there being about 500 looms in the town, chiefly employed by Glasgow houses in making pelisses, gingham, tweeds, galas, &c., the last being one of the most important articles manufactured in the locality about 30,000 pieces being made annually. The linen manufacture formerly carried on here, was superseded, towards the close of last century by the cotton fabric. Auchterarder is a place of considerable antiquity and appears to have been of more importance formerly than now. In 1716, the town was burned by order of Prince Charles Edward who at the same time promised indemnification to the inhabitants the measure being one of some supposed political necessity but the promise was never fulfilled. In modern times, the parish has acquired notoriety from the litigation carried on by the Earl of Kinnoull, the patron and his pretensions against the presbytery with reference to the well-known Veto Act, the transmission of which in favour of his Lordship, led to the formation of the Free Church of Scotland. The par. is 3 m. long by 3 m. broad. Pop. of par and tn. (1841) 3424.

AUCHTERDEERAN a par Scotland co. Fife 6 m. long by 1 to 4 broad. Pop. 3310.

AUCHTERGALEN a par Scotland co. Perth 19 000 ac. Pop. 3275.

AUCHTERHOUSF a par Scotland co. Forfar 3567 ac. Pop. 688.

AUCHTERLEW a par Scotland co. Aberdeen 16 000 ac. Pop. 1837.

AUCHTERMURCHY a tn. and par Scotland co. Fife. The town is 9 m. W. Cupar and 24 m. N. Edinburgh has three principal streets and a number of lanes. The houses are of stone some of two stories in height, but mostly of one only with clay or earthen floors. The town is well supplied with water and is lighted with gas and has a parish church, built in 1779 a Free church three l. Presbyterian churches, and five schools, including the parish school. A savings bank was instituted here in 1831 the deposits in which, in the beginning of 1850 amounted to £2054. Denshaws, dowlas, sheetings, tweeds, drills, stripes, checks, &c., are manufactured in the town and parcel to a considerable extent. In these branches of industry 1516 persons about half females, are employed. Distilling and malting are carried on to a considerable extent, the latter considerably improved of late years. Auchtermurphy was wrenched into a royal burgh by James VI. and although not now recognised as such it still enjoys all the privileges of that rank.—The parish is about 5 m. in length and from 1½ to 2 in breadth. Pop. 3704.

AUCHTERTOOL, a small vil and par Scotland, co. Fife, at the foot of the Callie hills. It contains an extensive brewery long famed for its ale, porter and table-beer the first of which is much used in London. The par. is about 5 m. long by 1½ broad. Pop. 517.

AUCKLAND a maritime co. New South Wales 80 m. in length and 40 in breadth contains about 1,680,000 ac. It possesses some fertile tracts, the most extensive of which is that comprising the plains of Bega. Pop. upwards of 1000.

AUCKLAND a port, and thriving settlement, in New Zealand (of New Ulster) lat. 36° 51' 30" S., lon. 175° 45' E. (n.) The town consists of two streets, one running down a rather steep little hill, and the other at the foot, running off to the left at a right angle from these streets numerous small lanes diverge in various directions. It has a number of good though small shops, and a great many pot-houses, the latter

accounting for a remark of Capt. Hayes, of H.M.S. *Driver*, who visited Auckland in 1847 that he had never seen so many drunken men collected together at one time, in such a small place before. On a hill above the landing-place is the church, an ungaily red building, and close by is the governor's house. The general appearance of the town is not prepossessing. The harbour is good and safe, and the water of great purity, but the landing places are exceedingly bad; and at low water and even half ebb, are unapproachable, from the extent of soft mud that stretches far out into the sea. The anchorage is abreast of the town. Prevailing winds, S.W. and N.E. Auckland, however is a thriving place its customs duties in 1846 exceeded £20 000 being nearly £7000 more than they were in 1847. Its wealth and population are also rapidly increasing. For this prosperity it is indebted to a great measure to its position, which is on the E. side of a narrow straits connecting the N and S portions of the island, and thus affording to easy communication with both the E. and W. seas. There is a small rope manufactory in the town. Provisions are tolerably abundant, and the climate agreeable and healthful. The country around is not remarkable for fertility but yields sufficient for the present population of the settlement. A considerable extent is now under cultivation, including some market gardens in the immediate vicinity of the town. Pop. (1844) 2704 in 1847 5217

AUCKLAND BISHOP

AUCKLAND ISLANDS, a group of islands in the S Pacific Ocean, lying S. of New Zealand, discovered August 18 1800, by Abraham Brant of the ship *Ocean*, a S. sea whaler belonging to the Messrs. Keadyby lat. (S. Cape) 50° 58' S. lon. 166° 7' E (N.). The group consists of Auckland Island,

80 m. long by 15 in extreme breadth and several smaller islands, as Adams, Enderby Rose Ocean, lying Disappointment Island, etc. separated from each other by narrow channels; total area, about 100,000 ac. The Auckland Islands are of volcanic formation, and composed chiefly of basalt and gneiss, and have a wild picturesque appearance. They are so highly magnetic in many places, that the group may be compared to an enormous magnet. The highest land, Mount Eden is only 1335 ft. above the sea level and shows being few green plants, the whole surface is covered with vegetation. Dr. Hooker says, "A few forest shrubs all the shores, succeeded by a broad belt of brushwood, above which, to the summits of the hills, extend grassy slopes. On a closer inspection of the forest, it is found to be composed of a dense thicket of stag-headed trees, so gnarled and stunted by the violence of the gales, as to afford an excellent shelter for a luxuriant undergrowth of bright green *Antennaria* ferns, and several gay-colored herbs. The woods consist entirely of four or five species of trees, or large

shrubs, which are here enumerated in the order of their relative abundance, *Metrosideros laevis*, *Drosera longifolia*, *Poa simplex*, *Veronica elliptica*, and *Cypripedium*, *Phlox*, *For* further information on the botany of these islands see Hooker's *Flora Antarctica*. There are no land quadrupeds except the domestic pig in a wild state. It was introduced by Captain Bristow and now is exceedingly plentiful. The land birds are tolerably numerous in individuals but consist of few species and these chiefly such as are common to New Zealand. Hares, porcupines, snakes, penguins gulls and the albatross, are abundant. Insects are numerous and troublesome. The climate of the group is humid, and the mean temperature rather milder than that of Great Britain. Violent gusty winds are frequent. These islands possess several harbours, but the best is on the E. side of Auckland Island and is named Rensselaers Harbour having a stream of water flowing into it. The upper end of this harbour is called Lawrie Harbour which is completely land locked, and is suitable for vessels requiring to be hoisted down or undergo extensive repair the steep S. shore affording great facilities for loading and unloading. The highest spring tides, about 3 ft. Another good harbour is called Sarah's Bay lat. 50° 58' S. lon. 166° 58' E. The channel between Rose and Enderby's Islands might in calm weather be mistaken by strangers but it is only 4 ft. above the N.E. cape of Enderby's Island are some strong whirl pools.

The Auckland Islands are frequently visited by French vessels, and by vessels from the U. States, for the purposes of retreating and refreshment, though hitherto much neglected by our own. They are admirably situated for a whaling station from their proximity to the fisheries as well as to our colonies of Australia and New Zealand, and possess the great natural advantages of commodious harbours, and a plentiful supply of good water and wood. The Government of Great Britain to whom they belong by right of discovery have granted the exclusive possession of these islands to the Messrs. Enderby by whom a company has been formed for carrying on from thence the S. sea whale fishery—*Ross's Antarctic Expedition*, 1839-43; *U. States Exploring Expedition*.

AUCUTIA one of the Laccadive Islands, off the Malabar coast lat. 10° 51' N. lon. 73° 17' E. It is about 8½ m. in length, and half a mile in breadth is planted with coco-nut trees, and has a considerable population.

AUDE, a dep. in the S. of France formed of part of Lower Languedoc, so called from the river Aude, which runs through it bounded, N and N.E. by dep. Hérault and Tarn E. by the Mediterranean, W by Hérault-Garonne, W by Aude, and S by Pyrénées Orientales greatest length, E. to W. about 76 m. breadth N to S, 50 m. area, 1487 790 sq. m. The surface presents three groups of mountains, the Montagne-Noire, or black mountains, a continuation of the Cévennes, on the N. the Corbières, on the E. and the Pyrénées, whose S. slopes constitute nearly two-thirds of the whole département. Though generally mountainous the country is traversed by a great longitudinal valley extending from W to E (the upper part watered by the Fresquel, and the lower by the Aude) with many smaller valleys opening into it. The soil in the more elevated parts is dry and unfruitful, but in the lower districts it is fertile its yields, according to the position of the locality good crops of wheat, maize, oats, rye, and buckwheat, in quantities more than sufficient to supply the wants of the département. The vines and the olive, especially the former are cultivated to a considerable extent. Balaols, or salt-work, is gathered here and exported in large quantities to Italy and elsewhere Honey forms an important article of trade that of Narbonne being esteemed the finest in France. The cultivable land including meadows, vineyards forests, etc. comprises about two-thirds of the surface the remainder is heath and wood land. A considerable quantity of wine is produced. The white wines, in general, are considered superior to the red but both the red and white wines of Limoux, particularly its Champagne de Muli, and the blanquette of Bages, are among the most esteemed Great attention is paid to irrigation and the meadows, both artificial and natural produce abundance of forage for the cattle. Asses and sheep are numerous. A prodigious quantity of poultry is raised and exported in large numbers considerable quantities being sent to Spain. The climate is very variable a good deal of rain

falls in the S.W. Even in summer hail and snow are not unfrequent among the mountains. The hot winds of which there are two, the *Marm* or *Aure*, from the S.E. and the *Cure* from the N.W., sometimes blow with a fury that causes great damage.

The mineral productions consist chiefly of copper lead, and iron also marble in great variety and some coal and slate. On the coast, along the shore of the Mediterranean, are numerous shallow lagoons, called *Kiangs*. The salines or salt-pits in the vicinity might in summer yield about 374,800 cwt. of salt yearly.

The inhabitants carry on considerable manufactures, especially of woollen cloth (chiefly at Carmauxonne Castelnaudary and Lamoux), a large quantity of which is exported to the Levant. The other principal products are flour verdigris, paper leather glass, tiles, bricks, steel files, combs, and small articles of bijouterie with some tannery and toys. Great quantities are afforded to trade by the river Aude, which traverses the dep. S.W. to N.E. by the Canal of Langouedec, which crosses it E. to W. and by the Mediterranean. At its only port, La Nouvelle, in the Gulf of Lyons, between 100,000 to 140,000 qrs. of grain are annually shipped. Aude is divided into four arrondissements, 91 *cant.* and 434 *comm.* Pop. (1846) 289,661.—(*Dict. Gen. et Stat. Angl.* 8 of France French Official Tables.)

AUDE (Latin, *Aude* Italian *Aido*) a river S of France, rising in the Etang de l'Aude, near the village of Angles, dep. Pyrénées Orientales, about 4 m. N.W. the town of Mont-louis. Its whole course is less than 150 m. and for some part it runs nearly parallel to the Canal of Langouedec. It receives several tributaries, of which the principal is the Orbou, and falls into the Mediterranean Sea.

AUDENARDE, or OUDENARDE (Flemish, *Oudenarde*) a fortified town in Belgium, prov. Hainaut, 15 m. S. Ghent, and 20 m. N. Tournay situated at the base of a hill in the valley of the Scheldt, which runs through it. It contains three churches, of which that of St. Walburga is as early as the 10th century and a townhouse, a handsome Gothic structure, built in 1540, and possessing a carving in wood by Paul Verelsteden, which is regarded as a masterpiece, and said to equal anything of the kind that France or Italy has produced. Audenarde has several of primary instruction and of commerce, a college free communal schools, an academy of design, two orphan houses, and several other benevolent institutions. Its principal trade is in linen; of which, on an average, 20,000 to 25,000 pieces are annually sold in its markets. It has also extensive manufactures and breweries, dyeworks sawworks, salt-works, oilmills, and manufactures of cotton, ribbons, gloves, and tobacco. The celebrated battle which bears the name of Oudenarde, in which the French were signally defeated by the Duke of Marlborough and Prince Eugene, was fought under its walls. Pop. 5670.

AUDENHOVE (Br. *MARZA*) a tn. and com. Belgium, prov. E. Flanders 9 m. E. Audenarde. It has some linen manufactures, breweries, and sawmills. Pop. 2425.

AUDIERNE, a tn. and com. France, dep. Finistère, on a bay of the same name, a little above the mouth of the Goyen, 30 m. W. Quimper. Its situation is picturesque, and it has a good harbour with some trade in dried fish but the whole coast, lined with steep rocks, is very dangerous, and so often the scene of shipwrecks, that the greater part of the lives only by the plunder obtained from them. Pop. 1448.

AUDINCOURT a vil. France, dep. Doubs 4 m. S.E. Montbéliard, a bank, Doubs. It is famed for its ironworks which produce annually 8000 tons of pig, and more than 2000 tons of malleable iron, 30,000 cases of sheet-iron, and 500 tons of iron-plate. It has also a manufactory of spindles, a cotton spinning-mill, and a tannery. Pop. 3024.

AUDLEM, a par. England, Cheshire 10,525 ac. Pop. 4970.

AUDLEY a par. England, co. Stafford 8580 ac. Pop. 5180.

AUDEWICK, a tn. France, dep. Fin de Calais, 12 m. E.S.E. Calais, at the E. extremity of an agreeable and fertile plain with oilmills, breweries, tanneries, and a salt-refinery Pop. 1166.

AUE the name of several small places in Germany particularly—1. A tn. Saxony circle of, and 12 m. S.E. Zwettau. It has an old townhouse a knitting school, and a tin furnace and stamping-mill. In the neighbourhood are tin mines, beds

of porphyry earth and stone quarries. Pop. 1130.—2. The name of several rivers of Germany, particularly of two in Hanover the one of which joins the Aller on its N. bank, near Oster, and the other falls into the Elbe a few miles below Homburg.

AUERRACH—1. A tn. Saxony circle, Zwettau, hall of, and 16 m. E. Plauen, on the Gilitzsch. It has considerable manufactures of muslin, and plain and embroidered lace. It has also a needle-factory a ball-factory and a paper-mill. Pop. 8012.—2. A pretty vil. Hesse Darmstadt, about 15 m. S. Darmstadt, with mineral springs and baths, which contain a large quantity of iron, and are not much resorted to. It has a manufactory of cloths. Its castle of Fürstentberg built in 1780, is the summer residence of the Grand Duke. Pop. 1600.—There are numerous other places in Germany named AUERRACH, all of them small.

AUBENFELT a vil. Prussia, dist. of and 26 m. S.W. Mersburg on the frontier of Saxe-Weimar. Pop. 437. It is only remarkable for the distast of the Prussians by the French, October 14, 1806.

AUGLÀ, a tn. Tripoli lat. 39° 15' N. lon. 23° 0' E. Routes from Egypt and the coast of Tripoli, which is about 150 m. distant to Murzuk, in Fezzan, pass through it.

AUGLÈ, a tn. Hindoostan, prov. Malwa, 40 m. N.E. Ojanna lat. 23° 48' N. lon. 76° 1' E. between two artificial lakes, on a rocky height, 1598 ft. above the sea. It is surrounded by a stone wall, and contains a wall-built native fortification but is chiefly composed of mud houses, in 1820 6000 in number.

AUGHABY an important coal dist. of Ireland, on the N. border of co. Roscommon, Connaght. The quantity of coal has been estimated at from 8000 to nearly 8000 tons per acre. A railway connects the Aughabry colliery with the Arigna ironworks.

AUGHAGOUR a par. Ireland co. Mayo 5048 ac. Pop. 8511.

AUGHALLOO a par. Ireland co. Tyrone 19,231 ac. Pop. 6772.

AUGHANAGH a par. Ireland co. Sligo 7747 ac. Pop. 1880.

AUGHANUNCHOY a par. Ireland co. Donegal 3827 ac. Pop. 1158.

AI GHAVAL or OUGHVAL a par. Ireland co. Mayo 33 695 ac. excellent limestone abounds, and both lead and copper mines were formerly wrought here. Pop. 13,332.

AUGHAVEA a par. Ireland co. Fermanagh 17 142 ac. contains quarries of excellent freestone. Pop. 4834.

AUGHAVILLAR, a par. Ireland, co. Kilkenny 5671 ac. Pop. 1170.

AUGHER, a market tn. Ireland co. Tyrone 15 m. S.W. Dungannon in a rich undulating valley watered by one of the head streams of the Blackwater. It has a poor though pleasant appearance, without any bustle, except on market days. In its vicinity is Augher Castle. Pop. 614.

AUGHMACART a par. Ireland Queen's co. 9601 ac. Pop. 2483.

ALGHNACLOY a market tn. Ireland, co. Tyrone 1 bank Blackwater 13 m. W. N.W. Armagh. It contains of one principal and three smaller streets. A few of the houses are of brick, and roofed with slate, but the greater part are thatched. There are here a R. Catholic chapel and places of worship for Presbyterians, Wesleyans, and Methodists several public and private schools and a convenient market house. Market-day Wednesday. Fairs for live stock on the first Wednesday in every month. Pop. 1703.

AUGHNAMULLEN a par. Ireland, co. Monaghan 30 709 ac. Pop. 13 886.

AUGHNISH a par. Ireland, co. Donegal 9195 ac. contains several extensive blackfolds. Pop. 4011.

AUGHERM. See AUGHER.

AUGHTOV—1. A par. England co. Lancaster 4482 ac. S.W. Ormskirk on the Leeds and Liverpool Canal. Pop. 1855.—2. A par. co. York, E. Riding 4295 ac. N.N.W. Howdon on the Derwent river. Pop. 654.

ALGSBURG (Latin, *Augusta Fidei*) a city Bavaria, sup. prov. Swabia and Neuburg, on a rising ground in a fertile plain at the angle formed by the junction of the Wertach and the Lech, 35 m. N.W. Munich lat. (St. Ulric's Tower) 48° 21' 42" N. lon. 10° 54' 16" E. (L.) It is sur-

rounded with walls and ditches, but not fortified; divided into the upper middle, and lower towns, and intersected by four canals. Augsburg is the residence of a bishop, and the seat of a court of appeal. Although irregularly built, with close, narrow and ill-paved streets, it contains many handsome edifices and some elegant squares adorned with fountains. Most of the houses are old, large, and lofty, and many of them have curved pediment, and scullery fronts, adorned with frescoes, the subjects of which are usually taken from Scripture, or the legends of saints. The finest street is Maximilian Strasse distinguished by its length and breadth. Its three bronze fountains, and the townhall or Rath-haus, a civic palace, of Italian architecture, adorne the street in Germany. Adjoining the townhall are the Perleth tower a lofty bellry ascended by a

MAXIMILIAN STRASSE, TOWNHALL, AND PERLETH TOWER, AUGSBURG.
From French Barthelemy's France and Germany

staircase of 500 steps, and the arsenal. Among the other remarkable objects are the bishop's palace now used for Government-offices where the Confession of Augsburg was presented to the Emperor Charles V in 1530 the hall a handsome commercial mart and storeroom the public library the academy of arts, founded in 1820 the cathedral, an irregular Gothic building erected in the 16th century and containing a fine picture by Doménichino and the church of St. Ulrich, with a tower 350 ft. high, from which a fine view of the surrounding country is obtained, and in such immediate juxtaposition with a Lutheran church as to be apparently under the same roof. The city possesses a polytechnic institution, a Catholic seminary a Protestant gymnasium, a gallery of paintings, besides an orphan asylum, and a savings-bank numerous educational establishments, and 15 churches, of which five are Protestant. The Benedictine abbey of St. Stephen, formerly a convent of noble ladies, is now appropriated to the education of youth. It comprehends a royal lyceum a gymnasium, and a Latin school; the first having five professors, the second seven, and the last eight teachers. There is also a seminary attached to this institution superintended by a director and two professors, in which 54 students are educated. The town is surrounded by wooded alleys, promenades and private gardens and in front of the cathedral the Grand Parade is a pleasant place of public resort.

Augsburg has been long distinguished by its commercial spirit, and by the activity and industry of its inhabitants, and although not now so important a place as formerly is still the seat of extensive manufactures. The principal public works are four cotton factories, spinning and weaving, one of them having 808 power-looms and 40,000 spindles, and employing 1500 work-people a famous silk-factory machine-factory paper-mills, brass-foundry and the military foundry conste-

ling the principal cannon-foundry in Bavaria. Besides these, there are manufactories of articles in gold and silver silver lace, coloured paper, ribbons, mirrors, carpets, chemical stuffs, with blancheries and dyeworks. An extensive trade is done in printing engraving and bookbinding, and the celebrated *Alpenrose* *Zeitung*, the leading journal of Germany started in 1798, is published here. But the principal branches of business to which this city owes much of its modern importance, are banking and stock exchange operations Augsburg next to Frankfurt, being one of the most influential money markets on the Continent. It is also the emporium of the merchandise, and the chief mart for the sale of the wines of Italy Switzerland and the S of Germany; and hence has an extensive transit trade. Its mercantile establishments are above 300 and its annual circulation in bills and merchandise, varies in value from £2 000 000 to £4,000,000 sterling. It is connected by a railway with Munich, and, in the opposite direction with Nürnberg Bamberg, and Saxony Augsburg is a place of great antiquity the Emperor Augustus having established a colony there about 12 years B.C. Ravaged by the Huns in the fifth century it subsequently came under the supremacy of the Frankish kings and was nearly destroyed in 788 in the war of Charlemagne against Tharilo, Duke of Bavaria. After the division of the empire of the Franks, it became part of the dominions of the Duke of Swabia, and having acquired riches by its commerce, finally obtained its freedom from the Duke, by a purchase which was, in 1276, confirmed by the Emperor. The city now reached the summit of its prosperity and was, together with Nürnberg, the principal entrepôt between N and S. Europe, until towards the end of the 16th century when the discovery of the Portuguese and Spanish gave a new direction to the commerce of the world. Among its principal merchants in the 15th and 16th centuries, were the families of Fugger and Welser. In 1550 a daughter of

1. Townhall and Perleth Tower

3. St. Ulrich's Church
4. Cathedral
5. Church and House of St. Ulrich
6. Theatre
7. Infirmary and Lunatic Asylum
8. Church of St. Stephen

the burgher Welser Philipppine, the most beautiful woman of her time, became Archduchess of Tyrol, by marriage with Ferdinand, son of the Emperor Ferdinand I. The precious house of Fugger—the Rothschilds of the Middle Ages—carried on trade at the same time both with the E. and W. Indies in ships of their own, were proprietors of the richest mines in

Europe, and more than once repulsed, from their own private resources, the exhausted treasures of the Emperors Maximilian and Charles V. They received from the former patents of nobility and the privilege of coining money. In the following century (1619) the family numbered in its five branches, 47 counts and countesses of the empire, all tracing their origin from a simple weaver of Augsburg. The name and the family are still numbered among those of the German nobles. But many of its branches have died off, and the living descendants of the precious stock are reduced in fortune and influence proportionately with the city from which they sprang. —(Murray's *Handbook*.) Augsburg early took a conspicuous part in the Reformation, with which, for a long series of years, its history is closely connected. Here the celebrated Confession which bears its name, and which was drawn up by Melancthon under the auspices of Luther was, in 1531 presented to the Emperor Charles V. Here, in 1548, that monarch promulgated his Interim, a futile attempt to suppress the Reformation by giving up two of the most obnoxious dogmas of Popery — communion in one kind and the oblation of the clergy and more than all, here in 1550, was concluded the celebrated treaty which secured the Protestants in the full enjoyment of their rights and liberties. Augsburg is the birthplace of Halbeus the elder and other eminent artists. Pop. including 15,000 Protestants, 38,000. —(Murray's *Handbook*. See *Encyclopædia*. *Hiln's Lex. Deutschland*.)

AUGST or **ABBAU-ABST** and **BAUK-ABST** two vills, Switzerland, connected by a bridge over the Rigi, at its junction with the Rhine, 8 m. E. Basel. *Augst-Abst*, formerly *Kaiser-Augst* is in can. Aargau and has pop. 823. *Bauk-Abst* is in can. Basel and has pop. 231. Both of them occupy the site of *Augusta Raurorum*, a Roman colony which was ravaged by the Huns in 460. Some Roman remains still exist, and numerous coins, medals, &c. have been found in the neighborhood.

AUGSTHOLZ, or **ADONTHOLEND** a bathing place of considerable resort, prettily situated near the S. side of the *Bellegger See*, in the vil. of can. *Luzern*. On a gentle rising ground in the neighborhood, stands an ancient castle once a commandery of the Knights of Malta, supposed to have been founded in the 11th century.

AUGUSTA a vil. W. Australia, cap. co. *Somerset* on *Hardy's Inlet*. *Flinders Bay* lat. 34. 24 to 35. 11 S. 137° 9' E.

AUGUSTA, two towns, U. States. —1. Cap. of co. *Kennebec*, Maine. It lies on both sides the *Kennebec* river, 35 m. above its mouth in the Atlantic, and at the top of the steep navigation. The principal buildings are, the state-house, a handsome structure, with Doric portico of eight columns situated on an eminence a mile S. of the town. The U. States arsenal, a large stone edifice on the E. side of the river, the State house hospital, a fine granite building, with wings, and 70 ac. ground the high school and nine churches. Agriculture, manufactures, and commerce, are in a flourishing condition. Town in 1844 upwards of 3000. Pop. of township (1840) 5314. —2. A city Georgia, cap. co. *Richmond*, 1 bank, Savannah and 110 m. N.W. the city of Savannah. It is a regularly built, handsome town, containing a city hall, a museum, arsenal, jail &c. is connected with Charleston, Milledgeville, and various other places, by the Georgia Railroad and branches and has, by these means, and the navigation on the Savannah a considerable trade particularly in cotton and tobacco. Pop. (1840) 8403. —Several other places in the U. States have the same name.

AUGUSTENBERG a small town, Denmark, prov. *Schleswig*, vil. *Alsen*. It consists of one well-built street, and has a small harbour and dock. In the environs are a palace and park of the Duke of *Angusberg*. Pop. 800.

AUGUSTINE (St.) a city and seaport, U. States, E. coast, Florida, lat. 30° 54' N. lon. 81° 26' W. (p.). It was formerly of more importance than now a circumstance chiefly attributable to the badness of its port, which is shut up by a bar having not more than 5 ft. at low water and even in spring tides not more than 8 or 9 ft. A lighthouse on the N. end of *Anacusa Island*, with a fixed light, marks the entrance to the port. Previous to the acquisition of Florida by the U. States, the population amounted to 4000 or 5000; in 1840 it was only 50.

AUGUSTINE (St.) —1. A bay [called *Island* by the natives, S.W. coast, in Madagascar into which falls the Dur-

month, or *Oculaba* river] visited by British, U. States and French vessels, who purchase provisions for boats, gunpowder, muskets, rum, &c. and supply themselves with indifferent water (*Naut. Mag.*) —2. The N.W. in *Lord Mulgrave's Archipelago*, S. Pacific lat. 5° 28' S.; lon. 176° 6' E. (p.) —3. A vil. *Caroline* lat. 7° 34' N. lon. 156° 55' 39" W. —4. A volcano in N. Pacific lat. 34° 30' N. lon. 141° 30' E. about 300 m. E. by S. of the *Loose* group. The most E. cove of S. America, in Brazil; lat. 8° 21' S. lon. 54° 56' W. (p.) —5. A cape, New Granada, N.E. *Carthage*, lat. 10° 14' 6" N. lon. 80° 40' 45" W. —7. A cape in the S.E. of *Isl. Mindanao* lat. 6° 4' N. lon. 126° 13' E. (p.) —8. A river Labrador falling into the river St. Lawrence in lat. 51° N. lon. 59° W.

AUGUSTINUSGA a vil. Holland, prov. *Friesland*, 17 m. E. *Loosdrecht*. It is a scattered village, prettily situated in a wooded district, and has a Calvinistic church (which, in 1680 was burned and plundered by the Spaniards) and a school. The inhabitants are mostly engaged in agriculture and cattle-rearing. Pop. 600.

AUGUSTOW a prov. and city Russian Poland. The province is one of the eight voivodes or palatinates into which Poland was formerly divided and at the most N. part of the kingdom lying next *Russia Proper* between lat. 52° 40' and 55° 5' N. Area about 7000 sq. m. A large portion of its surface is occupied by marshes, lakes, and forests. It is divided into five circles, and contains 47 towns, 276 communes, and 155 parishes, cap. *Swkwa*. Pop. 310,000. The town of *Augustow* is 90 m. S. (*Swkwa*) on the *Niecia*. It was founded by *Sigismund Augustus*, in 1537 and has some woollen and linen manufactures, with a trade in horses and cattle. Pop. (1841) 6973.

AUKBOROUGH or **AUXBOROUGH** a par. England co. *Lincoln*; 1875 ad. Pop. 468.

AULDEARN a par. (5½ m. long by ½ broad) and vil. Scotland *Nairn*. South the village in 1645 the Marquis of Montrose defeated the Covenanters. Pop. vil. 415 par. 1480.

AULENDORF a market in *Württemberg* circle *Donau*, 23 m. S.W. *Ulm* on the *Schussen*, cap. barony of same name. It is very old, and said to be of Roman origin. Close to it is the fine castle of the Counts of *Königsberg-Aulendorf*, containing a valuable library and a fine collection of pictures. Pop. 960.

AULETTA a town in Italy Naples, prov. *Salerno*, dist. *La Sala*, 30 m. S.E. *Palermo*, situated on a pleasant hill at the base of which flows the *Negro*. It contains four *monte-de-pelle* and was founded by a *Grecian* colony. Pop. 2863.

AULLAGAS (*Laigua* or *La*) a lake Bolivia, in the valley of *Desaguadero*, which lies between two lofty ranges of the *Andes*, at an elevation of about 13,000 ft. Lake *Aullagas* receives, at its N.W. extremity the river *Desaguadero*, which flows from the Lake of *Titicaca*, situated in the same valley but at a greater elevation. The point at which the river falls into the lake is 12,380 ft. above sea level. The Laguna de *Aullagas* is intersected, towards its S. extremity by the parallel of 19° N. It is said to have no fish, and has no known outlet. The banks are inhabited by the *Aullagas Indians*, whence its name.

AULNE, a river France, which, rising near *Lahné*, in the chain of the *Masses* or *Black Mountains*, on the confines of dep. *Cotes du Nord*, first flows S. through dep. *Finistère*, till it meets and becomes part of the canal from *Nantes* to *Brest*. At *Châteaulin* it again assumes the form of a river and, flowing W. falls into *Brest* harbour. Its whole course is about 70 m. Its chief tributaries are the *Klen*, the *Dou*, and the *Hiera*.

AULONA, *AVLONA* or *VALONA* [anc. *Julia*] a town European Turkey prov. *Albania*, 84 m. N.W. *Scutari* lat. (approx.) 40° 37' 12" N. lon. 19° 45' 15" E. (p.) on a bay of same name, surrounded by hills terminating S. in Cape *Lingvata*. It stands on a hill surrounded by a wall, and has on the S. a small fortress called *Canina*, built upon a steep rock. The streets have a dirty appearance; and though possessing several mosques, and a Greek church, *Aulona*, as a whole, has the appearance of an Italian town. Unwholesome miasmas in the vicinity considering endemic, oblige the inhabitants, during the warm season, almost to desert the place. The bay protected at its entrance by the island of

Raseno forms a safe harbor but being in general rocky affords bad anchorage, except close to the town, and at its S. recess, named Porto Ragaseno. The Turkish inhabitants manufacture arms which are in much repute and woollen stuffs; while the Christians and a few Jews, are principally employed in commercial pursuits. The exports consist chiefly of silk, pitch from the mines of Seleucia, olive-oil, wool, gallnuts, and valonia and from Italy it receives in return gun and pistol barrels, glass, paper and Calabrian capotes. Aulona is the seat of a bishop of the Greek church. The country around produces excellent wine of which, however little is made also tobacco, oil, and corn all of good quality. The town was nearly depopulated by the plague in 1800. Pop. about 5000.

AULPS. See Acre.

AULT a small seaport, France, on the English Channel dep. Somme, 18 m. W B.W Abbeville it has several cotton mills, manufactures of ironware, and is one of the principal places whence Paris is supplied with fish. Pop. 1871.

AULT HUCKNALL a par England co. Derby 3750 ac Pop 690

AUMA a town in Saxony principality of 7 m. S E Neuried, on a small affluent of the Elster has two churches, an hospital, some cotton and woollen manufactures together with a dyework, tannery brewery and several mills. It has also six markets, chiefly for cattle. The town was at one time larger than at present, but has suffered much both by war and fire. Pop. 1255

AUMALE (anc. *Alba Arnica*) a town in France, dep. Seine Inférieure (Normandy) 15 m. E N. E. Neufchâteau pleasantly situated in an extensive meadow watered by the Breule, and hemmed in on all sides by richly wooded hills. It is ill built, and has a communal college manufactures of serge, blondes, China ware, and coarse woollen worsted and fulling-mills, and a belt-bumdy and a trade in cattle, cloth leather &c. In 1593 Henry IV of France was wounded on the bridge of this town, in an action with the troops of the League, and narrowly escaped being taken. Pop 1087

AUNBY par England co. Lincoln 1183 ac Pop 128
AUPS, or Aulps [Latin, *Alpes Vitis Alpinae*] a small town in France, dep. Var (Provence) 13 m. W N W Drogueville built on a plain at the foot of a mountain. The streets are narrow and dirty but the public square, in which the parish church stands, is handsome, and is adorned by a fountain of white marble of which there are quarries in the district. It has tanneries, and some trade in corn. Pop. 2568

AURAY (anc. *Auracus*) a small seaport in France, dep. Morbihan (Brittany) 17 m. S E Lorient on a hill slope, at the bottom of a deep bay into which the small river Auray falls lat. 47° 40' N lon. 2° 48' 28" W (c.) Its harbor which is excellent, and adorned with a fine quay is deep enough to admit vessels of large burden and its building-docks appear to be fully employed. On the height occupied by the upper part of the town stands the church of the Holy Spirit, an extensive Gothic-Arabian edifice of the latter part of the 13th century. Manufactures—cotton thread, lace, tiles, bricks, &c. Trade (costings)—corn, fruit, cattle, horses, butter honey, wine, wood, leather wax, and fish, chiefly pilchards. About 6 m. from Auray is the isolated chapel of Sainte Anne, a celebrated place of pilgrimage, to which about 8000 devotees annually repair from all parts of Brittany, in the month of July. Pop. 3735.

AURE (Vat. 2) one of the four valleys of Upper Armançon, dep. Haute-Pyrénées, France. This picturesque valley runs up into the Pyrenees between the Val de Campan and the Val de Luchon at the junction of the Nèze or torrents of Luchon and Arns. It is fertile, and well cultivated, abounding in pasturage and throughout but especially in the upper part, presents scenery of surpassing beauty.

AURE, two rivers, France.—1 Dep Calvados affluent of the Drome total course, N N W 20 m.—2 Dep. Eure et-Loire, affluent of the Eure from the left, course E N E 33 m.

AURICH a town Hanover gov and circle of same name, and of the former principality of E. Frisia land on the river and 15 m. N E. Emden, with which it is connected by a canal. It is walled, neatly built in the Dutch style, with a handsome market-place, near which stands the townhouse

and is the seat of the provincial courts of justice and record and also of a Protestant seminary. It contains three churches, a synagogue, grammar-school, gymnasium, four public libraries, a posthouse, an orphan hospital, a female reformatory, several sawmills, tanneries and distilleries, and manufactures of paper tobacco pipes and tobacco. Aurich has gained much by the opening of the canal. It has a considerable trade in cattle, and its horse-marshes are well frequented. Pop. 4350.—The government of Aurich is a low flat tract of country comprising about 1134 geo. sq. m. bounded, W by Holland and the Bay of Dollart, N by the N Sea, E by Oldenburg and S. by the territory of Meppen. It is protected from inundation by artificial dikes, 24 ft. high, and extending nearly 100 m. On the coast of the N Sea it is tolerably fertile but in general it is a more waste, consisting of barren moors and heath separated by tracts of sand. The inhabitants, who are mostly Protestants, employ themselves, in the more fertile districts, in agricultural pursuits, and in rearing cattle. In the less favoured parts, their chief occupation is herring fishing and commercial navigation. Pop. 153 400

AURILLAC (anc. *Aurelianum*) a town in France, dep. Cantal (Auvergne) 369 m. S. Paris. It is agreeably situated in a valley r bank Jourdanne is well built, and walled. The houses are covered with slate, obtained from quarries in the vicinity and the streets, though irregular are wide and clean being constantly irrigated by the overflows of a large river surmount at the top of the town, into which two fountains pour their copious supplies. At the lower part of the town, along the side of the river is the public walk called *Cours-Maison* or commonly *Le Grosier* at one end of which is an elegant bridge of three arches over the Jourdanne and at the other a beautiful fountain, surmounted by a column. Among the ancient buildings of Aurillac may be mentioned the castle of St. Stephen, which on the W. overhangs the town the church of St. Gerard that of Notre Dame of the 18th century with a much-admired ceiling and the college, an extensive pile of buildings, with a fine pavilion front and containing a valuable library and cabinet of mineralogy. Among modern buildings, the first place is due to the town house adorned with busts of 12 of the principal writers of France the prefecture, the theatre the corn exchange, at the extremity of a square, which contains a fine basin of water, about 10 ft. in diameter the hospital, the lunatic asylum, and the extensive market-place. Aurillac possesses a stud of excellent horses and a race-course, which during the races attracts numerous visitors from all the S. departments of France. Principal manufactures—bristles and other utensils of copper jewellery woollen stuffs, carpets, blondes lace, and paper. Tanning brewing and dyeing are likewise carried on and a good trade in horses mules, cattle, cheese, stockings tapestry leather and wool. Pop. 2484

AURIOL (Latin *Aureolum*) a town France, dep. Bouches-du-Rhône 16 m. R N E. Marseilles, in a valley watered by the Haveanne, on the banks of which are many agreeable promenades. The town is irregularly built but the houses among which the Hotel de Ville is conspicuous, have an elegant appearance. Manufactures—cloths, shoes, bricks and red tiles, for flooring. It has also mills for spinning worsted and silk, distilleries paper-mills, copper-works, and lincolns. In the vicinity are collieries, beds of gypsum and red ochre, and quarries of alabaster. Pop. 3271
AUROBA—1 One of the Society Islands, S Pacific lat. (N) and 15° 50' S lon 148° 11' W (c.) It rises abruptly from the sea, presenting on all sides but the S. a perpendicular cliff worn into caverns. Its summit is crowned with trees and a luxuriant vegetation; including the coconut and bread-fruit trees. In the upper and interior part of the island, the soil is extremely rich, yielding great abundance of rice, sweet potatoes, melons, yams, and some tobacco. Figs and poultry also abound, as do crabs and fish. Auroba presents unequivocal marks of having been supplied from the sea, which is of great depths within 150 ft. of its cliffs, Commander Wilkes having found no bottom with 150 fathoms of line. Its inhabitants are represented, by the navigator just named, as a cheerful, amiable, happy fine-looking race. Many of the natives can read and write well, and printed copies of several portions of the Scriptures are to be found amongst them. Pop. about 250.—2 One of the New He-

bridge, S. Pacific lat. (N point) 14 50' S lon. 163° 5' E. (n.) about 22 m long and 4 broad, discovered by Bos. It is said to be a considerable elevation is covered with a luxuriant vegetation and has some beautiful cascades and coasts of easy access. It produces bread-fruits, coconuts, plantains, yams and sugar-canes. The islands are of a dark colour, go nearly naked but are of a mild and peaceful disposition. — 9 An Isl. Red Sea, betwixt Dhoba and Haasana Island lat. 25° 30' N lon. 36° 30' E.

AURUNGBAD (sometimes called *Almoudoon*) a large prov. Decan, or W Hindoostan bounded, N by Gogjerat, Candish, and Bazar E by Bazar and Hyderabad S. by Bazar and Deapoor and W by the Arabian Sea. Length 500 m. average breadth, 160 m. The greater portion of the province is an elevated table-land, of an average height of 1800 ft. above the level of the sea. It is hilly and irregular especially towards the W where the Ghats, crossing is from S. to N situate a great elevation. In many places singularly shaped rocky isolated hills arise affording admirable situations for the natives for or fortresses. Of these, the most remarkable is that on which the fortress of Daulatabad is built. Though the province has no considerable rivers, the soil is fertile, and the climate favourable to the production of various fruits. Rice is the principal crop and staple commodity but the peach strawberry grape nectarine, fig, melon, and orange, are cultivated and arrive at great perfection. Horses, rarely but neither strong nor handsome were formerly reared in great numbers for the Mahratta cavalry. Neither agriculture nor commerce are in a flourishing condition. The inhabitants are chiefly Hindoos about one-twentieth being Mahomedans. The Mahratta language is that generally spoken but the Hindoostanee and Persian are used among the higher classes. Various architectural peculiarities distinguish the religious edifices from those usually found in upper Hindoostan. Since 1818, the greater part of the province has been subject to Britain. The pop. is scattered, and small in proportion to the extent of the country. — (Hamilton's *East India Gaz. Picture of India*.)

AURUNGBAD a city Hindoostan, cap. of above prov. 180 m. E.N.E. Bombay lat. 19° 54' N lon. 6° 55' E in a hollow in the immediate neighbourhood of an extensive marsh and of a large tank overgrown with rank aquatic vegetation, both of which, in conjunction with a very variable climate, render the locality unfavourable to health. It is separated from its principal salub. by the Kowliah, across which there are two substantial bridges. When approached from the N the view of Aurungabad is unimpaired its large white domes with gilded points, and its lofty minarets, appearing to rise from amidst beautiful groves the whole city with its terraced houses, covering a space of about 7 m. in circuit

where visible. The principal street is about 2 m. long, having at one end a spacious quadrangle, and near it a handsome modern bazaar. The mosques, caravanserais, and other public buildings, are of good and substantial construction, but, in point of architectural beauty much inferior to those of Delhi and Agra. One of the most important edifices and also in the best state of preservation, is the tomb or mausoleum by Aurungzade, to the memory of his daughter. Its domes are of white marble, and decorated like those of the Taj Mahal, but inferior in mass, finesse, and splendour. Originally a small village, Aurungabad, in 1634, became the seat of the Mogul Government, and was afterwards a favourite residence of Aurungzade, from whom it received its present name, signifying the place of the throne. When the Nizams became independent of Mogul authority it continued their capital till the invasions of the Mahrattas forced them to remove to Hyderabad. It is now the residence of a British political agent, and the head quarters of a battalion of the Nizam's army under British officers. Pop. (1823) 60,000 — (Hamilton's *East India Gaz.*)

AUSEJO, a tn. Spain. Old Asturia, prov. of and 23 m. S.E. Oviedo on the side of a steep hill. The parish church, townhall, a small castle an unsecure prison, and a group of well built mercantile and dwelling houses, form the main body of the town. Manufactures — coarse linen and oil. Pop. 2050

AUSEPITZ [locally named *Hustopek*] a tn. Austria, prov. Moravia, 30 m. S.S.E. Brlna. It has a church with an ancient altar a market place an hospital, and an almshouse. A considerable number of the inhabitants are weavers. The vicinity produces fruit and wine, and an active trade is carried on in grain and cattle. Pop. 3000

AUSEA a tn. Aghyenne kingdom, Adel t. bank Hawash near its confluence with the lake of the same name, about lat. 13° 30' N lon. 41° 40' E. It was formerly capital of Adel and long regarded as their principal seat of learning. The irruptions of hostile tribes put an end to its prosperity and independence and it is now little else than one of the great encampments of the Danakill and other tribes, where a perpetual fair or market is held to which large quantities of salt from Lake Asud are brought for sale and live camels in high demand for the goods worn by the married Bedouin females, and, pewter and brass, or copper ware are bartered for the produce of the soil. It has however still population of from 5000 to 8000. The inhabitants are of a tawny complexion, with long hair. — The lake of Ausa is a short distance N.E. of town. It is about 14 m. in length, 7 in breadth, and, according to D'Hérécourt, is upwards of 250 ft. deep. It overflows during the rainy season, and, when it recedes leaves a fine deposit, like that left by the Nile. — (Harris's *Highlands of Ethiopia*, vol. 1. p. 182. *Journal of Messrs Leunberg and Knapp D'Hérécourt, Voy. dans l'Océan*.)

AUSSEE two towns, Austria. — 1 In prov. Styria, in a mountainous district on the Traun, 2200 ft. above the sea, 53 m. S.S.W. Lenz lat. 47° 37' N lon. 12° 47' E. It has manufactures of bells and ironware, and in its neighbourhood are found marble, alabaster gypsum, pit-coal, salt, and sulphate of soda. It is particularly noted for the extensive and valuable salt mine in its neighbourhood, the produce of which is obtained partly in the form of rock-salt, and partly in the form of brine. The mine is divided into 11 stories or apartments for the reception of the brine, which is obtained by the admission of streams of water and is conveyed in wooden pipes to Aussee 4 m. distant. The annual produce is about 8270 tons. Pop. 1800. — 2 In Moravia, circle of, and 20 m. N.W. Olmutz. It is a place of great antiquity with a church and a synagogue and in the neighbourhood a palace of the Prince of Liechtenstein, a splendid edifice, with a fine park. Pop. of which 780 are Jews, 2000

AUSGIG a vil. Austria, circle, Leoben, in Bohemia near the junction of the Elbe with the Elbe, 24 m. N.W. Prague. It lies in the midst of gardens and vineyards, which produce a wine of some celebrity called *pechauer*. During

TOWN OF AUSHERMeyn DAULATABAD, AURUNGBAD.
From Gov. William Taylor's Station in the Deccan.

forenoon. It is surrounded by a stone wall with round towers, but is incapable of withstanding a regular assault. The streets are broad, some of them paved, and there are many large and good houses but signs of rapid decay are every

the *Humble struggle*, it acquired considerable notoriety and its old Gothic church, with a stone pulpit, a bust of John Huss, and a little Madonna, by the celebrated Raphael Mengs, who was born here, is an object of attraction to the antiquary. Pop. 1768.

AUSTELL (Br.) a market tn. and par. England, co. Cornwall. The town is 13 m. N.N.E. Truro, and 90 W. Plymouth, beautifully situated on the declivity of a hill. It consists of one principal street, and several smaller branching from it irregularly all tolerably straight, paved, well lighted and lighted with gas. The houses are chiefly stone, and in general substantially built, and the town is well supplied with water. The places of worship are the parish church adorned with a handsome tower, two district churches, and chapels belonging to the Wesleyan Baptists, Christian Society of Friends, &c. Other buildings of note are the new market-house and townhall in one edifice, and the union poorhouse. The schools comprise a gentleman's boarding and day school for classics, mathematics, engineering, &c., a large national school, two or three minor commercial schools several ladies schools, two boarding schools, and two or three dame schools. (Larger woollen cloth is manufactured here to a small extent. There are also two steam-engine manufactories, an iron-works in the town itself, and a charcoal-works, 14 m. distant. A large trade is done in china clay and stone, exported from the ports of Charlestown and Penzance, for the supply of the Staffordshire potteries, and foreign countries. In the vicinity are a number of extensive and productive tin and copper mines. About 2 m. N.W. the town, there is a remarkable amount of tin mine, called Caradoc mine, a Cornish name, signifying a gray rock. It is a vast excavation about 1 m. in circuit and 22 fathoms in perpendicular depth. No record exists of the period when it was first opened but, according to tradition it was worked more than 400 years ago. Markets-day for corn and provisions, Friday. Several annual fairs.—The average temperature 18 1/2° in day and 51° at night. The average wind is from the S.W. and to 10,750.—(Correspondent in St. Austell.)

AUSTERLITZ.—1 A small tn. Austria [locally named *Moskova*] prov. Moravia, on the river Látava, 12 m. E. Brtnim. It has a handsome church, with sculptures, and a palace with a library and good pictures, some of them by Titian and Rubens. It has also some manufactures, but the most remarkable circumstance connected with this town is the great battle of the same name, fought about 2 m. W. on December 2, 1805, in which Napoleon gained a decisive victory over the united forces of Austria and Russia. This battle was followed by the peace of Presburg signed on the 26th of the same month. Pop. 2600, of whom 450 are Jews. —2 A hamlet, Holland, prov. of, and 7 m. E. Utrecht, so named by the French, after the victory referred to in the preceding article. General Marmont built here, in honour of Napoleon, a pyramid of earth and turf which still exists. Pop. 220.

AUSTIN, a city U. States, cap. Texas on the Rio Colorado, 37 m. above Bastrop, and 140 N.E. San Antonio. It was named after Moses Austin, the first projector of the colonization of Texas. In April 1839, three years after Texas had achieved its independence, Austin was selected as the permanent seat of government for the new state. In April 1840, Austin contained 400 houses and 1300 inhabitants, and since then the population has considerably increased. It is an incorporated town, according to the municipal system of the U. States. The public buildings are not elegant, but are well suited to their various purposes. conspicuous among these is the president's house, situated upon a hill, and commanding an extensive and beautiful prospect. A Presbyterian church and a Methodist meeting-house have also been erected. In the spring of 1840, two newspapers were published in the capital of Texas; which, like almost every, is built upon seven hills, in a most picturesque and delightful situation. The streets are generally composed of gravel. Agate and cornelian, of the finest quality are found in great abundance about the city and neighbourhood. The Colorado hills, about 4 m. off, contain extensive quarries of marble, limestone, and granite, and will for many years supply the adjoining country with timber. Pop. of town, exceeding 2500 of the municipal city, 6184.—(Bonnett's *Geography of Texas* Kennedy's *Texas*, Vol. I.

AUSTIN (SAN FALLEN DR.) a post tn. U. States, Texas, cap. Austin co., a place of some trade, on the Brazos river 125 m. N.E. E. San Antonio de Bexar and founded July 11 1834.

AUSTRALASIA, a division of the globe of somewhat indefinite limits, but usually assumed to comprehend the continental island of Australia, and an unconnected number of others, many of them very little known, lying between lon. 110° and 160° E. and from Papua or New Guinea, the furthest N. island of the division, to lat. 50° S. It includes thus the islands of Australia, Van Diemen's Land, New Zealand, New Caledonia, the New Hebrides, the Mallicolo Islands, Queen Charlotte's Islands, the Solomon Islands, New Ireland, New Britain, the Admiralty Islands, Papua, and the Aru Islands, besides numerous other islands and island groups. The island of Timor and those lying W. of it, though coming within the general boundary above indicated belong to the E. or Indian Archipelago, called also Malasia. Australia is estimated to have an area of 8,600,000 sq. m. and a pop. of 2,400,000. It forms one of three portions into which some geographers have divided Oceania the other two being Malasia and Polynesia, and corresponds with the Melanesia of other geographers, who have divided Oceania into Malasia, or W. Oceania, Micronesia, or N. Oceania, Polynesia, or E. Oceania, and Melanesia, or S. Oceania.

AUSTRALIA or New Holland the largest ill. in the world, or rather a sea-grit continent lying between the Indian and Pacific Oceans, S. of Asia between lat. 10° 39' and 39° 11' S. and extending from lon. 115° E. to 158° 16' E. bounded N. by Torres Strait, the Sea of Timor and the islands of Papua, Timor, Flores, &c.; E. by the S. Pacific S. by Bass's Strait Van Diemen's Land and the S. Pacific; and W. by the Indian Ocean. Its greatest length W. to E. is 2400 m. Its greatest breadth is S. R. 1700 to 1900 m. Coast line, 5000 m. area, 8,600,000 sq. m. It is divided into two unequal parts by the tropic of Capricorn and consequently both a temperate and a tropical climate. Although there are numerous spacious harbours on the coasts of Australia, there are few remarkable indentations; the principal are the Gulf of Carpentaria, on the N. and Spencer's Gulf on the S. the former extending inland 650 m. with a breadth of 400 the latter extending 180 m. inland and varying in breadth from 80 to 10 m. On the W. is Shark's Bay and on the E. Harvey's Bay neither exceeding 40 to 50 m. in length and width. A ridge of steep but very mountainous runs along a great portion of the E. coast, at a distance from the sea varying from 50 to 90 m. while the S. coast, from Cape Lanvin to Spencer's Gulf, presents a low and sandy surface. The N. and W. coasts, so far as they have been yet explored, are also generally low with some moderate elevations at intervals. The interior is also believed to consist of an immense plain, the hilly districts rising from it like islands.

The geology of Australia is remarkable for its simplicity and uniformity. The strata of the rocks and the direction of the principal chain of hills is with one exception the same throughout the country, namely N. and S. Tertiary rocks prevail on the S. N. and W. coasts, expanding in the S.E. into a vast tertiary plain, traversed by the Murray and Darling rivers. Other two immense tertiary plateaus occur on the S. and the N. coasts; the former lying the great Australian Basin, and the latter the Gulf of Carpentaria, and both spreading horizontally for unknown distances into the interior. On the E. coast, paleozoic rocks, basalt, and granite occur in alternate patches along the whole coast from Bass's Strait to Cape Flattery in lat. 15° S. the last constituting the entire floor of the W. portion of New S. Wales and extending far into the interior of the continent.

Oceania have been formed by the British at few different points of this great insulated continent, but none of these have been yet pushed further inland than from 150 to 200 m., so that the interior of this vast country may still be considered a *terra incognita*. Some individual adventurers have indeed penetrated a considerable way into the interior but their accounts contain little to tempt followers. Captain Stuart, one of the most recent explorers of the wild and wastes of the interior regions of Australia, and who, in 1845, penetrated from Adelaide as far as lat. 25° 25' S., and lon. 135° E., describes the country he traversed as consisting of alternate sand hills and flats, with no trace of vegetation as far as the eye could

reach. Passing the level country he says: "We once more found ourselves among sand ridges, perfectly immemorial, and so close that the base of one touched the base of another; the whole country sand. The sand-hills are of a fiery red, and ran, fur miles and miles, in parallel rows, with points like the vanishing points of an avenue. I was at length brought up by a stony desert, that stretched before us in absolute boundlessness. All accounts agree in describing this sterile and repulsive character to the interior of the country; nor is it much better on many parts of the coast, especially on the S. W., N. and N. W. Captain Stokess, who surveyed these shores in 1837-38, makes frequent remarks in his narrative on the sterility and fertility of the land. It would appear indeed that the best portions of Australia have been already located: those being chiefly confined, so far as known, to the S. and E. portions of the island, where there are large tracts of good land, available for the purposes of both the former and greater. Here also the finest scenery is to be met with, composed of picturesque combinations of wood and water, rocky heights and deep ravines, such as is rarely to be met with in any other part of the country."

Mountains. The highest and most extensive mountain-system yet seen in Australia takes its rise at Cape Wilson the most S. point of that continent, and runs in a N. direction through New S. Wales. These mountains, called by the natives the Warragones, but by the settlers the Australian Alps, comprise three subdivisions—the Liverpool range, the Blue Mountains, commencing about 37 m. W. Sydney and a third, stretching beyond the parallel of 32° which has not yet received any name. The Blue Mountains so called from their assuming a beautiful blue colour when viewed from a distance, present some very striking features. The heights of the precipices, and depths of the abysms and ravines are tremendous.

It appears, says a writer in the *Saturday Magazine*, as if the earth, from the force of waters, or some violent convulsion, had all around subsided or been washed away leaving immense hollows and gulfs, and exposing to view to the depth of 2000 ft. the very ribs of the mountains. Dwarf trees, and a scrubby underwood, which retain their verdancy throughout the year, cover a great portion of these heights: the remainder consists of naked rock, destitute of all semblance of vegetation, and presenting a most dreary and sublimely awful appearance. Though formidable from their character the Blue Mountains do not attain any great height: the highest peak, Mount York, being no more than 5297 ft. The Liverpool range presents general features and characteristics similar to those of the Blue Mountains, though not quite so imposing. The highest peaks of this range have been variously estimated at from 4700 to 7000 ft. It presents however a number of points besides, from 2000 to 4000 ft. The precipices and chasms are tremendous here also.

Narrow gloomy and profound says Count Strassfeld, these stupendous rents in the bosom of the earth are enclosed between gigantic walls of rock, sometimes rendering from, sometimes frightfully overhanging the dark bed of the ravine, and its black silent eddies, or its foaming torrents of water. Many of the highest animals of the Warragones or Australian Alps, are covered with perpetual snow and, though no measurements have been taken of them, are believed, from this circumstance, to reach a much greater height than any of those above named. One of the most remarkable elevations yet ascended by Europeans is Mount Kosciuszko, which rises to a height of 6500 ft., and commands a view extending over 7000 sq. m. while immediately beneath the spectator yawns a gulf of 8000 ft. perpendicular depth. This range is continued N. by a series of low but perfectly known heights, in Cape York, on Torres Strait, thus forming a connected chain, at no great distance from the E. coast, the whole length of the island, from its most S. to its most N. point. Another range, commencing near the S. coast at Portland Bay is lat. 36 55' S., lon. 143 20' E. after taking a N. course for some time, connects with the Australian Alps by a series of gray hills. The first have been named by their discoverer, Major Mitchell the Australian Grampians and the latter by the same authority the Australian Pyrenees. In S. Australia occurs another mountain-chain, running N. from Cape Jervis to the singular horse-shoe depression of Lake Torrens. Many of the mountains of Australia exhibit evidences of their being extinct volcanoes. Of these the most remarkable are Mount Gambier and Mount Tschudi, between the W. bank of

the Glenelg and Rivoli Bay. Mount Tschudi has five craters, each about three-fourths of a mile in diameter and all filled with water. So far as is known, however there is no volcano in that country now in active operation, if a bituminous burning hill be excepted, belonging to a range called Wingen, which exhibits a red heat at the depth of about four fathoms but has no crater and discharges no lava. The following are the elevations of a few of the highest known mountains of Australia: they all occur in New S. Wales—Mount Kosciuszko, 6500 ft. Mount Ben Lue 5000 ft. Mount Lindsay, 5700 ft. Mount Dampier 5400 ft. Mount Canobian, 4810 ft. Mount Mitchell 4130 ft. Mount Plummer 4100 ft. Mount Enderby, 4000 ft.

Rivers and Lakes.—A scarcity of fresh water, whether in the form of rivers or lakes, is one of the prevailing characteristics of Australia. Along a coast line of not less than 8000 m. few rivers of any considerable magnitude discharge themselves into the sea, most of them being absorbed before they reach it; while on the S. coast there is not a single water-course to be found from Port Lincoln to King George's Sound a distance of more than 1500 m. Want of water forms not only one of the chief complaints of all the travellers who have sought to penetrate into the interior of the country but has, in several instances, been the cause of their abandoning their enterprises. Lakes are not scarce, but they are nearly all salt, as are also many of the rivers and springs. Long droughts, which dry up the channels of streams and arrest vegetation and sudden and violent rains, which cause them to overflow their banks and inundate the surrounding country are calamities to which the agriculturists of Australia are much exposed. The floods in particular are extremely formidable and destructive, rushing down with an unopposing which nothing can resist, and carrying off at one sweep the entire produce of the harvest. A still more remarkable characteristic of the rivers of Australia is, the circumstance of many of them terminating in marshes situated in the interior of the country thus reversing the order observed in most other lands by flowing towards the sea.

Rivers.—Amongst the principal known rivers of Australia, exclusive of those more recently discovered, and to be afterwards mentioned, are the Hawkesbury River, the Richmond River, the Murrumbidgee River the Murrumbidgee, the Macintyre, Macintyre, Darling, the Murrumbidgee River rises in the Blue Mountains, and falls into the sea at Broken Bay 20 m. N. of Port Jackson. The Richmond River falls into the sea between 60 and 60 m. E. of Morroto Bay and is navigable for small vessels about 70 m. from its mouth. Hunter's river also has its rise in the Blue Mountains, and is navigable for small craft of 30 or 40 tons burden, for 60 m. from low ebb, into the harbour of which it discharges itself. The Murrumbidgee has its origin in a range of mountains about 200 m. S.W. Sydney, in the parallel of 35° S. and under the meridian of 149° E. It is subsequently joined by the Lachlan and Murrumbidgee and ultimately enters the sea through the large marsh or at slow brackish lake, called Alexandria or Victoria Lake, and the lagoon named Corcoran. These large rivers are thus rendered useless as a means of communication from the sea to the interior. The origin of the Murrumbidgee is unknown but it is supposed to be formed by the junction of two small streams, called the Hume and the Owens, which have their rise in the Warragones Mountains. The Lachlan has its origin in the Culterio range of mountains, in country Argyle, New S. Wales. The Macintyre is formed by the junction of the Fish and Campbell Rivers. This river also takes an inland course and is finally lost in one of those vast internal marshes which form a feature of internal Australia. The Darling is supposed to be formed by the junction of numerous streams in the interior, to the W. of Moreton Bay. Its waters are perfectly salt, and the banks incumbered with the same substance. It falls into the Murrumbidgee 130 m. N. E. of Adelaide. Besides the rivers described, there are, of lesser note, the Glenelg, Manning, Hastings, Clarence and Brisbane. The scenery along the latter stream is said, by Mr. Oxley to be very beautiful, and the adjoining country well adapted for cultivation or grazing. The recent discoveries of Cape Stokes have added five new rivers to the previously known, the Fitz Roy, Victoria, Adelaide, Finisterre, and Albert, all situated on the N. and N. W. coasts. The two last fall into the Gulf of Carpentaria, within 50 m. of each

other. The scenery on the banks of the Albert is described by Capt. Stokes in the most glowing terms. He ascended the river to the distance of 10 m. and found it to be from 12 to 15 ft. in depth, with a breadth of about 500 yards. Some of the reeds, particularly that called *Hops Reed*, was found to present one of the most beautiful specimens conceivable of river scenery.

Lakes.—The lakes possess no characteristics of any interest, indeed hardly deserve the name, the larger of them being, in general, rather marshes than lakes, depending for their supplies of water on the rivers that flow into them, instead of being themselves the sources of rivers; the consequence is, that they are often so dried up by absorption and evaporation, as to present the appearance of vast reedy swamps; and even when filled with water more resemble submerged flats than lakes with low muddy shores, so soft, and of such extent, as to render the water unapproachable. Small lakes are numerous in all the level portions of Australia, but they are all salt, as are also many of the largest, their muddy banks being incumbered with the same substance. An opinion at one time prevailed, and still prevails, though not now so general, that there was a vast lake in the interior of Australia—a theory apparently adopted to account for the inward flow of so many large rivers, which were supposed to discharge their waters into this inland sea. Of this opinion, for one, is Capt. Stuart. The idea was supported by the evidence of the natives in the vicinity of Swan River who asserted that there was such a lake, and, to give a notion of its magnitude, said that if a boy commenced walking round it, he would be an old man before his task was completed. There seems now good reason to believe that this account either refers to one of the marshes alluded to, or is otherwise a gross exaggeration, and that the rivers which take an inland course define themselves as already mentioned, over vast flats, and finally disappear by being partly exhaled and partly absorbed by the sandy soil. Capt. Stokes is of opinion that the centre of Australia is a vast desert, into which all the waters that flow inland are poured, covering it, after heavy falls of rain, into an immense morass or lake, which eventually discharges its surplus waters slowly into the Gulf of Carpentaria. The largest of these swamps or lakes yet discovered are those of Alexandria or Victoria Dumbell and Torrens. The latter, as already mentioned is surrounded by the Murray. The Dumbell was discovered in 1848 by Messrs. Landry and Lecky. It is 15 m. long by 7½ broad, and is quite salt. It is situated 100 m. S.E. of Berkeley in W. Australia, and is supposed to be the lake of which the natives in that part of the country speak in such hyperbolic terms. Torrens lies inland from the head of Spencer's Gulf in S. Australia. It is of a horse-shoe form, and is said by Mr. Eyre to be 400 m. in length with an average breadth of 16 to 20 m. but its real extent has not yet been determined. The shores, according to the same authority are composed of soft mud and sand, in many places coated over with an crustation of salt, which glistens brilliantly in the sun. In the dry season, Torrens is merely a salt marsh.

Climate.—The climate of Australia, so far as regards the localities touched at, or occupied by Europeans, is with some exceptions extremely healthy. That of New S. Wales is particularly so, being perhaps the most salubrious on the face of the globe. The climate may be considered generally as very dry particularly S. of the tropic of Capricorn where the amount of moisture is about equal to that of S. Africa, and the S. parts of S. America in which places it resembles, also, in its mean annual temperature. But here, years of uninterrupted drought frequently occur. N. of this tropic, considerably more rain falls, while at the N. extremities of the island, including Cape York Peninsula and Arnhem's Land, the quantity is equal to that which falls in Ireland and the S. parts of England. It is, however extremely irregular and, though heavy lasts only for a few hours daily. On the W. coast of Australia, S. winds prevail from October to the beginning of April, the commencement of the Australian winter which is opposed to our summer; June, July and August being their winter months. In April the S. winds are interrupted by violent gales from the N. and W. accompanied by heavy rain. On the N.W. coast the winds are more various, but the W. seems to prevail, especially during the months of September, October, November and December. This coast is exposed also to heavy squalls between S.W. and N.E. They are, however generally of short

duration, and rarely take the mariner by surprise, giving ample warning of their approach by the gathering of heavy clouds and much lightning. On the N. coast, the E. and W. monsoons blow with great regularity the E. monsoon setting in generally about the beginning of April, and the W. in October. As might be expected, the temperature of Australia is various being affected both by geographical position and local circumstances. In New S. Wales the average temperature of spring is 65° S. of summer 72° of autumn 66 and of winter 55°. On the N.W. coast, again Capt. Stokes found the thermometer standing in the month of January at 86° in the shade on shore, and fluctuating during the day between 56° and 94°. Capt. Wickham found the average range of the thermometer on this coast, between the N.W. cape and the records of 120° E. during the months of May, June, July and August to be, on board ship 75° in the middle of the day and 60° at night.

Mineralogy.—Granite, sandstone, limestone and slate, potter's clay and sand commonly adapted for glass making occur abundantly. Beautiful marbles, suitable for statuary and other ornamental purposes, have also been found in New S. Wales. Copper, tin, and lead have also been found, but all these metals have been discovered in the shade by the discovery in 1851 in New S. Wales, and in 1858 in Victoria, of numerous rich and extensive deposits of gold, compelling in productive areas even the previously unvalued gold regions of California.

Vegetation.—There is much yet to learn regarding the vegetation of Australia, our knowledge of it being almost entirely confined to its coasts and maritime districts. The verdure being perpetual, the forests never exhibit either the varied tints of autumn nor the soft freshness of spring but wear continually a dull monotonous hue of olive-green. The forests are generally without perfume, though there are several odiferous plants that scent the air to a great distance but many of the former are beautifully formed, and exquisitely tinted although but short-lived. The forests of Australia are often found differing considerably from each other in their general features and characteristics, and in the prevailing description of tree of which they are composed some of them exhibiting an agreeable variety of scenery but most of them having a gloomy and melancholy appearance and being difficult to penetrate owing to the quantity of scrubby underwood with which they are thickened up. And the apparent sameness of the forest, says Constant Dumas, may be often found spots teeming with a gigantic and luxuriant vegetation, sometimes laid out in stately groves, free from thickets or underwood sometimes opening on glades and slopes, intersected with rivulets carpeted with the softest turf and which lack only the thatched and gabled cottages, with the blue smoke curling amongst the trees, to realise a purely European picture. Sometimes again, the forest skirts an open country of hill and plain, gracefully sprinkled with isolated clumps of trees covered with the richest tatted foliage, and encircled with flowers of varied form and colour, or it is lost in immense thickets where unnumbered flowering shrubs, and elegant interwoven creepers, form bowers as impenetrable and as picturesque as those seen in the forests of Brazil. In New S. Wales, many of the forests take their names from the predominating trees, such as Stringy Bark Forest, Iron Bark Forest &c. the former a gloomy looking tree, imparting to the woods a dreary and sombre character. Acacias are extremely common upwards of two hundred kinds having been found, all of them possessing a family resemblance which distinguishes them from the acacias of the Old and the New World. The Proteas and Banksias are almost peculiar to New Holland, and the Eucalyptus, Casuarina, and Norfolk Island pine are remarkable for their beauty and afford valuable timber. The barks of several trees abound in tanning matter and large quantities have been sent to Britain as a substitute for oak bark. Several of the noxious affords a gum resembling gum-arabic. One of the most interesting trees of the Australian forest is the *Boerhaavia glaberrima*, called by the settlers the gum-tree, which often attains a height of 150 ft. with a girth at the base of from 35 to 40 ft. Most of the trees of this species shed their bark annually the process is curious. When the season arrives, the old bark bursts, splits, and falls off, or is blown off by the wind as it hangs dangling in the air and the removed tree stands forth among stumps and branches in a new bark of a

beautiful silvery hue. Nearly all the *Eucalypti* are called gum-trees, although one species only yields a pure gum, the exudations of some of the others being merely resins. Another species yields a substance which the colonists call manna: it is of two kinds—a pure white, and a pale yellow. It has the taste of a delicious sweetmeat, with an almond flavor; and is so innocuous, that much cannot be eaten of it. This substance is much sought after by the natives, who sometimes scrape from the tree as much as a pound in a quarter of an hour. It appears, however, to be by no means very plentiful. From *Eucalyptus* stems the colonists obtain, by incisions in the bark, a cool, refreshing, slightly aperient liquid which ferments and acquires the properties of beer. The most remarkable and most beautiful tree of the Australian forest is the fern-tree, which grows to the height of 15 or 20 ft. when it suddenly spreads out its enormous leaves, each 4 or 5 ft. in length, in every direction. These leaves differ none in appearance from those of the common fern, except in size. Intermingling with the other trees of the forest, is seen, at intervals, the tall slender stem of the palm-tree, rising to a height of 70 or 100 ft. Palms, however, are limited to the N and E shores, where the vegetation resembles more to that of India than to the prevailing character of that of Australia. The blyworts constitute a marked feature of Australian vegetation among them are the *Acacia*s or grass-trees, with shrubby stems, somewhat resembling small palms. They bear tufts of long very foliage at their extremities, from the midst of which rise very long cylindrical spikes of densely compacted flowers like beeches, which furnish valuable fodder for all kinds of cattle. The base of the lower leaves of some species may be used as food, and the lower portion of the top of the trunk is eaten by the aborigines raw and roasted. In the more favoured regions of Australia, grasses are abundant and nutritious, presenting pasturage of great extent, and admirably adapted for the rearing of cattle. It is not a little remarkable however that notwithstanding the excellence of the climate and the luxuriance of vegetation, Australia does not produce a single native edible fruit, if we except some insignificant berries, and a kind of chestnut lately discovered. But exotic fruits and vegetables are found to thrive well, and may now be had in New S. Wales in great abundance, and of excellent quality. The fruits comprise all those of the tropics, as well as those of colder climates, and include oranges, lemons, figs, bananas, guavas, pine-apples, &c. Amongst the culinary vegetables are all those known in the gardens of Europe. Green peas are gathered in winter as well as summer and the potato produces two crops in the year. Seed-time is from March to June harvest in November and December. Every species of corn is cultivated with success in the settled districts. The rice, the olive, and mulberry also thrive well. Tobacco, of good quality, is grown, but being unable to compete with the American, as point of cheapness, some attempts to cultivate it on a large scale were attended with ruin to the speculators. The cat, in a wild state, was not with on the W coast of Australia by Capt. Stokes, who therefore supposes it to be indigenous to that country.

Zoology.—Of the class Mammalia, three orders are entirely wanting in Australia—the quadrupeds, pachydermata, and marsupials. There are thus none of the monkey tribe in that country, no sloth, rhinoceros, hippopotamus, nor deer, no native hoofed quadrupeds of any kind, nor any native ruminating animals, all of the latter now there being of foreign introduction. Neither are there any lions, tigers, bears, wolves, hyenas, or any other wild beasts of prey. The native animals of Australia are mostly indigenous; few of them being dangerous to man either from natural ferocity or from the possession of venomous qualities. Of the ten or eleven

species of Canivora that inhabit Australia, and its seas and rivers, one only is a land animal—the wild dog. Another is the alligator; the rest are marine mammals, belonging to the seal kind and comprehending the sea-lion, sea-bear &c. As a set-off against the above large deduction from his zoology Australia possesses several animals peculiar to itself, and of singular physiological structure. It has more than 40 species of kangaroos, of which nearly every species occurs in all parts. The largest of them, as well as the largest native quadruped, is that remarkable herbivorous mammal, the kangaroo, attaining at times the weight of 160 to 200 lbs. Its flesh is held in high estimation by the settlers particularly the tail, which grows to an enormous size. There are many varieties of this singular animal, some of them very small, but beautifully furred the smallest species is called the *hanger* or *hanger* the largest are locally distinguished by the names of the *forester* and the *old man*. It is said that the kangaroo is rapidly disappearing before the advance of civilization. Opossums, similar to those of America, are numerous, taking up their abodes in the hollows of decayed gum trees. Capt. Stokes met with a beautiful specimen on the N coast, which he describes as being about half the size of a full-grown rat in colour and fur resemble the chipmunk. Next to the animals described, wild dogs are the most frequently met with their appearance is wolfish, ears erect, and colour a reddish-brown. They do not bark, but sometimes yelp, like the common dog. When hard pressed by hunger they devour each other and, being very destructive to sheep, frequently hunted by the settlers. One of the most remarkable animals on this island is the ornithodermis, an aquatic egg-laying mammal, frequenting rivers and lakes, and their margins with the back of a duck and a fur-covered body in shape resembling that of an otter. length from tip of back to that of the tail, 13 inches. It swims well, and, indeed, seldom quits the water as it crawls with difficulty on land. The foot of the male is armed with a spur like a cock's, through which passes a poisonous liquor rendering the animal dangerous. Besides these quadrupeds, there are porcupines of two kinds, flying foxes, flying opossums, and flying squirrels, wombats, and the porcupine and eel &c. Australia now possesses a large stock of the domestic animals of Britain, which thrive there remarkably well. The breed of horses is excellent. Horned cattle, sheep and swine, also prosper the first attaining a great size while the sheep improve in fleece, and their flesh in flavour. Neither goats, asses, nor mules are reared to any extent.

The birds of Australia are numerous, and in great variety and comprehend many beautiful, and some remarkable kinds. Eagles, some very large, measuring 9 ft. from wing to wing salient, and various other species of hawks and owls, are numerous and so also are parrots, periwinkles, and cockatoos, many of them of the most beautiful plumage. Pigeons of various species, and the most delicate and varied hue, frequent every part of the island. Vultures are entirely wanting as are likewise the common domestic fowls, there being nearly a total absence of the gallinaceous birds. All the tribes of small singing birds are also absent. The largest Australian bird is the emu or cassowary excellent in use by the African natives alone, and attaining a height sometimes of more than 7 ft. 5 and 6 being the average. It is widely diffused over the S parts of Australia, but is rapidly disappearing before the encroachments of civilized man. Banders are not uncommon some of them attaining a weight of from 15 to 18 lbs. A rousable bird was met with on the N coast by Capt. Stokes. The large tumbler, says that intelligent navigator noticed by Capt. King and others, and supposed to be raised by the inhabitants, are the works of a bird some of these tumbler are 30 ft. long, and about 5 ft. high. The edifice is erected by means of the feet, which are remarkable both for size and strength, and a powerful power of grasping, they are yellow while the body is brown. Working his nose into the side to see them, hopping towards these piles on one foot, the other being filled with materials for building. They resemble mounds of earth in appearance, though of smaller size. They deposit their eggs in these mounds where they are hatched by the heat generated, in part, by decomposition, and from which they issue in a state of maturity, which renders them independent of parental tenderness. This bird is gallinaceous, and the name which has been given it is *Megapodius australis*.

An opinion is entertained in Australia that unknown animals, of immense size, inhabit the large water-holes and marshes of the interior. This opinion is sustained by native authority always, however, to be doubted in such cases. It was sometimes a large animal, with long white hind-quarters, and which made a tremendous noise, it is said to have been seen in 1844, by a settler in the river Bendara, but it disappeared while he was about a great of men and cattle. Several other tales are alleged also to have been heard proceeding from some of the large and remote water-holes, which those who heard them believed to proceed from some large animal. The frequent discovery, on the banks of some of the Australian rivers, of the fossil remains of gigantic animals, of a race thought to be now extinct, is supposed to give plausibility to the above tale.

From the use of its nest, which is spoken of with astonishment by Capt. Cook, it was presumed to be a bird of enormous bulk. Birds of Paradise abound in the W parts of Australia, where they are shot by the natives with blunt arrows, in order to avoid injuring their elegant plumage. They are then skinned and dried for sale. The most common birds belong to the honey-sucking family and many of the warblers are unusually beautiful, the two most magnificent being the rufous bird, and the ring oriole. The spotted grosbeak, a splendid bird, and the *Mosses* type or type-bird, with a magnificent lyre-shaped tail, are natives of the land of extraordinary natural productions. Quails are numerous, and supply the place of partridges to the sportsmen of the antipodes. The gigantic cranes may frequently be seen on the borders of the rivers, lakes, or swamps, which also abound in ducks, geese, and wildgeese, affording many a savory dish to the hard-wrought settler. Other aquatic birds are the pelican goose, and that rare one of the Latin poets—the black swan, a bird of the most stately form and graceful carriage to be seen in great numbers on the lagoons of New S Wales.

The reptiles of Australia are pretty numerous, though only a few are dangerous. The most formidable is the alligator which abounds in the N. They were seen in great numbers in the rivers Adelaide, Albert, and Victoria, discovered by Capt. Stokes. Serpents are numerous, and some of them extremely venomous. Those most commonly seen in New S Wales are the diamond snake, the black, the gray and the brown, the whly, and the yellow snakes. In the N parts of Australia they are more numerous of greater variety and of larger size. The diamond snake, the largest of those named, attains a length of from 10 to 15 ft. and girth of 13 to 15 inches. It is not venomous, but, owing to the heat of its fangs, its bite is dangerous. It is beautifully marked, and obtains its name from being covered with a series of diamond-shaped spots, of various brilliant colours. The black snake which varies in length from 5 to 5 ft. is poisonous, as are also the gray brown, and whip snakes. But the most deadly is the yellow snake the bite of which is almost instantly fatal. This reptile is also the ugliest of the tribe. It has a large flat head, a malignant eye, and emits a strong, offensive odor. Lizards and frogs are also numerous in various parts. Scorpions, centipedes, and tarantulas do not exist in such numbers as to cause inconvenience or discomfort to the settler.

The seas, rivers, and lagoons, abound in fish of numerous varieties and other aquatic animals, many of them peculiar to the coast, nearly as large as the sea-fish of the same name, are plentiful in the river and in the lagoons are caught enormous eels some of them weighing 20 lbs. Cod-fish are abundant on the coast, and of a large size, being not unfrequently caught of the weight of 50 lb and even 90 lbs. Whales and seals frequent the coasts and coves. On the N coasts are extensive fisheries of trepan, much visited by native traders from the Indian Archipelago. The seas are likewise frequented by several species of sharks, and by sea-serpents of great size. Insects are numerous, and in some respects resemble those of Africa and Asia. Locusts are plentiful in some parts. Of bees there are three kinds, all destitute of stings. Ants are numerous, both in numbers and species, one kind being an inch long and their hills attain a height of 13 ft. with a width, at the base, of 7 ft. gradually tapering to a point. Spiders are very large and caterpillars, in some seasons blight the finest crops.

Aborigines.—The Australian natives belong to the Papuan negro race and are of a very brown or chocolate colour; they are of rather less average height than Europeans, ranging from 5 ft. 4 inches to 5 ft. 7 inches, and frequently falling below the lowest of these measurements. The head is small, the trunk slender the arms and legs of a rounded and muscular form, and the whole figure, in general, very well proportioned but frequently marred by the protuberance of the abdomen. The hair, which they wear very long, is jet black, and for the most part thick and coarse, though in some individuals it is soft and curling. If attended to, it might be made ornamental to their persons, but, being nearly neglected, it becomes matted and greasy. The owners seldom use it as a towel to wipe their hands with. The most remarkable feature, however, of the Australian savage is the eye, which is large, full, penetrating, and singularly eloquent, expressing the emotions and workings of the mind with vivacity and energy. The women are not, in

general, so well formed as the men—a circumstance attributable to their being much employed in digging, and to the custom of carrying their children on their shoulders. Both parents are fond of their offspring, and treat them with the greatest indulgence. Some of the points alluded to are illustrated in the accompanying woodcuts, all representations

6 AUSTRALIAN ABORIGINES.—From Angus Smith's *Australia Illustrated*.

of S. Australians. No 1 is a warrior of the Mount Barker tribe—he is painted with narrow stripes of red ochre that reach quite round his body. His shield is made of bark. No 2 is a woman of the Parakallah tribe, Port Lincoln, with her child on her shoulders, as mentioned above. The little one holds on by the hair of its mother's head. No 3 is a boy amassing himself with a red spear. In this figure, the singular protuberance of the abdomen for which the Australians are so remarkable, particularly when young is very observable.

6 AUSTRALIAN ABORIGINES.—From Angus Smith's *Australia Illustrated*.

No 4 represents a man of the Nauo tribe from Coffin's Bay W of Port Lincoln. He wears a covering of unit feathers, with ornaments of shaved sticks in his hair, which is bound round with spun opossum fur. In his hand is a woman's instrument for throwing the spear. His breast is marked with deep incisions, and horizontally across the breast these are filled with clay which prevents them healing, and renders them hard and horny resembling tubes of gristle, which project from the skin, and produce a repulsive disfigurement of the body. No 5 represents a woman of the Milimendava tribe, on the Coorong equipped for travelling with her net made of brush and her basket along with her back. She is also provided with the digging stick or *matte*, and carries fire in her hand between two pieces of bark. Her garment is the circular mat made of reeds, called *peppercorn*. No 6 is a man

at the Mithemara tribe, wearing the one-wood cloak, the most complete and perfect garment to be met with among the Australian natives. It resembles a coarse matting, the long ends of the grass-like weed forming a graceful fringe at the bottom of the garment. This dress is of rare occurrence, and only manufactured during the inclement season to protect the individual from the weather on exposed shores. No. 7 is an old man of the Mithemara tribe, on the Murrumbidgee. The form of the Australian is less massive than that of the African negro, but he is much more swift and graceful in his movements, and is much more agile and adroit and when belated, says Count Strahlenberg, in the posture of striking, or throwing his spear his attitude leaves nothing to be desired in point of manly grace. Their speech, moreover, particularly the natives of New B. Wales, says the same authority possesses all those felicitous combinations of syllables which constitute a highly sonorous and euphonic language. Both the physical and intellectual qualities of the Australian aboriginal have been rated much too low the descriptions hitherto given of him having been apparently from specimens found amongst the desolated and desolate wastes in the neighbourhood of Sydney corrupted by the contact of civilization, which, instead of improving his condition, has taught him new vices, and reduced him from the independence of savage life to a state of starvation and beggary. In form he is by no means the miserable looking creature he has been so frequently represented neither are his perceptions nor intellectual capabilities at all so limited as they have been described. There is, as might be expected, great diversity both as regards personal appearance and character amongst them but we have the evidence of Capt. Stokes, and other recent writers, to show that both have been unwarrantably disparaged. The former who circumnavigated Australia, and who thus came in contact with a great variety of tribes, frequently speaks of them as being a fine race of men, and the tribes about Shoal Haven and the small B. ports, he describes as good-looking, useful fellows, of whom much may hereafter be made. A curious and interesting manifestation of native talent was found by this intelligent navigator in Depot Island on the N coast. This was a series of drawings of animals &c. on the smooth surface of the rocks. Much ability says Capt. Stokes, is displayed in many of these representations, the subjects of which could be discovered at a glance. The number of specimens was numerous, so that the natives must have been in the habit of amusing themselves in this innocent manner for a long period of time. When to this fact is added that on the same coast, the canoes of the natives, according to the same authority are neatly and artistically made, it is irrational to insist on entertaining a mean opinion of their capacity. In comparison with other savages, but perhaps in a higher degree than any not excepting the red men of America, they possess singularly acute physical perceptions, which they exercise in a way that would appear to be incompatible with a very low condition of the intellectual faculties. Of their extraordinary sharpness of vision, Capt. Stokes records an interesting instance—Two natives were employed to track the footprints of the strayed child of a settler a boy of six or seven years of age, which they did for many miles, tracing the footprints through brushwood, over hills and valleys, and large spaces of grass-covered ground. All the objects of their search were found and the most interesting feature in this case was the fact which these poor savages expressed on discovering the strayed child. Capt. Stokes mentions another instance of their singular keenness of vision, where a particular individual, a settler, was distinguished and named by a native from his footprint, subsequent inquiry confirming the accuracy of the recognition. In the following slightly abridged quotation from the same author we have an account of an aboriginal whose conduct and bearing are alone sufficient to elevate the character of his whole race in the estimation of civilized men—"We had just completed our survey of the coast," says Capt. Stokes, "when two of the boat's crew came to report a visit from one of the natives they said their white visitor came to them without any enticement, no offers of red or blue beads or shells, or some gaudy bauble that seldom fails to catch the eye of the savage, and without the slightest indication of fear. We hurried down to one this marvellously comely native, whom we found coming up the hill he met us with all the confidence of an old acquaintance. His first act of civility was to show

Mr. Tennant and myself an easy road to the beach and I shall never forget, as he proceeded on, or rather walked by our side, yielding the path, with natural politeness, to those he seemed to regard as his guests, how wonderful was the agility he displayed in passing over the rocks, sometimes springing down the face of one almost precipitous without the least apparent effort. His height was about 5 ft 8 inches, his forehead was remarkably high his proportion very quick, and his utterance gentle and slow. His extraordinary confidence in us commanded the respect of us all. As already remarked, there is, however, great diversity in the characters of the different tribes as well as in their social condition while many of them are mild, intelligent, and industrious, some are fierce, vindictive, and generally in a state of the rudest barbarism. Of this description are the natives inhabiting the vicinity of Cape Villaret these savages, unlike the more advanced tribes, who wear cloaks made of opossum skins, are entirely naked with the exception of a coarse grass mat round the waist; their spears, darts, and clubs are made of wood. Neither is there now any doubt that the natives Australians, or at least some of the apert, indulge in cannibalism. Heyler says that he has on several occasions seen human flesh in their possession and that he was told that they make a point of eating certain portions of their enemies killed in battle. Infanticide also is practised to a great extent, arising from the extreme difficulty the mother finds in rearing her offspring.

They have several curious superstitious beliefs and observances. One of the most extraordinary of the former is, the belief that white men were their fellow-countrymen in a former state of existence.

Acting on this belief a party of natives regularly visited a settler twice a year on account of his resemblance to a deceased relative. On these occasions, the settler's kindred, as these poor savages thought themselves, travelled a distance of 60 m. and had, besides, to pass through an enemy's country. The Australians have a superstitious horror of approaching the graves of the dead they are always even to speak of them, and when they do, it is always in a whisper. They stand aloof, in great awe of the noises of the forest when agitated by a tempest. From the reports of the Commandant at the Aboriginal settlement on Flinders' Island, it appears that the natives are making a gratifying progress towards civilization, and becoming expert in some of the industrial arts. In road-making says one of these reports, they are complete adepts they are fully equal, in this kind of labour to the most experienced of the white men in the settlement, and for celerity of movement are greatly superior. In husbandry they had also made great progress, preparing the ground for and planting their own potatoes. Several of the younger male members of the establishment had been put to different trades, and were making rapid proficiency. One youth, who wrote a fair hand, was employed in the Commandant's office as a clerk or copyist, and another as a messenger. Nor were the females behind the males in aptitude. They had become expert needlewomen, and had attained great proficiency in the art of manufacturing French net. In regard to the domestic arrangements of their dwellings, they were found to be fully equal to a large majority of white women and to many much superior. Their ordinary dwellings were kept clean, and were tastefully arranged they washed their husbands' linen, cooked, baked bread, and performed all the ordinary domestic duties of civilized life with judgment and propriety. Some of the more intelligent of the men were employed as police and were found perfectly efficient in all respects. On one occasion several of these aboriginal police were despatched in search of a convict who had absconded they discovered him, brought him back to the settlement handcuffed, and safely lodged him in the jail. Unfortunately our relations to the aborigines are not all of this satisfactory character. Violence and bloodshed have marked the contact of the two races. The savage, driven from his hunting grounds, and deprived of subsistence, commits depredations on the flocks of the settler who, in return, puts the savage to death when and wherever he meets with him; the latter retaliates by murdering the white man when opportunity offers, and a war of extermination is the result. From this fierce and sanguinary spirit, some of the most atrocious crimes have arisen that can well be conceived the greater turpitude, and greater recklessness of human life and human suffering, being almost always with the whites. It is but pro-

per to add, that the British Government has ever shown the utmost anxiety for the protection and well-being of the natives. The despatches of Lord Glenelg, while colonial secretary, to the governor and other public officers of New S. Wales are filled with injunctions to these functionaries to use every means in their power to protect the native from the violence of the settlers, to civilize him by firmerness and gentle treatment, and to provide for his wants. The aborigines are declared to be British subjects, and as such entitled to the protection of the laws, and to all the rights and privileges pertaining thereto. The murder of a native to be considered in the same light as the murder of a white man, and the same consequences to attend the perpetration of the crime, by whomsoever committed. Acting on this principle of justice, seven men, all convicts and servants of settlers, were hanged at Sydney in the year 1853, for the murder of 22 natives, men, women, and children, whom the ruffians led out, tied together by a rope, to a solitary place, and assassinated, one after the other, burning the bodies afterwards.

The native Australians possess no regular habitations, being generally on the move in search of food, but some places along the coast, where they can obtain a constant supply of fish and oysters, they construct such huts as those represented

NATIVE HUT, JARVIS BAY.—From Dr. Smith, Voyages to Australia.

in the accompanying woodcuts. No. 1 is a hut of the natives of Jarvis Bay New S. Wales. It is a superior structure to that which follows bearing out the opinion held as to the greater intelligence of the aborigines of the E. parts of Australia. The native at the door of the hut is procuring fire, by

HUT OF MILAKURDA TRIBES.—From August Smith, Australia Illustrated.

rubbing together two pieces of grass tree. The grass sticks are of two kinds, hard and soft. The soft piece is held firmly by the foot, while the hard one is rubbed between the hands, with the point inserted into the soft piece. No. 2 is a hut of the Milimurra tribe, built on the shore of the Coorong, a lagoon in E. Australia, S. and W. Lake Alexandrina or Victoria. On these black shores, the huts are built facing the N.E. in order to shelter them from the prevailing S. and W. winds.

Colonies.—The colonies established in Australia are, S. Australia, W. Australia, New S. Wales, and the settlement of Victoria, Port Phillip or Australia Felix, and Cockatoo and Moreton Bay. A settlement, called N. Australia, was formed some years since, but was abandoned in 1847 after an outlay by the Government of upwards of £15,000.

There are two rival routes to Australia, the E. and the W. The one by the Indian Ocean and the other by the Isthmus of Panama. The latter is more direct, and shorter than the former by 1786 m.; the distance by Suez and Singapore being 14,468 m. while that via Panama is only 12,690. The distance by the Cape of Good Hope in Sydney is 13,580 m. being 1190 m. more than that by Panama, which is thus the shortest of the three.

Commerce, &c.—The trade of Australia is still only in process of being developed many articles not being yet produced in sufficient quantity to admit of extensive export. The commerce is, however, already considerable, and is rapidly extending, and with the increase of population, becomes every year more important to Britain, whence the colonies derive their supplies of manufactured goods. Particulars respecting the commerce of Australia will be found in articles on the separate colonies. Here it may be noted generally that of late years, copper ore, gold, and wool have formed important items of export. After gold, wool is the staple commodity. The extraordinary increase, from 1830 to 1853 in the quantity of this article produced in Australia, and exported to Great Britain is shown in the following table:—

Year.	1830	1840	1845	1851	1852	1853
Wool, 1,000 lbs.	9,770	425	54,177	617	11,000,000	17,547,415
Gold, 100,000 lbs.						40,001,087

QUANTITIES OF THE OTHER ARTICLES EXPORTED FROM AUSTRALIA IN THE LAST FIVE YEARS, IN ONE A 1853.

	1851	1852	1853
Copper ore, value of copper and copper vessels	7,053	10,144	5,311
Copper wrought	354	73	809
Iron, not tanned	23,380	93,238	41,981
Iron, tanned	565,708	819,044	515
Woolen of pure shawl, rough	567	1,070	805
Of coarse - t.	3,601	10,894	9,851
Ch. garments	1,001	804	446
Q. leather	74	81	815
Skins, sheep, undressed and tanned.	6,443	27,616	26,439
Tallow	178,464	159,161	154,138
Wine, produce of Brit. soil in Australia, 1853	1,711	84	104

To the end of 1853 probably above 610,000,000 of gold have been exported. In 1851 271 vessels, since 1845, 77 left the United Kingdom for Australia but in 1853 551 vessels, since 1845 118 were despatched. Pop. (1849) 287,409.

History and Discovery.—The first account given of Australia was by Torres, a Spaniard, who passed through the strait that now bears his name, between 1 Spain and Australia, in the year 1606. Between that period and 1695 a large portion of the coast line of Australia had been surveyed by various Dutch as navigators. Between 1684 and 1690 Dampier explored a part of the W. and N.W. coasts to which discovery had hitherto been confined. But, in 1770 Cook extended it to the E. coast which he carefully surveyed. He was followed by Bligh in 1789, who earned on a series of observations on the N.E. coast adding largely to the knowledge already obtained of this new world. Colonists had now arrived on the soil and a penal settlement was formed (1787) at Port Jackson. Since then various adventurers, both by land and sea, have been endeavouring, with more or less success, to increase the amount of information regarding both the interior and the coasts of Australia. Amongst the former are, Mr. Oxley, Messrs. Hovell and Hume, Capt. Sturt, Major Mitchell, Mr. Earle, Count Stralsdorf, Capt. Grey, Messrs. Lander and Lefroy, Dr. Leichardt, and Assistant-Surveyor Kennedy, who was murdered by the natives, when exploring the course of the Victoria, in 1848. Amongst the more eminent navigators, besides those already named, who have explored the coasts of Australia, are, Capt. King, Bass, and Flinders; and, in recent times, Capt.

Stokes, in the letter of which we are, as the reader will have perceived, indebted for much of the newest and most interesting information contained in this article.—(Dr. Stenhouse's *Physical Description of New S. Wales and Van Diemen's Land*; Stokes's *Discoveries in Australia*, &c. Dutton's *S. Australia* and its *Mineral Government Returns* regarding *Australia* and *Aborigines*; Martin's *British Colonial Library*; James's *S. Australia*; Bather's *Handbook for Australia*; *Emigrants*; Sturt's *Expedition into Central Australia*, 1846; Jukes's *Sketch of the Physical Structure of Australia*.)

AUSTRALIA FELIX. See PORT PHILIP

AUSTRALIA (EASTERN) or **NEW S. WALES**, the E. part of Australia, S. of lat. 26° S. by S. and E. of lon. 141° E.; bounded N by N. Australia, W by S. Australia, S. by Bass's Strait, and E. by the Pacific. greatest length about 900 m. and greatest breadth about 750 m. This large district is now divided into—1. Cooksland, or Moreton Bay comprising the N. portion, S. to lat. 30° S.—2. New S. Wales proper or the middle district, the oldest colony in Australia, from lat. 30° S. to Cape Howe, lat. 37° 30' S.—3. New S. Wales, Port Philip or Victoria, W. of Cape Howe, S. of the rivers Murrumbidgee and Murrumbidgee, and E. of S. Australia. See **NEW S. WALES**, **COOKSLAND**, and **PORT PHILIP**.

AUSTRALIA (NORTH) that part of Australia lying N of lat. 26° S. and E. of lon. 120° E. bounded, N by the Indian Ocean, E. by the Pacific, on which side it is fringed by the Great Barrier Reef (which see) S by E. and S. Australia and W by W. Australia greatest length, W to E., about 1500 m. greatest breadth, N to S., about 1000 m. On the N. shore is the immense Gulf of Carpentaria, about 400 m. in sq. and in the W. the Gulf of Van Diemen and Cambridge. Of this large tract of country comparatively little is yet known. Not a single permanent settlement exists upon it. On but one healthy Government station at Port Essington, on Coburg Peninsula, Arnhem's Land, notwithstanding the great hopes that were formed of it, having been abandoned in 1849. For what is known respecting N. Australia, the reader is referred to the articles **ARNHEM'S LAND**, **PORT ESSINGTON**, **CAPE YORK**, **CARPENTARIA** (GULF OF), **ARHMEAN RIVER**, &c.

AUSTRALIA (SOUTH) a British colony so called from occupying the S. portion of the S. region on the S. of the Australian island-continent, between lat. 26° and 38° S. and lon. 125° and 141° E. and bounded S. by the Southern Ocean, E. Victoria, N. unoccupied and almost unexplored territories and W. Western Australia area 800,000 sq. m. The coast about 1200 m. long, is for nearly all of desolate aspect, but is occasionally skirted by low sandhills, and towards its E. extremely rises into rocky cliffs of sandstone, covered with wood and rising to the height of 500 ft. to 800 ft. It is lined by numerous rivers, all small except that of Esquimaux, and is remarkable, particularly in the S. for the number and depth of its indentations, being penetrated from S. to N. by the large gulfs of Spencer and St. Vincent, separated from each other by Yorke Peninsula, and continuing on the S.W. shore of the former the excellent harbor of Port Lincoln and on the E. shore of the latter Adelaide, the rising capital of the colony. A large portion of the interior consists of stony barren tracts, often so completely destitute of vegetation as to present all the appearance of a desert waste and apparently doomed, from the want of water to remain for ever unfit for human habitation. Still, after deducting the waste, large tracts remain some of tolerable fertility covered with wood or scrub, or somewhat stony ground, well adapted for extensive sheep-walks, and others of admirable fertility capable of raising all kinds of grain and fruit.

The surface is traversed by several mountain-ranges, the highest summits of which scarcely if at all exceed 3000 ft. Of these, Mount Lofty commencing at Cape Jervin, which forms the E. entrance of the Gulf of St. Vincent, skirts the E. shore of that gulf for about 40 m., attaining the height of 2834 ft. and then continues N into the interior, where it seems gradually to descend, but its course has not been traced. The principal mountains are—Razor Back 2925 ft., in lat. 34° 20'; immediately N of it, Mornia Bryan 3012 ft., with its celebrated Burras mts and still farther N., about lat. 33° 40' Black Rock Hill, 2750 ft. Near the head of Spencer Gulf Mount Lofty throws off an arm nearly at right angles, which, under the name of the Gawler Range, stretches nearly due

W rising gradually as it proceeds, and makes a sudden bend N N W. its extreme height appears to be about 3000 ft. It is singularly rugged and barren. On the E. bank, and near the mouth of the Murray a range of moderately elevated heights proceeds S. E. skirting the coast to its extremity near Cape Northumberland. Throughout these ranges the existence of volcanic agency at a former period is everywhere apparent, and several distinct crater cones are to be traced. The higher summits are usually composed of granite, diorite, porphyry, gneiss and other igneous rocks. On the lower slopes slate usually prevails, but both on them, and at still higher elevations, a ferruginous sandstone is largely developed. Among the mountains E. of Gulf St. Vincent primitive limestone, often in the form of a beautiful white marble, is very abundant. Throughout these formations, and more especially in veins of quartz penetrating the clay-slate, a great variety of valuable minerals have been found including copper which has already been worked to a considerable extent, and yielded most profitable returns, argentiferous lead, manganese, iron, and iron. Gold also exists, but has not yet been found in such abundance as to settle S. Australia to rank as a gold-field.

Almost the only stream within the colony which deserves the name of river is the Murray which enters the colony on the E. in lat. 34° flows first easterly then W. and then S. into the extensive lagoon called Lake Victoria, communicating with Encounter Bay. Though the largest river of S. Australia it would, in well-watered countries rank as a comparatively insignificant stream, but its great importance here cannot easily be over-estimated more especially since it has been ascertained that during the rainy season it is as fertile by descent through its whole course within the colony. Almost all the other streams are, for the greater part of the year merely chains of ponds. Lakes, both salt and fresh are numerous, but seldom large. The shallow lagoon of Victoria or Alexander has been already mentioned. The only other deserving of notice as forming a remarkable physical feature, is Lake Torrens a shallow basin, which curves from S. to N. in the form of a horse-shoe, for at least 400 m. with a breadth varying from 30 m. to 80 m.

The climate is hot, but salubrious, and has proved by no means trying to European constitutions. As already, in the summer months of December, January and February, the maximum temperature is about 105° the minimum about 65°. In July the depth of the Australian winter the maximum is 60° and the minimum 48°. The surface being much more pastoral than agricultural, wool has hitherto been the staple product but all the ordinary grain-crops, maize, and potatoes, grow well. The vine finds both a congenial soil and climate, and many varieties of fruit, including melons of uncommon size and quality are becoming abundant. By far the most important export is copper which in the three years ending 5th January 1854, amounted as follows—Copper ore (1851) 4128 tons (1852) 8563 tons (1853) 2677 tons; regulus of copper (1851), 186 tons; (1852) 401 tons (1853) 68 tons; copper unwrought (1851) 780 tons (1852) 679 tons (1853) 469 tons; copper partly wrought (1851) 319 tons (1852) 572 tons; (1853) 561 tons. The great falling off in 1853 is accounted for by the greater attraction of the Victoria gold-fields. The next most valuable export is wool, which, in the last of the above years, amounted to 359 748 lbs. the declared value of imports was £1,183,458. The revenue of 1854 was £189,440. In 1853 the population amounted to 70,000. For administrative purposes South Australia is divided into 11 counties. As a colony it was founded by the South Australian Company in 1834, but not properly established till 1837.

AUSTRALIA (WESTERN) in the most extended sense, that portion of Australia W of lon. 127° E.; bounded E. by N. and S. Australia, and N. W. by the Indian and S. Pacific Oceans. It lies between lat. 18° 45' and 36° 10' S. lon. 112° 40' and 127° E. Of this vast territory little is known. Its interior has never been visited, and even its shores have only been partially explored with any degree of exactness. Its principal bays and gulfs are, Cockburn, D'Ent, King Sound, Roebuck Gulf, and Shark Bay all on the W. and W. coasts, there not being a single gulf of any extent on the E. coast, as far as yet known. The principal capes are—on the S.W., Cape Leeuwin, on the W., N. W. Cape

and on the N. Capes Leveque, Voltaire, Bongaillville, Talbot and Landonary. The coast is everywhere, but especially on the N and W fringed with coral reefs and islets. N of lat 18 S. it is as a whole, high, frequently rocky and at times well wooded. From lat 18 to 28° S. it is generally low sandy and mostly barren, though here and there rocky hills, patches of grass, and thick mangroves are met with. The remainder of the coast, including the whole of the colony of W. Australia, is elevated with some intervals of low sandy shore. In some parts it is barren, but in many it is well wooded. The only part of this portion of Australia known with any degree of accuracy is the colony above referred to.

W. AUSTRALIA (Colony of).—In a more restricted sense the name W. Australia is applied to a British colony on the S.W. coast of Australia, founded in 1829 between lat. 30° 30' and 35° 30' S and lon 115° and 119° 30' E. occupying a space of 300 m N to S, and about 160 or 170 E. to W. with a coast line of about 600 m. Its first appearance is not very inviting; dull, green looking downs, backed by a slightly undulating range of hills, rising to nearly 2000 ft. high are the chief natural features. It consists of 26 counties, mostly of pretty regular form lying compactly together and varying from about 40 to 70 m. in length, and from 30 to 45 m. in breadth. The land here generally is not remarkable for fertility the entire territory containing perhaps a greater quantity of positively bad land than any other of the Australian colonies but, with manure and proper cultivation, very good grain may be produced. The wheat of the wheat districts grown here has been as much as 70 lbs. per bushel and its quality generally as good as that of S. Australia. Soil upon which sheep have been folded produces on an average about 30 bushels per acre, but it might be much increased. A great deal of barley is grown. Oats will not grow well and the climate is unsuited to flax. The herbage is scanty and the average stock would keep about one sheep to 5 ac. but there is the advantage of a supply of water throughout the year remaining in pools or lakes, sufficient for the pastoral system, and for the climate generally. The vine, fig, and olive are beginning to be successfully cultivated in the colony. Grapes and currants of every species also thrive, and a great deal of wine has been made from the former for the consumption of the colony. The quantity of vineyard already planted is 390 ac. The live stock of the colony in 1848 was estimated at 118 570 head but there is reason to believe that it much exceeds this, many of the settlers who had considerable flocks having refused to give returns, while others made incorrect ones. With the exception of cinchona which has been found in masses on the surface of the ground in various places no metalliferous ores have yet been discovered within the colony. Coal of good quality has been found and, from the reports of the geologist employed by the Government it appears that fields of great extent may be calculated on. Very little trade is carried on from this colony to S. Australia or New S. Wales, but there is an active communication with Singapore and the Mauritius. To the latter place, the exports are sheep, bullocks, and potatoes. The principal export of the colony is wool. It has, however a less average market-price than Britain than the wools of the other Australian colonies, partly from its being less known, and partly owing to inferior care bestowed on getting it up, from want of labour though, in principle it is quite equal to any of them. Its production has greatly increased, and there is a capacity of almost unlimited extension. The next most important article of export is sandal-wood, the markets for which are Singapore and China. In 1848, there were only 32 tons of this wood shipped from the colony in the following year the quantity amounted to 370½ tons, and would have been much larger had the colonists possessed the means of conveying the wood which had been felled to the port. There is likewise an available supply of shipbuilding timber which grows quite close to the sea. It is analogous to Honduras mahogany is of a great size, possesses the peculiar property of resisting the sea-worms, and is not apt to split or warp, while at the same time it is more easily worked than any other wood in Australia. It has been used on the colony for building small vessels, and also for rafters, &c. in house-building being impervious to the white ant. A ship-load was supplied to the Admiralty under contract, last autumn (1848) and was very highly

approved of. It is confidently expected that when the value of this timber the service of the colonists, becomes more widely known, it will materially promote the progress of the colony which hitherto has not been very rapid while in some respects, there has been a positive retrogression. In 1853 the only item of export to the United Kingdom was wool and that only to the amount of 34 000 lbs. though in 1851 it had attained the amount of 369 596 lbs. and in 1852 that of 327 600 lbs. The total exports in the same year, amounting to £100 917 consisted chiefly of haberdashery, beer and also cotton woolen and silk goods, iron, steel hardware, and cutlery leather soap, and candles. In 1853 the quantity of land alienated was 1 883,208 acres, and the quantity surveyed and open for settlement only 21 000 acres. In 1849 the tonnage entered was 7592 tons, and cleared 8145 tons in 1850 the entered was 15 988 tons, and the cleared 14 748 tons. For administrative purposes the colony is divided into 32 counties. The government is similar to that of the other Australian colonies. The most important part of the colony is the Swan River settlement founded in August 1829 by Captain Eiding, who was appointed governor. Fremantle, at the entrance of the river is the port and Perth situated about 9 m inland, in the county of the same name is the capital and seat of government. It is a large straggling village partly concealed by the abrupt term nation of a woody ridge, and standing on a picturesque slope on the right bank of the river. Guildford and York are the other chief places in the colony. The Swan River like all the other rivers of Australia, is subject to sudden and tremendous floods, which inundate the corn lands in its vicinity and sweep away all opposing obstacles with irresistible impetuosity. The number of aborigines is about 1500. A good feeling exists towards them and many of them are employed by the settlers in menial capacities but they are fast decreasing. Pop. of colony (1851) 8967.

AUSTRALIAN ALPS.—a mountain-range in Australia, in the colonies of Port Phillip and New S. Wales extending from lat. 38° S lon 148° 30' E. in a N.E. direction for about 200 m and forming part of the great Australian or chain from Wilson's promontory to Cape York. Its highest peaks are Mount Kosciusko or Wallington 6500 ft. Mount Dargal 4600 ft. and Mount Pinalar 4100 ft.

AUSTRALIAN GRAMPPIANS.—a mountain-system in Victoria or Port Phillip W. the Pyrenæes, cos. Ripon and Dundas. The highest known peak, Mount William is 4500 ft. above the sea level. This, the most W. system in the colony has generally a N. and S. direction, and is composed of several ridges. From the N. slopes rise the Wimmera and Northern which unite and flow N. to Lake Hindmarsh. From its W. and E. slopes flow the rivers Glenelg, Wendou, and Grange which all unite into one stream and fall into the sea in lon. 141 E.

AUSTRALIAN PYRENEES.—a congeries of mountains in Victoria or Port Phillip, N. W. Melbourne, cos. Talbot and Ripon, and connected W. by low ridges with the Australian Grampians. The culminating peak, so far as known is Mount Cole, rather more than 100 m. W. N. W. Melbourne. From their N. slopes rise the rivers Avoca and Yarra-ye the latter an affluent of the Murray.

AUSTREY = par English or Warwick 2097 m. Pop. 555.

AUSTRIA (Empire of) [German *Oesterreich* or *Osterreich*—the Eastern kingdom? The Austrian empire is one of the largest and most populous of the European states, situated nearly in the centre of the continent. It extends from about lat 45° to 51° N. or exclusive of Rumania and the Slavovet part of Croatia, from about lat. 44° 30' to 51° N. and from about lon 9° 30' to 24° 30' E. comprising 258,000 sq m. or about 45 000 more than France. Its greatest length, from E. to W. is about 860 m. its greatest breadth, from N. to S. with the exclaves and abutments about 600 m. bounded, S by Turkey the Adriatic Sea, and the independent states of Italy; W by Sardinia, Switzerland, Bavaria, and Saxony; W by Prussia and Russian Poland and E. by Russia and Moldavia. On the shores of the Adriatic along the coast of Dalmatia and Venetian Lombardy lies its only sea frontage extending exclusive of islands, about 500 m.

The Austrian empire is composed of a union of different states, some of them at one time forming independent kingdoms, inhabited by races of people differing from each other

In almost language, customs, laws, and religion held together as one empire, by being under one sovereign and one central government. It is divided into 13 governments, corresponding

ing in a certain respect to the nationalities of which it is composed. The following table exhibits the name and area of these governments with their population in 1850—

ARRANGEMENT OF PROVINCES according to the Constitution of March 4, 1849, and POPULATION in 1850 exclusive of Military

PROVINCES.	Area, Sq. m.	Population, 1850	Pop. per sq. m.	CHIEF TOWNS.	Population, 1850.
1. Archduchy—					
Upper Austria	5,484.92	708,816	129.7	Lin.	26,878

Total	198,680.75	31,775,364	159.9		

As this article on the empire, as a whole, must necessarily be general the reader is referred for more specific notices of the provinces to the separate articles on them throughout the work.

General Aspect.—Although presenting every variety of surface, the prevailing character of the Austrian dominions is mountainous, there being few districts where mountains are not found while the plains do not occupy more than a fifth part of the whole superficies. The loftiest ranges, and the most extensively cultivated are found in Tyrol, Styria, Illyria, and the S. parts of Austria Proper. In some of these regions the scenery is bold and romantic, and has been considered equal to that of Switzerland. The most extensive tracts of low or flat land occur in Slavonia and the S. E. and central parts of Hungary much of this level land is remarkably fertile, but it is met at various points by vast morasses and arid steppes. The principal valleys are found in Tyrol, Salzburg, Styria, and Illyria. Extensive plains stretch along the courses of the rivers, particularly the Po, the Danube, and the March. The principal rivers of Austria are the Danube, the Elbe, the Save, the Drava, the Mura, the March, or Morava, the Teis, or Thaya, and the Maros. The Danube, for upwards of 800 m. is navigable for pretty large vessels throughout the whole Austrian territory which is all the other most of them tributaries of the Danube are navigable for vessels of smaller size. All of them abound in fish. The lakes are numerous though those in the low land, particularly in the plains of Hungary are rather smaller than lakes, being collections of stagnant water with swampy margins. These in the more elevated regions of Styria, Tyrol, and the other mountainous districts are pure lakes, surrounded with wood and rock and all the other attributes of picturesque scenery. The finest lakes are to be found in Upper Austria, of which the principal are the Attersee, the Mondsee, the Traunsee, and several others. In Styria, the lakes are numerous but small.

Climate, and Vegetable Productions.—Austria lies between the isotherms of 60° and 50° and has a climate nearly as various as its surface. In some parts, as in Hungary, the annual fall of rain is comparatively small while the W. and N. W. parts of the empire, in this respect, resemble the W. of England and the alpine regions are probably the most rainy in Europe. The N. regions, between the 48th and 51st degrees of lat. have an average temperature resembling that of the N. of France. Between lat. 48° and 49° the heat is considerable and between 42° and 48° which comprises the whole of S. Austria, it is still colder the winter lasting two or three months only, and being, in general extremely mild. In the first region, the principal products are wheat, barley

oats, and rye in the second vines and maize are added and in the third olives. The productive capabilities of the soil however are by no means rendered available to their full extent. The quantity of land under cultivation is equal to that in Great Britain, but the produce, even where the soil is superior is small a third less. The wines of Austria are poor with exception of a few choice kinds including the well known Tokay and some therefore but such descriptions are exported and these in very limited quantity. A great portion of the worst wine is made into brandy. The average produce of wine is about 3,000,000,000 gallons of which Hungary yields by far the largest proportion. The vineyards by which the above quantity of wine is produced occupy 487,202 ac. The quantity of arable land is 62,433,383 ac. producing of wheat, maize, rye, barley and oats 60,260,860 quarters. The forests are more than an eighth part of the productive soil of the empire, and form no inconsiderable source of wealth. About half of the whole is in Hungary including the Banat, Croatia, and Slavonia, and in Transylvania. Much of it is of excellent quality and well adapted for house and ship building, furniture, and for all other purposes. In general however owing to bad management, it is not nearly so productive as it ought to be.

Animals.—Wild deer with small eland, foxes, lynxes and a species of small black bear are found in many districts the fox and lynx being particularly abundant. Herds of a native breed of horses of small size were wild over the plains of Hungary. All the domestic animals of England are known throughout the empire. Domesticated birds especially ducks and geese are abundant and wild birds more numerous than in any other part of Europe. Among the latter are wild geese, bustards, grouse, blackcocks, woodcocks, wild ducks, wildcats, and the like.

Geology, Mineralogy, &c.—A large portion of the countries now composing the Austrian empire was at one time submerged by the sea, particularly Hungary where the general appearance of its vast plains, the nature of their soil and above all the occurrence of fossil sea-shells, leave no room to doubt the former dominion of the ocean. Throughout all Austria the tertiary formation prevails with a margin of the secondary formation, stretching to a greater or lesser extent into the surrounding countries and diversified by patches of igneous rocks of the tertiary and alvial epochs. In mineral productions Austria surpasses, probably every other country in Europe possessing with the exception of platinum, all the metals. In Transylvania, gold is obtained in large quantity and in Hungary silver abounds. Copper and lead

mines exist in different parts of the empire. The repositories of iron are innumerable; but, from the high price of fuel the quantity produced is far short of what it might be. Tin is raised in Bohemia, but in no other part of the empire. Quicksilver is obtained in many places; but the richest mine, not only in Austria, but in Europe, is that at Idria in Carinthia. Colemanite, also, cobalt, arsenic, bituminous chrome, hematite, manganese, black tourmaline, alabaster, serpentine, gypsum, black-laid, slate, and flint, abound in many of the countries of the empire, and coal in almost every province. Salt, vitriol, alum, sulphur, sulphates and soda are also among the mineral productions. In every part of the Austrian dominions, mineral springs are numerous. The precious stones are the Bohemian carbuncles and Hungarian opal both much esteemed; the shadobony ruby, emerald, jasper, amethyst, topaz, cornelian, chrysolite, and beryl. Marble, of every description and variety of colour occurs in most of the provinces.

Industry, Commerce, Minerals, &c.—The quantity of gold obtained in 1847 was 68,467 oz. of silver 687,607 oz. of quicksilver 3851 cwts. of which about a third was converted into elemaner of tin found wholly in Bohemia, only 43 tons, a quantity quite insufficient for the home consumption though apparently not on the increase. Copper is found principally in Hungary. The whole produce in 1847 was 2770 tons, but, as in the case of tin the quantity obtained was not equal to the home demand, some obtained 294 tons. The produce in lead in 1847 amounted to 3080 tons, testimony to 201 tons, cobalt to 144 tons but the largest produce of the metals is iron which was, in 1850 169,481 tons. Cast iron is produced chiefly in the N. provinces of Styria, Carinthia, with Carinthia, Bohemia, Moravia, and Hungary. In 1841 there were of blast-furnaces and smaller smelting-works in operation, 226; cupole-furnaces 32 iron and steel forges 885 puddle-works, 16 with 24 furnaces plate-rolling works, 40 and 9 cast-steel furnaces. An important branch of the iron trade of Austria is the manufacture of rails for railways. Some years ago however Austria could not supply the demand for rails, and large quantities were imported. These importations have now greatly diminished, in consequence of an increase in the production. The quantity of coal produced in 1847 amounted to upwards of 686,499 tons more than four times the quantity which was raised in 1838. The quantity of salt produced in 1850—rock boiled, and hay salt—amounted to 275,820 tons. The far greater number of the Austrian mines belong not to private companies but to Government. The following table exhibits a comparative view of the produce of the Austrian mines in the years 1838, 1847, and 1850.

	1838	1847	1850
Gold	On 81,117	On 85,156	On 85,487
Silver	686,547	697,746	687,607
Quicksilver	On 3851	On 3851	On 3851
Copper	27,287	27,287	27,287

Opium	15	8	8
Magnesian	47	—	—
Total Value	21,044,215	21,887,441	27,000,000

Silk.—The textile manufactures of Austria have considerably improved in extent of late years, but are still behind in regard to many important circumstances, including judicious selection of locality, subdivision of labour and general man-

agement, which so largely contribute to the success of the English manufacturing establishments. Amongst the textile manufactures, silk holds a conspicuous place, although confined chiefly to Vienna, Milan, Como, Prague and Pott. The first-named of these places consumes annually 600,000 lbs. of spun silk or silk-thread the second 180,000; and the last 240,000 making, in all 1,020,000 lbs. The whole produce of the silk manufactures of the Austrian empire amounts to about 22,500,000, employing altogether in the various processes, about 160,000 persons. The principal silk-producing provinces are Lombardy, Venetia, Tyrol, the coast-lands, Hungary, and the military frontiers. The produce of the Italian provinces alone was estimated at 5,000,000 lbs. The silk-mills and silk-factories, in 1848 amounted in all to about 6840.

Wool.—The woolen trade of Austria is also considerable. In 1843 the entire annual produce of the empire was 771,875 cwts. of which Hungary produced nearly the one-half. The manufacture of woolen cloths is on foot in Bohemia and Moravia chiefly the other provinces do not produce sufficient to meet their own demands. The entire production of Austria in woolen cloth and walked stuffs may be reckoned at about 1,000,000 pieces, value about £4,500,000. In the production of combed yarn from which the finest description of goods is manufactured, the improvement has been considerable. In 1841 there were 14 mills for combed yarn, with 25,400 spindles, producing 68,386 cwts. The number of spindles may now be reckoned at 90,000. The whole produce of Austria in combed woolen stuffs may be reckoned at 228,500 pieces. In the manufacture of shawls and shawl-cloths Austria is rapidly acquiring a high reputation. The principal seat of the manufacture is Vienna, where there are six factories which together produce annually about 400,000 pieces value £240,000.

Linen.—In consequence of the large quantity of linen produced by private individuals throughout the various provinces of Austria, an approximation by estimate, of the value of the whole quantity produced in all that can be attempted. This founding on the best attainable data is about £5,000,000 employing 30,000 looms, and about 500,000 weavers and as each weaver requires 12 spindles, to supply the necessary quantity of yarn there would appear to be three and a half millions of individuals or a tenth part of the whole population of the empire, more or less employed in the branch of industry. Though machinery for flax spinning has recently been introduced this operation is still performed chiefly by the hand.

Cotton.—The cotton weaving of Austria is also upon the increase. Besides the handlooms which it employs and which in 1848 were estimated at 90,000 numerous cotton-mills or factories have been erected chiefly in Lower Austria and Bohemia but partly also in Lombardy the Tyrol and other provinces. In 1848 the number exclusive of those in Austrian Italy Hungary and Transylvania, was 168, with 1,237,861 spindles.

Cloth-printing.—In the printing of both woolen and cotton and in Turkey-red dyeing Austria has made, and is making great progress. The quantity of cotton and woolen goods printed in 1841 was together 2,068,000 pieces, value £2,181,000 of which about six-sevenths were cotton. To the number of pieces of printed cotton and woolen goods above given there falls to be added 254,000 pieces of mixed fabric, produced in Lower Austria. The principal establishments for Turkey-red dyeing are in the N. of Bohemia in Vorarlberg, Moravia, Galicia, Lombardy, Treviso in Venetia, Stein in Carinthia, and one or two other places. The mixed produce of the whole was in 1841 12,000,000 pieces. The entire quantity of goods—cotton woolen and mixed fabrics—printed in Austria, is rather more than one-fourth of that printed in England, nearly equal to that of France upwards of one-fourth more than that of Russia, and more than double that of Prussia and Switzerland.

The whole cotton manufactures of the empire including spinning weaving and dyeing may be estimated at £4,500,000 the number of hands employed at 860,000.

Distilling and Brewing.—Austria is somewhat remarkable for the number of its breweries and distilleries. Of the former there are 3165 which produce about 100,000,000 gallons annually consuming about 900,000 quarters of malt. The ale of the beer produced in 1842 was stated at £2,500,000 the beer-tax amounting in the same year to £250,000. The whole quantity produced, however, only equals half that pro-

exported in Bavaria. The number of distilleries in Austria, exclusive of Hungary, Transylvania, the military frontiers, Austria Italy and Dalmatia, was in 1850, 14,937 producing 16,877,510 gallons of spirit, of which Galicia alone produced 11,911,141 gallons. In Galicia, Moravia, and Silisia the distilleries work chiefly from grain but in Bohemia, Styria, and Austria Proper large quantities of spirits are manufactured from wineless plums, cherries, potatoes, &c.

Austria had, in 1851 in addition to the sugar-refineries which annually use about half a million cwt. of colonial sugar 13 solely employed on the sugar obtained from beet-root and potatoes. Of these there are 68 in Bohemia, 26 in Moravia, and 30 in Hungary the remainder are scattered over the other crown-lands. In 1850 when the number of these refineries was only 82 they used 8,090,000 cwt. beet-root, and 132,850 cwt. potatoes, in producing 161,174 cwt. raw sugar. The competition with colonial sugar is maintained by means of a heavy protecting duty.

In addition to the general import and export trade Austria carries on—partly from its central position in the continent of Europe, and partly from its numerous navigable streams, excellent roads, and in later times, its partially completed railway system—a very considerable amount of business in the transit of goods through her territory to other countries. The transit duties vary from 3 kreutzers or the 16th part of a shilling, to 27 kreutzers, or 10½ per cent. of 12½ lbs. The relative importance of these three branches of commerce will be perceived from the following table—

IMPORT EXPORT AND TRANSIT IN 1850.

Agricultural and Agricultural Products	Imports	Exports	Transit
Cereals, produce, &c.	21,579,000	21,579,000	00,000
Woolen produce and fruit	41,000	35,700	65,300
Oil	2,500,000	111,100	0,000

1868	21,579,000	21,579,000	21,579,000
1869	21,579,000	21,579,000	21,579,000
1870	21,579,000	21,579,000	21,579,000

Both the exportation of wool, and the importation of raw cotton, have greatly increased of late years, the latter being, in amount, nearly twice what it was in 1851. In timber, a similar improvement has taken place. The average annual exports between 1851 and 1850 was to the amount of £250,000; in 1844 it amounted to £247,000. This branch of trade suffers greatly from a want of suitable means of transport, and until these are obtained, one of the most important sources of the national wealth must remain comparatively unavailable. In the iron trade, there has been an improvement during the last 20 years equal nearly to 400 per cent. and on coals to 700 per cent. The exports, again, of linen goods, broad yarn and flax, show a gradual falling off, the result of the advance of the cotton manufactures. In decrease, however, is limited chiefly to fine goods. In the regular increase in the importation of dye-stuffs, we have a marked indication of the progress of industry. The quantities of indigo and wood imported in 1844 were nearly one-third more than in 1840 and previous years, and in dye-woods the increase was about as much. The woollen manufactures of Austria are also improving, and the exports of the finer descriptions of goods increasing. But the imports of foreign wool indicate any falling off in the home produce, it being a coarse material from Russia and Turkey for the manufacture of cloths for the poorer classes.

The following table exhibits a comparative view of the total imports and exports of the empire in the years 1847 and 1850 and at the same time shows the chief localities from which they come or to which they are sent—

	Imports from		Exports to	
	1847	1850	1847	1850
S. Germany	21,410,000	21,540,000	21,411,000	21,111,000
France	1,700,000	1,700,000	1,700,000	1,700,000
Prussia	1,700,000	1,700,000	1,700,000	1,700,000
Poland	1,700,000	1,700,000	1,700,000	1,700,000
Russia	1,700,000	1,700,000	1,700,000	1,700,000
Turkey	1,700,000	1,700,000	1,700,000	1,700,000
Italy	1,700,000	1,700,000	1,700,000	1,700,000
Switzerland	1,700,000	1,700,000	1,700,000	1,700,000

Galicia	21,110,000	21,110,000
Carinthia	21,110,000	21,110,000
Trieste	21,110,000	21,110,000
Venezia	21,110,000	21,110,000
Hungary and Transylvania	21,110,000	21,110,000
Total	21,110,000	21,110,000

The imports from Great Britain and Ireland include a great variety of articles the more important of which are refined sugar, cotton manufactures, cotton yarn and twist, woollen goods, fish, &c. A considerable quantity annually enters Austria through Germany which reaches it by sea will be seen from the following table—

DECLARED VALUE OF THE PRINCIPAL ARTICLES OF IMPORTATION AND EXPORTATION FROM THE PORT OF TRIESTE, 1847 TO 1850.

Year	Imports	Exports
1847	21,110,000	21,110,000
1848	21,110,000	21,110,000
1849	21,110,000	21,110,000
1850	21,110,000	21,110,000
1851	21,110,000	21,110,000
1852	21,110,000	21,110,000
1853	21,110,000	21,110,000
1854	21,110,000	21,110,000

1857	21,110,000	21,110,000
1858	21,110,000	21,110,000
1859	21,110,000	21,110,000
1860	21,110,000	21,110,000

To carry on the foreign and internal commerce of all kinds of commerce, Austria, in 1847 had 6799 vessels of all sizes tonnage, 241,769 employing 55,690 men. Of these, upwards of

500 are of large size, handsomely and strongly built. Besides these, there are a great number of lighter employed in loading and unloading vessels of which Dalman has the largest number of 2000. The vessels built in 1850 were of larger size for foreign trade, 45 (18,120 tons) large coasters 20 (1455 tons), small coasters 65 (861 tons) and fishing-boats 208 (348 tons). The principal ports of Austria are Trieste, Venice, Chiozza, and Fiume, all in the Adriatic. The vessels that arrived at, and sailed from these ports, in 1844 with their tonnage, was as undernoted:—

VESSELS ARRIVED AT AUSTRIAN PORTS IN 1844

	From Foreign Ports		From Austrian Ports		Total
	Vessels	Tons	Vessels	Tons	
Trieste	1862	57,278	6,578	510,000	6,664

Total	3600	137,679	20,431	879,858	1,997,537

Coin, Weights and Measures.—In Austria, accounts are kept in guilder and florin of 60 kreuzers each, the value of the florin being 24 shillings. The gold coin are double sovereigns 23 1/2 d. each single sovereigns, 21 s. 6d. and half-sovereigns, 18 s. 6d. The principal silver coin is the rix dollar equal to two florins or 4s. sterling. The copper coin are grochen grocheln kreutzers, and phennings or hellers. At Trieste, and at all the inland towns of the Austrian dominions, except those of the Lombardo Venetian kingdom, the imperial dollar of two florins, the florin, and the 60-kreuzer piece, called *zwanziger* are the current coin. The Austrian centner the weight by which all large quantities are rated, is 122 1/2 lbs. avoirdupois. The metze (plural, metzen) the largest dry measure is somewhat more than the fourth part of an English imperial quarter nine metzen making two quarters nearly. The eimer the most generally used liquid measure, is equal to 14 3/4 English wine gallons. In long measure the Vienna foot is equal to 12 1/2 inches English the Vienna inch or aune, to 80 65 inches English. In superficial measure, the roth of land = equal to 6889 English square yards, or 1 acre, 1 rood 273 poles. **Population, Religion, Education, &c.**—The population of the Austrian empire amounts to five distinct races the German, Slavonic, Magyar Italian and Wallachian. The respective numbers of these nations have been estimated as follows:—

Nation.	Population.
Slovonians	17,088,000
Croatians	6,598,000
Magyars	4,802,000
Italians	1,125,000
Wallachians	3,116,000
	36,667,000
To these may be added { Jews 415,000	
Gipsies 125,000	
Total.	37,207,000

The Germans who constitute above one-fifth of the entire population keep compactly together, occupying the archduchy of Austria the N half of Styria, a part of Carinthia a small

portion of Carniola, the N part of the Tyrol and the N and W borders of Bohemia. There are besides, about 1,500,000 in the Hungarian provinces. The Austrian population is increasing rapidly. This increase is great in all the provinces, but is most remarkable in Galizia and Dalmania, being in the first, 1 1/2 per cent. and in the second, 1 1/2. As far back as 1837 the average annual increase of the population amounted to 1 1/2 per cent., or nearly doubling itself in 50 years. The ratio of increase is now much greater.

Religion.—The state religion of Austria is the R. Catholic, and next in numbers is the Greek church. Calvinism and Lutheranism are also professed by a large body of the people the former mostly in Hungary and Transylvania, the latter in the German provinces and in Galizia. The civil power exercises supreme control in all ecclesiastical matters, the emperor being in everything but the name head of the church and as no sentence of excommunication or other ecclesiastical edict, can be issued without the sanction of the crown, the Pope's direct authority in Austria is more limited than in some other countries.

In 1851 the numbers of the various confessions were as follows:—

Roman Catholics	22,009,046	Protestants, Helvetic	1,834,988
Greek Catholics	2,426,116	Do do do do	—
Greek, not united	2,746,066	Unitarians	46,000
Protestants, Augsburg	—	Other sects	8,606
Confessions	1,131,641	Jews	404,196

Education.—The educational establishments of Austria are divided into eight classes:—1 universities 2 academies including high, special, and art schools 3, lyceums 4 theological institutions 5 philosophical institutions 6, gymnasiums 7 particular institutions 8 people's schools. The last, as forming the foundation of the whole system, fill first to be considered. In their nature they come near to our idea of parochial schools, every parish of the empire, almost without exception containing one. They are all divided into high schools (*Haupt schulen*) and elementary schools (*Arten schulen* and *Mädchen schulen*). The former amount to 936 the latter to 17,511 being the whole schools of this class throughout the empire, with the exception of those of Hungary Transylvania, and the military frontier, for which there are no returns. In the elementary schools the education is strictly national. It consists only of the most necessary branches and every individual between the ages of six and twelve male and female, without distinction of rank or creed is understood to be receiving it. To insure this accurate registers are kept of all the children who have arrived at the school age and the priest and local functionaries of each parish are enjoined to see to their attendance. By the registers of 1842 the number of children of the school age was 2,995,069, and the actual attendance throughout the empire (with the exceptions above-mentioned) was 2,373,455. Here the education ceased to be compulsory but all for whom a superior or professional education is required are supplied provided by the other classes of educational establishments. The leading statistics belonging to each class are given in the following Table:—

	Number	Teachers	Pupils	Public Expenditure
Universities	9	419	12,794	260,041
Academies	37	427	—	24,016
Lyceums	31	217	6,890	—
Theological institutions	5	217	8,747	—
Philosophical institutions	75	305	5,111	—
Gymnasiums	268	1,848	64,328	46,766
Particular institutions	1,438	4,600	32,812	—
People's, or National Schools	17,111	87,233	2,273,453	275,118

Hospitals.—Out of the 63 cities and principal towns of Austria, 31 possess founding-hospitals with lying in establishments attached. The number of foundlings received into these hospitals in 1833 was 14,897 and in 1840, 17,410. From 1831 to 1840 there were in public keeping 966,846 children, with a yearly increase of numbers. The number of foundlings claimed is very small proportionally. At Linz, 243 only were sought back in the course of 61 years, out of 5808 foundlings. In the Prague hospital, 2869 only were sought back from 1823 to 1841 out of 87,841 foundlings. In Milan, the proportion sought back was much greater indeed remarkable, when the other cases are considered. It was 7629 out of 20,147 foundlings or considerably more than a third.

Government, Revenue, Army and Navy.—The whole legislative authority is vested in the emperor who exercises supreme control in all the provinces, excepting Hungary and Transylvania. But a constant tendency on the parts of the various states to resume their independence, and maintain their respective national distinctions, has the effect of hampering the exercise of this control, and thereby preventing what has been lately threatened—the dismemberment of the empire. The provincial states, or *Landes*, register the laws framed by the Emperor on financial matters and to allocate or appropriate the amount of supplies to be contributed by the different districts, meet once a year or oftener if necessary. The executive government acts through councils or boards each having a chancellor who communicates with the provincial councils and with the cabinet. Hungary and Transylvania have each a separate chancery and are governed by their own laws as are, likewise, the Italian states. The nobles form a separate order in the state, and are so disproportionately numerous as to make the dietaries appear ridiculous: the total number of nobility in the empire being no less than 400,000, or one to every 90 inhabitants. Of these there are 250,648 in Hungary alone, or one for every 20 burghers. The privileges and prerogatives of these last are seriously detrimental to the national interests in various respects; those of the nobles of the other provinces are few and unimportant.

The Austrian Government has always been extremely reluctant to give any official account of its financial position or operations. It is thus difficult to ascertain what the really are. In 1851 the total income was £23,375,303 total expenditure, £27,843,947 deficiency £4,468,644. The national debt, in 1841 was £115,460,043 in 1852 £123,376,980. The principal sources of revenue are a land tax, a tax on consumable articles, customs on goods, and monopolies of salt, tobacco &c.

The numerical strength of the Austrian army on the peace establishment is 400,481 of which 48,844 are cavalry. The war establishment is 589,160. During the last years of the penultimate war the Austrian army amounted to 660,000 men. The period of service, in all but the Hungarian regiments, is eight years. The military schools of the empire are the academy of engineers in Vienna, the military academy of Milan, Wiener Neustadt, and of Watson, the military schools of Olmutz and Lódz, and a variety of other schools and institutions, all having reference to military purposes in several of them the pupils are educated at the public expense.

The Austrian navy which is under the management of a naval commandant at Venice, is small consisting of, in 1852 six frigates, five corvettes, seven brigs, six galleons with six steam vessels and small craft, and a Danube flotilla of gun boats, having 123 guns and eight howitzers, the whole force mounting 743 guns. Marine force 3215 staff, artillery and seamen, with six companies of marine infantry. The chief naval station is Venice, where there is established an academy of naval cadets.

Laws, Literature, and Fine Arts.—The administration of justice is under the superintendence of the superior ministry of justice, at the head of which there are two presidents. It is divided into two sections, one at Vienna, and one at Verona. All trials are conducted with a degree of secrecy and those of criminals scandalously protracted before their trials are brought on, and years more before they are concluded. Sentence of death can be passed after consultation only a law which, whatever may be said of its humanity must have a tendency to defeat the ends of justice.

History.—After the creation of the German empire in the ninth century by Charlemagne, that prince subdued the district on the S. bank of the Danube to the E. of the river Ena, and converted it into a military frontier to repel the incursions of the Huns, and other barbarous nations. It was then called *Oberrhein* or the East country from its relative position to Germany but subsequently obtained the name of Lower Austria, and became the nucleus of the present Austrian empire. The governors of this district or province were appointed by the Emperors of Germany to whom they were subject, with the title of margrave (German, *mark-graf*—lord of the marches) which title was borne by their successors for three centuries after.

About the middle of the 12th century Upper Austria was added to Lower Austria, and the title of margrave merged

into that of Duke. Soon after Styria came by bequest to the Duke of Austria, when the latter for the first time, established the dual residence at Vienna. Hitherto the Duke of Austria had been of the house of Babenberg but, in 1246, the male branch became extinct, when Rudolph of Hapsburg, Emperor of Germany one of the ablest princes of his age, vested the succession to the dual throne in his son Albert and his descendants, and with this prince commenced the Hapsburg dynasty over Austria. Various schemes of territory by marriage, purchase, and inheritance, now rapidly increased the extent of the dual dominions, raising Austria from the rank of a mere province to that of an important state, and giving it a corresponding influence in the councils of Germany. Continuing to extend its limits, Austria finally became so much greater than any other state in the empire, that its Dukes were raised to the dignity of Emperors of Germany, the first so elevated being Albert II. who, in 1438 obtained the imperial crown which has remained ever since in undisturbed possession of the Hapsburg line of Austrian sovereigns. In the latter part of the 15th century Maximilian I. an Emperor of the Austrian line married the daughter and heiress of Charles the Bold, Duke of Burgundy and by her secured further large accessions to the Austrian dominions, namely the Netherlands, Franche Comté, and Artois.

In 1521 Ferdinand I. married Anne, sister of Louis King of Hungary and Bohemia, and succeeded to these thrones on the death of the latter which occurred in 1526 at the battle of Mohacs. The vast and continually increasing power of Austria, having excited the jealousy and hostilities of the combat towards the Protestants the fears of the other European nations a war was the result, from its duration, 1618 to 1648, known as the Thirty Years War. It was a war between the Catholic powers of the empire, with Austria at their head and Saxony and the Protestant states, aided by Sweden and France. The most distinguished generals of this war were Gustavus Adolphus King of Sweden on the part of the Protestants and Al. Wallenstein, the Austrian, on that of the Catholics. The Thirty Years War ended in the treaty of Westphalia which secured the independence of the different states of the Germanic empire from the exercise of the Protestant religion, and, for a time, the tranquillity of Europe.

In 1740, the male line of the house of Hapsburg was brought to a close by the death of Charles VI. when the succession devolved on his daughter Maria Theresa, who, with the aid of English subsidies, successfully repelled attacks on her dominions by Bavaria, Saxony and France. Regarding the possession of Silesia, she was less fortunate, however in a contest with Prussia to which it was finally ceded in 1763, after a war of seven years duration. Maria Theresa was succeeded by her son Joseph II. a well-meaning and enlightened prince. In 1804 Francis I. assumed the title of hereditary Emperor of Austria, and two years afterwards, renounced the title of Emperor of Germany. The late Emperor Ferdinand I. born April 19 1793 succeeded his father Francis I. March 2 1835 married February 27 1831 Anne, daughter of Victor Emmanuel King of Sardinia. Abolished, December 2 1848, in favour of his nephew Francis Joseph I. the present Emperor who was born on August 18, 1830. The political convulsions of 1846, by which the peace and prosperity of so many of the nations of Europe were wrecked for a time, extended to Austria, where a predisposition to revolt had long existed previously being a necessary consequence of the association of the jarring and incongruous elements of which that empire is composed. In the year above named, a spark from the revolutionary fires of France ignited the combustible materials, and in a short time Austria was in a flame. Lombardy revolted. The Austrians were driven out of Milan, Venice, and many other towns, by their disaffected inhabitants, who subsequently formed an alliance with Charles Albert, King of Sardinia, who then invaded the Austrian territory at the head of a large army and for a time victory seemed to favour the Italians. In the following year however, both the insurgents and their Sardinian ally were repeatedly defeated by the Austrian forces under Marshal Radetzky and Lombardy was again brought under the Austrian sway. Taking advantage of this state of things, Hungary also came forward with a demand for entire independence, assuming at the same time, that supremacy on her own account over Croatia and Slavonia, which the two latter had hitherto yielded to her

merely as proxy for the monarch. Austria retained the demand, as threatening the dismemberment of the empire, when a short but sanguinary war was the consequence, which terminated in favor of the monarch. This result, however, was owing, in part at least, to fortuitous circumstances, as well as to superiority in arms, as the following heads of the new constitution promulgated at Vienna March 7 1849 sufficiently show. Grants—Full enjoyment of political and religious liberty science and scientific instruction free; the general education of the people to be provided for by public institutions every one to have free expression of opinion the press to be relieved from censorship the right of petitioning to belong to every one citizens to have the right to assemble and to form associations if the object be lawful individual liberty guaranteed a man's domicile inviolable the secrecy of private correspondence to be held sacred.—(Miller's *Statistical Jurisprudence* Paton's *Service Thompson's Austria Foreign Quarterly Review*, Annual Register Almanach de Gotha, Lyall's *Geology Parliamentary Papers*.)

AUSTRIA (THE ARCHDUCHY OF).—The archduchy of Austria, or Austria Proper is the nucleus around which has grown the vast empire known as the Austrian dominions. In extent it is comparatively small its area being only 10,909 sq. ac. m. while the area of the entire Austrian dominions is estimated at 195,682 sq. ac. m. It is bounded, N. by Bohemia and Moravia, E. by Salzburg and Styria, E. by Hungary and W. by Bavaria and is comprised between lat. 47° 26' and 49° 2' N. and lon. 12° 45' and 17° 5' E. It is divided into two provinces by the river Enns or Ems, which flowing N. falls into the Danube about 2 m. N. the lower of Enns the line of separation N. the Danube running from a point on that river 4 m. S. W. to the Bohemian frontier. The province W. of the Enns also called Austria above the Enns or Upper Austria (*Oberösterreich*) has Linz for its capital. The W. boundary is formed by the Inn river, 8485 sq. ac. m. The province E. of the Enns, also called Austria below the Enns or Lower Austria (*Niederösterreich*) has for its capital Vienna, the capital also of the empire area 7424 sq. ac. m. E. boundary of the Danube, the river March and S. the river Leitha, separating it from Hungary. Both provinces are mountainous, and abound in beautiful and romantic scenery. The entire vale of the Danube from Passau to Vienna, a distance of not less than 180 m. presents a continued series of the most picturesque views equal if it has been asserted to those on the famous Rhine while the scenery on the Enns, and several of the other streams, has been considered but little if at all inferior. The confines of the archduchy on the E. are marked by a range of mountains, including a branch of the Noric Alps, which spreads its branches over the whole country S. of the Danube. The N. portion, again, are traversed in all directions by the *Riesnerwald*, or Bohemian mountains. Between these N. and S. mountain-ranges lie the vale and basin of the Danube, to which both provinces almost exclusively belong. The principal tributaries of the Danube from the N. are the Inn Traun, Enns, Ems, Traisma, and Leitha—all Alpine streams, and remarkable for the green tinge of their waters—and numerous smaller streams from the S. come the Krana, Kamp, Giller March, &c. the last after the Danube, the largest stream pertaining to the province. The lakes chiefly confined to Upper Austria, are numerous, and remarkable for the beauty of their scenery. The principal are the *Grafensee* or *Tramsee*, about 7 m. long, and 3 broad at its broadest part; the *Heilbrunnsee*, 6 m. long and about 1 broad; the *Attersee*, about 13 m. long and 3 broad; the *Mondsee*, the Lake of St. Gilgen, and an immense number of smaller lakes. Swamps and morasses of great extent are of frequent occurrence. The mineral wealth of the archduchy is not great. In Lower Austria there are some iron mines, while both provinces contain quarries of marble and freestone, slate, alum, and potter's clay; and east alabaster gypsum rock crystal, garnets, beryl, topazes, and emeralds are obtained. A little gold and silver copper lead, and iron are found in certain localities; and in the hills of Luchl and sulphur in various quarters. The whole produce of the mines and furnaces of the archduchy amounted, in 1845, to 269,915. Of this sum, 237,158 is the value of coal, found only in Lower Austria.

The climate of the archduchy varies with the level of the

different localities, but neither the heat nor the cold is extreme, though the lower provinces are subject to sudden changes. The average annual temperature in Vienna is about 51° F. The maximum heat does not exceed 97° and the winter cold ranges between 10° and 13° below the freezing point. At Linz, the mean heat is 45° 58°.

The soil is as various as the climate. In the hilly regions there is little cultivation but compensation is found in valuable forests. Agriculture, however, is on the whole in an improved and improving condition. The cultivation and general management of the vine, however, is still defective. The following table will give an idea of the productive superabundance of the country and of the extent to which its capabilities have been made available—

PRODUCTIVE SPECIFICATIONS OF THE ARCHDUCHY

Arable Vineyards Gardens, &c.	Arms. 1,150,710 116,338 1,098,084	Arms. Brought forward, Pastures Woodland	Arms. 4,807,492 1,084,428 3,888,077

Carry forward	1,068,511	Total	4,903,449

Throughout the territory fruits and kitchen vegetables of all sorts are produced in great abundance, and of excellent quality. In Lower Austria, a considerable quantity of wine is produced, especially in the hilly districts around Vienna where the quality is much superior to that obtained from the vineyards on the plains. Flax is cultivated to some extent and, in Upper Austria, hops also. The valley of the Enns and the plain of Pulla on the Danube, are the most fertile tracts, both yielding most luxuriant crops of corn. The woods and forests consist chiefly of beech oak maple linden with alder pine, and fir. In Upper Austria, where pastures abound the rearing of cattle is general, and the horses bred in the S. W. parts of the province, are noted for their size. The numbers of horned cattle horses, and sheep in both provinces, in 1843 was—

Cows	200,104	Horses	119,328
Cows	899,538	Sheep	389,128

In the mountainous regions goats abound. The lynx wolf and bear are also met with. Foxes, stage deer marmots, polecats, squirrels martens hares and wild fowl are numerous. The lakes and rivers are well stocked with fish.

The commercial resources of the archduchy and the activity and enterprise of its inhabitants are greater perhaps, than those of any of the other dominions of the empire. Lower Austria and Lombardy with little more than a tenth of the population of the whole Austrian territory engrossing about a third of its entire trade. Lower Austria, however, is partly indebted for this result to the possession of Vienna, the capital, and the largest and most populous, and perhaps, also, the greatest manufacturing city of the empire.

The quantity of spirits annually distilled in the archduchy is very considerable, being no less than 1,800,015 imperial gallons of which rather more than the half is made in Upper Austria. To produce this quantity of spirits there are 1756 distilleries, but most of these are on a very small scale. The quantity of wine produced annually amounts to 94,996,859 imperial gallons, the produce almost entirely of Lower Austria, neither the climate nor the soil of Upper Austria being favorable to the vine. There are, in Lower Austria, seven sugar-refineries, and three manufactories of sugar from beet-root. Both Austria produce considerable quantities of iron and wool. In 1845 the amount of wool was 4,448,000 lbs. The produce of iron in the same year was small, not much exceeding 8000 tons, the greater part from Upper Austria. The manufacture of linen, though it has suffered greatly by the progress of the cotton manufacture, is still prosecuted to a considerable extent. Spinning machinery has been lately introduced into the country, but flax is still spun almost exclusively by the hand, and forms a principal employment of the inhabitants of the mountainous districts. The quantity of linen manufactured in 1845, was 290,000 pieces of 30 ails each, value, 2,150,000, of which

quantity Upper Austria produced 90,000 pieces, and Lower Austria 300,000. The cotton manufactures are also considerable, and is rapidly increasing. In Lower Austria there are 60 factories, with about 335,000 spindles; in Upper Austria, four factories, with 20,000. Silk is likewise manufactured to a large extent, especially in Vienna to a more limited extent in Nonstadt and some other towns. The woollen manufactures have not been so prosperous although there are some large factories at Vienna, Linz, and other places the supply however is not equal to the home consumption.

In Upper Austria, the saltworks afford employment to several thousand persons, the produce amounting annually to about 45,000 tons. The other manufactures are linen, ironware, and cutlery tools, copper-ware, brasswork, jewellery articles of wood, leather porcelain, paper, glass, chemicals, beer and spirits. In Lower Austria are numerous tanneries, blacksmiths, and also printfields, at which 254,000 pieces of woollen and cotton goods are printed annually. The exports of Upper Austria consist principally of salt, timber wood for fuel, yarn, horses, woads, carpets, ironware, tools, cutlery, wax, cotton yarn, cotton stockings, cloths, beer, earthenware, silk and polishing stones, marble, and considerable quantities of fruit.

The trade of the archduchy in 1845 was as follows:—

	Imports.	Exports.
Upper Austria.	£1,910,000	£1,278,707
Lower Austria.	300,100	360,121
Total.	£2,210,100	£1,638,828

The internal traffic is much facilitated by the excellence of the roads, the navigable rivers and canals, the steam navigation of the Danube, and by the introduction of railways, of which there are three in the archduchy.

Education is an object of anxious solicitude to the Government, which provides gratis instruction for all who cannot afford to pay for it. To secure an ample supply of teachers, numerous normal schools have been established in various parts of the country particularly in Vienna, which furnishes from 1800 to 1000 teachers annually. Throughout the whole archduchy every child must go to school for a certain number of years. A more questionable law enforces that no person shall marry or set up in any trade or business without a written certificate of attendance at school.

The inhabitants of Austria Proper are almost all Germans, and are an active, industrious and good-natured people, living easily and contentedly with a reasonable command, not only of the necessities, but of the enjoyments of life. The peasantry in general are in comfortable circumstances are kind, cheerful and affable, simple in their manners, and perfectly acquainted with their lot. Pop. in 1845, Upper Austria, 851,286 Lower Austria, 1,415,935 together 2,267,221 of which, perhaps, 50,000 or 60,000 are settlers from other parts of the Austrian dominions and foreigners the remainder are native born Germans.

AUSTRIAN ITALY. See Lombardy.
AUTERIVE, a tn. France, dep. Haute-Garonne (Languedoc), 15 m. S.E. Toulouse, r. bank, Ariège, which is here navigable, and is crossed by a bridge of brick. The chief occupation of the inhabitants is in making army-clothing. Pop. 2230. — There are other three places of the same name in France.

AUTREUIL, a vil. France, dep. Seine, at the entrance of the Bois de Boulogne, within 1 m. of the W. barrier and properly only a suburb of Paris. It has several manufactories, chiefly of printed stuffs, and some considerable tenantry with some breweries, distilleries, &c. A great number of elegant country mansions are in the neighbourhood. Autreuil is celebrated as the residence, in former times, of many literary persons of distinction, among whom are the poet Racine, whose country-seat is still shown, and Molière, whose house has been converted into a rustic temple, containing not only his bust, but also those of Racine, Fontenelle, Corneille, and Boileau. Pop. 3313. — Two other places in France bear the same name.

AUTHIE. — 1. A vil. France dep. Somme, 7 m. E. Doyelles. It has numerous manufactures of coils, and one of cotton yarn. Pop. 946. — 2. A small river France, which rises near the above village; for about 20 m. forms the boundary between the depts. Somme and Pas de Calais, and after a

course of about 25 m., falls into the English Channel. — 3. A vil., dep. Calvados (Normandy), not far from Caen.

AUTHION a river France, rising in dep. Indre-et-Loire, flows W. and falls into the Loire on its N. bank, after a course of about 26 m., for 15 of which, from Bassenoit to the Loire, it is navigable.

AUTHORPE, a par. England, co. Lincoln; 921 ac. Pop. 136.

AUTOL, a tn. Spain, in Old Castile, prov. Logroño, 8 m. E. by W. Calahorra, on the side of a limestone hill, called Sanfago, 1 bank, Oñate, and having a parish church, prison, hospital, and school. Pop. 3740.

AUTOLIN DE VILLARUYA, a vil. Spain, in Asturias, prov. Oviedo, 3 m. N. Navia; on the sea-shore, at the embouchure of the Navia. It has a large parish church, an agricultural population, and is celebrated for salmon and other fish. Pop. 1500. — (Malco.)

AUTUN [anc. *Abracus* or *Augustodunus*] a city France, dep. Saône-et-Loire (Burgundy) cap. of second picturesque situated on a hill, at the foot of a lofty range of well-wooded mountains 1. hour Arras; 26 m. E. Mâcon, Châlonne-sur-Saône. It is the seat of a Bishop, suffragan to the Archbishop of Lyons, and has courts of primary jurisdiction, and of commerce also a communal college, two libraries, a collection of pictures and antiquities, a society of agriculture, sciences, and arts two hospitals, and two ecclesiastical seminaries, with other institutions. The numerous remains of antiquity in and around Autun render it a very interesting place. Part of the ancient walls are still standing and are remarkable for their massiveness and solidity. Of the gates built by the Romans two remain the Porte desnonnes, now called the Porte d'Arroux, surmounted by a gallery of the Corinthian order and covered with ornaments of exquisite workmanship in good preservation and the Porte Lingonnesse now the Porte Saint André. A tower is also pointed out as having formed part of a temple of Minerva. In the old parts of the town are the ruins of an amphitheatre, and of several temples, the principal of which appears to have been that of Janus, a square building, of which three sides remain. The modern city is divided into three parts, the highest, the chateau or castle, being supposed to occupy the site of the ancient capital. The cathedral of St. Lazare a Gothic edifice, founded in the 11th

AUTUN CATHEDRAL, North side. — From Chagny, Collection of the Proprietor

century has a fine lofty spire, 325 ft. high and a choir richly adorned with marble carvings. Above the principal portal is a beautiful arcade; while the tympanum exhibits a curious representation of the resurrection, and final judgment. In the square adjoining the cathedral is an fount of great beauty. The quarter called La Ville contains the principal open space or square, named the Champ de St. Laitre,

which is planted with trees, and forms an agreeable promenade. There are several other public walks, particularly the Champ de Mars, a spacious square in the middle of the town, elevated upon a terrace. The houses of the third quarter, the Marchaux or Marlaux Forum, of the ancient city are mean and ill built, and the streets narrow and dirty. The river here is crossed by two bridges, d'Arroux and St. Andoche. Manufactures—sarpas, serge, cotton velvet, cloth, linens, and silk-ware. During the first Revolution there were here a cannon-foundry and many factories of other kinds of arms. In the neighbourhood are some tanneries and paper-mills. Auzon is the chief if not the only place in France where a species of fabric called *laine de Marouan*, used for best-overalls, horse-cloths, &c. is made. The principal trade is in grain, wood, wine, hemp, leather, horses, and cattle. In the vicinity are iron and lead mines; and not far distant, the valuable coal-pits of Epagne and Genozet. At the latter place are extensive iron furnaces. A kind of gray granite, and pottery clay are also found in the surrounding district. Auzon was a place of great extent and importance, even before the conquest of Gaul by Julius Cæsar, who makes frequent mention of it under the name of *Biturica*, capital of the *Ædus*. Talleyrand was Bishop of Auzon at the breaking out of the great Revolution. Pop. (1846) 9098.

AUVERGNE, a prov. Central France, now merged into *depts* Cantal and Puy-de-Dôme, and an arrond. of Haute Loire but still deserving of separate notice, because of its frequent use as a geographical boundary particularly in the numerous works both popular and scientific, to which its interesting geological phenomena have given birth. The part of Auvergne to which these works specially refer is an extensive plain, usually known by the name of the *Limagne*, stretching from E. to W. about 50 m. with an average breadth of 20 m. and an altitude above the sea of 1900 ft. and bounded E. and W. by two parallel ranges of granite and granite, about 8000 ft. high. The surface of the plain consists of alluvial deposits, resting on a substratum of limestone, and is broken by numerous hills, which appear to have originally formed part of the same substratum and been upheaved by volcanic agency. The best proof of this is in the fact that many of them are surmounted by a crest or capping of basalt. To the W. of the plain the limestone disappears and is succeeded by a plateau of granite, which rises 1600 ft. above the valley of Clermont, must be 3000 ft. above the sea. This plateau forms the base of a long chain of volcanic cones and domes, which, to the number of 70 form a zone of nearly 20 m. by 2 m. and vary in altitude from 500 to 4000 ft. The highest of them *Puy-de-Dôme*, is 4000 ft. above the sea. It is entirely composed of volcanic matter and has a regular crater 1000 ft. in circumference, and 800 ft. deep. The whole of the cones present the same general character—well-defined waters enclosed by regular cones, on whose sides the lava streams may be traced easily as on those of *Vesuvius*. (*Dict. de la France*, *Lydell's Geology*, *Mantell's Wonders of Geology*).

AUVERS-LE-HANOY a tn. and com. France dep. Sarthe (*Maine*) r bank, Trulon, 32 m. S.E. Lard on an acclivity and built in the form of a square, the sides of which are occupied by houses, while an ancient church rises in its centre. The district around is watered by the Trulon, the Erve and the Valga. From the margin of these streams sprout steep slopes, some of them crowned with the remains of old forts, and others of them in the form of fantastic peaks, which have a very picturesque effect. Pop. 2338.—Other three villages in France have the name of *Auvers*.

AUVILLARDS—1 A tn. France, dep. Tarn-et-Garonne (*Armagnac*) 23 m. W. Montauban on a height, 1 bank, Garonne, with a port and considerable trade. Manufactures—porcelain, earthenware, woolen, bonnets and hats. Pop. 1742.—2, *Auvillards-sur-Saône*, a vil. dep. Côte-d'Or (*Burgundy*) Pop. 521

Vol. I

AUXERRE (anc. *Autissiodorum*) a city France, dep. Yonne, 56 m. S.E. Paris, on the side of a hill, 1 bank, Yonne, which here begins to be navigable. The situation is remarkably fine, and the air pure, but the town itself is in general ill built and dirty with narrow, crooked streets. Its churches constitute its chief attraction. The cathedral, dedi-

AUXERRE.—From St. Front Philippe.

cated to St. Etienne, is a splendid Gothic structure though still unfinished. Its interior is finely proportioned and the windows, of stained glass are exceedingly beautiful. The old episcopal palace, once regarded as among the finest of the kind in France, is now the *Hôtel de Préfecture*. The abbey of St. Germain contains some curious crypts, one below another in the lower are tombs of the early Counts of Auxerre.

Auxerre is the seat of a court of assizes and of courts of primary jurisdiction and commerce. It has a communal college or high school, a museum of antiquities and natural history, a primary normal school, a public library containing 25 000 volumes and nearly 200 000, an agricultural society, a theatre, a large foundling-hospital, baths, and a botanical garden. Over a greenhouse in the market-place is a curious old clock-tower. The principal manufactures are of woollen cloths, sarpas, drapery, hosiery cotton yarn, hats, wools, blankets, violin strings and earthenware; leather red and yellow ochre, rouge called *de France*, and chalk. It has some commerce in hemp, leather, staves, bricks, and cattle but the chief trade is in wool, and in the wines of the district, of which about 150 000 tons are annually sent along the Yonne and Seine to Paris and Normandy. Of these wines the most noted is the white Chablis. Auxerre was the ancient capital of the *Auxerrois* or county of Auxerre which now constitutes the principal part of the arrondissement of that name. Pop. (1846) 11,890.

AUXONNE [*Latm. Aona, Auserna*] a tn. France, dep. Côte-d'Or (*Burgundy*) 18 m. E.S.E. Dijon 1 bank, Seine, here crossed by a beautiful bridge of 23 arches. At one extremity of the bridge is a bank or embankment about 1½ m. long to give access to it during inundations of the river. Auxonne is a fortified place of the fourth class, well built, the seat of a court of commerce, and has a communal college, and a public library containing 4000 volumes, a castle on an arched canon foundry and an artillery school has been formed on the ramparts. Manufactures—woollen stuffs, sarpas, muslins, and hardware. Trade—grain, flour, fruit, wine, brandy, iron, wood, and coal. Auxonne was the capital of a small sovereignty separate from the duchy and county of Burgundy the sovereigns of which took the title of *Seign d'Auxonne*. Pop. 2242.

AUXY LE CHATEAU a small tn. France, dep. Pas de Calais (Artois) in a marshy country on the Authie, which intersects it, 80 m. S.W. Arras. It has an old parochial church, tanneries, and four fairs. Pop. 2342.

AVA [*Burmese, Awaung or Aungmy*]—Fish-pond; Burmese [*Burmese*—City of gossam] a city Borneo, of which it was formerly cap. 1 bank, Irrawaddy about 1 m. S.W. Amoy, was also formerly the cap. lat. 21 51 N.; lon. 85° 25' E. It

55

is divided into an inner and outer town, each surrounded by a brick wall and fence the circumference of the whole being about 5½ m. The houses are, in general, more huts thatched with grass but a few belonging to persons of distinction, are of somewhat superior construction. The outer town is but thinly scattered with these wretched habitations and some large quarters are entirely destitute of buildings. The inner town about 1 m. in circumference, and forming the N.E. angle of the city is chiefly occupied by the palace, finished in 1824 the Ring-dien or hall of justice the Lat-dien or council-chamber the arsenal; and the houses of a few persons attached to the court. Ave contains also some dilapidated monasteries. The houses, including one without the walls, are eleven in number and were at one time well stocked with native commodities, goods from China and Laos, and British cottons, woolens, glass, and earthenware. The pop. in 1836 amounted to 25,000 or 30,000, but is now much less. An earthquake, in 1839, destroyed every substantial building in the city. Since this event, the seat of government has been removed to Monchoho.

AVAIL, the largest of the Bakoin Islands (which see)

AVALON a large peninsula, forming the E.E. part of Newfoundland having Trinity Bay on the N and Pleasant Bay on the S separated only by an isthmus of about 4 m broad. The bays of St. Mary and Thosagey on the E., and Conception on the W divide this district into three lesser peninsulas. It has also several smaller bays, with many excellent harbours. The Great Bank of Newfoundland lies E. of it.

AVALLON [anc. *Avallio*] a town, France, dep. Yonne, arr. av. 36 m. S.E. Auxerre is romantically situated in a fertile country 1. bank, Cosne, which here takes the name of the Yonne, on a hill of red granite, along the brow of which runs a broad terrace-wall, planted with lime-trees, more than 500 ft. above the bed of the river. It has well-built houses broad and clean streets, an hospital church-hall and parish church, an old abbey with a curious Renaissance porch likewise a court of commerce, a communal college, and an agricultural society a theatre, and public baths. Manufactures—woolen cloth, coats, coarse mustard, and paper. It has also some tanneries and fulling-mills, and a trade in grain, wine, cattle, and coals. Pop. 4896

AVAREZ (Kharat) a political division of E. Circassia, on the N slope of the Caucasus, between the rivers Akai and Kolesa, area, 2387 sq. m. It is mountainous and sterile, inhabited by the Avars, a tribe of Circassians, governed by a Khan, and is nominally subject to Russia. The Avars are Musulmans, and live by the chase and by plunder. To prevent their predatory incursions on the surrounding tribes, an annual sum is paid to the Khan by Russia, and the rank of lieutenant-general is given him. Pop. 81 000

AVATCHEA, a river Kamtschatka, rising in a meadow at the foot of a volcano of same name flowing E. and falling into the Pacific Ocean at the town of Petropavlovsk, on the Bay of Avatcha. Its whole course is about 80 m.

AVATCHINSKAYA, a volcano, Kamtschatka in lat. 53° 15' N lon. 156° 50' E.; height, 9053 ft. The first eruption of this mountain occurred in 1817

AVE, a small river Belgium, rising in prov. Luxembourg, and after passing Luxembourg and Wallin, disappearing in a subterranean mountain, under which it continues its course for nearly half a mile. After emerging, it passes Ave and Aulx, and joins the Lesne.

AVENBURY a vil. and par. England, co. Wilts. The village is 6 m. W by N Marlborough, and consists of one principal street, badly kept; houses principally poor-looking cottages, built of stone from the neighbouring downs, supply of water abundant. The parish church is a fine old structure of Norman architecture. There are also a Baptist chapel and an Independent chapel in the village, a boarding-school, and a national school. The village occupies part of the site of a place of worship belonging to it is supposed, to the ancient Britons. It was enclosed by an extensive ditch and rampart, including double streets of large unburnt stones. On the neighbouring downs are numerous barrows or tumuli, one of which, called Silbury Hill, covers an area of upwards of 5 ac., and is 3077 ft. in circumference at the base, and 150 at the summit, with a perpendicular height of 115 ft. There are numerous other monuments of antiquity of a similar kind in the vicinity. Area of par. 4544 ac. Pop. 768

AVEIRO, or *BAIA DE AVEIRO*, a seaport in Portugal, prov. Douro, on a bay of same name, formed by the estuary of the Vouga, 58 m. S. Oporto; lat. 40° 25' 24" N; lon. 8° 27' 45" W. [a.] Aveiro is situated in a flat, marshy country which renders it very unhealthy. The old walls still remain but the suburbs extend beyond them. It is a bishop's see, and contains four parishes, a cathedral, and four other churches, six monasteries, a college, and an hospital. The houses are small and the people generally in poor circumstances. Aveiro has manufactures of earthenware and salt is made in great quantities from the lagoons in the neighbourhood but the quality is reckoned inferior to that produced at Bethel and Lisbon. The fishery is active, and the province is supplied with codfish chiefly from Aveiro; and besides salt and fish, a thriving trade is carried on in oil, wine, oranges, &c. The crystal caught off the coast are reputed the best in Portugal. The entrance to the mouth of the river is marked by two lofty stone pyramids, each 70 ft. high. The port is wide and safe, but a shifting bar at the entrance renders the aid of a pilot indispensable. During spring-tides there are 15 ft. water on that bar at neaps, from 7½ to 12 Pop. 4094.

AVEIRO a town Brazil prov. Para, pleasantly situated in a fertile country admirably adapted for the growth of cotton and sugar cane, Tapajós which is here navigable, and 70 m. above its embouchure in the Amazon. The inhabitants are chiefly Indians.

AVELEY par. England Essex 3089 ac. Pop. 811

AVELGHEM a town and com. Belgium, prov. W. Flanders, dist. of, and 8 m. E. Courtray containing malt works, dyeworks, breweries, tobacco-factories, and oil and flour mills. Pop. 6295.

AVELLA a town Italy Naples prov. Caserta, dist. of and 5 m. N.E. Nola. Slightly elevated, and surrounded by a river extending to Naples. It has four parishes churches. Close by are the ruins of the Roman Avella, celebrated by Virgil for its natural products. Pop. 6080.

AVELLINO a town Naples cap. prov. Principato Ultra, dist. Avellino 50 m. E. Naples situated at the foot of Mount Vesuvius, near the Babbato. It is a fortified place, and the seat of a bishop, suffragan to Benevento and of a civil and criminal tribunal, and contains a mean looking cathedral, three parish churches, and a royal college. It stands on the declivity of a hill the houses are in general well built but the streets, though wide are exceedingly irregular. It has a square adorned with an obelisk and possesses several agreeable promenades but the public edifices, with the exception of a granary are of the poorest description. It has some manufactures of macaroni, of sausages, long celebrated and of coarse cloth also, several dyeworks, much favoured by the plentiful supply of soft water. It is likewise famed for its confectionary and carries on an active trade in grain. The neighbourhood abounds in chestnuts and hazel-nuts. The latter were much prized by the Romans, and are still celebrated under the name of Avellino nuts. The town suffered a good deal by earthquakes in 1694 and 1731 and is at a short distance in the famous Val di Garzano, the site of the Fosse Casale, where the Romans compelled a Roman army to lay down their arms and pass unscathed under the yoke, a.c. 521 Pop. 15 586.

AVENBURY par. Eng. Hereford; 3222 ac. Pop. 354

AVENCHES [anc. *Avetionum*] a small town Switzerland, cant. Vaud, about 5 m. S the Lake of Murat, and 30 m. N.E. Lausanne, cap. of a detached dist., surrounded by Freiburg and the Lake of Neuchâtel. The ancient walls, which had a street of seven miles, may still be traced. A Roman tower a Christian column, 37 ft. high, the remains of an amphitheatre, an aqueduct and baths, numerous inscriptions, and specimens of Roman work, are the chief relics of the former splendour of Aventicum. About a tenth of the ancient city is occupied by the modern town or village of Avenches, consisting of a few streets, and having an old church, a castle, and an institution for lunatics. The environs are beautiful and fertile. Pop. (Protestants) 1468

AVENDALE, or *AVENDALE*, a par. Scotland, Lanark, watered by the Avon area, 23,000 ac., of which more than one-half is under cultivation. Densington, where Glen of Claverhouse was defeated by the Covenanter, in 1679 is in this parish. It contains a considerable town, called Strathaven

or *Servus*, by which name the parish also is sometimes designated. Pop. 1465.

AVENING *vill.* and *par.* Eng. Gloucestershire the former on an alluvial area of par. 4429 ac. Pop. 3381.

AVENSWEDDE, a *vill.* Prussia, prov. Westphalia, gov. of and about 23 m. S. S. W. Minden, on the Dolke; with woollen and linen manufactures. Pop. 8622.

AVENZA or **LAVENZA**, a small tn., N Italy in the united duchies of Modena and Massa-Carrara, on the Gulf of Genoa, 1. bank Aversa, near its mouth lat. 44° 5' N; lon. 10° 5' E. It was at one time the principal place of shipment for the Carrara marble; but in consequence of the gradual elevation of the coast, it is now 1 m. distant from the sea, and therefore no longer a shipping point. There is here a magnificent castle built by Cateruccio degli Internodelli. Aversa is the first town of the duchy of Massa, and the Modenese custom house is stationed here.

AVERKEBT a *vill.* Holland, prov. Overijssel, 18 m. N. E. Zwolle, and 9 m. S. E. Middelburg. It has a Calvinistic, a R. catholic church, and a school. Pop. about 1800 chiefly employed in agriculture and cattle-rearing.

AVERHAM *vill.* Eng. Kent 3646 ac. Pop. 367.

AVERNAKÖE, an *island* Denmark, Little Belt, lat. (centre) 55° 2' N lon. 10° 17' E. It is of irregular form about 5 m. long, varying from $\frac{1}{2}$ to $\frac{1}{4}$ m. broad, and is separated from Skjerve by a deep channel but from Dretis and Skarø by shallow water not more than 5 ft. deep. Pop. 350.

AVERNO [anc. *Avernus*] a celebrated lake Italy prov. Naples occupying the crater of an extinct volcano about 9 m. W. Naples, dist. Positano near the *Madurassano*. It is between 1 and 2 m. in circumference, of a circular shape and about 180 ft. deep in some of the deepest places. It is often referred to by the ancient poets, especially by Virgil by all of whom it is associated with everything gloomy and dismal. In ancient times the lake was surrounded with groves, which, excluding a free circulation of air rendered the place extremely unhealthy from noxious accumulations of mephitic vapours. The account of Lucretius is that birds could not fly over it without being suffocated and Lyell sees no reason for discrediting it, though the spot has now become sublimed and cheerful. The groves were cut down by Agrippa during the reign of Augustus, and a communication opened between Aversa and the Lucrine lake, which was afterwards almost entirely displaced by an eruption in 1588, which threw up from the midst of its waters a mountain, now called *Monte Nuovo* but the outlet joining it to the Lake of Aversa still remains. On the S. E. bank are the ruins of a temple of Apollo and a little further W. the entrance into the subterranean grotto of the Cumaean sybil. The surrounding heights are now clothed with vines, and retain none of their original gloomy character. It is still however resorted to for its vapour-baths, though its vicinity is unhealthy in summer. — (Lyell's *Geology*.)

AVERØE, an *island* Norway off the coast of Ramsdal lat. (centre) 63° 57' N lon. 17° 20' E.

AVERRI *See* WARREN.

AVERSA, a *city* Italy province and district Caserta, 9 miles N. Naples on a delightful plain covered with vines and orange-trees. It is a bustling and lively place, spacious and well built the seat of a bishopric, one of the richest in the kingdom of a royal governor and of a tribunal; and contains also churches, several convents a well-conducted forwarding hospital, and a lunatic asylum, celebrated for the excellence of its system. Aversa is famed for its almond-oil, called *avresce*, which are in great demand in Naples, with which it communicates by a fine broad avenue. Aversa was built in 1020, by Raimund, a Norman chief. Andreas, of Hungary was strangled in a convent here by some conspirators, Sept. 5, 1846. Pop. 16,168.

AVES ISLANDS, or **AVES ISLANDS**—1 An *island* E. coast, Newfoundland; lat. 50° 5' N.—2 An *island*, 60 m. N. W. Dominica, and 51 W. Guadeloupe.—3, A cluster of small barren, rocky islands, Lesser Antilles, about 100 m. E. by E. of the Gulf of Venezuela, between the islands of Beem-Ayre and Bequem lat. 11° 50' N. lon. 67° 40' W. (v.).

AVESNES, a small fortified tn. of the fourth class, France, dep. Nord (Hainaut), on second, on the Greater Lillois, 49 m. S. E. Lille. It is the seat of a sub-prefecture and of a court of primary jurisdiction; and has a communal

college or high school, an hospital for old men, and an agricultural society. The town is in general well built, and has a cathedral surmounted by a tower 800 ft. high; some court-houses, townhall, barracks and a fortress, in the Place d'Armes. It has manufactures of coarse serge, hosiery and soap, with several tanneries, breweries, brickworks, salt-refineries, and marble saw-works. A considerable trade is carried on in grain fruit, hops wood, cattle, ironware, slate, and cheese. Pop. 2377.

AVESNES-LES-BATHES a *tn.* France, dep. Nord, 6 m. from Cambrai. It has a church, cemetery and manufactures of candles, bricks and oil. Pop. 3871.

AVETZA a *tn.* Sweden. *See* AVETZTART.

AVETON-GIFFORD *par.* England Devon 3182 ac. Pop. 578.

AVEYRON [anc. *Veronica*] a rapid river France giving its name to the dep. Aveyron. It issues from the springs of Veyron among the Cévennes. Taking a W. direction, it passes Rhodes Belcastel and Villafraude and becomes navigable at Negrepellasse about 20 m. above its embouchure in the Tarn, into which it falls, after a course of about 180 m. a little above Mende.

Its principal affluent is the Vézère.

AVEYRON, a *dep.* S. of France, formed of the ancient dist. of Rodez, a subdivision of the prov. of Guienne bounded N. and N. E. by depa. Cantal and Lozère E. and S. E. by Gard and Hérault, which separates it from the Midi terranien W. and S. W. by Lot, Tarn-et-Garonne, and Tarn between lat. 48° 41' and 44° 55' N. and lon. 3° 50' and 8° 50' E. length, N. to S. about 96 m. breadth, E. to W. 60; area, 2 137 664 ac. or 8840 sq. m. It is one of the most mountainous departments of France; traversed in the E. by branches of the La Margelle range which water the mountains of Aveyron with the Cévennes—its boundary on the S. E. Prolongations of the latter and of the mountains of Cantal cover the S. and N. parts. One long chain, called the mountains of Aude, extends nearly 30 m. in length from 1 bank, Truys, to the point where the Lot enters the department. These mountains are all of volcanic origin, and contain numerous grottoes and subterranean caves. Between Gaillole and the village of Naves they exhibit basaltic columns of various forms, and perpendicular rampart-like precipices of the most striking appearance. A group, called the *Lézards*, an offshoot of the Cévennes, rises between the sources of the Aveyron and the Tarn, and runs N. to S. W. throwing out several branches. Five considerable rivers traverse the department—namely the Aveyron, after which the department is named, the Vézère the Truys, the Lot and the Tarn. Of these the only one navigable within the department is the Lot. The other streams of any consequence are the Dordogne the Lorges, and the Dourain. During winter which continues more than six months, the snow lies deep upon the mountains the sides of some of which are covered with vast forests principally of chestnuts. It is only in the W. that plains of any considerable extent are found. The soil is of three different kinds varying with the different species of rocks, from the decomposition of which it has been produced—a calcareous earth in the limestone district, a rich friable mould among the volcanic basalt, and generally a poor hungry clay when primitive schist, quartz, and gneiss prevail. Agriculture is in a very defective state. In field labour oxen are generally used. Throughout the S. districts, oats and rye are usually cultivated. In the W. eastern, besides these, a little wheat is raised, but this species of grain is more abundantly grown in the E. where the farms are often so large as to employ 25 yokes of oxen. Barley maize, and buckwheat are also produced. Altogether the grain raised is nearly sufficient for the consumption. The extent of arable land is 908 810 ac. meadows 808,790 ac. vineyards, 86,025 ac. Nearly a fourth part is waste land, and the remainder is occupied with forests, orchard and garden grounds, &c. There are few lakes, and no marshes. The wine produced is of inferior quality. In the district of Gaillole, cheese of excellent quality is made; but the best is produced in the village of Roquefort; it is made from a mixture of ewe and goat milk, and is considered the finest in France. The quantity exported is from 30 000 to 45 000 lbs. yearly. Considerable attention is paid to sheep-breeding, and about 1 400,000 lbs. wool are annually produced. In the more mountainous localities both sheep and cattle are very inferior

Males are reared for export to Spain. Wolves and foxes abound, and adders, lizards, and other reptiles are numerous. Aveyron is rich in coal, iron, and silica. The coal mines being among the most valuable in France. They are principally in the neighborhood of the small town of Aubin, in the district lying between the Lot and the Aveyron. Here are also considerable ironworks, and the burning mountain of Fontanges, the peak of which having accidentally caught fire, has continued burning for centuries. It also possesses copper mines. Argenti-fères lead, antimony sulphate of iron, sulphur fuller's earth, gypsum, and marble, are procured in large quantities. Manufactures—silks, coarse woollen stuffs, common cloths, table-linen, silk thread, hosiery, china-ware, paper, leather and glass. Some trade is carried on in grain, peaches, and other fruits: wool cheese, hams, sheep, and males: copper, steel, coal, silks, nails, staves, timber, &c.

The inhabitants are, in general, well-behaved and industrious: grave in their manners, but still of a cheerful disposition. In the greater part of the department, but especially in the district situated between the Lot and the Aveyron, the fowling light to work at an early age, and take part in all agricultural labours, however severe. Aveyron is divided into five arrondis, 42 cons. and 274 com. Its cap. is Rhodes, and other principal towns are Milhan, St. Affrique, and Villefranche. Pop. (1846), 286,061.—(*Dict. de la France* Prossé *Officiel* Table.)

AVEZZANO a town in Italy Naples, prov. Aquila, cap. dist. on a beautiful plain near the lake Fucine about 22 m. S.E. Aquila, surrounded by dilapidated walls, and believed to be founded on the ruins of the ancient Alba. It has 10 churches, and a large public square adorned by some handsome buildings, amongst which is a palace belonging to the Colonna family. Pop. 8166.

AVIANO [properly FIVRE DI ARRANO] a vil. Austria Italy gov. Verone, deleg. of, and 30 m. W from Udine, cap. of dist. Pop. 560.

AVIEMORE a vil. Scotland, co. Moray L. bank, Spey 25 m. S.E. Inverness.

AVIGLIANA a town in Italian States, prov. Turin 30 m. E.S.E. Susa. Manufactures—silk and coarse cloth. Pop. 8000.

AVIGLIANO a town in Italy Naples, prov. and dist. of, and 11 m. N.W. from Potenza on the brow of a hill part of which gave way in 1824, in consequence of long-continued rains, and destroyed a portion of the town. It has an elegant collegiate church, several convents, and a royal college. On the pasture in the neighborhood, the largest and finest oaks in the kingdom are reared. Pop. 9290.

AVIGNON [anc. Arven] a city France, cap. dep. Vaucluse, situated in a valley l. bank Rhone, here broad deep, and rapid, crossed by a wooden bridge, and also by a bridge of boats 408 m. S.E. Paris, and 53 N.W. Marseilles lat. 43° 51' N; lon. 4° 48' 36" E. (L.) It is a very ancient

AVIGNON, seen from the North.—From English View in the House of France.

city, of an oval form, built on a gently undulating surface, and surrounded by lofty walls, which are crowned with battlements. Surrounded with square towers, and adorned with handsome gates. Along the ramparts is an excellent boulevard, planted with oaks, from the lofty pinnacles of which, portion-

larly from the Dome, a rock which starts up abruptly from the Rhone to a height of 180 ft., a fine view is obtained of the rich surrounding country. The town is, upon the whole, well built, of large antique-looking houses; but the streets are narrow, crooked, ill paved, and extremely dirty. Avignon is the seat of an archbishop and has courts of primary jurisdiction and of commerce; a college, a primary normal school, a public library of 42,000 volumes, an Asylum, a medical library, a museum of natural history, a collection of plates and antiquities, a botanical garden, and a school of design. With an agricultural society and an association called the Academy of Vaucluse. Among its charitable institutions are a subsidiary infirmary of the *Hôtel des Invalides* at Paris for old and wounded soldiers, an orphan hospital, and a leprosy asylum. Many of the public edifices possess great interest. The cathedral, called *Notre Dame des Doms*, a building of great extent, is said to have been originally founded in the first ages of Christianity on the ruins of a heathen temple and after its destruction by the barbarians of the North, was rebuilt by Charlemagne. The richly-sculptured Chapel of the Resurrection is considered a masterpiece. Several popes officiated in this cathedral, and Innocent VI. Urban V., and Gregory XI. were consecrated in it. The former palace of the popes, near the cathedral now used as a barracks and prison, is a vast irregular Gothic structure, built at different periods with walls of great thickness and height, and strong towers, some of which are 150 ft. high. The chamber of the Inquisition established here in the 18th century and several of the atrocious contrivances to subdue the minds by torturing the bodies of its victims, are still shown. The church of the Cordeliers, of which nothing now remains but fragments of the tower and side walls, was celebrated for containing the tomb of Peter's Laura. The church was destroyed at the Revolution, when the tomb of Laura, with others, was broken open and the contents scattered to the winds. Of the churches, those of St. Pierre and St. Marcel are about the only two now deserving notice. In the Place d'Horloge are the *Hôtel de Ville*, a semi-circular edifice, originally a palace of the Colonna family the principal café, and the theatre erected in 1824. An ancient stone bridge across the Rhone was destroyed by a flood in 1699 only four of its arches remain.

The silk manufacture is the principal source of employment at Avignon and the rearing of silkworms is carried on extensively in the district. The city has also manufactures of velvet, woollen and cotton goods, hats, jewellery &c. with silk-dyeing establishments, a coarse-dressery a type-foundry iron works, paper-mills, tanneries, &c. and a trade in wine, brandy, iron, cotton, wool, truffles, grain, and other articles, of which it is the entrepot for Lower Dauphiné Provinces, and all Languedoc. Its chief manufactures, however have been transferred to Lyons; the annual fair at Beauneire has supplanted its market and it now depends chiefly on its olives, its vines, and the transit of goods upon the Rhone. The means of conveyance which Avignon possesses are very extensive. Numerous diligences run on the public roads which centre in it. Two steamers ply daily to Lyons, and two to Arles. The railway connecting it on the one hand with Montpellier and on the other with Marseilles, has been completed while that which is to connect it with Lyons and the capital is in rapid progress. With such means of conveyance, it cannot be doubted that the improvement which is said to have commenced in the trade of Avignon, will soon become much more decided.

Avignon is supposed to have been founded by the Greeks who settled at Maslin, now Marseilles. After the Romans, it passed under the domination of the Goths, and other northern barbarians. In 730 it was taken by the Saracens, who possessed it till 787 when it was wrested from them by Charles Martel. After a variety of fortunes, during which it passed to the Counts of Provence, it was sold by a Countess of that name, in 1345, to Clement VI., who, as the price, not only granted to pay her 80,000 crowns, but declared her innocent of the murder of her husband, which she was almost universally believed to be guilty. From that time Avignon con-

tinued to be a papal city, and in 1309 it was taken by the French king Philip the Fair, who transferred the papal seat to Avignon. It remained in the hands of the French kings until 1527, when it was taken by the Spaniards. In 1530 it was sold by a Countess of that name, in 1545, to Clement VI., who, as the price, not only granted to pay her 80,000 crowns, but declared her innocent of the murder of her husband, which she was almost universally believed to be guilty. From that time Avignon con-

threw to be possessed, for more than four centuries, by the popes, of whom not fewer than seven resided at it, besides three others, generally regarded as schismatic popes, who on the deposition of Gregory XI., the last of the series, set up their throne here, and maintained it for 40 years. The popes latterly governed Avignon by legate the last of whom was expelled at the Revolution of 1791. Pop. (1848) 36,185.

AVIGNONET a tn. France, dep. Haute-Garonne, 4 m. S.E. E. Villeneuve, on the Lers, near the Canal de Langouedec. It has a considerable trade in cattle. The only remarkable event connected with it, is the summary vengeance which some Abbeigues inflicted here in 1243 on several priests and familiars of the Inquisition. Pop. 1081.

AVILA, a prov. Spain, in New Castile, esp. same name near the centre of the peninsula and bounded, N by prov. Valadolid, E by Segovia and Madrid, S by Toledo and Cáceres, and W by Salamanca; area, 4917 sq. m. watered by the Alberche, Adaja, and several smaller streams. The prevailing formations are granite and mica. The N. portion of the province is, for the most part, flat and exposed, but adapted for tillage that on the S. very rugged and mountainous, interspersed with fruitful valleys and verdant slopes. The principal mountains are the sierras de Gredos, Fitero, Villafraña, Villafraña, Avila, and Tumbillo; they are rocky and precipitous, covered with oak pine poplar juniper &c. Silver copper lead iron, coal, marble, and various other minerals are found in Avila, and to some extent wrought. The plains in the N. part of the province are stony and poorly cultivated, but produce good grain and flax. The valleys of the S. portion afford rich pasturage, and abound in grapes, olives mulberries, chestnuts, alfalfa and other fruits. Sheep goats, pigs horned cattle, &c., are reared in considerable numbers. Cloth, linen silk, paper soap, earthenware hardware, copper vessels, and leather are manufactured and exported. Avila possesses numerous benevolent institutions, and education is perhaps better attended to in it than in any other province of Spain crime is proportionally rare. The people are honest, temperate, and cheerful, but reserved and ceremonious towards strangers. Pop. 183,986.—(Madrid.)

AVILA, a city Spain in New Castile, esp. prov. of same name, 66 m. W.N.W. Madrid, on a hill 8069 ft. above the sea, at the foot of which runs the river Adaja. Divided into three districts—San Nicholas, San Antonio, and San Francisco and partially surrounded by a wall of polished granite, in good preservation entered by nine gates, and formerly flanked with 88 towers. Before the invention of gunpowder the place was considered impregnable. It has irregular badly paved and filthy streets two large squares, containing the principal buildings, which, as well as the houses generally are built of gray granite. Avila is the see of a bishop and has a Gothic cathedral eight other churches, a university an endowed school, a school of arts, townhall, public storerooms, hospital, cemetery and several convents. Two annual fairs are held in June for the agricultural and industrial produce of the country, the other in September for horses, cattle, sheep &c. Pop. 4121.—(Madrid.)

AVILES, a tn. and port, Spain, in Asturias prov. of, and 17 m. N. Oviedo lat. 45 35' N. lon. 5° 51' W. 4 m. from the sea, 1 bank of the river Aviles, here crossed by a bridge called San Sebastian. The river at high water is navigable for vessels of the largest size up to the town. Aviles has somewhat regular but convenient, well-lighted, paved, and drained streets several squares, in some of which are some fine houses with arcades, an elegant galleon, built on 13 arches, and having a quadrangular tower, two churches, a townhouse, an hospital several well-attended schools a small theatre, the old palace of the Marquesses of Santiago and Ferrera, with numerous public and private fontaine. Manufactures:—copper vessels, linen, earthenware, glass, linen, damask, umbrellas, and drills and bleaching is carried on. The commerce is active, and consists chiefly in the export of copper vessels, earthenware, and a considerable quantity of coal, obtained from the mines of Armo in the vicinity. Pop. 6500.—(Madrid.)

AVINGTON—1, par Eng. Berks 1148 sq. Pop. 97.

—2, par Hesse 179 sq. Pop. 178.

AVIO a market in Austria, in the Tyrol on the Adige, circle Trent. It is the seat of a deanery, and has a castle, manufactures of silk and velvet, and flint quarries. Pop. 3780.

AVISE, a tn. Persia, in Kurdistan, on the Khoras, 78 m. S.W. Shuster. Pop. 8000.

AVIZ (Latin, *Avinion*) a tn. and par Portugal, prov. Alemtejo, dist. of, and 35 m. S.W. Faro, 10 m. S.W. Faro, an affluent of the *Tejo* about 1000 ft. above the sea, the knights of Aviz founded in 1146 by Alfonso I., and the residence of the grand prior. It is surrounded with good walls and defended by a castle and contains a church, a convent of the order of Aviz, an hospital, and a posthouse. Pop. 1415.

AVLONA. See *AVLONA*.

AVOCA, or *OVACA*.—1 A valley and river Ireland, co. Wicklow celebrated as the scene and subject of one of Moore's songs. The Avoca river traverses the parish of Arklow and falls into the sea about half a mile below Arklow. It rhymed at one time with salmon, but since the drainage of the Ballymashagh copper mines was led into it, the fish have entirely disappeared.—2 A river Australia Felix, which divides the districts of Wimmera and Westcoast. There are a number of stations on its banks. It rises in the Australian Pyrenees, flows N. and falls into Lake Bael total course above 300 m.

AVOCH par Scot. Ross 6198 sq. Pop. 3029.

AVOLA or *AVOLA* a market tn. Sicily, situated by a battery prov. of and 18 m. S.W. Syracuse, pleasantly situated on a wooded eminence with a marine village on the beach. It is clean and regularly built, has a good trade in wine, corn, olives, oil, honey almonds, and fruit and some sugar is made at the only cane plantation now remaining in Sicily. The adjacent country produces large numbers of cattle, many of which find a market at Malta. Game is abundant. Tunnies are caught a short distance from the town. Pop. 8500.

AVON the name of five rivers in England two in Wales, three in Scotland and two in Australia. Three in Scotland are sometimes called Avon the name Avon or Eves, according to Ireland being common to rivers the course of which is easy and gentle. In ENGLAND are—1, The Upper Avon which rises in co. Northampton passes Stratford-on-Avon, the birthplace of Shakespeare, and falls into the Severn at Tewkesbury.—2 Lower or West Avon, which rises in co. Gloucester and enters the Bristol Channel about 8 m. below Bristol.—3 The *Hampesters Avon* which falls into the English Channel at Christchurch Avon.—4, The *Little or Middle Avon*, runs in co. Gloucester and falls into the Severn.—5 The *Avon, Lymington or Tordun*, which rises in co. Monmouth and, after a course of about 15 m. falls into the UK at Caerleon, in the same county.—Those in WALES are, a river in co. Glamorgan, which falls into Swansea Bay and another which rises in co. Merioneth, and falls into Cardigan Bay.—Those in SCOTLAND are—1 A tributary of the Spey which has its source in Loch Avon, in the S.W. extremity of co. Banff.—2 A stream which rises in Loch Avon, co. Ayr and falls into the Clyde at Hamilton.—3 A river which, for nearly half of its course, forms the boundary between the co. of Linlithgow and Striding. It takes its rise in co. Dumfriesshire and falls into the Frith of Forth a little W. of Borrowstonness, in co. Striding.—Those in AUSTRALIA are—1 A river in W. Australia, rising in co. Grantham, about lat. 39° 30' S. from which it proceeds N. through the co. of York, and falls into the Swan river at lat. 31° 30' S. co. Victoria.—2 A river Australia Felix, on which there are several stations. It is a small affluent of Lake Benzyang lat. 28° 35' S. S. lon. 148° E.

AVRANCHES (anc. *Avranch*) a tn. France, dep. Le Manche (Normandy) esp. around, 80 m. E. St. Malo 1 bank, Sea, about 3 m. above its embouchure in the Atlantic, pleasantly situated on the extremity of an extended ridge, the summit of which is crowned with the ruins of the cathedral, which was built in the 11th century and destroyed at the Revolution. Here Henry II. of England did penance in 1173 before two of the Pope's legates, for the murder of Thomas à Becket. A fast stone, with a top engraved on it, marks the spot; and is all, save a single broken pillar that remains of the once magnificent cathedral. Avranches is the seat of a tribunal of primary jurisdiction, and has a high school, a public library of about 10,000 volumes, an hospital a theatre and a botanic garden.

From the latter and from the public walk formed in what was formerly the garden of the bishopric, the entrance to

the town, and various other points, the view obtained is said to be the finest in the N. of France. One of the most prominent objects in the remarkable peak called St. Michel Manufacture—i.e., blondes, white thread, and wax candles. A small trade in grain, better older hemp, flax, and cattle is carried on. Avranches is a favorite residence of the English, on account of the beauty of its situation, the salubrity of the air and the cheapness of living. The celebrated line, whose Demerit *Demerit* is still regarded as one of the best works on the evidence of Christianity was Bishop of Avranches. Pop. 7247.

AVRANCHIN (*Avranchin* *Normandie*) an ancient dist. France, now comprised in *dep. La Manche*, and forming the arrondissements of Avranchin and Mortain.

AWA.—1. A prov. in, and cap. Japan, in the E. of I. Nippon. The town Awa lies in lat. 34° N; lon. 140° E., about 80 m. E. Jeddo.—2. A principality in the same island.—3. A small Japan cap. of I. Nikoko.—4. A British fort in Bengal, Hindostan, N. from Agra.—5. A market in Persia, prov. Irak, N. W. Persia.

AWAMI, or **AWAN** in I. Japan, about 80 m. in extent, off the E. coast of Nippon, between it and the E. coast of Shikoku, in lat. 34° 30' N. lon. 134° 30' E. It forms a principality of the same name, has an area of 468 sq. m., is high and hilly, has a story and sandy soil, and yields cotton, but only sufficient for local consumption. From some of its legends, salt is gathered. On the coast is a town called also *Awami* besides which there are on the island the towns of Tama, Myura, Murotsu, and Jomura.

AWAUCHIN (*Awau*), an active volcano in Kamohaka lat. 53° 15' N. lon. 158° 50' E. It is 9055 ft. in height; its last eruption took place in 1837.

AWE (Loch), a fresh-water lake, Scotland, co. Argyll, extending about 33 m. in length, from N. E. to S. W. with a breadth of about 2 m. and communicating with Loch Eilve by the river Awe, which, after a course of 7 m. discharges its waters into the latter at Bonaw. It is very deep and its sloping shores are well cultivated, but the horizon is closed by lofty mountains, from which fall many picturesque cascades. The *Crossna* flowing over its N. end, and giving it a singularly wild and romantic character. About 24 small lakes are scattered over its surface, on two of which, Inishal and Fraoch-Eilan, are some beautiful ruins. Near its N.E. and likewise, is Trunkellion Castle, once the seat of the chief of the M. Macgillivray, and about 4 m. E. close on its banks, is the beautiful ruin of Kilmarnock Castle, once the residence, and still the property of the Marquis of Breadalbane.

AWLIBOOMBE, par. Eng. Devon 2569 ac. Pop. 564. **AWRE** par. and vil. Eng. Gloucester the former on a plain near the banks of the Severn. Area of par. 6115 ac. Pop. 1512.

AX, a small tn. France, *dep. Ardege*, 30 m. S.E. Foix, pretentively situated amidst mountains of granite belonging to the Pyrenees, at the intersection of three valleys, watered by the mountain-torrents of Asson, Orgue, and Mornas, which, on their junction here, take the name of Ardege. It is celebrated for its hot sulphurous springs varying in temperature from 118° to 166° Fah. There are two or three establishments of baths, and several hotels and hospitals one of which has been constructed by the French Government for military purposes. Near it is an ancient bath, established in 1200, called *Bain-de-Ledre*, or *Lepre's Bath*. The inhabitants use these hot springs for various domestic and even culinary purposes. Ax has some manufacture of woollen goods, and tanneries. Pop. 1891.—(*Murray's Handbook* *Des de la France*.)

AX, or **AXA**, two rivers, England, one of which has its source in the Mendip Hills, in the remarkable cavern of Welky hole, co. Somerset, and after being joined by the Chadder water passes Axbridge, and flows into the Bristol Channel near the village of Uphill.—The other Ax rises near Cheddar, co. Dorset, joins the Axwater and falls into the Bristol Channel at Axmouth, co. Devon.

AXBRIDGE, a market tn. and par. England, co. Somerset, bet. Wincaster. The town is 11 m. N. E. W. Glastonbury and 120 m. S. W. London, on the banks of the Ax, under the Mendip Hills, and consists of three or four irregular streets. The church, which stands on an eminence, is a large and handsome Gothic structure, of great antiquity and contains

some ancient monuments. There are, besides, a chapel for Wesleyan Methodists and Particular Baptists, a guild-hall, a market-house, several schools, and some small charities. Kait stockings are manufactured here, and are in some request. Market-days, Tuesday and Saturday. Four fairs annually for cattle. Area of par. 540 ac. Pop. 980.

AXEL, a small tn. Holland, off cen. of same name, near Zwollev, E. of the W. Beek, and 7 m. W. Hyl. It is built in the shape of a parallelogram, and has a townhall, a Calvinistic church, a school, two breweries, a saw-mill, a hat manufactory and two corn-mills. The inhabitants are chiefly employed in agriculture, and number 2200.

AXHOLME, a river I. England, N. W. angle on Lincoln, formed by the rivers Trent, Idle, and Don, about 17 m. long, N. to S. and generally 5 m. broad, E. to W. area, 47,800 ac. The soil is fertile and large quantities of flax and hemp, rape and turnip-seeds, are cultivated. In June 1747 the body of a woman was found 6 ft. deep in a pasture in this island. The antique medals on her feet, afforded evidence of her having been buried there for many ages. Yet her nails, hair and skin, showed hardly any marks of decay. It contains seven parishes, Alkthorpe, Bolton, Croxley, Epworth, Haxey, Loddington, and Oulton, and has two market towns, Croxley and Epworth, the latter the principal town of the Isle. Pop. (1841) 12,778.

AXIM or **AXES**, a tn. and dist. Abania, on the Gold Coast. The Dutch had a fort here called Fort Anthony situated on the most W. promontory of Cape Three Points. The Portuguese founded the first settlement, but were driven away by the Dutch in 1649. The land is good, and the country well cultivated. The town on a river of the same name lies between Danovo and Cape Apollonia lat. 5° 25' N. lon. 2° 25' W.

AXMINSTER, a market tn. and par. England, co. Devon. The town is 34 m. E. Exeter on the S. W. side of a hill that rises above the river Ax, consists of five principal streets somewhat irregularly laid out with houses mostly of stone, and slate-roofed. It is supplied abundantly with water and well lighted with gas. The only public building worthy of notice is the parish church, a very ancient edifice, containing some interesting antiquary remains. The library is a fine specimen of Anglo-Norman. The other places of worship are an independent chapel a Wesleyan chapel and a R. Catholic chapel. The educational means are, a national school with a small endowment, in which about 120 boys and girls are educated a school on the British system and several private, dame and Sunday schools. There are a room-room, several reading societies, and a few minor charities. Axminster was at one time celebrated for its woollen cloth and carpet manufactory; it had also an old established tapestry but none of these branches now exist in the town, the trade of which is entirely a retail one. Area of par. 7637 ac. Pop. 2769.

AXMOUTH par. Eng. Devon 4733 ac. Pop. 689.

AXUM, or **AXUMA** [anc. *Axuma* or *Axum*] a tn. Abyssinia, kingdom, Tigra, now much decayed; situated about 10 m. W. Adowa, and 110 E. W. Ardege, near one of the sources of the Mareb, 7000 ft. above the level of the sea lat. 14° 10' N; lon. 39° 0' E. Modern Axum is a miserable village of about 600 huts, built in a small room between two hills, at the N. W. end of a large and fertile valley and is now worthy of notice only for its antiquities. Of these, the most celebrated is an obelisk, 60 ft. high, consisting of a single block of granite, highly ornamented in relief, and crowned with a representation of the ancient patera. It is of Greek workmanship, and the only entire and erect specimen remaining of upwards of 50, the rest lying in fragments around. Probably the most ancient relic in the place is a small square enclosure, with pillars at the corners, and a seat and footstool of granite in the centre, where the coronation of the kings of Axum took place. Axum was capital of a powerful kingdom, but we have no accounts of it previous to the commencement of the Christian era, when it was a great commercial mart, carrying on an extensive trade, especially in Ivory by the port of Adia, Adula, or Sella, on the Red Sea. Its monarchs, who ruled not only the country of the *Axumites*, but also part of Arabia, were of Greek origin, and used the Greek language, and for many centuries maintained their dominion unimpeded.—[*Baird's Abyssinia*, Russell's *Nubia and Abyssinia*.]

AY (Pelo), or Peto War one of the Banda Islands, Indian Archipelago lat. 4° 30' S. lon. 159° 58' E. It is one of the most beautiful and picturesque of the Bandas, but its without water the inhabitants depending on rain, or on supplies from the other islands. In common with the other islands of the group, it produces excellent nutmegs.

AY or Ayacucho (Lak Apoc) a in France, dep. Marne (Champagne) 19° 5' S. E. Rhodan at the foot of a hill covered with vineyards, 2 bank. Marne. It is celebrated for its white wines, which are considered the best of any in Champagne, and produced annually to the value of about 275 000. Besides its trade in wine it has some distilleries and vinegar-works, and beds of fine clay for earthenware and porcelain. Pop. 3882.

AYACUCHO a dep. Peru, between lat. 12° and 15° 30' E., and lon. about 75° and 76° W. bounded, N. by dep. Junin, E. and N. E. by independent Indian tribes, S. and W. by the cordillera, which separates it from Lima. greatest length from N. W. to S. E. 275 m. greatest breadth, about 180 m. area estimated at 25 000 sq. m. With the exception of the S. W. frontier formed by the magnificent range of the cordillera, it consists chiefly of a series of plains, from one of which it derives its name. It is well watered by numerous tributaries of the Amazon, the largest of which, the Montero, proceeds through the N. of the department in a course so tortuous, as almost to describe a circle. Ayacucho is divided into the 10 provinces of Tarma, Huancayo, Huancavelica, Huamanga, Azuay, Castrovirrey, Cangallo, Andabambilla, Lucerna, and Pichincha. Cap. Huamanga. Pop. about 190 000.

AYAMONTE a seaport in Spain prov. of and 80 m. W. B. W. Seville, on the 1 bank and near the mouth of the Guadalequivar, which here forms the boundary between Spain and Portugal. It stands on an acclivity which slopes from N. to S. and is defended by two small batteries, of modern construction. The town consists of two parts, an upper and a lower which have a very marked difference in their appearance. The former consisting of narrow and irregular streets, while those of the latter are regular and spacious and lined with good houses, generally two and sometimes three stories high. There are three public squares, all with well-planted walks. The largest of these, San Francisco, is adorned with a fine fountain. The chief public buildings are, two churches, a townhouse and prison but none of them are deserving of notice. Ayamonte has a well-endowed hospital, and two endowed schools, in which only the humblest branches are taught. Boat-building and lace-making, once carried on to a great extent here, have greatly fallen off, though the latter still gives employment to a considerable number of females. The chief occupation at present is fishing. Pop. 4675.

AYAR NOR, a lake in Chinese Tartary lat. 44° 46' N. lon. 86° 15' E. It is of an oval form, and receives several streams, the chief of which is the Lakho, but has no outlet. Greatest length, from E. to W. 85 m. breadth, 20 m.

AYAR. See AYAR.

AYASHI. See AYASHI.

AYALFEE (Gharat) par Eng Durham 10 808 ac. Pop. 1384.

AYERRE, a in Spain, in Aragon prov. of, and 30 m. N. W. Huesca, on a hill near the source of the Vadiello. It has 11 paved streets two squares connected by two lofty arches through the hereditary palace of the Marquis of Ayerre two churches, a townhall an hospital, and two schools. Main features—iron, oil, and wine. Annual fair in September. Pop. including the adjacent hamlets of Angila and Fontanellas, 3170.—(Madrid).

AYLESBURY par Eng Devon 3948 ac. Pop. 958.

AYLESBURY sear in England, co. Buckingham 86 m. N. W. London. houses badly built, chiefly of brick water courses six principal streets, irregular and differently kept, but lighted with gas. It has two established churches, one of them, St. Mary's, an ancient cruciform structure one independent, two Baptist, one E. catholic, one Methodist, and some other smaller places of worship a national, British, archdiocesan, and other schools a mechanics institution, and numerous minor charities. Principal public buildings—county-hall and market-house, handsome edifice; main work-house and jail. Chief manufactures— silk, shawling and weaving. Drunkling and tame rabbits bred in great numbers for the London market. Aylesbury returns two members to Parliament; constituency (1849) 1515 Area of par

3200 ac. Pop. of in, and par 6081.—There is a vale of the same name in co. Buckingham, celebrated for its fertility.

AYLESBY par Eng Lincoln 2110 ac. Pop. 172.

AYLESFORD a vil. and par Eng Kent co. Kent. The vil. is 324 m. S. E. London, on the r bank Midway over which there is a stone bridge of six arches. The only main feature is paper. Area of par 4391 ac. Pop. 1487.

AYLESTON, par Eng Leicester 3350 ac. Pop. 868.

AYMER, a considerable lake in British N. America, immediately adjoining Christy Colden Lake, with which it is connected by a small stream about 80 m. N. from the N. E. extremity of Great Slave Lake and intersected by the parallel of 64° 15' N. and the meridian of 109° W. It is about 50 m. in length, and about 30 in breadth.

AYMERTON par Eng Norfolk 1679 ac. Pop. 290.

AYLSHAM, a market in England, co. Norfolk, on a gentle acclivity rising from the river Bure 104 m. N. Norwich. It consists of four principal streets, tolerably well kept, lighted with gas. houses of brick, and generally well built. supply of water ample, but not reckoned of the best quality. The church is in the decorated style. The other places of worship are, a Baptist chapel, and a Wesleyan and Primitive Methodist chapels. Aylsham was formerly celebrated for the manufacture of linen sold under the name of Aylsham web. Subsequently the manufacture of woollen articles gave employment to many of the inhabitants, but since the introduction of machinery all these branches of industry have ceased to exist. Corn now forms the only article of trade. Aylsham has a national school for boys, another for girls, and a school for infants a commercial school, in connection with the Norfolk Board of Education, for the sons of farmers and tradesmen a literary society with a good and increasing library; and several minor charities. A cemetery with walls has been recently formed. Area of par 4898 ac. Pop. 2741.

AYLTON par Eng Hereford 825 ac. 1 op. 108.

AYMARQUES. See AYMARQUES.

AYMAUN. See AYMAUN.

AYMAUN, a small town and barony in Arabia, W. coast of the promontory of Maasra or Muscat, at the entrance into the Persian Gulf lat. 25° 25' N. lon. 55° 23' E. The houses are built principally of mud. The inhabitants depend for subsistence upon the pearl-fishery the produce of which is between 23400 and 25000 annually. The country around is sterile, and fresh water scarce, being procured from wells three quarters of a mile distant and which are often filled up with sand by W. gales. The anchorage of the town is bad, over a rocky bottom. Pop. of in, 1000 to 1500.

AYMESTREY par Eng Hereford 6349 ac. Pop. 835.

AYNHO par Eng Northampton 2330 ac. Pop. 611.

AYORA, a in Spain, prov. of, and 51 m. S. W. Valencia, in an extensive hollow at the base of an isolated limestone mountain. Its streets are, for the most part, straight, commodious, and clean, with wide well-paved footpaths. It has four squares a parish church and a chapel of ease, a handsome townhall an unhealthy prison, two schools, an hospital a large public granary and a public bath. On the summit of the hill where a part of the town once stood, are the remains of an old castle. The inhabitants are chiefly employed in husbandry and expressing oil. Pop. 8786.—(Madrid).

AYOTT two par. Eng. Herts.—1 (St. Lawrence) 747 ac. Pop. 147.—2 (St. Peter) 1100 ac. Pop. 292.

AYR, a river Scotland, Ayrshire, running a W. course, of 80 m. through the dist. of Kyle, dividing the so to which it gives name, into two nearly equal parts, and finally falling into the Frith of Clyde below the town of Ayr. The species of cleystone, known as the Water of Ayr Stone, is found in its channel.

AYR, AYRSHIRE or AYRSHIRE, an extensive maritime co. on the S. W. coast of Scotland, having somewhat of a crescent form bounded, N. by Renfrewshire, S. by Wigton and Kirkcubright, E. by the shires of Lanark and Dumfriess, and W. by the Irish Channel. It is about 70 m. in length, with a breadth varying from 10 to 22 m., but diminishing to 4 or 5 m. at its N. and S. extremities. In coast line, which is about 18 m. in length, presents no deep indentations, but has several excellent harbours. The singular rock off the coast, known by the name of Ailsa Craig belongs to the county as does also the island of Little Cumbrae. Ayrshire comprises, altogether 668,800 ac., of which about a half is supposed to be arable. The county was formerly and is still popularly divided into the

three districts of Carrick, Kyle, and Cunningham. The first comprehends all that part of the county lying S. of the Doon the second, the space between the Doon and the Irvine and the third, the remaining part of the county N. of the Irvine, the smallest, but the most wealthy and populous of the three. The surface is irregular and a large portion of it hilly. Of the latter description is the whole district of Carrick, the E. part of Kyle, and the N. extremity of Cunningham. The other parts of the county are in general flat, and somewhat monotonous, with exceptions of the banks of the streams, which are remarkable for their picturesque beauty. The level lands are extremely fertile and well cultivated but in the lower districts along the coast, the soil is mostly light and sandy and less productive. Although, as above stated, a large portion of Ayrshire is hilly it has no great elevations the highest summits varying from about 1200 to 1900 ft. The principal streams are the Ayr, Blinnoch Guran, Doon, Irvine, and Carrick, more than one of which have been rendered classic by the name of Burns. There are several small lakes in various parts of the county some of these well stocked with fish, but not otherwise remarkable. Fish are also plentiful on the coast, although not so abundant, it is said, as formerly.

The mineral riches of Ayrshire are very considerable, although in part but of recent development. Coal is abundant, especially in the middle and N. parts of the county which may be considered as included in the great coal field of Scotland. Extensive seams, also, of black-band ironstone have recently been discovered in various parts, and of so peculiar a character as to render it extremely probable that Ayrshire will at no distant day become the great seat of the iron manufactures of Scotland. The principal ironworks already established in the county are those of Blair Glangarnock, Eglinton, Monkirk, Leger, Kilmarnock, and Dalmenething, but others are from time to time being added. Flueing is found in some localities in considerable seams and lead, antimony and copper are also met with, but in small quantity. Limestone and freestone abound. Mill-stones, of coarse granite, much esteemed for their hardness and durability are quarried near the N. coast, in the district of Cunningham. The well known whinstone, called Water of Ayr Stone is found in the river Ayr. Marl also, is prevalent in many places.

The climate of Ayr is moist, the average annual amount of rain falling near the centre of the county being 39 and 42 in. but it is by no means unwholesome. The agriculture of the county was in a miserable condition till about the middle of the last century when it began to improve, and has since continued to make rapid progress. The principal grain raised is the oat. Turnips are rapidly increasing, the quantity now raised being upwards of ten times that grown 15 to 20 years ago. Potatoes, also, are universally cultivated. Flax is raised, and bog or heath, but very little wheat. Lime is the common manure, but on the coast sea-weed is much used. Dairy-husbandry is extensively practised, the Ayrshire cows being celebrated as milkers. The well-known and much esteemed Dalrymple cheese, so called from a parish of that name in the district of Cunningham, is produced in large quantities but most part of the cheese made in the adjoining parishes, and even in the adjoining counties, is sold as Dalrymple cheese. Great quantities of milk, also, are sent, in large tubs, by railway to Glasgow. On the dry lands along the coast, a small white-faced breed of sheep, of indifferent quality, has long been maintained, but in the moors the native sheep are bred in great numbers their wool is coarse and scanty but the flesh is excellent. The horses of Ayrshire are of superior breed, being hardy strong, and of large size. The arable farms are mostly small average rent of land, about 11s. 8d. per acre. There are several large estates, although there are also many of the middling and smaller class of proprietors. The rank throughout the county are now excellent, although in former times it was generally a pestiferous reed is it is. As already mentioned, run is maintained to a great extent, and is yearly increasing. Its woollen manufactures are also extensive, particularly carpets, hosiery, and worsted shawls, which are produced in great quantities at Kilmarnock, Striven, and other towns. There are some considerable quarries, and likewise several extensive cotton-works in different parts of the county and a great deal of yarn is spun for the Glasgow and Paisley manufacturers. Ayrshire neither

work is also much esteemed, and has been long known and celebrated under that name; nor is the county less famed for its beautiful wooden snuff-boxes. The county is adorned with many elegant mansions, of which probably the finest and most picturesque is Calton Castle, the seat of the Marquis of Ailes, standing on the verge of a beautiful cliff, overhanging the sea, about 12 m. S.W. Ayr. Among the many interesting scenes of antiquity may be noticed two enormous columns of gray stone, one in the parish of Calton the other the larger of the two, in that of Born. Nothing is known of the history of either. There are also traces of encampments in various parishes, supposed to be of Danish origin. On the coast of Carrick about 18 m. S.W. the town of Ayr is the ancient castle of Turaherry in which Robert Bruce, King of Scotland is said to have been born, and where he is known to have spent many of his youthful years. It was here that a fire, accidentally kindled, was mistaken by Bruce for an expected signal and caused him to cross the sea from the island of Arran opposite, to attempt the deliverance of his country. Durara Castle, a tall empty tower occupying a commanding position on the coast, about 7 m. S.W. Ayr is also an interesting relic of former times. Of the ecclesiastical ruins, the most interesting is the abbey of Crossraguel in the parish of Kirk-Cubwald founded in 1244.

The chief towns are—Ayr, Kilmarnock, Irvine, Troon, Saltcoats, Largo Ardrossan, Gifford, Ballantrae, Tarbolton, Manohing, Beith, Dalry, Largs, and Maybole. Ayrshire contains 45 parishes and returns one member to Parliament. Constitution in 1849. 1850. The annual value of real property in 1842-3 £251,518. Pop. 1851, 83,338.

AYR, a seaport, royal and free bur. Scotland, on a barge, on a wide plain, 1 bank, river Ayr near its confluence with the Frith of Clyde, 30 m. S.W. Glasgow and 40 by railway lat. 55° 37' 54" N.; lon. 4° 37' 42" W. (A). Two bridges, the Two Drags of Burns, called, respectively the Auld and New Brigs, the latter an elegant structure of five arches, connect the town with the suburbs, Newton or New Town, and W. Ailsa, both on the E. bank of the river. In the more modern parts of the town the streets are spacious, many of the shops elegant, and the houses handsome. Here, also, is one of the finest squares of which any provincial town can boast, called Wellington Square. All the principal streets are well paved, lighted with gas and kept remarkably clean. In the town and suburbs there are four established churches two Free, two U. Presbyterian, a Reformed Presbyterian Original Seceders Congregationalist, Episcopalian, and R. Catholic. The other principal edifices are the Town's New Buildings, containing a suite of elegant assembly-rooms, and a public reading-room, the whole structure being finely set off by an elegant square, 226 ft. in height; the county buildings on the N.W. side of Wellington Square, after the model of the temple of Isis at Rome; and Wallace Tower a handsome structure, 115 ft. in height, having, in a niche in front, an indifferently-executed statue of the hero. This tower occupies the site of an ancient one of the same name, in which, according to tradition, Wallace was confined. Between the town and the sea are the remains of a citadel erected by Cromwell, now called the Fort. The academy at Ayr has long been celebrated for the excellence of its system, and the ability of its teachers—a circumstance which has tended to no small degree to promote the prosperity of the town many families resorting to it for the education of their children. The number of scholars averages from 500 to 600 annually. The building is plain but commodious, and occupies a healthy situation. With exception of carpets, there are no manufactures of any extent in the town, which, on the whole, in a business point of view is a dull place, depending greatly on the weekly markets and the county courts for its support.

The harbour of Ayr has two piers, which extend into the sea upwards of 600 yards, one on the E. side of the river and the other on the N. Further out, there is a breakwater, recently constructed. The depth of water in ordinary spring tides, is from 13 to 14 ft., but at low water only 3 ft. The channel, however, is too narrow to admit vessels drawing more than 12 ft. water while the navigation is much impeded by a shifting bar of sand near the mouth, on which, at ebb tide, there is not more than a foot of water but, in spring tides, there is 9 ft. at high water and 7 in neaps, with a foot or two more with fresh E. winds. The shipping trade of Ayr is

chiefly with Ireland, the principal exports being cotton, wool, lace, coal, and linoleum. Imports—grain, spirits, timber, slate, bricks, and lime. There is also a small foreign trade in hemp, mats, yellow tar, iron, and pitch. The sea fisheries of Ayr were at one time very considerable, but have greatly declined of late years. Races are held here on a course about a mile S. from the town, and are generally well attended, and about 2 m. S. stand Burns & Cottage, Alloway Kirk, &c. See ALLOWAY.

The town of Newton-upon-Ayr on the opposite bank of the river is now generally ranked as a suburb of Ayr, although it is a borough of barony, having magistracy of its own, and a peculiar and independent constitution. The principal street is of considerable length but contains few handsome houses, while those in the other and older parts of the town are narrow, irregular and straggling and the houses of homely appearance but towards the sea, several new and spacious streets have been laid out, and a number of neat villas erected. The only building of any note, exclusive of the churches, is the council-house. Handloom weaving and hand-sewing are carried on here to a considerable extent, especially the latter the celebrated "Lynbrie" needlework, in which several hundred females are employed. Newton-upon-Ayr has a joint interest with Ayr in the harbour and supplies nearly all the coal shipped there. It has, likewise, some shipbuilding docks, rope-walks, and iron and brass-foundries. Although called New Town the erection of the burgh dates as far back as the time of Robert Bruce. It is included within the parliamentary boundaries of the burgh of Ayr by the Reform Act, and thus forms a constituency with it. Campbellton, Inverary, Irvine, and Oban, in returning a member to Parliament. The townships of the Glasgow and Ayr Railway is in this burgh. Wallacestown, mainly in the par. of St. Quirren, was formerly a v.l. adjoining Newton-upon-Ayr but is now so blended with it as to form one compact town. Its population consists almost entirely of colliers, artisans and weavers. It also is within the parliamentary boundaries of Ayr. Pop. Ayr 9110 Newton upon Ayr to and par. 4814. Pop. of par. bor. 17,634.

AYR (Newtown-upon-Ayr) See AYR.

AYSGARTH, a par. and township, Eag York, N Riding 77,908 ac. Pop. 5583.

AYSTON par. Eng. Rutland 897 ac. Pop. 118.
AYTON — (Overd) par. Eng York, N Riding 5690 ac. Pop. 1504. — 2 par. Scot. Berwick 7000 ac. Pop. 1889.

AZAMBUJA a tn. and par. Portugal prov. Estremadura, dist. Alemquer 18 m. S.W. Santarum. It is situated on a fine and well-cultivated plain and has an annual fair. Pop. 1640.

AZAMOR a small tn. N.W. coast, Morocco, prov. Dakhla, on a sand-hill 120 ft. above the sea, at a short distance from the l. bank of the river Um or bugh lat. 33° 16' N. lon. 8° 15' W. (a). The walls which are 1½ m. in circuit, are in ruins, and the only defence remaining is a few guns, pointed seawards. The town is dull and lifeless, the streets narrow and filthy. Provisions, fish, vegetables and fruits are, however, abundant, and of excellent quality. At the S.E. angle of the town is a suburb containing a mosque and a sanctuary. The inhabitants carry on some trade in wool, which is shipped at Azamor, a small port about 8 m. S.W. a sand-bar at the mouth of the Um or bugh, and the ruggedity of the current, rendering the approach to Azamor dangerous. The country around is open, and well cultivated, with many gardens, and extensive plantations of banana. Pop. 1000.

AZANI, an ancient Phrygian city of Turkey in Asia, near Antioch, now in ruins. l. bank, Rhodanus, 2½ m. S.W. Kinyas. It was formerly a wealthy and magnificent city, as appears from the numerous and imposing ruins which it contains, including a great quantity of shafts of columns, beautifully-worked capitals, entablatures, and the ruins of a noble temple and theatre. The columns of the temple are of the Ionic order, formed of a single block of marble 36 ft. in length. Some of the Greek inscriptions on the walls refer to the reign of Hadrian. The modern village consists of a few straggling huts.

AZAUHUAL, a tn. Spain, Estremadura, prov. of, and 34 m. S.W. Badajoz; in a valley encompassed by three hills. Vol. I.

It has straight, well paved streets, three squares, a parish church, townhouse, public storehouse, two schools, prison, barracks, and a hospital. Agriculture, domestic weaving of stockings, and brandy-distilling are the chief occupations. Pop. 2860.

AZAY several small tn. and comm. France:—1, Azay-Bridé, a v.l. and comm. dep. Deux-Sèvres. Pop. 1896. — 2, Azay-le-Ferron, a tn. and comm. dep. Indre (Berry) 16 m. N. Le Blanc; with a hot sulphurous spring. Pop. 1541. — 3, Azay-le-Rideau, a tn. agreeably situated on the Indre, dep. Indre-et-Loire (Touraine) 15 m. S.W. Tours; with manufactures of leather and bombazines. Pop. 1219. — 4, Azay-sur-Ocher, a v.l. and comm. dep. Indre-et-Loire, 7 m. E.S.E. Bourges, l. bank, Cher. Some good red wines are made here called vin de Ocher. Pop. 1362. — 5, Azay-sur-Indre, a v.l. dep. Indre-et-Loire, l. bank, Indre, at the confluence of the Indre; Pop. 461. — 6, Azay-sur-Thoué, a v.l. and comm. dep. Deux-Sèvres with manufactures of linen-woolery and druggists. Pop. 1189.

AZCOITIA, a tn. Spain, Biscay prov. Guipuzcoa, 30 m. N.W. Tolosa. In a verdant plain l. bank, Lroia, at the base of the lofty mountain of Ibañeta. The town is in three divisions and comprises a square, one principal and several other well constructed and commodious streets with wide foot pavements. The townhouse, a fine edifice, with five arches in front, the parish church a good specimen of Doric, and the school are the only buildings worth notice. Chief employments—agriculture, and the manufacture of iron nails and hardware. There are also some flourmills. The vicinity yields grain, fruits, especially cherries, chestnuts, and vegetables also some game and fish. Pop. 8793. — (Madoz).

AZEITAO or VILLA NOVOA, a tn. and par. Portugal prov. Estremadura, dist. of, and 6 m. W. Setúbal on a small stream which falls into the estuary of the Tagus. It has two churches, a cotton-factory several dyeworks, and some trade in wood. Pop. 1590.

AZERBIJAN or ADRERBAIAN (anc. Media Atropatene) a frontier prov. Persia, between lat. 36° 10' and 38° 55' N. and lon. 44° 20' and 48° 20' E. bounded, N. by trans-Caspian Russia, E. Russia and Ghilan, S. Irak-Ajemi and Ardabil, and W. Kurdistan. Length, from border of Kurdistan to the Murghab Mountains, 310 m.; breadth, 180 m. area, 55,285 sq. m. Nearly the whole country consists of a succession of high mountains, intersected by deep and rugged ravines which occasionally open into plateaux or extensive plains. Many of these are fertile, and partially cultivated. In the very centre of the province are the mountains of Behand, rising to the height of 9000 ft. above the sea level towards the E. of Tabreez, Mount Bavelan W. between 12,000 and 15,000 ft. The principal rivers are the Arax or Araks, on the S. border with its affluent the Karasun, the Kizil Osm, in the S. with its numerous affluents, which water the central parts of the province, the Jughay the Somer-char, the Aji and the Salvan, which fall into the Lake of Urmiah. One of the most remarkable features of Azerbaijan is the great salt lake of Urmiah (which see). The best soils yield from 50 to 60 fold, when abundantly irrigated, by means of the many small rivers by which the province is intersected. The principal produce consists of wheat, barley, maize, rye, flax, hemp, madder, dried fruits, cotton, tobacco, honey, grapes, wheat and wool and a considerable number of cattle, camels, horses, and sheep are reared. The chief articles of manufacture are velvets, silk stuffs, carpets, woollens, copper vessels, arms, and a little cutlery. There are very extensive tanneries; and the dressing of furs and skins is a general occupation. The province has some valuable minerals particularly iron, lead, copper salt, sulphate and sulphur and among the hills in the neighbourhood of Maragheh is found a beautiful transparent white marble, much pressed in Persia for paving paths and palaces and in this place it is used for bath-stones.

The climate of Azerbaijan is healthy but extremely hot in summer and autumn, and intensely cold in winter; the latter being severely felt from the great want of fuel, the only substitute for which is dried cow-dung mixed with straw. The spring is temperate and delightful in the plains but, on mountainous districts of wood, the snow lies for many months in the year; and hailstorms are so violent as frequently to kill cattle in the fields. The province is divided into 15 districts chief towns, Tabreez at Tauris, the capital; Masand or Mas-

nah, Ardabed, Shohmetar, Tanoj, Ehar, Shohmet, Khol, Urniah, the bishoprics of Zoraster and Maranga. The oppressive and exacting system of the Government tends much to depress the energies of the people and, in 1832 a colony of no less than 40,000 Armenians left this province and settled within the Russian territories. Pop. 1,500,000 consisting of Persians, Turks, Armenians, and Jews.—(Kinnear's *Geog. Memoir of the Persian Empire*, and *Quincy's Treatise on the History of Persia*, and *Frederick on the S. banks of the Caspian Sea* *Geog. Jour.* vol. iii. Col. Chesney.)

AZINGHUR, a to. Hindooistan, prov. Ahalabad, 80 m. N. N. E. Benares, and 400 m. N. W. Calcutta lat. 26° 5' N. lon. 83° 4' E. It was ceded to the British by the Nabob of Oude, in 1801. The inhabitants manufacture and export a considerable quantity of cotton goods.

AZIMNAGUR, a large dist. Hindooistan, prov. Behar, B. the Krishna, about lat. 16° N. watered by the Guiparba and Malpurba, but still is to a great extent remaining in a state of nature. Chief towns:—Gohark, Balgram, and Shachpoor.

AZINCOUVE

AZMERIGUANG, or **AJAMEDA GAKS**, a to. Hindooistan, prov. Bengal, on the river Boornah a tributary of the Brahmaputra, 225 m. N. E. Calcutta lat. 24° 51' N. lon. 91° 10' E. It has an establishment for the construction of native boats, and a considerable inland trade.

AZOF (Sea or) [called by the Russians, *Moré Leonovské*; Latin, *Morus Leonis* Greek, *Asow Meadow*], a large body of water in S. E. Europe, forming the N. subdivision of the Black Sea, with which it is connected by the Straits of Kerch or Yenikale (see *Chersonesus Taurica*) situated between the parallels of 43° 15' and 47° 15' N. and between the meridians of 25° and 30° E. its length, S. W. to N. E. (from the Strait of Kerch to the mouth of the Don) being 185 m. its average breadth about 80 m. and its area, about 14,000 sq. m. The N. coast is, for the most part, bold and craggy rising about 100 ft. above the water. The E. coast, inhabited by Cosacks, is very low chiefly sandy and intersected with lakes and morasses. The W. coast is formed by the tongue of sand, called the Tongue of Arabat, which divides it from the Shakhé More or Putrid Sea while the Crimea, and the territory of the Cosacks of the Black Sea, form the S. shore, on which, here and there, are some hills, visible a considerable distance. Its greatest depth, between Yenikale and Helosaria, on the N. side, is 7½ fathoms and it deepens considerably towards the Gulf of Don, several banks extending a great distance from the shore. The water is muddy and, from the numerous rivers running into it, almost fresh. The Sea of Azof has no remarkable current, the strongest never running more than 1 m. in 24 hours the navigation is generally stopped from November to March by ice. Perhaps no body of water of equal extent so abounds with fish, the principal fisheries are along the S. coast, between Cape Delgores and the Straits of Yenikale, the sturgeon, shark, and other fish, from which are prepared in large quantities, both salted and tinned. The extreme W. part of the Sea of Azof, called the Putrid Sea, is, during the greater part of the year little better than a noxious quagmire, and, at all times, wholly useless for navigation. The Strait of Yenikale or Kerch is about 15 m. long and 5 m. to 5½ m. broad, has the navigable channel, near Yenikale, but not more than 14 ft. of water. A new island was raised in the Sea of Azof, in 1814, by volcanic eruptions. The chief towns on its banks are Taganrog and Mariupol, on the N. shore, and Kerch on the W. shore of the strait of the same name.

The commerce of the Sea of Azof has been much hindered, not only by the impossibility of navigating it during four months of the year but also to the extensive activity of Osseus, which has deprived it of much of its trade. The following table, taken from the *Journal of Astruc* *Lloyd's*, 1847,

gives a comparative view of the foreign and coasting trade, both import and export, in 1845 and 1846.—

EXPORT TRADE, 1845-6.

AZOF or **ASOV** a detached to. Russia, gov. Ekaterinoslav l. bank, Don, about 10 m. from its embouchure in the Sea of Azof lat. 47° 7' N. lon. 39° 25' E. (24° P. (1842), 2295

AZOUZES, or **ASOQUEM**, a to. Ecuador prov. of and 15 m. N. N. E. Guayaquil lat. 2° 42' S. lon. 79° 7' W. The valley of Yunguilla, in which it is situated is remarkable for its fertility. There are mines of both silver and quicksilver in the vicinity. Rubies are found in the sands of a stream which runs through the valley.

AZORES, or **WESTERN ISLANDS**, a series of islands, N. Atlantic Ocean, belonging to Portugal situated between lat. 36° 56' and 39° 44' N., and lon. 31° 7' and 25° 10' W. They are more in number and arranged in three groups, the N. W. being composed of the islands of Flores and Corvo the central group, about 114 m. S. E. from these, consists of Terceira,

St. George, Pico, Fayal and Graciosa, and the third group, 69 m. S. E. from the central of St. Michael and St. Mary. St. Michael is the largest of all the islands, being 50 m. long and from 5 to 12 broad. St. Mary is distant from it about 45 m. The Azores, all of which are of volcanic origin, necessarily of a late period, present a very rugged, though picturesque aspect, being lofty precipitous, and generally of a conical form. The most remarkable of them is the Peak of Pico, a conical mountain, which shoots up to the height of about 7000 ft. Though presenting a very unassuming appearance from the sea, a closer inspection discovers these islands to be covered with the most luxuriant vegetation, vineyards, corn fields, groves of lemon and orange-trees; and rich open pastures, skirted by beautiful woods, meet the eye in every direction. The climate, though somewhat humid, is delightful;

and, combined with the natural fertility of the soil, brings every sort of vegetable product to the utmost perfection. The sugar-cane, coffee-plant, and tobacco grow luxuriantly and fruits and plants of all kinds, and from all countries, could be here cultivated with greater success than perhaps in any other part of the world. Unfortunately however the inhabitants have neither the money nor intelligence necessary to turn the natural advantages of their position to the best account. They know nothing of gardening, and very little of the science of agriculture. Their implements are of the rudest description and in sowing they throw the seed about at random, calculating on the bounty of nature for a rich return, in which they are never disappointed. The lupine, which grows to an extraordinary size in these islands, is one of its most valued productions. It is raised in great quantities, and the seed, after being soaked in sea-water to divert them of their bitterness, constitutes a favorite food of the poorer classes. The Azores produce annually upwards of 17,000 pipes of wine and brandy and about 160,000 boxes of oranges and lemons, the greater part of which find their way to Bristol, the remainder being divided between Brazil, Hamburg, and the U States. They also export considerable quantities of coarse linen, salted pork, and beef. Their imports are chiefly, from England, hard ware, cotton and woollen stuffs, wearing apparel, &c. from the Brazil, rum, coffee, sugar, &c. from the U States, fish, staves, timber, tar, oil, &c. from Portugal, salt, tea, oranges, crucifers, indispensible dignifications, rather &c. These last are sold openly in the shops, at high prices. The beasts of burden are asses and mules, and a few horses, but of a very inferior description. Sheep, goats, pigs and dogs are numerous, the last two in excess. The lands are held under strict entail, and the farmer to whom they are leased is oppressed with every possible sort of exaction. The great kindness, however to the commercial prosperity of the Azores is their want of good harbours, the only tolerable port being that of Angra, in the island of Terceira, and even that is much exposed, and offers little safety excepting in the fine season. All the rest are open bays or roadsteads, affording hardly any protection whatever. The Azores, as already remarked, are of volcanic origin, and many tremendous evidences of the activity of the subterranean fires have presented themselves at various times. In 1591 an earthquake, which continued 12 days destroyed the town of Vila Franca in the island of St Michael and in 1808 a volcano rose up in the island of St. George, to the height of 2500 ft. and became extinct after burning with great fury for six days and sending out a flood of lava which overflowed the island and covered it with ruin and desolation. In this

GALLERIA OF FLORES AZORES

archipelago, several rocks and volcanic islands have from time to time been thrust up from the bottom of the ocean. The last that appeared was in 1811, off the W and of St. Michael. In June of that year the crater of a volcano suddenly emerged from the sea, rose to the height of 300 ft., raged furiously for some time, spewing ashes, cinders, and

stones, and again gradually disappeared. Fountains of boiling water also exist in many of the islands, affording further evidence of the presence of internal heat. One of the finest specimens both of the mountain-scenery of the Azores and their extinct volcanoes is the Caldera of Flores. Its steep sides are clothed with box cedar and firs, while its center filled with water forms a magnificent mountain-lake, deep and clear and often covered with sea-gulls, whose cries awaken the echoes, and have a strange effect. The islands are politically divided into three departments, under a governor general and two lieutenant-governors, the seat of government being at Angra, in the island of Terceira. Both intelligence and morals are at an extremely low ebb amongst the people of the Azores, who are, besides, very bigoted. The lower classes are abominably filthy in their persons. Their best redeeming quality is temperance. The period of the first discovery of the Azores is not ascertained, but they were known and several of them were laid down in maps in the 14th century. Little, however was known of them till about the year 1481 or 1482 when a Flemish merchant of the name of Joshua Vandenberg in a voyage to Lisbon was driven by stress of weather on their coast; having mentioned his discovery on his arrival at Lisbon, the Portuguese Government immediately fitted out an expedition, and took possession of them, giving them the name of the Azores from the great number of hawks found on the islands, *azor* being the Portuguese for hawk. They were at this period totally uninhabited and without animals of any kind excepting birds which were numerous and various. A dangerous reef of rocks, on which the sea breaks heavily has been recently discovered about midway between the islands of St. Michael and Terceira. It is in about lat. 38° 18' or 38° 15' N. and lon. 26° 41' or 26° 50' W. 30 m. N.W. of the N.W. point of St. Michael. The reef is supposed to have been thrown up recently by the agency of a submarine volcano. Several islets having been formerly thrown up near the same spot but from being of spongy constitution, were soon washed away. The pop. of the Azores is reckoned altogether at 208,500 Terceira, 40,000 Santo Miguel or St. Michael 80,000 Pico, 24,000 Fayal, 22,000 Flores 14,000 Santo Jorge, or St. George, 10,000 Graciosa, 7800 Santa Maria, 5000 Corvo, 700

AZOY See Asof

AZPEITIA a town in Spain in Biscay prov. of and 18 m. N.W. Tolosa, 10 m. from the sea, 1 hour, Urola, at the N base of Mount Ibañeta. Though rather a scattered town yet near its centre, part of the ancient walls, with four gates of heavy stone, still exist as do many old Moorish-looking houses once highly ornamented, but now partly dilapidated. It has well constructed and paved streets, and three squares, in the principal of which are the former convents of St. Domingo and St. Augustine, now converted into a primary school and public reading-room in the same square bull fights are held on the festival of St. Loyola. In the smaller squares are two town-houses one of which is now used as a prison. The town also possesses two churches, one of which is of mixed Tuscan and Gothic architecture several good fountains and a public bath. Manufactures—iron vessels, nails, and shoes, all of limited extent. In two marble-works, driven by water-power, the marble, from the quarries of Mount Ibañeta, is cut. Agostina Loyola, the founder of the order of the Jesuits, was born about a mile from Azpeitia, on the banks of the Urola, in a house which is still preserved within the marble walls of the convent that bears his name and in the same locality bearing also the name of Loyola, is a fine church in the Corinthian style, also built of marble. Pop. 6800

—(Hicks.)

AZREK (BAHR-EL), or BARR NILE, a river N.E. Africa, one of the two principal head-streams of the Nile it rises, under the name of the Dughay, in the Galla country S. from Abyssinia, in an elevated district, about 75 m. S.W. Soloka, cap. of Kaura. It issues from a swampy meadow and pursues a general N.W. course till it joins the Bahar el-Ahmed or White Nile at Khartoum lat. 18° 40' N. lon.

$8^{\circ} 40' E$. Its largest tributary is the Abdi, which joins it about lat. $11^{\circ} N$ $80^{\circ} W$.

AZUELA, a large river in S. America, Ecuador prov. Quito. It rises on the E. slopes of the Cayambá, one of the loftiest summits of the Bolivian Andes, directly under the snow-capped equator whence it flows E. and S.E. for upwards of 200 m., where it assumes the name of the Amazon, an affluent of the Negro, one of the tributaries of the Amazon.

AZUN (VAL D.), a valley France, dep. Hautes-Pyrénées, traversed by the Gave, and noted for its beauty the Eden of the Pyrénées. It is intersected by the stream whence it is named, and opens out W. of the valley of Argelès, about

3 m. S.W. the town of that name, and extends up into the central chain, between the mountains called *Pis de Mudi d'Amn* and *Pis de Gabies*, and contains 10 considerable villages. It produces principally fax and millet. The heights are cultivated with corn, and the lower parts afford excellent pasturage for numerous herds of cattle. At the extremity of the valley is the road leading to Spain.

AZUKARA, a seaport in Portugal prov. Entre Douro e Minho, 1. bank, Ave. at its junction with the sea; the former separates it from Villa de Comda, of which it may be considered a suburb lat. $41^{\circ} 20' N$ lon. $8^{\circ} 27' 18' W$ 15 m. N. from Oporto. Pop 788

B

BAAGÖE, or **BAAD** two small islands, Denmark 1.—1. In hall. When between Asia, Faister and Scotland from which it is about equally distant lat. (centre) $54^{\circ} 5' N$ lon. $12^{\circ} 4' E$ about $3\frac{1}{2}$ or 4 m. long and about 3 m. broad at the broadest part. It is fertile, has a village named Bogby and about 7000 inhabitants.—2. In the Little Belt, between lat. Odense and the E. coast of Sehelovig in lat. (S point) $55^{\circ} 17' 48' N$ lon. $12^{\circ} 48' 0' E$ 1 m. above 1 m. in length, and $1\frac{1}{2}$ in breadth. It is fertile, and forms part of the par. of Assens in Fflnboen.

BAALBEC, or **BALBEC** [called by the Greeks *Heliopolis*—the city of the sun] Syria, 40 m. N.W. Damascus anciently a populous and magnificent city now in ruins, and inhabited only by a few poor families situated on a rising ground, near the N.E. extremity of the plain of Bocat or Bekka, between the heights of Libanus and Anti Libanus On an elevated plateau about 1100 ft. in length, from E. to W. and 700 ft. in width from N. to S. the principal ruins, seen from a distance, tower like the ridge of a hill. The most remarkable ruin is that of the great temple, which stands at the E. extremity and occupies a circuit of more than half a mile. A handsome flight of steps leads to a Corinthian peristyle or portico, 280 ft. in length. This portico leads into a hexagonal court, 144 ft. in diameter surrounded by chambers in ruins. From the W. side of this enclosure, a gateway and sloping ascent lead into a grand quadrangular court, 247 ft. long, by 317 ft. wide. It occupies the highest and central part of the plateau, and is surrounded by apartments, some of these semicircular alcoves, 20 ft. in diameter and others quadrangular of larger dimensions, with high arched roofs. A kind of colonnade appears to have run

level with the hexagonal court already mentioned, are two vaulted parallel passages, running E and W, and connected by a third passage running N. and S. The walls of these passages and a semicircular arch which rests upon them, are composed of large blocks closely fitted, and of admirable workmanship. Immediately to the W. is a space 288 ft. long by 118 wide, once the site of a magnificent temple. It appears to have had a peristyle of Corinthian columns, 10 in front, and 19 on the sides. Six of them still remain, of exquisite proportions, and colossal dimensions. They are 7 ft. in diameter and with their pedestals, are 71 ft. high. The shafts consist of three pieces beautifully fitted without cement. The whole height, including the capital and a fine cornice above the columns, is nearly 80 ft. A little to the E. there is a smaller but more perfect temple, in the form of a quadrangle 225 ft. by 118 ft. with a peristyle of Corinthian columns, 4 ft. high, 19 ft. in circuit, and 6 ft. apart. They were surrounded by a bold cornice 7 ft. high, and connected with the wall by a stone ceiling finely sculptured. The entrance to this temple is through an exquisitely carved doorway 26 ft. high by 20 ft. wide, with a staircase on each side leading to the summit. The interior 118 ft. by 65 ft. had niches on each side, and two screens, behind the ornament of which the object of worship is supposed to have been placed. The roof has fallen in and the floor lies covered with a confused mass of sculptured fragments. The substructure of these monuments consists of ponderous hewn masses of such prodigious size, that one is lost in astonishment as to the mechanical means by which they could be removed from the quarry to their place. The largest of them is 67 ft. long, 14 ft. broad, and 6 ft. thick. Another

still more gigantic, lies in the great quarry about three quarters of a mile from the town almost separated from the rock preparatory to its removal. There are other interesting ruins in Baalbec besides those alluded to, and the entire neighbourhood, for several miles round, is covered with them.

The history of Baalbec is very obscure, but there is evidence of its having been a place of importance in the time of Antiochus Pius, under the name of Heliopolis, and in all probability for ages before. It was the station of a garrison in the time of Augustus, and was then a great and wealthy city. By whom it was first founded, however is unknown, neither has it been ascertained when its temples were erected. Although gradually decaying through a long series of years, its decay lately was particularly rapid. In 1721 its population amounted to 5000; in 1820, it had fallen to 200. The whole town presents now a most wretched appearance.

GENERAL VIEW OF BAALBEC.—From Libanus, Viewed from the East.

along the front of these apartments, supporting in its centre a structure of considerable extent, on which one of the screens of Baal is supposed to have stood. Beneath this court, and on a

The inhabitants manufacture white cotton cloth to a small extent, and have some drying-boats. There were also mills within these few years, several tanneries in the town. The pro-

perty of the people consists chiefly of cows with a few goats and sheep. Baalbes mules are much esteemed. Pop. (1886) 200. **BAAMBRUGGE**, a vil. Holland, prov. of and 12 m N W Utrecht, 1 bank Kromme-Angel having a small Calvinistic church and two schools. Being on the main road from Utrecht to Amsterdam, there is considerable traffic through it. The inhabitants are chiefly engaged in cattle-raising and in the cheese and butter trade. Pop. 700.

BAAE—1 An extensive dist. Baden, forming the chief part of the principality of Fürstentum. It lies in the Black Forest, partly in the Lake and partly in the Danube circle, and, besides numerous villages, contains 10 towns. It is very hilly but a good deal of grain is grown on its lower grounds, while the higher yield excellent pasture. The horses reared on it are in high repute. A great many of the inhabitants are clockmakers. —2 BAAE, or BAE, a m. Switzerland cant. of, and 3½ m. N. Zug on the road to Zürich, in a fertile plain, 1890 ft. above the sea. The townsh. is a handsome edifice, built in 1674. There is a large paper-manufactory here and a considerable trade is carried on with the surrounding district. The vine is cultivated, and furnish wine produced. Pop. 2186.

BAARDWIJK a pleasant vil. Holland prov. N. Brabant, 10 m E. Geertruidenberg founded, by some, by the Dutch as others by the Longobards. It has a R. catholic and a Calvinistic church, a small almshouse for old men a school, and a cornmill. Pop. chiefly agricultural, 1155.

BAARLAND a vil. Holland, prov. Zealand Island, 8 Beveland 14 m. S.E. Arnhem, in the middle of a fertile country and richly watered meadows. It has a good-looking church, with a lofty spire, a school and a pop. of 500.

BAARLE BAARLE-NAMEN, or BAAE, a vil. Holland prov. N. Brabant, 12 m S.E. Eindhoven, on the Belgian frontier, so closely connected with Baarle-Hertog in Belgium, prov. Antwerp that the two in fact make but one village. Of two contiguous houses, one is frequently in Holland, and the other in Belgium, and some even being built exactly on the line of demarcation between the two countries have the frontier mark on their gables and chimney-stacks. It has two churches, as many schools, two horse and cattle-markets, and an agricultural pop. of 600.

BAAREN a vil. Holland, prov. of and 19 m N.E. Utrecht, pleasantly situated, and built round the large, old but decad-

some church, which is adorned with a lofty spire. It is an old place and was formerly a town. Pop. 1600.

BABA, the name of several towns in different parts of the world, of two capes in Asiatic Turkey and of two islands in the Asiatic Archipelago:—1 A tn. Turkey in Asia, on a shelving point of Cape Baba, on the Grecian Archipelago, immediately above the sea. lat. 39° 50' 5" N; lon. 26° 5' E. It is built and the houses mean looking being constructed of unburnt brick. It contains a mosque and a half-ruined castle and was at one time celebrated for the manufacture of knives and sword-blades, which were held in high esteem by the Turks. This trade has now much fallen off though a portion of it yet remains, the yataghans of Baba being still famous. The port, which is in front of the town and formed of large fragments of rock is capable of admitting small boats only. Large vessels, however frequently anchor in the roadstead, under shelter of the cape, during the prevalence of N winds. The inhabitants are occupied chiefly in pastoral pursuits, raising cattle, the pasturage both on the high and low grounds being excellent, and in growing valonia, which they export in large quantities. Pop. 4000.—2 A tn. Turkey in Europe, Upper Wallachia, 1 bank Kistina. lat. 45° N lon. 25° 55' E. Pop. 3000.—3 A tn. Turkey in Europe prov. Trikala or Thessaly r bank Selembria, and about 9 m. from its emporium in the Gulf of Salosika, 14 m. N.A.E. Leirios.—4 A tn. Lousador dep. of and 42 m N. Guayaguli, at the N. extremity of Lake Emboramban. Pop. 4000.—5 and 6, Two capes in Asiatic Turkey one on the S shore of the Black Sea. lat. 41° 20' 54" N lon. 31° 26' E (a.) the other the Zeytron Promontorium of the ancients, on the E shore of the Grecian Archipelago. lat. 39° 58' 12" N lon. 26° 5' 50" E (b.), on the N side of the Gulf of Adramyti.—7 An isl. in the Red Sea Indian Archipelago. See BAHREY.—8, One of the Alon islands (which see).

BABAEFG SUMER-DAMIR or SUMER-E-BABAE a tn. Persia, prov. Kerman lat. 29° 58' N; lon. 55° 5' E. formerly a flourishing city and the depot of merchandise passing from Gombroon on the Persian Gulf to the interior but now much decayed. It has four gates, and from each a long street leads to the market-place in the centre, the dome over which is said to be the largest in Persia. It is the residence of the deputy governor of Kerman and celebrated for its fruit-gardens.

BABA DAGH a fortified tn. Turkey in Europe (Dagaria) push Bulgaria, built by the Turkish Sultan, Bajazet lat. 44° 53' N lon. 28° 40' E. The streets are paved but dirty. It has five mosques, two public baths, and a college and carries on a considerable trade through the port of Kara Kerman, an outlet of Lake Risselen on the Black Sea. Pop. 10,000.

BABAKANDA, a tn. Fatahah country W Africa lat. 10° 3' N lon. 5° 55' E. It contains a royal residence in which the king or chief of the district frequently resides. Good crops of rice and other kinds of grain are produced in the vicinity. Very large yams and edible bulbous plants are cultivated and ginger is abundant. Cattle are plentiful though of inferior appearance. The chief manufacture of the place is leather and stretched skins, which are taken white and then given them. Pop. 9000 or 10,000.—(Dureau's Travels in W Africa).

BABBER, or BABA, an isl., S. Moluccas, 60 m W Timor Lat. 11° (E. point) 7° 3' S; lon. 128° 59' E. It is hilly and in its W end is the village Tapa, off which is good anchorage, during the E. monsoon, in 14 to 16 fathoms. The greater part of the island is covered with natural wheat and abounds in wild cattle, pigs, and goats. Very little of it is cultivated, the inhabitants raising their Egyptian wheat, coconuts &c. in the small fertile island of Wotang, lying W of Babber. The people are poor and are visited once a year by vessels from Banda, for the purpose of trading.

BABCAEY par Eng Somerset 2593 ac. Pop. 425.

BABEL ISLAND an isl. Bab's Strait, contiguous to the E. point of Great Island, lat. 80° 57' S; lon. 148° 20' E (a.)

BAB EL MANDEB (The gate of many) the straits at the entrance to the Red Sea, from the Gulf of Aden, formed by approaching points of Arabia and Abyssinia, about 16 m. broad at the narrowest part and divided into two channels of unequal breadth, by the small island of Perim, lying near the Arabian coast. lat. (S. point) 12° 33' N; lon. 43° 35' E (a.)

The R. or Little Strait, between Faria and the Arabian coast, about 2 m. in width, with from 9 to 14 fathoms water is the most frequented, notwithstanding the greater rapidity of its current, being free from shoals, and its moderate depth allowing manœuvres. The W. channel, or the Greater Strait, between Faria and the Abyssinian shore, is about 13 m. wide, but much obstructed by rocks and islets. At the narrowest part, Cape Bab-el-Mandeb projects from the Arabian coast, lat. 12° 41' N; lon 45° 27' E. (A.)

BAB EL MANDEB (SEA OF) See ADEN (GULF OF)

BABENHAUSEN.—1. A town, Bavaria, circle, Swabia, 1 bank, Rhine, 34 m. S. W. Augsburg. It has a handsome palace, the residence of the Fugger family, the celebrated banker princes, and an agricultural population of 1711. — 2. A vil. grand duchy of Hesse-Darmstadt, prov. Starkenburg 1. bank, Giespahn, 19 m. S.E. Frankfurt-on-the-Main. It contains an ancient castle, formerly the residence of the Counts of Hesse-Lichtenberg, now a military house of correction; and a Lutheran parish church, built in the 10th century with statues of popes and bishops; also a brickwork and a glasswork. Pop. nearly all Lutheran, 1650

BABIACORA, a. m. Mexico, state, Sonora, 1 bank, Sonora, 50 m. S. W. Arizona.

BABINGBEDA a large vil. Austria, Melanovian dist. of and about 30 m. E. Brod, between the marches of Bosnia and Koniak. It contains a R. catholic parish church and an old castle. Pop. 4185.

BABINGLEY or **BABENKLEY** par Eng Norfolk 849 ac The first Christian church in E. Anglia was erected here. Pop. 68

BABINGTON par Eng Somerset 607 ac Pop. 117

BABUAN an isl. Soolee Archipelago about 20 m. N. E.

BABUTANI lat. 5° 20' N. lon. 130° 4' E.

BABUTANES, or **BATANES**, a group of small islands, N. the island of Luzon and S. of Formosa, between lat. 18 52' and 19° 36' N. and lon. 121 6' and 123 12' E. separated on the N. from the Baluan Islands by the Strait of Balintang. They consist of numerous rocky islets, and the five larger islands of Calayan, Culu, Babuyan, Camiguin, Dulapit, and Pags some of which are volcanic. Camiguin, which is one of the largest of them, abounds in sulphur and has a port called San Pio Quinto. The inhabitants of these islands who are tall and well made, and have but an indifferent character for honesty are not subjected to tribute, on account of their extreme poverty; only contributing a little tortoise-shell and a small number of other articles. The natural products are wax, ebony, bananas, and coconuts.—(Mallet's Philippines)

BABWORTH, par Eng Notts 6165 ac Pop. 608.

BABYLON or **BABEL**, an anc. city Assyria, cap. Chaldees, on a branch of the Euphrates which divided the city into two parts. Although now the most famous city in the world so complete has been its ruin that the very site has become matter of doubt. Rich, Niebuhr and Vossius suppose it to have been near the modern town of Hilla, about 46 m. S. Bagdad, containing about 12,000 inhabitants, chiefly Arabs and Jews, and the residence of a Turkish bey. According to Herodotus, the city was of a square form each side measuring 15 m., and of course the four sides 60 m. It was encompassed with walls built of burnt bricks cemented with bitumen 850 ft. high and 87 ft. thick, and with 250 towers, 100 gates of brass, and protected on the outside by a vast ditch filled with water and proportioned in width and depth to the elevation of the walls. Streets, 50 in number stretched across the city intersecting each other at right angles, and terminating at the different gates. The river traversing it from N. to S. was lined with quays of the same thickness as the walls, and crossed by bridges of great beauty and admirable construction, each about 200 yards long and 10 broad. The whole city contained 676 squares, each 2½ m. in circumference. It is difficult to conceive a more thorough destruction than that by which Babylon has been overthrown. The city enclosed large tracts of pasture and arable land, sufficient to support the whole population during a long siege. Amongst the ruins of Babylon, there remains almost perfect attention. The, Nine Mounds, or Mound of the Tower (called by the Jews Nebuchadnezzar's Palace), the most remarkable and stupendous

mass of all the ruins. It is a huge oblong edifice, 763 ft. in circumference, situated about 8 m. S.W. of Hilla on the W. bank of the Euphrates. It has been generally supposed to be a remnant of the great pile of Babel, but more properly belonged to the city of Nine, Borsippa or Borsippa, one of the quarters of the Babylon of Herodotus. Second AT-BAR the castle or palace, consisting of several raised walls and piers, which face the cardinal points, and contain many caves and passages. These walls are 8 ft. thick. In some places ornamented with niches, and in others strengthened by pilasters and bastions, built of fine-burnt brick, still perfectly clear and sharp, laid in extreme course, of such tenacity that it is almost impossible to extract a whole brick.—(Rich.) Third, The Elysiad, or the Overgrown, an enormous mound, of oblong shape and irregular height, also facing the four cardinal points. The elevation of its highest angle is 141 ft. Rich thinks that, in some respects, the Miquille corresponds to the accounts of the celebrated hanging-gardens of Babylon which, according to Strabo formed a square of 400 ft. on each face and stood upon the river that supplied them with water. But, from the circumstance of skeletons and wooden coffins being found in this mass of ruins, it is conjectured to have been a great brick pyramid for the dead, and perhaps also used as a observatory. The surrounding country is a desert, inhabited only by some wandering Arab tribes, and periodically subject to inundations. At one period, immense canals, intersecting the plain of Babylon, connected the waters of the Euphrates with the Tigris.—Besides the ancient capital of Chaldees, there appears to have been another city of the same name in Egypt, on the site of which old Cairo is built.—(Dr Asseville's Geo. Rich's Memoir Rennell's Geo. of Herodotus Ptolemy's Tracés Mignan's Travels in Chaldée Niebuhr, Voyage en Arabie)

BABYLONIA the name of an ancient kingdom, which comprehended a narrow tract along the Euphrates, extending about 154 m. from the modern town of Bishik at Shuyukh N.W. to the ruins of Babylon and thence, in the same direction 287 m. to Kalsah on the Khabur. Its E. boundary was Assyria, and thus it included the greater part of what was afterwards called Mesopotamia. The name Babylonian still remains, and is more particularly applied to the S.E. portion of the peninsula of Bagdad.

BABY PULO three islands, Indian Archipelago (Pulo signifying island) 1. Is. lat. 1° 30' N. lon. 106° 17' E. (A.) It is woody and bold excepting at the E. end.—2. A small isl. off the S.W. extremity of Water Island, at the N. entrance of the Onypha Passage; lat. 8 5' S. lon. 135 40' E. It is high and bold to approach on the W. side. The passage between it and Wetter is said to be unsafe.—3. A small isl. between the islands of Ceram and Boero, but much nearer the former than the latter lat. 3 10' S. lon. 127° 50' E. The passage channel between Baby Pulo and Ceram is narrow and fit for proas and small vessels only.

BACALAR, or **BAN YUAN** See BAGAHL (see Sole-mountain) a vil. Yunnan on the N.W. extremity of a small lake of the same name, where it receives the San Joseph, about 86 m. N. N.W. Belian. It contains about 120 houses, inhabited chiefly by Indians, and is much frequented by English smugglers.

BACALHAO an isl. off the S.E. coast, Newfoundland lat. (N. point) 48° 9' N; lon. 55 52' W. (A.) It is high, nearly 4 m. long and 1½ broad, and is distant about 1 m. from the mainland with a good channel between.

BACAMARTÉ, a vil. Brazil, prov. Paraíba, 16 m. from Campina-Grande. It lies in the hills of the same name, and its inhabitants are chiefly engaged in cultivating cotton.

BACARAT (see Baccarat) a town, France, dep. Marne, around of 16 m. S.E. Lunerville, on the Moselle, which is here crossed by a bridge of nine arches. It is noted for its extensive manufacture of crystal, which affords employment to upwards of 1000 workmen. The method of moulding crystal in imitation of cut glass was invented here, by M. Ismael Robinet, in 1723. Baccarat has also manufactures of calicoes and cotton stuffs, tanneries, sawmills, and a chemical work, for the preparation of soda, marbled acid chloride of these, manganese, &c. An annual fair is held in July for grain and cattle, and a considerable trade is done in timber. Pop. 3794.

BACCHIGLIONE, a river, Austrian Italy gov. Venice. It rises about 18 m. N. Vioncia, passes that city and Padua, flowing S. and S.E. and falls into the Gulf of Venice at lat. 45° 8' N. lon. 12° 17' E., about 3 m. S. Chioggia, after a course of about 65 m.

BACHARACH a tn. Prussia, prov. Lower Rhine, 1. bank, Rhine, 39 m. S. Coblenz. It is a place of great antiquity surrounded by an old wall flanked with towers, which have a picturesque effect. It is said to have been originally a Roman fort and to take its name from a rock in the river called *Bachar-ach* (island of Bachar) which, though usually under water becomes exposed in very dry seasons, and is then hailed as the harbinger of a good vintage. The chief things worthy of notice in Bacharach are the romantic remains of an old church, called *Werner's Church*, on a steep acclivity above the town and its wine, which, though produced in limited quantity the only soil fit for it being confined to scattered patches among the rocks, has been celebrated for centuries. Besides the culture of the vine, a manufacture of Morocco and common leather gives employment to the inhabitants, amounting to about 1900.

BACHIAN *See* BATHIAN.
BACK STAIRS PASSAGE the E. entrance into the Gulf of St. Vincent, S. America, formed by the E. end of *Maatsoo Island*, and *Cape Jervis* on the mainland. It is about 7 m. wide, and has some islands, called the *Pages*, at its entrance but the passage is safe, with from 9 to 15 and 17 fathoms.

BACK'S RIVER, the name now given, in honour of Capt. Back, to a river originally called the *Thlewathochash* or *Great Fish River* British N. America, N.W. territory. It rises in *Sussex Lake*, near the N.E. extremity of *Lake Athymer* in lat. 64° 15' N. and lon. 108° 10' W., and proceeds N. N. E. through a region of sand and granite, to lat. 65° 30' N. then turns suddenly E., and makes a long circular sweep towards the S.E., passing over numerous rapids. Near lat. 65° 10' N. and lon. 104° W. it again turns N., and enters *Lake Telly* and flows on emerging from which it is broken by a series of falls and rapids, and resuming its original course of N. N. E. confines it to its mouth in a bay supposed to be part of *Boothia Gulf* lat. 67° N. lon. 85° W. The whole tract through which the river flows is sometimes called *Back's Land*.

BACKERGUNGE—1 A dist. Hindoostan prov. Bengal, on the coast between the Ganges and the *Brahmapootra* and including part of the deltas of these rivers and having the *Sunderbunds* or *Sunderbans* on the S.W. Tigers and alligators are numerous here, and attain an immense size. The district is in many parts exceedingly fertile producing annually two abundant crops of rice but is subject to destructive inundations that which occurred in June 1822 destroyed 10 000 persons. It was much infested also, by *Dacots* or river pirates but, by the perseverance of the British authorities, they have been almost wholly put down. More than one-half of the inhabitants are *Hindoo*, the remainder *Malabars*. Area, 8194 sq. m. Pop. 733 800.—2 A tn. same dist. 130 m. E. Calcutta lat. 22° 49' N. lon. 89° 30' E.

BACKFORD par Eng. Chester S109 sq. m. Pop. 44

BACKNANG a tn. Württemberg circle, Kecker 16 m. N. E. Stuttgart, on the *Murr* contains a collegiate church, with the tombs of the first Margraves of Baden, and has manufactures of woollen and linen goods, and some tanneries. Pop. 3267

BACHOFEN a market tn. Bohemia, circle, Benatek. 1. bank, *Lat. 55 m. N. E. Prague*. It is governed by its own magistracy and contains a townhouse, two churches, and an hospital. In the Thirty Years War it was pillaged by the Swedes. Pop. 1010

BACKWELL or *BACKWELL*, par Eng. Somerset 5007 sq. m. Pop. 1074.

BACOLOR a tn. lat. *Lesser Assam* prov. *Praempang*, about 28 m. N.W. *Maula* in a plain, and near the river *Praempang*, with which it communicates by means of a canal. It was the capital of the *Philippines* during the British invasion in 1769. In December January and February fever is prevalent. Pop. 22 and servants, 3548.

BACONO a river Venezuela, rises in a mountainous district, about 10 m. S.E. *Truxillo*; lat. 8° 52' N. lon. 70° 30' W.; whence it flows S. and S.E. to lat. 8° 0' N.

lon. 69° 30' W. when, assuming the name of *Guacapo*, it falls into the *Forquena* at lat. 8° 12' N. lon. 68° W.

BACONSTHORPE par Eng. Norfolk 1360 ac. P. 233.

BACQUEVILLÉ, a tn. France, dep. Seine-Inférieure, 11 m. S.W. *Dieppe*. It manufactures stockings, serge, and bed-ticking; and has some trade in cattle. Pop. 1494.

BACS, or *BACSA*, a market tn. S.E. Hungary co. *Bacs-Bodrog* 37 m. S. *Zombor*, near the *Meestung* north lat. 45° 24' N. lon. 19° 20' E. It was formerly a royal free town and the see of a R. Catholic and Greek bishop. The transit trade is considerable. Pop. 3770.

BACS BODROGHER a co. S. Hungary circle, beyond the *Danube*. It contains three free towns, nine market towns, and 95 villages; is one of the largest counties in the circle, and forms part of the great alluvial, often swampy and consequently unhealthy tract, which lies between the *Theiss* and the *Danube*. It is bounded N. by the *Franciscan Canal* so called after the *Emperor Francis*. The soil is very fertile, and produces in abn. wheat, tobacco and so on. The lakes are numerous and teem with fish. From the largest of them, *Lake Palica*, large quantities of alkali are obtained. Fuel is scarce and the only substitute possessed by the greater part of the population is cow-dung, mixed with straw. In this county is an entrenchment, attributed to the Romans, which is several miles long. Area, 3825 sq. m. Pop. nearly 500 000.

BACTON three pars. Eng. —1 Hereford, 115 ac. 1 189

by the junction of the *Riquelme* and the *Guadiana* the former enclosing it on the N and E, and the latter on the N.W., where it is crossed by a superb granite bridge of 38 arches. *Badajoz* is a regular fortress, of remarkable strength. Fortifiable walls and bastions, with a wide and deep foss, run round it on all sides; while a series of important outworks, placed partly on the tongue of land and partly on the opposite

banks of the river, adds greatly to its means of defence. The highest part of the city is the N. near the Rivilla, is occupied by an old Moorish castle, from which point the ground slopes gradually to the E. R., and W. and is intersected by numerous streets, which, though very imperfectly paved, are in general spacious, clean, and lined with well built houses, many of them of three stories, with a coloured, and painted or white-washed fronts, which have a cheerful appearance. As a whole, however, the town is said to be dull, and to have few social attractions, beyond a fine promenade along the banks of the river. The principal building is the cathedral begun in 1345, but possessed of no architectural merit. The facade, which is of a later date, is in the Greco-Roman style, with Ionic pillars, and a statue of the Baptist. The interior is adorned with some fine paintings by Mateo Cerezo and Luis Morales, the latter of whom, surnamed El Divino, was born here and gave name to a street. In addition to the cathedral are four parish churches, two of which, the Concepcion and St. Agustin, also contain several paintings by Morales. The other principal buildings are the arsenal, the military hospital with beds for 250 patients, the college (*seminario conciliar*) well endowed, and provided with a full establishment of professors the theatre, and the prison, a large building very imperfectly ventilated.

Badajos is the seat of a bishop, and at one time abounded in ecclesiastical establishments, many of which have been suppressed. Four nunneries, and some monasteries, still remain. As the capital of the province it is also the residence of a captain-general and contains several courts and public offices. Its chief industry is the extensive and well-cultivated Hoggia de Nuestra Señora de la Piedad, founded in 1757. The manufactures are of little importance, consisting of a few linen and woollen stuffs, china, and leather. There is some trade by the river and a little transit by mules. The importance of Badajos as a frontier fortress has subjected it to repeated sieges. Those which took place during the peninsular war are well known, particularly the last, in April 1812 one of the most murderous on record in which the British proved so eminently superior. It was happily furnished by the lateral access which succeeded it. Pop. 11,715.

BADAJOS, a very town, Government, bounded N. by prov. Cáceres, E. by Ciudad Real, S.E. and S. by Corvera, Badajoz and Huelva and W. Portugal area 10,590 sq. m. The surface is very much diversified. Numerous mountain-ridges, ramifications of the Sierra Morena, traverse it in different directions but between these and along the banks of the river, are extensive tracts of rich alluvial soil, particularly one called Barros, which is celebrated throughout Spain for its remarkable fertility. The mountainous tracts are well wooded with oak ash, and other trees which are not only extensively used for fuel but furnish good timber while the acorns and the mast feed large herds of swine. Too much of the province is said to be devoted to pasture and the parts under cultivation, owing to a very imperfect system of management, are far less productive than might be expected, from their natural fertility. The chief river is the Guadiana, which traverses the province E. to W., and receives several tributaries within it. The manufactures consist chiefly of soap, coarse linen, leather and a few other articles of home consumption, the trade is chiefly internal, and as yet insignificant, though a great addition is anticipated from a railroad which is intended to connect Badajos with Sevilla. The mines registered within the province amount to 34 among which are one of gold, 10 of silver and several of aluminium or quick silver. The greater proportion, however, are of lead and copper though many even of these have ceased to be productive. The climate, particularly in the lower districts, is both hot and damp, and intermittent fevers are very prevalent. The province, for administrative purposes, is divided into 15 districts and, ecclesiastically forms a diocese of same name, whose bishop is suffragan to Santiago. Pop. 336,196.

BADAMEN, the Bosphorus

BADAMEN, a town, in Catalonia, prov. of and 7 m. N. E. Barcelona in a fertile plain 1 bank. River, near an embouchure in the Mediterranean Sea. It has two squares, an ancient parish church, two schools, several fountains, and a raised convent, of the order of St. Jerome, burned in the late war. Cotton-weaving and silk-dyeing are carried on, agricultural produce is exported, and, besides husbandry

the inhabitants are engaged in fishing and sea-faring. Pop. 5000.

BADAUMY a hill-fort, Hindostan, prov. Bajeepoor 55 m. N. E. Darwar considered one of the strongest forts in India lat. 15° 55' N. lon. 75° 49' E. It was taken by the British, under Sir Thomas Munro, in 1818, although it had previously successfully resisted the efforts of an entire Maharastra army. The neighbourhood presents an extraordinary assemblage of large circumscissed rocks piled on each other and scattered about in the wildest confusion.

BADENBURY a t. Germany, duchy of Ansbach-Bayreuth, dist. of, and about 5 m. from Hallestadt. It is a tolerably well-built thriving place, and has two gates. Pop. 1310

BADEN (GRAND DUCHY OF) the seventh state of the Germanic Confederation, in the S.W. corner of Germany between lat. 47° and 49° N., and lon. 9° and 27° E. bounded N. by Hesse Darmstadt and Bavaria, E. by Wirtemberg and an interjunct portion of Hohenzollern, S. by Switzerland, and W. by France. It is of very irregular form and has no proper natural boundaries. On the W. and part of the N. its contour is defined by the Rhine but in other directions it is much indented and mixed up with other states. It may be described as a long strip of land stretching N. E. to S. W. narrowest at the centre, widening considerably towards the N. and much more towards the S. base. The line through its centre, and forming a slight curve, with its convexity E. is about 175 m. Its breadth varies from 13 m. where it is narrowest, a little in the N. of Baden town, to 60 m. Its area, owing to its extreme irregularity is not easily calculated but according to the latest measurements, is 4456 sq. m. sq. subdivided into four circles, viz. the Lake Circle in the N. E. and the circle of the Upper the Middle and the Lower Rhine, in the S. W. centre, and N. respectively. The surface is occupied as follows:—Agriculture, 3,173,575 ac. meadows and pastures, 983,795 ac. wood, 2,384,850 ac. vineyards, 127,780 ac. gardens, 23,930 ac. waste, 31,700 ac. The remainder is occupied by water buildings streets, roads &c.

Physical Features.—Baden is decidedly mountainous, being traversed to a considerable extent by the lofty plateau of the Schwarzwald or Black Forest, which commencing in the circle of the Upper Rhine, between Basel and Waldshut, proceeds in an N. direction, forming, by its W. side, the range of romantic precipitous which bound the valley of the Rhine, while its E. side slopes much more gradually. Its highest points are the Feldberg, 4675 ft. in height; the Belchen, 4643 ft. Büchelberg, 4380 ft. Hoehkopf, 4333 ft. Kitzbuehl, 4088 ft. Hoehfirst, 4000 ft. and the Fautenfirst, 3563 ft. Another range, of no great elevation though somewhat precipitous called the Heiligenberg, attains its greatest height in the vicinity of Heidelberg. In addition to these ranges, are the two smaller groups of the Kaiserstuhl and the Odenwald. The former lies on a isolated position, and appears to have at one time belonged to an island. Its greatest height is about 1218 ft. The Odenwald is usually regarded as a continuation of the Black Forest, with which it merges imperceptibly and, stretching N. into Bavaria and Hesse-Darmstadt, flattens down by a series of gentle slopes, and disappears. The nucleus of the Black Forest and Heiligenberg consists of granite and granite, usually overlain, S. W. by Jura limestone E. by red sandstone, which often forms extensive tracts and occasionally appears in isolated masses, and N. E. by Alpin limestone. The Kaiserstuhl is evidently of volcanic formation. The Odenwald is composed, for the most part, of red sandstone. In the W. however, there is some green granite, and mica, and in the S. E. Alpin and shell limestone. These mountains are intersected by valleys of more or less extent, which, occasionally cutting the Black Forest transversely reach the E. side. In the S. the valleys are generally short, with a rapid declivity towards the N. W. In the N. they are much longer and have, in general, a much more gradual descent.

Rhinus and *Lobos*—*Rhinus* belongs entirely to the basin of the Rhine and the Danube the former draining the far larger portion of the surface, while the latter occupies only a small portion of the S.W. corner where it takes its rise, and merely runs the few first miles of its mountain course. The torrents which rush down the steep sides of the Black Forest, hastening into the Rhine are almost without number, but its chief affluents within Baden are the Neckar, Kinzig, Pfalz, Alb, Murr, Elz, Wieslauter, and Wutach. Baden abounds in lakes, the largest being the Lake of Constance, and the whole of the Uppergrange and Solling is due to it, with a great number of others, which though small, are by no means inconspicuous.

Minerals and Minerals Springs.—The variety of minerals is very great, but the number of those which exist in such quantity as to be workable to profit is comparatively small. Gold is still occasionally washed from the sands of the Elbe, and the Black Forest contains numerous veins of silver, which, in earlier times, were extensively wrought, and maintained several silver furnaces. Copper is still produced from the mine of Harzensteine, south near Witten, manganese near Eisenbach, lead in the Mitter valley and calcimine near Wiesloch. These however are all surpassed in value by the iron mines which are worked to the number of 30, and employ 15 smelting furnaces. In addition to these may be mentioned coal rock, salt gypsum alabaster marble, whitestones, zinc sulphure, potshers and porcelain clay ochre and occasionally granite. A great number of mineral springs are also to be met with. The number of them has been estimated at 70 and of these not a few are of great celebrity attracting to the different watering-places to which they have given rise crowds of visitors from all parts of the world.

Climate and Vegetable Productions.—The climate of Baden varies, of course, with the nature of the surface. While in the valleys and plains all the ordinary fruits are coming to maturity, cold winter blasts are often felt among the mountains; and there are even ravines on the sides of the Faldberg from which the snow seldom entirely disappears. Some observations seem to indicate, that in the region of the Faldberg the seasons are becoming colder and that the formation of glaciers upon it is by no means impossible. In the Black Forest the grapes are no longer ripened, and on the loftiest summits of the Faldberg ordinary pines and larches are scarce, and the three-needle pines are about the best they begin to bear. The energy and stunted condition of the alpine woods exhibits only patches of grass and lowland moss, while its lofty sides are chiefly covered by the alpine roses and bilberry. The open valleys of Baden, in the S. are much warmer than in the N. The E. side, and also the Oberrhein, are cold, lying exposed to the blasts of the Swiss Alps, and extensive tracts of table-land, where as yet the labours of the husbandman have done little to mitigate the natural rigour of the seasons. The finest climate of Baden and, indeed, of Germany is in the valley of the Rhine. Here winter is short, and spring early; the winds from the Rhine, here a narrow corridor, around the river and the lakes; the fields are covered with rich crops and all the ordinary fruit-bearing plants and trees, particularly the vine and the chestnut, grow in luxuriance. Indeed, the vegetation throughout Baden is peculiarly rich and manifests itself especially in the magnificent forests which line many of its valleys, and clothe its mountain sides, furnishing supplies, both of fuel and exotica; timber which are almost unmarketable. The mean annual temperature of Baden, taken at Mannheim, is 51.40° at Karlsruhe, 51.48° at Friburg; which is in the neighbourhood of the Black Forest, and has been observed at Alpirsbach, in the Black Forest, and at Gersheim, in the Oberrhein. In the climate of Baden is the frequency of hailstorms in the district of the Kalsmündel, and the hurricanes which proceed from the direction of Strasbourg.

Agriculture.—Baden is quite an agricultural country, the arable land occupying rather more than a third of the whole surface. The annual produce of grain is estimated at 1,890 120 quarters, of which rather more than one-half is spelt or German wheat, about one-fifth oats, one-eighth barley and rather more than one-sixth rye. Large quantities of potatoes are grown throughout the country and hemp of excellent quality tobacco and hops in particular districts. The culture of green crops attracts a good deal of attention, and the sowing of clover is generally practised, but though scarcely a patch of land on

which any crop can be raised is allowed to lie waste, and the collection of manure is never lost sight of; the science of agriculture cannot be regarded as far advanced. The operations of the field are often performed in a very slovenly manner; the implements are clumsy in the extreme, and bullocks, and even cows, are employed to do much of the work. The rearing of cattle forms an important occupation, but inferiority of breed is too often regarded as a matter of secondary consequence. Numerous herds of goats and swine are fed in the Black Forest. The rearing of bees is only attended to that of the silk-worm exists, but has not as yet made much way.

Manufactures and Trade.—Of neither of these has Bedford much to boast. The whole number of families engaged in occupations immediately connected with the woollen, cotton and linen manufactures, has been estimated not to exceed 200. The working of the polymers enumerated above affords much more extensive occupation, but without the

200 The working of the minerals commenced above affords much more extensive occupation, but perhaps the most important manufacture is that of wooden shooks, con- fined closely to the districts of the Black Forest and, con- nected with it the making of animal boxes and other musical toys, in which extraordinary skill and ingenuity are displayed and for which prices amounting from 15 000 to 12,000 florins (21000 to 21500) have been obtained. The chief trade of Baden is derived from its forests. Tin ber of the finest quality much of it adapted for shipbuilding was transported to Holland by the Rhine and by way of Basel to Switzerland and France both of which also take large quantities of charcoal. The only other articles of trade de- rived of some use were particularly the manufacture of hillingaleys for Saxony and Prussia, especially the Saxons, wares, hats, tobacco and fruit. Salt is exported in con- siderable quantities to Rhenish Prussia and Upperwald.

Population and Moral Statistics.—The population has increased from 1 277 365 in 1839 to 1 369 291 in 1861 distributed in eleven circles as follows:—

	Community	Pop. 1981
Constance	910	122,898
Willingen	60	65,063
Walldorf	167	11,107
Freiburg	911	167,118
Lörrach	128	87,808
Gersheim	110	411,856
Offenburg	148	45,184
Baden	96	114,609
M. umheim	86	88,540
Hildesheim	106	194,426
Mosbach	948	1,69,968
	1508	1,824,981

The population according to older subdivisions of Baden already seemed, may have been given for comparison. The Lake Chrys, 198 160 the Upper Rhine 245,918, the Middle Rhine 499,782 and the Lower Rhine 355,480. In respect of religion the inhabitants are divided into R. Catholics, 568,068 Protestants, 464,589 Dissenters, 297,726 Jews, 24,998 Moslems. The different mass of people which inhabit the valley of the two rivers, the Moselle and the Rhine, the former occupying the territory from the Murg to the Rhine, and the latter the territory to the N of the Murg. The language corresponds to this territorial division the Alemannisch prevailing in the high country particularly in the valley of the Wies, and in tolerable purity though frequently intermixed with Swabian and Franconian. It is spoken with the least understanding in the Black Forest, where the Alemannisch is still more different from that of the inhabitants of the valley of the Rhine. The native of the Black Forest is lively, industrious, of an ingenious and somewhat imaginative turn, honest fond of trade, and rather too fond of law in general regulations, but apt to allow his belief to degenerate into superstition. The natives of the Rhine valley are of more mixed character, being chiefly German, but with some admixture of French, and are generally more free than those of the mountain of Swabia.

Belong is easily distinguished from that of Old Baden; who, in his turn, is as easily distinguished from the inhabitant of the Baden palatinate. In general the inhabitants of Baden are robust and healthy with some tendency to corpulence which, however is said to be less common than formerly in the more secluded parts of the country their manners are primitive and their morals pure but, on the whole, their character in this respect is not the highest, and contrasts unfavorably with that of their Swiss neighbors. Education is very generally diffused, and the means employed for the purpose deserve honorable mention even in Germany. The general charge of public instruction is committed to a board called *Oberstudienrath*. Every village has at least one primary and every town a grammar school. Parents are obliged to send their children to the schools and continue them there for a certain period, or till a certain degree of proficiency is attained. Of a higher order than those already mentioned are numerous seminaries, called real schools, Latin schools, pedagogiums, gymnasiums and lycées. At the head of the whole are the two universities of Heidelberg and Freiburg, both of great antiquity and equaled to no honorable place among the most distinguished universities of Germany. In addition to very complete courses of classics, literature and sciences, the former has a Protestant, the latter a R. Catholic faculty of theology. In regard to religion, the course of which France has set the example is followed. There is no proper religious establishment, but every form of religious belief is protected and where the adherents are of any numerical importance, directly recognized.

Government—Baden ranks as the seventh state in the German Confederation. It has no vote in the ordinary deliberative assemblies, and three in what is called the *Landtag*. The government is a constitutional monarchy founded on a liberal representative basis. In its present form it was established in 1818, being voluntarily conceded by the Grand Duke. The states are composed of two chambers. In the upper are the princes of the Grand Ducal family the nobles and barons, the Protestant and R. Catholic bishops, 14 deputies from the landed gentry elected for eight years two deputies from the universities, elected by the professors, for four years and eight individuals nominated by the Grand Duke, at will, from any class. The lower chamber consists of 63 deputies, elected for eight years 2nd by 14 privileged localities, and the remainder by 41 electoral districts. The members of this chamber while actually sitting are allowed about 6s. 8d. per day. The executive belongs entirely to the Grand Duke who appoints 16 ministers and councilors and all the leading functionaries and judges. The supreme civil and criminal court has its seat at Mannheim, but the capital of the grand duchy is Karlsruhe. The military quota which Baden furnishes to the German Confederation is 10,000 men. The ordinary standing army including officers, is about 15,000 men. In 1845 the public revenue was about £1,275,790 and the expenditure, £1,207,470. In 1848, the public debt was £2,547,500.

History—The hereditary possessions of the House of Baden extend over little more than a fourth of its present territory. The reigning family dates its historical origin from Berthold crowned the Dux, Count of Thurgau and Druzgan. The emperor Henry III. in reward or reward his services, allowed him to assume the name of Duke of Zähringen, and gave him the territory of the *Markung* of Berthold. His grandson Herman reached to his domains in the end of the 11th century and is the proper founder of the House of Baden. He took the title of Margrave, and died in 1130. (On the death of the Margrave Christopher I. in 1527 two lines were formed by his sons Bernard and Ernest by the former that of Baden-Baden by the latter that of Baden-Durlach. Both lines became united in 1771 in the person of the Margrave Charles Frederick who obtained considerable accessions of

territory and the title of Elector. At the dissolution of the German empire he received additional accessions of territory, and died in 1811 succeeded by his grandson Charles, who married Stephanie, an adopted daughter of Napoleon, and shared largely in the favors of that dynasty. Shortly after giving the constitution of 1818 he was succeeded by his uncle Lewis who dying in 1830 made way for his half-brother Leopold, the reigning Duke. Baden has had its share in the recent instructions which have taken place in Germany. On May 15, 1849 a popular assembly held at Offenburg, passed a series of violent resolutions, later also, dissolving the chambers, and evoking a constituent assembly. Military insubordination, also began to appear and manifested itself so strongly at Carlsruhe that the Grand Duke quitted it, and withdrew into Alsace. Ultimately by the aid of Prussian troops, but not without a severe engagement with the insurgents the insurrection was put down and matters again returned to their former state.—(Huhn's *Lex. Deutschland*.)

BADEN or BADDER (commonly *Baden* *Baden* and *Civitas Aretina Aquensis*) a fine and watering-place grand study of Baden circle, Middle Rhine, 18 m. S.W. Carlsruhe, one of the most beautiful localities in Europe. It is built in the form of an amphitheatre, on a spur of the Black

BADEN.—From Forest, View of town in Grand Duchy of Baden.

Forest overhanging a valley through which runs the little stream Oosbach. The houses are in general, old and high the streets, with one exception, narrow and crooked, and nearly all steep and hilly. The finest buildings lie along the river but there is not a single handsome square. The edifice most deserving of notice are the new palace, standing on an isolated height above the town on the site of a Roman temple and baths and surrounded by fine gardens, the palace and near it the less extensive but prettier villa of the Duchess Dowager Stephanie, the town church, containing the tombs of 14 members of the margraves house of Baden, and altarscreens painted by Lal after Guido Reni, the spital church, an old Gothic building now used by the Protestants and in which also the English service is regularly performed and the museum of antiquities, built in the form of an old Guelan temple. Baden is the chief place of a ballwick, and contains the different public offices belonging to it. It has also an excellent hospital a poorhouse, and savings bank. The chief manufactures are linen, ropes, and pottery. Baden has been celebrated from the remotest antiquity for its thermal baths which made it a favorite resort of the Romans. The springs are at least 13 in number and the temperature of each, though uniform in itself differs from that of the others. The hottest, and, at the same time, most copious of the springs, is the Ursprung. It has a temperature of 158° F., and yields about 40 cubic ft. of water per minute. The chief ingredients of the water are saline, with some sulphuric and carbonic acid, and small portions of silica and

the oxide of iron. It is clear has a slightly salt and animal taste, and deposits a kind of chalk crust. Its chief efficacy is in scrofulous, catarrhal, and rheumatic affections. The old vaulting over the Ungring is of Roman construction and in the museum are many Roman remains, found in and about the locality. The annual number of visitors, and to be of a more mixed character than formerly is estimated at 80,000. In July and August are considered the season. On the banks of the On opposite the town, is the Conversations-haus, with its promenade and gardens. It also contains gaming saloons, with a café-restaurant, theatre, and reading-room. The parties who hold the tables on lease from the Grand Duke, pay a heavy sum for the odious privilege. The manufactures of the town are insignificant. They include ropemaking pottery and leather-dressing, to a small extent. Light wares of wood, glass ornaments, *bricks*, *teps*, &c. are sold, in a kind of fair held upon the promenade to attract visitors but, upon the whole, Baden-Baden must be considered merely as a place of fashionable resort, and which is losing its once great respectability. Resident pop. 4343.

BADEN [*sic* *Thurnus Cebus* and *Austrorum*] a to Lower Austria, gov and diocese, Vienna, from which it is distant 8 W 16 m. I bank, *Schwarzbach* at the foot of the Styrian Alps. It consists of a nucleus and seven suburbs and has numerous hot sulphurous springs (34 to 89° F.) used both for bathing and drinking and resorted to annually by thousands of invalids and others. The finest baths are those of the *Bayerhof* the *Prinzenbad*, and the *Carolinabad*. They are, for the most part, society baths (*Gesellschafts- or Volkshäuser*) in which the bathers, male and female, in simple dressing-gowns, mix promiscuously and walk about up to the neck in the steaming water. They are efficacious in cutaneous diseases, gout, and rheumatism, resembling in their effects the springs of Aix-la-Chapelle. Baden was almost wholly destroyed by fire in 1818 but has been rebuilt with increased architectural beauty. The chief modern buildings in the town and neighbourhood are the *Wallburg* the handsome chateau of the Archduke (Charles) in the valley of St. Helen the palace of the Archduke Anthony the *Sauhof*, a military hospital, with beds for 400 soldiers the church of St. Augustine, the only one in the town the townhall, theatre, an hospital founded in 1816 and several other charitable institutions. There is a park and public promenade, much frequented and in the environs the scenery is highly picturesque. The fying of yarn cotton-spinning and the manufacture of silk, velvet and muslin are carried on to a limited extent. Pop. 4690.

BADEN [*sic* *Thurnus Helveticus*] a to and dist. Switzerland *canton Aargau*. The town (*Ober-Baden* or *Baden-am-Aargau*) is 12 m. N. E. *Aarau* in a narrow *Aargau* I. bank, *Limmat*, which is here crossed by a wooden bridge. It is the seat of a district court, and has a townhall a handsome R. Catholic church, a convent, monastary hospital and house of correction, and is celebrated for its hot sulphurous baths. The hottest springs have a temperature of 116° F. The Romans had a castrum at Baden called the *Castellum Thermenarum* and during the Middle Ages there was a fortress here, where the Duke of Austria frequently resided the ruins of which still exist. From 1496 to 1712 Baden was the seat of the federal diet of the Swiss cantons, and the residence of the foreign ambassadors. The treaty of peace between France and the empire was signed here Sept. 7 1714. The town has some trade in wine. Pop. 1844.

BADENVOCH a dist. Scotland, Inverness, about 85 m. in length, and 38 in breadth; bounded, E. by the Elgin and Aberdeen, S.W. by Athol and Lochaber and N. by Nairnshire. The name is derived from a word signifying *beauty* the country having been originally covered with natural forests, many of which still remain. Though like all mountain districts, possessing some fertile spots, the country may be generally described as barren poorly cultivated, and thinly peopled, but abounding in beautiful and picturesque Alpine scenery. In this district is situated, at an elevation of 1800 ft. above the level of the sea, *Loch Eibh*, the source of the river of that name, one of the largest in Scotland. The lake is surrounded by the *Corrynank Mountains*, from which descend the torrents by which it is principally supplied. Badenoch in days of old, was a lordship of the Cumma, of which family was the *Red John Cumma* slain in the church at *Dumfries*, in 1206 by Robert Bruce. The Cumma, who

were long the most powerful family in Scotland ruled here with absolute sway planting numerous strong fortresses over the country to support their authority. Bruce subsequently annexed Badenoch to the earldom of Moray but it was afterwards bestowed, by Robert II. on his son Alexander, Earl of Buchan, a man of a disposition so fierce and ruthless, that he was called the wolf of Badenoch. The issue of the latter falling, the lordship of Badenoch fell into ruin, and remained with the Greys till 1453 when it was bestowed on the Earl of Huntly. Badenoch was long the property of the Gordon family but is now in other hands. It was the birthplace of M. Pharoos the translator or author of Ossian's poems who also died there, on Feb. 17 1796 his body being afterwards carried up to Westminster Abbey where it was interred. In this district, also in the parish of Alvie, is *Kinnaird House*, the beautiful and favourite residence of the celebrated and accomplished Duchess of Gordon who died there, and who was there buried by her own desire.

BADPNWEILER a vti grand duchy Baden, circle, Upper Rhine, 15 m. S.W. Freiburg celebrated for its baths used in rheumatic, hysterical and hypochondriacal affections. They are impregnated with *Minerwasser* water and have a temperature of 62° F. They were known to the Romans whose baths were discovered in 1784, and are regarded as the most perfect out of Rome. They are 324 ft. long by 100 broad, and consist of four large and eight small baths, with vapour-bath, smoking and dressing-rooms, &c. Two altars have been found the one bearing the inscription *Thunus Almus*, and the other containing traces of the name of Diana. The wine called *Merkenberger* the best which Baden produces, grows in the neighbourhood 1 op. exclusive of visitors, 400.

BADSHAWUR or **BAIDESHWAR**, a small but neatly built in Hindoostan prov Orissa, presidency Bengal picturesque situated on the r bank, *Mel* sundry 35 m. S.W. Cuttack, lat. 22° 12' N. lon. 85° 25' E. It consists of one broad street having a row of gardens up the centre, with trellis-work coverings, over which beams and other creeping acacias and flowering plants are trained forming an continued bower at intervals there are fantastic, and sometimes tastefully-constructed vases made of pottery in which the tulsi plant is reared. There are also several wells in the town with terraces round them the houses are all elevated on pilthurs with narrow ledges projecting beyond the walls, on which the people sit in fine weather and the slatich projects considerably so as to admit of the rain falling after. There is a mart here for grain, iron cotton cloths, silk dhotis, ironmongery &c. which are both manufactured and brought from the neighbouring places. In the vicinity are some ancient temples, and a hill of volcanic appearance, which rises steeply from the river to a height of 200 ft.—*Journal of the Asiatic Society of Bengal*.

BAELEGHHEM a vil. and com. Belgium, prov. E. Flanders 10 m. S. Ghent, having manufactures of linen cotton, tobacco, and candles also breweries. Pop. 2932.

BAELEI — A tn. and com. Belgium, prov. Antwerp on the Great Nethe 14 m. S.E. Turnhout. Here are a manufacture of coarse woollen, a distillery, oil mill and corn-mills. Pop. 3162.—2 A vil. and com. prov. Liège, 5½ m. N. Verrières with stone quarries, lime-works, and a paper a cloth, a thread, two corn and four fulling mills. Pop. 2041.

BALNA, a tn. Spain in Andalusia, prov. of and 24 m. S.E. Cordova, r. bank, Marbella. It has hills though tolerably good streets, two principal and two smaller squares, four parish churches, a town and court house, ladies college, several well-attended schools two hospitals, a prison, public stores, house, riding-school, numerous convents, and a palace of the Countess of Alameda. Portions of the old walls, and the remains of a castle, still exist. Manufactures—linen, woollen, and cotton fabric tiles, bricks, and earthenware, and there are some tanneries, and oil and corn-mills, in the place still a considerable number of the inhabitants are engaged in agricultural pursuits. Large quantities of grain and oil are exported to Málaga, and the trade with the interior is extensive. An annual cattle-fair is held. Pop. 3244.

BALEZARD a tn. Brazil prov. Minas Geraes, 160 m. W. N. Rio de Janeiro, on a streamlet of same name. It has a church, town-house, and prison; its district well watered, and here and there well wooded, is in general fertile and yields good tobacco which is extensively cultivated. Millet and beans are also grown for local consumption, and a considerable quantity of pigs are reared for the Rio de Janeiro market. Pop. 21 and dist. 9000.

BAERHODE, a tn. and com. Belgium, prov. E. Flanders, on the Scheldt, about 5 m. E. Dendermonde with breweries, oil and corn-mills, and a building dockyard. Many of the inhabitants live by the fisheries. Pop. 2660.

BAEZA, (see, Baeza) a tn. Spain, in Andalusia, prov. of, and 22 m. S.E. Jaen, cap. dist. of same name, about 8 m. N. of r. bank, Guadquivir agreeably situated on a height called Loma de Ubeda, and rich and well-watered plain. When seen from a distance, its numerous churches and monasteries, many of them of Gothic architecture, and its lofty steep-roofed houses, present a very striking appearance. At one time it had a double mole of walled walls, but of these only a few fragments now remain. The streets, though

not straight, are in general spacious and well paved and the houses, mostly of two or three stories, are built of a fine sandstone, quarried in the neighbourhood. This sandstone, by exposure to the air becomes dark and gives the town a sombre hue. Of the three public squares which Baen contains, the largest is the Plaza de la Constitución. The houses, which line two of its sides have a range of porticos and its interior is beautifully laid out, being both planted with poplars and adorned with a fountain of white and black marble, with several fountains. The principal edifices are the cathedral, now united to that of Jaen, an irregular edifice, erected at different times, and in different styles of architecture the university one of the finest edifices of the town, though as a literary institution it has been suppressed and the old monastery of St. Philip de Neri. Baen contains nine parishes and three monasteries is the seat of several district courts and possesses a seminary (*seminario conciliar*) in which both theology and philosophy are taught an economical society and several endowed schools, chiefly for elementary instruction. The principal manufactures are cloth, leather, and soap. The fireworks of Baen were once celebrated, but have greatly fallen off. The annual fair lasts a fortnight. The celebrated sculptor Gaspar Becerra was born here in 1530. Pop. 10,851.

BAFFA (mo. Paphos) a seaport in S.W. coast, island of Cyprus lat. 34° 47' 18" N lon. 85° 34' 30" E. (N.) It occupies the site of the celebrated Paphos of antiquity where Venus is believed to have landed after her birth, leaving the group from the foot of the sea near this island. It was worshipped by the inhabitants and had 100 altars at Paphos hence her titles of Cyprian and Paphian Queen. The numerous ruins of palaces and churches everywhere to be met with, bear evidence of the splendour of the ancient town, and present a striking contrast to the squalor and wretchedness of the modern one, which consists of an assemblage of miserable houses, with a few Greek churches and mosques. In the neighbourhood are a number of excavations made in the rocks, and inhabited by Turkish families. Beautiful crystals are found in the rocks near Baffa called Baffa diamonds. The country round is fertile, yielding large crops of corn besides cotton and silk. The bay is large but shallow and unsafe. Pop. 1000.

BAFFINS, or **BY LOTS RA** a large gulf or inland sea, communicating with the N. Atlantic, by Davis Strait, N.E. coast, America, between lat. 68° and 78° N. and lon. 59° and 80° W., extending 8 E. to N.W. about 950 m. with a mean breadth of about 280 m. It was first explored by Baffin in 1616, and more fully by Capt. Ross, in 1818, and Capt. Parry in 1819. It is of great depth in many places, but of extremely unequal bottom, the ascertained depths varying from 900 to 1050 fathoms. Its shores are rocky and precipitous, rising to a height, in many places, of 1000 ft. backed by ranges of lofty mountains, covered with perpetual snow. In the dreary and barren region there is hardly any vegetation the little there is, consists chiefly of mosses, lichens, and ground berries. The coasts are rendered remarkable by the presence of prodigious numbers of high, sharp, conical rocks, so artificial in form and appearance, that they are called *monuments*. Both sides of the bay are indented by numerous sounds, creeks, and inlets, few of which, however, have been yet explored. It abounds in black whales, of a large size, and in seals, the capture of which employs a number of British vessels. The principal land animals are bears, black foxes, hares and walrus. Birds—parmigans, terns, gulls, elder ducks, auks, and petrels.

BAFFIN'S ISLANDS.—1 Three small barren uninhabited islands, E. shores, Baffin's Bay and so called by Capt. Ross. They are in lat. 74° 4' N lon. 58° W. (N.)—2, A small isl. Fox's Channel, N. branch of Hudson's Bay It lies S. of Melville peninsula; lat. 65° 40' N lon. 85° 20' W. (N.)

BAFFO a considerable tn. Maltes country a district of Dubonay W. Africa. It is situated near the Fellatiah frontier at the foot of one of the Kong mountains, and is surrounded with a variety of trees—oil, cotton, sycomore, ash acacia. From being in the hill country the climate here is more temperate than in other localities of Dubonay. The country around is well watered; and some of the streams are impregnated with iron, others with manganese. The land pro-

does four crops of Indian corn each year and two of Guinea corn. Tamarind, grapes, figs, cashew and kolla nuts, are abundant. There is a good, though small, breed of cattle, but no horses. Sheep and goats, as well as guinea-fowl of various kinds partridges of a large size, and pigeons, are plentiful and venomous serpents numerous. Pipe-clay is abundant in some of the valleys. The market is well supplied with all articles of native consumption. The inhabitants, who manufacture a little cloth, are literally slaves, but live at peace since they were brought under the sway of the King of Dehoney.

BAGAGEM a river Brazil, prov. Goyas, an affluent of the Maranhão. It rises in the Serra Vidiosa, flows W N W and falls into the Maranhão about 20 m. above the junction of that stream with the Tocantins, after a course of about 160 m. in lat 12° 30' S. lon. 49° 5' W.

BAGARIA, a vil Sicily 11 m. E S E Palermo, with the mansions of whose nobility it is adorned that of the Prince of Palagonia being the most distinguished. Pop. 4000.

BAGBOUUGH (Warr) par Eng Somerset 1872 ac Pop. 450

BAGDAD a pash Turkey in Asia, of a triangular form stretching N W from the head of the Persian Gulf in about lat 33° to 38° N and lying between lon. 40° and 48° E. bounded, S W by the Arabian desert, E by Persia, and N by the pashalies of Van and Diarbekir. It is thus about 650 m long, and about 450 as its greatest breadth, traversed by the Euphrates and Tigris, which afterwards unite and enter the Persian Gulf in a single stream. The pashalic is usually divided into three portions: that E. of the Tigris, that W. of the Euphrates, and that lying between these two rivers. The first is fertile the second flat and sandy without herbage and without water excepting along the immediate banks of the river the overflows of which form productive rice-grounds the third is now a complete desert, though formerly one of the richest and best cultivated territories of the old world. This result proceeds almost solely from the wretched government of the Turks. The better cultivated and more fertile portions of the province, produce large crops of wheat, barley, rice, and maize, with a good deal of tobacco, hemp, flax, and cotton. Near the towns and villages to which nearly all agricultural efforts are confined great quantities of fruit are grown particularly dates which are reckoned of a superior description and form an important article of subsistence. Melons, cucumbers, and onions are also abundant, and of excellent quality. Among the wild animals are lions, hyenas, jackals, wolves, gazelles, hogs, and hares. There are not many lions, but jackals are both numerous and troublesome. The domestic animals are horses, asses, mules, buffaloes, camels, and froedocaries. The horses are of small size, seldom exceeding 14 hands high, but are held in much esteem on account of their heavy build and capability of enduring fatigue. The most numerous and most useful however of the domesticated animals, is the camel. As beef is not used as an article of food oxen are raised solely for the yoke. The wild birds are black partridges, snipes, wild doves, and on the lakes and marshes wild geese, ducks, widgeons, and pelicans. Ostriches are found in the deserts. The only domestic birds bred are the common fowl and pigeons, neither geese turkeys nor ducks being domesticated. The province is only partially subject to the Porte the Arabs being sole masters of the country from Bagdad to the Persian Gulf. The Arab

sheikhs or chiefs are bound to furnish the pasha with a certain number of troops, and a certain amount of tribute. but these contingents are very irregularly paid, often evaded altogether. The population of the pashalic, consisting of Turks, Arabs, Kurds, Turcomans, Armenians, and Jews, has been estimated at 1,800,000.

BAGDAD a large and celebrated city Asiatic Turkey formerly cap. of the empire of the Khalifs now cap. pash of same name on the banks of the Tigris about 190 m above its junction with the Euphrates; lat. 33° 19' 50" N lon. 44° 22' 38" E. (c.) The city stands on both banks—two-thirds being on the left, and the remainder on the right—of the river which is here about 620 ft. wide the communication being maintained by a long narrow and very inconvenient bridge of boats. It is of an irregular oblong form, and about 5 m. in extent and as seen from a little distance, has a striking appearance, being surrounded by formidable-looking walls of furnace-burnt bricks, strengthened with round towers, and mounted with cannon. A forest of palm and date-trees growing around and within the city adds to the picturesque effect. The interior however disappoints the high expectations which a distant view is calculated to excite. A large portion of the ground within the walls is unoccupied, and the backs of which the houses are built are mostly old, being dug out of the ruins of former edifices, and hence rounded shiplike or otherwise disfigured. The streets are narrow unpaved and extremely filthy and the houses, built of burnt bricks of a yellowish-red colour generally consist of two stories above

BAGDAD seen from the Tigris. — After Lieut. Col. Chesney.

the ground, or rather underground flat. They have seldom any window to the street, and the doors are all strong and iron-clamped. A few of them, however are rail road by a sort of oval or projecting window admitting light to a sitting-room, in which the various members of the family meet, and visitors are received. Here the males may be seen smoking, and occasionally the females peeping through the half-closed lattices. The houses consist of a range of apartments opening into a square or inner court, with one or two subterranean rooms called *serdabs*, in which the inhabitants seek shelter during the day from the intense heat. The houses built by David Pasha, is one of the finest in the East, and is well supplied with home and foreign manufactures but the other ones are mean structures, though sufficiently spacious, and generally well stocked. The shops are poor and dilapidated, the windows indicating neglect and decay. There are about 100 mosques in the town, although not more than 50 or 60 are in use. The mosques. They differ from, and are in general inferior to, those of other Mohammedan cities still some of them have a very gay appearance, their domes and minarets being covered with glazed tiles, of various colours, but chiefly green, white, yellow and black, arranged in a kind of mosaic work, with consider able taste, and so as to reflect the rays of the sun with brilliant effect. The caravanserais and baths are mostly mean establishments.

Bagdad was formerly a place of extensive trade, but has been for many ages the great emporium for the commerce of all the surrounding countries; but it has of late years much declined, in consequence, principally of the rapacity of the Government, and its unwillingness or inability to protect the property of the merchants from the Arabs, and

in part from the interruptions caused by plague, war and inundation. Another great cause of decline is, that Persia no longer receives her chief supplies from Bagdad but obtains them in the provinces, viz. Trebizond, from Great Britain and Constantinople and on the S. direct from India and the Persian Gulf. The yearly trade between Aleppo and Bagdad at present, seldom exceeds one caravan of 100 to 1500 camels. The chief imports of this trade are cotton twist, raisins, shirtings, prints, imitation shawls, woollen cloths and dyes. The returns, independently of resuscitated in specie, in which the greater part is paid are Persian tomahawks, beffalo-hides, East India indigo, pearls, Cashmere shawls, some Mekka coffee, gums, myrrh, &c. Bagdad has few manufactures. The principal are red and yellow leather both of which are much esteemed; and a kind of plush, of rich and beautiful pattern, which is much used by the Turks for covering cushions and sofas.

The climate of Bagdad is intensely hot in summer but, on the whole, salubrious, although subject, during part of the summer to a hot wind, known by the name of *Samsal*, which is said to feel as if it had just passed over the mouth of a lime kiln. Rain rarely falls later than the beginning of May or earlier than towards the end of September after which it continues for a time to fall copiously though the winter on the whole is dry. So far from considering the excessive heat of summer unhealthy the natives assert, that if it does not attain its usual intensity sickness is sure to prevail. It has been observed that the plague visits Bagdad every ten years. A tremendous visitation of that calamity took place in 1831 when the city was nearly depopulated upwards of 4000 dying daily for several days continuously out of a population of about 60,000. To add to the horrors of the scene, the Tigris overflowed its banks, inundated the lower part of the city causing the destruction, in one night, of 7000 houses, which, falling with an almost simultaneous crash, destroyed 15,000 persons.

The population of Bagdad is exceedingly mixed consisting of Persians, Turks, Armenians, Arabs, &c. Jews and as they all dress after the fashions of their respective countries, the variety of costumes displayed in the streets and bazars is very striking. The natives are said to be the ugliest people in the Turkish empire—a circumstance in part owing to the effects of a cutaneous disorder to which they are subject, and which leaves disfiguring marks on the countenance. The only women in Bagdad who submit any part of the face are the Arab females, whose dress consists of a wide chemise of red or blue cotton, and whose faces, arms, &c. are tattooed in a manner exceedingly disagreeable to a European eye. The handsome women and the least disfigured by art, are the Georgians and Christians: but all ranks and classes stain the hair and the palms of the hands with henna, the last so deeply that they are said to resemble those of a miller covered with tar. The Turkish women, when they go abroad are enveloped in large sheets of checked-blue linen which give them a shagreened appearance, their legs being, at the same time, enclosed in large jack-boots of yellow leather and their faces covered with a thick black horse-hair veil. Two other striking features of this far-famed eastern city are the immense numbers of singularly ugly negro slaves and white donkeys that throng the streets. Both are in great request the latter so much so, as to bring off from £40 to £50 each. Only a very imperfect approximation can be made to the actual population. It once exceeded 100,000. Fontanier makes it as low as 30,000. The probable number does not exceed 65,000.

BAGE a vil Brazil, prov. São-Pedro-de-Mo-Grande, near Piratuna on the S. frontier of the province. It has a church, and about 2000 inhabitants.

BAGE, name of two vils, France, dep. Ain about 8 m. distant from each other and 15 m. N. W. Bourg—1 *Bage-le-Châtel* agreeably situated on a hill, in the midst of a fertile plain, and possessing some manufactures of cloth, leather and earthenware and a trade in agricultural produce particularly poultry. Pop. 749.—2 *Bage-la-Ville*, a large vil. on Bag-le-Châtel. Pop. 2069.

BAGH or **BAGH** a vil in Balochistan, dist. Catch Gaw, dist. 29° 35' N. lon. 68° 35' E. It is 12 m. N. and not far from the celebrated Bolan Pass. It is surrounded by a ramous mud wall. The houses, about 2000 in number are

of the same material and wretchedly built. It has a large roofed bazaar well supplied with wares. Adjoining the town is an extensive cemetery containing some remarkable tombs; and near it, a large mosque. In dry weather water is extremely scarce, the stream of the Harpa becoming then exhausted, while the water in the tanks and wells is brackish and unwholesome. The neighbouring country where properly irrigated is fertile in grain. The climate is sultry.

BAGHITCHCHESEHRAI See BAKHTSCHUMARAI
BAGINTON par Eng. Warwick 1687 as. Pop. 206.
BAGLAN par S. Wales Glamorgan 8479 as. P. 558
BAGIANA or **BAGIELANA** a dist. Hindooestan, prov. Aourangabad extremely hilly with many fertile plains interspersed. It is one of the original Mahomet countries and remained under the sovereignty of that tribe until the fall of Peshwa in 1818.

BAGLEN or **BAGALEEN** a prov. island of Java, S. coast bounded, W. by Banyuwana, N. by Samarang, E. by Kadoe and Djogjakarta, and S. by the Indian Ocean. It lies between lat. 7° 10' and 8° 11' S., and lon. 109° 25' and 110° 5' E. is mountainous but fertile, generally of volcanic formation and has 10,432 ft. high and *Fraser* about 8902 ft. both in the N. of the province and both volcanoes the former as active one. Besides these several other lower heights have craters. The principal streams are the Ambal and Hogovento, both falling into the Indian Ocean. The atmosphere generally is clear and from the height of the ground, the heat is seldom greater than 80° Fahr. *Rice* Egyptian wheat, tobacco, sugar and coffee, are the principal products. Buffaloes are plentiful and in the woods tigers, panthers, hares and numerous kinds of birds abound. On the coast the edible birds nests are found.

BAGNA, or **BAGOT**, a tn. Turkey in Europe, prov. Roumelia, about 40 and 40 m. S.S.W. Supla, 1 bank, Moravia at the S.W. extremity and near the base of the mountain range that separates the provinces of Bulgaria and Rometia. It is surrounded by an embattled wall outside of which are some thermal spring baths. Pop. about 1000.

BAGNA CAYALI U a tn. Papal States, 25 m. S.E. Ferrara, on the Reno. It has some silk mills and large quantities of hemp are grown in the surrounding district. P. 10,064.

BAGNA LODICA See BAKALODICA.

BAGNALS-TOWN a tn. Ireland, co. of 10 m. S. Carlow, agreeably situated on the Barrow where there is here a handsome bridge. The castle house is on an elevated site, and has an elegant Ionic portico. The town has a fever hospital, a dispensary and a R. catholic chapel. Many persons are employed in the quarrying and dressing of granite for building and of Carlow flag: both of which abound in the district, and are shipped down the Harrow to Waterford, Dublin &c. Pop. 2256.

BAGAN or **BAGIAN** a small in Indian Archipelago off the N.E. coast of Borneo from which it is distant about 25 m. lat. 6° 5' N. lon. 116° 50' E. 1.]

BAGNARA a tn. the capital of Baglio, prov. Calabria Ultra, 17 m. N.E. Reggio, at the N. entrance of the Strait of Mesina. It has a considerable trade in wood and tar. Excellent mazon wine is produced in the vicinity. This town is supposed to be the *Portus Orestis* of the ancients. Pop. 3175.—2 A tn and castle, Papal States 39 m. W. Ravenna, r. bank, Santorso. Pop. 2440.

BAGNARELA a tn. Papal States, 15 m. N. Vitorbo on a hill. It is the seat of a bishop. P. 3733.

BAGNERES DE BIGORRE [tn. *Agences Vieux Agues Bigorre*] a celebrated watering-place France, dep. Hautes Pyrénées, cap. around of same name at the entrance of the valley of Campan; 1 bank, Adour 12 m. S.E. E. Tarbes. Its site is one of the most romantic in the Pyrenees. Well-cultivated slopes surround it on all sides, and are terminated in the distance by a mountain-range, the most conspicuous summit in which is the peak of Midi. The town is well built and contains several good squares, and numerous spacious, handsome streets. The houses are all whitewashed and many of them have dormer, tinels and window-sills of blue marble, which abounds in the neighbourhood. One of the worst evils by which Bagneres suffers is a bright glare and sultry stifling heat; but this is considerably allayed by copious streams drawn from the Adour and made to circulate

in almost every street. Bagneres owes its chief celebrity to its baths which are sulphurous and saline, and have a temperature varying from 87 to 123 Fah. There is also in the vicinity a chalybeate spring said to be almost the only one in the Pyrenees. The bathing establishment, called *Fraser's*, is very complete, and is the largest and most handsome building of the town. It stands at one of its extremities immediately under Mount Olivet, and is approached by a long avenue of poplars, winding through a verdant valley. The inhabitants depend chiefly on the baths almost every house possessing lodgings, but the manufacture is of some importance. The chief of these is the crêpe known by the name of *Crêpe de Bergues* and a fine woollen gauze, almost as fine as lace, woven into shawls and scarfs. A great proportion of the females, young and old are employed in knitting. Bagneres has also extensive marble-works, dyeworks, tanneries, and paper-mills. Pop. 6401

BAGNERES DE LUCHON is a France dep. Haute Garonne, arrond. of, and 21 m S W St Gaudens. It is one of the principal watering-places of the Pyrenees and derives its celebrity from its sulphurous thermal waters said to be beneficial in rheumatic complaints are used chiefly as baths. The town is situated in the picturesque valley of Luchon surrounded on all sides by hills covered with natural wood. The main street forms a splendid avenue at the W end of which the large bathing establishment is placed. The neighbourhood exhibits some of the most interesting scenery of the Pyrenees and as horses can be procured for a trifle, equestrian excursions are the chief amusements of the visitors who are most numerous in the months of July and August, at which period the place is very gay. Climate, of good quality is made here. The winter lasts seven or eight months. Resident pop. 2415

BAGNES (VAL DE) is a valley Switzerland can. Valais, about 25 m. in length. It commences at St. Braucher a little below Orsieres, and follows the source of the Dranse upwards to Chablais, stretching thence in a N.E. direction to the glaciers of Chamonix. In the year 1546, the village of Bagnes was destroyed by an inundation, caused by the stoppage of the Dranse at a glacier until its waters had been melted. In 1813 similar stoppage of the Dranse took place at the glacier of Cervin, and the water formed a lake no less than 1½ m. long 700 ft wide and at one part 200 ft deep. Attempts, partially successful were made to cut a channel through the ice, so as to drain the lake gradually but the barrier at last gave way and a deluge of 500 000 000 of cubic feet of water was let loose, in the space of half an hour to sweep through a tortuous valley. A food five times greater than that of the Rhine at Basel filled the bed of a mountain-stream. All the bridges on the Dranse were swept away even that of Martigny, which stood 80 ft. above the ordinary level of the river, because were destroyed many lives were lost, and the fertile pastures were converted into a desert of gravel. The valley contains several hamlets, and about 9000 inhabitants. (Forbes's *Torres through the Alps*)

BAGNY or **BAGNY DE LUCCA** see *Baignes* *Coronatus* at *Ville* a tn and com duchy of Lucca, 12 m N the city of Lucca, 7 bank, Lucca, here crossed by a bridge. In the town there are a handsome parish church, an English chapel, many royal buildings theatre, several public libraries and five bathing establishments. The waters, which are much used contain sulphate of magnesia, carbonate of lime, alum and iron, and their temperature varies from 112 to 129°. The country yields grain oil wine, and great quantities of fruits and vegetables has forests of chestnut and beech and feeds a considerable number of cattle and sheep. Pop. 8884

BAGNY or **St. GIULIANO** (see *Thermes Pissini*) a tn and com. Tuscany prov of and 4 m N.E. Pisa, at the W base of Mount Pisano, on which stands the ancient chapel of St. Giuliano whence the town derives its name. The town is well constructed and clean, and much resorted to by the citizens of Pisa on account of the reputed efficacy of its thermal baths. The establishments for the accommodation of bathers are extensive and well regulated. The waters are clear in odorous and saline temperature, 101°. In Mount Pisano marble is quarried; and in the vicinity are the remains of a magnificent ancient Roman aqueduct, the *Aqua Claudia* *Pueros* of Pliny. Pop. 11 128

BAGNO a small fortified tn. and com. Tuscany prov of,

and 88 m. E. by N Florence, near r bank, Arno. It has an ancient and handsome church, municipal buildings and a noble old edifice used as a bathing establishment. The thermal baths are much frequented temperature of water 106° to 110°. The country is fertile towards the river its mountains are covered with forests of pine, oak, beech, and oak, the fruit of which feeds numerous swine; cattle, sheep, and goats are reared to some extent. Five annual fairs are held one of which in the spring is the most extensive and best attended cattle-fair in Tuscany. Pop. 6887

BAGNO A *acqua* (see *Bagni di Cascina*) a vil. Tuscany prov Pisa, 8 S E Lari on the E. celebrated for its thermal sulphurous, and carboniferous waters, of a temperature of between 97 and 98 Fah. They are clear and inodorous but have a sharp and taste. Pop. 1235

BAGNO A *xiruti* a tn and com Tuscany prov of, and 4 m E by S. Florence, having a parish church with a few fine pictures, and a townhouse. The vicinity is very fertile and the low meadows towards the river Arno N of the town afford food for numerous cattle and sheep. Pop. 13 139

BAGNOLI a tn. Naples prov Salerno, 6 m S W Trivento, on the slope of a hill. It has five churches, an abbey and an hospital. Pop. 4879

BAGNOLI—1 A tn. Naples, prov Principato Ultra, 6 m S W St. Angelo de Lombardi, on the declivity of Mount Calvillo. It has a fine collegiate church, and several convents. Pop. 4500.—2 A tn. Austrian Italy gov. Milan dep. dist. of same name, prov of and 7 m. S by W Brescia, on the high road from that city to Cremona. 1 op. 2646.—The district is fertile, and feeds a considerable number of cattle. Pop. 15 895.—3 A tn. Sardinian States prov. Saluzzo, 1 bank, Ormea, at the foot of the Alps. 1 op. 2000

BAGNOLI or **BAGNOLI** see *Bagna* a vil. France, dep. Lot, on the Lot, 10 m S E. Meud, on a slope near 1 bank, Lot, and deserving of notice for its bathing establishment, which is very complete, and much frequented. The springs which are thermal, having a temperature of 111 to 112 Fah. rise in a narrow valley. The water on first issuing is limpid and free from oil, but after it has run some distance meets N of oil of sulphuretted hydrogen. It is not so agreeable to the taste, but has a kind of soapy mucous feel. It is used both internally and externally and is said to be very efficacious in scrofulous and similar affections.

BAGNOLS (see *Baignes*) a tn. France, dep. Gard arrond. of, and 15 m. N E. Uses r bank Cuse, and of some celebrity for its wines. It is on the whole an ill built town, with narrow streets, but has one fine square, adorned by two fountains and surrounded by a balustrade. The college also is a good building. The chief products of the soil are wheat, barley, corn, clover, clover, and spin silk. It has also distilleries, tanneries, and dyeworks. Pop. 1908.—Four places in France, in addition to the two already mentioned have the name of BAGNOLS.

BAGNOVE, a tn and com Tuscany prov Pisa 7 m S.E. Pontremoli at the S. base of Mount Ormo. It contains a large square parish church and castle. The inhabitants are chiefly engaged in tillage and rearing cattle, for which four yearly fairs are held. Pop. 4655

BAGNOLINO a tn. Austrian Italy gov. Milan, prov of and 24 m. N by V. Besenico, 3 m N W lake Iseo, 1 bank, Caffaro, having a fine church, an hospital and extensive iron-works. Hard ware, coarse cloths, and serge are manufactured here, and an annual cattle-fair is held in July. In the vicinity are the sulphurous thermal springs of St. Quercino. Pop. 3599

BAGSHOT (formerly *Italy Hall*) a vil. and chapelry England co. Surrey tm. Woking, 10 m. S W Windsor. Pop. 1071. It gives its name to an extensive heath in the neighbourhood, once famous for the numerous highway robberies committed on it. The heath is now much reduced in extent, considerable portions of it having been enclosed and cultivated. Along its borders are numerous handsome villas

BAGTHORPE par. Eng. Norfolk; 750 ac. Pop. 79

BAGULCOOT—1 A subdivision of the dist. of Darwar Hindostan, prov. Benares presid. Benares including the pergunnahs Baguloot and Badaunzy length, 64 m. breadth, 44 m. area, 1280 sq. m. It is badly supplied with water there being few springs and a deficiency of rain, the annual amount rarely exceeding 26 inches. On this account, the vil-

lages are built mostly on the banks of rivers. The principal language is Canarian. Pop. about 100,000.—A. A. m., cap. of above subdivision, 135 m. N. E. Goa, and the residence of the principal merchants and bankers of the district. Pop. 7623. The principal merchants and bankers of the district. Pop. 7623.

BAGUR, a dist. Hindoostan, now attached to the prov. of Malwa and Goojrat.

BAHADUR (OOR), two towns, India.—1 A. m. prov. Goojrat, 20 m. S. E. Benia, and 81 m. N. E. Surat lat. 2 11' N. lon. 73° 46' E.—2 A. m. prov. Malwa, dist. Chandwar lat. 4 15' N. lon. 78° 4' E.

BAHAMIA (KIAHIA) one of the principal islands of the Bahama group 57 m. E. from the coast of E. Florida; lat. (W. end) 26° 41' N. lon. 79° 0' W. (s.) about 70 m. long by 9 broad, healthy and tolerably fertile, but thinly inhabited. Pop. 464 males, and 358 females, chiefly employed in raising Indian corn, and other agricultural pursuits.

BAHAMIA ISLANDS, or LUCAYAS, a group of about 500 islands, belonging to Great Britain, many of them mere rocks, lying N. E. Cuba, and E. of the coast of Florida, the gulf stream of which passes between them and the mainland. They extend from the Grand Bahama or Nassau Caye in lat. 27° 21' N. and lon. 79° 45' W. to the Moschell Bank in lat. 21° N. and lon. 70° 32' W. a distance of upwards of 600 m. Generally speaking they present a flat appearance and are mostly long and narrow. They are formed of calcareous rock, which, by retaining the moisture, is found well adapted to the growth of various kinds of fruits. Of the whole group, not more than 12 or 14 are inhabited and some of the largest are either altogether uninhabited or but thinly peopled, while others, again, are almost unexplored. The climate, though rather hot, the thermometer varying from 80° to 90° in summer is healthy and, with moderate care, well suited to European constitutions. Though generally sterile, some of the islands produce oranges, lime lemons excellent vegetables, maize, and ground provisions, for the consumption of the inhabitants, and a little cotton for exportation. The general wild vegetation of the Bahamas is a close growth of trees comprising the Madeira, horse-beal mahogany, mastic, lignum vitae, pagon, sand dreweeds &c. with an extensive underbrush. Numbers of cattle are reared on the islands, and the hog and egret are found wild in the woods. In the more E. islands there are natural salt ponds of great value, the cultivation of which is increasing but is capable of much further improvement. Tortles abound on the shore, and are an article of export. In 1850 the total exports amounted to £68 385, and the imports to £124 486. In 1851 there cleared outwards 33 vessels tonnage 80,914, navigated by 2356 seamen and there entered 363 tonnage 86,038, navigated by 2286 seamen and there were built 13 vessels, tonnage 494. In 1851 the revenue of the colony amounted to £28 106, and the expend ture to £28,063, of which sum £1050 were for educational purposes. The schools supported by the government are 21 in number attended by 1857 scholars, besides which there are several private schools. There is also a library and museum, partly supported by government. The colony is divided into 18 parishes, and contains nine Episcopal churches and 11 Wesleyan chapels, a Presbyterian church, six Methodist and several Baptist chapels. The seat of government is Nassau, island of New Providence, one of the largest, and, from its geographical position and natural advantages, the most important of the group. Here also is the head quarters of the troops. The legislature consists of a governor and council, appointed by the crown and a house of assembly. The present inhabitants are composed of two classes, residents and wreckers the former are chiefly the descendants of American royalists, great numbers of whom repaired to these islands, with the remains of their property at the close of the American war. The wreckers, as their name implies, follow as a calling the occupation of rescuing the crews and cargoes of shipwrecked vessels—a calamity exceedingly frequent in these intricate and dangerous seas. They are licensed by the governor and are well armed for the purpose, and are in danger. Their vessels, well adapted for the purpose, are small flat-bottomed sloops, which they manage with great skill. They receive a salvage on all property rescued from the waves. The gambling life of a wrecker has, however, much sullied against agricultural pursuits, against the real advancement of these islands, and against the comfort and interests of the inhabitants. Much has been done to promote

education in the Bahamas; numerous schools having been established and chiefly supported by the colonial government, and also, to a great extent, by the Wesleyans. San Salvador one of the islands was the first land fallen in with by Columbus on his first voyage, in 1492. At this period, the larger of the Bahamas were densely peopled by a mild and inoffensive race of Indians, whom the Spaniards removed to Hispaniola to work the mines, or act as divers in the pearl fisheries of Cumana. By this cruel proceeding the race became entirely extinct in the course of about 14 years. The Bahamas were remained uninhabited for nearly a century and a half, when they were colonized by the English (1829) who were, in turn, expelled by the Spaniards. They subsequently changed masters repeatedly but were finally ceded to the British in 1783. The principal islands are Grand Bahama, Great and Little Abaco, Andros Islands, New Providence, Eleuthera, San Salvador Great Exuma, Rum Cay, Wedding Island, Long Island, Crooked Island, Acklin Island, Arwood Cay, Marianna Island, Great and Little Inagua, and the Carriacou Islands. The entire pop. in 1845 amounted to 25,500; according to the census of 1851 it had increased to 27,519.

BAHAR, or BAHAR, an extensive prov. a dist. and in Hindoostan, presidency of Bengal. The PROVINCE, of very irregular outline, is situated between lat. 23° 45' and 27° 26' N. lon. 83° 1 and 87° 14' E. bounded N. by Nepal W. by Allahabad Oude, and Gundwana, S. by Gundwana, and E. by Bengal area, about 50,000 sq. m. The Ganges flowing W. to E. divides it into two nearly equal parts the N. consisting partly of the extensive alluvial tract along the bank of the Ganges, and stretching N. to the forests of Nepal and Morven, the S. consisting partly of a similar tract along the E. bank of that river and an extensive mountainous tract commonly called Nagpur from the diamond mines it was supposed to contain. The province of Bahar is divided into six districts or sikkas and as in respect of natural advantages, one of the most highly favoured in Hindoostan. Its climate is temperate and healthy though subject, particularly towards the centre, and during the hot season to a parching W. wind succeeded however towards evening by a cool breeze from the E. The cold season among the hills is congenially-suited to European constitutions. At sunrise during that season, the temperature ranges between 35° and 40° and often, in the course of the same day reaches 75° Fah. The province is well watered. In addition to the Ganges which traverses it centrally it possesses the Sonah, the Gundach, the Caranassah, and the Dewah with almost innumerable smaller streams. The soil particularly in the plains, is of remarkable fertility. In the tract E. of the Ganges, irrigation is usually effected by means of wells, from which the water is drawn by a lever and buckets; in other parts, by damming up the streams. The chief products are opium (the staple commodity) indigo, sugar, cane rice, wheat, maize, cotton, flax, sesamum, ginger, pepper tobacco betel leaf, and a variety of flowering plants, from which essences are made. There are, besides, considerable numbers of cattle reared. The manufactures consist of cottons (once a staple of great importance, but now almost entirely superseded by English imports) carpets, essences as rose-water and otto of roses oils, refined sugar saltpetre, hides, soap, earthenware, and paper. The natives of Bahar excel the Bengalese in stature and physical strength and in general have better houses, many of them in a few towns being two stories high but they fall below them in domestic economy and moral propriety. Intemperance is nearly universal and religion is mocked in the persons of a degraded and dissolute priesthood. The capital of Bahar is Patna. At a remote period of Hindoo history Bahar seems to have been the seat of two independent sovereignties, that of Magadha or S. Bahar and Mithila (Tibet) or N. Bahar. There are no Buddhists here although Gaya, the birthplace of Buddha, the great prophet and legislator of E. Asia, is within the limits of the province. Bahar was transferred to the British in 1765. Pop. (see third Mahometans) 9,101,462.—The province occupies the central portion, bounded N. by the Ganges, E. by Bhagulpore, S. by Rangoon and Bhagulpore, and W. by Shahabad; greatest length, N. E. to S. W. 163 m.; breadth, 68 m. area, 6634 sq. m. The greater part of the country consists of a rich alluvial plain, bounded on the N. by the Ganges, is level and highly cultivated,

although barren isolated hills are of frequent occurrence, particularly in the centre of the district. None of them, however, attain a greater elevation than 700 ft. but in the E. part, there are hills of nearly twice that height. The principal rivers being the Ganges, are the Soos or Golden river the Pungwa the Phalga or Fulga, the Soos, and the Pungwa, with their numerous branches. About 500 sq. m. are covered with woods and thickets, consisting of palms, bamboo, mangrove, pomegranates, fig-trees, apple and other fruit-trees. Hot springs and volcanic substances are met with in various places. The principal wild animals are black bears spotted tigers, badgers, leopards, jackals, squirrels, foxes, hares, dogs and monkeys porcupines, alligators, and fish abound in the Ganges. Birds are numerous, but all songless. The climate is on the whole healthy though the heats of spring are excessive, and the E. and W. winds hot and parching. The chief productions are wheat barley maize, and rice about a fourth of which, of superior quality named *hamrah*, is in great demand in the markets of Calcutta. The lands near the Ganges yield two crops a year. Cereals, pulses, ginger, cardamom, turmeric, coriander, linseed, sesamum, potatoes, and legumes are also extensively cultivated together with many other kinds of succulent vegetables cotton, sugarcane, tobacco betel-leaf safflower and indigo, are likewise cultivated to a greater or less extent. Poplars are grown in great quantities in garden land especially watered, generally along with mangoes, garlic and coriander.

The manufactures consist of cottons, carpets, blankets, paper soap, leather in many shapes, bricks, coarse earthenware &c. There are six great places of pilgrimage in this district, and 200,000 pilgrims have been known to visit one of them called Gaya in a year. The chief towns of the district are Gaya (the capital) Bahar Bhogotgi Dandigar Uruvi &c. The villages are numerous, consisting of mud built houses huddled together without regard to regularity or comfort. It is divided into twenty-eight parganas. P. 1, 500 sq. m. of whom about a fourth are Mahomedans.—The town is in the above district lat. 25° 15' N lon. 85° 35' E. 40 m S.E. Patna, 265 m N.W. Calcutta. It is a large straggling place built chiefly around a ditch marking out the boundary of the ancient city which though now nearly deserted, must have been a place of importance, and was probably the capital both of the district and province. The best part of the town consists of a long narrow street roughly paved with bricks and stones, but presenting altogether a wretched appearance. In the centre are the remains of a massive stone building roofed with a number of small domes having its interior divided into as many cells resembling the Patna mosque of the upper provinces. The environs are well cultivated and improved by irrigation. Pop. about 25,000.

BAHAWULPOOR, BAHAWULPOOR or DOABPOOR, a thinly-peopled principality N.W. Hindustan, between lat. 27° 41' and 30° 25' N lon. 69° 30' and 3° 08' E bounded N and N.W. by the Punjab from which it is separated by the rivers Ghazra, Ispind, and Indus W. by Sindh S. and S.E. by the Jomana and Deccan and E. by Sikh territories of Malwa. Length N.W. to S.W. about 300 m. breadth, about 100 m. at the broadest part. Along the rivers forming the N.W. boundary the soil is fertile, producing cereals, tobacco, indigo and sugar and in this district are situated all the important towns in the principality Bahawal poor Ahmudpoor Soodpoor and Ooli. The remainder of the territory to the S.E. is nearly wholly included in the Great Indian desert and consists of sand and covered with the prickly pear and saline plants. In some spots however a scanty vegetation is met with supplying food to the herds belonging to nomadic tribes frequenting these localities. The domestic animals are the camel, reared in great numbers in the desert; the buffalo the cow the gaddi or short-tailed sheep, the goat, &c. Poultry is plentiful. West near the rivers, wild fowl are so abundant that, according to Mason a goose may be had for a halfpenny and two or three ducks for the same sum. Many of the inhabitants are Jats and Baloches (Mahomedans) but the majority are Hindus. The manufactures, carried on almost entirely by the latter consist chiefly of silk and cotton and ironware, and a species of cotton called *soongras*, of remarkably fine texture. The weaving, also Hindus, manifest a considerable degree of enterprise, and carry on an extensive trade chiefly in articles of European

manufacture, received by way of Bockanow and the desert of Ameer. The merchants of Bahawalpoor are not infrequently seen in Balkh and Bokhara, and sometimes even in Astrakhan. Bahawalpoor is governed by a khana, whose military force consists of about 25,000 regular troops, with about 4,000 of heterogeneous class. Chief town—Bahawalpoor (the cap.) Ahmudpoor, Ooli and Kilmupur. E. surface, lat. 26° 00' 100

BAHAWULPOOR, cap. above principally about 2 m. from the Ghazra, 55 m S.E. Mooltan and 830 m. W. N.W. Delhi lat. 29° 33' N lon. 71° 40' E. It is a place of considerable antiquity and had walls indications of which may still be traced along the public walk. The houses, chiefly of kiln-burnt bricks are much mixed with gardens, which give them an isolated and straggling appearance. The whole is enclosed by groves of date and pipal-trees. The only public buildings deserving of notice are the palaces of the khana, though in appearance they are not very attractive residences. The manufactures are numerous, and some of them costly. They consist chiefly of silk stuffs and congeal. The trade also is extensive. Pop. about 30,000.

BAHIA the name, with various affixes of a number of bays in different parts of the world—1. *Bahia de Todos-os-Santos*, see ALL SAINTS BAY—2. *Bahia Blanca*, a bay in S. America, Buenos Ayres lat. 38° 55' S. lon. 61° 40' W. (N.)—3. *Bahia Honda*, a bay on the N.W. coast of Cuba lat. 23° 50' N. lon. 83° 12' W. (N.)—4. *Bahia Honda*, a bay on the S.W. coast of Guatemala lat. 14° 45' N. lon. 81° 31' W. (N.)—5. *Bahia Honda*, S. America, Venezuela, at the extremity of the promontory forming the W. side of the gulf of the latter name lat. 12° 15' N. lon. 71° 45' W. (N.)

BAHIA a maritime prov. Brazil cap Bahia, bounded W and N. by Pernambuco from which it is separated by the Rio São Francisco N.W. by Sergipe. E. by the Atlantic; and S. by Espírito Santo from which it is separated by the Rio Mucuri or Mucury a. 1. Minas Geraes, towards which it is bounded by the Rio Paranaíba and the Rio Paranaíba, the latter flowing W. to the São Francisco and the former E. to the ocean. It is comprehended between lat. 9° 20' and 15° 55' S. lon. 47° 20' and 44° 50' W. estimated area 222,105 sq. m. divided into 13 districts. The province of Bahia is traversed E. to W. by a mountain-range under various names Almas, Chapada &c. at a distance of rather more than 200 m. from the sea, forming the water-shed between the rivers that flow E. to the Atlantic and those that flow W. to the Rio São Francisco. Numerous effects of this main chain traverse the province in various directions causing the course of the rivers to deviate less or more from their general direction of E. or W. Gold and copper are rare, but mines of silver exist though they have not been wrought, on account of the presumed small quantity of the precious metal in them. Iron granite and different kinds of clays are abundant in certain localities as are also limestone, salt-petre, whetstone, and rock crystal. The principal streams flowing to the Atlantic are, the S. boundary, river the Rio Grande do Belmonte, the Contas, Patipé, Iguayema, and the Paraguaná, which falls into the Bahia de Todos-os-Santos. Besides those named there are numerous others, reaching the ocean either directly or indirectly. The Paranaíba and the Remedios are the principal streams flowing W. to the Rio São Francisco but besides them there are numerous others of less note. Though hilly the province has also extensive plains, and is throughout well watered but, from the limited population and the agriculturalists always preferring the sea-shore or the margin of the rivers, a large portion is still uncultivated. The principal agricultural products are sugar cotton, tobacco and coffee, manioc, rice beans, and maize. Its supplies of sheep and cattle are drawn from other provinces. Among its plants and their products are Brazil-wood of several kinds, cedar gum elemi and copal, dragon's blood jalap, sassafras, and sassafras. The oranges, mangoes, and numerous other fruits are excellent. This province sends 14 deputies to the general assembly and seven senators to the upper chamber. Its own provincial legislative assembly is composed of 36 deputies who are paid both during the session and its prerogatives and receive, besides, an indemnity proportioned to the distance they have to travel. The revenue of the province for the financial year 1848-50 was estimated at about 274,000 sterling. Besides Bahia the capital, the principal towns are Jacobina, Cachoeira, Caravelas, São Francisco Ilhéus, &c. Pop. about 800,000.

BAHIA, or **RIO SALVADOR**, an important maritime city and seaport, E. America, empire of Brazil, cap. prov. of same name, beautifully situated in an elevated position on the W side of a spit of land forming the E side of the entrance

to the Bahia de Todos-os-Santos or All Saints Bay immediately within Cape St. Antonio on which is a revolving light, 160 ft. above the sea level in lat. $18^{\circ} 0' 42''$ S lon. $88^{\circ} 31' 48''$ W (L.). It lies 800 m. N. E. E. Rio de Janeiro and is the seat of the only arch. bishopric in the empire. Nothing can be finer than the view of Bahia when seen at a short distance from off the sea: one part towers above another and the whitened houses and red tiled roofs contrast magnificently with the rich foliage interspersed between. It is composed of two parts, the upper (alto) and lower (baixo). The lower or shore town (Baía de Praya) consists of a single narrow badly-paved, dirty street with a gutter in its centre, following the contour of the shore, and is all about 4 m. long from the suburb of Bomfim to the locality called Gamboa. The buildings (of stone) are high, and, though old, have a cheerful exterior; those nearest the shore projecting considerably into the sea. A wide space in this street is used as a market-place and near it is the exchange, so very remarkable for architectural beauty but worthy of attention for having been constructed of the best native materials. In this part of the city dwell the mercantile agents, and here the great business bustle exists, the streets being continually thronged with pedlars, carriers, &c., increased in consequence of the difficulty of using carriages or sledges of any kind, from the unevenness of the ground. Recent alterations have, however, greatly improved the appearance of the lower town, into which omnibuses have been introduced. Here likewise are situated the custom-house, the stores or magazines called *armazéns*, for merchandise of all kinds, the granary (the *armazém*), and the shipbuilding yard. One of the most noteworthy edifices in this part of Bahia is the large church of Conselão or Conceição, built of stone brought out not ready from Lisbon. The upper town lies at an elevation of several hundred feet above the lower town and the streets connecting the two parts are consequently very steep, following, in some instances, the zig-zag course of ravines, and in others ascending across the hill-sides. This is the larger finer and more populous part of the city. Here the wealthier classes dwell, and here are situated

the most important public buildings. The general aspect of the upper city is antique. It is built on the crest of the hill and composed principally of one or two principal streets, which, in their direction, follow the outline of the hill, as the Rua de Praya follows that of the shore, and is all about 6 m. long. These streets are well paved, more, however with the view of preserving them from injury by rain, than for the furtherance of locomotion, which, indeed in Bahia, except for foot-passengers appears to be a secondary consideration; the inequality of the ground rendering the use of wheeled carriages almost impracticable. Rome is not built on so many hills as Bahia, which, according to one writer is so irregular in its surface, as to give it the appearance of having been thrown up by an earthquake. The wealthier class progress through the streets in a sort of litter or palanquin, called *cadeiras*; and sugar cotton and coffee are borne along in bags on the heads of the negroes, or in baskets, packages, hung by slings from poles, supported on the shoulders of slaves. On one of the most commanding heights of the city is placed the finely wooded public promenade (*Passeio publico*) from which a magnificent view of the ocean is obtained: it overlooks, likewise, the city and bay towards which latter it is bordered by a steep precipice, protected by an iron railing. A marble monument, to commemorate the landing of Don John VI. the first royal governor of Brazil decorates the promenade. The city is divided into ten parishes each having its own church the most important of which is the cathedral São Salvador but numerous other places of worship are scattered through the city so much so that it exceeds every other city in the empire for the number and the sumptuousness of the churches. Many of these are attached to monasteries and convents which, with their inmates are, in like manner more numerous here than elsewhere and all in the most excellent state of repair. Such are the convents of Benedictines, Carmelites, and washed Franciscan Capuchins, &c. Among the churches attached to the religious houses that of Nossa Senhora da Piedade is a large important Spanish edifice. Bahia is abundantly provided with public buildings. Besides those

NOSSA SENHORA DA PIADEADA.
From Bahia, by Vapour, Pernambuco and N. Brazil.

mentioned as being in the lower town, the more important are the governor's palace, a large quadrangular edifice, of 600 ft. on each face; the archiepiscopal palace commensurate with the cathedral; the mint, foundry, court-house, prison, a public and a military hospital, rython cemetery theatre, and granary. These are all stone, and mostly solidly constructed buildings, but none of them possessing especial pretensions to architectural beauty or elegance. The suburbs of Bahia are beautiful, Victoria hill being particularly so. Here are situated the finest houses and gardens of the city the residences of the principal British merchants and the English cemetery. At the Campo do Forte do Rio Pedro is an English Protestant chapel. In 1811 a public library was established in the city which likewise has a surgical school and an agricultural society, an excellent collegiate institution, 16 primary schools, and a normal school, besides several private schools. The upper

town has some printing-presses, and is the seat of the manufactures of the place, consisting of tobacco glass, brandy &c. Alternate land and sea breezes render the climate of Bahia pleasant, though the temperature ranges between 75° and 85° Fah.

The harbour of Bahia is one of the best in America, and suitable for vessels of any size. The bay which forms it is much more extensive than the celebrated bay of Rio de Janeiro. The harbour is defended by seven forts, and at its entrance is a lighthouse. War vessels lie in front of the city S.E. of fort São Marcelo merchant vessels lie further N.W. towards fort Montserrat. The commerce of Bahia consists chiefly in the export of sugar, cotton, tobacco, rum, and other articles of native product, but it has fallen off considerably since the revolution of 1837 and does not appear even now to be recovering itself. One considerable branch the importation of slaves, has been materially curtailed by the activity of British cruisers, and by the withdrawal of British credits of money consequent upon repeated loans from seizure of the slave vessels. The whale-fishery of this city was once the greatest in the world, and a considerable number of whales are still caught in the neighbouring seas, and brought in here for flensing and boiling. Notwithstanding the field efforts diffused by the decaying animal matter the capture of a whale is the occasion of general triumph in Bahia. Hundreds of the people, the coloured especially, throng round to witness

the monster's dying struggles and to procure portions of his flesh, which they cook and eat. Vast quantities of this flesh are cooked and sold in the streets. Numbers of swine also feast upon the carcass of the whale.

The following table of the vessels cleared and entered at the port of Bahia, 1840 to 1847 shows that the number of vessels and the amount of tonnage has fluctuated considerably and on the whole has decreased—

STATEMENT OF THE NUMBER AND TONNAGE OF VESSELS, belonging to various Nations, Cleared and Entered at the Port of BAHIA, in each year from 1840 to 1847

Years.	ENTERED.		CLEARED.	
	Tons.	Tons.	Tons.	Tons.
1840	787	106,261	64	11,878
1841	1051	138,026	880	138,259
1842	967	128,111	898	120,410
1843	1048	136,000	971	123,440
1844	900	101,111	958	121,709
1845	878	99,747	924	100,128
1846	411	50,000	390	50,000
1847	318	70,200	314	70,200

A singular general result of decrease in the exports is exhibited by the following table, notwithstanding the evident increase in some important articles—

STATEMENT OF THE QUANTITIES OF THE PRINCIPAL ARTICLES OF DOMESTIC PRODUCE exported from the Port of BAHIA to various countries in each year from 1845 to 1846.

Years.	SUGAR.				COTTON.		COFFEE.	Tobacco.		HIDES.	PILES.	TAPIOCA.
	Cents.	Rees.	Barrels.	Rees.	Rees.	Rees.	Rees.	Rees.	Rees.	Rees.	Rees.	Rees.
1845	80,120	661	9036	15,548	208	11,480	55,023	6,390	123,898	35,813	1238	
1846	84,008	740	10,450	16,450	208	14,010	56,453	6,347	123,898	35,813	1238	
1846	77,798	1811	9598	11,794	208	15,079	56,917	6,380	124,106	36,114	2056

The imports consist chiefly in manufactured articles and possessing no return for the port of Bahia alone, we present the following table of the imports of the province, which are evidently on the increase—

STATEMENT OF THE VALUE OF THE IMPORTS into the Port of BAHIA from various Countries in each year from 1845 to 1846.

Years.	1845	1846
1845	846,298	1,041,111
1846	811,000	1,431,548
1846	1,000,000	

Bahia de Todos os Santos, or All Saints Bay was discovered in 1505 by Amerigo Vesputius. In 1510 a vessel commanded by Diogo Alvarez Corréa, was wrecked; near the entrance of the bay and every one, himself excepted, was murdered by the Tupinambá Indians. Having secured a nutmeg, and saved some powder and ball Corréa soon acquired unbounded influence over the Indians, who knew nothing of firearms and in process of time he married Paraguassu, daughter of the head chief, Naparua, whose name was given to the large island in front of the city. He now began a settlement, which he named São Salvador subsequently recognized by the Portuguese Government as the capital of the Brazilian empire, and residence of the Governor-general the first one Thomas de Sousa, landing in 1549. From this time it continued to increase rapidly in size and importance, but underwent many vicissitudes of fortune, having been taken by the Dutch, and even after reverting to its original possessors, it suffered from the attacks of its former captors. It continued to be the capital till 1763 when the viceroyalty was transferred to Rio de Janeiro. In 1808, Don John, the first member of the royal family who came to Brazil landed as stated above. He was pressed to make his court at Bahia, the efficiency of the bay and the difficulty of effectually blockading the harbour formed a weighty objection to the city as a residence for royalty. The Prince regent, therefore resolved to pass on to Rio de Janeiro but, before the fleet weighed anchor he communicated to Count de Ponte, the governor that celebrated document the *Carta Regia*, by which the ports of Brazil were thrown open to the commerce of all nations. The first printing-press was established in 1811 and the first sugar-mill was introduced from England in 1815. At the Portuguese re-

volution in 1820 Bahia was plunged into the horrors of civil war from which it was freed in 1847. It had a small revolution of its own in 1837 which did great damage to the prosperity of the city but was soon suppressed by the supreme Government. Pop. about 120,000. (Diocese, Gen. Insp. Brazil Kidder's Brazil Gardiner's Travels in Brazil Parliamentary Papers Private Information.)

BAHIA NEGRA a lake, Brazil prov. Mato Grosso r bank Paraguay on the confines of Bolivia lat. 20° S. It is about 20 m. long by about 7 broad. Its waters are of a dark colour whence its name Negra (Black) and flow N to the Paraguay 36 s. below Nueva Colônia.

BAHLINGEN or BAHLEGEN —1 A to Württemberg circle of the Black Forest valley of the Aach and Schönbach 25 m. S.W. Stuttgart. It has two churches, one of them containing the tomb of Count Frederik von Zollern. It carries on an active business in the manufacture of woollen stuffs, hosiery and leather has also several breweries and distilleries, and a considerable trade in grain. Pop. 8370.

—The municipality of Bahligen has a pop. of 22,000 in 81 parishes. It lies along the Swedish Alps, the highest summit of which Oeschelshenberg 2869 ft. above the sea level is within it. A will grand duchy of Baden, circle of the Upper Rhine, 71 m. N.W. Freiburg. Pop. 17,000.

BAHIA a tn. 12 m. S.W. of Bahligen, circle, Großherzogthum r bank Thue, 22 m. S. Bahligen. It is walled, and contains 3000 inhabitants, who live by agriculture and the manufacture of straw bonnets.

BAHREIN a group of three islands, in a deep bay on the S. side of the Persian Gulf to the largest of which, exclusively Europeans give the name of Bahrein, and the natives, Awal or Aval (as the first, close to it is Mahwah, while Awal alludes the mainland to the S.E. Arab geographers on the other hand, apply to the whole of this tract of coast the expressive name Bahrein, which signifies the two waters, that is, the salt and the fresh water the distinguishing peculiarity of this coast being the number and copiousness of the fresh-water springs which gush forth from the bottom of the sea along the shore. To this abundance of good water is attributable the comparatively dense population of the coast, which is, in general, sterile and forbidding. Some villages have pumps in the sea; but the chief supply of fresh water,

both for the mainland and the islands, is furnished by divers, who, on reaching the bottom, hold their gas-tanks open over the springs, and are quickly carried up by the ascending current. A wal extends about 35 m. in length N. to S., with an average breadth of 8 m. Its N. extremity where stands the capital town Manama with a good-sized harbour for vessels of moderate size, being in lat. $22^{\circ} 12' N.$ lon. $69^{\circ} 47' E.$ A ridge of low hills runs through the island N. to S. About a fifth of the island is under cultivation and being well irrigated is extremely fertile producing besides wheat barley and dates, a great variety of tropical fruits. This is the centre of the Persian Gulf pearl-fishery which is carried on with the greatest advantage on the banks in a moderate depth of water. The diving commences in June, but becomes more productive in the three following months, when the temperature of the sea increases. Bahrain is said to own 3000 boats engaged in this business, besides 150 yachts of larger size. The annual value of the fishery has been variously estimated at from £20,000 to £70 times that amount, perhaps the lowest estimate is intended to represent what accrues to the fishermen, who are always kept in debt to their employers, and extremely poor. Manama, being resorted to by foreign merchants, is well provided with ample caravanserais and boats also of a handsome make. Its population may amount to 5000. It is supposed that there are 40,000 inhabitants in Awa and 20,000 in the other islands. Bahrain was occupied by the Portuguese in the 16th century but in 1622 they were expelled by the Persians. These, after many contests with the Arabs finally withdrew from the island in 1740. Subsequently the Wahabys extended their sway over the islands as well as the coast, but since 1819 their power has been extinct, and the peaceful fisheries is now protected by British vessels.

BAHR EL ABIAD (See **ABAD DIBR-EL**)
BAHR EL AZREH. See **AZREH** (BAHR ET)
BAIR, a celebrated watering-place of ancient Italy W. shore of the Bay of Naples, and 8 m. W. the city of same name. The Campanian Baigian, once the place where the wealthy Romans had their country-seats, is now deserted. Its great attractions were its hot springs, and its picturesque situation on a beautiful bay sheltered by surrounding hills from the violence of the winds. The strip of land however that lay between the hills and the sea was too narrow for the numerous mansions with which it was crowded, and men who possessed half a province elsewhere, contented here for a single acre. Those who could find no room on the bank, built into the sea. But, on the decline of Rome Baia fell into decay. Its villas and palaces were deserted and the docks and other contrivances by which the sea was held back being neglected the waters resumed their ancient territory overwhelming the mansions of the voluptuous Romans. The temple of Jupiter Ferpula is the most celebrated monument of antiquity in the neighbourhood of Baia, and has recently acquired great additional interest in the eyes of the geologist, from the unequivocal evidence which it affords of great alternating changes in the relative level of sea and land in the surrounding district, two of them since the Christian era, and each exceeding 20 ft. The evidence of this important fact is derived chiefly from three pillars, still standing, which at the height of 20 ft. above high-water mark exhibit perforations by ichthyoid and other marine animals of course, proving incontrovertibly that at the time when these perforations were made, the pillars must, up to that height at least have been submerged.

BAIROU, a town in Asiatic Turkey west of, and 61 m. N. by N. Erzeroum, a high, Taborak, on the road between Erzeroum and Trabzon. It is irregular and ill built, occupying the base of an isolated hill on the summit of which is an ancient castle fortified by an outer wall which demands for down the hill. The castle was one of the strongholds belonging to the Gemoes, who were permitted by the sultans of Armenia to establish a line of fortified stations through their kingdom to the frontier of Persia. The ruins,

which cover a considerable extent of ground display much beautiful masonry while the numerous towers, of all forms, with which the walls are strengthened are remarkably well built. The fall of snow at Bairo, in winter is so great, as to

THE TOWN OF CASTLE OF BAIROU From *Voyage Description de l'Asie Mineure* in 1840

interrupt all communication with the neighbouring villages for several months together. Cow dung baked a sun constitutes the fuel of the poorer classes, who can afford no other. The inhabitants are described as a stout, active, hardy race, and of mild and civil manners. Pop. 1000.

BAIERSDORF or **RAVENSBURG** is in Bavaria, circle Middle Franconia, dist. Erlangen 11 m. N. Nürnberg on the railway between that city and Bamberg and on the Ludwig Canal. It contains a parish church a synagogue, and the ruins of the palace of Karchenstein and has a copper work and numerous useful factories. Pop. 1596, of whom 440 are Jews.

BAIKAL (Russian *Байкал* More—Holy lake) an extensive alpine lake, Siberia, gov. Irkutsk between lat. 51 and 56 N. and lon. 103° and 110° E. greatest length, measured through its centre from N. to S. about 260 m. average breadth from 30 to 40 m. area 11,200 geo. sq. m. It has somewhat the form of a crescent with its concavity towards the W., and is surrounded on all sides by lofty mountains in ranges intersected usually by deep precipitous ravines, but sometimes, also, by wider valleys covered with pine. These mountains often rise up precipitously in fantastic peaks from the shore of the lake, and appear to be continued as precipitously beneath its surface—in some parts a depth of 100 fathoms in others, no bottom has yet been found. The prevalence of volcanic rocks, and the violent twisting and upheaving of the more regular strata by their agency together with the thermal springs which abound in the neighbourhood seem to justify the belief generally entertained that the bed of the lake is the crater of an extinct volcano. This belief derives additional support, from the fact that volcanic agency is still active throughout the surrounding country. Recently a year almost without an earthquake. The level of the lake is 1420 ft. above that of the sea—an elevation which, taken in connection with the cold mountainous region in which it lies, accounts for the long period during which it continues frozen. Snow usually begins about the end of August. Shortly after winter sets in and the lake begins to be frozen—only partially however as the whole surface is seldom frozen over before the middle of December. Thereafter it continues so and may be traversed on sledges till the end of April. The lake receives the drainage of a vast extent of country not fewer than 200 streams pouring their waters into it. Of these the most important are the Selenge and the Barguzin which both join it on its E. shore and the Upper Angara, which falls into its N. extremity by four mouths. The only outlet is the Lower Angara, a tributary of the Yenisei which brings Lake Baikal into communication with the remotest parts of W. Siberia. Though both a broad and a rapid river the water which it carries off has been estimated at less than a tenth of that which the lake receives. The lake has no

islands at any considerable distance from its shores, but numbers of them occur in the mouth of the principal streams, and formed probably by the deposits of the latter. The largest of all, Okhkon not far from the middle of the lake, is about 100 m long by about 15 broad but, with exception of a little pasture in its interior and a few birches, pines, and broadwood along its rocky sides is, in its name in Mongolian, implies, completely barren. Lake Baikal abounds in fish, particularly sturgeon and caviar, salmon, salmon trout, omul and a very remarkable fish called kalamekha, which, though only from 4 to 6 inches long is a more mass of fat and is often thrown up dead upon the shores in immense shoals. Seals also though naturalists are very much puzzled to know how they got there, are very numerous and at certain seasons, the air is perfectly filled with flocks of swans and ducks. The shores of the lake are thinly populated and are composed of the tribes of the Tungus and the latter the more numerous and almost all employed in the fisheries, which are of considerable commercial importance. Sturgeon is caught in large quantities throughout the summer and salted, and, together with the caviar and herring obtained from it, is largely exported but the most important fishery is that of the omul (*Esox nigratus*) which, though much expensive in its habits, generally appears in vast numbers between August and September. The kalamekha are seldom taken alive, but furnish large quantities of oil which finds ready purchasers among the Chinese. The situation of the lake makes it this channel of a considerable traffic, particularly between the E. and W. During the frozen season sledges laden with goods are continually passing and repassing while a considerable number of small vessels, of a peculiar construction and are usually employed during the summer months. An extensive number of islands are scattered about the lake, the building stone vessel which, in all probability has been completed, and is now navigating the lake.—(Erman Ritter Marcet Nové, *Année de l'Asiatickische Reise* Hofmann)

BILBAO, the largest city in Spain, in Andalusia, prov. of Vizcaya, 80 miles from Madrid, 160 miles from the high road from Madrid to Seville. It has spacious streets, three well-paved squares, a large Gothic church town hall, five schools, an hospital, prison, public storehouse, cemetery, a castle, and a palace of the Counts of Benamey. The inhabitants are engaged in manufacturing linen, glass, bricks, tiles, soap, exporting oil, distilling brandy and in agriculture and cattle-rearing. A mine of antimony is wrought in the vicinity. On July 19 1809 **Bilbao** was the scene of the first victory in the peninsula war gained by the Spaniards over the French. Pop. 4976.

BALLINEROUGH a small market to and par. Ireland co. of, and, 1 m. S. E. Cavan. The town, though a registered place, is well built but has a respectable appearance and the markets are well attended. It possesses an established church two R. catholic chapels, two Presbyterian meeting-houses several schools a brewer's and a large junco workhouse Ballinorough Castle, an extensive and handsome edifice, stands about 1½ m. from the town. Pop. of tn. 1100. Area of par 12 416 a. P. 582.

BAILIQUE PENITENCIA MARIATTA of AMIPORE, at
1st Brazil port, *Park*, to the mouth of the Amazon 40 m N
Cabo Norte, near the embouchure of the Araguari; lat. \
point) 1 4 N lon 49° 58' W (N.) It is about 20 m long
by 8 or 4 broad, about 10 m. from the shore, has a village,
and about 100 Indian families

BAILLEUL [*sens. Baskoum*] a tn France, dep. Nord
arcord of and 10 m. F Hazebrouck. It is situated on unim-
portance, and generally well built. The houses are mostly
built in the Flemish style. Large numbers of cattle graze
the rich meadows around the town. Manufactures—various
kinds of thread lace, cloth, linen and cotton goods, &c. There
are also here a sugar-work, a pottery several breweries, and
some oil-mills. A considerable trade in corn, cattle, cheese
and other agricultural produce, is carried on. Pop. 5088.

BANCAUL is the name of several other small towns in France.
BAIN a (n) France dep. l'Is-e-et-Vilaune, arrond of Redon
 18 m S Rennes, formerly an episcopal see, and a place of
 some note in the province of Britany Manufactures —
 woolen stuff. Trade — cattle. Frn. 1948

BAINS (Lam) two watering-places, France:—1 Called also *Agnès-les-Bains* (which see).—2 *Bains*, or *Bains-les-Bains*.

a seat in dep. Vosges (Lorraine) stood of, and 16 m. S.W. Epinal in a fine valley traversed by the streamlet Barmegnot, which shortly after joins the Consey. The thermal springs here have been known since the Romans invaded Gaul although little was made of them during the Middle Ages. A bath was called the Old Bath but was constructed in 1815 and was rebuilt in 1795. The springs which are 10 to 20 centigrade are used principally for curing gonorrhea on 129 Feb. The baths are used principally for chronic affections: rheumatism, indigestion and female complaints. The bathing establishment is very complete. Bains has fountains, and a work for making sheet-iron for transmits. Pop. 1505. — Two places in France in addition to the above, have the name of BAINS. BAINTON two parts. Fig. — 1 Bainton (St. Andrew) York F. Riding 88000. Pop. 409. — 2 Bainton St. Mary Northampton 738 as. Pop. 302.

BAIRAMITSH, s in Asiatic Turkey pass. Anatolia, 55 m S.W. Deje, and 25 m N.W. Adramyti lat 39 45' N lon. 26° 2' E It is regularly built. Roman antiquities abound in the vicinity

BAIRDSTOWN A post town, U States, cap Nelson Co Kentucky. Contains a courthouse, jail market house, church a bank an academy and school both well attended, and a K catholics summary founded in 1819 called the College of St. Joseph, under the direction of the K catholics with a president, and 13 professors or teachers. Pop (1840) 1482

BAIRNLEIGH OF BARNHURST a in Bavaria, circle, Upper Main, on the Red Main, 41 m N of Nürnberg. It lies on the Rhine river, among rocks, and is a very beautiful place. Fichtel Mountain. It is partly surrounded by old walls and has some pleasant grounds. The houses are lofty and well built of hewn stone the streets spacious well paved and occasionally adorned with fountains. It contains the

place of Duke Peter of Bavaria, an open house, a riding-school and gymnasium seven stables (six Protestant and one R Catholic) a synagogue, a public library and some benevolent and charitable institutions. Principal manufactures—stamaware and porcelain, tobacco-pipe heads, parchment, linen and cottons. There are also in the town a paper-mill, a factory for playing-cards, works for cutting marble and glass, a sugar refinery a bell foundry tanneries in which both white and red leather are prepared and several breweries. In the neighborhood are three places: Pantzen Bennefeld and Hermsdorf. The first is surrounded by gardens, well watered. In the second is a fine castle, the residence of the Duke of Meiningen. In the last are shown the apartments and bed of Frederick the Great. In a cemetery at the entrance of the town is a monument erected by the King of Bavaria to the celebrated writer Jean Paul Friedrich Richter who died here in 1825. Pop. 17 000

BAIREO two vls. Detail prov. São Paulo. 1 Four m N São Sebastião lat. 43 46 E. It has a convent of Franciscans and its inhabitants, all Indians, are occupied in fishing. The women manufacture some clay vessels. — 2 *Barro das Silveiras*, on Rio N. E. frontiers of the province, near the town of Lorena, in province Rio de Janeiro. It has a church and around it the ordinary necessities of life are cultivated and likewise some coffee, which is sent to Rio de Janeiro 1 cp. 1890

BAINF or **BAZIN** a river S. of France, rising in dep. Haute-Pyrénées, flowing N and falling into the Garonne near A guillon, dep Lot-et-Garonne, after a course of 99 m. It has been rendered navigable, by means of locks and sluices from its confluence with the Garon a to Verac, a distance of between 10 and 15 m.

BAISY THY a vil and com Belgium, prov Brabant, arrond Nivelles, remarkable as the birthplace of Godfrey of Bouillon the leader in the first crusade. The inhabitants live by agriculture brewing distilling oil and soap-works. Pop. 2224

BALNKS a vil France, dep Pyrénées-Orientales, in a fertile valley which produces wine of good quality about 6 m N W Perpignan. In the neighbourhood are marble quarries, and a celebrated grotto, called the Hermitage of St. Catherine, romantically situated in the heart of a little valley surrounded by barren rocks which overhang the Glv. **Pop** 1980

BAJA a market tn and lordship Hungary co. Bacs-Bodrogh 93 m S Pesth, near I bank, Danube. It is the seat of the courts of justice for the county has a Greek and

a R. catholic church, a synagogue and a Franciscan monastery important markets, and a brisk river-trade. Here is the beautiful chateau of Prince Grassalkovich. Pop. 14,884

BAJADA, a considerable town and river-port, La Plata, esp. state Entre Rios, 1 hour from about 10 m. S.E. Santa Fe, and 535 m. N.W. Buenos Ayres. The battle and massacre which prevailed here, present a curious and striking contrast to the arid plain, interrupted only by the cries of birds and particularly the owl, which reigns on the banks of the Paraná, above and below the town. Provisions are here abundant and cheap. Pop. 6000

BAJADORB, or BOLADOR (Lape) in the mt. of I amon about 90 m. from its N.W. extremity in about lat. 18° 52' N; lon. 120° 35' E.

BAJINDO, or BAJINDO (Old and New) two towns W Africa, on the Niger on opposite banks lat. 9° 31' N lon. 4° 25' E. about 4 m. below Bousa where Park the celebrated African traveller was killed. At this town, Lander met with very large canoes he dug a hut in the middle, which contained cereals and their whole families

BAJMOZ, or BAJMOZ, a market in Hungary, capital of some name on Neutra, on the Nyitra, 72 m. N. by E. Komorn. It is surrounded with walls; and contains a parish church and a castle. The German colonists here annually prepare several thousand saddle-trees for the cavalry regiments and a great variety of wooden articles are made both in the town and its environs. Pop. 800

BAJOLR, or BAJOLR, a dist. and, in Afghanistan N.E. extremity of that kingdom, and on the S. side of the Hindukosh. The district which consists of a plain or rather spacious valley lies between lat. 34° 45' and 35° 10' N. and lon. 71° 5' and 71° 35' E. and is about 95 m. long and 15 broad. It is enclosed by mountains nearly inaccessible from three aspects, and covered with dense forests inhabited by numerous wild beasts. The plain is very productive and is occupied by an Afghan tribe, called Turcomans, about 70,000 or 80,000 in number who are ruled by a chief of considerable power. The district contains inexhaustible stores of the finest iron ore.—The town of Dapur cap. of the dist. supposed to be the Bazar mentioned by the historians of Alexander is N. lat. 34° 30' N lon. 1° 30' E. 130 m. N.E. Cabool and 170 m. N.N.E. Ghazni. Pop. about 5000

BAKEL, a large, well-built, and thriving v. l. W. Africa, in the lower Gambia country, Lat. Senegal lat. 14° 24' N lon. 12° 44' W. Here the French have a factory which is tolerably well fortified, and has a garrison of about fifty black soldiers. The surrounding territory is very fertile but also very unhealthy; serpents, alligators and hazards abound in the swamps and there are clouds of mosquitoes. The factory of Bakel, which is a dependency of the colony of St. Louis, was established in the year 1819. The people are a simple, contented race, have partially adopted European attire and habits, and show some tincture of French politeness.—(Raf. Senegal & Africa Occidentale)

BAKEL W. L., a market in par England, co. Derby. The town occupies chiefly the bottom and one acclivity of a valley between Buxton and Matlock, 10 m. from the former and 12 from the latter and consists of four principal streets, generally kept in good order lighted with gas, and amply supplied with water, houses well built, chiefly of stone. The parish church is a fine old Gothic structure, and contains many interesting monuments and the places of worship for Independents, Wesleyans, &c. are some of them handsome edifices. The educational means are an endowed grammar school a national and British school, and a free parish school. Bakewell likewise possesses a dispensary clothing society and a mechanics institute. The only trade is marble-cutting which is carried on to a considerable extent, the workmanship being reckoned of a superior description. In the immediate vicinity there is a cotton-mill, erected by the late Sir Richard Arkwright. The chalybeate waters of Bakewell, formerly celebrated, have been lately re-established by the Duke of Rutland. Market on Friday four times annually. The parish comprises 48,000 ac. chiefly hilly ground Pop. of par 9897 of co. 2217

BAKHOMT, a dist. in Russia, gov. of and 120 m. E. Ekaterinburg cap. dist. of its own name a region of steep, barren soil and is mined, and there is a brisk traffic in bones

and cattle. The town founded in 1708, was once fortified and flourishing. Pop. 4000

BAKHTEGAN, a salt lake, Persia, prov. Fars, about 12 m. S.E. Shiraz. Its dimensions do not seem to be accurately ascertained some authorities giving it a length of 40 m. while Kinnaird in his *Geographical Memoirs of the Persian Empire*, gives it about that measure of circumference. During summer the lake is nearly dry and its bottom becomes encrusted with a remarkably fine salt, much esteemed throughout the province.

BAKHITIYARI MOUNTAINS, a range of mountains in S.W. Persia, stretching N.W. and S.E. between, and parallel to, the rocky range of Ava and Laristan. None of these mountains, or rather ridges of rocky hills are more than 1000 ft. above their base. The Bakhitiyari Mountains are inhabited by a wild and lawless tribe, who do not hesitate to rob strangers, though not incapable, at times, it is said of a savage hospitality. They are represented also as a brave and hardy race. They live in villages of about 20 to 30 houses each in nooks of the mountains, wherever they can get water and grass and some established themselves in caves, of remote and dangerous access. They calculate their numbers, with their depredations, at 29,000 families

BAKHISCHISARAI, or BAKHISCH-SARAI, an ancient town in Russia (Crimea) on the Tauric-Chersonesus 15 m. N.W. Simferopol. It is the capital in which the khans or Tartar sovereigns of the Taurid peninsula long held sway as deputies or tributaries of Turkey before Russia established herself in the Crimea. Bakhischsarai is an interesting place, and is pronounced by Dr. E. D. Clarke one of the most remarkable towns in Europe. The Tartar impress is still strong upon it. It stands at the bottom of a narrow valley hemmed in by precipitous rocks, and watered by a small rivulet, by no means of the most rapid appearance, and consists almost entirely of a single street, built along the side of this rivulet, and lined with houses and workshops, in which the Tartar tools, in primitive simplicity in the production of articles of the very same form and quality as furnished by his forefathers two centuries ago. The town contains several mosques which are usually embosomed among trees and whose minarets rise high above the houses and is adorned with numerous fountains. The Karan Jews, a peculiar section of that people carry on a considerable trade in common stuff goods, mercury and colonial produce. The old palace of the khans, a singular edifice is in good repair and even suitably furnished. It stands in the centre of the town, and is enclosed by high walls. A bridge gives access to the principal court, which is spacious paved with Lombardy poplars and lime-trees and ornamented with an elegant Turkish fountain, shaded by willows. The buildings present all the usual irregularity of Eastern mansions but the walled galleries, brilliant jutting pavilions, of a make so light that they seem hardly to belong to the body of the edifice, and a profusion of great overshadowing trees, produce an effect seldom obtained by systematic regularity. It first became the residence of the khans in the year 1475. In the 16th century their dominion extended not only over the entire Taurid peninsula, but the contiguous territory W. N. E. and S. from the banks of the Danube to the foot of the Caucasus but their rule, continually shaken by Russian invasions and influence, from the year 1720 downward ceased altogether in 1783, when the country was incorporated with that empire. The number of houses in the town exceeds 2000 inhabited by (1849) 12,077 persons the majority of Tartar blood the rest Russians, Greeks, Armenians, and Jews.—(Dumford's Memoirs de Hell.)

BAKHISCH-SARAI, a small town in Turkey in Asia, parh Anatolia lat. 41° 47' N lon. 38° 51' E. about 12 m. from the shores of the Black Sea situated in a deep hollow surrounded by lofty mountains, the most remarkable of which is called Bakir Sultan. It consists of about 300 houses, of which only one-half are substantially built the remainder are the dwellings of poor masons, and often ramous and ornamented. It contains however a handsome mosque. The district around was at one time famous for its copper mines, but they have long since been abandoned.

BAKONYER WALD, a forest-covered mountain-chain Hungary on Vaypina, N. Lake Balaton or Felsz. It is one of the last effects of the Moris Alps, running S.W. to N.E.,

nearly 60 m long culminating point, about 3069 ft. high. The hills are covered with excellent timber consisting chiefly of lime, oak, and beech. Immense herds of swine, known by the name of Bakeryen, are fed in it and large quantities of oil are extracted from the beech mast. The burning of wood for potash, by which great havoc had been made in the forest, is now under proper regulation. Game is very abundant.

BAKU or **BAKOU** a seaport to Russia, cap of the khansate of Shirvan in Caucasus, S. shore of the peninsula of Apsheron, W coast, Caspian Sea, of which it is one of the most frequented ports lat 40 21 20" N lon 49 51 6" E (N.). The walls of the town were formerly washed by the Caspian but they are at present about five yards distant from it the sea, however has gained upon the land in other places the ruins of ancient buildings being found at the depth of upwards of 16 ft. It stands on a declivity the summit of which is crowned by the palace of the former khans. It is defended by a double wall and deep ditch constructed in the time of Peter the Great and has two strong towers, under whose protection vessels can anchor in from four to six fathoms water within 80 yards of the shore, in a spacious road, sheltered from all quarters. The town is ill-built, streets narrow and crooked. The houses small, and flat roofs coated with asphalt. The Virgin's Tower is the most striking object in the place. There are, however several spacious mosques public squares, markets, and caravanserais a Greek and an Armenian church, and some Tartar schools. The chief exports of the town and neighbourhood are naphtha, salt, and saffron in return for which it receives chiefly from Persia, raw silk and cotton rich carpets and shawls, rice &c. and from Europe, all kinds of ironware and cutlery cotton, limes and woollen manufactured goods, thus becoming an entrepot through which an important trade is carried on between the F and the W. It is adjacent island of Baklan has important fisheries. Pop 7431.

The peninsula of Apsheron is celebrated for its mud volcanoes and naphtha springs, the latter yielding annually upwards of 4000 tons. Near these springs is the Artesian well, or field of fire, nearly half a square mile in extent and from which inflammable gas is continually escaping. In ancient times it was held in the highest veneration by the Guebres or Parsees and frequented by thousands of pilgrims. They have still several temples here, and many of them spend their days in worshipping in penitential exercises so severe, as often to cost them their lives.

The jurisdiction of Baku extends over 83 villages, with 19 000 inhabitants of whom 1000 are Turkomans. The khansate of Baku was formerly attached to Icras, but wrested from it by Russia about 1725 restored in 1750 but retaken in 1801 by the Russians, to whom it now belongs.

BAKU or **BAKOWA** a vil Moldavia on the Butrize near its confluence with the Sereth. It was formerly a flourishing place, but has now fallen into utter decay retaining only a very small trade in cattle corn salt, and wool. It contains the ruins of a cathedral having at one time been a residence of a catholic bishop.

BALA a market and seaport on N Wales on Merioneth, on a plain at the efflux of the river Dee from the N. E. and of Lake Tegid 18 m. W by S. of Llangollen. It consists of one straight, wide street chiefly of well built stone houses. It has an Episcopalian chapel a Welsh Calvinistic Methodist chapel and chapels for Wesleyans and Independents all plain buildings; a school connected with the Welsh Methodist, and one with the Independents both for educating young men for the ministry. Woollen stockings and shawls are manufactured here to a small extent, and there is a considerable trade in butter and cheese. The spring calvee, and the winter and summer quarter-seasons for the county are held here, and the county court for the recovery of debts. Tegid or Dala Lake, near which the town is situated, is the largest in Wales, being from 12 to 18 m. in circumference it abounds with trout, carp and pike. Pop. (1841) 1256.—(Local Correspondent).

BALABAK or **BAIAPAK** an Isl Indian Archipelago between the N of Bornoeo and Palawan Is. (middle) 7 59" N lon 115 6' E. It is about 90 m long yields ebony sage honey and wax, which, along with the fish caught on the coasts, are purchased by Chinese traders. Pop. 800.—S of this island, and N of Balambangan and Danguay, is the Balalek Passage.

BALABALAGAN *See PATERBOROUGH (Larrea)*

BALAGHAUT (above the Ghaut) a dist Hindoostan presid. Malabar, between lat 18 15 and 16 30" N lon 78 40' and 79 30' E. the territory acquired by the E. India Company under treaty with the Nizam, in 1800 and since subdivided into the districts of Bellary Choddaiah and Kurnool bounded N by the rivers Krishna and Tumbura, and comprising the conquests of the Nizam, acquired by the treaties of Seringapatam and Mysore, in 1792 and 1799. There are no large rivers in the country except the Krishna and Tumbura, which mark its N boundary. The soil is in general good, consisting either of a black loam, or of a red generally mould. Droughts are frequent, and rains uncertain, yet much mischief is done occasionally by inundations in September and October. Balaghaut is not well wooded, its forests having been cut down by the numerous armies by which it has been traversed. Only a few clumps are still found, chiefly among the hills. When this district was ceded to the British it had 50 258 tanks and wells. Indigo cotton sugar betel leaf and tobacco are raised. Nest cattle, sheep, and goats are reared in great numbers. Diamond mines exist in several places, especially in the E and central divisions, from which the Gemma merchants are supplied the country so called not producing any.

Balaghaut once formed part of the Hindoo empire of Ilanagar after the fall of the Dullu dynasty it was broken into several independent states, was conquered by Hyder between 1766 and 1780 and in 1800 ceded by the Nizam to Great Britain Area, 28,869 sq m. Pop. (1846-37) 2 170,008.

BALAHULUR, a city Siam Caisiana, prov of and 18 m. N N E. Lerida r bank, Sagra, here crossed by a stone bridge. The city is surrounded by stone walls with six gates, and has tolerably good, though rather dirty streets, one grand and several smaller squares a parish and several conventual churches, a townhouse college, two schools, an hospital two reservoirs, and, at the N side, on the top of a commanding hill a castle flanked with four towers of considerable strength and in good preservation. The inhabitants though chiefly agricultural manufacture hempen fabrics and shoes export oil and dural brandy. Three fairs are held annually in March September and December. Pop. 4649.

BALAKINA a town Russia gov of and about 20 m N W of the city Novgorod cap dist of same name, 7 bank Volga where it is joined by the Ussola. It was formerly surrounded by wooden walls and towers which were destroyed by fire but it still has a rampart of earth, with a deep fosse. It contains 15 churches and a convent, and has a considerable trade, chiefly in grain. Its salt springs are no longer used. Pop. 8600.

BALAKIAYA or **BALAKIA** a town Russia, on the Black Sea, gov Taurida, dist. of and 82 m. S 4 W from Simferopol lat 44 25" N lon 38 54 40" E. It has a good but little frequented port completely sheltered by lofty hills. The general appearance of the town perched upon heights, is very picturesque, though it is composed chiefly of a single street with half-deserted shops, and of houses mostly in a ruinous condition and is surrounded by a half-built wall. It has a fortress, placed immediately above the harbour on an almost inaccessible rock, and is inhabited chiefly by Greeks, who have a handsome church here and thought rather indolently disposed occupy themselves with fishing particularly that of mackerel. The trade is of very little consequence, but the hills in the neighbourhood contain marble, which is occasionally worked and a good deal of timber is shipped. The wine and melons of the district are excellent. Balakiaya is the port of the T-yetrigomans, at which Ulman is said to have landed and the description of it given by Homer is so graphic and correct, that Dubous de Montperoux says (*Voyage autour du Caucase*) that were he to give a description of the Bay of Balakiaya, he could not do better than borrow that of the old poet. Under the domination of the Genoese, it was called Camhalo a modification of the ancient appellation (*Symachos*) given it by Arrian. In the ruins of a wooden church convent, built it is believed on the site of the celebrated ancient temple of Diana Taurica. A number of churches and mosques, in ruins, attest the ancient magnificence of the town. Pop. (1849) 1067.

BALAMBANGAN a fertile, uninhabited Isl Indian Archipelago, 15 m. N Bornoeo lat. (S W point) 7 13" N ;

but mostly unpeared and dirty; houses chiefly of brick, and scattered over a vast extent of surface; basars and caravanserais numerous. A good trade in silk and cotton is carried on, and the iron found in the adjacent district of Anol is worked here. Chief imports—iron and sugar. The inhabitants are principally peasants and mechanics, and have a few schools or colleges, about 80 in number. Pop. estimated at about 150,000; according to Fraser (in 1822) 200,000.—[Fraser's *Travels on the E. banks of the Ganges* (London Geog. Journal, vol. viii. p. 104)]

BALGACH a vil. and par. Switzerland, can. of and 11 m. E. St. Gall contains both a Protestant and a Catholic church, two Protestant schools, and one R. Catholic and a well-endowed infirmary not only for this parish but also those of Marpach and Reichen. Balgach has also a chalybeate spring and in the neighbourhood, on a slope clad with vines, stands the fine modern castle of Grüttenstein. Pop. 1335.

BALHARRY See **BALLYRY**

BALI an isl. belonging to Holland, Indian Archipelago, between lat. 8° 30' and 8° 50' S. and lon. 114° 30' and 115° 40' E. bounded N. by the sea of Java, and S. by the Indian Ocean. Separated W. from Java by the Strait of Bali, 14 m. wide, and E. from Lombok by the strait of same name. Greatest length, 85 m. greatest breadth, 55 m. area, about 1700 sq. m. Bali in shape bears some resemblance to a triangle and has been divided into the following districts:—Baling comprising the whole of the N. coast; Dyembana on the W. Tabanan, Mengoi Glang and Klengkong on the S. Karang Asem on the E. and Payung and Bangli in the centre. The surface is chiefly occupied by a series of volcanic mountains, of great height, stretching W. to E. and retaining their commanding ridges in Agassiz, a volcano of 11,218 ft. which after long quiescence, became active in 1843. It lies in the continuous line of volcanic action which stretches in an irregular curve from the Aleutian Isles through Sandwich, Java and Sumatra to the Bay of Bengal. Bali as might be anticipated from its locality has had its full share of subterranean disturbances. In particular in 1815 an earthquake took place, when a mountain near Baling was broken into fragments, and suddenly disappeared while both a large lake from the interior and the sea burst in and inundated a space of about 6 m. in extent, destroying more than 1200 persons. The part of Bali not consisting of volcanic rocks appears to be of a recent calcareous formation. This is particularly conspicuous in the S. where a plateau several hundred feet above the level of the sea, abuts on the coast, and forms the precipitous cliff of chalk wall known to sailors under the name of *Tuwelboek* or Table-Point. Notwithstanding the mountainous nature of the surface generally Bali has several extensive and well-watered valleys in which immense quantities of rice are grown. Coffee is cultivated on the higher grounds, but the quality is inferior. Cotton thrives well. The island is well wooded, but the most important trees, in all respects, is the cocoa, which forms whole forests. The principal animals are cattle and buffaloes, of which some are exported. The horses are small and shabby but are said to be of a much harder nature than their appearance indicates. Swine, goats, and monkeys abound and in the N. and W. of Baling and Dyembana, tigers are not uncommon in the mountains. Immense flocks of wild fowl, particularly ducks, are seen in every quarter. The inhabitants, whose origin is unknown are a handsome race, much taller and better made than the Javanese. They are of a yellow copper colour, and have regular features. In many the excessive use of opium and other vices have produced premature decay. Their subsistence is their pines or elms is unbounded, and no degree of ill usage from them provokes a murmur. In domestic life everything happens the average. The female is first seduced off by violence, then becomes her husband's slave. The upper and lower part of the body is uncovered, and the only dress is a piece of cotton cloth to which on occasions of ceremony such as a visit to the prince a kind of mantle, called a *selendang*, is added. The villages usually consist of large squares surrounded by mud walls within which the cottages, also of mud, covered with reed, but without any window, are arranged. Employments of every kind are carried on in the open air, articles either on a beach outside, with which every bit is provided. These

villages have populations varying from 500 to 8000. The dwellings of the princes are of a much superior description being generally built of well-cemented bricks, and surrounded by substantial walls with gates. The prevailing religion is Hinduism. Education seemed chiefly to reading and writing to be by no means general. Some of the Balinese, however, cultivate sciences; and the princes, and others, which, have good schools for their children. The manufacturers are very trifling. Every family has its loom, worked by the females, and employed in producing some ordinary cotton stuffs. Industry is confined to the making of gold and a few domestic implements. Both in the working of iron, particularly steel and the making of trinkets from gold, considerable progress has been made. The chief articles made for consumption are salt from sea water and black sugar from a kind of date. The commerce of Bali, with the neighbouring isles of the Archipelago is considerable. The chief exports are rice, tobacco, and oil and the chief imports coarse British cotton and opium. Pop. 700,000.

BALI BALONG, a petty state, S. angle of Bali. It is wholly a plain, all cultivated and yielding plentiful crops of rice, large quantities of which are annually destroyed by multitudes of rats whose overpowering numbers the natives have not found means to withstand. The crops consist of rice and the inhabitants, 150,000 in number are frequently subjected to all the horrors of famine.

BALISAKERRY **BALISAKERRY** or **BALISAKERRY** par. Irel Mayo 13 692 sq. Pop. 3801.

BALIZE See **BELIZE**

BALK a vil. Holland prov. Friesland 10 m. S.E.W. Sneek, in a bushy place near the Lake Slot (Slotermeer). It has a R. Catholic, a Calvinist and a Baptist church a school and council hall. Many French families came here after the revocation of the Edict of Nantes whose descendants may be traced in the names of many of the country people. Agriculture is the principal employment, but there is likewise a deal of trade done in wood, obtained from the neighbouring forests of theastland. Pop. 1000.

BALKAN [anc. *Hæmus*] an extensive range of mountains, Europe, Oriental alpine system) and when understood in its largest sense, extending in an irregular curve from the Adriatic to the Black Sea, between lat. 41° N. and 44° N. and lon. 16° and 29° E. More properly however the W. part of the range belongs to the Dinaric Alps, and it is true Balkan or *Hæmus* begins near the sources of the Lepenc, lat. 42° N. and lon. 21° E. where the first great bifurcation of the range occurs, the one branch proceeding S. and forming the Pinde, while the other or Balkan range, proceeds E., commencing with the name of *Tohar-dagh* and taking in succession the names of *Ghoubert-dagh*, *Mount Agnial*, *Agrian-dagh*, *Ghoubert-dagh*, *Codja Balkan* and *Rimnik-dagh* or the Balkan of the Turks. This range, particularly towards the E. has been very imperfectly explored and the heights assigned to its loftiest summits are only conjectured. The average height of the range does not exceed 5000 ft. and in the E. towards the Black Sea, is far lower than this but is more than one summit of the *Tohar-dagh*, the limit of perpetual snow is understood to be attained while on the tops of *Doikim* and *Peristera*, near Mesovo, the snow scarcely melts. Calculations, founded either on this fact, give to *Doikim* [anc. *Somus*] a height of 8500 ft. to *Mount Orbelus*, near Sophia, 8000 ft. and to *Mount Bozdara* the outstanding point of *Tohar-dagh*, and probably of the whole Balkan range, 9700 ft. The E. side of the Balkan consists of crystalline schist, and is much more precipitous than the N. side, which is calcareous. The plain is broken across by numerous ravines of terrific appearance, so deep and narrow that daylight is almost excluded. There are, however, several passes, the best and most frequented of which, known by the name of *Trojan's Gate*, leads from *Demirlik*, in the N. of *Roumelia*, to *Sophia*, in the S.W. of Bulgaria. Numerous rivers take their rise in this range. Those on the N., the principal of which are the *Boma*, *Morava*, and *Iskar* belong to the basin of the Danube, with the exception of a few small streams which proceed E. and pour their waters directly into the Black Sea. The chief rivers on the S. side are the *Varier*, the *Borana* or *Karava*, and the *Mevron*. These all fall into the Archipelago. The Balkan range is well wooded, and is understood to be rich in minerals. To the

S. of Glaremont in the district of Carrow, a few miles are known to exist, and rich beds of iron appear in almost every quarter, but the Turks neglect to turn them to account—*(Oryctographes de L'Europe)*.

BALKH a city Khazak of, and 260 m. S. Balkh, cap. prov. of same name, on a fertile plain. 1840 ft. above the sea on the Adirouk or Balkh river about 17 m. above its junction with the Amouk lat. 36° 4'. N. lon 67° 30' E. It was anciently named Bactra, and was long one of the most flourishing cities in the East and the emporium of the trade between India, China, and W. Asia. On account of its antiquity it is still called the Mother of Cities, and is said to have been built by Kymonok, the founder of the Persian monarchy. The remains of the ancient city extend over an extent of about 20 m. and consist chiefly of fallen mosques, decayed tombs, and three colleges of luminous structure. None of the ruins, however being of an age prior to that of Mahomedanism. The modern town merely a large village is surrounded by a mud wall which encloses the town on every side for about 2 m. In the central park, on the N. side, a white marble stone is pointed out as the Throne of Cyrus. The climate is not so agreeable but the water is bad and of a marshy nature, and in appearance not unlike pipel-clay very fertile crops good the wheat grows so high as in England and the fruits, particularly apricots, are rich. The river Balkh which has its source in the mountains of the Hindoo Kooch gives its name to the city and province, and water from it is distributed by aqueducts and canals, which frequently overflowing leave the ground marshy. Snow is brought from the mountains about 40 m. S., and sold in the streets. The travellers Moorcroft and Gubbins are buried outside the town. Pop. about 2000, chiefly Afghans and a few Arabs.—The ravines lie between lat. 35° 30' and 37° 30' N., and lon. 65° and 69° E. extending about 250 m. E. to W., and 110 N. to S. area, 200,000 sq. m. bounded N. by the Oxus or Amouk E. by the Hindoo Kooch S. by the mountains of the Hindoo Kooch and W. by the desert on the N. of Khazak. The country slopes gently towards the Oxus, in which direction there are great facilities for irrigation, and the soil is generally rich and productive, as is proved by the great population which it now sustains. In the S. and E. the country is mountainous, but has some fertile valleys. The province formed during several ages, a powerful and independent state. It is now subject to the Khan of Balkh. Pop. estimated at about 1,000,000.—*Barnes's Balkh and Four Voy. Geog. Soc. vol. 10*.

BALL, or BALLAS, a vil. and par. Irel Mayo, E.R.E. Castlesbar. Here are the remains of a round tower and ancient church. area of par. 5509 ac. Pop. 127.

BALLACHULISH a ferry Fowlair co. Argyle and Inverness, across Loch Leven, an arm of Loch Lomond 10 m. S.E. Fort William. Loch Leven lies nearly E. and W. and the ferry is about a quarter of a mile across. On both sides there is an ha and on the N. side a few scattered crofters' houses, part of the male inhabitants of which are employed at the well-known slate quarries on the S. side of the loch, about 2 m. E. the ferry where a small village has risen, with an Established church and seat, an Episcopal, and a R. Catholic chapel. The strata, each of which is called a quarry are 50 to 70 m. number every one employing four hands.

BALLAGHADIREEN a tn. Irel Mayo 14 m. N.W. Tuoh. has a moss and unattractive appearance and a barrack. Pop. 4151.

BALLAGHMOON par. Irel Kildare 2178 ac. P. 238.

BALLANE, or BALLANS, par. Irel Galway 1729 ac. Pop. 274.

BALLANTRAE, a vil., harbour and par. Scotland, co. Ayr. The village 50 m. S.W. Glasgow r. bank, Stitches half a mile from the mouth in the Firth of Clyde, has a west church, regular steamers with Glasgow several times a week a valuable salmon-fishery employing about 36 boats and is frequented during summer as bathing-quarters.—The parish is about 10 m. sq. Pop. 1801.

BALLAS a tn. Upper Egypt 1 bank, Nile, about lat. 26° N. lon 32° 45' E. celebrated for its earthen jars, called, from the name of the town, Ballans, which are used all over Egypt for carrying water. Large rats made of ballans jars are frequently found there the Nile, to be disposed of in the markets of the metropolis.

BALLATER, a vil. Scotland co. of, and 86 m. W. S.W. Aberdeen 1 bank, Dees, celebrated for its much-frequented chalybeate springs; houses well-built streets regular; surrounding scenery bold and picturesque. There is here a free church. The villa is distant about 1½ m. from the village, at a place called Pannanish, where there is a lodging house and beds of various kinds. Pop. 379.

BALLAUGH a par. and vil. Eng. Lane of Man 7 m. S.W. Ramsey. Pop. 1892.

BALLER, or BALLY par. Irel Down 6428 ac. P. 1618.

BALLERIN par. Irel Kilkenny 2559 ac. Pop. 585.

BALLENSTADT a tn. duchy of Anhalt Dessau on the Götze, at the foot of the Lower Harz Mountains, 48 m. S.E. Brunswick. It has an hospital manufactures of linen, and dyeworks. In the vicinity is a castle the residence of the Duke on a commanding situation, surrounded with fine gardens. Pop. 4000.

BALLENY ISLES, a group of five volcanic islands, Atlantic Ocean of which the central one is lat. 56° 44' S. lon. 169° 11' W. (a) Two of the islands are small and low the other three are of considerable size and elevation the highest, Young Island rises to a beautiful peak to a height of about 12,000 ft. They are covered with snow and ice, and are walled in with steep precipitous cliffs, without any appearance of inlet or harbour. In one of the islands there are two active volcanoes.

BALLINAY, or BALLEYNAY a market tn. and river-port, Ireland co. Mayo, on both banks of the Moy the town itself being on the 1 bank and the suburb Ardara, with which it is connected by two bridges, being on the r. bank about 5 m. above its mouth in Killiney Bay where there is a bar with 8 to 5 ft. water at low tide. The general appearance of the town is rather pleasing one excellent street runs parallel to the river. Most of the other streets lie at right angles, and consist chiefly of poor cabins and cottages, intermingled with a few better buildings. The town contains an ancient parish church a handsome R. Catholic chapel, and a courthouse. The retail and provision trade of Ballina is considerable. It has also a little coasting trade and foreign trade. The number of vessels entered consisting in 1847 was 108, tonnage 6151 cleared the same year 29 tons 1878 foreign entered 7 tons 957 cleared, 10 tons 1885. The river Moy is navigable for vessels of 200 tons to within 1 m. of the town where there is a good quay. The exports are chiefly corn, meal provisions, hides, fashers &c. The town is a great resort of anglers in the summer season, the fishing in the Moy being excellent. The Ballina Union contains an area of 149,520 ac. and a pop. of 51,960. The value of property rated in the Union amounts to £48,228. The workhouse affords accommodation for 154 inmates. Pop. 6569.

BALLINABOY par. Irel Cork 9° 3 ac. Pop. 2808.

BALLINACARGY a small post in Ireland, co. West meath 5 m. E. by R. Colmilt on the Royal Canal. It is a thriving and clean town surrounded by a fertile district. Pop. 386.

BALLYRAHAN, a tn. and par. Ireland, co. of, and 11 m. S.W. Donegal lat. 54° 50' 15" N. lon. 8° 11' 42" W. (N.) on the Erne about 1 m. from the S.E. shore of Donegal Bay. The river flows through the town from E. to W. and divides it into two parts connected by a bridge of 14 arches. The larger portion is on an acclivity the other partly on low level ground and partly on a rock of considerable elevation. The town comprises eight streets, most of them straight, and all tolerably well kept. Houses generally well built, some of brick, but many of stone and slated supply of both river and spring water ample. On a commanding eminence in the N. part of the town, stands the Episcopalian church a handsome structure in the Elizabethan style. The other places of worship are two R. catholics, a Presbyterian, and two Methodist chapels. There are in the town a classical school, an infant and four other schools, and a distinctive snook society. Distilleries leather-dressing and salt, tobacco and rope manufacturing are carried on, but to a very small extent. The trade of the port is very inconsiderable, its imports being confined to some building materials it had formerly a considerable export trade in corn, but this has entirely ceased since 1846. The harbour is fit for small vessels only having, at low water not more than 2½ ft. on the bar. The population is chiefly employed in agricultural labour but a considerable portion, also, in salmon fishing during the season and in the saltworks. Pop. 3587.—[Local Correspondent.]

BALTEAGH or BALLYDANON par Irel. Londonderry 11 506 ac. Pop. 2715

BALTIC (Tns) or BALTIC SEA (Latin, *Mare Balticum* German, *Ost See*) an internal sea in the centre of N. Europe, between lat. 58° 30' and 66° 40' N. and lon. 10° and 30° E. enclosed by the shores of Denmark Sweden Russia, Prussia, and Mecklenburg and communicating with the Kattegat by three passages—the Sound the Great Belt, and the Little Belt. Its greatest length from N. to S. is 54 m. and nearly 900 m. Its breadth is very irregular and varies from 40 to 200 m. Its area including the three gulfs of Bothnia, Finland, and Riga, has been estimated at 160 000 sq. m. and its basin, which receives the drainage of more than a fifth of the surface of Europe, is at least, 900 000 sq. m. Its largest volumes of water are derived from the E., where it receives the Oder and the Vistula and the N., where it receives the Niemen the Dnie, and the Neva; but these supplies are probably exceeded in accumulated amount by the almost insuperable torrents which flow down from the N. and N.W. and are fed by the vast reservoirs of the Norwegian mountains. The shores of the Baltic, proceeding from the Little Belt in the W., and along the S. and E. as far as Darna's Point, at the entrance to the Gulf of Riga, are flat and sandy and even towards the N., where the coast assumes a rocky

character the beach seldom attains a height of 50 ft. The sea itself seems to partake of the character of the shore. It slides very gradually, ascending scarcely any harbours which vessels of above 300 tons can enter. Its depth nowhere exceeds 167 fathoms and in general is not more than 40 or 50. Owing to the general flatness of the coast the Baltic is much more exposed than inland seas usually are to distant influences. The warm moisture accumulated over the Atlantic and wafted along by the prevailing west wind meets with no interruption till it arrives at the Baltic, when it encounters the keen blasts of the Ural Mountains, and of the steppes extending to the N of the Caspian Sea, and is precipitated in heavy falls of rain or snow which materially affect the composition of the water of the Baltic and reduce the quantity of salt contained in it to little more than a half of that contained in the water of the N Sea. According to experiments apparently performed with the greatest accuracy, of 3 lbs. of water taken from each, that of the N Sea yielded 47 that of the Baltic only 23 grains of salt. This comparative frugeness of the water of the Baltic, and shallowness of its bed, disposes it to freeze easily and hence, though it rarely happens that extensive portions of it are entirely frozen over, its shores usually begin to be covered with ice before the end of December and the navigation of its harbours thereafter continues interrupted till the beginning of April. The shallowness of its water along the shores of the Baltic is due to its being in a great degree to the immense quantities of mud and sand deposited by rivers and torrents, the number of which has been estimated at 250 but it was early suspected that other causes were in operation, and the Swedish naturalist Celsius, followed by the more celebrated Linnæus maintained, that the water in the Baltic was gradually subsiding at the rate of about 3 ft. in a century. A more philosophical opinion now more generally adopted is, that the bed and the surrounding shores are gradually rising. Scientific measures have been adopted for the purpose of determining the point, but until the result is known, it is still a question whether the amount of alluvial deposit is not of itself sufficient to account for the phenomenon. The Baltic has no proper tides. Its surface is of too limited extent to feel the solar and lunar influence directly and the passages which connect it with the ocean are too narrow to communicate the changes of level which the tides produce on the ocean surface. There is, however, a slight irregular change of level in the Baltic of which no very satisfactory account has yet been given. The salting of the Baltic is not of much importance. The herring which need to visit it in shoals in the 14th and 15th centuries, is now only met with in individual specimens but, along the Swedish coast, especially in the Gulf of Bothnia, a fish called *strömming* and very much resembling the herring, though smaller is caught in great numbers and besides a large home consumption, is extensively exported. The other fish which abound most are the salmon, eel, pike, perch, and bream. Near the islands of Gothland and Åland, a considerable number of seals are killed. One of the most celebrated products of the Baltic is amber. It is often thrown on the S. coast after N.W. and W. winds, and is also dug up in a few places, about 300 ft. inland from the beach.

BALTIMORE is a small town or village, Ireland, on Cork R coast, lat 51° 29' N. lon. 9° 22' W (n) 53 m W.S.W. the city of Cork, on the E. shore of the harbour of same name. It contains a handsome tower with a lofty square turret, a school-house, and a dispensary. On the summit of a rock, rising over the town, stands the picturesque ruins of the ancient castle of Baltimore. The harbour which lies about 4 m. N.E. of

Cape Clear Light, is very convenient for ships bound either E. or W. The anchorage, in which there are from 13 to 14 fathoms, lies between Baltimore Point, on the E. side, and Blorkin Island or Fort Point, on the W. Small vessels may ride, two or three cables length to the N.W. of Baltimore town in 10 or 11 ft. at low water quite sheltered from all winds. The number of vessels registered at the port in 1847 was 120 tons, 3926. Entered in the same year 257 tons 16 908. Cleared 153; ton 9466. The principal exports are—slate, copper ore, and agricultural produce—imports—timber, iron, coal, salt, and general merchandise. There was a considerable fishery here some years since but it is now much fallen off. In the beginning of the 17th century Baltimore was plundered by the Algerines who carried away 300 prisoners to Algiers, most of whom were English settlers. The population of the town, together with its prosperity is rapidly declining. Pop. (1831) 459 (1841) 168.

BALTIMORE, a city and port of entry U. States, Maryland, on eo of same name, N side of the Patuxent 14 m

above its anchorage in Chesapeake Bay 42 m. N.F. Washington lat. (Baltimore Monument) 39° 17' 24" N. lon 76° 37' 30"

BALTIMORE.—A View of the Capitol.

W (n). It is at the third city of the U. States in population and the fifth in extent of commerce; pleasantly situated on a bay on slightly undulating ground. The streets are ap-

close, regularly laid out, generally at right angles, with a few here and there running diagonally. The ground-plans are not quite so like the squares of a draught-board as that of many other towns in the U States; they are well paved the wide walks being laid with red bricks, placed diagonally. The houses are, for the most part, built of red brick, with marble or granite basements, and have a neat and substantial appearance. A small river called Jones's Falls, over which there are three handsome stone bridges, and four of wood, intersects the town. The principal public buildings are the city hall, a plain building, three stories high; the court house, two stories high; the state penitentiary the various buildings of which with gardens and walks occupy four acres of ground; the county prison a neat structure, with unembellished towers; and the house of refuge. There are besides, two handsome mountain manses, the Washington Monument and the Battle Monument the former 163 ft high, surmounted by a statue of Washington; the latter which was erected in commemoration of the successful defense of the city against an attack of the Irish, on September 1814 is 32 ft high, with a statue on the top. The emblematical of the city of Baltimore, the names of those who fell in the battle are inscribed on the column in letters of gold. The city is well supplied with water both by pipes and public fountains there being several of the latter in various parts of the city tastefully enclosed by circular railings, and covered by small open temples composed of a dome supported by columns. Besides the public buildings and other objects already enumerated Baltimore contains two museums, two theatres, a custom-house, an hospital in which there is an excellent collection of anatomical preparations in wax and several other benevolent institutions. In exchange, five unwholesome 14 banks 104 places of public worship, of which the Episcopalian have twelve, B. Catholics eleven (including a handsome cathedral) Presbyterians eleven Lutheran eight, Baptist five Methodists 43 a public library a lunatic asylum, an observatory four universities and colleges, with 555 students 50 schools, with 178 teachers and 9061 scholars of whom 3738 in primary schools. The harbour is excellent, and of easy access though sometimes obstructed by ice. It consists of three divisions—the first 600 yards wide with 23 ft water, the second 13 ft deep at the entrance increases to the upper reach to 15 ft. It is third or inner harbour which penetrates to the centre of the city has a depth of 10 ft and admits vessels of 300 tons those drawing more lie at wharfs near Fell's Point, a little way farther down.

The commerce of Baltimore is extensive including most of the trade of Maryland and a portion of that of the U States. It is the greatest tobacco and flour market in the U States there being upwards of 60 flour-mills in its immediate neighbourhood each capable of producing 32 000 barrels in a year. Cotton, coal, lumber, coffee, hides, guano, grain &c are included in its trade. The department of provisions alone being estimated at \$1 600 000 annually. The total imports in 1861 amounted to \$1 448,792 and the exports to \$1 268 283. In 1852 the total number of vessels that entered the harbour exclusive of bay craft, was 1889 and the same year there cleared for foreign ports 583 vessels, tonnage 147,570 being a considerable increase since 1846, when the total vessels entered were 476 tonnage 106 146 and cleared 541 tonnage 128,821. There are also a number of establishments for the manufacture of cloth, cotton, paper, powder, iron, copper, glass, steam-engines, &c. In a large locomotive establishment here, 100 engines are manufactured annually. The supply of periodical literature is also ample consisting of numerous daily weekly and semi-weekly newspapers and magazines or journals. Its means of the extensive railway system of the U States, Baltimore has easy communication with the most important places in the Union. Pop (1850) 109 064.

BALTINGLASS, a market in and par Ireland, co. Wicklow. The town is 28 m. S.E. of Dublin pleasantly situated in a vale on both banks of the Slaney which is here crossed by a stone bridge of three arches. It consists of four principal streets and several smaller and contains some good houses, but is generally ill built and struggling. There are here the ruins of an ancient abbey called Baltinglass Abbey founded between 1148 and 1161 for Clonliffe sisters. In the vicinity are several calico printing works, bleachgreens, and a flour-mill. A savings bank was established here in 1828 Act of par 6383 act. pop. 4164 Pop. of in 1872

BALTONSBOROUGH or **BALTONSBURY** par Eng. Somerset. 1878 act. Pop. 708

BALU INLAND an Is. Indian Ocean Gulf of Marabout, at the embouchure of the Salween or Thanlyin river, which separates Burmah from Siam. It is 17 m long and 8 broad, extending from lat. 16° 14' to 16° 31' N. It is moderately elevated, and said to be very fertile.

BALVAER or **POOLVAER BAY** Isle of Man, S. end of the island; lat 54° 7' N. lon. 4° 45' W. The bay is spacious and affords good anchorage and shelter.

BAMBRA prov., W. Africa, kingdom, Congo bounded, N. by the Congo, S. by the Les and W. by the Atlantic. lat. 0° 18' S.; lon. 14° 30' E. It is one of the largest and richest districts in Congo possessing mines of salt, silver, copper, lead, and iron, and a fishery of eel. The cap. of the prov. bears the same name and is about 90 m. S. St. Salvador.

BAMBARRA, an extensive country in the interior of W. Africa, but whose boundaries have not been exactly ascertained. It is lat. 12° 12' N. lon. 15° E. to 16° 22' N. lon. 15° E. to 16° 30' W. The greater part of the country is level, or slightly undulated, and is traversed by several rivers of considerable size, including the Joliba or Niger which flows through its entire length from S.W. to N.E. The W. and lower portion of it, is hilly but the general aspect of the country is beautiful resembling it has been said, the central districts of England. The climate, in the N. parts is intensely hot, though hardly so oppressive as in some of the adjoining countries. In the S. parts it is more temperate. The rainy season commences in June, and terminates in November its termination being generally followed by a dry N.E. wind which is reckoned harmful by Europeans, from destroying the superabundant moisture. Vegetation is various and luxuriant. Rice, maize, millet, yams, cotton, water melons, French beans and onions, are raised in great abundance and in the rainy season, cabbages, carrots, and turneps. Considerable quantities of tobacco also, are grown in some districts, and in some the indigo plant grows spontaneously. Fruit-trees, however are scarce the most numerous being the pistachio, and the shia or inter-tree, the kernel of whose fruit yields a grayish butter that will keep sweet for twelve months without salt—a great advantage in a country where the latter is extremely scarce and consequently dear. The large baobab, with several other trees common to other parts of Afr. are, abound here. The pastures are extensive and rich, maintaining numbers of horned cattle, sheep, goats, and horses, the latter of a superior breed. The wild animals, with the exception of monkeys are those of tropical Africa, lions, tigers, wolves, panthers, elephants, &c. Birds of a variety of species, are numerous, especially in the marshes, which are resorted to by pelicans, egretta, plovers, ducks, teal, and other aquatic fowls.

The rivers abound with fish which form the principal subsistence of the natives living on the banks of the Joliba and other streams. Alligators, too, are numerous, but, generally, of a very dangerous kind. Venomous reptiles, how ever swarms, and are held in much dread by the natives. Of the mineral wealth of the country little is known, but the mountains are said to be rich in gold. The aborigines of Bambarra are of the Mandingo family their language, habits, and appearance being precisely the same. They are represented as a kind and humane people, inferior to some of the other negro races in refinement and ingenuity but greatly superior to them in the kindlier feelings and sympathies of humanity. The men manufacture articles in gold and iron and tan and dress leather and make gunpowder the women spin, weave, and dye a soft coarse cloth much prized for its durability and beautiful blue colour. In these commodities, to which may be added ivory they carry on a pretty extensive trade with various more remote kingdoms, importing in return, salt and European merchandise. The country generally is but thinly peopled, the bulk of the population comprising in towns and villages. Some of the towns are thus very crowded containing many of them, not fewer than 50 000 inhabitants. Though having a king, the country is in reality governed by a number of petty independent chiefs, who often go to war with one another. The Bambarra are superior to their neighbours in the art of war and their assistance is often invoked to turn the scale in the frequent wars that are waged around. Such assistance is usually granted, on condition of

tribute being paid them, and they are said to be, in general, faithful to treaties. The religion of the natives consists simply in the acknowledgment of a Supreme Being and a future state, a few are Mahometans and a few practise Fetishism. Polygamy is common. Amongst the marriage laws of the country is one of a singular nature. Should a woman refuse to become a wife, and afterwards contract a marriage with another person, she may be seized by the first suitor as a slave. A remarkable feature in the moral character of this amiable, though primitive people, is the extraordinary love of children for their mother—a trait often touchingly displayed. Pop. estimated at 2 000 000.

BAMBERG is in Bavaria, circle Upper-Main, beautifully situated at the foot of a range of slopes clothed with orchards, hop-gardens, and vineyards, and traversed by the Regnitz, the branches of which divide the town into three districts, and give it a form very much resembling the letter K. The communication between these districts is maintained by seven bridges, one of them an elegant suspension bridge about 250 ft long and 80 broad. The town is surrounded with walls, and well built. Its handsome houses, gardens well paved, and well-lighted streets, together with the pleasant walks and the gardens of the princely, make it one of the finest towns, and most delightful residences in Bavaria. Among the public buildings of it are the Dom Kirche or cathedral, a fine structure, in the Byzantine style founded in 1004 and containing, among other interesting monuments, the curious and richly-sculptured tomb of the emperor Henry II. and his empress Cunigunda the church of St. James, founded in 1078 and remarkable for its handsome portal and frescoed dome. St. Gangolph's Church, with two towers, and a fine altar-screen, executed by celebrated masters the upper parish church, or St. Mary's, a handsome Gothic building of a quadrangular form, containing several fine paintings and sculptures, and the Jesuit church of St. Martin's, a massy structure in which beauty and grandeur are happily combined, and to which is attached a library particularly rich in MSS. To these buildings may be added the old Benedictine monastery occupying the height called St. Michael's Mount, and now converted into a workhouse, the old palace of the bishops of Bamberg, the theatre, and the townhall, completed in 1476,

THE PALACE, BAMBERG.
From the Bamberg Palace in Upper-Bavaria.

and restored in 1756. The educational and literary institutions comprise a Lyceum, in which full courses of divinity and philosophy are given by eight professors, assisted by other teachers, and attended by 700 pupils; a normal school, a mathematical institute, a drawing academy and a royal library comprising about 66,000 volumes a museum of natural his-

tory and a cabinet of natural and experimental philosophy. There are also surgical, anatomical, and other medical schools, attached to the general infirmary founded (1789) by Bishop Frank Ludwig, of Kralup, and possessing a capital of upwards of 230,000. The principal manufactures of the town are of porcelain, gloves, jewellery, wax, tobacco, starch, musical instruments, marble ware, &c. Large quantities of garden-seeds, and of liquors, are raised in the vicinity of the latter, about 50,000 lbs. are annually sent abroad. The town of Bamberg is in much repute throughout the surrounding country and the demand for it is so great, as to employ upwards of 60 breweries. The curious shroud in picturesque scenery Pop exclusive of military 19,312 of whom 400 are Jews.—(Huhn & Loe. Deutschland.)

BAMBOUK, a country in the interior of N W Africa, in the angle formed by the Faldout and the Senegal, S. of the latter river E. of Bondon, and N. of Wooll and Denties, is from lat 12° 30' to 14° 30' N., and from lon. 10° 30' 15' to 12° 15' W. Its precise extent has not been ascertained, but is supposed to be about 140 m in length, by 60 to 100 m in breadth. It is, on the whole, a mountainous district, and in some parts rugged though attaining no great elevation, the highest points never exceeding 600 ft above the general level of the land, while the ordinary heights are about 300 ft. The higher regions are sterile, being composed mostly of naked rock, but the valleys and plains are remarkable for their fertility and for the luxuriance, or rather exuberance of their vegetation every sort of plant and tree attaining the most gigantic dimensions. Amongst the latter the succulent baobab, the calabash and tamarind, with a great variety of acacias and palm trees, all of which reach here the utmost limits of their growth and fruitfulness. The rich and produces likewise in abundance, and almost without culture, maize, millet, cotton, water-melons, and an immense variety of leguminous plants. The low lands, which are subject to inundation yield large crops of rice of the finest description. With all this fertility however Bambouk is one of the most unhealthy places on the face of the globe, and is wholly uninhabitable by Europeans. The rainy season, which lasts for four months commences about July or August, flooding the low lands, and causing the rivers to overflow their banks, adding to the fertility of the soil but greatly increasing the malariality of the climate. Immense herds of wild oxen and cows rove through the forests, or feed on the rich pastures of the plains. Lions and elephants are also numerous, and birds and insects of all descriptions, while the rivers swarm with crocodiles of the most formidable kind. But the most remarkable feature of Bambouk is its rich gold mines. The principal one, an insulated hill of 3000 paces in circumference, and about 300 ft high, is at the distance of about 1 m. from the large and wealthy town of Natakou. The soil of this hill is almost wholly auriferous, every cubic foot containing gold in the shape of lumps, grains or spangles. It is perforated with deep holes or pits in all directions, the greatest quantities of gold being found at the greatest depths. There are numerous other noted gold mines in Bambouk those of Kenleba were visited by Mr. Raffert in 1843-44, who found them not extremely rich, and wrought, as might be expected in the remotest manner possible. These mines being considered common property are open to any of the inhabitants of the adjacent villages who choose to work in them. Most of the gold found is given to the Moors in exchange for salt—a scarce and much coveted commodity in this part of Africa, as in many others. Bambouk is densely peopled. The natives are Mandingoes, or so notorious for their ferocity and cruelty as to be esteemed the type of barbarism. They profess the Malin religion but disregard some of its most important observances, amongst others as in the use of wine and intoxicating liquors, drinking to excess of a decoction of the latter made from millet and honey. They are indolent and voluptuous, and prefer the less laborious employment of searching for gold, to cultivating the fertile lands with which they are surrounded. Bambouk was at one time, during the 15th century, in the possession of the Portuguese, who had been tempted by its gold mines to invade the country. They do not appear however to have held it long. Many of them fell in quarrels amongst themselves, many by debauchery and disease, and the miserable remnant by the weapons of the natives, who, when their numbers were reduced, rose against them and massacred

these all in one day. The ruins of ancient Portuguese forts and houses are still to be seen in the country.

BAMBROUGH, or **BAMBROUGHS**, a vil. par and curia, England, co. Northumberland, on the coast. The village about 21 m. S.E. by S. Berwick-on-Tweed—lat. 55° 57' N; lon. 1° 48' W.—is beautifully situated near the sea, and was anciently a royal borough and important market town. It fell lately into decay, but is again improving. Close by the village is the ancient castle of Bambrough, a residence of the Earls of Northumberland, and famous in English story. It stands majestically on the summit of a steep rock which projects into the sea, and rises perpendicularly to the height of 150 ft. above low-water mark. The keep a lofty square structure, is of Norman architecture, and is the most ancient part of the building. The date of the present structure is uncertain, but it is said that a fortress was erected here as early as the sixth century. In 1065, it was taken from the Northumberland family by William Rufus, and remained in possession of the crown till about the middle of the 15th century soon after which it ceased to be considered a fortress of importance. The castle, latterly fall by purchase into the hands of Lord Creve, Bishop of Durham, who, at his decease, in 1770 left a large property to be applied to charitable purposes. From this source a benevolent establishment has been formed at Bambrough, for the succour of shipwrecked seamen, the education of children, and the relief of indigent persons. As part of the arrangement, ships stores of all sorts are kept in the castle while various expedients are adopted in stormy weather to aid distressed vessels. Thirty girls are here educated clothed, and boarded gratis. There are also two free schools, a good library and a dispensary.—The PARISH contains 21 townships, and three chapelry areas, 25,384 sq. Pop. 4645.

BAMIAN or **BAMIAN** an ancient and celebrated valley in Afghanistan. The town is situated on the slopes of an isolated hill situated in the latter 55 m. N. W. Kabul lat. 34 17 N. lon. 68 8' E. The valley is about 1 m. broad, and very fertile, and is bounded on each side by nearly perpendicular steep slopes. On the S. side, are several passes varying in height from 9000 to nearly 13,000 ft. The town and its vicinity throughout, indeed the whole extent of the valley is covered with ruins of antiquity of an extraordinary description, including colossal idols and vast caves excavated in the face of the living rock. Two of the idols are upwards of 120 ft. in height, and the caves so numerous as to extend in continued series for 8 miles. It is not known by whom these gigantic works were executed although many more or less plausible conjectures have been hazarded on the subject.

BAMBAKOO a w. W. Africa, Bambarra, 186 m. S. W. Sogo, 1 bank Joliba, important for its commerce, especially in salt.

BAMOO See BAMBOO.

BAMPOORA, or **BHAMPOORA** a tn. Hindoostan prov. Malwa, on the Betwa 1844 ft. above the sea level lat. 24 28 N. lon. 76° E. The fort of Bampoora is unfinished, but the walls are well built, and enclose a palace, also an unfinished, erected by order of Jowahir Row Holkar of whom it contains a statue in white marble. The city and pergumats attached formed part of the dominion of Mahar Row Holkar Pop. 59,000.—(Gleanings of East India Co.).

BAMPTON several towns and parishes England.—1 A market tn. and par. Devon. The town, situated in a valley on the river Babarcom, an affluent of the Exe, about 20 m. N. Exeter consists of two principal streets, irregular but well kept houses, stone and slate, but indifferently built spring water abundant. It has a church (an ancient, but neat structure) and a Baptist chapel, several schools, including a national one for 50 boys and 50 girls, also two or three minor charities, by one of which 25 boys and 25 girls are clothed yearly. At one time, the serge trade was carried on here to a considerable extent, but has declined since the introduction of machinery. The chief business of the place consists in stone-quarrying and lime-burning. Bampton is noted for its fairs for sheep and cattle, particularly that held on the last Thursday of October. Area of par. 7785 ac. Pop. 2102.—2 A tn. and par. Oxford. The town is 16 m. by road W. by S. Oxford, and 79 m. W. W. London. Houses neatly built—supply of water ample. The town was celebrated in former times for the manufacture of leather jackets, gloves, &c.

Vol. I.

3rd. Area of par. 6750 ac. Pop. 5780.—3 A par West-morland area, 10,290 ac. Pop. 583.

BAN—**de-larocra**, a valley France, dep. Vosges, celebrated as the scene of Oberlin's labours. It lies among the mountains of the Vosges, and is enclosed by a number of rounded schistous hills, some of which are 1000 ft. above the meadows below. The soil is naturally stony and the climate is severe. Wheat was at the beginning of October 1840, 12 in. deep, and seldom mows away before the middle of May leaving at the utmost only five months of tolerable weather. Half a century since this valley was a barren desert, inhabited by a few poor ignorant peasants. By the labours of a single Christian philanthropist, roads were made, trees planted, schools erected, a better system of agriculture introduced and the moral habits of the people so much improved, that manufacturers established themselves here, from no other motive than that of obtaining work-people whose conduct was so exemplary. The chief establishment is a cotton ribbon factory. At the entrance of the valley in the churchyard of the quiet village of Foudrey is the tomb of Oberlin, a plain stone, with his name engraved, and an inscription bearing in terms equally true and touching. He was 60 years the Father of this district.

BAN or **BANOWICE**, a lordship and market in Hungary S.E. Transylvania 64 m. N. Komorn on a height, near an affluent of the Neutra, with much natural markets, and an extensive trade in cattle wool, and iron. Pop. 2650.

BANAGHER—1 A market in Ireland, Kings co. 42 m. E. Kildare, on elevated ground, 1 bank, Shannon, here crossed by a handsome new bridge of 60 elliptical arches, with a navigable opening of 40 ft. It consists chiefly of one long narrow street has a church R. catholic chapel royal endowed and national schools, and small manufactory branches a considerable trade in corn and provisions, and large horse and cattle fairs. Pop. 1846.—2 A par Londonderry 34 475 ac. Pop. 6096.

BANAL-MILITARGRENZE, in Austria, a division in the S. E. of Military Croatia, between the rivers Sava, Kulpa, and Una, subdivided into the two nearly equal districts of Banal-Grana-Regiment I and Banal-Grana-Regiment II each with an area of 400 geo. sq. m. The former has Glim for its capital, and consists of the five military communities of Futusna and 180 villages, the latter consists of the five military communities of Costanica and 143 villages. The whole Banal is hilly but tolerably fertile producing all kinds of corn and pulse, also maize, flax hemp, and madder Banal was taken from the Turks by Leopold I. and secured to Austria, by the peace of Carlowitz, in 1699. Pop. 219,600.

BANANA ISLANDS, a group of small islands, N. W. Africa off the coast of Sierra Leone, near Cape Shilling, lat. 8° 5' N. lon. 13 11 49' W. (a). The largest is 4 m. long and 1 broad. They are extremely fertile, have abundances of water and are so comparatively healthy that the European residents of Sierra Leone, from which they are little more than 50 m. distant frequently resort to them for the benefit of their health. Good anchorage off the islands in 5 fathoms. All inhabited.

BANANAL—1 Two villages, Brazil. The one is prov. Rio Paulo, on the road from the city of that name to Rio de Janeiro in the district of Araxa, and near the bank of the Paraíba. In the vicinity coffee and sugar are extensively cultivated, and large quantities of poultry are reared for the Rio de Janeiro market. The other vil. is in prov. Rio de Janeiro, on a streamlet of the same name, an affluent of the Paraíba from the right, and navigable for about 5 m. It has a church and sugar-mill.—2 A river lat. Brazil, called also SANTA ANA, formed by the river Arapira. It lies in the N. E. corner of prov. Mato-Grosso is 200 m. long by about 55 broad, covered with vast forests, and has in its centre a navigable lake, and to be about 90 m. long by about 80 broad. The soil of the island is extremely fertile. The name Bananal was given it from the remarkable increase in the banana-trees planted there by the discoverers in 1778.

BANAT a large prov. Austria (emp. Transylvania) bounded N. by Hungary W. Hungary and Sclavonia, S. Servia, E. Wallachia and Bismuthogen or Transylvania. It consists of three counties of Temes, Temeval, and Krassó, and two military districts, called the German Banat and the Wallachian Banat. Greatest length, from E. to W., 120 m. greatest breadth, from N. to S., 96 m. area, 5730 geo. sq. m.

It is very compact, its form approaching a square bounded by the Danube, Theiss, and Maros, on all sides except the E., where it becomes hilly. With this exception the surface is flat, and on the W. is partly covered with swamps. The other rivers, besides those mentioned, are the Temea, which traverses the province almost centrally, the Nera, the Kerkab, and the Ait Begs, so called to distinguish it from the Nera Begs, a small about 85 m. long and wholly within the province. Taken as a whole, the Banat is one of the most fertile districts in Europe. Its wheat has long been famous for the great quantity and excellence of the flour it yields while its maize frequently gives 24, 48, or even 60 returns. The vine is extensively planted, and great attention is paid to the rearing of the silkworm. Good cattle are grown. Live stock is abundant, and of good breed. Rearing horses particularly engages the attention of the German colonists. The whole territory is well wooded, and game abundant. Immense flocks of water fowl frequent the marshy districts; and the rivers, particularly the Theiss, teem with fish. The minerals hitherto have not been considered of very much importance, but an extensive coal field has been recently discovered. The inhabitants belong to various races. Magyar villages prevail in the N. Serbian in the W. and German colonies both in the W. and S. There are also several settlements of Bel garmen and other races, but the mass of the population is Wallachian. Pop. nearly 1,000,000.

BANBRIDGE, a market to, Ireland so. Down, 25 m. S.W. Belfast, on the Ban which flows through, and divides it into two portions, one of which occupies a rising ground on the l. bank of the river the other a sloping space on the r. bank. It consists of four streets, houses chiefly stone and well built well supplied with water but not lighted. The only buildings of any note are the church, in the Gothic style; three Free-Bye-Bye meeting houses, Episcopalian, E. Catholic, and Unitarian chapels, and a large union workhouse, with fever hospital attached. There are five or six schools one of which is in connection with the Church Education Society two in connection with the National Board of Education, and several private schools. A literary institution has been lately established, where monthly lectures are delivered on literary and scientific subjects. The principal manufactory is that of linen, which is carried on to a great extent both in the town and neighbourhood, where are also several bleaching establishments. Pop. 3800 (Last Census).

BANBURY a port bar and par England, co Oxford. The town, situated in a valley on the Cherwell, 59 m N Oxford, consists of several spacious streets, well paved and lighted with water abundant. The church a modern erection, with a tower 133 ft. high, has an magnificently exterior but is well fitted up within. Independents, Particular Baptists, and Wesleyans, have each a neat and commodious place of worship and there are small chapels, also, for Primitive Methodists, Calvinistic Methodists, and Unitarians a E. Catholic chapel lately built, and a Friends meeting-house. It has four schools (a charity national British, and infant) and numerous charitable institutions, supported by voluntary contributions a mechanics institute, subscription library theatre, townhall, and jail. Manufactures—plaster, girth and other working celebrated also for its cakes, which have been famous for upwards of two centuries, and for its ale. An extensive trade in cattle, corn, and all kinds of provisions. Returns a member to the House of Commons. Registered electors (1848) 558. Area of par 3150 ac. Pop. 6200.

BANCA, BAKRA, or BANGKA, a large isl. Indian Archipelago, belonging to Holland, between Sumatra and Borneo, colored for its tin. It lies between lat. 1° 0' and 3° 7' S. and lon. 105° 9' and 106° 54' E.; is of irregular shape and about 106 geo. m. long, by 64 broad at its N. end, the broadest part area, 4340 sq. m.; separated W. from Sumatra by the Strait of Banca, about 14 m. broad; and E. from the island of Billiton by Guegar Strait. It has several considerable bays, of which the most important are Kinkab and Goloa, and is hilly but soon of its elevation much exceeds 9000 ft. The higher hills are granite, the lower of red scoriaceous earth. In black alluvium between these latter are found the tin deposits, discovered first by chance in 1710, and nearly more than 35 ft. below the surface. Only a small portion of the island, in the N. end, near the capital Mitha or Muttah, has yet been explored for this metal the yield of which, in 1844,

reached 4188 tons. The Banca tin is the best obtained in the Indian Archipelago, and said to be equal, or nearly so, to that obtained in Britain. Besides this metal, the island yields iron, lead, copper silver and arsenic, rock-crystal and smaltine, and, in the W. part, there are beds of lignite. The hills are covered with valuable timber particularly red-wood (amarantoid) resinous trees are in great numbers, those furnishing gum elastic, and the myrtaceae, forming whole forests. Though vegetation is very vigorous, the soil and climate of Banca are not favourable to cultivation; the former being too stony and dry for the latter which, during August, is so hot, that all the leaves of the trees are dried up still, were the numerous streams by which the island is intersected turned to the purpose of irrigation, with the same attention that they are appropriated to the washing of tin, excellent agricultural results might be obtained. Among the vegetable products may be named dragon's blood, cassia, nutmeg, beanish, soy, cassia, &c. The fauna of this island includes three species of apes, and the Galapothemus marmoratus, all common to Sumatra; Sceloporus tardigradus, Pteropus fuscus, Viveria Indica, Sca vittatus and verticatus, Cervus rusa, and Moschus moschiferus. Neither tigers, bears, nor large pachyderms are to be found in the island, of which probably the most formidable animal is the alligator which inhabits the rivers in great numbers and is exceedingly voracious, attacking boats without hesitation. The birds are mostly similar to those found in Java and Sumatra. Banca is inhabited by Malays, Chinese, and a small number of Bengali Gipsies, and a still smaller number of Babels from Celebes. The Chinese, numbering 18,000 are the only laborious race in the island, one of them doing as much work as any three of the others. The climate on the higher grounds is esteemed tolerably healthy but on the lower grounds, and along some parts of the coast, which are swampy, fever of a very dangerous kind is so prevalent, that Dutch soldiers think no greater misfortune can befall them than to be ordered to Banca. Pop. (1840) 85,000.—(Yan der Aa *Tenninck's Omp d'and Davidson's Trade and Travels in the Far East*).—2 A small island group at the N.E. point of Celebes, separated from that island by a narrow strait of same name. The largest island, whence the group takes its name, is lat (E. point) 1° 48' S. lon. 125° 12' E. (N) It is about 7 m. long, well inhabited, and produces lemons, coconuts, breadfruit, rice, sugar, tobacco, &c. **BANCAJAN or BANCAJALLAN** a large and populous is., W. coast of Madura, Indian Archipelago; lat. 7° 2' S. lon. 115° 45' E. esp. of the lat and of the lon. of same name, with a fort and palace in the latter of which the sultan of the island resides. The Dutch have a residency here, and a considerable trade is carried on.

BANCHORY.—1 (*Danewick, or Danewick* a par Scotland, partly in co. Aberdeen, and partly in that of Kincardine. Pop. 8078.—2 *Banchory-Ternan*, another par wholly in the latter co. area 21807 ac. Pop. 3478 The silt in both cases are the names of silt. The etymology of the word Banchory is unknown.

BANDA, a gov or prov Dutch possessions, Indian Archipelago, composed of the Banda Sea, the E. part of the Ceram and the late Kaffir Ceramian, Kassar Goram Key and Aroo.

BANDA, a Moluccan island group, belonging to Holland, Indian Archipelago in the Banda Sea, 8 Ceram, between lat. 3° 50' and 4° 40' S. lon. 129° 58' and 130° 2' E. The group consists of the inhabited islands of Great Banda or Lontor, by far the largest, about 13 m. long by 3 broad. Banda Neira, Pulo Klu, Pulo Ay Georzing Ap, a volcano, and Boengaya; and of the uninhabited islands of Kapal, Pissang, Rietjen, and Vronwen. They are all of volcanic origin, covered with a thick stratum of garden earth, admirably adapted for the cultivation of the nutmeg which is however limited to the three more important islands Great Banda or Lontor, Banda Neira, and Pulo Ay the cultivators being partly slaves and partly convicts, together comprising upwards of three-fifths of the total population of the group. The nutmeg produces upwards of 400,000 lbs. of nutmeg, and above 150,000 lbs. of mace. Besides these articles, some trade is done in oil obtained from the nuts of the Cassia tree, a tree which here attains great perfection. Wheat, fruit, the oil is used as table when stale, for burning. Other vegetable products of these islands, which are all well wooded, are coconuts, sugar,

plant, and the ordinary tropical fruits. Wild cattle are found on some of them, especially on Rodiagya, where they are hunted by the officers of the garrison. Wild goats, sheep, and pigs are also found. The most remarkable birds are four kinds of pigeons, *Columba porphyrio*, *semita*, *javana*, and *diademata*, and some species of sungees and noddies. The two species of sungees first named are very destructive to the nutmegs, which they eagerly seek, and swallow whole and, after digesting the fleshy substantial envelope, they void the nut or kernel in a state fit for germination. In like manner also, they and species of the genus *Buccones*, swallow and void the fruit of the clove-tree and of the *Cassipourea* commune. To birds such as these, capable of long-continued flight, has nature committed the diffusion of the aromatic plants over the Archipelago.

The harbour which is beautiful well-sheltered, and easy of access, lies N. the island of Great Banda, and between it and the islands of Banda Neira and Goecong Api all of which approach close to each other. It is defended by several forts of which the more important are those of Belgie and Nassau on Banda Neira, and Hollandia on Great Banda. On the for-

BANDA THE ANCHORAGE AND SHIPWRECK. — From Dr. H. H. Vogel's Voyage au Pôlu Sud

mar of these islands is the governor's residence and the small village or town of same name the houses in which are built chiefly of wood, and roofed with leaves, on account of the frequent earthquakes to which the group is subject, caused by the island Goecong Api, which rises 7380 ft. above the sea, and is one of the most active volcanoes in the Indian Archipelago. It forms an immense cone, increasing in size with each eruption and is covered with luxuriant vegetation to the limit where the lava, by becoming cold ceases to flow but down through the vegetation to the sea, are to be seen the sources of lava torrents, filled with half burnt-up trees. At the foot of the mountain, coco-nut, and other fruit-trees of tropical countries flourish and the only inhabitants are a few families, natives of Timor. The proximity of the volcano subjects the Banda Islands to the ravages of frequent eruptions and of frequent earthquakes, some of which have been very destructive. The strongest recorded were those of 1596 1615 1682 1691 1711 1749 1798, and 1839 but the most fatal in their consequences, those of 1629 1688 1688 1743, and 1818. So terrible were the ravages of the eruption and earthquakes of 1691 that all the more wealthy inhabitants fled the islands, and emigrated to Ambona, Tamaré &c. and only through the firmness and courage of the governor Crayt, was the total abandonment of the establishment prevented. Goecong Api likewise renders the climate very insalubrious. The annual deaths in the group are one in 21. Several of the islands have no fresh water. Pop. of the whole group in 1840 5081 of whom 1183 were slaves, and 1029 convicts. — (Van der Aa *Tussamack's Coup d'oeil Jour Ind. Archip.* Hooker's *Discoveries in Australia*.)

BANDA ORIENTAL. See UROUVAU

BANDA REA, *Islands* or *Indian Archipelago*, the space of sea enclosed by the islands of Boero and Ceram, on the N. Timor and the Suwatty Islands, on the S.; Timor Laut, Lort, and other small islands, on the E.; and the Flores Sea, on the W.

BANDAH a to Hithelootan, prov. of and 94 m. W by N Allakabed, presid. Calcutta, cap. dist. of B. Bunderkhuud, r bank, Cane lat. 25° 31' N; lon. 80° 30' E. A few years ago this town was an unimportant village, but is now a large and bustling town. Its position is particularly excellent.

BANDYTT, a small isl. Indian Archipelago, Strait of Lombok lat. (S.E. point) 8° 51' S. lon. 119° 29' E (n) about 12 m. long by about 10 broad.

BANDOLÉ (anc. *Bendulim*) a vil. France, dep. Var (Provence) about 10 m. from Toulon, occupying a lovely spot on the shores of the Mediterranean, and enjoying a climate in which frost is scarcely known, where the orange grows in the open air and artichokes, green peas, and the early crops of less favoured climates, are gathered in the dead of winter. Pop. 1814

BANDON or BARDONKING, a tn. Ireland co. of, and 20 m. S.W. Cork, on both banks of the Bandon a beautiful stream celebrated by Spenser as The pleasant Bandon crowned by many a wood. There are several good streets in the town straight and well kept houses of stone from a quarry in the vicinity; generally well built, lighted, and amply supplied with water. There are two parish churches two R. catholic chapels, two Methodist chapels, one Scotch church and one Unitarian meeting-house. The other principal public buildings are the courthouse, market-house, and savings-bank none of which are worthy of note in an architectural point of view and a small barracks where one troop of horse, and a company of foot, are accommodated. There are two good classical schools, besides two parochial schools in connection with the Church of England two national, and one Methodist school for the instruction of the lower classes. Bandon was, about 20 years ago, a flourishing manufacturing town, but hardly a vestige of its former prosperity now remains. Between 5000 and 4000 persons were then employed in weaving cotton-spinning &c. but these, and all other branches of industry with the exception of distilling and porter-brewing earned on by two distilleries and two breweries have wholly disappeared the largest cotton-mill in the place having been converted into an auxiliary workhouse. Bandon is one of the most remarkable towns in the S. of Ireland. Peopled originally by a colony of English Protestants, it has been always distinguished for its loyalty and strictly Protestant character. Indeed, so strictly Protestant was it at one time, that until about the period of the Union no R. catholic would be permitted to live within its walls. It returns a member to the House of Commons constituency in 1800, 206 Pop. 7943. — (Local Correspondent.)

BANDONG a tn. Java, 75 m. S.E. Batavia. It has an agreeable aspect, but, in consequence of the vicinity of morasses is unhealthy. The hills around are clothed to a considerable height with coffee plantations, and the lower grounds are covered with rice fields.

BANECE, or BANECE, a small isl. France S. Cape Finis thre, between Utahut and the mainland lat. 45° 29' 7' N lon. 5° 1' 45' W

BANERAS, or BANERAS, a tn. Spain Valencia, prov. of, and 29 m. N by W Alicante, r bank, Vinalejo; tolerably well built, has a parish church a townhouse, two schools, a hospital prison, and three public fountains. The inhabitants, though chiefly agricultural manufacture caps, blankets, and winter clothing. Pop. 2236.

BANEZA (La) a to Spain, prov. of, and 26 m. S.W. Leon, at the head of a valley r bank, Sierra, here crossed by a wooden bridge. It has straight and tolerably good streets, one principal and three smaller squares two parish churches, four chapels, one Latin and three other schools, a townhouse, prison, extensive hospital, storehouse, &c. Pop. 3306, chiefly agricultural, but also manufacturing coarse cloth and ticking, hats, tiles, bricks, leather and earthenware.

BANFF is on Scotland, bounded N. by the Moray Firth S. and E. by the co. Aberdeen, and W. by co. Moray and Inverness. Its extreme length, about 37 m. breadth, very unequal, averaging about 13 m. area, 647 sq. m. or 414,080 ac. The general surface is mountainous, the country containing some of the highest mountains in Britain; Cairngorm, celebrated for its pyram. rising 4080 ft. above the level of the sea. Benrinnes, 3768 ft. according to the late Government survey; Corryhabha, 3558 ft. Knockhill, 2500 ft. and Cabra, 2377 ft. The N. side of Benrinnes is the highest of all the Scottish mountains, is also in this county. These mountains generally consist of a nucleus of granite, overlain by gneiss, quartz rock, and mica schist, succeeded by clay-slate, and old red sandstone. At Portree near the coast, there is a bed of serpentine, known by the name of Portree marble, and in different places iron and lead have been discovered. Towards the E. the mountains gradually slope away and leave along the coast a level tract, which extends about 30 m. and has a fertile soil which is well cultivated, and produces large and early crops. In the interior there is comparatively little arable land, but many fertile valleys between the hills and mountains well adapted for grazing—the principal farmers of the former as the coolness and humidity of the climate render the harvests precarious, and always late, being seldom completed before the end of October. Agriculture has become considerable progress in the county but there is still ample room for improvement. The farmsteadings are in general substantial fields well enclosed and large tracts of waste land are brought every year under cultivation. The principal rivers are the Spey remarkable for its rapidity and for the value of its salmon-fisheries, which, for some miles from its mouth, yield a rent of from £8000 to £10,000 a year to the Duke of Richmond who is now proprietor. The Dueran whose salmon-fisheries rent at £2000 a year the Avon, the waters of which are so singularly transparent, and consequently so deceptive as to depth, that it is extremely dangerous for strangers to attempt to ford it. Salmon were abundant in this river in former times, but they are now scarce. It is still however so excellent trouting stream, and for this sport is preferred by anglers to the Spey. It is here, besides these, the smaller streams of Linn, Fiddich, Isla, and Connel, the first giving its name to the Glen so celebrated for its whisky. The Isla is another fine trout stream, and the scenery on its banks beautiful. The principal lakes are Lochan in 3 m. long and 1 broad, and Lochbheige upwards of 1 m. long, and about half a mile broad, both in the parish of Kirkcubright, and both abounding in trout. Game of all kinds abundant in the county. Its most valuable minerals are marble, limestone, coal, granite, freestone, slate, rock-crystal, and opacine. Its manufactures are few and unimportant, comprising several breweries, sawmills and rope-works. Its commerce is confined to the coasting-trade, through the medium of the ports at Banff, Macduff, Portree and Gardnasholm, where oats, butter, salmon, &c. are shipped, and coals, iron, and timber imported. The principal productions of the county are cattle, corn and fish. The white fisheries along the coast occupy from 100 to 120 boats. The herring-fishing is also extensive. The county is divided into districts, and includes 24 parishes but only one town of any consequence, namely Banff. It returns one member to the House of Commons; constituency in 1849 826. Pop. 54,171.

BANFF a seaport town and royal burgh, Scotland, esp. above co., 121 m. N. by E. Edinburgh, and 59 m. N. W. Aberdeen lat. (N. pier) 57° 40' 18" N. lon. 3° 31' 30" W. (a.); situated at the influx of the Dueran, across which is a fine bridge of seven arches, into the Moray Firth. It is separated into two parts, one of which lies partly on the lower extremity of a plain on the river side, and partly on a declivity the other portion, called the New Town, stands on an elevated ridge, terminating abruptly within a short distance of the sea. Between these two and beautifully situated on a projecting point, stands the castle. The houses are, for the most part, irregular in site, but the streets are generally straight and wide, and are kept remarkably clean. One of them, under different names, is more than half a mile in length. The town contains a general commodious market-place in a central situation, and public halls, all of modern structure. It has Established, Free, United Presbyterian Independent Episcopalian, and

R. catholic places of worship; a Hierarchy society and scientific institution; several benevolent societies, several well-endowed educational institutions, and four branch banks. The public buildings of note, besides churches, are the town-hall, adorned by an elegant spire and an apse. The harbour is situated on the W. extremity of a circular bay, at the opposite extremity of which are the town and harbour of Macduff. It consists of an old basin partly walled up, and now suitable only for vessels of very limited draught of water; and of a new basin formed by a pier and breakwater built in 1816. Vessels drawing 12 ft. water can enter the new basin at high water of ordinary spring tides drawing 15 ft. at spring tides. The herring-fishery of the port was at one time very considerable, there being about 70 boats employed in it in the year 1819 but, in 1843, the number had fallen off to 32. The number of vessels registered in 1847 was 114; tonnage 9996 mostly employed in carrying grain, herring, salmon, live cattle and cured pork, to London, Leith, Aberdeen, and other places in the N. There is also a small foreign trade, occasional voyages being made to Sweden, Emma, and Holland for iron, deals, hemp, and flax. Of the few and limited manufactures in the town the principal are a foundry and some small manufactures of ropes and sails, chiefly for home use. The town was erected into a royal burgh by Robert II. in 1373 afterwards confirmed by James VI. and Charles II. In 1645 the town was pitifully plundered by the Marquis of Montrose, by which the inhabitants were reduced to a state of absolute beggary as set forth in their humble supplication to the high court of Parliament, in 1647 the copy of which is preserved, Berriestown, Town of Banff 1647. Parliament granted the petitioners their own estates as a means of relief. James Sherr, the celebrated Archbishop of St. Andrews, was born in Banff castle in May 1618 and James Macpherson the notorious Highland outlaw was executed here on November 16, 1700. Banff suffered by the great inundations of 1829 and 1885 there being, on these occasions 5 or 6 ft. of water in some of the streets. The town is governed by a provost, four magistrates, and 17 councillors all elected by the £10 constituency. The parliamentary constituency in 1848, amounted to 218, Banff sending with Elgin, Culter, Inverury, Kintore, and Peterhead, in sending a member to the House of Commons. Pop. of the 5567 of par exclusive of bor 869.

BANGALORE (Bangalore) a fortified town in Hindoostan, Mysore, 70 m. N. E. Seringapatam, 100 m. W. Madras; lat. 18° N. lon. 77° 40' E. built on a plateau 3000 ft. above the sea, and much resorted to by Europeans, on account of its salubrious climate, the thermometer ranging between 82 and 57° Fah. The cyprus and vine grow luxuriantly and apples, peaches, and strawberries are raised in the gardens. The houses are in general two stories high, wall built of red earth and roofed with tiles. The principal bazaar is spacious and handsome, ornamented with rows of cocoa-nut trees. Tipoo Sultan's palace, built of mud in the Saracenic style, is an impressive structure, used occasionally by the rajah for public entertainments. The fortifications of the town were of great extent and strength but it is now in ruins, having been destroyed by Tipoo Sultan, when he found that it was not impregnable. The entrenchment is about 2 m. from the town and contains a large barracks, numerous shops stocked with European manufactures, a public library and assembly-room, and a handsome race-stand. From its central position, Bangalore is of considerable importance, both politically and as a trading station. Its merchants carry on a traffic with every part of S. India chiefly in sugar, salt, betel-nut, metals spices, dyestuffs, raw silk, and cotton wool. The silk goods manufactured here are of a particularly strong description. The cotton brought at the weekly markets is spun by poor women of all castes, except the Brahmins. Bangalore was founded by Hyder Ali in 1791. It was taken by Lord Cornwallis. Pop. 80,000.

BANGIL a town, 23 m. S. Soerabaya, having good houses, many of them large store buildings, and a spacious, roomy market-place, well supplied with provisions, and much frequented.

BANGKA. See BANGA.

BANGKOK, or **BANCOK**, an extensive city cap of the Kingdom of Siam, extending 3 or 4 m. on both sides of the Menam, 15 m. above its embouchure in the Gulf of Siam,

and 55° 30' E. Yutha or Suva, the former capital; lat. 18° 55' N. lon. 100° 24' E. (2). The river is deep enough for vessels of 250 tons, but there is a bar at its mouth on which the depth of low water is never more than 5 ft. and at no time exceeds 14 ft. The city properly consists of three parts—the town itself, the floating town and the royal palace. The first stands on a rich tract of alluvial land, low but not marshy and is intersected by tributary streams, and winding creeks and canals, so that almost all intercourse is by water. Owing to the daily tides, and the annual inundations to which the town is exposed, the houses, which are mostly of wood, and many of them wretched hovels are built on piles, and elevated above the water level. There are no regular streets, and each house has a small canoe or boat for its use. The floating town occupies the channel of the river opposite to the town itself, leaving a considerable opening in the centre. The floating houses are of an oblong form, constructed of boards, and resting on rafts of bamboo, moored to the bank, in rows of eight, ten, or more in depth they are occupied principally by Chinese, and provided with a covered platform, on which merchandise, fruits, rice, earthenware, dried fish, and fresh pork, are exposed for sale. The king's palace is on an island, from 2 to 3 m. in length, but of incommensurable breadth, separated from the land by a narrow arm of the river and is surrounded by high walls. Numerous temples, conspicuous by their tall spires and glistening gilding, are scattered through

built here of the teak and other timber furnished by the Siamese forests. The Chinese and their descendants compose nearly three-fourths of the inhabitants. The remainder consists of Siamese, natives of Cambodia, Burmese, Peguans, Malays, and natives of Laos. Total pop. estimated at between 850,000 and 900,000.—(Crawford's *Sketches of Siam* Hans. 1824; *See also Gen. Singapore Free Press*.)

BANGOR, a city and port, N. Wales, on Carnarvon at the head of Beaumaris Bay lat. 53° 15' N. lon. 4° 6' W. beautifully situated at the entrance of a small valley which opens upon the Llan Ffynnon, opposite to, and about 2½ m. S E Beaumaris, on the railway to Holyhead. It consists chiefly of one narrow crooked street, nearly 1 m. in length, and several smaller lighted water gas, and abundantly supplied with water; houses substantially built of stone. The principal buildings are the cathedral, a finely-estimated and handsome structure, chiefly in the later style of English architecture, 214 ft. in length, breadth of body and side aisles, 60 ft. an Episcopal palace, demerary house free school market-house assembly-rooms and infirmary. The other places of worship are a Baptist, Independent, R. catholic two Calvinistic, and two Wesleyan chapels. Bangor has likewise a free grammar national, Scotch, infant, and two boarding schools, an infirmary dispensary and a set of three houses for six poor old single men. The principal trade is in slate, brought by railway from quarries about 7 m. distant, which employ upwards of 2000 men chimney-pieces, tomb-stones, ridge-slates writing-slates for schools, &c. are manufactured from slate in the town. The only other trade carried on is shipbuilding. The scenery around Bangor is exceedingly pleasing and picturesque, and in many parts characterized by features of striking grandeur. The town is, on this account, much frequented by strangers, no fewer it is said than 50,000 visiting it annually. Bangor is one of five parliamentary boroughs returning together one member to the House of Commons. Market day Friday, four fairs annually. Area of par 7645 ac. Pop. of par in 1864—(Local Correspondent.)

BANGOR, par N. Wales co. Cardigan 302 ac. Pop 198.

BANGOR MOKASHONCHY BAKORH is 7 coks par N. Wales, co. Flint and Denbigh 5795 ac. Pop 1264.

BANGOR a tn. seaport and par. Ireland co. Down. The town, situated on an acclivity S side of Bellah Lough 4 m. S W Donaghadee, lat. 54° 40' N. lon. 5° 55' W. consists of one principal and several smaller streets, all clean and well kept. Houses of stone, but some of them so old and dilapidated, as to give a very unfavourable appearance to the town. There are many neat buildings, however along the shore, which are let in the summer season as bathing quarters. Bangor being much resorted to for this purpose. It has an Episcopal church a small Methodist, and a R. Catholic chapel and two Presbyterian churches, one of which is an elegant structure, and finely situated near the centre of the town several well-conducted mercantile and mathematical schools, two cotton spinning-mills, and some trade in importing coals. The male part of the population is chiefly employed in fishing the females in hand-spinning in all its branches. Bangor takes its name from one of the earliest religious houses built with lime and sand—Bangor i.e. White well; built in 553 destroyed by the James in the 15th century and rebuilt by Malachy O Moearg prince of Armagh—part of the walls are still standing. In this town and parish are six Presbyterian churches 9600 inhabitants, of which upwards of 2000 are Presbyterians, descendants of Scotch settlers in the reigns of Elizabeth and James I. Sir James Hamilton, afterwards Viscount Clanaboy had a grant of the site of the abbey and all its former possessions. Moore contends that this and not Bangor in Wales, was the birthplace of Felagius. Pop. of tn. 2250.—(Local Correspondent.)

BANGOR, a city and port, U. States, co. co. Penobscot, Maine, at the head of the navigation, 7 m. Penobscot river 60 m. from the sea. lat. 44° 47' 50" N. lon. 66° 47' W. 68 m. S. E. Augusta, and 230 M. E. Boston. population

BANGKOK.—From Captain's Wharf to the Sea.

the city. The principal one is of a pyramidal form and is surmounted by a spire 300 ft. high. The palace temples, and houses of a few chiefs, are the only edifices of brick and mortar roofed with timber and covered with red tiles. Fires are in consequence frequent. There are a R. catholic bishop, and three R. catholic churches, at Bangkok, and about 1000 R. catholics, either converted natives, or descendants of Portuguese settlers. The trade of Bangkok is considerable. The imports into the port, in the year 1848, amounted to about 1,120,000 ticals (£120,000) and the exports to 1,500,000 ticals (about £160,000) thus amount comprehending the trade with Singapore, Bombay Batavia, Palembang, and England but not the direct junk trade with China, which is very large, but of which no estimate can be obtained. The import duties are levied, not with any regard to the value of the goods, but upon the tonnage of the vessels entering the port. They act, therefore, almost as a prohibition, especially on cotton manufactures, which hold the most important place in the trade. Principal exports—sugar pepper lac, ivory aromatic wood, and fine wood for cabinet-work. tin hides, cotton, rice, salt fish, edibles roots, &c. Chief imports—porcelain, tea, mercury dried fruits, silk and silk goods, nankeen paper and other Chinese manufactures; Indian printed goods, British cotton goods and woollens, British glassware, and opium. The commerce with the interior is also important. There is a considerable manufacture of tin vessels by the Chinese settlers who are also workers in iron and leather tanning and preparing large quantities of deer, ox, and buffalo hides for exportation. Vessels of 200 tons burden and a great number of large junks, are

a pleasant and commanding situation, affording a fine view of the river and surrounding country. The buildings, both public and private are neat, and many of them elegant. It has seven churches—a Congregational, Episcopal, Baptist, Methodist, Lutheran, Universalist, and R. Catholic; two academies, 25 schools, a courthouse, and three banks. There is here also a theological seminary called The Maine Charity School. It is under the direction of the Congregationalists. School has three professors, 43 students, 120 alumni, and 7000 volumes in its library. The harbor is spacious, of easy access, and capable of floating vessels of a large class, the tide rising 1 ft. but it is not open in winter. The principal article of trade is lumber brought down the river Penobscot in large quantities, 1200 vessels, of about 100 tons each, being employed in this trade during the navigation season. There are, besides, 100 vessels engaged in the coasting trade, 50 in foreign commerce, and about 20 in the fisheries. It enjoys regular communication with Portland and Boston, by steamer, for eight months in the year. The city is governed by a mayor seven aldermen, and 21 common-councilmen. Pop (1840) 6827.

BANG-PA-KUNG a river Siam, has its source in the mountains which separate Siam from Cambodia, about lat. 14° 45' N lon 101° 15' E whence it flows in a S W direction towards the Gulf of Siam, into the N. E. corner of which it falls near Bang-pa-soe, lat 13° 50' N lon 101° 17' E. Its entire length is about 300 m., and in size it is said not to be inferior to the Mekong.

BANG-PA-SOE, a town, cap. of a dist fertile in rice and sugar near the mouth of the Bang-pa-kung lat 13° 50' N lon 101° 18' E, 47 m. E.S.E. Bangkok. It is a considerable town, containing several thousand inhabitants, and surrounded by a wooden stockade.

BANQUET a small isl. in the E. sea, near Palembang lying off the N. extremity of Sumatra lat 7° 18' N lon. 119° 0' E, abundant in turkie.

BANHAM, par Reg. Norfolk 3964 sq. Pop. 1195.

BANHO a town and par Portugal, prov. Beira-alta, dist. of and about 10 m. from Viseu on the Vouga which is here crossed by a fine stone bridge of 10 arches. It has thermal springs, which were used by the Romans, and are so copious as to be capable of turning a mill. Pop 650.

BANIAN See *ELIZACK*.

BANIAN.—1 A vil. Syria near the source of the river Beus, a tributary of the Jordan, 47 m. S. W. Damascus. This place, once the important city of Baniyas, is now mean and insignificant, though many extensive ruins, and the finest scenery attest its past grandeur. The ruins of its Baroque citadel, which once crowned the adjoining hill still include foundation walls 10 ft. thick.—(Robinson's *Researches in Palestine*).—2 A small town, coast of, and 53 m. N Tripoli with ruins of ancient Baniyas.

BANJACK, BANIAL, or BANIKS an island group, Indian Archipelago, W coast, Sumatra, 16 in number yielding nothing but birds nests and treasure. lat. 8° W island W point 2° 5' N lon. 97° 14' E (a). The principal island Banjack from which the group is named, lies opposite the mouth of the river Singal and is about 18 m. long by 7 broad lat (S. point) 2° 20' N lon 97° 15' E.

BANJARMASIN BANJERANG or BANJERANGS [from *Banjay* foundation, *Masing* frequent or according to others, *Banjay* water *Masing*, salt] once an extensive empire occupying the S.E. corner of Borneo, upwards of 800 m. long and 270 broad, now all included in the Dutch provinces of the S. and E. coasts of the island. The supremacy over this extensive tract has been ceded to Holland from time to time, so that now the Sultan of Banjarmasin retains over only a small portion of his former empire, and even in governing that remnant, which he does in a manner absolutely he owes the Dutch as his suzerain. Banjarmasin as arranged by treaty of 1846, comprehends the tract of country bounded W by the river Banjar or Barito, and Belakongal E. by the Montes Montanus, the loftiest summit of which is 5905 ft. high. The two boundaries converge and unite N at Mount Lomang, about lat. 1° 51' N lon. 110° 35' E and S. about 8 m. S. W Martapura, area, estimated at 5946 sq. m. The Sultan resides in Martapura, about 17 m. S.E. the town of Banjarmasin, which is the seat of the Dutch governor. The country appears to be generally flat,

and well-watered by numerous streams, of which the Banjar is navigable for a considerable distance inland. The soil is exceedingly fertile, bearing a spontaneous vegetation of great richness and variety. Amongst the products are diamonds blood wax, pepper benzoin resins, rice, and cotton; birds nests, iron, gold, and diamonds, large and fine. The gold is found to a depth of 15 to 20 ft. Good coal is abundant in the S.E. on the river Rian. In the N., at Nagara and Margasari distinct coal blades and other kinds of armour are manufactured, and excellent pease are constructed. The population is meagre for the extent of country being estimated (1846) at not more than 120 000.—(Van der Aa *Taalmanboek*, *Camp d'ord* *Monteur des Indes*.)

BANJALUKA, a samak and ta. Turkey in Europe, prov. Croatia. The town stands on the Verba, which here separates Bosnia from Croatia in lat. 44° 46' N lon 17° 15' E. It is strongly fortified and contains a citadel, a number of mosques, several colleges, baths, and barracks, and a manufactory of gunpowder. Pop. 7000.

BANJARMASIN a town, Borneo Dutch cap. of above territory on an arm of the Banjar about 14 m. above its mouth. The houses being exposed to daily inundations of the river are built on piles, elevated 3 ft. above the level of the marshy ground and communicate with each other by means of a plank, which serves the purpose of a street. A large number of the houses are built upon the front of the river being used as a shop or stall on which wares are exposed for sale. On market-days, the water is covered with skiffs, having a single individual in each, moving about selling vegetables, &c. The people are continually on the river all necessities being purchased at these floating markets and all business being done on the water. In every respect it is a floating town, possessing neither carriages nor horses; the only animals reared being pigs, goats, ducks, geese, and fowls. The houses of the European functionaries, the government buildings, and the fort, are built partly of stone and partly of wood. The fort Tama is surrounded with palisades, and contains the residence of the king, the magazines, and barracks. Exports:—pepper benzoin, honey resins, dragons blood, birds nests iron, and straw mats, very artificially made and imports—rice, salt, sugar opium, corn, Chinese porcelain, silk entirely gunpowder &c. The navigation of the Banjar is obstructed by a bar at its mouth, in lat. 3° 25' S lon 114° 42' E (a) on which there are 11 to 16 ft. of water at high tide.

BANJOEMAS, a dist. or prov. and in Java. The district lies near the centre of the island, between lat. 108° 58' and 110° E and has a sea-board towards the Indian Ocean of about 35 m. It is chiefly of volcanic formation consists in greater part of an extensive valley watered by numerous streams, and is one of the richest and most fertile provinces in Java, producing rice, Turkish wheat sugar coffee, indigo &c. The climate, especially on the S. coast, is very changeable still Banjarmasin is not esteemed unhealthy. Pop 516,068.

The towns cap. of prov. lies 22 m. from the coast, at the opening of the valley above referred to lat 7° 33' S lon. 109° 20' E. It is tolerably well built, is the residence of the governor and contains a fort and garrison. The whole city wares marry on a considerable trade, and are extremely frank and hospitable. Pop. 9000.

BANJOEWANGI a town, E coast of Java, prov. Betawie, cap. of dist. of same name, on the Strait of Malacca. It has a fort, and only one stone house—the governor's residence. It is an exceedingly unhealthy place. The lofty mountains landward prevent the wind from clearing the atmosphere, so that the heat is very great. In the vicinity are several volcanoes; the loftiest, Idjeng, about 15 m. N. W., is 19 170 ft. high. The surrounding is the most E. portion of Java, and in greater part unencultivated, and covered with wood. A range of lofty mountains, several of them active volcanoes, skirt it out from the rest of Java. The soil, mixed with lime, is naturally so fertile, that this is esteemed the most beautiful district in the island, but, at the same time, one of the most unhealthy. It was formerly used as a place of banishment the convicts being employed in clearing the ground of trees, and in bringing it under cultivation. The coffee raised here is esteemed equal to Mokka, and many other products are of the greatest excellence. On the coast, near the capital, are some small islands. Banjarmasin was formerly a small state, governed by its own sultan under the protection of the Prince of Bali.

BANNA See BANCA

BANKEL, an isl. in the Andale Archipelago, at the entrance into the Bay of Talo, E. coast, Celebes lat. 7° 20' S.; lon. 122° 50' E. (2.)

BANKS'S ISLANDS.—1 A group of islands in the B. Pacific Ocean, about lat. 13° 53' S.; lon. 168° 45' E. (a.) named after the celebrated botanist Sir Joseph Banks, as have also been various other islands, points, capes, peninsulas, straits, &c., in different parts of the world.—2 A group of islands in Spencer's Gulf S. Australia, lat. 32° 19' S. lon. 136° 55' E. (a.)—3, An isl. in Torres Strait, in lat. 10° 13' S. lon. 143° 19' E. (a.)—4, Cape (West) S. Australia, Bouay Land, lat. 37° 53' S. lon. 140° 24' E. (a.)—5, Banks's Land, British America, Arctic Ocean, the westernmost land seen by Parry, lat. 74° 0' N.; lon. 117° 0' W.—6 Banks's Peninsula, New Zealand, B.E. coast, lat. New Munster; lat. (extreme point) 43° 54' S. lon. 178° 1' E. (a.)—7 Banks's Strait, the channel formed between the H.E. and of Van Diemen's Land and the Furness Islands.—8, A bay on the W. side of Althorpe Island, one of the Galapagos group S. Pacific Ocean; lat. 0° 5' S. lon. 81° 30' W.—9, A cape at Baranov King George III. Archipelago, Russian America.

BANMO See BELIMO

BANN (Upper and Lower) two rivers in N. of Ireland. The first rises in a plain called the Deer's Meadow and sometimes the King's Meadow in the mountains of Mourne, co. Down about 8 m. E. Armagh after flowing a distance of 88 m. in a N. direction, it falls into Lough Neagh, near the Ben-foet ferry in co. Antrim. It is navigable by boats of 60 tons burden.—The Lower Bann is the outlet of Lough Neagh. It rises past Tooma, and expands into Lough Beg winding through a rugged country; and afterwards flowing by Portglenone in Antrim, and Kilwa in Londonderry forming the boundary of the two counties passing Coleraine it falls into the Atlantic Ocean, 4 m. below that town after a course of nearly 40 m. A bar at its mouth renders the navigation at the entrance to the river difficult in rough weather; but on ordinary occasions, vessels of 200 tons can proceed as far up as Coleraine bridge. At that town occurs a fall of the river called the Salmon Leap and above it are one or two rapids. By means of the Newry navigation, the Upper Bann is made subservient to the opening of a communication from Lough Neagh to the Irish Sea and, if the Lower Bann were rendered navigable throughout, a safe communication would be opened from the Irish Sea to the Atlantic.

BANNA, a river S. Guinea, having its source in a mountainous region, about 80 m. from the coast. It flows in a W. S. W. direction, and falls into the sea in about lat. 8° 30' S.

BANNALEG, a tn. and com. France, dep. Finistère, 19 m. E. Quimper noted for its wrestling-matches, held annually in September and which attract multitudes of spectators. The Breton wrestlers are celebrated for their strength and scarcely less so for the angularity of their costume. A considerable trade is done here in cattle, horses, and poultry. During the wars of the League a bloody battle was fought under the walls of Bannalec, between the league and the royal troops. Pop. 4372

BANNINGHAM, par Eng. Norfolk 920 so Pop. 680

BANNOCKBURN a vil. Scotland, co. of, and 3 m. N. E. Stirling on both sides of the Bannock, which divides it into two parts, called, respectively Upper and Lower Bannockburn. It is amply supplied with water and both the private dwellings and public works are lighted with gas. It has three churches (Episcopal, Free, and United Presbyterian) and four schools, well taught, and well attended. Bannockburn has been long celebrated for its woollen fabrics, consisting chiefly of tartans, tartan shawls, carpets, and hearth-rugs. All the tartan worn by the Highland regiments in the British army has been made here for the last half century. The chief kinds of carpeting are Brussels, three ply and Venetian. In Bannockburn more so far from the village is an extensive coal-work, employing upwards of 100 workmen who have a high name for intelligence and moral character. A school has been established for the miners' children. The village, however, is still more celebrated for the decisive battle of the same name, fought in its vicinity between the English forces under Edward I., and those of the Scotch under Robert Bruce, by which the independence of Scotland was fully and finally secured, the former having been defeated with great

loss. This memorable battle was fought on Monday June 24, 1314. The English army amounted to 100,000 men, the Scotch to about 80,000. The best authorities represent the loss of the English on this occasion, in the battle and pursuit, to have been 80,000 men; while that of the Scotch is alleged to have been about 8000. An interesting memorial of the conflict still remains at a short distance S. W. from the village of St. Ninian, on the position occupied by the Scottish army. This is a large piece of granite, with a hole in it, in which was placed the Scottish standard called 'Barod Stena, from its having been planted or bored for the reception of the pole of the standard. It is now protected by an iron grating from the depredations of the relic-hunter. Pop. 937

BANOLAS, a tn. Spain Catalonia, prov. of, and 10 m. N. by V. Gerona tolerably built: has four squares, a parish church, chapel, town hall, hospital, Latin, and two other schools, and three public fountains. The inhabitants manufacture cotton fabrics of all kinds, silk, and paper; but most of them are engaged in agriculture and cattle-rearing. Three annual fairs are held. Pop. 4500

BANOS [baths] by itself, and with affixes the name of numerous towns and villages in Spain of which the following are the most important:—1 *Baños* a tn. Andalusia, prov. of, and 24 m. N. by E. Jaen on the skirt of the Sierra Morena; has indifferently built streets, steep, but well paved a parish church, several chapels, a school, hospital, storehouse and cemetery. The inhabitants are employed in agriculture and cattle-rearing. In the vicinity are mines of secondary and thermal springs from the baths attached to which last the town derives its name and importance. Pop. 1770.—2 *Baños de Cervera*, or *de rio Pisuerga*, a tn. Leon prov. of, and 6 m. E. Palencia, between the rivers Carrion and Pisuerga. It is built on a small square, handsome Gothic parish church, chapel townhall prison, school and storehouse, and cemetery. Near it are baths esteemed efficacious in various disorders. Pop. 372.—3, *Baños de Ebro*, a tn. Old Castile prov. of, and 15 m. W. by N. Logroño, a small, Ebro tolerably well built, and possessing a church townhouse prison school, and storehouse. The baths are much frequented in the summer season for cutaneous affections. Pop. 331.—4, *Baños* a vil. Extremadura, prov. Caocera, 30 m. W. Palencia, at the base of the hills which divide Extremadura from Leon. The baths are much resorted to for rheumatic complaints. Pop. 1636.—[Madrid.]

BANBERERA a considerable tn. Hindoostan, prov. Bengal, 1 bank, Hooghly and 1½ m. N. W. the town of that name. Within its limits are comprised two adjoining villages and near it, to the N. are ruins of stone buildings of Mahometan structure.

BANBWARRA, a tn. Hindoostan, dist. of Bagur prov. Gojard, cap. of a small native state, under British protection, 117 m. N. N. E. Baroda lat. 25° 54' N. lon. 74° 32' E. It is an agreeable place, surrounded with gardens, and contains some handsome temples and a respectable bazaar. At a short distance from the town is a pool of water with a stately flight of steps, overhung by palms, papulas, and banar trees and beyond it, on the crown of a woody hill are the towers of a large castle formerly the palace of Banbwara.

BANTALLAN an Isl. Indian Archipelago, one of the smallest of the Philippines, at the N. entrance of the strait between the islands Negros and Zebu lat. 11° 0' N. lon. 123° 20' E.

BANTAM or *BATAV* [rebellious people] a prov. Java, occupying the whole W. end of the island; bounded, N. by the Java sea, W. by the Strait of Sunda, and S. by the Indian Ocean, about 88 m. N. to S. in its greatest length and as much in its greatest breadth. It is of very irregular outline, Cape Java or Java Head forming a high rocky peninsula, and is indented by the extensive bays of Bantam, Prov. Welcomes &c. The coast, in many parts, is difficult of access, but everywhere it abounds with fish. Bantam, island, is mountainous and has several extinct and two active volcanoes, Polo Bara and Karang the latter the loftiest summit in the province, is 5069 ft. high. Many of the mountains are wooded to the top, and among them warm sulphurous springs are numerous. The N. part of the province is flat, in some places marshy in others sandy and in many instances. Health is exposed also to be injured, on the S. coast, by the strong winds from the Indian Ocean. The climate of

the interior mountainous country is bracing and healthy in proportion to the elevation. Here the thermometer does not rise so high, and is much more steady than on the coast, where sudden and great changes of temperature are frequent. Bantam, though fertile, is less so than some of the neighbouring provinces and its fruits are not esteemed so highly as those of Java. Pepper was long the principal article of culture but now rice is the main article of produce, for the raising of which the numerous marshes throughout the province render it peculiarly well adapted. Coffee, cotton, indigo, and sugar are also extensively cultivated; bananas and coconuts are produced in great quantities, and tobacco to a small extent. The rearing of cattle, buffaloes of large size, and goats, is a principal means of support the latter are sent extensively to the market at Batavia. Of wild animals, tigers, rhinoceroses, serpents, and apes, are plentiful and give few apprehensions.

Though addicted to hunting the tiger the inhabitants are effeminate, voluptuous, and jealous in the highest degree false, revengeful, and indolent. Still they manufacture coarse cotton cloths, striped and kasegne figured, much esteemed as an article of dress, and extensively sold to the natives of the interior and to the neighbouring islands. They prepare also, yarns from the fibres of the pine-apple, pottery-ware excellent mass of brasses and bronzes, and fine chalk extensively used by Europeans throughout the Indian Archipelago for plastering and whitewashing houses, and by the natives themselves, for various purposes. The religion is *Islamism*. The principal towns are *Basant* (the capital) and *Baring*.

Bantam at one time formed an independent kingdom under a sultan of her own and though, from the time the Dutch obtained full supremacy in Java, they held a certain sway over it still it was not till the beginning of the present century that it was incorporated finally with their possessions, and placed directly under their government the then reigning sultan being banished to Ambon. Pop. (1838) 303 242.—(Van der A.)

BANTAM an old and celebrated in Java, cap. former kingdom, and present prov. of same name. It is beautifully situated on the bay and river of the same name and backed by lofty picturesque mountains; lat. 6° 1' 42" S. lon. 106° 10' 42" E. (2.) The river Bantam divides into three arms the centre one which not very deep, passes through the town, the other two bounding it right and left. The houses, chiefly of reeds plastered with clay roofed with leaves, and each one surrounded by a bamboo enclosure, and thus separated from one another are so embosomed among coconut trees that it is somewhat difficult at first to suppose one's self in a town. The Sultan's palace, and the Dutch fort—Spelwijk and Diamant—are in ruins and the only building of note is the mosque or temple, surrounded by a lofty wall and adorned with a small tower or minaret. In the N. part of the town is the Chinese quarter and beyond it, at some little distance, are situated the dwellings of the Europeans. Towards the shore, fishermen live in miserable huts, and behind them are some salt-pans. In consequence of the numerous sand banks on the shore, and the pent-up position of the place, Bantam is one of the most unhealthy spots in Java, frequently being the whole day so enveloped in thick mist, that nothing can be seen from the roads but the mere outline of the bay a few miles from the town the atmosphere is found to be quite clear.

Bantam is one of the oldest and most famous towns in the East, and, at one time, was the principal mart of the Dutch but its trade has now been transferred to other channels. It was at one time 2 m. long but by fire, as well as the loss of trade, it has been reduced both in size and appearance.—The bay is about 8 m. E. to W. by about 5 or 6 m. N. to S. from the island of Pajang at its mouth, to the town of Bantam. Several islands are scattered over its surface, of which Pajang is the largest. Formerly the bay was deep and the anchorage good, and it was frequented by numerous and large vessels, but, from the increase of the mud deposits, it has become much shallower so that even small vessels seek the town with difficulty.—(Van der A.)

BANTAY a resort in Ireland, co. Cork, at the head of Bantry harbor near the N. end of Bantry Bay. Lat. 54° m. W. S.W. Cork lat. 50° 40' 46" N. lon. 8° 27' 52" W.

W. (a.) It consists of two parallel streets, irregularly and indifferently paved some good houses, but the greater portion squallid huts, imparting to the town altogether a very mean appearance; and contains a parish church (a plain modern building) a R. Catholic chapel, and a Wesleyan meeting-house. It has little trade, and no manufacturing, although it has formerly a considerable amount of both. The scenery around it is the most picturesque description. Pop. 2395.—The bay remarkable at once for its natural beauties, and its natural advantages, although the latter are turned to little account, is large, safe, and commodious for vessels of any size. The water is deep close to both shores, no rocks or shoals in the way but such as may be easily avoided, and the stream of tide is scarcely sensible in any part of it. The points of land forming the entrance into Bantry Bay are, Crow Head on the N.W. and Sheep's Head on the S.E. the latter in lat. of 52° 3' N. lon. 9° 27' 4" W.

BANWELL, vii A par Eng Somerset 4839 ac. P. 1873 BANTYA FELAO a mountain village Hungary circ. Thither-Thom, co. Szeben 6 m. E. Banya-Nagy It contains a parish church (R. Catholic) a Greek, and a Reformed church. Pop. consisting of mixed race 4730

BANYA NAGY (see *Amal Domus*) a mountain in Hungary co. Szeben 93 m. E. Debrecen and not far from the borders of Transylvania. It has gradually risen from a mere mountain village to the rank of a town and carries on a considerable trade in wine, fruit, and earthenware. The inhabitants suffer much from a want of good water though there are springs in the neighbourhood which, it is said might be brought into the town at very little cost. Four yearly markets are held here Pop. 5500

BANYU WANGI see BANJOWANGI.

BANYULS SUR MER, or BANYULS LA MARE, a vil France dep. Pyrénées-Orientales around, of, and 20 m. E. of Perpignan, a small bay formed by the Mediterranean, near the frontiers of Spain. It was a place of some military importance in the Spanish war and the scene of several encounters. An excellent red wine, of a deep colour and great strength called *Rapeno*, from its resemblance to a Spanish wine of that name, and a rich sweet wine, known by the name of *Grenache*, are grown in this district, which in addition to its wines, has also a trade in grain. Pop. 1357

BAOL a state of W. Africa, Senegambia, having the state of Sin on the E., of Kayor on the N. the Jolof territory on the E., and the Atlantic on the W. Its N. boundary is about 23 m. S.E. Cape Verde, the parallel of 14° 30' N. passing nearly through its centre.

BAFAUME, a in France, dep. Puy-de-Dôme 14 m. S.E. Area, regularly built, and fortified after plans of Vauban. The inhabitants were formerly obliged to use water of bad quality but, in 1728 an artesian well was sunk in the vicinity and an abundant supply obtained. Fine woollens and silken goods are made here, and *marbric* is extensively manufactured in the vicinity. Bapenne has also spinning-mills, sawmills, cooperage, and tanneries. Pop. 4978.—The name of a large manufacturing village in the neighbourhood of Rouen, on the top of the long and steep hill of Casteau is pronounced in the same way but spelled *Bapenne*.

BAPCHILD, par Eng Kent 1058 ac. Pop. 355.

BAR, a tn. Hindoostan, prov. Bahar presid Bengal & bank, Ganges lat. 26° 28' N. lon. 85° 50' E. It is mostly built, but is of large extent, and has a considerable trade. Pop. including Maseungu, 75,000

BAR (formerly *Bor*) a tn. Russia, gov. Pskolok 38 m. N.E. Kamenetz, on the Bz. It is defended by a citadel built on a rock and contains several churches, and a monastery. Bar is famous for the confederation, formed here Feb. 29 1708 by the Polish nobles, Pulkowski, Potocki and Krasiński against the Russians. Pop. (1842) 6791.

BAR LE DUC or BAR SUR OISE is a tn. France, dep. Meuse, 325 m. E. by S. Paris. It was formerly fortified, and had a castle, but which, with the fortifications, is now in ruins.

The modern Bar is composed of an upper and a lower town. The former situated on an eminence, on which it rises in the form of an amphitheatre, is the aristocratic district. It commands a fine view is well built, and has several elegant mansions. The lower town extends into the valley traversed by the Orain, which is here crossed by three stone bridges. It is a busy active place, with many shops, manufactures,

workhouses, and places of business. The streets are wide, and well laid out in particular, those of Rochelle and the Capuchins, which are lined with a double row of Elm-trees, and the public buildings are of an inferior description. The church of the upper town contains the monument of René de Chaulnes, Prince of Orange, who was killed in 1544, at the siege of St. Dizier. It consists of an altar of black marble, into which a white marble skeleton, of almost hideous appearance, has been inlaid, and was executed by Rishier, a pupil of Michelangelo. The chief manufactures are cotton yarn, cotton and woolen stuffs, printed calicoes, and colored handkerchiefs. The preserved fruits and confectionary as well as the wines of Bar are in great repute. In the environs are ironworks and stone quarries. Fir and oak planks are also prepared, and sent to Paris. Pop. 13,678

BAR-SUR-AUBE (*Barren ad Alben*) an anc. tn. France dep. Aube, 29 m. E Troyes, agreeably situated, r bank, Aube, here crossed by a bridge at the foot of the St. Germain mountain, in a valley surrounded with picturesque hills covered with vineyards. In general it is badly built, and the streets inconveniently laid out. It has two ancient churches, one of which is of large dimensions and an hospital founded in the 11th century. On the neighbouring mountain of St. Germain are the remains of a camp, said to have been occupied by Attila. Calicoes, waxenolls, mals brandy and vinegar are manufactured here and a considerable trade is done in corn, wine, wood, hemp, and wool is embarked on the Aube, and forwarded to Lyons and the S. of France. In 1681 above three-fourths of the inhabitants of Bar-sur-Aube were carried off by the plague. In 1814, a holy contested action was fought here between Napoleon and the allies. Pop. 4134.

BAR-SUR-SÈNE a tn. France dep. Aube, 19 m. S.E. Troyes r bank below, which is here a small limpid stream, and is crossed by an elegant stone bridge. It is walled, well built, and very clean with streets regularly laid out and has manufactures of paper, cotton, hosiery, cutlery and some tanneries. The principal trade is in corn, wine brandy, hemp, wool, and leather. Pop. 5163.

BARBARA, a steppes, Siberia, gov. Tobolsk and Tomsk. It is a vast plain, formerly a sea, between the rivers Irtysh and Obi, which constitute its N and E boundaries, while the Altai Mountains bound it on the S. about 400 m. in length and about 800 in breadth. This great expanse of flats is full of swamps and salt lakes but is in many parts fertile and a considerable portion has been brought under cultivation by colonists settled there by the Russian Government. Bears and wolves abound as well as domestic poultry and cattle. The horses are small, but so vigorous and nimble, that there is no part of Siberia where one is conveyed from place to place with such celerity as here. (Cookson's *Journey through Russia and Siberian Territory*)

BARBACOA.—1 A harbour N.E. and of Cuba; lat. (entrance) 22° 30' 50" N; lon. 74° 21' W. The opening is clear, but exposed to heavy swells.—2 A tn. situated on the S.E. point of the harbour and between the two embouchures of Barbacoa and Molasses beach. It is inhabited chiefly by pilots.

BARAHAT or **BARAHAT**, a tn. N Hindoostan, cap. Gurwal lat. 30° 45' N; lon. 78° 22' E. on the N.W. bank of the Ganges; once a place of some importance, afterwards an insignificant village but again rising into importance a station for pilgrims visiting Gangotri.

BARAICHKE, or **BARAICHKE**, a tn. and dist. Hindoostan, prov. Oude. The town stands in a pleasant situation 64 m. N.E. Lucknow, 66 m. N.W. Oude lat. 27° 38' N lon. 81° 30' E. It is a place of great antiquity and is described by Abu Fazl, in 1583 as a large city. The N part of the district is covered with dense forests but towards the river Goggera, the country is open, fertile, and tolerably well cultivated. Many of the old Fatah rans are found scattered over the district, and one of their chiefs has still the title of Khan of Baraichke.

BARANCA (*NORVA*) a tn. New Granada, at the junction of the Molinos with the Rio Magdalena, 46 m. S.E. Cartagena. It is a thriving place, and the point of embarkation of goods and travellers for Oribagua, going up the Magdalena, and of disembarkation for those coming down that river.

BARARELLO, a tn. Naples, prov. Salerno, 5 m. S.W. Capri-Isle. Pop. 2965.

Yates.

BARBANTA, one of the best peopled counties of Hungary, forming part of the circle beyond the Danube, and lying between that river and the Drave. It has an area of nearly 1500 sq. m. The surface is generally flat, and, where under cultivation, very fertile, yielding in abundance, corn, wine, fruit, and fodder but about a half of the whole is covered with forests. Great numbers of cattle are reared. The county is divided into six districts, containing one royal burgh (Windischke) one municipal town 11 market towns, and 337 villages. Pop. 285,000.

BARATARIA, an isl., bay and lake, U. States, Louisiana, N coast, Gulf of Mexico. The marsh is small, lies at the entrance of Barataria Bay lat. 29° N; lon. 90° W. is a strong military position, and affords a safe and commodious harbour for merchant vessels and small ships of war.—The bay 37 m. S. New Orleans, is surrounded by a flat marshy country and was formerly much resorted to by pirates.—The lake, a little W of the bay is about 80 m. long, and 8 m. broad.

BARBA, a river Guatemala rises in lat. 14° 48' N lon. 84° 45' W., and falls into the Caribbean Sea, by two branches, one terminating near Beaver's Island, the other several miles to the E. of it; the embouchures of both being nearly on the parallel of 14° N. The entire course of this river is about 60 m.

BARBACENA, a city Brazil, prov. Minas Geraes, 150 m. N.W. Rio de Janeiro, on the top of two hills in the terra Mantiquaria, about 8500 ft. above the sea. lat. 21° 22' E. lon. 45° W. It enjoys a mild climate has broad straight streets, the two principal ones are paved, and have a footpath on either side the houses are low and have gardens in the rear. The parish church is in the middle of a large square, in which the two principal streets meet, and there are, besides, in Barbacena three other churches, a townhall, prison, and primary school. The chief occupations are extracting gold, and exporting large quantities of cotton and coffee to Rio de Janeiro. Pop. in and dist. including three parishes besides that of Barbacena, 12,000.

BARBADOR, an auriferous river Brazil, prov. Mato Grosso which falls into the Paraguay on its r bank, lat. 15° 8' lon. 57° 30' W. after a S.E. course of 130 m.

BARBADOR, or **BARBADORA**, the most E. of the Caribbean Islands, standing apart from that chain at about equal

distances (76 m. E.) from St. Louis and St. Vincent. Its capital Bridgetown, situated at the S.W. corner of the island, is in lat. 13° 4' 12" N lon. 59° 57' W (s.) Barbadoes is 31 m. 61

In length, 12 is breadth, and 55 in circumference, excluding the shoals of the bay, and contains about 166 sq. mi. or 106,570 ac. It is nearly encircled by coral reefs, which in some places extend 8 m. to seaward, and render the navigation dangerous. It has no mountains, nor any very elevated spots, the highest, Mount Hillaby being only about 1146 ft. above the level of the sea. The surface, however, is much diversified, and often picturesque, presenting on a small scale, a succession of valleys, hills, table-lands, cliffs, gorges, and ravines, some of the latter exhibiting perpendicular walls of 150 ft. The low lands are of limited extent, and are confined to the E. B. and E. E. parts of the island. About a seventh part of Barbados consists of tertiary sandstones and limestones, rising to considerable heights; the remainder is covered by raised coral reefs, divided by vertical walls of coral rock, some of them nearly 200 ft. high, into six terraces indicating many periods of upheaval. In the lowest of these terraces, 15 or 20 ft. above high water Indian hatchets have been found, showing that the last movement had taken place within the human period. With exception of the most minute forms of organic life marine life is almost entirely absent, no fossil remains of any kind have been hitherto discovered in the rocks which compose the island. It is not supposed that Barbados possesses any of the precious metals. Bituminous coal is found in many places, and is used as fuel in furnaces. Petroleum, potter's clay and ochre yellow and brown, also abound. The clays, which are more or less mixed with all these matter were formerly extensively used for the preparation of earthenware, and the ochre is sometimes employed as paints by the labourers. There are also several mineral springs on the island, but no streams deserving the name of rivers although some are so called they are mere streamlets, ceasing during the tropical torrents, when they become impassable. The productive soil of Barbados is of a reddish brown hue on the higher table-land in the low lands it is black, and somewhat reddish in the parts where it is shallow. This black mud is the best suited for the growth of the sugar-cane. It is considered one of the best soils in the W. Indian Archipelago, being open to the sea breezes, and cultivated throughout, injurious miasmata are unknown. The most delightful months in the year are January and February the hottest, July, August, September and October when the heat is extremely sultry and oppressive. The heaviest rains fall in November and December Barbados is subject to hurricanes and thunder-storms of the most violent character. One of the most destructive of the former on record, occurred on October 10 1789 when 4326 persons perished, and the colony was damaged to the extent of \$1,850,564 sterling. Land-slips have frequently occurred by which houses and growing trees have completely changed their positions. There are now no woods or forests in Barbados, these having been all cut down to make way for agricultural operations. The indigenous mammyha comprises only the Barbados monkey the racoon, both animals nearly extinct, though formerly so numerous as to be objects of legislative enactment for extermination. An indigenous mouse, and two species of bats. The list of birds is extremely meagre, the number of indigenous species amounting only to 11 of which the Barbados blackbird is the most conspicuous. The island is now much infested with wild dogs—the progeny of the domestic animals imported from Britain, chiefly by the labourers. These have turned wild, and have increased so rapidly as to commit the most serious ravages in the sheep-pens. A dog-law has been introduced for their destruction, but hitherto without effect. The cattle used in the island are chiefly imported from Porto Rico, Argentina, and the Orinoco the horses mostly from the U. States. An extraordinary mortality amounting to 25 per cent. prevails here among the latter causing a large annual importation of these animals. Barbados possesses an unusual portion of cultivable soil. Out of the 106,470 ac. which its area contains, no fewer than 100,000 are under cultivation, 40,000 of which are annually planted in sugar-cane the remainder being either appropriated to provisions, or used as pasture. The cultivation of the natural pasture grasses, however seems to be neglected for that of sugar; the best development of the former having been arrested by the progress of the latter, leaving only the poorest and worst. There is also much room for improvement in some of the agricultural departments. 'Few

things strike a stranger more, on his arrival at Barbados, than the bad state of the working cattle and seeing 10, and sometimes 12 weeks once drawing in a waggon. The same number are put to the plough. The cattle are generally of a small breed, and much out of condition, which seems attributable both to the scarcity of sufficient food, and to the want of shelter from the sun and rain. —(Governor Reid's Report, May 24, 1848.) The account given by Mr. Henry Dummett, a native of Barbados, and a large proprietor there, is somewhat different, and generally suggestive of other inferences. In his evidence before the select committee on sugar and coffee planting, in March 1848 he states, 'That mules and horses are generally employed, and have nearly superseded cattle that the cultivation of the island, particularly that of the sugar-cane, is perfect, and that improvements of every nature are eagerly sought after and adopted. The staple articles produced in the island for export, are sugar raw, rum, aloes, and cotton. Fustic, logwood, rum, indigo, and tobacco, were formerly exported in considerable quantities, but the cultivation of the last two has been long since entirely abandoned. Rum is still produced in considerable quantities but fustic and logwood are now raised in small quantities only. In 1838 there were 22,500 head of sugar exported being the largest quantity in one year up till that time. The exports subsequently fell off, but again increased greatly so that in 1860 there were exported 43,865 head of sugar and in 1861 49,845 head of sugar. The following table presents a general view of the trade of the island at intervals, from 1840—

TRADE AND NAVIGATION OF BARBADOS.					
COMMERCE.			SHIPPING.		
Year.	Imports.	Exports.	Owning.	Invest.	
1840	\$945,255.	\$605,450	73,611 tons.	75,223 tons.	
1845	945,130.	679,908	100,226	90,480	
1848	862,846.	601,900	108,648	94,648	
1850	941,701	694,294	119,910	153,910	
1861	922,875	678,376	129,287	179,287	
1862.	916,143	1,067,613	119,349	176,113	

The trade with Great Britain has always been, and continues to be, the most important, surpassing in amount the whole commerce of Barbados with all other parts of the world. More than three-fourths of the exports go to Great Britain, principally sugar molasses, cotton and aloes the remainder to the other W. India islands the British N. American colonies the U. States, and various other foreign parts. The chief imports from Great Britain, amounting to more than a half of the whole trade, consist of corn, flour, manure, salted meat, rice, spirits, refined sugar, tea, wines, and miscellaneous goods. All British manufactures, or articles of British growth are free of colonial duty. The number of vessels belonging to the colony in 1862 was 81 tons, 1787 of these, 12 were above 50 tons. The revenue of the island chiefly derived from the exports and imports, from duty on brandy and rum, and from surplus tonnage and crown duties, amounted, in 1845, to 257,751 2s. 6d. the expenditure, to 252,847 19s. 4d. In 1862 the revenue had increased to 298,562 of which 251,480 were derived from customs, and 47,082 from rum and the expenditure to 292,463. The moral condition of the lower classes in the island is far from being satisfactory, although it is said to be improving. This, however, does not appear to be the case from the report of Governor Reid, who, in his despatch of May 24, 1848, says, 'That the number of marriages contracted, does not show the progress making in this respect (social order) and that marriage is too often contracted in order to obtain legal powers over younger women. Diabolical too with a plurality of women, the wife, are maintaining many small evils in the W. Indian which Government should strive to diminish. The condition of the agricultural population of Barbados, which is estimated at 46,000 souls, on the whole, to be tolerably comfortable. A labourer's day with a cottage, is about 10s. per day; without, from 1s. 0d. to 1s. 2d. nine hours work but working only five days in the week, Saturday being a holiday or employed in the cultivation of his provision grounds, which, according to the estimate, yield so abundantly that a single day's labour is sufficient for a week's subsistence. The local government of Barbados consists of a governor-in-chief, assisted by a council. The governor has the title of Excellency and is invested with the chief civil and military authority. The council have, by courtesy,

while in the colony the title of Honourable, and consists of 12 members, who are appointed by mandamus of the sovereign. The house of assembly is composed of 24 delegates, elected annually two for each parish, and two for the city of Bridgetown, by the body of the people. The governor may at any time, of his own authority, adjourn, prorogue, or dissolve the assembly. The courts for the administration of civil justice are, the courts of chancery of common pleas, of exchequer, of ordinary of admiralty of error, and of exchequer. For the administration of criminal justice, there is the court of grand sessions, and the court of admiralty sessions. An efficient police force was established in the island in 1835. In 1848, the militia of the island amounted to 1735 men, including officers, &c.; but the usual number is from 1000 to 1100, the year named having been one of political excitement. The island is divided into 11 parishes, and has 11 parish churches, and 83 chapels, chapel-schools, or licensed places of worship. There are in the island, besides four missionary stations belonging to the United Brethren, the congregations of which amount altogether to 8911 individuals: eight churches and four meeting-houses belonging to the Wesleyan Methodists, the united congregations of which amount to 6580 persons, and a Jewish synagogue, one of the best, and most buildings in the West Indies, although the congregational numbers only 70 persons. There are but few R. Catholics on the island, but there is a priest stationed there chiefly in consequence of the military, amongst whom there are always many of that persuasion. The whole church accommodation of the island comprises 15,500 sittings, for a population of about 128,000. Of the schools of the island generally Governor Ridd in the despatch previously referred to, reports unfavourably. He says he found them in a very low state, and not as all suited for the wants of the colony. Since that time they have been greatly increased in number. In the year 1859 they had attained the number of 101 at tended by 10,896 and in 1862 they had still further increased to a number of 156, attended by 12,847. There are also Sunday-schools attached to nearly all the churches and chapels. Some of the public schools are supported by parochial grants the children being in some cases, maintained and clothed as well as instructed. At the head of the educational establishments of the island, stands Colington College, founded by Col. Colington, a native of Barbados, who died in 1710. The building was begun in 1716 and was finished in 1721. It is beautifully situated on the E. side of the island, at the distance of about 14 m. from Bridgetown and has a disposable annual revenue of £2610 expenditure in salaries to professors, schoolmasters, &c. £2610. Neither bookellers nor public libraries are so numerous in the island as might be desired of the former there are only two and of the latter there were none till 1847 when one or more were established, through the instrumentality of Governor Ridd previously however several libraries belonging to private associations, including a clerical library were in existence. The benevolent and charitable institutions are numerous, and on a scale highly creditable to the Christian feeling of the inhabitants. The principal institutions of this kind are, the general hospital opened in 1844 with accommodation for 77 in-door patients, and a lunatic asylum. There are, besides a large and commodious almshouse in Bridgetown, and a long list of minor charities, supported by voluntary contribution. There are several literary and agricultural societies, and five weekly newspapers; one of which, the Barbados Mercury has existed for upwards of 114 years.

There are several small towns on the island but the principal is Bridgetown, which was erected into a city in 1842 (see BRIDGETOWN).

The early history of the island is involved in uncertainty and the events of the settlement variously related. It would seem, however to have been known to geographers in the early part of the 16th century as appears from a manuscript chart of the world preserved in the British Museum, and believed to have been executed previous to the year 1528, where it is shown in correct relative position to the other Caribbean Islands under the name of *Bernado*. No notice, however, was made in Barbados till 1625, when Mr. William Courteen, a merchant of London, established a colony there, although it had been visited 50 years before by an English vessel, called the *Oliver Blossom*, the first ship from

that country. It is supposed, that had ever touched its shores. It has remained in the possession of the British ever since the founding of the settlement in 1625.

The population of Barbados is the most dense of any spot of land in the world, and is fast increasing. In 1861 it was 135,998 of whom 95,069 were black, and in 1862 it had increased to 138,727 of whom 100,000 were black, giving an average of 930 to the sq m. being nearly three times that of England—(Schomburgk's *Barbados*, *Peri*, *Agortia*, &c.).

BARBARA SANTA.—A small ill, channel, and in California. The island is in lat. 38° 28' N. lon. 119° 5' W. (n.) The channel is the narrow passage between the island of Santa Cruz and the mainland the S. entrance of which is crossed by the parallel of 34° N. The river flows at the head of the port or harbour of San Felipe, 280 m. S.W. San Francisco. lat. 34° 24' 13" N. lon. 119° 41' W. (n.)—A port, N. and of the Isl. Campana, W. coast Patagonia; lat. 48° 5' S. lon. 76° 20' W. (n.)

BARBAREEN a small town and seaport, Caylen, W. coast, dist. of, and 24 m. S. Cultra; lat. 6° 29' N. lon. 80° 5' E. Most of the house is covered with tiles. It has manufactures of cordage and iron, is a port of entry and as port. The principal articles of commerce in consequence, of which large quantities are produced in the vicinity—(Caylen Gazette).

BARBARY [anc. *Barbaria* or *Barbarorum Terra*], the most N. general division of N. Africa bounded, N. by the Mediterranean E. by Egypt S. by the Sahara or Great Desert and W. by the Atlantic Ocean. Its length, from E. to W. is about 5600 m. its breadth from N. to S. varies from about 140 to about 660 m. It comprises the empires of Morocco and Fez on the W. the French colony of Algeria, and the regency of Tunis in the centre and the regency of Tripoli, including Barca and Fozan, on the E. Its different parts were known to the ancients under the names of Mauritania, Numidia, and Africa Proper. Its superficial extent has been estimated at 650,000 to 700,000 sq m. The name has given rise to some dispute, but is probably derived from Berber the designation given by the Arabs to its ancient inhabitants, who were called *Barbari*, and whose descendants forming a large portion of the present population, still inhabit the mountains and valleys of the Atlas. (See ALGERIA, BARCA FEA, FEZAN, MAROC, TRIPOLI, and TUNIS).

BARBASTE, a town, France, dep. Lot-et-Garonne (Condome) close on the edge of the Goulle, 4 m. from Versac. The town, which is well built and has a cotton-mill, numerous vineyard-works, and several other factories lies at the termination of the ancient road commonly called Caesar's road or *Itinéraire*, which crossed the river by a bridge, at a point a little below that where a Gothic bridge of seven arches now stands. At one extremity of this bridge stands a large square building with walls of great thickness, and flanked at each of its corners by a square turret, which terminates in a point. This edifice, and the mills attached to it, having been the property of Henry IV., sometimes procured for him the surname of the Miller of Barbaste. Pop. 1715.

BARBASTO a city, Spain, Aragon, prov. of and 28 m. E.S.E. Huesca, in a mountainous district, occupying a fertility at the top of which stand the principal buildings and older parts of the town, and at its base runs the river Nera crossed by two bridges of stone, and one of wood. The city has straight, well-made, and paved streets, several squares, a cathedral parish church, college, Latin, and three other schools, townhouse, session-house, ecclesiastical court-house, extensive hospital, two prisons, several convents, with churches attached two palaces, a theatre, and ball-room. In the vicinity are the gardens and promenades, adorned with luxuriant trees and elegant fountains. It also possesses philosophical, agricultural, commercial and other literary and beneficent associations. The manufactures of Barbaste have greatly declined, consisting only of hats, hardware, cutlery, shoes, and ropes and a little trade is carried on in horned cattle, horses, and mules, reared in the vicinity; and two annual fairs are held. Pop. 6176.

BARBERINO DI MUGELLO, a town, Italy, Tuscany, dist. of, and 16 m. N. by S. Florence, on the Arno. Her houses are made here in large quantities. In the vicinity is the royal villa of Cafaggiolo, the ancient residence of the Medici. Pop. 5969.

BARBERINO DI VAL D'ELSA, a tn. Tuscan prov. of, and 14 m. S. by W. Florence, surrounded by a castle. The Barberini family, to which Pope Urban VIII. and several other popes, derived its name from this town. Excellent cheese, called *di Leontide*, is prepared here. Pop. 723.

BARBENTANNE, a tn. France, dep. Bouches-du-Rhône, about 4 m. S. Arles, at the confluence of the Rhône and Durance, in a wine and fruit district. The town, on the slope of a hill, surrounded by the ruins of an old castle, is well built, and has a fine promenade. The inhabitants, who are remarkable for their liveliness and love of dancing, are engaged exclusively in the culture of the ground, and more especially in that of vines and olives. Pop. 1831.

BARBEZIEUX, a small tn. France, dep. Charente 30 m. S.W. Angoulême. It is tolerably well built, and pleasantly situated in a wine and grazing district. Trade—principally in agricultural produce. It has also some manufactures of coarse hempen cloth, and extensive tanneries. There is a mineral spring in the vicinity. Pop. 2335.

BARBONA, a tn. American Ind. gov. Venice, prov. of, and 30 m. S.E.W. Palma, 1 bank, Adige, containing a parish church and an oratory. Pop. 2500.

BARBUDA, one of the Caribbean or W. India Islands, belonging to Great Britain, 27 m. N. of Antigua, of an oval form, 15 m. long S.E. to N.W. and 8 m. broad lat. 17° 23' N. lon. 61° 43' W. (n.) It is low level, and fertile, well covered with woods, stocked with deer and various kinds of game. Some dangerous reefs extend off the island. The climate is healthy and the soil so mild and pure, that travellers from other islands resort here for the benefit of their health. The island is a property of Government, the only one in the W. Indies, and belongs to the family of Codrington. It produces in great abundance, corn, cotton, pepper and tobacco but no sugar. It has no harbour but a roadstead on its W. side.

BARBY a tn. Prussian Saxony gov. of, and 14 m. S.E. Magdeburg 1 bank, Elbe. It is walled, and well built, has an old castle and three churches, with manufactures of linen and cotton, woollen, harness, and distilleries. Pop. 3400.

BARBY par Eng. Northampton 1535 ac. Pop. 623.

BAEJA, a dist. N. Africa, forming the E. division of the regency of Tripoli between lat. 26° 30' and 28° N., and from lon. 20° to 25° 30' E. length, N. to S., about 500 m. greatest breadth, E. to W., about 400 m. All ancient writers, with exception of Herodotus, represent the country as a desert, and this representation was generally believed even in modern times; but it is now ascertained, that though that part of it next the Libyan desert which bounds it on the S. is almost barren, the sides and summits of the hills in the E. and N. portions are fertile; both containing cultivated fields which yield luxuriant crops, and large tracts of excellent pasture. A little way inland an extensive plateau, broken by a range of hills, lies parallel with the coast. The utmost height of these hills does not exceed 1800 ft. The whole of this tract is thickly wooded, and covered with excellent soil. Among its vegetable productions are the pine, palm, date, fig, and olive, and a great variety of flowering shrubs including rose, laurestine, honey-suckle, &c. The principal cereals cultivated are Indian millet and oats. There are no rivers which contain water at all seasons, but a great number of mountain torrents, that pour down the ravines to the W., S. and E. and are soon lost in the sands amidst which, however are found the two oases of Amfijah and Sygual. The domestic animals, camels, horses, oxen, asses, sheep, and goats, are numerous, and form the chief wealth of the inhabitants, who are *Pederni* Arabs. Herds of grey camels, ibexes, &c., and all sorts of wild beasts, also abound. Bees, as called from the Greek *Apes* once contained two wealthy Greek colonies, one of the same name, and the other called *Cyrene* and was regarded as one of the chief granaries of the African coast. The Romans succeeded the Greeks and the remains of temples, aqueducts, and other great public undertakings, together with the discovery of numerous Greek and Roman coins, whose inscriptions identify them with the country, show at once the importance to which it had attained, and the amount of civilization introduced. All this, however, has long passed away, and the Arab is again sole master of the country. The seat of the fabulous Hyperborean gardens was placed here. Pop. estimated at 1,000,000.

BARCELONA, a prov. Spain, one of the four subdivi-

sions of Catalonia, bounded, N.E. by prov. Gerona, S.E. by the Mediterranean, S.W. by Tarragona, and N.W. by Lerdida area, 3605 sq. m. It is generally mountainous, especially the N. portion, being traversed by chains from the Pyrenees; the highest peak, the *Turron de la Loma*, on the confines of Gerona, is covered with perpetual snow. The mountains are mostly well wooded, and afford fine timber for ship and house building. One of the most remarkable objects in this province, perhaps in Europe, is a enormous mass of red sand near Cardener and nearly 4 m. in circumference, equally celebrated for the purity of the mineral and for the brilliant effect of the sun's rays on its crystal pyramids. The plains and valleys watered by the Llobregat, Besos, Tordera, and numerous other streams, all falling into the Mediterranean, are fertile, and yield good crops of wheat, rye, barley and other grain, fruits and vegetables, with abundance of oil and wine and the rich meadows support numerous flocks. The climate is variable, cold, and rough in the uplands but mild, salubrious, and clear in the lowlands, especially on the coast. Game abounds, and wolves and bears are sometimes met with in the wilder parts of the mountains. The manufactures are considerable and various, consisting of woollen, cotton, linen, and other fabrics hats, glass, soap, cutlery, ribbon, earthenware, gunpowder, coons, stockings, gloves and brandy tanneries, dyeworks and bleaching are numerous. Education in Barcelona is, perhaps, better attended to than in any other province in Spain benevolent institutions of various kinds, as well as schools for the instruction of the rising generation, being generally found in all towns of any importance. Probably in some measure owing to these advantages, crime (with exception of smuggling) has of late years been considerably on the decrease. Pop. 533,935.—(Madoz.)

BARCELONA, a seaport to Spain, cap. prov. of same name, Catalonia, 513 m. S.E. Madrid lat. (Mole light) 41° 22' 36" N. lon. 2° 11' E. (n.) It is semicircular in its general outline, and is both surrounded by walls and defended

by a citadel, which forms the N.E. boundary. It is not strong, however, in itself, being protected by the fort of Montjuic, occupying a height of that name in the N. The protection of this fort necessarily secures that of the town and citadel.

also. Barcelona is divided into two nearly equal parts by a finely-planned promenade, called La Rambla, stretching N W from the shore. The N W division forms the old, and the S W division the new town, the former consisting chiefly of narrow, crooked, ill-paved streets, while those of the latter are more spacious and regular. To the E. of the town, and S. of the dike is the extensive suburb of Barceloneta, laid out with great regularity built chiefly of brick, and occupied by sailors, and other seafaring people. Many of the houses of Barcelona itself are also of brick, but most of them, particularly in the new town, are of brown stone, several stories in height, and of an imposing appearance. In recent times, great improvements have been made. Gas has been introduced and extensive sewers have been constructed. Fountains of the finest water are found in every quarter and in addition to La Rambla, already mentioned, the Maralla de Tierra and the Maralla del Mar form almost untravelling promenades. The principal public edifice is the cathedral, which stands in the highest part of the old town. Its origin dates from the first ages of Christianity, but its present form of Gothic architecture appears to belong to the end of the 13th century. It is approached by a lofty flight of steps and surmounted by two towers. It is by no means an elegant structure, and part of it, particularly its portal, remains unfinished. There are numerous other churches, several of them ancient and handsome, but scarcely entitled to a separate notice. One of the most remarkable buildings of Barcelona is the Palacio de la Deputacion, where the Cortes of the province used to hold their sittings. It is in the Greco-Roman style, and is now called the Audiencia, being occupied by the courts of law. The records of Aragon and Catalonia are kept in it. Some of them are of the ninth century, and the whole collection is said to be one of the most interesting of the kind in

of cotton and woolen goods manufactured in one year has been estimated at \$448,000, and the number of them annually exported at 700,000, value \$70,280. Its other chief exports are iron, copper, tin, cork, fruit, wines, and bananas. Its principal imports are Baltic timber wax from Africa, stock fish from Newfoundland in British bottoms, Swedish iron, Styrian steel, Riga and Petersburg hemp, copper and iron ware from Germany and various articles of French and Italian manufacture. The following tables will show the shipping trade of the port and district of Barcelona in the years 1838-58—

In 1838, 105,910 bales of cotton were imported into Barcelona, chiefly from England and France. The trade with Great Britain though greater than it was twenty years ago is still far below what it was at the end of last century when many hundreds of British vessels entered the port in the course of the year. The principal trades in the town are shoemakers, tailors, brass-makers, armourers, cutlers, carpenters, iron-brokers, silk weavers, cabinet-makers and turners. The port of the city as commodious but obstructed by a bar which will not allow of vessels entering that draw more than 12 ft. water; large ships are, therefore obliged to anchor outside. On the mole, which is 400 fathoms in length, there are a lighthouse, two batteries, and two redoubts.

Barcelona is said to have been founded by the Carthaginians under Hamilcar Barca, hence its name. After the fall of Carthage, the Romans first became its masters, then the Goths who possessed it, with the rest of Catalonia, till the year 714 when it was conquered by the Saracens. In 805 it was retaken from them and governed by French viceroys. In 874, it became an independent republic, and maintained its independence till the annexation of Catalonia to the crown of Aragon in the 13th century. In 1714, it was besieged by the Duke of Berwick, for Philip V. of Spain and taken, after a defense equaling in desperate valor that of Saragossa in more modern times.

In 1785, when the population was two-thirds less than now the number of monks in the city was 1213; of secular priests, 1218 and of nuns, 654. Pop (1857) including Barceloneta, 251,015.—(Maison's Parliamentary Papers.) BARCELONA (New) a tri. and port, Venezuela, at the mouth of the Orinoco on the Caribbean Sea, lat. 10° 10' N., lon. 64° 47' W. The houses are mostly of mud, ill constructed and poorly furnished. The streets are unpaved, and, in wet weather extremely filthy while, in dry the dust is intolerable. Its harbour and shipping are protected by a fortress, called El Morro de Barcelona, situated on a hill which rises to about 400 ft. above the level of the sea. In 1847, the number of vessels visited was 27; tons, 5341.—Cleared, 26; tons, 4487. Barcelona is a most unhealthy place, even the

THE CUSTOM-HOUSE, AND STREET OF THE CUSTOM-HOUSE, BARCELONA.—From George L. Thompson.

existence. Of modern buildings, the principal are the custom-house, the exchange, the theatre, and the prison. The conventional establishments, though many of them have been suppressed are still numerously 23. The principal educational establishments in the university, which, though it had almost fallen into complete decay has lately been revived, and promises again to become worthy of its early fame. At present its chief functions are performed by the colleges, in which a complete course in the arts and sciences is given. In connection with it are numerous schools, in which elementary education is provided for all classes. Theological education is given chiefly in the Seminario Conciliar while there are several separate establishments specially set apart for the study of medicine. Charitable and benevolent institutions are numerous; the chief being the Casa de Caridad, Casa de Misericordia, and the hospital of the Holy Cross. Among literary institutions, may be mentioned four public libraries and two museums, the Academy of Belles Lettres, and the Royal Academy of Arts and Sciences, &c.

Barcelona is the seat of various manufactures, the principal of which are silks, woollens, sewed cottons, calicoes, lace and shoes; and it also has a foundry for cannon. The greatest

excessive heat and moisture of the air. The country around, however, is extremely fertile. The chief trade of the town is in burned cattle, jerked beef and hides and of agricultural produce, in indigo, manioc, cotton, and coconuts. Pop. (1807) 15,000; half whites, and half mulattoes and negroes.

BARCELONETA, a tn. Venezuela, 105 m. S.E. Angostura, L. bank, Paraguary. Pop. about 3000.

BARCELONETA, a tn. France, dep. Basses Alpes, on the Italian frontier. 80 m. N.E. Digne. It stands in the middle of the valley of some name, here 1½ m. broad. The two principal streets, the houses of which are lined with a row of arcades cross each other at right angles, and have smaller streets, laid out in regular order opening into them. Most of the houses have their windows as much as possible to the S. with very small openings to the N. in account of the extreme severity of the cold when the wind blows from the mountains. At the end of the main street, towards Italy, a handsome square planted with trees forms an agreeable promenade, and round it are placed the barracks, courthouses, prisons, and other public buildings. Snow falls heavily in winter during which, the arcades already mentioned form convenient and sheltered pathways. Like most frontier towns, Barceloneta has suffered by war having been burnt no fewer than seven times. It is now however, perhaps the prettiest of all the French towns in the Alps. Silk, serge, and small drapery are manufactured here, and as it is the central point where the inhabitants of the valley dispose of their produce, and purchase their household and other articles the Saturday market has the appearance of a fair. The valley of Barceloneta formerly belonged to the Counts of Provence, subsequently to Savoy but is now in France. The people have always been noted for their love of liberty and at the close of the 18th century when an attempt was made to reverse French taxation which had previously been abolished the measure was abandoned on account of the clamour it created the mountaineers willingly paying a sum of 100,000 livres (about 24,000) for exemption from salineral claims. Pop. of 1905

BARCELLOS.—1 A tn. and par Portugal prov Minho, chief town of dist. of same name, r bank, Cávado here crossed by a handsome stone bridge 37 m. N. Oporto. It is surrounded by walls, fenced with towers and has broad and straight streets, lined with well-built houses, contains two churches, two monasteries, an hospital, a posthouse, and a grammar-school stands in a rich and well-cultivated district, and has several important fairs. Barcellos is said to have been founded by Hamilton the father of Hannibal, 250 years a.c. Pop. 8900.—2 A tn. Brazil prov Para, r bank, Rio Negro lat. 1° S. lon. 65° W. It has a church and, at one time, was the residence of the chief of the district of Rio Negro. Now it is inhabited by Indians, and by a few people, partly fishermen, agriculturists, and merchants.—3 A vil. Brazil prov of, and 100 m. S.E.W. Bahia, advantageously situated on the river Marahim. It has a church and primary school and its inhabitants are chiefly engaged in agriculture.

BARCHESTON-WITH-WILLINGTON par Eng. Warwick 1475 ac. Pop. 209.

BARCHEVELLO a market in Meuse Canal prov of, and 23 m. N.E. Felda, r bank Werra. It contains a palace, a castle, a church, a stamp-mill, and has four yearly markets. Pop. 1690

BARCOMB, par Eng. Essex 4963 ac. Pop. 1076.

BARCO or **BARDO**, a vil. and fortress, Sardinian States, Piedmont, L. bank, Doria, 23 m. S.E.E. Aosta. It stands on a height at the S. entrance of the valley of Aosta, and, in 1800, after a siege by the French, was taken and razed. It has since been rebuilt.

BARDEL, a tn. Japan, Bay of Totomi, in the S.E. of the Isl. of Kijohon. It is a place of some note, and has both a considerable general trade and fishing.

BARDEN-BURG, a tn. Blanches France, prov of, and 5 m. N.E.E. Aux-la-Chapelle. It has a St. Catholic parish church, and three yearly markets. Coal is worked in the neighbourhood. Pop. 1290

BARDFIELD, three pars. Eng. Essex.—1, Bardfield (about, 3689 ac. Pop. 1010.—2, Bardfield (Lattin, 1710 ac. P. 950.—3, Bardfield-Sidney or Little Lattin, 1111 ac. P. 960

BARDI a tn. and com. Italy duchy of and 30 m. S. by

E. Piacenza, L. bank, Ceno, commanded by a castle situated on a hill S. the town, erected in the ninth century. In the vicinity are forests of chestnut, beech, and oak, and abundant pasturage for cattle. Two annual fairs are held. Pop. of 720, com. 7314.

BARDIA, an Isl. Gulf of Suez, E. coast, Lower Suez, opposite the embouchure of the Teyring. lat. 10° 50' N lon. 99° 50' E. (c.) It is 70 m. in length, 10 m. in breadth, very lofty and is separated from the mainland by a channel about 2 m. in width.

BARDNEY, par Eng. Lincoln 5490 ac. Pop. 1829

BARDOLINO a vil. Austrian Italy gov Verice, 15 m. N.W. Verona, having a small harbour on the E. margin of Lake Garda, 7 m. N. Peschiera. Near this village, at the famous battle of Rivoli, January 1797, the French under Bonaparte defeated the Austrians under Alvinci. Pop. 1890

BARDONNEGHELIA, or **BARONNEGHELIA**, a vil. Sardinian States, Piedmont, prov. of, and 18 m. W. Suez, on a strait of same name, a tributary of the Doria. It has some trade in cattle. Pop. 1000.

BARDOWICK a vil. Hanover prov of and 4 m. N. Lüneburg, on the Ilmenau. It is a very ancient place, and has a cathedral church. The chief occupations are field and garden culture and linen-weaving and some trade is done in seeds. Pop. 1400.

BARDREY par Eng. York W. Riding 3487 ac. P. 898

BARDSFY an Isl. N. Wales co. Carnarvon in the Irish Sea, at the N. point of Cardigan Bay lat. 53° 45' N lon. 4° 48' W. (a.) about 2 m. long and 1 broad, called in Welsh *Jups Eula* [the island of the current] from the violence of the stream in Bardsy Sound. On the S.E. side is a small harbour capable of admitting vessels of 40 tons burden. There is a lighthouse on the island, with fixed and revolving lights, 129 ft. above the sea. The inhabitants are chiefly employed in fishing and agriculture. Area 490 ac. Pop. 92

BARDT or **HARDT**, a tn. Prussia, prov. Posen, on the Blannese or Gulf of Bayk, a large lake communicating with the Balha, 17 m. W. Stralsund lat. 54° 21' N lon. 13° 42' E. It is old, but tolerably well built has manufactures of soap, candle and tobacco and by means of its harbour which is good, and its communication with the Bal, carries on a considerable commerce. Pop. 4400

BARDWELL, par Eng. Suffolk 3144 ac. Pop. 898

BARÈGES, or **BARÈGES** (see. Volpère) a village in France, dep. Hautes-Pyrénées, 22 m. S. Tarbes on the Gave de Bastan celebrated for its hot sulphurous springs. The narrow valley of Barèges contains 11 villages, perched like eagle's nests, high up in the mountains, or on little plateaux formed by the debris that has fallen from them, and affording a fine view of ground for cultivation. The village of Barèges is composed of a single tolerably spacious street, of about 80 good houses, intended principally for the accommodation of the visitors to the baths. It is a dull-looking place, but some of the widest scenery of the Pyrenees is in the neighbourhood, and the road that passes up the valley from Pierrefitte and Luz is considered an extraordinary effort of engineering skill. From June to September the place is crowded with invalids, sometimes to the number of 800 besides the soldiers in the military hospital. The remainder of the year is winter but snowfalls in summer are not uncommon. There are six springs, varying in temperature from 82° to 111°. Their principal ingredient is sulphate of sodium, with portions of carbonate, nitrate, and sulphate of soda; acids, sulphureted hydrogen, and animal matter. They seem principally beneficial in rheumatic complaints, cutaneous affections, ulcers, old wounds, and contractions of the muscles or tendons. The inhabitants are remarkable for their skill in knitting, and many articles of dress are very tastefully got up. The ladies dresses called *barèges*, take their name from this place.

BAREILLY a dist. Hindoostan, Delhi, between lat. 28° and 29° N. bounded N. by the Karamon hills, W. by the Ganges, E. and S. by part of the Oude territory and S. by W. by the Purneah, Alighur, and Meerut districts, area, 5600 sq. m. The soil is well watered by numerous small streams. To N. of Rampoor the Koolis is navigable during the rainy season, and serves to float down large timber. In summer the heat is intense; but in winter, with E. winds, the thermometer falls below 50° Fahr., and water freezes in the tanks. The surface, in general, is level, and the soil excellent;

date-palms, bananas, walnut, apple, and pear trees, vines, &c., are plentiful. Sugar and grain are grown everywhere, and, together with rice and cotton, bring the highest prices. The chief imports from the lower provinces are silks, salt, coarse sugar, cottons, ordinary cheap trinkets, and coral beads. From the hilly country and even from Tibet, goods are transported on the backs of goats. The Mohillies or Patane, of this district, are a tall and handsome race of men, and comparatively fair and well-featured. The tribe of Bengalis (carriers and bullock-drivers) are estimated at 14,000, all Mahomedans. Bareilly formed part of Rohilkhand previous to the conquest of that country in 1774 by the British. In 1801 it was ceded to the East India Company by Viceri Shaj-ud-Daulah, Nabob of Oude.

BAREILLY is a Hindoostani, esp. of above dist., on the united streams of the Jomah and Bunkra lat. 28° 38' N lon. 79° 30' E.; 181 m. E.S.E. Delhi and 148 m. N.W. Lucknow. The site of Bareilly is elevated and pleasant; the principal street is nearly 8 m. long, and the houses although mostly of one story only are well built. In some other parts of the town, the houses are mere huts or hovels. There are here several mosques, and an old fort in ruins. The civil and military servants of the E. India Company live in encampments S. of the town, where a new and strong quadrangular citadel, surrounded by a ditch, has been built. The articles manufactured here, wholly by the Mahomedans, are chiefly warlike cutlery of all kinds, such as swords, daggers, &c. also bows and arrows, saddles, and horse trappings, fine carpeting, embroidery and jewellery. Bookbinding and engraving, shoe-making, tailoring, tanning and dressing leather and all the minor trades from pursuing which the Hindoo is prohibited are likewise carried on by them. The brass water-pots of Bareilly are much valued, as well as the cabinet-work, painted black, varnished, and adorned with a yellow pigment, in imitation of gilding. Bareilly possesses 181 Purban and Hindoo schools and some hundreds of seminaries, pretty well attended, besides an English college, teachers of medicine, &c. A mission school under the auspices of the Company had, in 1841 about 70 Hindoo scholars. Bareilly is the head-quarters of a civil establishment and circuit court, to which nine other districts are subordinate. The lands in the neighbourhood are but 8 ft. above the waters of the Ramganga, and are annually inundated. Pop. (one-third Mahomedans) 65,795.—(Hamilton's *East India Gazette, Parliamentary Papers*.)

BARENTIN is a town, France, dep. Seine-Inférieure (Normandy) r bank, Ausserre about 10 m. N.W. Rouen with manufactures of handkerchiefs and calicoes, cotton, paper and oil mills. There is also a mill for spinning flax, which has 500 spindles. Pop. 2278.

BARENTWELL, or **BARTONWELL** is a vil and par. con. of, and 16 m. E.S.E. Zetrich, on a height near a stream of same name, which traverses the parish, and is here crossed by a stone bridge. The church is new and handsome, and possesses a fine collection of bells. The greater part of the inhabitants are employed in spinning and weaving silk. Pop. 8462.

BARETOUN (A1) [*anc. Perestom*] is a town, Egypt, on the Mediterranean, on the borders of the desert of Barca lat. 31° 30' N lon. 27° 30' E. It is now perhaps better known by the name of Port Mhadid or Barak Marra. Its harbour is good, and suitable to carry on a considerable trade.

BARLEUR, a seaport in France, dep. Manche (Normandy) 15 m. E. Cherbourg lat. 49° 40' 6" N lon. 1° 50' 50" W [n]. It is situated on the peninsula of Cotentin, in the English Channel and has a harbour as small as surrounded with rocks and every way so ill adapted for the purposes of navigation, that the only wonder is, not how it should now have ceased to be, but how it ever could have been a port of any consequence. Accordingly it deserves notice at present solely on account of interesting historical associations. In the 15th century Barleur was more frequented than any other port of Normandy; and, after the Norman conquest, it was the principal point of communication with England, and it was on one of the rocks near the port that William, only son of Henry I., was shipwrecked in 1120 and perished, with several members of the royal family and 140 young English nobles. In the 18th century, Normandy was ceded to France, when the trade of Barleur was transferred to Cherbourg. In 1846, and again in 1845, Barleur was pillaged by the English.

At the close of the 16th century the fortifications were destroyed by command of Henry IV. of France. Small vessels only can now enter the harbour, but there can be no doubt that it admitted vessels of considerable burden during the Middle Ages. It has two lighthouses, with fixed lights, neither of which can be seen from any great distance at sea. The little traffic now carried on is in flax, hemp, butter, &c. and fish. Pop. 1185.

BARFORD six pars. Eng. t. 1 par. Norfolk; 1059 ac. Pop. 430—3 par. Warwick 1640 ac. Pop. 672.—5 par. Bedford (Great) par. Oxford 1180 ac. Pop. 859.—4 par. Bedford (Great) par. Bedford 2830 ac. BARFRESTON or **BARSTON** par. Eng. Kent 500 ac. Pop. 181.

BARGA DE GARFAGHANA, a town and com. Tuscan dist. of, and 26 m. N. Pisa, near the L. bank of the Larcina. It has a handsome collegiate church and a powder manufactory. Beautiful jasper is found in the vicinity and abundant forests cover the mountain sides. Pop. 7194.

BARGE is a town, Sardunian States, Piedmont, prov. Saluzzo at the foot of Mount Monbracco 1 bank Granarolo, 38 m. S.W. Turin. It has a communal college manufactures fire-arms, and carries on a brisk general trade. Slaves are quarried in the neighbourhood. In 1808 it suffered greatly from an earthquake. Pop. 7000.

BARGOUZINSK, a town, Siberia, gov. Irkutsk, esp. dist. of same name, 80 m. above the mouth of the Barguzin, which, after a course of about 300 m. falls into the E. side of Lake Baikal. In its neighbourhood are thermal baths, and the bitter lakes from which the purgative salt of Siberia is obtained.

BARIHAM three pars. Eng. —1 par. Haddington 700 ac. Pop. 108.—2 par. Kent 4600 ac. Pop. 1103.—3 par. Suffolk 1806 ac. Pop. 770.

BARHOLM par. Eng. Lincoln 1290 ac. Pop. 351.

BARI, a vil in Sardunian States near the E. coast, prov. Lanusei, 65 m. N.N.E. Cagliari. It is very unhealthy; but has a small harbour at which some corn and wine are shipped. Pop. 1500.

BARI (Tanna Di) a prov. Naples bounded N and N.E. by the Adriatic N.W. prov. Capitanata, S.W. and S. Frosinone, S.E. Orange, greatest length, from N.W. to S.E. 60 m. average breadth about 34 m. area, 1490 sq. m. In the S and S.W. it is traversed by an offshoot of the Apennines, but the province, as a whole, is perhaps the most fertile and best cultivated in the kingdom. It has three lakes, and numerous mountain-torrents but the only river of the least consequence is the Ofanto and even it is almost confined in its course to the N.W. frontier. The principal products are corn, flax, tobacco, cotton, wine, olives, and saffron. Large numbers of sheep, goats, and asses are reared. The principal manufacture is salt. Some saltpetre also is obtained. Bari takes its name from its capital. Pop. 426,000.

BARI [*anc. Barium*] a seaport in Naples, prov. and esp. of Terra di Bari W. shore, Adriatic 60 m. N.W. Taranto; lat. 41° 42' N lon. 16° 52' 30" E. [n]. It stands on a small promontory and is defended by walls and a castle. It is a general mart and houses busy barks. The sea port is a handsome structure, with a lower terrace of 360 ft. high. Other public edifices are, the celebrated priory of St. Nicholas, founded in 1087 and still resorted to by pilgrims; the royal lyceum or academical school, with 16 professorships of sciences, letters, law and medicine; the college, founded in 1817 for the education of the nobility; the diocesan seminary, several parish churches and convents, an orphan institution, two hospitals, an asylum, with extensive magazines. The sea port is a most beautiful. Bari is the seat of a cardinal and archbishop, and of an archiepiscopal, metropolitan to the seat of Bitonto-st-Bari and Conversano. It has manufactures of cotton and linen goods, hats, silk, soap, and glass. The *agave scolymifera* or *Saccharifera*, so generally used as a liquor throughout the kingdom of Naples, is prepared here in great perfection. The port is small, and almost choked up with sand, but the roadstead affords good anchorage-ground. Trade, principally with Venice, Trieste, and the coast of Dalmatia. Exports—wine, grain, almonds, oil, and cotton, produced in the surrounding district. Bari, under the Roman, was governed

by the west magistratus. On the hill of the amphitheatre, it passed into the hands of the Saracens, and afterwards into those of the Normans, who became masters of Apulia, and had their government in this town. It was thrice taken and destroyed, and thrice rebuilt on the same site. Pop. 31,372.

BARIGIANO a *tu. Naples*, prov. Avellino Ultra I., 11 m. S.W. Aquila. Pop. 2000.

BARILE, a *tu. Naples*, prov. Basilicata, 4 m. S.E.E. Melfi, agreeably situated on a hill. It was founded by a Greek colony of the Lower Empire, and the ruins of the Greek church were preserved so late as the 17th century. It has three churches. Pop. 8730.

BARIMA a headland and river, British Guinea. The former is the extreme N.W. point of that territory on the S.E. side of the estuary of the Orinoco lat. 5° 56' N. lon. 60° 40' W. (n.). The river after a course of about 60 m., almost precisely parallel with the coast, falls into the estuary of the Orinoco a little further up than point Barima.

BARJAC—1. A *tu. France*, dep. Gard, 17 m. E. Alais, at the foot of the Causse; with a cold mineral spring, and is the neighbourhood a quarry of excellent stone, for building or sculpture. Pop. 1745.—2. A *tu. dep. Lozère*, 1 ep. 1028.

BARJALS, a *tu. France*, dep. Var 9 m. N.W. Brignoles. It is well built, and the environs are singularly picturesque. The chief products of Barjals are wheat a kind of cake, made of almonds and honey for which there is a great demand vermouth, gins, and earthenware. It has also a refinery of wax, paper and fulling mills, tanneries, and distilleries. Its trade is in oil, burning oils, resins, and olives. Pop. 3181.

BARKEING a *tu. England*, co. Essex, 1 b. Riding, about 5 m. above the junction with the Thames, and 7 h. E. London; consisting chiefly of one principal street; houses mostly of brick, and generally well built wall lighted, but badly supplied with water. It has a parish church, a handsome structure, with a lofty tower and containing some ancient monuments a Wesleyan and an Independent chapel and a meeting-house belonging to the Plymouth Brethren, a national infant, and Plymouth Brethren schools, a mutual improvement society a friendly society and a periodical lending library. No manufactures but the fishing trade is carried on to a great extent. There is a convenient wharf at Barkeing creek, which is navigable to afford for vessels of 80 tons. Area of par. 12 741 ac. Pop. 9988.

BARKEING *See* Eng. Suffolk 2164 ac. Pop. 1856.

BARKOUL, or *Taris-Si*, a *tu.* and lake Mongolia, prov. W. Kham, on the N.W. margin of the desert of Gobi. The town is in lat. 48° 40' N. lon. 94° E. a little S.E. from the lake, and about 88 m. N. the important town of Kamsi or Hami. Barkoul has a considerable trade in provisions and clothing, and is governed, along with several other towns and settlements around it, partly by Chinese officers, and partly by the chieftains of the various tribes. The country around is cultivated to a small extent.—The lake is from 10 to 15 m. in length and about half that breadth.

BARLETTA a *tu.* Naples, prov. Terra di Bari, dep. of same name, W. shore, Adriatic, 38 m. N.W. Bari, lon. (telegraph) 41° 19' 15" N. lon. 16° 17' 30" E. (m.) It is a fortified place of the fourth class, and is surrounded by a single wall. The streets are wide, and well paved; the houses

high (of stone) and in general well built. In the market place is a colossal bronze statue, about 13 ft. high, supposed to represent the Emperor Haravilla. The cathedral is a fine Gothic edifice, the nave of which is supported by antique granite columns. There are several other churches, convents for both sexes, an orphan institution, a college founded by Ferdinand IV., and a theatre. The harbour is fringed by a mole running out from the shore. It admits of small vessels only, but good anchorage ground is found in the neighbourhood. The port is defended by a citadel, part of which is falling to ruin. Close by is a lunatic. Barletta has a considerable trade in grain, wine, almonds, and the other productions of the country which are exported to the different parts of the Adriatic. The Neapolitan Government have some extensive saltworks about 5 m. from the town. The sea-bathery forms an important branch of industry. A great corn-market or fair is held annually in November. Pop. 19,999.

BARMEY a manufacturing *tu.* Rhodan Prussia, circle, Elberfeld dist. Düsseldorf situated in the valley of the Wupper, 27 m. N.E. Cologne. It is in fact a continuation of the town of Elberfeld to which it is united by a bridge, and with which it forms one uninterrupted street of 6 m. in length, and it is composed of an accumulation of numerous places of different names, now constituted a town. Its situation is healthy and picturesque, but the town itself is dirty and not prepossessing. The staple manufactures are ribbons and tapes, which are very widely diffused. Silk is likewise manufactured with cotton and linen fabrics, linen and cotton thread, velvet, lace, steel and plated articles hardware, chemical products, and earthenware, with establishments for calico-printing which have long been famous for the excellence of the dye, called *Wupper-dye*. The town is surrounded by kitchen-gardens, the cultivation of which employs many persons. It contains four churches, one of which the Protestant church, is a very handsome building, a high school, a deaf and dumb asylum, exchange, two banks, a police court, and a commercial tribunal. The district in which the united towns of Elberfeld and Barmen are situated is the most populous, the most industrious, and most thriving in the Prussian dominions. Pop. (1846) 84,932.

BARMEY *See* Eng. Kent 749 ac. Pop. 538.

BARMOUTH or *ANERMLAW* a small seaport in, N. Wales, co. Merioneth, 8 m. W. Dolgellau lat. 53° 44' N. lon. 4° 3' W. at the mouth of the Maw or Aftu; built on steep and unequal ground, at the foot of a lofty mountain. The houses rise in successive terraces above each other and are reached by steps cut in the rock. The town is much frequented in summer for sea-bathing and some trade is done in flannel and hosiery and tanning and shipbuilding are also carried on to some extent. Its chief exports are timber, bark, copper, lead &c.; imports—corn, flour, coal, limestone, hides, and groceries. It contains several dissenting chapels. Pop. (1841) 1930.

BARMEY a market *tu.* Denmark, Holstein, co. Ranzau, 19 m. N.W. Hamburg Besides agriculture, the main employment is shoemaking, for export, over Hamburg to America. In the middle of the town is a good marketplace. Four annual fairs are held one of which, for *swan*, is important. Pop. 1700.

BARNARD CASTLE, a *tu.* and *tu.* par. England, co. Durham. The town is on a summit rising abruptly from the sea, 22 m. S.W. by E. Durham. From the principal street, which is about 1 m. in length, two or three smaller ones and numerous lanes, diverge. The main streets are macadamized in the middle, and paved with cobblestones, and all are lighted. The better class of houses are of freestone, and many of them handsome; but those of the working classes are overcrowded and ill ventilated. Manufactures—two extensive textile-mills, and four large paper-manufactories.

115.2. High Pillar parish church, an ancient Gothic structure with an embattled tower and five chapels for independent sects, Baptists, Wesleyans, &c. It has also four large national schools, several Sunday schools, boarding and day schools, a grammar blue-coat, and a very clearly marked an infirmary dispensary and several sets of almshouses, besides a number of minor charities. It has a library institution, established in 1845, a museum, two reading-rooms, a musical society, a farmers club and horticultural and agricultural societies. The manufactures consist of wool stapling, lace-making, matting, paper-making, tanning, shipbuilding, stocking-weaving, hosiery and rope-making, &c. There are also two potteries, and in the neighbourhood several saws and blanket-mills. Some of these branches of industry are carried on to a great extent. The trade of the port is considerable, and its foreign trade increasing. The number of vessels registered here for the year ending December 31 1847 was 89 ton 5010. Vessels entered for the same year 1032 ton 44,932—cleared, 418 ton 21,685. Chief exports—grain, wool, bark, leather paper &c. Imports—coal, timber iron, groceries, spirits, porter, fruit, &c. There are four commodes, quays, on which vessels of 100 to 200 tons load and unload, and the river is navigable for barges and small craft for 8 m. above the town. Barnston is governed by a mayor recorder six aldermen, and 18 councillors. It returns two members to the House of Commons. Registered electors (1849) 781 Market-day Friday Area of par 1103 ac. Pop. 9667

BARNSTON or BARNSTON par Eng Essex 1443 ac Pop. 165

BARNVILLE—see Wren [anc. *Proconatus Portus*] a small town and support France, dep Manche 15 m W B Valognes It has an ancient and curious Roman church and carries on considerable trade in agricultural produce, with Guernsey Jersey and Alderney Pop 1906

BARNWELL, two par Eng—1. *Barnwell all Saints, or King's Barnwell*, par Northampton 1680 ac Pop 147 2. *Barnwell St Andrew* par Northampton 1746 ac Pop. 268

BARNWOOD par Eng Gloucester 14 1 ac 1 856. **BARO** a river Africa, which rises in the country of the Wallages, S.W. of Abyssinia, near lat. 8° N in an extensive plain, in which the Gedda, (Geddi, Niso and Gédah, all the Baro itself, tributaries of the White River or true Nile, have their sources. The course of the Baro is not explored, but the natives represent it as a very large river the valley of which is inhabited by Ginnakala, and frequented by bands of elephants. (See Jour vol. xii, xv.)

BAROACH, or **BAROACH** [anc. *Baroach*—water of wealth, a. n. Hindostan, Bombay presidency prov Gujarat, cap. dist. of its own name, on the Nerindia [anc. *Nemadus*] 25 m from its mouth in the Gulf of Cambay lat. 21 46' N lon. 73° 34' E; 42 m N Surat a poor sea-looking, unhealthy town, with narrow and dirty streets but in the vicinity are numerous dilapidated mosques and minarets, indicating its former importance. The river is here 3 m. broad, very shallow but abounding in sea fish, especially carp. A considerable trade is carried on with Bombay and Surat in raw cotton, grain and seeds. There is here a pargana or hospital for animals, supported by voluntary donations, and by taxes on marriages, mercantile transactions, &c. About £1000 are annually raised for this purpose. Baroach was taken by storm by the British in 1773 and since 1805, along with the district, has remained part of the British dominions. Pop. about 85,000.—The *Durrani* has an area of 1000 sq m. and is one of the most populous and best cultivated in the G. of India, yielding large quantities of excellent cotton. Pop. (see *Annals* Mahometan) 279,500.

BARODA, a city Hindostan, cap. dist. of same name, and of the Guzerat's dominions, and the station of a British resident and a body of troops lat. 22° 20' N; lon. 73° 25' E. 240 m N by E Bombay It stands on marshy ground, 1 bank, *Vishwamitra*, and is surrounded by a double wall of mud, with round towers at irregular intervals, and several double gates. Two spacious streets, which cross each other at right angles, divide the town into four equal parts. In the market-place is a square pavilion, with three bold arches on each side, and a flat roof, adorned with seats and fountains, and is a *Majlis* building. Like everything else in this city having the smallest

claim to grandeur or elegance, the Mahometan structures before them are shabby. Baroda was a large and wealthy town during the reign of Aurangzeb, and is still considered one of the richest cities of its name in India. Here is a stone bridge over the *Vishwamitra*, remarkable as being the only one in Gujarat; and some singular walls with grand flights of steps. Pop. in 1818 estimated at 100,000.—The *Durrani* has an area of about 12,000 sq m.; yielding sugar-cane, tobacco, indigo, corn, legumes, opium, hemp, flax, and cotton, the last being a staple commodity. Deer, hares, partridge, and other game are numerous.

BARON or **NOUMA BARON** an isl., S.E. coast, Java lat. (corrected) 8° 20' S.; lon. 113° 25' E.

BARONSTOWN par Irel Louth; 2309 ac. Pop. 787 **BAROS**, or **BAROOS**, a n. Sumatra, W coast; lat. 3° 4' N lon. 98° 25' E., near the mouth of a small river. There is here a good harbour to which much of the produce of the island of Nias is brought, such as betates, rice, beans, sorgho, &c. and exchanged for steel, iron tobacco, corn, and cotton goods. The district round Baros was formerly a kingdom or petty state of the same name. It produces excellent camellia oil, and some gold.

BARQUESIMETO a n. Venezuela, cap. prov of same name, 62 m. W & W Valencia lat. 9° 54' S. lon. 68° 12' 27' W (L.) Previous to the great earthquakes of 1813 the town was well built, having straight and wide streets a handsome parish church, a rich convent of Franciscans, and a hospital. It is now but a wreck of what it was. It has several schools and higher seminaries. Pop. 16,000 in 1800.—The government lies between lat. 8 43' and 10° 46' N and lon. 68° 30' and 70° 30' W, and is bounded N by the Caribbean Sea, area, 19,313 sq m. Agriculture and cattle-rearing are the chief occupations. The principal products are wheat, coffee, cacao, maize, and indigo. Pop. (1825) 86,527 (1839) 123,755.

BARR, a n. France, dep. Bas Rhin (Alsace) 9 m N Schlettstadt, agreeably situated at the foot of the Vosges tolerably well built, and has a good quay. Near Barr on the mountains of Hoenberg are the ruins of Leipsberg, and the convent of St. Odile, founded in 632 by Odile, Countess of Alth, Duke of Alsace. Part of a Roman wall called by the inhabitants the *Papens wall*, in some places 10 or 12 ft high, and from 6 to 9 ft broad, is also still to be seen there. The trade of Barr is principally in woollen stuffs, manufactured in the town. The dyeing establishments employ almost 800 workmen. Barr has also several mills, among others spinning, tan, and oil mills, driven by water power and some trade in wine and brandy. Pop. 8686

BARR, two villa, and a par Scotland—1. A villa, and par Ayr the former 18 m S W the town of Ayr pleasantly situated on an angle formed by the water of Gregg and the river Stincher. The most of the houses occupy an acclivity and have been built without regard to order but the whole village has a clean and neat appearance, and is well light. The inhabitants are mostly employed in handicraft and agricultural labour and in mangle-weaving for the Glasgow manufacturers. Their social condition is excellent there having been no criminal action against any inhabitant of the parish for 80 years. In August 1840 the lower part of the village was nearly swept away by a sudden flood from the neighbouring heights, supposed to have proceeded from the bursting of a water-spout. Area of par stated to be about 100 sq m. or 64,000 imp. ac. Pop. 907—2. A small villa, co. Argyll, dist. Campbells about 18 m N Campbellton.

BARRA [a bar] the name, with different affixes, of various places in Brazil—1. *Barra-de-Vellas*, a considerable villa prov Minas Geraes, r bank, Rio São Francisco, where it is joined by the Rio das Vellas. lat. 18° 50' S. lon. 40° 20' W It is situated in a vast plain, mostly inundated by the two rivers which fertilize it. In this place are salt deposits, from which the province is supplied. The village has two churches, and is rather unhealthy. Gold-mining, pottery trade, and agriculture, employ the 8000 inhabitants of the villa and district.—2. *Barra-de-Rio-de-Ouro*, a flourishing t., prov Bahia, agreeably situated, r bank, Rio de Orou, at its mouth in the Atlantic lat. 14° 32' S.; lon. 38° W It has a municipal hall, prison, church, primary school, and a good port for commerce. Two ravine hard by are esteemed excellent for tempering steel. In the district a considerable quan-

they of muskoxen and these are cultivated for export to Bahia. Pop. (in. and dist.), 8000.—4. *Barrado-Rio-Sao-João*, a hamlet, prov Rio de Janeiro, at the mouth of the Rio São João and having a church and primary school. Sawing planks from timber cut in the neighbouring forests, is the principal business of the place. The port is commodious, and has 13 to 15 ft. of water. In winter fever is prevalent in the district, arising from numerous marshes, with which it abounds. Pop. 4000.—5. *Barrado-Rio-Grande*, a tn. prov Bahia, at the junction with the Rio Grande and the Rio Francisco. It was formerly a prov. Pernambuco, but in 1850 was annexed to prov. Bahia. It has a church, and a primary school. Its districts is generally sterile, producing only salt, in the growing and transportation of which the most of its 4000 inhabitants are employed.—6. *Barrado-Rio-Negro*, also called *Rio Negro*, an ancient tn. prov Para, l. bank of the river after which it is named, near its junction with the Amazon. It has a church and is the depository of various kinds of produce brought down the Rio Negro and its affluents; and in it are three Government establishments under Government superintendence, for making muscovy cordage, cotton cloth, and earthen tiles.—7. *Barrado-Longo*, or *São José*, a vil, prov Minas Gerais, 45 m. S.W. Pila-Rica or Ouro-Preto, on the Rio Gruncho, across which there is here a bridge. The village has a church, and 6000 inhabitants, mostly agriculturists.—8. *Barrado-Mana*, a vil prov Rio de Janeiro, on a river whence it is named, an affluent to the right of the Paraíba. It has a church, and sugar-mills. The inhabitants of towns and districts are about 8000 and chiefly engaged in cultivation of coffee.—(Duarte Geo. Imp. Brazil).

BARRA, a large vil Naples, 4 m. E. the town of Naples. It produces silk and contains many country houses belonging to the inhabitants of the metropolis. Pop. 6000.

BARRA a petty state N.W. Africa, at the mouth of the Gambra, r. bank, extending about 54 m. along the coast, with a breadth of about 43 m. It is in general well cultivated and contains a number of considerable villages, with some fine forests. The palm, banyan, and fig trees are also plentiful. Homes are scarce, but asses are numerous, as are also wild buffaloes. The greater part of the population is composed of Mandingoes, a fine race the women stout, active, and pretty the males tall, and well made, and of a more intellectual cast of countenance than is usual amongst negroes. They are also more refined, and of a more amiable and benevolent nature than the natives of the neighbouring kingdoms. In commercial transactions they are shrewd, sharp, and wary. A principal branch of industry is the manufacture of salt, large quantities of which are exported, muscovy, cotton stuffs, ivory gold dust, &c. being taken in exchange. Their laws are mild, just, and in general fairly administered. They are all rigid Mahometans, and strict observers of the laws of the prophet. Pop. estimated at 280,000. The capital Barra-Bading, lies on the coast, at the mouth of the Gambra, about 7 m. N.E. Bathurst, and has some trade in the articles above noticed.

BARRA, or **BARRAT ISLANDS**, a group of upwards of 20 islands, forming a part of some name, W. coast, Scotland or Inverness, forming part of the chain known by the name of the Outer Hebrides. About 10 of these are inhabited and the others used as grazing. The principal island, from which the group is named, is about 12 m. in length, varying in breadth from 3 to 8 m.; its N. point is in lat. 57° 2' N. lon. 7° 54' W. (S.). It is much indented by bays and arms of the sea, particularly on the E. side. On the W. side, except the two or three sandy bays, it is defended from the billows of the Atlantic by a barrier of huge rocks, excavated by the action of the sea into vast caves and fissures, the latter of appalling depth. Besides the universal formation of these islands, but of an unusually refractory nature, undergoing little change from the action of the atmosphere, and everywhere displaying a singular aspect of obstinate durability with the identity with which it decomposes, marks to the surface of the island a naked and barren appearance. The climate, like that of all the W. islands of Scotland is variable and fluctuating, but mild and healthful. Notwithstanding its imposing look, Barra contains a great deal of fine pasture in the hollows and valleys; while the hills, which are of considerable height, afford excellent grazing to their very summits. The island, and parish in general, being better adapted

for grazing than agriculture, the latter has not made much progress, although the adoption of improved implements has enabled the small farmers to turn their ground to much better account than formerly. The black cattle raised in Barra are much esteemed and for rearing sheep it is considered one of the best places in the Highlands, although it is but lately that a regular sheep stock was introduced there. The chief part of the lands is let to small tenants in crofts, from year to year—a system under which no improvement can of course be expected. For the most part the inhabitants are miserably situated, their houses being composed of loose stones and earth, and having neither windows nor chimneys, a round hole in the roof, and one or more holes on each side of the house, supplying their place. Their habits are miserably and their household furniture generally of the most wretched description. Their ordinary food consists of barley-mal potatoes milk, and fish. More ardent spirits are said to be consumed in this island than in any place of the same extent in the W. Isles. The manufacture of kelp employs a great many hands, old and young, for about two months in the year but the pay is miserably small, the commodity kelp having fallen to about a fourth of the former price. Few of the natives can either read or write. The cattle abroad in kelp, including ling cod, turbot, halibut, flounders, and herrings the latter frequently visiting the island in immense shoals but the inhabitants unfortunately are in such a state of poverty that they cannot provide themselves with the fishing necessary to enable them to take the utmost advantage of the wealth on their shores perhaps not equalled, certainly not exceeded, in any other part of Scotland. As it is, there are from 20 to 30 boats of 8 tons each, with five men to each boat, employed in fishing. They carry the cod and ling they take, in a dried state, the latter being highly esteemed, to Glasgow and Greenock. Shell fish are also abundant on the shores of Barra lobsters, crabs, &c. and cockles in immense quantities. In scarce seasons the inhabitants live in a great measure on cockles, boiling them in salt water, and then making them into a kind of soup, which they consider wholesome and nutritious. There are four fresh-water lakes in the island of from half a mile to a mile in length, all abounding in trout and eels. The ruins of several religious houses, apparently of very old date exist in Barra, the more remarkable of which—two churches, said to have been built by the monks of Iona—were at a place called Killbar. There are also numerous ancient watch-towers distributed over the islands and on every lake there is a dam or fort, supposed to have been built by the Scandinavians. Many Druidical circles are also to be met with. The ancient castle or stronghold of the MacNeils, the former proprietors of Barra, a rude and lofty mansion, stands in the middle of a beautiful bay upon a small rock, which is entirely covered by the sea at high water. It is of an irregular form, strongly built, and about 60 ft. high, with a square tower in one corner rising many feet above the adjoining walls. Here the MacNeils, in times of old maintained the state and authority of sovereign princes, ruling with despotic sway, and maintaining the pomp and dignity of royalty. The names of the larger islands, of which the parish is formed are Watnony Sandery Fairby Mingalay and Barra to the S. with several others of lesser size, uninhabited, to the N. and N.E. Mingalay and Barra are remarkable for their lofty rocks one on the former being 1400 ft. perpendicularly above the sea. To these rocks the natives resort for seaweed and the eggs. The most prevalent winds here are the S.W. and N.W. the former often blowing with such extraordinary violence, as to sweep away the sandy soil with the vegetation, leaving only naked rocks behind. Pop. of par 1871 of whom about 2000 are E. Catholics.

BARRACKPOOR, a military cantonment, Hindoostan, presid. Bengal l. bank, Hooghly 10 m. N.N.E. Calcutta. The site is beautiful, and the climate salubrious. Near this village is the place of the Governor-general of India, the park around which is 4 m. in circumference. The cantonment is a large military village, with barracks for the European officers and the other white inhabitants, who are attracted thither by the beauty and healthfulness of the place, and by its vicinity to the Governor's residence. Races are held here in the cool season.

BARRADA, a river Syria, pass. Damascus. It rises near Ain-el-Hawa-Ugh, flows E. along the Anti-Libanus, and

these, turning S.E., proceeds in a tortuous course through a wide valley bordered alternately by bold rocks and wooded hills. On approaching Damasco, it is divided into two branches, one of which passes along the N. side of the city while the other is diverted into eight different channels for watering the city and irrigating its gardens. The former branch is supposed to be the Phlegra and the latter the Abasco, of ancient times. The branch shortly after exits, and the track crossing two tributaries, enters the marshes and lake of Lake-Merdy-Aiba. (Chesney)

BARRAFRANCA, a to. S.W. valley of Calcuttawatta, dist. Pannu. Pop. 6800.

BARRAH, par Irel Cadw, 15,297 sq. Pop. 2488. **BARRAHMAHL**, or **BARRA MAHL**, a subdivision of prov Salina, Hindostan, presid. Madras. See **BARMAH**.

BARBAUX, a vil. France, dep. Isere, 21 m. N.N.E. Grenoble. On an eminence, conspicuous to the village, stands fort BARBAUX, a place of considerable strength. The inhabitants are chiefly engaged in agriculture. Nearly opposite, across the Isere, stand the mouldering towers and shattered walls of Dayard the birthplace of the famous observer Sans Pareil at vers Republique. Pop. 2029.

BARBAX, a to. Spain, New Castle, prov of, and 20 m. W. by N Alcala de a plain, at the foot of the Sierra de Alcala. It has three streets, a square, parish church, town-houses, with prison attached two schools, a storehouse, and a cemetery. The people are engaged in tillage, raising grain and cotton and as muleteers. Pop. 2361. (Madrid.)

BARRE, several townships, U. States.—1 In Massa chusetts, co. Worcester the soil fertile, and well adapted for grazing. It contains one academy and 13 schools. Pop. 2763.

—2 In Vermont, co. Washington with four churches and 15 schools. Pop. 2116.—3 In New York, co. Orleans, 11 containing several villages, two academies, and 84 schools. Pop. 6539.—4 In Pennsylvania, co. Hamilton with 19 schools. Pop. 2225.

BARREA, a vil. Naples, prov Abruzzo Ultra II on a hill, r bank, Sangro, 19 m. S.E.E. Salerno. Benedetto di Virgilio, a poet of some name, was born here. Pop. 1150.

BARRELL, a to. Hindostan, prov Gojran, cap. of a small principality 80 m. E. N.E. Cumby lat. 23° 44' N lon. 74° E. It stands in a narrow valley near the Tamsa a tributary of the Muree, and is mostly built of mud, the houses are of brick. The district is wild, and covered with jungle, extending for a space of about 40 m. wholly uncultivated, and inhabited by a few nomadic and predatory Bhoctas. **BARREGER**. See **BARROSES**.

BARREL-OF-BUTTER ISLAND a rocky or small rocky islet, Scotland, Orkney off the S. end of Pomona, deriving its name from the circumstance of the tenant paying the proprietor a barrel of butter as rent for the privilege of killing seals on it, the only thing of value it produces.

BARREN ISLAND the name of several islands in various parts of the world.—1 An isl. S.W. entrance into Bass's Strait, one of the Hunter group lat. 40° 52' S lon. 144° 49' E.—2 An isl. S.E. entrance, Banks's Strait one of the Furness Islands lat. 40° 23' S lon. 146° 6' E. (n.)—3 A group of 7 or 8 islands, Mozambique Channel W coast, Malagasy where they are small and low with white sandy beaches, and shrubs on them. Some of them have rock and breakers projecting to a considerable distance, and are extremely dangerous. They lie between 17° 50' and 18° 35' S lon. 45° 33' and 48° 55' E.—4 An isl. in the Bay of Bengal about 55 m. E. from Middle Anderson Island lat. 12° 16' N lon. 93° 54' E. (n.) It is a volcano, 1848 ft. high, and may be seen from a distance of 85 to 40 m. It is of small extent, covered with trees, except near the crater. It was not generally known that this volcano was in an active state until 1791 since which time it has continued so, and is subject to violent eruptions. The crater is very large when compared with the extent of the island.—5 A small isl. in the S. entrance of the Malay or China Sea, between Borneo and the Malay Peninsula lat. 1° 29' N lon. 100° 28' E. (n.)—6 A small isl., sometimes called Rook Island, on the E. coast of China, in the Tung Hai or Korea Sea lat. 30° 48' N lon. 123° 8' E. (n.)—7 An isl. of Russian America, at the S. entrance into Cook's Bay lat. 65° 58' N lon. 151° 28' W. (n.)

BARKEBUET POINT New S. Wales, co. Cumberland lat. 34° 30' S lon. 151° 28' W. (n.) It is a rocky peninsula, joined to the mainland by a

narrow isthmus bounded by the sea on the E., and Pitt-water an inlet from Broken Bay, on the W.; lat. 35° 37' S; lon. 151° 28' E.

BARREHEAD a large manufacturing vil Scotland, co. Dumfriesshire in the vale, and on the banks of the Leven, 7 m. S.W. Glasgow consisting chiefly of a row of houses on either side of the public road to Irvine. The more modern houses, mostly completed by the working classes, are neat and commodious. The most elegant building is the chapel of ease, in the Norman style, connected with the Established church; besides which there are a Free and a N. Presbyterian church, and a N. Catholic chapel. Numerous extensive factories lie either bank of the Leven. In the village and its vicinity there are four spinning factories, with about 80 000 spindles and two weaving factories, also bleacheries, seven printworks and a flour-mill an iron-foundry, and a machine-shop, employing in all about 5000 hands. The railway to Barrehead, which was opened in 1849 has greatly increased the prosperity of the place. Pop. (1841) 5327 (1851) 6069. (Local Correspondent)

BARKEE, par Scotland Forfar on the German Ocean, N. of the Frith of Try having two lighthouses, which form the leading lights for vessels entering the Try. Pop. 2178.

BARKEE REEF (The Granite) this reef, called superficially the Great Barke Reef from its vast extent, is situated off the N.E. coast of Australia. It commences with Breaksea Spit, in lat. 24° 20' E. lon. 158° 30' E. and extends to Bristol Island, on the coast of Papua, in lat. 9° 10' S lon. 145° 20' E., being a distance, in a straight line, of about 1260 m. It stretches along the coast at a mean distance of about 80 m. being in some places not more than 10 or 15 m. from the land, at others upwards of 100. This prodigious reef is wholly composed of coral, and rises in general precipitously from a very great depth, its bottom having been reached in some places on the outer side of the barrier with a line of 384 fathoms. If laid dry says Mr. Jukes it would be found to have a considerable resemblance to a gigantic and irregular fortification a steep glass, crowned with a broken parapet wall and surmounted on one rising ground to another.

In sailing from Sydney through Torres Strait, vessels have their choice of two tracks, called, respectively the Inner and Outer Routes. In taking the former they enter within the Barrier Reef at its S. extremity and run up the northward along shore. This passage, although narrow and intricate, is safe, with good anchorage the whole of the way the depth being generally about 12 fathoms and it is protected also from the violence of the sea by the reefs themselves. The outer route has not yet been surveyed, and is only known roughly by having been traversed by whalers and merchant vessels. It has not, of course the advantages of the inner passage, being exposed to the open sea, and having a depth of water which precludes all possibility of anchoring. Several vessels having been lost on these reefs, in consequence of there having been no chart to point out their dangers, or to indicate the openings by which, when taking the Outer Route, they might steer through the reefs for Torres Strait, Capt. Blackwood was dispatched by the Admiralty in H. M. S. Fly in the year 1842 to survey the Barrier and to lay down such channels between the outer and inner seas as offered a secure passage. This has been done, and several eligible openings marked, together with a very complete series of soundings. On Ram's Island, lat. 11° 30' E. lon. 151° 52' E. which was the best passage through the reef, a beacon has been raised 40 ft. high, and 30 ft. diameter at the base. It is built of stone quarried in the island, and wrought into square blocks. (J. B. Jukes's *Narrative of the Surveying Voyages of H. M. S. Fly*.)

BARICA-NEGRA, a to. and dist. Uruguay or Banda Oriental. The town is 65 m. N.E. Monte Video. Large works of cattle are reared in the district, many of the estancias into which it is divided having from 60,000 to 200,000 head of cattle.

BARINGTON, four par. Eng.—1 par. Cumberland; 2119 sq. Pop. 694.—2 par. Somerset; 1668 sq. Pop. 511.—3 par. Dorset (Barnes) par Berks and Gloucester; 2363 sq. Pop. 545.—4 **Barington (Lidde)** par Gloucester; 228 sq. Pop. 125.

BARROSA, a vil Spain, S.W. coast, Andalusia, prov of, and 16 m. S.E.E. Cadix. To the E. of the village, on a knoll of the same name was fought (March 2 1811), the well-

known battle in which the British, when shamefully abandoned by the Spaniards, gallantly repulsed an attack by a superior force of French under Victor and took two of their eagles.

BARROW, a large and important navigable river Ireland, prev. Liffey. It rises at the foot of Glenharrow in the Slieve Donard mountains, on the borders of the King's and Queen's counties, a few miles W. Portlborough and, after a generally S. course of about 30 m., joins the Suir in forming the estuary called Waterford harbour. It is navigable to New Ross, a distance of 25 m. from the sea, for vessels of 200 tons; and above that town for barges to Athy where a branch of the Grand Canal joins it. Its principal tributaries are the Nore, the Grease and the Blackwood rivers.

BARROW seven pars. Eng.—1 par. Suffolk 8665 ac. Pop. 1130.—2 *Barrow-on-Trent*, par. Derby 7780 ac. Pop. 9787.—3, *Barrow, Great*, par. Chester 2918 ac. Pop. 849.—4, *Barrow-Corvey*, par. BARROW STRAIT the connecting channel between Baffin's Bay on the E. through Lomonosov Sound, and the Polar Sea on the W., between lat. 72° 45' and 74° 40' N. from 30 to 45 m. in breadth. The coasts are rocky rugged and sterile, and the water of great depth. Frequently upwards of 250 fathoms while often no soundings at all can be found. Icebergs of immense size are met with in this strait. Whales abound there also as in Baffin's Bay which it quite resembles in all other respects. The strait was discovered in 1513 by Baffin but Capt. Parry who visited it in 1819 gave it its present name after the late Sir John Barrow.

BARROWBY par. Eng. Lincoln 4485 ac. Pop. 801.
BARROWDEN par. Eng. Rutland 2078 ac. Pop. 718.
BARRY a vil. and par. S. Wales co. Glamorgan, 9 m. S. W. Cardiff. Area of par. 835 ac. Pop. 74.—There is a small Isl. of the same name in this parish, abounding with rabbits and having an area of about 800 ac.

BARSA,—1, A co. Hungary chieft. Rither Danube, length from N. to S. about 45 m., average breadth from W. to E. 18 m. area, 784 sq. m. or sq. m. Towards the N. the surface is generally hilly but in a great extent it consists for the most part of rich alluvial plains or valleys, watered by numerous streams, of which the principal are the Gura, Nitza, and Sitza. It is rich in corn, wine, and cattle. Its minerals, once important, are understood to be nearly exhausted; but some gold is still obtained. It possesses chalybeate springs and thermal baths. The cap. is Aranyos-Maroth. Pop. (chiefly Slavonian and German) 133,900.—2 The name of four small places Hungary three of them in the above co. on the Gura, in the vicinity of the town of Leva, and one in co. Szeged, on the Drava.

BARSAZ, a tn. France dep. Gironde, 25 m. S. E. Bordeaux, 1 bank, Gironde, in a district celebrated for its white wines. The best vineyards are above the town; these produce a wine similar to Sauterne, having only a little less flavour and rather more spirit. Pop. 1701.

BARSHAM four pars. Eng.—1 par. Suffolk; 1871 ac. Pop. 207.—2 *Barsham (East)*, par. Norfolk 1167 ac. Pop. 219.—3 *Barsham (North)*, par. Norfolk 1015 ac. Pop. 77.—4 *Barsham (West)*, par. Norfolk 1571 ac. Pop. 98.

BARSK, an vt. Denmark, Schleswig in the Little Belt, head. Apsersund, about 2 m. long by 1 broad lat. 55° 7' N. lon. 9° 22' E. A large portion of the E. side of the island forms a perpendicular limestone wall, which, being undermined by the sea, causes Barvik to become gradually less. On it is a small village.

BARTON par. Eng. Warwick; 1866 ac. Pop. 883.
BARTON or BARZ, a tn. Asiatic Turkey path. Anatolia, built at the junction of two rivers, the Kizilirmak and the Orkhan, and near where the united streams fall into the Black Sea lat. 41° 45' N. lon. 33° 10' E. It is surrounded by a ruinous wall, and consists of about 650 houses, and is built on two low hills of craggy limestone. The houses, on account of the marshy character of the surrounding country are all built of two stories, the upper one of which alone is inhabited. For the same reason the streets are carefully paved with large limestone slabs. It has 13 mosques, 3 schools, and four baths, and carries on a lively trade with

Constantinople, from which it imports various kinds of manufactures, sending, in exchange, hemp, fruit, and building timber. Small vessels only can come to the town, there being but 7 ft. water on the bar. Pop. 10,000.

BARTEN a tn. Prussia, circle, Rastenburg, duchy of E. Prussia; on the Nebe, 47 m. S. E. Königsberg; with a church, and a linen, horse, and cattle market. Pop. 1687.—Other five villages in Prussia have the same name.

BARTENHEIM, a vil. Prussia, dep. West-Rhin (Alsace), 16 m. from Altkirch, near the West-Rhin Canal. P. 186.

BARTENSTEIN, a tn. Prussia, circle, Rastenburg duchy of E. Prussia; on the Aller 34 m. S. E. E. Königsberg with woollen manufactures, tanneries, and more especially poteries. Pop. 4000.

BARTFA, or **BAZERELD**, a free to Hungary co. Bors, 168 m. N. E. Pesth; on a rising ground, near the banks of the Tupa and Lupa. It is one of the oldest towns in Hungary and is well built. has several E. Catholic churches a Lutheran church and school a Franciscan monastery military academy hospital theatre, paper-mills, poteries, forges, &c. In the public square stands the townhall. Some splendid chalybeate springs and baths, near the town, are much frequented. In the neighbourhood a meteoric ironstone was found weighing nearly 3 cwt. The trade in wine, hemp, linen cloth and woollen yarn, is considerable. Pop. 3200.

BARTF, see **BARTFA**.

BARTHOLOMEW (St.)—1 One of the W. India leeward islands belonging to Sweden, in lat. (centre) 17° 40' N. lon. 62° 34' W.; having the Isl. of St. Martin N. W. distant about 12 m. and St. Christopher S. E. distant about 30 m. It is about 8 m. long, varying from 2 to 3 in breadth area, about 25 sq. m. It is of irregular shape, and deeply indented by numerous small sandy bays separated by bold and steep rocky acclivities, of moderate height. In the interior it is hilly but its highest elevations do not reach 1000 ft. The island is, in most parts, barren and sterile but its numerous little valleys are well cultivated, and vegetables are at all times to be obtained. It produces also a little cotton, sugar tobacco, and indigo but its only exports are cattle, and some salt. The trees of the island comprise lignum vitae and iron-wood. Water is scarce the inhabitants being obliged to depend for their supplies almost wholly on rain. The only harbour La Cuvette, a safe and commodious one, and much frequented, is on the W. side of the island. Close by is Gustavia, the principal town, inhabited by a mixed population of Swedes, English, French Danes, and Americans. It is a thriving place, having a considerable commerce with the neighbouring islands in general supplies, which may be obtained there at all times. This island was settled by the French in 1643, and was ceded by them to the Swedes in 1784, with whom it still remains. The slaves on this island were emancipated by a decree of the Swedish Government, dated October 9 1847 on which occasion the negro population framed an address of thanks to the King of Sweden. The population is estimated to be between 8000 and 9000, of which two-thirds are black.—2 An Isl. of coral formation in the N. Pacific Ocean lat. 6° 35' N. lon. 149° 47' E.; it is low covered with coco-nut trees and inhabited by a light-complexioned race.

BARTON *BRON-MANCA*, a m. and par Eng., co. Lincoln.
 The town is pleasantly situated on r bank, Humber 83 m.
 N.N.E. Lincoln; has two ancient churches, and Wesleyan,
 Calvinist, Primitive Methodist, and R. Catholic chapels an
 endowed charity school, several almshouses, and other charit-
 able institutions. Trade principally in corn, flour, malt, coal, and
 horses. Rope and twine are manufactured, and there
 are corn-mills, breweries, tanneries, potteries, &c. Area of
 par 610 ac. Pop. of tn 8966

BARTON *BRON-TWEL*, a township, England, on Lan-
 caster 5 m. W by S. Manchester on both sides the Irwell,
 here crossed by the Bridgegate canal and on the Liverpool
 and Manchester railway. It has a neat church, Methodist,
 Wesleyan, Unitarian, and R. Catholic chapels several
 schools, and manufactures of cottons, woollens, iron and steel.
 It includes the village of Patricroft (which see) Pop. 10,865.

BARTHA (f. a river Prussia, which rises in gov. Posen
 near the frontiers of Poland. It first takes a N course then
 turning E. passes Adelsau, and at Malotsh becomes navi-
 gable. Here it turns to the E., and proceeds in a circuitous
 course till it is joined by the Odra. From this its course is
 W. N. W. till it falls into the Oder 8 m. E of Glogau.

BARVAS a vil. and par Scotland, in Lewis, co. Ross.
 The village is situated at the mouth of a small river of the
 same name on the N. W. coast.—The parish in the N.
 part of the island is 12 m. long by 7 broad. Pop. 4189

BAS, or **BARS**, a small isl. France, in the English Channel.
 N. coast of dep. of Morbihan. It is 23 m.
 long, and nearly 3 broad, has three villages, four hamlets,
 and two forts. The spring from which the inhabitants derive
 their sole supply of water is below high-water mark. No trees
 grow on the island. The channel between the island and the
 mainland is a favorable refuge for ships. A revolving light
 stands on an elevation, 225 ft. above the level of the sea, in
 lat. 48° 46' N. lon. 4° 18' W (n.)

BASCHURCH, par Eng. Essex 3373 ac. Pop. 1490
BASCHURCH, a m. and par. Baginbun, par. Hants, on
 the road, and nearly half-way between Totton and Monk;
 with extensive lime and marble quarries, and a considerable
 export of agricultural produce and cattle Pop. 3661

BASEL *Basle* (French *Basle*, *Basle*) a cant. A W.

corner of Switzerland, the 11th in the Confederation, between
 lat. 47° 21' and 47° 57' N. and lon. 7° 29' and 7° 48' E. by
 Aargau, W. by Fribourg, N. by Baden and cant. Aargau, E. by
 Aargau, and by cantons Solothurn and Bern. Its shape is
 so very irregular as to make it almost impossible to give an
 average length and breadth, but it measures 140 sq. m. The
 surface in the S. is mountainous, being intersected by portions
 of the Jura range, which in a manner isolates the canton from
 the rest of Switzerland, but the N. part is flat, lying along the
 banks of the Rhine. The whole canton belongs to the basin
 of this river and is watered by a great number of its affluents,
 the chief of which are the Ergolz and Birs. The highest
 summit is about 2500 ft. The forests are considerable, and
 consist of oak, ash, pine, and fir. The soil, where it admits
 of cultivation is fertile and produces good crops, particularly
 on the borders of the Rhine, and in the valleys of the Ergolz
 and the Birs, but the corn raised does not much exceed
 what is necessary for the consumption of the inhabitants.
 Wine of good quality the best being Schwarzwald, and fruit
 are also produced. In the mountains, where the pasturage is
 excellent, cheese and butter are made to a large extent, and
 many cattle are reared. The only minerals wrought are sand-
 stone, limestone, a little coal, and some iron. Salt is obtained

from salt springs. Manufactures employ the greater part of
 the population. Ribbon-making in particular had become an
 important branch of industry as early as the commencement
 of the 17th century and was greatly extended by the influx
 of French Protestants on the revocation of the Edict of
 Nantes.

It employed 1398 looms in 1754, and has since in-
 creased to such an extent, that the number of persons employed
 by the ribbon manufacturers of Basel, in this and the neigh-
 bouring cantons, is about 15,000 and the value of the ribbons
 produced varies from 2480,000 to 2600,000 annually. The
 patterns were formerly imported from France; but the manu-
 facturers now employ draughtsmen, who furnish the designs.
 The U. States take about a half of the whole, and the greater
 part of the remainder goes to Germany. England was at one
 time a considerable purchaser, but the great improvements
 in the manufacture of Coventry have almost entirely ex-
 cluded those of Basel. Other manufactured articles are
 silk thread, tape, sermets, leather paper cotton thread, some
 cotton goods, tobacco, and hardware. The commerce of the
 canton is extensive and flourishing; its exports including—in
 addition to the staple of ribbons already mentioned—leather
 par tobacco hardware, and agricultural produce, particu-
 larly madder, flax, cattle, horses and cheese. Its imports are
 colonial produce, silk, cotton, salt, lead, tin, metals, iron,
 copper and steel. The position of the canton between France,
 Germany and Switzerland proves for it an extensive
 transit trade, facilitated by the Rhine, and by the railways
 on either side that river. Its contingent to the army was
 918 men and its war contribution 24,435 francs (21877) It
 was divided into six Bern or administrative divisions—
 Basel, Liestal, Spiez, Waldenburg, Bernau, and Unter-
 Bernau. Since 1833, this canton has been definitively divided
 into the two cantons of Basel Country (Basel-Landschaft),
 and Basel City (Basel-Stadt, Basle-Ville) Basel Country compris-
 ing the whole territory of the old canton with the exception
 of the town of Basel, its suburbs, and three communes on the
 r. bank of the Rhine which together constitute the canton of
 Basel Town. Both cantons are portions of the Swiss Con-
 federation, but have only a single vote between them—an
 arrangement attended with the awkward result, that when
 they are not agreed they neutralize each other and the vote is
 lost.

BAREIL (French *Basle* or *Basle*) one of the most extensive
 towns in Switzerland, par. formerly of the whole can. of
 Basel, but now under the subdivision of that can. cap. only
 of the can. of Basel Town. It is 43 m. N. Bern, pleasantly
 situated on the Rhine, which is here crossed by a wooden
 bridge, supported partly on stone piers. The river divides
 the town into two parts—*Great Basel* or *Great Basel* on the
 left bank, and *Little Basel* or *Little Basel* on the right bank.
 lat. 47° 54' N. lon. 7° 56' E. Basel is surrounded by walls
 and is tolerably well built, streets irregular but clean, and
 plentifully supplied with fountains. The cathedral, built by
 Henry II. in 1019 has a tower 255 ft. high and is one of the
 finest churches in Switzerland. It contains the tombs of
 Erasmus, (Ecolampadius Bernoulli), and Anne, wife of Ru-
 dolph of Hapsburg, mother of the line of Austrian princes.
 In a corner of the square in which the cathedral is situated
 is the public library containing 50,000 volumes, with many
 important manuscripts, an interesting collection of paintings
 and drawings by Holbein, and a number of antiquities from
 August, the site of the Roman *Augusta Raurorum*. Behind
 the cathedral is a terrace, about 60 ft. above the level of the
 river, planted with chestnut trees, and commanding a fine
 view of the Rhine, the town, and the hills of the Black Forest.
 The arsenal contains the armour worn by Charles the Bold at
 the battle of Nancy. The university founded in 1459 by Pope
 Pius II., and re-organized, in 1817 with 24 professors, was the
 first great university for the advancement of learning estab-
 lished in Switzerland. It once enjoyed a high reputation, and
 numbered Erasmus, Bernoulli, and Euler among its profes-
 sors on the two latter were natives of Basel. The town has also
 a normal school, a gymnasium with 13 professors, an elemen-
 tary polytechnic school, a theological institution, a school of
 practical agriculture, and the Erasmus college. The library
 of the theological institution contains 30,000 vols. and a
 special library attached to the botanical garden is said to be
 the richest of the kind in Europe. As a commercial and
 manufacturing town, Basel is the most important in Switzer-

land. This is partly to be attributed to its position on the borders of France and Germany a few miles below the spot where the Rhine becomes navigable and at the termination of the French and German railways on either side the river.

BASEL, from above the town.—From French Station in France and Switzerland.

which naturally renders it the entrepot of the commerce of Switzerland with France, Germany and the Low Countries. Its ribbon manufactures are extensive (see *proceedings* or *code*) and it also produces paper, silks, gloves, leather, jewelry, printed cottons, and turnery ware. About a quarter of a mile beyond the gates a cross is erected to commemorate the battle of St. Jacob fought in 1444, when 1600 Swiss attacked a French army of twenty times their number commanded by the Dauphin, afterwards Louis XI. and for 10 hours kept it in check nearly all the Swiss fell, not more than 10 according to some accounts, escaping alive. This exploit first opened the face of Swiss valor and led to the enrollment of the Swiss body-guard of France. The vineyards near the field of battle produce a red wine called *Schweizerblut* (Swiss blood) esteemed the best in the canton. Down to the end of last century (1785) the clocks of Basel were kept an hour in advance of those in other places of Europe—a singular custom, the origin of which is unknown. The treaties of peace, between France and Spain, and France and Prussia, were signed here, July 22 1795. Pop. 21,601 almost all Protestants.

BASEL, a town and com. Belgium, prov. Flanders on the Scheldt, 12 m. N.E. Tournai. The chief church is handsome, and contains some good paintings and in the immediate vicinity is an old Gothic castle of the 13th century surrounded with a fine domain laid out in modern style with a lake and suspension bridge. In the commune are large brickfields, producing from 60 to 70 million bricks annually. Many of the inhabitants pass their lives by making sails or wooden shoes. Pop. 4918.

BASELICE, a town, prov. Samois, 18 m. S.E. Compoigne, on the declivity of a mountain. It has a hospital, and two *monte-de-piété*, established to portion poor girls on their marriage. Pop. 6406.

BAS EN BASSET, a town, France, dep. Haute Loire, 11 m. N. Yssandon. Overlooking the town is the picturesque ruin of the castle of Rochefort. There are here manufactures of blonde lace, ribbons and cashmeres. Pop. 1083.

BASFORD par. Eng. North 2730 ac. Pop. 10,099.

BASHEE ISLANDS, a group of islands, Indian Archipelago, N. of the Philippine Islands, and between lat. 20° and 21° 30' N. and lon. 121° and 122° E., discovered, in 1887 by Desper. They were so called, by their discoverer from the name of an intoxicating liquor which is much drunk there. Bashee is a thick yellow sand, of a sub-salt taste, between that of oil and tallow and is not very potent in its effects. They are hilly and produce sugar-cane, plantains, banana, pumpkin, yams, and vegetables. Abundance of goats, hogs, and good horses. These islands are now frequently called

Bashees. That portion of them formerly called N. Bashees, as will be seen from the following extract, is supposed to have no existence, at least in the position in which they are usually laid down, lat. 21° 5' N. lon. 122° E.—The following morning we found ourselves close off Yfou, or the mechanism of the Bashees group, and were fortunate enough to effect a landing on a detached islet, and obtain its position. This enabled us to affix from the chart the islets termed N. Bashees, which have no existence in the position assigned to them, nor in the visual radius from the main-head position of the *Samarang* 108 ft. above the level of the sea. The channel between the two north eastern islands is small, and carries soundings, but too deep for anchorage as well as the bottom being rocky. The position of the islet lying off the S. extremity of Yfou, is in lat. 21° 5' N. lon. 121° 54' E. See BATAV and BATAK.—(See Bate's Voy. *Samarang* vol. i p. 210.)

BASHKIRS, a peculiar people inhabiting the plains adjoining the Uralian Mountains on the confines of Europe and Asia, between the parallels of 51° and 55° 30' N. and the meridians of 58° and 68° E. The origin of these people is extremely obscure; their language, which differs but little from that of the Tatars of Kasan, seems to connect them with the Turkish race, while in looks and features they are said to bear a stronger resemblance to the Finnish tribes. It is not improbable that they are the descendants of Bulgarians, Magyars, and other Tatar adventurers who settled in the Uralian valleys, partly expelling partly mixing with and absorbing the original Finnish population. In the 15th century the travellers Carpini and Kitbuqa point out in that quarter the country of Basch or Baschians, they call it Great Hungary. The Ostiaks on the river Ob, have the tradition that their nation came from the S.W. that is, from the S. Ural. The tradition of the Bashkirs is, that they left Bulgaria towards the end of the 12th century. They are now called, by their Tatar neighbours, Uestak (Ostak) or strangers, so that all circumstances tend to show that, in occupying the territories they succeeded also to the names of the original Finnish race. It is true that the name Bashkir is usually explained from the Bashkir language some suppose it to be a corruption of Bash-kurt (a bee-head) which is explained to mean a *keeper of bees*. Others endeavour to make the word signify *shaven heads* but these etymologies, ingenious as they may be, fail to reconcile the comparatively recent and evidently Turkish origin of the present Bashkirs, with the mention of Pascar in the 15th century in connection with the Hungarians or Finnish name.

As to physical character, the Bashkir may be said to belong to the robust and most uncouth Mongolian type. He is of middle height, very muscular and strong, his eyes are small, his mouth large, his face flat and broad and widened still further to the view by the projection of enormous ears. He has black hair and an olive complexion. The Bashkirs may be justly called the Bedouins of the N. They are indolent on foot but indefatigable on horseback and being habitually intent on pillage, these bold horsemen and expert archers long proved extremely troublesome neighbours to the Russians. In 1741 however they were completely subdued, and being placed, at a subsequent date on the same footing as the Cossacks, they were obliged to furnish 2000 cavalry to the general service of the empire. They are allowed to choose their own chiefs—their Scaramians and Ataman (Hakman)—who govern each a village or canton, assisted by a Russian secretary bearing the title of *Tsamakal* (Ispahan). The Bashkir guards are armed with spear, bow and arrows, and so expert are they in the use of the latter weapons, that it has not been thought worth while to supply them with firearms. The Bashkirs are, at the present day, the only people within

the habits of the Russian empire who still cling to their ancient nomadic habits. During half of the year at least, they live under trees or tents as winter approaches, they return to their villages—each such encampment was a group of wooden houses at the foot of some wood—they send forward the women to harvest the forest, and to their country, glossy dwellings, and then settle for a few months with their flocks and herds around them. In spring, again, with different feelings, they hurry to the open plains, and encamp in small companies. The women milk the cattle, make cheese, weave cloth, and prepare felt for tent coverings; the men drive the herds, tend the cattle, fish and hunt with hawks. Their falconry is successful, and hawks trained by them fetch good prices in the Alpha steps and in Persia. With abundance of maize, milk, cotton, and honey in any section of game and wild fruits, devoid of care and always on horseback, the Bashkirs lead a singularly happy and healthful life. Their wealth consists chiefly in droves of horses. A rich man will possess 2000 or 3000 horses, and there are few so poor as not to have a horse. Their herds are also extremely numerous; honey and still more, wax, constituting chief articles of their export trade with the Russians. The Bashkirs are Mahomedans, but of the most ultra kind they assemble round their priest or mullah to pray in an open enclosure, having no covered mosques. They do not bury their dead in consecrated ground, but in the plain. The Bashkirs avoid as much as possible the towns and cities, and readily sell to the Russians the right of mining on their estates nor have they villages anywhere on the mountains, except near the pass of Blatnost. At that point, the line of their usual haunts crosses the Uralian chain, extending N E to the East, and S W to the Elbrus, the Caucasus, and the T. Ural. Their territory S W Blatnost, is of the finest kind, well watered, wooded, and abundantly fertile but these equine think only of pasture, and never of their own second crops in agricultural pursuits. They do not go beyond Ekaterinburg on the one side, nor Orenburg on the other. In 1770, they reckoned 37,000 families or probably about 160,000 souls in 1888 they had increased to 105,000 of whom about 20,000 were in the government of Perm the remainder in that of Orenburg.

BASILAN or **BASILAN** one of the largest islands of the Solow Archipelago, off the W. extremity of Mindanao, from which it is separated by the Strait of Basilan, about 15 m. broad, a safe channel, though having irregular tides; lat. (E. point) 6° 41' N. lon 122° 17' E. (E. point) It is about 42 m. in length by 6 average breadth. It is low towards the coast, but mountainous in the centre produces bananas, sugar cane, and rice. Its coast abounds with fish, hogs and deer and wild and in the depths of the forest elephants are met with Basilan is a favorite resort of pirates, particularly of a daring and active one calling themselves Ilanos, a distinct people, who inhabit the line of coast comprised within the light of the bay of that name in the island of Mindanao.—(*Journal of the Asiatic Society of Bengal*.)

BASILIDEN or **BASILIDEN** par Eng Berke 2068 as. Pop. 798.

BASILICATA, a prov Naples, bounded N by provs. Principato Ultra and Capitanata, S E Bari E Otranto and Gulf of Tarentum, S Calabria Ultra, S W the Adriatic, W Frosinone, and the Gulf of Naples, S E to S. 95 m. greatest breadth, from E to W, 85 m. area, about 2464 sq. m. It is almost wholly on the E. side of the Apennines, and its numerous streams, the chief of which are the Simo, Agri, Salandrella, Basento, and the Bradano, flow E into the Gulf of Tarentum. The valleys in which these rivers flow slope gradually in the same direction till within 10 m. of the coast, when they sink down into a low plain. Here the fertility is great, and abundance of corn (principally maize) wheat, flax, hemp, figs, quinces, and tobacco are produced. Many of the hill parts however, are planted with olives, and the more mountainous districts afford excellent pasturage, on which great numbers of sheep, goats, and swine are reared. The capital of the province is Potenza. Pop. 469,000.

BASING par Eng. Harris; 5104 as. Pop. 1396.
BASINGSTON, a town, par England, co. Hants. The town, pleasantly situated near the source of the Loddon, 18 m. S. N. E. W. W. contains a number of several streets lined with well-built houses, great, mostly supplied with water and lighted. A handsome new town hall was erected here in 1889,

constituting a spacious market for corn, a hall-room, and other apartments for public purposes. Basingstoke has a church, a fine Gothic structure erected in the time of Henry VIII.; two Dissenting chapels, and a Friends meeting-house; a blue-coat and national school united, a British day-school for boys and girls, supported by the Society of Friends, and several Sunday-schools a modern institute with good library and numerous charities founded by private persons. A considerable trade is carried on in corn and malt, which is much facilitated by the favorable position of the town as regards the means of transport. Area of par 4068 as. Pop. 4538.

BASINGBROOKE par Eng. Harris; 5104 as. Pop. 1396.

BASLE, par Intl Bascompton 15,996 as. Pop. 8140

BASOUTA, a town, Basutoland, Malwa, on an affluence of the Bechuan. lat. 28° 53' N. lon. 28° E. containing about 2000 houses.

BASQUE PROVINCES [para. *Guasarin*] a territory of a nearly triangular shape, in the N of Spain, formed by the three provinces Alava, Guipuzcoa, and Biscay which contain unitedly an area of about 4668 sq. m. It is bounded, N by the Atlantic, E by France and Navarre, by Old Castile, and W by Santander between lat. 43° 25' and 48° 38' N. and lon. 1° 44' and 2° 50' W. These provinces are very mountainous and picturesque (see ALAVA, BISCAY, and GUIPUZCOA) and in language, manners, costume, and government, differ materially from the rest of Spain, each having a separate constitution. The privileges enjoyed by these provinces are not merely political for they have free trade in salt, tobacco, &c. on which a heavy duty is paid by the rest of Spain, and freedom from conscription. The Basques generally are honest, simple, and industrious, attached to music and dancing, and remarkably fond of the hapsies; with kindness they are easily managed, but are sullen and revengeful if treated with severity. In person they are of the average height, remarkably well built, muscular and capable of enduring great exertion they make the best sailors in Spain, and are industrious and skillful in mercantile pursuits. They are a brave people, much addicted to smuggling, and eminently fitted for the desultory manner of guerrilla fighting by which they have so long preserved their independence. The name *Basques* is derived by Humboldt from *Basco*, a forest, whence *Bascon*, belonging to a forest other antiquaries derive it from *Bascon* a mountaineer. The name is, as far as history informs us, the first that took up its abode in Spain, though its origin is doubtful. Humboldt imagines that the inhabitants are the modern representatives and descendants of the ancient Iberi and, according to the Basque historians, the Vascones, so called by the Romans, had settlements in France Italy and Ireland. Be this as it may it is evident that the Basque nation has at different periods held the greater part of Spain in subjection, and unsuccessfully resisted all attempts to deprive it of its liberties and privileges. Pop. 373,149.

BASS (Tux) a remarkable malar trap rock, Scotland, co. Haddington, at the mouth of the Frith of Forth; lat. 56° 42' N. lon. 2° 53' 12' W. 2 m. from the coast of E. Lothian and 2 m. from N. Berwick. It is of a circular form, about 1 m. in circumference, rising majestically out of the sea to a height of 480 ft. On being closely approached, its aspect is tremendous, from its lofty precipitous walls of rock, and the immense excavations which the sea has opened all around, one of which, running N W and S E, may be taken as a main weather. The rock is inaccessible except on one steep path to the S E. There is a spring of water on its summit, whose superfluities has been guessed at 7 ac. and where a few sheep also are grazed, which bring a high price, Bass was once considered a delinquent. Solas goes, and other sea-fowl in myriads, cover its rocks, and being flying around it is clouds. On the N E. side, the water is of great depth, but shallow on the S. Among the several ruins on the island, of historical interest, are the remains of a fortalice, com. manding the landing-place, capable of accommodating upwards 100 men, and which had been accessible only by ladders or boats and chains, and the ruins of a chapel, about half-way up the acclivity of the rock. The Bass was purchased by Government after the Revolution, and the castle, long since demolished, converted into a state prison, in which various leaders of the Reformation were confined. It was the last

place in Britain that held out against William III. Its gallant defenders a small band, yielding only when they had no longer a means of subsistence. This angular rock recently belonged to a family of the name of Lander whose head was styled, *Lander of the Isles*.

RASSA RAFFA, or **ROFFA**, a harbour Grain Coast, east of Guinea, between the Capes of Mesurado and Palmas, is about lat 7° N. lon. 10° 30' W. and distant from the former between 70 and 80 m. The neighbouring country abounds in fruits, especially oranges, lemons, and bananas. Cattle, sheep, and goats are also reared in great numbers, affording ample supplies to vessels resorting to the harbour.

RASSAIN a tn. Burma, cap. prov. I. bank, Bassein river one of the mouths of the Irawaddy 99 m. W. Bassein; lat. 19° 56' N. lon. 94° 45' E. It is considered the third port in the empire; has a greater depth of water than Bassein, but is less centrally situated for trade. Pop. (1836) 8000.

RASSALEG par Wales, Monmouth 9355 as. P 2159
RASSAM (GRAND)—1 A river W. Africa, the embouchure of which is on the S. part of the Ivory Coast where the French have a settlement. Its chief affluents, the Akra or Akoka, which comes from the N., is said to approach near one of the arms of the Niger—2 A. in near the mouth of the above river and cap. of a district of same name lat 5° 20' N. lon. 2° 30' W. It is a place of some trade, and exports a considerable quantity of gold.

RASSANO a tn. Austrian Italy gov. Venice 15 m. N. E. Venezia, 1 bank, Brenta, here crossed by a beautiful stone bridge connecting the town with its suburbs on the opposite side of the river. Bassano is surrounded by walls, is well built and well paved, having marble fountains. It has 80 churches, four universities, two hospitals, a gymnasium, schools, and several benevolent institutions, a *mont-de-piété*, and barracks works for spinning silk and bleaching wax, tanneries manufacture of woollen cloth, straw hats, and copper utensils and likewise a printing establishment, founded 1668 which at one time, employed 50 printers and more than 1000 persons, but is now much fallen off. Paper-mills are attached to it, and also a school of engraving by which Bartoloni, Volpato, and other distinguished engravers largely benefited. The trade of Bassano consists chiefly of silk, the produce of its own territory, cloth, timber, iron, corn, wine, and cattle. In the vicinity a great quantity of charcoal is made which is sent to Venice. The country around is studded with villages and abounds in vines and olive-trees, which last here reach their N. limit of growth. Bassano is the birthplace of Francesco Giacomini, and *Lacoste de Poite* the father of the Venetian school of painting and of Aldus Manutius, the celebrated printer of Venice. On September 9 1796, the Austrians, under Wurmer were here defeated by the French under Bonaparte. Napoleon, when Emperor created his secretary Marie, duke of Bassano. Pop. 11,807.

RASSAR (A) or **EL-ZASS-KHIZ**, a tn. Morocco 85 m. S.S.W. Tangier r. bank, Loucos or Loukcos. It has good-looking houses, roofed with tiles in the European style 14 mosques, a large number of shops and a market. Pop. 5000.

RASSAR PULO, a small isl. Asiatic Archipelago, N. coast Ceram, a title W. of the entrance into Bava Bay lat. 2° 45' S. lon. 129° 10' E.

RASSAS DA INDIA, an isl. Mozambique Channel lat. 22° 22' 30' S.; lon. 40° 54' 15' E. (N.) The name of *Baixa da India*, given it by the Portuguese discoverers, it still bears in all European charts except our own. It is of a circular shape, about 8 or 4 m. in diameter highest towards the N., but generally flat and on the W. has a white sandy beach, without any appearance of rocks or reefs. It is of easy access, is well wooded, and the shores abound in turtle.—(Horsburgh.)

RASS STRAIT the passage between Van Diemen's Land and Australia, about 150 m. in length, and 120 to 140 in breadth. It is much obstructed by islands and coral reefs, and is, on this account, a rather dangerous navigation. The prevailing winds are from the W. The tide rises from 6 to 12 ft., and runs at the rate of 1½ to 2½ m. per hour. The soundings vary from 85 to 42 fathoms. The strait is called after Mr. Bass, a surgeon, by whom it was explored while on a sailing voyage from Port Jackson.

RASSKE (La) a small tn. France, dep. Nord, 14 m. S.W. Lille on the canal of same name, that forms the water of L.

communication from the Derde to St. Omer, Dunkirk, and Calais. Bonnets, soft soap, and pottery are made here. There are also spinning-mills for wool and cotton, oil-mills, tanneries, and a saw-work. The trade is principally in grain, seeds, wine, oil, butter, fruit, cattle, pigs, wool, and coal. Pop. 3249.

RASSEIN a seaport in Hindoostan, presidency Bombay prov. Accumulated lat. 19° 22' N. lon. 73° 54' E. 30 m. N. Bombay and separated from the island of Elefante by a narrow channel. It was fortified by the Portuguese in 1581 and remained in their possession until captured by the Mah. rajas in 1750. Here the treaty was signed December 31 1802 between the Peshwa and the British Government, which confirmed the federal empire of the Mahrattas since which it has belonged to the British. A considerable part of the rural population of the district are R. Catholics. To the N. and N. E. of the town are extensive forests of teak, from which the dockyards of Bombay are supplied.

RASSELA THWAITE par Eng. Cumberland 6980 as. Pop. 557.

RASSESDORF a vil. and par. Switzerland, cant. of and 3 m. N. E. Zurich, pleasantly situated in an open valley. It has a church and two schools. The inhabitants are engaged partly in agriculture and partly in manufactures. Pop. 823.

RASSESE (GRAND and LITTLE) the former called *Erman* par by the natives of Hindoostan, is the name of a ledge of rocks nearly 1 m. in extent off the S. end of the island of Ceylon lat 6° 11' N. lon. 81° 35' E. It is elevated but a few feet above water and the sea breaks over it with great violence in stormy weather. There is a safe channel between it and the main which is about 9 m. distant. About 21 m. N. E. by E. of the Great Basses, is the ledge of rocks called the Little Basses lat 6° 24' 30' N. lon. 81° 54' E.

RASSETTERE, two tns. West Indies—1 Cap. of isl. St. Christopher's; is situated at the mouth of a small river S. side of the island contains about 800 houses a spacious square and a church, and is defended by three forts. The district of Basseterre contains 17 sq. m. with a population of 6390 and is divided into two parishes—St. George's, and St. Peter's the former of which sends from the latter two members to the Assembly. The vale of Basseterre is beautiful, and well cultivated.—2 The cap. of isl. Guadeloupe lies near the S. end of the island and consists of one principal long street, stretching along the sea-shore. Defended by Fort Royal and Matilda. The anchorage is unimpaired and exposed to a constant swell.

RASSIGNANA a tn. Sardinian States (formerly fortified) prov. 55, and 7 m. N. E. Alexandria r. bank Po, not far from the mouth of the Tanaro. Pop. 4000.

RASSINGBOURNE, par Eng. Cambridge 4223 as. Pop. 2148.

RASSINGHAM par Eng. Lincoln 1940 as. Pop. 829

RASSORA. See BUSMORAH.

RASTAD or **RATTA** a market and fishing tn. Sweden, hall of, and 58 m. N. W. Christianstad, on the Kattegat lat. 56° 28' N. lon. 13° 43' E. It has a tolerably good harbour and carries on some sea-faring business with Nisidn Ystad and other places.

RASTELICA a tn. France, dep. Corvée, arrond. of and 15 m. N. E. Ajaccio, on the Frunzetta, chief place of canton. Pop. 2538.

RASTIA a seaport in France, N. E. coast, of Corsica, 55 m. N. N. E. Ajaccio; lat. 43° 41' 48' N. lon. 9° 27' E. (N.) It is the wealthiest and most populous town in the island, is built in the form of an amphitheatre, and olive, orange, and citron gardens, and has a fine appearance from the sea but on a nearer approach, the houses are found to be mean, the streets narrow though well paved with a kind of marble Jasper. Several of the churches are handsome, with rich gliding and marble sculptures, resembling the churches of Italy. The finest is that of St. John the Baptist, which is of large size, and highly decorated. This town is the seat of the royal court of appeal for the island, of a court of commerce, and of an inspection-general of forests. It has a royal college, a royal school of hydrography, a theatre, a public library with 6000 volumes, and is the residence of consuls from most of the European states. The staple of Bastia is leather. Its numerous tanneries prepare, on an average, annually, 5000 to 6000 hallow-hides, 1000 mts, and 5000

BASTIDE-DE-SKROU. The other manufactures consist of soap, wax, candles, liquors, and salicorns, which are highly esteemed by the Indians. The trade is chiefly in wine, oil, leather, guns, hair, and coral. Coral fishing, also, is carried on to some extent. A considerable trade is done in wine, oil, sugar, pulses, grain, oak-bark, and fruit; and there is regular communication by steam with Toulon. Of late years, Bastia has greatly increased in importance, and has become a centre of most extensive traffic between France, Sicily, Italy and the Levant. The former unimportant port in 1860 in process of being replaced by a new one, which will enclose a surface of 50 ac. one-half of which will present a depth of 19 ft. and a quarter 26 ft. It will be protected by a mole, and form an excellent harbor of refuge. Before the annexation of Corsica to France, Bastia was the capital of the island. Pop. (1846) 12,571.

BASTIDE-DE-SKROU a small town in France, dep. Artois, 5 m. N.W. of Flix, situated on the Artois here crossed by a stone bridge of a single arch. There are in the vicinity a remarkable grotto, and a copper mine, no longer worked, and a worsted, and a cotton mill. Tiles, pottery and hosiery are made here. Pop. 1107.

BASTIDE-DE-SKROU, a town in France, dep. Tarn, 23 m. from Castres. Well built, has some dyeworks, and cloth manufacturing. Pop. 1496.

BASTUGNE, a town and com. Belgium prov. Luxembourg, in a plain, on the high road between Namur and Luxembourg from the latter of which it is about 32 m. N.W. It has two churches, four chapels, a small cemetery and an hospital. Its fortifications were demolished by the French in 1698. Tanneries, and the knitting of worsted stockings, employ a great part of the inhabitants. There is also an important trade in grain and cattle. Bastogne is famous for its hams. Pop. 3220.

BASTON par Eng. Lincoln 3520 ac. Pop. 863.

BATAAN a prov. Philippines, lat. Lunon, forming a peninsula W. side of the Bay of Manila, the N. it is bounded by prov. Zamboanga. It is poor and little cultivated yet produces the best sugar in the Philippines and very good indigo, but scarcely enough of rice to supply the wants of the people. The country is frequently inundated, and the roads rendered impracticable in the rainy season. The province is traversed by lofty mountains, which are well covered with valuable wood, but the streams by which it is watered are generally small, and only to be navigated by native boats they abound however in fish, which forms a staple article of food to the inhabitants. Pop. 37,010.

BATAC or **BATANG**, another Archipelago, N. coast. Samar one of the Philippines lat. (N point) 12° 45' N. lon. 125° 5' E. (a.) Inside of this island is the port of Palapa, having 5 and 6 fathoms water accessible by two channels, one on each side of Batas.

BATALEA, a town and par. Portugal, prov. Estremadura, dist. of, and 7 m. S. Lunon, on the sea. The Dominions consist here, was founded by King John I. in commemoration of a victory over the King of Castile, near Aljubarrota, in the year 1385. This convent, in the Norman Gothic style, is one of the most splendid buildings in Europe. An Irishman named Hacket was the architect. It was intended as the royal burying place for the Kings of Portugal, but the sepulchre of the Braganzas is now at Belem. The town has some trade in salt, and an important annual fair which lasts eight days. Pop. 1062.

BATALIN or **BATALON** a small island in the Archipelago, lat. S. Cape Talyra, at the E. end of the island of Celebes, lat. 1° 30' S.; lon. 123° 50' E. (a.)

BATAN an island in the Archipelago, the principal of the Batanes group, belonging to the Philippines; lat. (southeast of San Domingo) 20° 27' 30" N. lon. 121° 56' E. (a.) It is about 12 m. long by about 4 broad, covered with rich vegetation, and as mountains, the highest peak being 4000 ft. high, and apparently an extinct volcano. It yields in abundance, yams, sweet potatoes, maize, coconuts, garlic, rice, grain, &c. Cattle, pigs, goats, sheep, and poultry, wood and water, are plentiful. Batan has three convents. The Abbe's residence is in the Casa Real, San Domingo, in the bay of same name, in which good anchorage and shelter are to be found. He has jurisdiction over the Batayanes, the Batanes proper in most British maps named the Batanes (all of which are).

BATANES, a group of islands, Indian Archipelago, belonging to the Philippines. They lie N. of the Batayanes, but in British maps are usually called Batanes. They consist of six islands, Batan (which see), Bayat, or Bayat, or Orange Island, Batang Chevre, Bathan, and Daupier all off the N. end of the island of Lunon between lat. 20° and 21° 20' N. The Batayanes, in some authorities, are named Batanes.

(See Batanes.)
BATANG ISLAND See **BATANG**
BATANG PASRA and **BATANG LOBO**.—1 Two fine streams, Sumatra, affluents of the Bantan or Bantan, which falls into the Strait of Malacca, at Tanah Pood.—2 **Batang Hari**, a considerable stream Sumatra, an affluent of the Jambis, which falls into the China Sea, N.W. the island of Menan.—3, **Batang Goolis**, a considerable stream, Sumatra, but not navigable. It falls into the Indian Ocean, on the W. coast, opposite the island of Nibis or Nias.

BATANGAS, a prov. in the Philippines lat. Lunon, S. Manila. The province is intersected by lat. 14° N. and bounded S. by the Mindoro Strait it is composed principally of plateaus and fertile meadows, variegated with beautiful and fragrant flowers, yielding ample food to innumerable humming birds and bees, the latter producing large quantities of honey. The mountains of this province, among which are four peaks of considerable elevation are well wooded on the W. but have scarcely any vegetation on the E. side. They are said to contain iron and some gold. The principal rivers, all small are the Batangang Obispo Gemil, Dancan, Cane and Bonbon. This last flows from the lake of the same name otherwise called Teal, and falls into the Bay of Bataan; it abounds in excellent fish. Lake Bonbon or Teal, lies near the centre of the province, and is about 12 m. long by about 10 broad. It is deep, full of fish and in its centre is a small island, in the middle of which is the crater of a still active volcano. At the bottom of this crater and in the midst of flaming vents, is a small lake, the waters of which, as analysed by the chemist Lopez, are composed of sulphuric acid. This lake is sufficiently large and deep to be navigated by small boats, and round its edge is a flat space sufficiently broad to form a carriage way. It has no communication with the large exterior lake. The province is subject to earthquakes. It grows excellent coffee, indigo, maize a little pepper fine cotton, legumes, fruits, coconuts, and wild nutmegs. Its pastures are good and feed beautiful flocks, cattle, and horses. Some little cotton spinning and weaving are carried on and fishing supports a considerable number of Commerce—chiefly with Manila, in the various articles of native produce already enumerated, but more especially in cattle, the flesh of which is highly esteemed. The province is reckoned healthy and the people are affable and laborious. Pop. 198,987.—The towns are of the prov. lies on the bay of the same name, 1 bank, Calumpang 58 m. S. Manila lat. 13° 45' N. lon. 121° 5' E. (a.) It was founded in 1581 is large, built with tolerable regularity has spacious streets, an elegant royal house, the dwelling of the Alcaldes, and several elegant private houses. It is well situated for trade, the large bay on which it lies, about 10 m. sq. opening into the Strait of Mindoro, which is the creek of a great number of vessels. Pop. in and dist. 17,880.—(Malat's Philippines.)

BATANTA, an island in the Archipelago, off the N.W. end of Papea lat. (W. end) 6° 59' S. lon. 130° 30' E. It is separated S. from the island of Salavaty by Pitt's Strait and N. from Waylay, by Daupier Strait. It was formerly under the king of Bikan but is now under the Dutch. It is inhabited by Malays and Papuans.

BATAVANAN an island in the Archipelago S.E. coast Lunon, a little E. of the bay of St. Miguel, lat. (N. point) 14° 11' N. lon. 125° 30' E. (a.)

BATAVIA, a coast prov. N.W. end, lat. Java, cap. same name, bounded E. by Krawang S. by Batumang, by Batum, and N. by the Java Sea; length, about 50 m. breadth, about 20 ares, 880 sq. m. Along with Batumang, it formed at one time the native kingdom of Jacatra. This province is in general flat, the ground rising a little in the N. and is not so fertile as other parts of Java, but derives from the scarcity of water in many localities. Rice in moderate quantities, coffee, and pepper are grown excellent fruit and

good vegetables in superabundance are cultivated, and a considerable number of cattle, horses and pigs are reared. Hae and river fish are plentiful, and so are likewise crocodiles. Pop. (1845), 95,148.

BATAVIA, a large important commercial in Java, situated not only of that island, but of all the Dutch possessions in the East. It lies near the N.W. end of Java, in a spacious and beautiful island-studded bay lat. (observatory) 6° 5' S. lon. 106° 50' E. (2). It is composed of two portions, the old, called Jacatra by the natives, situated in a marshy flat near the sea, and intersected by the Giliwong or Great River and sundry canals; and the new suburban portion, extending over the higher grounds to a distance of several miles inland, the respective sections of this latter portion being called Rijswijk, Noordwijk, Malenvliet, Tinehang Koningsplein (King's Plain), and Weltevreden. In these suburban portions are the dwellings of the Europeans, who no longer inhabit the old town, on account of its well-known insalubrity as great, that townsmen are on record of fever being taken from sleeping in

it one night only. Much has been done, however, to improve public health in Batavia: marshes have been drained, and into the stagnant canals currents of water have been led, and lastly the sanitary condition has been much ameliorated. In consequence of the desertion of the Europeans, many houses in the old town present a very dilapidated appearance, rendered all the more melancholy by the white stone of which they are built. Still it is the business part of the town. The principal warehouses and offices of the Europeans, together with the Java bank and the Exchange, are all collected into one long street, which, from nine A.M. till four P.M., presents a very busy scene. But in the evening, after business hours, when the merchants have returned to their dwellings in the suburbs, it is as still as before it was animated. The principal buildings in the old town are, the Stadthuys or townhall, the Lutheran and Reformed churches, the exchange, the custom-house, and the Chinese hospital, none of them having any pretensions to architectural beauty. On the W. side of the Great River is the Chinese quarter inhabited exclusively by

THE TOWN AND PORT OF BATAVIA.—After Goussier

natives of the celestial empire who form an important and industrious portion of the population of Batavia. This quarter is so Chinese in outward appearance, as might almost lead to the supposition that a section of Canton had been transported to Java. In smaller matters, the Chinese are governed by their own laws administered by native officers, usually respectable merchants appointed to the duty by the Dutch Government. The suburbs inhabited by the Europeans present more the appearance of a garden than a town, each house being built apart from its neighbour and surrounded by coconut trees, bananas &c. whose shade imparts a delightful freshness to the apartments. Here are located the Governor's house, the general hospital, Willem's church (William's day), the society of arts and sciences, and the museum of that society containing an extensive collection of Malay and Hindoo relics, and having a reading-room attached to it. The Government offices are united in a large building at one of the extremities of Weltevreden plain, formerly called Weltevreden, and in the same plain are located the R. Catholic church, and an excellent primary school. Elsewhere throughout the town there are several other schools, a Mahomedan mosque, several Chinese temples or pagodas, and a theatre. Batavia, in common with the other two principal towns of Java, possesses an orphan court, charged with the administration of all successions not expressly excluded by testamentary deed. This court has agents in all the towns over which it has jurisdiction.

The streets of Batavia have footpaths on either side, reserved for the use of freemen natives, or Chinese. Slaves must either walk on the unpaved centre, or if on the footpath, out of the way of any freemen they may choose to meet. Europeans never walk. So strict is etiquette in this respect, according to Dumont d'Urville, that if a European, either from choice or necessity should walk on his feet in the streets, he must needs be followed by a carriage.

Batavia is the depot for the produce of all the Dutch pos-

sessions in the E. Sea. Of the three articles most in demand for European consumption, coffee, pepper and sugar the two former are entirely monopolized by the Dutch Government. Spices are brought from the Moluccas: coffee and pepper from Celebes and Sumatra: gold dust and diamonds from Borneo thence from the government mines in Banca: tortoise-shell, bees-wax, dyewoods, &c. from Timor: Bumbawa, and the other islands to the E. tea, nankin, porcelain, mother-of-pearl, horax tobacco and paper from China and opium, drugs, paten cloths &c. from Bengal. A valuable trade is also carried on with Japan: but since the establishment of the British in Singapore, the Dutch trade with India, China, and Siam has considerably decreased. To these importations, tea from America has recently been added: large quantities being now yearly brought to Batavia, to India, and to various islands of the Indian Archipelago. The principal exports are rice, coffee, sugar, pepper and arrack. The Dutch ships from Europe seldom proceed further than Batavia, in which place the produce of the other possessions is brought in Dutch country ships, a fine class of vessels, for the most part owned, officered and commanded by British subjects.

The bay forms an open but secure roadstead, of great beauty and may be entered by the largest vessels. It contains a number of islands many of them named after towns in Holland. On Onrust is the naval arsenal, well fortified on another is a convict establishment; on a third, an hospital and on a fourth, warehouses.

The chief articles of native consumption are rice, fish and salt, the two latter monopolized by the Government. Here the town are extensive works for making salt from sea-water: but the produce is disposed of at the Government stores at about seven times its real value. The whole of the fish brought to Batavia is, in the first instance, sold wholesale by a Government auctioneer to the rich Chinese fishermen, who retail

It of a large profit. The markets are well supplied with fruit and vegetables. The principal sorts are mangosteens, durians, and chaddocks the three prime fruits of Java; pine apples,

soursops, rambutans, rose apples, guavas, duckoos, limes, lemons, melons, pomegranates, and sixty different kinds of plantain and banana. Fowls are plentiful and cheap, but turkeys, pigeons, and wild fowl are, in general, scarce and butcher meat is dear.

Batavia originally was merely a commercial station. It received from the Dutch its present name in 1619, and in 1723 it had risen to be a considerable town. In 1811 it was taken from the Dutch by the British, but was restored by the treaty of 1815. The population is very mixed, consisting of Dutch, English, and Portuguese, and their descendants, 2800 Javanese, chiefly of Malay extraction (18000) Chinese, 25,000 Moors and Malays, 10,000 Europeans, 5000 natives of the island, 100,000 natives of the country, 118,000 natives of the country. *Journal* Van der Aal's *Nederlandsche* Earth & Water's Sea Houseman, Voy on China, Am, at Malacca Detachment D'Urville, Voy, autour du Monde.

RATAVIA, a town and post vil., U States cap. on Genesee, New York, 46 m. E Buffalo. It has three academies, and 23 schools. The post village contains a court-house, jail, county clerk's office, five churches, and a female academy Pop. (1840) 2000.—There are several other places of this name in the United States.

It is reputed to be one of the oldest towns in the country; was
formerly of much greater extent than now was walled, sur-
rounded by a ditch and had a castle and two gates. Its
decrease in size is probably owing to its having been repeatedly
burned. Pop 500

BATH a city England, co. Somerset 12 m. E. by R. Bristol, and 107 W London. The greater part of it lies in a deep valley on the Avon the remainder on the surrounding acclivities the whole presenting a singularly striking and imposing appearance. The principal streets are straight, well lighted with gas, and particularly well kept—great cleanliness being observed throughout. The water is pure and supply of water plentiful. The houses are of freestone which is obtained in abundance from the adjacent hills, and are generally handsome. The principal buildings are, the assembly rooms, gildhall theatre, the pump-room, King's and Queen's baths, cross bath, hot bath, and swimming bath, hot and cold pump-rooms, Kingston bath general hospital, city hall, &c. There are also several fine specimens of domestic architecture in the city associated with marvellous beauty of situation—the Greens, Royal Crescent, and Palmsbury Street are the best. Bath has, altogether 12 churches, and 15 chapels most of the parishes belonging to various bodies of Protestant Dissenters—two Roman Catholic chapels, and a Jews synagogue. Two of the finest of the city are the Abbey Church, St. Michael's church, and the Theatre Royal, the former built in lovely castellated style and the paved seats of the latter forming one of the finest of its kind.

BAYN, ARNEY CHURCH, CHAS F BRYANT, JR., from the George Town.

the most interesting features of the city. The most important schools are the grammar college, grammar school, boys' and girls' charity school, and the national school. The principal charitable and literary institutions are, the Bath general

hospital the united hospital, and several dispensaries, two library and scientific institutions, and a mechanics institute. There are no manufacturing of any consequence in the city nor any trade beyond the retail business of a fashionable place of residence.

The famous thermal springs to which Bath owes its celebrity are three in number yielding, respectively 128, 130 and 112 gallons per minute, their temperature ranging from 115° to 118° F. The waters have been analysed by various chemists, the results of whose investigations exhibit considerable discrepancies, inducing the belief that the ingredients vary both in kind and proportion, at different times. The following analysis of water taken from the large spring that supplies the Grand Pump-room, was made by the German chemist, Walkner—

	In 1000 gr.	1 pint (64.500 cub. in.)

The accommodation provided for bathers at the various bathing establishments is of the most complete and elegant description. The King's bath, one of the most extensive, is 60 ft. long by 41 ft. wide, is filled daily to the height of 4 ft 7 in., and contains more than 814 tons of water: the Queen's bath adjoining, is 35 ft. square. The new royal private bath, of which there are seven, contain, each 14 hogheads of water and the tepid swimming bath 670 being 82 ft. long and 23 ft. wide. Salubrity of climate beauty of scenery and abundance and cheapness of markets, in all of which respects it is unequalled by any other city in the kingdom, are the other leading attractions of Bath. It is not now however so popular a place of resort for the fashionable world as it was in former times but still contains a great number of gentry who have been induced, by its numerous advantages, to make it a permanent place of residence.

Bath was founded by the Romans, and called by them *Aqua Solis*. Amongst the remains of that people discovered there, were some baths, exceeding in elegance it is said, those of the present day. These baths were found about 30 ft. below the present level of the soil. The city owed much if not all its early celebrity and prosperity to the singular personage known by the name of *Beau Nash*, who came to reside there in 1708, and who, from the seal and tact he displayed in arranging and conducting the balls, assemblies, and other amusements of the town, was unanimously voted master of the ceremonies—a position which he occupied undisturbed for about half a century. Nash died in 1761 and was buried with great pomp in the Abbey church. Ancestry the author of the *New Bath Guide*, in which the follies and vices of that fashionable resort are so cleverly caricatured, was a native of this city. The corporation of Bath consists of a mayor 14 aldermen, and 48 councillors. Jointly with Wells, it is the head of a diocese and returns two members to the House of Commons. Registered electors (1860) 3059 Pop 54,240. —[Local Correspondent.]

BATH.—1 A report on, U. States, Maine, co. Lanesville, of which it is one of the principal commercial towns pleasantly situated, W. bank, Kennebec river 13 m. from the coast. Shipbuilding is carried on here to a great extent. In 1840, to the amount of about 244,000. The tonnage of the port, in the same year, amounted to 64 080 tons. It contains three churches, five academies, and 30 schools. Pop. (1840) 5141. —2, A co. Virginia, having nine schools and a pop. of 4800. —3, Several towns and townships, the largest of which is the cap. of Co. Steuben, state of New York, which has a court-house, jail, five churches, one bank, a female seminary and 30 schools, with two weekly newspapers, and a pop. of 4915.

BATHGATE, a tn. and par. Scotland, co. Linlithgow. The town is situated on an acclivity and near the base of a ridge of hills, 18 m. W. Edinburgh and 25 m. E. Glasgow on the Edinburgh and Bathgate Railway. It comprises an old and new town; the former consisting of several narrow, crooked, and very dirty lanes; the latter of several principal streets, on a regular plan, straight and spacious with broad footways. The houses are almost all of stone, and in the new part of the town, are well built. The town is lighted with gas, and abundantly supplied with excellent water chiefly from springs. It has a parish church, a Free church and two U. Presbyterian churches, all very plain buildings. The schools are the parish school, and the well known academy a handsome structure, erected in 1835-34 situated on a rising ground a little E. of the town. The principal manufactures are ginghams and pubacks, mostly for exportation but during the last few years the weaving of the finer sorts of worsted plaids and shawls has been carried on to a limited extent. Except at times when trade is depressed there are about 530 hand-loom weavers employed on fabrics of the former and about 30 on fabrics of the latter class of goods. The weavers are mostly all employed by large mercantile houses in Glasgow. There are, besides, a distillery a brewery and three grain-mills. A number of the females are employed in humbering and a good many hanks are engaged in the coal and ironstone mines in the neighbourhood. On the low grounds, a little S. of the town, the remains may still be traced of a castle, in which Walter High Steward of Scotland resided, and in which he died 1528. Bathgate was erected into a free burgh of barony in 1834. The length of the par is 7½ m. its greatest breadth 4 m. area, 11,214½ ac. Pop. of to and par 4558. —[Local Correspondent.]

BATHURST.—1 An English settlement W. coast, Africa, at the E. end of the small isl. of St. Mary at the mouth of the Gambia lat 13 28' N. lon. 16 32' W. The principal street, called Wellington Street faces the river and consists of warehouses and private dwellings, built of stone or brick, and roofed with sticks or shingles. The houses consist of one floor raised from the ground on brick pillars have verandahs and large open apartments, and are approached by a long flight of steps. They are, in general commodious, and have a handsome appearance. The other parts of the town are composed chiefly of African huts, with small gardens on each side. The market is held under a long open shed and is thronged by individuals of various tribes, and with people from the different neighbouring kingdoms. Provisions are plentiful beef, mutton, poultry fish milk and butter being brought into the town by the natives in great abundance. At a short distance from Bathurst is a spacious hospital for liberated Africans. The English settlers are chiefly merchants, who deal in gum, bees wax, hides, ivory and gold, receiving in exchange for these articles, the cloths and cutlery of England. Bathurst settlement was established in 1816.—2 A in Cape Colony co. Albany 30 m. S.E. Graham's Town.—3 A dist. Upper Canada, of a triangular form, with its base stretching along the 1 or 2 bank of the Ottawa river, 1700 sq. m. The surface is generally level or of but moderate elevation, covered with lofty forest trees. The soil, in this and the adjoining districts, is in some situations, marshy but, in general, fertile average value of cleared land £2 6s 7d per ac. wild, 6s 8d. In 1848, there were 41,659 ac. under crop of which 18 065 were wheat, 16,859 oats, and 4767 potatoes. The remainder comprised barley rye, peas, maize, and buckwheat. The agricultural produce of Bathurst, for 1846, included also 158,693 lbs. maple sugar. Live stock in the same year—cattle, 23 829 sheep, 86,416; hogs, 13,375. Dairy produce—butter 808 720 lbs. cheese, 8678 lbs. The principal manufactures of the district are, flannel cloth, linen, and flannel of the first of which, upwards of 33,000 yards are manufactured yearly of the second, about 2000 yards and of the third, upwards of 71,000 yards. Bathurst comprises the counties of Lennox and Richmond cap. Bath is a member to the legislative assembly. Pop. (1848) 29,449. —[Canadian Almanac, 1849-50.] *Bathurst's British N. America*—4 A tn. and bay New Brunswick; the latter lat 47° 37' N. lon. 60° 45' W.—5, A cape, Arctic Ocean; lat. 70° 26' N. lon. 137° 35' W. —6, An inland co., New E. Wales, 65 m. in length and 46 in breadth;

sition that it is practiced as a species of ceremony and not from any inherent love for human flesh. In other respects they seem to be a sufficiently amiable sort of people, with a general tendency rather to good than evil. The houses are built with frames of wood, with the sides of boards, and usually consist of a single large room, which is entered by a trap-door in the middle. The ordinary food of the lower class of people is maize and sweet potatoes. Amongst their domestic animals are horse-flesh, and their flesh of a small black dog which they fatten and eat. Toddy or palm-wine, they drink copiously at their feasts. Polygamy is practiced, each wife occupying a different part of one large room, but being no otherwise separated. Their religion is at once peculiar and unattractive. The natives of the sea-coast exchange their basins, combs, earthen, and small quantities of gold dust, for iron, steel, brass wire, and salt. These they barter again with the more inland inhabitants for the products and manufactures of the country particularly the home-made cloth. The Government of the Batta country although nominally in the hands of three or four sovereign Rajas, is effectively divided into numberless petty chiefdoms.

BATTAGLIA, a small tn. Austrian Italy gov. Venice, 9 m. S.W. Padua, on the canal of Monselice at its junction with the canal of the Battaglia. It is celebrated for its hot sulphurous springs and baths, 168° Fah., to which cures of foreigners resort every year. The promenades along the banks of the canal are charming, and a great source of enjoyment to visitors. Pop. 8000.

BATTANAN a dist. W coast, Sumatra, Dutch prov. of Padang, with vil. of same name, 13 m. S. Natal, at the mouth of the river Battanan. The district yields gold, which is sent for sale to Natal.

BATTALAH or **BATTALA** [Vatela] a large tn. Punjab, in a vast open plain, 88 m. N.E. Amritsar. lat. 31. 43 N. lon. 76° 0' E. It is surrounded by groves of mango trees and tanks of water. All kinds of fruits prized by Europeans grow here in abundance. It is considered the healthiest place in the Punjab.

BATIAM or **BATANG** an Isl. Indian Archipelago W entrance into the Strait of Singapore, and distant from the island of that name, 13 or 14 m. E.B.E. lat. 1° 5' N. lon. 104° 4' E. It is about 23 m. long by 8 broad, and contains a good harbour called Boeding Bay which has been lately much frequented by American ships trading with Singapore, who, by discharging and receiving their cargoes there, avoid the dues exacted at the latter port. It is surrounded by rocky islets, and is separated from Bunting Island by a narrow strait.

BATTERSEA a par. and vil. England, co. Surrey in a low situation, r. bank, Thames, across which there is here a wooden bridge, connecting it with Chelsea on the opposite side. A great portion of the parish is laid out in market gardens, the produce of which is sent to the London market. The parish church is a neat brick building and contains amongst other interesting monuments, one to the celebrated Lord Bellingbrooke sculptured by Kneller. Area of par. 5183 ac. Pop. 11,779.

BATTICE-JONAS, a tn. and com. Belgium, prov. of and 12 m. E. Liège. From 800 to 400 looms are employed in weaving cloth. A great deal of butter and still more of cheese, known by the name of Limburg are exported. Pop. 4480.

BATTICOTTA, a vil. and par. Ceylon, in Jaffna the former contains a seminary established by the American missionaries, into which native youths only are admitted. There is here, likewise, a Bible association. Pop. of par. and vil. 5841, all Malabars.—(Ceylon Gen.)

BATTLEFORD par. Eng. Suffolk 1542 ac. Pop. 495.

BATTLE par. and vil., S. Wales, Brecon; 1544 ac. Pop. 161.

BATTLE, a market tn. and par. England, co. Sussex. The town, in a valley nearly encircled by wooded hills, 7 m. N.W. Hastings, consists chiefly of one irregular street, in which there are many old-fashioned buildings, is well supplied with water and lighted with gas. The church is ancient, and contains some fine specimens of painted glass, and numerous antique monuments. There are places of worship, also, for Baptists, Wesleyans, Swedenborgians and Unitarians, and an endowed and charity school. Battle has been long celebrated for the manufacture of gunpowder. Tanning is likewise carried on to a considerable extent. Interesting

remains of the ancient abbey built by William the Norman, still exist, including the gateway a beautiful specimen of the decorated English style. The town was anciently called Epton, but changed to its present name after the battle of Hastings. Market day Thursday; three fairs annually. Area of par. 7890 ac. Pop. 3849.

BATTLEFIELD par. Eng. Selw. 850 ac. Pop. 46.

BATTLESDEN par. Eng. Bedford; 1125 ac. Pop. 180.

BATTUCIAS, or **BATTUCIA**, a tn. of remarkable beauty in Spain, prov. Salamanca, in the midst of high and rugged mountains, on the borders of Extremadura. They are difficult of access. Spanish tradition had peopled these wild and lonely glens with demons, and other supernatural beings; but the establishment of a Carmelite convent there, in 1699, tended to put an end to this absurd belief. The principal valley is 8 m. long and 2 broad. On the summit of the highest mountain by which it is overhung, is a chapel dedicated to the Virgin, which is visited by immense numbers of people on the 8th of every September. State prisoners were sometimes sent to this dreary region. The romance of Las Batucias, by Madame de Guilla, is founded on a story which represents these valleys as having been discovered in the 15th century by two fugitive lovers.

BATU an Isl. Indian Archipelago, W coast, Sumatra, immediately S. of the equator. 40 m. long and 10 average breadth, almost entirely covered with wood. It is rich in sago, coconuts, and birds nests and is inhabited by a tribe from the island of Nias, who pay a yearly tribute to the Raja of Baluaro, a small fortified village in the interior belonging to a different tribe, whose number is never allowed to exceed 100.

BATURIN a tn. Ruana, gov. of and 78 m. E. Tschernigov pleasantly situated on a hill, near the Betta, a tributary of the Dnestra. It contains a handsome chateau, belonging to the Counts of Rastumwsky, a convent, and eight churches. The inhabitants depend chiefly on agriculture, and several yearly markets. Baturin was once the residence of the hetmans of the Cossacks and had a fortress which, on the revolt of the celebrated Mazepa, in 1708, was demolished. Pop. (1849) 1399.

BATURIE [formerly *Montemore Velho*] a tn. Brazil, prov. Ceara 95 m. S.W. Aracaty in the serras Beturike. It has a church, school, and elementary college. The inhabitants of terra and district 2500 are engaged in cultivating and gathering cotton and in rearing cattle. The serras of Baturie or Botariz, runs S.W. to N.E., with a considerable curve total length, about 150 m. It is fertile, and well peopled.

BATURSKA WOLA a vil. Austria, Galicia, diocese, and 9 m. N.W. Bochnia on the Vistula. Pop. 2260.

BATZ (leze ny) *See* Bas.

BATZ, a fishing tn. France dep. Loire-Inférieure (Britany) amidst salt marshes, on the shores of the Bay of Illaud and about 22 m. W. Savenay. The houses are well built of granite, with lofty windows and slated roofs. The inhabitants are chiefly engaged in fishing for which their locality and little harbour are well adapted; they are remarkable for their cleanliness which is especially manifested in the carefully waxed floors and furniture of their houses, and for a curious costume peculiar to themselves, and transmitted with out change from generation to generation. The object most worthy of notice is the church, whose square heavy roof is supported by a spire, about 170 ft. high, is a superb land mark for vessels, in passing two very dangerous reefs at the entry of the Loire. A variety of curious shell-work is made here. The chief trade is in fish, herrings, and pilchards oen, bay flax, and salt of the finest quality obtained from the salt marshes. Pop. 1266.

BALBELTCHOUAP an Isl. Pacific Ocean, the largest of the Pellew group lat. (N. extremity) 7° 45' N. lon. 184° 55' E. (N.) forming the N.E. part of the chain it is about 24 m. in length, and on its W. side there is a high hill, from the summit of which both extremes of the chain may be seen.

BAUCO a tn. Papal States, 6 m. W. Frodonova. P. 8000. BAUD a tn. France, dep. Morbihan, 20 m. N.W. Yannes having some trade in grain, cattle, hemp, butter and honey. Pop. 1082.

BAUDOUR, a vil. and com. Belgium, prov. Hainaut, 7 m. W. Mena. The museum is noted for its pottery. It

has also two sub-refuges, two breweries, an oil and two cream mills.—The country is watered on its E. extremity by the Hahn, and traversed by the canal from Mosa to Coudé. A large part of its surface is covered by a morass. Pop. 2946.

BAUERWITZ, or **BAHNSON** a tn. Prussia, gov. of, and 24 m. S. Oppeln circle, Loobschütz, a bank, Rhine. It contains a K. Catholic church, a chapel, castle, townhouse, and hospital is the seat of several public offices, and some manufactures of linen and cardamum. Pop. 2800.

BAUG a tn. Hindostan, prov. Malwah at the confluence of the Guirra and Vangerry 22 m. E. Baroda lat. 22° 22' N; lon 74° 49' E. It stands on horizontal beds of sandstone, at the base of a range of hills, in a valley on the road between Malwah and Gogherat by the Oudipour pass, and is famous for its smelting furnaces and forges. About 8½ m. S. the town are four extraordinary cave temples, cut out of the solid rock, and supposed to be of Buddhist origin, though there is no record of the existence of Buddhism in the district. Their walls are sculptured with mythological representations, which, with a single exception, apparently of modern date, have no resemblance to those of the Brahmins. Pop. 5000.

BAUGE, a tn. France, dep. Maine-et-Loire, 19 m. E. N. E. Angers agreeably situated in a valley near the Conansun, which is here crossed by a handsome stone bridge. Some of the houses are good; but the town is, in general, very irregular.—An old castle, built by Folques Barre, still remains in good preservation, and the hospital is one of the best in the department. Coarse cloth and woollen stuffs are made here. The trade is principally in cloth, wool for carpentry and cattle. Pop. 3197.

BAUGHURST par Reg Hants 1670 ac Pop. 568.

BAULEAH a tn. Hindostan, presidency Bengal 1 bank, Ganges, 20 m. N. E. Moorshedabad. It is a large place and of some commercial importance; has a spacious factory and is the residence of a commercial officer of the E. I. Company.

BAUMBER, or **BAUMBERG** par Reg Lincoln 8200 ac Pop. 407.

BAUME the name of several places in France, especially—1 *Baume les Dames* [anc. *Balnea*] an anc. tn. France, dep. Doubs. It is well built, and pleasantly situated, r bank, Doubs, in a hollow surrounded with vine-clad hills and close to the canal that connects the Rhone and the Rhine. The principal buildings are the parish church, which is large and handsome, and the spacious hospital. Previous to the revolution of 1793, there was here a celebrated Benedictine convent, to which only arms who could exhibit proof of nobility were admitted. This convent was founded in the fifth century and was patronized by the kings of Burgundy. Hats are manufactured here to a considerable extent and in the environs are glassworks, ironworks, tanneries, paper-mills, &c. Pop. 2211.—2 *Baume les Messieurs* [formerly *Baume les Moines*] a tn. France dep. Jura, 6½ m. N. W. Lons-le-Saulnier. It has a magnificent church, and was formerly noted for its large monastery of Benedictine monks. The neighbourhood

is very rugged and precipitous, and much visited by travellers for its romantic scenery. Pop. 771.

BAUMELEIN, or **BAUMLEIN**. See **BAUMAN**.

BAUNTON par Reg. Gloucester; 1840 ac. Pop. 184.

BAURE, **BAURON**, or **BAURON**, a river, Solina, rising in Lake Gessandre; lat. 45° 18' S. lon. 55° 50' W.; flowing N. W. and falling into the Danube or Gessandre, on its E. bank, on the frontier of Russia, after a course of about 800 m.

BAUTSCH a tn. Austria, Moravia, circle Freun, 23 m. N. E. Olmitz. It has a parish church, and its own magistracy. Pop. (German) about 2500.

BAUTZEN or **BUDOWITZ** a tn. Saxony cap. Upper Lusatia, r bank, Spree, 83 m. E. N. E. Dresden. It is well built, with large many houses, broad, straight, well-paved streets and suburbs adorned with beautiful gardens. It was formerly defended by a strong castle, which is now in ruins. The public buildings of note are, the royal palace of Orleansburg now used as public offices, the cathedral a large structure, built in 1218 with a very lofty spire; a K. Catholic chapter-house, a townhall, and public library, a gymnasium a normal school with a number of churches, hospitals, and other charitable institutions. It has considerable manufactures of tobacco, woollen cotton, linen goods, and hosiery with iron powder, and paper-mills; copper and wire works, dyeworks, tanneries, blacksmiths, hewers, distilleries, and tanneries. About 7 m. E. by R. from Bautzen is Hochkirch, the scene of a great battle fought in the Seven Years War 1746. Near the town is the scene of another sanguinary conflict, the battle of Bautzen, fought between the French under Napoleon and the allies, May 21 and 23 1813. Pop. exclusive of garrison, 8676.

BAYARIA [German, *Bavaria* French, *Bavière*] a kingdom of Central Europe, in the S. of Germany composed of two isolated portions of unequal size. The larger portion, comprising about seven-sevenths of the territory is included between lat. 47° 19' and 50° 41' N. and lon. 8° 58' and 13° 50' E. bounded, E. by Bohemia and the archduchy of Austria, N. by Tyrol, Vorarlberg and Lake Constance, W. by Württemberg Baden, Hesse-Darmstadt, and Hesse-Cassel N. by the states of Ducal Saxony the principalities of Rhenish and the kingdom of Saxony. The smaller portion, the Pfalz or Palatinate, lies W. from the main portion of the kingdom, and separated from it by Württemberg Baden and Hesse-Darmstadt. It is included between lat. 48° 57' and 49° 50' N. and lon. 7° 8' and 8° 21' E. and is bounded, E. by the Elz, which separates it from Baden, S. by France, W. by the Prussian Rhine provinces, and a portion of Saxe-Coburg, and N. by Hesse-Darmstadt.

Bavaria is estimated to contain an area of 29 657 sq. m., and is divided into eight circles (*kreise*) which were formerly named after the rivers that watered them but an edict of Nov 29 1837 gave the circles new names and new boundaries. The following table shows the new and old names of the circles, with their area and population, at the present time—

CIRCLES (KREISE).	Area, sq. m.	Population in Dec.	CHIEF TOWN.	Pop. 1861.
<i>Modern Name.</i>				
1. Oberbayern (Upper Bavaria)	6 614	5 798	Munich.	145,201
2. Niederbayern (Lower Bavaria)	4 118	575,061	Munich.	125,000
3. Pfalz (Palatinate)	2,225	285,120	Speyer.	52,610
4. Oberpfalz (Upper Palatinate), and Regensburg (Regen)	4,399	474,241	Regensburg.	57,375
5. Oberfranken (Upper Franconia)	2,228	500 70	Bamberg.	12,944
6. Mittelfranken (Middle Franconia)	2,798	627,492	Frankfurt.	12,944
7. Unterfranken (Lower Franconia), and Aschaffenburg	2 004	590,554	Würzburg.	86,119
8. Schwaben (Swabia), and Neuburg	5 445	5 492	Augsburg.	44,889
	50,617	4,615, 68		4,900,897

Including military (25,519).

Mountains—Bavaria is a hilly rather than a mountainous country. A large portion, more especially S. of the Danube, is a plateau country of considerable elevation, and indeed, the whole of the main portion of the kingdom may be described as an upland valley averaging about 1000 ft. above the sea level, intersected by numerous large streams and ridges of low hills. On all sides it is surrounded by hills of a greater or less altitude, either quite upon the frontier or only at small

distances from it. The whole S. frontier is formed by a branch of the North Alps, offshoot from which project far into the S. plateau of Bavaria. Besides numerous peaks which this range contains, varying from 4000 to 8000 ft. high, the following may be named as being above the latter number—The Zugspitze, 9675 ft. high; the Watzmann, 8733 ft. the Hochvogel, 8475 ft. the Maßbach, 8450 ft. Passing along the valley of the Inn and across the Danube, we come to the Bohemian

Speyer, formed by the Bohemian Mountains, running S.E. to N.W., and lowering down at the valley of the Eger. The highest peaks in this range, are the Riebel, 4743 ft., and the Arber, 4848 ft. Crossing the Eger we meet with the Fichtelgebirge, reaching the Schwarzbach 6450 ft. high; and the Odenwald, 5841 ft. W from this range, and along the frontier of the Saxony dual territories and Hesse-Cassel, hills of moderate elevation, under various names Frankwald, Riebelgebirge, &c., no peaks of which attain an elevation of more than 5148 ft. The W mountain boundary of the Bavarian valley is formed N of the Main by the Spessartwald range, and in the kingdom of Württemberg by the Alb (which see). The only note-worthy interior ranges are in the N.W. the Steigerwald; and in the N.E. running in a S.W. direction from the Fichtelgebirge, the Franconian Jura; a low limestone range containing numerous remarkable stalactitic caves. The Fils or Palatinat, is traversed S to N by the N. extremity of the Vogesen, the highest peak in this locality being Donnersberg 2137 ft. high.

Lakes.—The lakes of Bavaria are rather very numerous nor of very great extent, though many of them present exceedingly picturesque scenery. The larger are all situated on the upper part of the S. plateau, the smaller within the range of the North Alps. The most remarkable of the former, are Lake Ammer, about 10 m. long by 2½ broad 1786 ft. above the sea. Lake Wörn or Starnberg, about 12 m. long by 6 broad, 1899 ft. and Lake Chiem 9 m. long by 5 to 4 broad, 1651 ft. above the sea. Of the smaller the more remarkable are, Lake Tegern about 8 m. long 2086 ft. Lake Walcham 2597 and various others upwards of 2000 ft. above the sea level. Most of the lakes are well supplied with fish.

Rivers.—Bavaria belongs wholly to the basin of the Danube and the Rhine with exception of a very small portion in the N.E. corner which through the Eger appertains to the basin of the Elbe. The river Danube intersects the main portion of the kingdom W to E. nearly in the centre, and before it enters the Austrian dominions at Passau, where it is still 925 ft. above the sea, it receives on its E. bank the rivers Ilser Lech and Isar which have their sources in the North Alps besides numerous smaller streams; and on its E. bank the Wertach, Altmühl, Naab, and Regen besides other lesser streams. The Rhine nearly the whole length of the N. part of this portion of the kingdom from E. to W. and is navigable for steam vessels from Bamberg to the Rhine. Its principal affluents are the Regnitz, and the Saale. In the Palatinat there are no streams of any importance, the Rhine being merely a boundary river.

Climate.—If we except the valley of the Rhine, and the valley of the Main in Lower Franconia, Bavaria, even including the Palatinat, in comparison with other German States, is a cold country. The average temperature of the year is about 47° Fahr., the same as the E. coast of Scotland. Winter 30° spring, 47° summer 65° and autumn, 47°.

Soil and Vegetation, &c.—Bavaria is one of the most favoured countries in Germany in respect of the fruitfulness of its soil, due no doubt in a considerable degree to the undulating nature of the country to the numerous streams by which it is watered, and to being nearly wholly composed of Jura limestone. In the plains and valleys the soil is capable of producing all kinds of crops, but not until lately were the natural advantages of the country turned to good account. Ignorance and idleness opposed a barrier to improvement, which it took the utmost efforts of an enlightened Government, aided by the general spread of education to remove. At length a spirit of agricultural enterprise pervades the kingdom improved methods of cultivation have been introduced, and large tracts of waste land have been reclaimed and brought under the plough. The principal crops are wheat, rye barley and oats but in some districts rice, spelt, maize, and buck-wheat, are also raised. To these productions of the soil may be added potatoes (the culture of which is yearly increasing) tobacco, and fruit, of which large quantities are grown in the valleys of the Main and the Rhine. In the circles of Mittelfranken and Schwaben-Neuburg the hop plant is cultivated to a considerable extent, the quantity varying from 30,000 to 40,000 ewt. per annum; and the vine in the circles of Fils and Unterfranken. The latter produces the Franconian which the best wines of the Empire are produced near Dinkelsbühl and Weichenheim. The celebrated Steinwein and Voss.

Leitenwein are the produce of the S. slopes of the Marienberg near the town of Würzburg. The forests of Bavaria, composed chiefly of fir and pine trees, cover nearly a third of its entire surface, and yield a large revenue to the state; much timber being annually exported, together with potashes, tar, turpentine, and other products peculiar to these wooded regions.

The principal mineral products are, salt, coal, and iron. The first is a royal monopoly and produces a considerable revenue, the latter are not wrought to nearly the extent they might be, though a considerable number of ironworks and coal mines are in operation. Black-lead is found in several places, and pretty largely exported, especially to America, where it is used for making crucibles. Porcelain clay of the finest quality likewise abounds in some localities, the best being obtained in the district of Wundtshaus in the Upper Main.

In the rearing of cattle and sheep, the Bavarians are still far behind. Notwithstanding the extent and excellence of their pastures, the stock, generally is of inferior quality and inadequate to the home consumption. Improvement in these respects, however, is now in progress, through the instrumentality of agricultural and veterinary schools, which were established a few years since and which distribute prizes to encourage the breeding of stock. Stables are great numbers in all parts of the country and poultry and wild fowl are abundant. The wolves and bears with which the forests of Bavaria were at one time infested are nearly extinct.

The manufactures of Bavaria are singly very unimportant, being mostly on a small scale, and conducted by individuals of limited capital. The principal articles manufactured are coarse linen, woollens, cottons, leather paper glass earthen and ironware jewellery &c. but the supply of the first three articles is inadequate to the home consumption. Of leather paper glass, and ironware pretty large quantities are exported. The optical and mathematical instruments made at Munich are the best on the Continent and are priced accordingly.

But the most important branch of manufacture in Bavaria is the brewing of beer—the universal and favourite beverage of the country. There are upwards of 5000 brewing establishments in the kingdom, which have been calculated to supply on an average, about 20 gallons a year to every individual of the population. The beer is neither so strong nor so sweet as Scotch ale but is of much better flavour and forms a pleasant and wholesome beverage. It is not only consumed in immense quantities in the country but is sent to all parts of Germany. A large portion of the industrial population maintain themselves by weaving linen, and by the manufacture of articles in wood (some of which are of beautiful workmanship) and by the tanning and sawing of timber. Notwithstanding its favourable geographical position, and other natural advantages, the trade of Bavaria is very limited. The whole amount of import, export, and transit duties collected in 1845 did not much exceed £200,000. Principal exports—corn, timber wine cattle, sheep, butter, salt, iron, leather glass, hops, fruit, beer &c. Imports—sugar coffee, cotton, rice, tobacco, drugs, copper oil, spices, dye-stuffs, silk, and silk goods, lead, &c.

From its position, Bavaria enjoys a considerable portion of transit trade, much facilitated by the good roads that traverse this country in all directions. The means of communication have recently been greatly augmented, by the completion of the Rhine Ludwig (King Louis) Canal, which connects the Main at Bamberg with the Altmühl a short distance above its embouchure in the Danube, thus establishing direct water communication through the Rhine, between the German Ocean and the Black Sea. By the railway from Munich through Augsburg, Nuremberg and Bamberg to Hof, Bavaria is connected with the railway systems of N. and W. Germany. Several other railways are contemplated, but the only one yet opened is that from Augsburg to Karlsruhe.

Education and Art.—The department of education is under the superintendence of the Superior Board of Education and Ecclesiastical Affairs. A complete system of inspection is established throughout the country the reports of the inspectors, including not only the number and predilection of the scholars, but also the conduct of the teachers, the state of the buildings, and the nature and extent of the funds available. It is necessary in Bavaria, before education can be obtained in any higher school, to have passed a satisfactory examination in the lower school. Not only must all candidates be

offices under the state past examinations, but examinations are held of apprentices in trade, who wish to become masters, and even of officers in the army on promotion. The total of both sexes receiving instruction in 1844, was 1,088,208, or about 1 in 6 of the whole population. There are three universities in Bavaria—two of which (Munich and Wirtzburg) are E. Catholic, and one (Erlangen) Protestant. In the first, there were, in 1847 1471 students. In the second, 531 and in the third 363. There are also several lycees, a number of gymnasia, numerous Latin, normal, and polytechnic schools, higher academies of arts and sciences, fine arts, horticulture, &c. The capital, Munich, contains a library of 500,000 volumes, including 18,000 MSS., several scientific and literary institutions, academies, and national societies, and extensive collections of works of art.

Bavaria enjoys the honour of having originated a school of painting of a high order of merit, known as the Nuremberg school founded about the middle of the 15th century by Albert Dürer, a native of that town, whose works are little, if at all, inferior to those of his great Italian contemporaries. Hans Holbein, who excelled Dürer in portraiture, though far behind him in historical painting, is claimed by Bavaria, but neither the precise locality nor date of his birth are known with certainty; Augsburg, Basel, and Grinshaus being severally named as the one, and the dates 1455 and 1498 as the other. To these celebrated names have to be added those of the eminent sculptors Kraft and Vischer both also Bavarians the former born about 1455, and the latter about the middle of the same century. The masterpieces of the latter distinguished artist in the bronze statue of St. Sebastian in Nuremberg, contained a marvel of art, for beauty of design, and delicacy of workmanship. The most celebrated of Kraft's works is the remarkable tabernacle in stone, affixed against one of the columns of the choir of the church of St. Lawrence also in Nuremberg. The restoration of Bavarian pre-eminence in modern times, in connection with the fine arts, is in great measure due, not entirely owing to Louis, the late sovereign of that kingdom; whose love of art, and liberal patronage, have rendered the capital one of the most celebrated seats of the fine arts in Europe.

Religion.—There is no predominant church in Bavaria, but the prevailing religion is the E. Catholic, professed by 4,600,000 out of about 4,600,000. The principal portion of the remainder are Lutherans, Reformed, and Jews. Although however Catholicism be the religion of the state, all others are free and all citizens whatever their creed are equally admissible to the same public functions and employments, and possess the same civil and political rights. The Articles of the Concord concluded with the Pope, are subordinate to their application to the fundamental law of the state. By an ordinance of Louis, late King of Bavaria, females are prohibited from pronouncing any monastic vow until after having passed their 33d year. The ceremony of taking the veil must always be performed in presence of a lay commissioner intrusted with the power of interrogating the person about to withdraw from the world. The dioceses of Bavaria are, Munich, an archbishopric, with 30,000 souls (1866). Bamberg, also an archbishopric, with 18,000 souls (1858). Augsburg, Bistum, and Hildesheim, bishopric with 10,000 souls (1833) each. Passau, Bistum, and Speyer, bishoprics, with 8000 souls (1866) each. The dean at Munich has 4000 (1838), at Bamberg, 3500 (1831), in the first seat of bishoprics 3000 (1836) and in the second, 2500 souls (1838) a year, and the dignities called *propst*, who rank between the bishop and dean, have the same as the dean. The annuity incomes vary from 1400 (£116) to 3000 souls (1818). These salaries are paid by Government. In Bavaria, marriages between individuals having no capital cannot take place without the consent of the parental persons appointed to superintend the poor institutions, who, if they grant such liberty where there are no means of supporting the children that may spring from such marriages, render themselves liable for their maintenance. The law is apparently intended to prevent imprudent marriages, for which it seems certainly better adapted, than for the promotion of morality.

People.—In general appearance the Bavarians are stout and vigorous, well adapted to bear the fatigues of war, and are in general considered as good soldiers. They are fond, addicted to drinking and to immoral practices, but are brave,

patriotic, and faithful to their word. Their manners and customs, towards the close of the last century, were described as coarse in the extreme, and strongly marked with the superstitious bigotry of their religious creed. Since the more general diffusion of knowledge, a great change for the better has taken place. The peasantry are clad in long hose multi-coloured coats, lined or edged with pink, and studded in front with clusters of silver or white metal buttons, thrown open to display a smart waistcoat of various and brilliant colours; their hats are ornamented with artificial flowers. Many of the Bavarian females are head-dresses, heavily and gracefully. They wear generally and display much taste in their attire. Some of them wear black silk handkerchiefs tied tightly round their heads, decorated with flowers or ribbons some caps of silver or gold tulle, and all having their hair neatly braided. German is the language chiefly spoken by the Bavarians; but they have never been conspicuous for the cultivation of their native tongue.

Money Wrecks &c.—The Bavarian currency is the same as that of Frankfurt, Wirtzburg, &c. Accounts are kept in florins and kreutzers. The most common Bavarian silver coins are—

Flies of 2 kr.	of which 30 make a florin.
4 kr.	10
18 kr.	1
24	1 (Groschen).
Bavarian dollar	5 florins 26 kreutzers.
1	1 15
Prussian coin	are very common throughout; R. Rhenish.

The principal linear measures are the *foot* = 911578 Eng. yard and *finger* = 6 lines. Each of these measures, multiplied by itself, gives the square measure of the same name. The principal dry measure is the *schafel* = 764688 Eng. quarter. The bush of the *liquid* measure is the *metze* or *maasskorn* = 235807 Eng. gallon. The *owen* (wine measure) is = 60 maasskorn, but the *owen* (beer measure) = 64 maasskorn. The principal weights are the *pfund* (pound) = 1.28459 Eng. lb. and the *centner* = 128.45 Eng. lbs. or about 112 lbs. more than the English one.

Constitution.—Bavaria is an integral part of the Germanic Confederation, the domestic inalienable, and even hereditary. The executive is in the hands of the King. The legislature consists of two chambers, one of senators, and one of deputies the former composed of princes of the royal family the great officers of the state, the two archbishops the heads of certain noble families, a bishop named by the King, the president of the Protestant General Consistory and any other members whom the King may create hereditary peers the latter of members chosen, one to every 7000 families, or 25,000 persons. The qualifications are, that the candidate have completed his 30th year that he be a free and independent citizen that he be a member of the Roman or Reformed church, and pay taxes on property of the value of £765 at the least. The members are chosen every six years unless dissolved by the King and are generally convened once a year but are bound to assemble at least once every three years. Each of the eight circles or provinces has a provincial government, consisting of two boards, one for the management of the police, schools &c. and the other for the management of financial affairs. The national budget exhibits a favourable state of matters, the receipts considerably exceeding the expenditure. The full war complement of the army is about 57 000 men the contingent furnished to the German Confederation, 26,500. The army is raised by conscription, every man, excepting the nobility and clergy being liable to serve after the completion of his 21st year. The period of service is six years and no Bavarian can settle or marry or accept of any definite appointment, until he has fulfilled his military liabilities.

History.—The Bavarians are descended of the Boli, a Celtic tribe, who subdued the native inhabitants, and took possession of the country about 600 years before the Christian era. The Boli were in turn conquered by the Romans who retained the territory till the fall of the empire, when it was overrun by the Ostrogoths and Franks. The sovereignty of Bavaria was subsequently assumed by Charlemagne, and on the death of that monarch, the kings of the Franks and Germans governed it by their Rutenen, who bore the title of Margrave, afterwards converted into that of Duke, and lastly (1818) into that of Elector. In 1070, Bavaria passed into the possession of the family of the Guelphs, and in 1180, it

was transferred by imperial grant to Otho, Count of Wittelsbach. On the extinction of the direct line of that family in 1777, the Elector Palatine, Charles Theodore, added the Palatinate and the duchies of Juliers and Berg to the Bavarian dominions. In 1799, Charles Theodore died without issue, and the Salubian branch of the line of the palatinate became extinct with him. The Duke Maximilian Joseph of Deux-Ponts came into possession of all the Bavarian territories. The peace of Lunenburg (Feb. 9 1801) put an end to the renewed war and its most important article—the cession of the left bank of the Rhine to France—essentially affected Bavaria. Whilst it lost all its possessions on the left bank of the Rhine, and also the lands of the palatinate on the right bank, it obtained, on the other hand, by an imperial edict, an indemnification, by which it gained, in addition to the sum of 100 millions of florins, 216,000 sq. m., and 216,000 inhabitants.

The political importance of Bavaria, with respect to Austria as well as to France, was more fully displayed in the war of 1805. When Austria resumed hostilities against France, she required the Elector of Bavaria to unite his troops with the Austrian army and refused to allow him to remain neutral, which for the Emperor Francis wrote to the elector Sept. 18 1804 France herself could not suffer as long as she should find it expedient. Bavaria, however did not find it accordant with its own interests to place itself entirely in the power of Austria. At the beginning of the war the Elector joined the French with about 80,000 troops, and the peace of Presburg annexed to his dominions 10,900 sq. m., and 1,000,000 inhabitants, and conferred on him the dignity of King in return for which, he ceded Würzburg which was erected into an electorate, in the place of Salzburg. The King of Bavaria, like the rulers of Würzburg and Baden were assumed sovereignty over the lands of the nobility of the empire within his borders. When, in 1813 the war between France and Russia broke out Bavaria sent anew its whole proportion of troops to the French army. Insignificant remains only of the 80,000 Bavarians returned in the spring of 1813. Maximilian Joseph, notwithstanding this sacrifice, placed fresh troops under the command of Napoleon as the protector of the confederation of the Rhine, when the new campaign was opened near the close of April. This army also achieved great losses, but distinguished itself by its wonderful bravery under the command of Marshal Outinot. It suffered particularly in the battles of Lützen and Grossbeeren (1813). In 1805 Bavaria was raised, by the treaty of Presburg to the rank of a kingdom, with some further cessions of territory all of which were confirmed by the treaties of 1814 and 1815. In 1848, the discordant conduct of the King of Bavaria, in maintaining an open house with a wandering actress, who had assumed the name of Lola Montes, but who was in reality the eloped wife of an Englishman and whom he had married a Bavarian countess, by the title of Gräfin von Lunenburg, had thoroughly alienated the hearts of his subjects, and quickened that desire of political change which had previously existed. In this spirit the people, early in March 1848, demanded the immediate convocation of the Chambers the liberty of the press, that judicial trials should be public, that an electoral reform should be granted, and that the army should take an oath to observe the constitution. The King having refused to convocate the Chambers before the end of May the people flew to arms, attacked and captured the arsenal after a short engagement. They subsequently marched against the royal palace, the military refusing to obey them, although commanded to do so. In this predicament, the King, finding further resistance useless, yielded to all the demands of the people, who now returned their arms to the arsenal, and afterwards dispersed quietly. Fresh tumults, however occurred, and on March 21 King Louis announced his resignation of the sceptre to his son, the crown prince Maximilian, the second of that name who had filled the throne of Bavaria. Bavaria contains several very ancient and venerable cities, famous for its towns of the empire, such as Augsburg, Regensburg or Regensburg, and Nuremberg, in their day of prosperity, centres of wealth and commercial activity created and sustained by the extensive carrying trade overland from Italy and the East, to the Baltic, and to the great cities of the Netherlands. Nor less remarkable were the Episcopal cities, Würzburg and Bamberg, once capitals of ecclesiastical principalities, but now still further reduced than the Imperial towns.

Pop. (1848) 4,519,545.—(Burgess; Hahn; Parliamentary Papers, Annual Register &c.)

BAYAT [see Bayang] an eco. to France, dep. Nord, around, of, and 15 m. N.W. Avenue, of considerable military importance in the time of the Romans. It contains the ruins of an aqueduct, amphitheatre, and fortifications, and has manufactures of glass, earthenware, hardware, agricultural implements, hosiery and leather. The inhabitants are also engaged in agriculture and rearing cattle. Pop. 1605.

BAVERSTOCK, par Eng. Wilt. 1186 ac. Pop. 169. BAYBPE, a to Mexico, prov. Chihuahua, in a mountainous district, near the source of a river of the same name. It used to be classed as one of the Spanish presidios, or small forts built as a protection against the wild Indians.

BAWTRY a market in England, co. York, W. Riding on a plain on the Lide, 9 m. S.E. Doncaster. It consists of two principal streets straight, and well kept lighted with gas, and amply supplied with water. Houses chiefly of brick, plastered or stuccoed; and contains a parish church a Methodist and an Independent chapel several Sunday-schools and a day-school. It has some trade in corn, oak-timber and stone, which is sent chiefly to London and Hull. The Lide is navigable to the town for small vessels of about 24 tons. Pop. 1170.—(Local Correspondent.)

BAWTRILEY par Eng. Warwick 874 ac. Pop. 318.

BAY a lake in Luzon, 9 m. of Manila. It is of very irregular form, but measures above 30 m. both in length and breadth. There are several small islands in it, of which the largest named Tulin, is about 11 m. long by half that width at its broadest part. It receives the waters of several rivers, but has only one outlet, the Pasig, which falls into the Bay of Manila, at the town, after a course of about 18 m. The lake is deep in many parts, though generally not more than about 18 fathoms. It contains vast quantities of fish, of which daily supplies are sent to the Manila market. Game is abundant on its shores. Few birds of various kinds and swarms of insects frequent its banks and waters.—(Mallat's Philippines.)

BAY OF ISLANDS, a large and commodious harbour N.E. coast, New Ulster (native name, *Kahoonoo*) the most N. of the New Zealand Islands; about 90 m. S.E. North Cape lat. (E. point, Cape Brett) 35° 10' S. lon 174° 22' E. (N.) It is of easy access and, with exception of one rock called the White-rock, the position of which is well ascertained there are no hidden dangers. It is fringed with islands, whence its name, and contains a surface of water of about 10 m. sq. Near the middle of the W. side of the bay is the opening of Korororua harbour a secure but shallow port better adapted to merchant shipping than to the use of men-of-war. Within the line from Cape Poodoe to Cape Brett, between which is the entrance into the bay there is not more than 30 fathoms of water and everywhere excepting close to the rocks, the bottom is soft and unobscured, affording secure anchorage. The view on all sides is pleasing, exhibiting everywhere an appearance of fertility, but is without any grand, or remarkable features. The bay has been the resort of whalers for many years.—(Gardner's Voyages of Adventure and People, Parliamentary Report.)

BAYAMO or BAY SALVADOR, a tn. E. part, Isl. Cuba, 60 m. N.W. Santiago, near 1 bank, Ocaña a small stream that falls into the bay called the Canal de Bayamo. It lies in lat. 30° 40' N. lon. 76° 55' W.; and carries on a good trade.

Pop. variously stated from 7500 to 14,000.

BAYAN or BAY KHARA-GOOTA, a lofty mountain-range in Asia, on the N.E. border of Tibet, a branch of the Kuen-lun stretching N.W. and S.E. between the sources of the Hoang-Ho and the Yang-tse-Kiang, one of the largest rivers in China.

BAYAS [see Baia] a tn. Syria, prov. Aleppo, a little to the S. of the river Dail Chai, and 15 m. N. Iskenderoon. It contains a castle, khm, bazars, baths, and numerous ruins. There are several villages in its neighbourhood, situated amidst groves of orange and palm trees.—(Chamney.)

BAYAZID, or **BAYRIZ**, a town in Turkey in Asia, pop. 44, and 140 m. S.E. Erzurum; S.W. Mount Ararat, from the base of which it is separated by a lava-covered plain 10 m. in width, lat. 39° 24' N. lon. 44° 20' E. governed by a pasha of two tails, appointed by the pasha of Erzurum. It is situated on the declivity of a rugged eminence, the summit of which is fortified, and surrounded by a wall and ramparts.

THE CASTLE OF BAYAZID.—From *Travels Description de l'Arménie de France*, etc.

parts. The town is in a ramous state most of the houses are small and ill built, and the streets are in an extremely filthy condition. Besides the extensive palace of the pasha, the town contains two Christian churches, three mosques and the famous monastery of Kara-Kiliseh, celebrated for its beautiful architecture and antiquity. The inhabitants consist chiefly of Kurds and Armenians. The former amount only to 800 or 400 families the latter to not more than 190 families. Kurdish is the common language of the place. Some trade is carried on with Georgia and Persia, on the frontiers of which the town is situated. Total pop. 5000.—(Smith and Dwight's *Researches in Armenia*.)

BAYDON par Eng. Wills 8060 ac. Pop. 370

BAYEUX, (much), a tribe of people E. Africa, inhabiting the banks of Lake Ngami and the river Zouga. They are a fine intelligent race, much darker and larger than, and in every respect superior to, the Bechuanas. They make canoes, roughly fashioned, out of entire trees and so that one and counterbalances the other they do not care for them being straight consequently many are quite crooked sails are unknown. They live chiefly on fish caught by means of neatly-made nets, dyed in tea, made from the bark of the camel-thorn, to prevent them from rotting.—(Latter from W. C. Owerell, Esq., in *Jour. Roy. Geog. Soc.* 1854.)

BAYEUX, an sea city France, dep. Calvados, 16 m. N.W. Caen situated on the Aure, in a fertile plain about 6 m. from the sea, and surrounded with excellent pasturage. The principal street is handsome, but most of the others are narrow and irregular. The houses have an antique and elegant appearance the squares are large and planted with trees. The cathedral is a splendid Gothic edifice with a tower 240 ft. high. It contains some interesting statues, sculptured in the 16th century. The church of St. Eusèbe, situated outside the town, is supposed to be the oldest in Bayeux. Little remains of the original structure, however excepting a portion of the square tower. In the Hotel de Ville is preserved one of the most interesting relics of the Middle Ages, known by the name of the Bayeux Tapestry although, in reality the work of the middle. It is a representation of the events connected with the invasion and conquest of England by the Normans, wrought in woad of various colours, in the style of a sampler. It is 214 ft. long, and 20 inches broad, and is divided into 73 compartments, each with a Latin inscription illustrating its subject. This singular relic is said, on good grounds, to have been the work of Matilda, Queen of William the Conqueror, assisted by her female attendants. Napoleon during his celebrated invasion of England, caused this tapestry to be carried from town to town, and exhibited in the theatre between the acts, to amuse the spectators to a second conquest. An excellent engraving of the tapestry has been made by

Stothard, for the London Society of Antiquaries. There are several manufactory in the town including those of superior quality calicoes, sashes, table linen, cotton yarn, and hats; and tanning and dyeing are carried on. The principal manufactory, established in 1813, continues to maintain its reputation. It employs about 60 workmen, and the articles produced are stronger and stand much better than the Languedoc produce, although the latter is of a purer white. A considerable trade is carried on in horses, cattle, pigs, poultry, fish, and butter of which latter article large quantities are sent weekly to Paris, either fresh or slightly salted. The All-Saints fair which lasts two days, is devoted to the sale of horses. Bayeux is of high antiquity having existed previously to the invasion of Gaul by the Romans. Pop. 9106.

HAYLEN See *BAYLEN*.

BAYONNE, a seaport in France, dep. Basses Pyrénées lat (nautical) 43° 29' 30" N. lon. 1° 25' 30" W. (n.) It is advantageously situated about 4 m. from the sea, at the confluence of the Nive and Adour. The former divides the town into two nearly equal parts, called Great and Little Bayonne, connected by the Mayon and Franco bridges. Both parts are surrounded by ramparts, flanked with bastions and broad deep ditches, which can at any time be filled with water. Four gates form the entrances to the town. As a fortified place, Bayonne ranks is the first class. Great Bayonne extends along the L. bank, Nive and contains the old castle; Little Bayonne stretches along the R. bank of the same river and the L. bank, Adour and contains the new castle, which is flanked by four towers. A third quarter, properly a suburb of the town although it does not belong to it, now even to the same department, is situated on the R. bank, Adour. It is called St. Esprit, and belongs to the department of Landes, communicating with Bayonne proper by a handsome wooden bridge across the Adour. In St. Esprit is situated the citadel which commands the town of Bayonne, the port, the surrounding district, and the approach from the sea. Bayonne is an agreeable town, built in the Spanish fashion, and presenting a different appearance from the greater city of French towns. The houses have lattice-windows and balconies over which cloth lines are extended. The shops are open in front like booths, and the Grande Place resembles a Spanish square in all its principal features. The inhabitants are remarkable for the animation and gaiety of their manner and have an appearance of light-heartedness that contrasts strongly with the more solemn demeanour of their Spanish neighbours. The town is well and substantially built. The main street, through which the high road to Spain passes, contains several handsome edifices. The other streets are narrow and appear to be more confined than they really are, from the height of the houses, which are generally of three or four stories. The Place Grammont, which opens, on one side, on the Nive, and on the other on the Adour, and the harbour is embellished with some fine buildings, amongst which are the custom-house and theatre. This square is the great resort of both the busy and the idle. The only remarkable public building in Bayonne, besides those named, is the cathedral, a small but elegant Gothic structure. Its arsenal is one of the best and most complete in France. The military hospital, also, is of considerable extent, being capable of accommodating 2000 invalids. On the bank of the river is an agreeable promenade, carefully kept. On one side is a row of houses painted in various colours, and on the other a noble quay. An avenue of trees occupies the intervening space. A little lower down the river are the dockyards, which are very commodious and well adapted for the construction both of ships of war and merchant vessels. The walks along the river are much frequented, and present a picturesque variety of costume. The women of Bayonne are celebrated for the elegance of their figures. Their attendants have become almost proverbial in France. The harbour of Bayonne is encumbered by a bar across the mouth of the Adour but, when entered, it affords every security. The rise of flood tide is 18 ft., of neap tide, 6½ ft. In 1840, the number of vessels that entered the port was 793, of which 66 were British; cleared the same year, 726, of which 43 were British.

Bygone has an exchange, and schools of commerce and navigation. The chief products consist of Andaya brandy, liquor, chocolate, sugar, oranges, glass, and refined sugar. It has a chamber of commerce, and carries on an important trade, not the least portion of which is by smuggling, into Spain. The chief exports are resins, woollen cloths, oranges, glass, dyed silks, drugs, cream-of-tartar, wines, brandy, etc. The chief imports are fine Spanish wool, liquor, root and jalam, wines, iron, copper, olive-oil, saltstems, etc. Bayona prides itself on never having been taken by an enemy and its motto is, *Invicta sumus*. The bayonet, a well-known military weapon was invented here, and derives its name from the town. Pop. (1945) 18,850.

BAYPOOR, a seaport to Hindoostan in Malabar Presid. Madras, 7 m. S. Calicut lat. 11° 10' N; lon. 75° 59' E. Tipu Sultan named this place Sultanpattanam, and intended to make it a commercial emporium. Tank ships of 400 tons are built here, and tank tar is extracted from the ships and wood.

BAYREUTH. See **BAIKREUTH**.
BAYSWATER, a hamlet, England, co. Middlesex, in the immediate W vicinity of London, of which it may now be considered a suburb, being only 2½ m. from St. Paul's on the Uxbridge road, on a plain adjoining Kensington gardens. The houses are tolerably well built, principally of brick, the fronts faced with composition, many of them are in the villa style, and some of them spacious and handsome residences well lighted with gas, and water abundant. It contains a church, Episcopal and Wesleyan chapels and several schools, including three ladies schools, and one connected with the Wesleyans.—(Local Correspondent)

BAYTON par Eng Worcester 1960 as. 1 op. 443
BAYVILL par S Wales, Pembroke 1844 as. P 124
BAZA (anc. Baza), a city Spain, Andalusia, prov. of, and 53 m. S. N. E. Granada, in the valley N. the Sierra Nevada. It has its situation, and for the most part, enclosed and narrow streets, these squares a college, and two parish churches, town-hall, hospital, college, four elementary schools, civil and ecclesiastical prisons, numerous public fountains, fine gardens, and promenades. Manufactures—hats linen fabrics earthenware, and gypsum. The environs yield wine and hemp sheep, cattle, and mules are reared and an annual fair is held in September. Baza is famed in early Spanish history more especially in that of Granada. In 1499 it was taken from the Moors by the Spaniards, after a siege of nearly seven months. In 1810 the French, under Marshal Soult, here defeated the Spaniards under Generals Blake and Frère. Pop. 10,133.

BAZADOIS (Trix) (anc. Vascos) France, one of the districts into which prov. Guyenne was divided, and now included in *depts Gironde and Lot-et-Garonne*. Its capital was Baza.
BAZARUTA, a group of islands, Africa, off the coast of Sofala, just beyond Cape St. Sebastian. They extend in a chain to the N and S, and approached from the S, appear like one island. Their N extremity forming the cape of the same name, lat. 21° 51' S. lon. 35° 33' E. has a reef projecting from it, which is covered at high water. On the W side of the N island there is a cove called Funga Bay, with from 7 to 9 fathoms water but lined by shoals on each side. There a ship might find shelter from E, S and W winds, and procure wood and water.—(Rosenburgh).

BAZAS (anc. Cavesu) a in France dep. Gironde 38 m. S. E. Bordeaux on a rocky eminence, at the foot of which flows the Garonne. It is surrounded by agreeable promenades, and by retained walls the only remains of its ancient fortifications. The houses are generally well built the only edifice possessing any architectural interest is the cathedral a Gothic structure, erected in the 13th or 14th century. It is small, but well proportioned, and remarkable for the number and lightness of its columns, for the purity of its style, and for the delicacy of the principal facade, which is ornamented with numerous statues and sculptures. In the principal porch is a font for holy water, in which, by a curious optical effect, the whole vault of the cathedral is reflected. Some saltpetre, glass, and leather are manufactured; and a considerable trade is carried on in agricultural produce, and wool for fuel, carpentry, and shipbuilding. Pop. 2325.

BAZANGA, a town Papia States, 14 m W Bologna, on the Saugoglia. Pop. 2037.

BEALL, a well and headland Ireland co. Kerry S. side of the estuary of the Shannon 6 m W N W Ballylongford. Near the village is an old castle.

BEALINGS, two parts Eng.—1 *Bealings* (Great) par Suffolk 1029 as. Pop. 377.—2, *Bealings* (Little) par W of the former 764 as. Pop. 516.

BEAMINSTER, a town and par England, co. Dorset. The town is situated in a fertile valley on the Birt, 14 m N W Dorchester. Houses, in general, good modern buildings streets well paved and lighted with gas. Water abundant. The church, built on an eminence on the S side of the town, is a stately structure, with a well-proportioned tower nearly 100 ft. in height. The Wesleyans and Independents have chapels each and a new chapel of ease is now (1856) in course of erection. There is an endowed school several daily and Sunday schools, and an almshouse for eight aged persons. Principal manufactures—saddlery, iron, tin, and copper wares market-day Thursday. The town was almost entirely destroyed by fire on three different occasions first, in 1644 again, in 1684 and a third time, in 1781. Area of par 3116 as. Pop. 2683.

BEAR, or **BEER** ISLAND and **HAYEN** Ireland Barmy Bay co. Cork. The **ISLAND**, which is about 5 m. long and from 1½ to 2 broad, is situated on the N W side of the bay. Its highest summit, 597 ft. high, is in lat. 51° 37' 30" N lon. 9° 55' 12" W (N.)—The **HAYEN** situated between the island and the mainland, is spacious and well sheltered, and has sufficient depth of water for large ships. It has two eminences one at the E. end the other at the W end of Bear Island. Bear Haven has recently been pointed out as well adapted for a naval and transatlantic packet station.

BEAR ISLANDS.—1 An isl. N Ocean, about 315 m. S. Cape South, in Spitzbergen lat. 74° 30' N; lon. 20° 0' E (N.)—2, Three islands in Hudson's Bay one in lat. 54° 24' N lon. 60° 50' W (N.); another in lat. 54° 33' N; the third in lat. 54° 46' N.—3, A group of islands in the N Polar Sea off the N E. coast of Siberia, between lat. 70° and 70° 50' N and lon. 164° and 168° E.

BEAR LAKE (Trix **BEAR**) an extensive sheet of fresh water in the N W part of N America, on the Arctic circle, between about 66° and 67° 35' N lat. and under the 30th degree of W lon. It is of irregular shape, and measures 170 m N to S. and E. to W. Its depth has not been ascertained, but where tried, no bottom was found with 270 ft. of line. The water is remarkably transparent, and appears of

a light blue colour. It abounds with fish particularly with a kind known by the name of the herring salmon of Bear Lake. The Bear Lake river flows from it to the Mackenzie river.

BEARN [anc. *Pagus Bearnensis*] an anc. prov. France, now constituting the department of the Basses Pyrénées, with the exception of the arrond. of Bayonne, and part of that of Mirepoix. Pau was the capital; the other towns were Lescar, Oloron, Nal, Orthez, Navarrenx, Morlaas, St. Jean, Pind de Port, St. Palais, Sauveterre, Pauzan, dep. Pyrénées.

BEARN (Carrs) a prehistoric, France, dep. Pyrénées-Orientales, on the Mediterranean, lat. 43° 31' N; lon. 3° 1' 30' E. (a.) Its summit is formed by Mount Bearn, on which a lighthouse of the first class has been erected, 751 ft. above the level of the sea, visible from a distance of 144 m.

BEARSTEAD, par Eng. Kent 610 ac. Pop. 620.

BEAR, or **BEYAS** [anc. *Byssa*], one of the great rivers of the Punjab, having its rise at the Kuluhi Pass, on the S. side of the Szechu Mountains, a branch of the Himalaya system, in lat. 32° 11' N lon. 77° 32' E. where the former attains an elevation of 15,500 ft. From this point, the Bear flows generally in a S. direction for about 60 m. when it turns W and NW till it reaches the E. margin of the Punjab, a distance of about 80 m., when it proceeds S.W. for 75 m.; forming throughout that space, the E. boundary and is then joined by the Setlej, about 8 m. N N E. Sobroon lat. 31° 10' N; lon. 73° 2' E. Its entire course is thus about 215 m. The Bear has been considered larger than the Setlej but it is greatly inferior to that river in the length of its course and, according to Burnes, though they have about the same breadth each—200 yards, the Setlej has the greater volume of water. The united stream, below the point of junction, is called the Gharu or Ghazra.

BEAS DE SAGRADA, a to Spain Murcia, prov. of and 50 m. NW Jaca, in the centre of a fertile vale, near the l. bank of the Guadalquivir. It has two principal and several smaller streets, two squares, a church, town and court houses, a hospital, endowed school, damp and gloomy prison and the ruins of a large old castle. Cottons cloth and shawls are manufactured, and dyeing, bleaching, tanning and oil-expressing are carried on. Pop. 2695.

BEATENBERG (N) a mountain, Switzerland, on Bern. It rises from the SE side of Lake Thun, and has a remarkable cave called the Beatenhöhle, in which St. Beatus is said to have lived, and worked miracles. On the slope of the mountain stands the alpine village and church, of the same name, about 2500 ft. above the level of the sea. Pop. 974.

BEATH a small par. Scot. Fife. Pop. 1253.

BEAUCAIRE [anc. *Belum Quadrum*] a tn. France, dep. Gard, 14 m. E. by St. Nizmes, r. bank, Rhone, opposite Tarascon. It is favourably situated for commerce the

Spain, Italy, the coasts of Africa, and the Levant. The town is, in general, tolerably well built, but the streets are narrow and inconvenient. There are no public establishments here, and very few manufactures, but the suspension bridge across the Rhone, which forms the communication with Tarascon, is the finest work of the kind in France. The river here is about 478 yards wide. Previous to the erection of the present bridge in 1839, the Rhone was crossed by a bridge of boats. Pictorially situated on a rock stand the ruins of the ancient castle, erected at the period of the first Crusades, and partly demolished in the reign of Louis XIII. Beaumont is principally celebrated for its great fair which rivals the fairs of Leipzig and Frankfurt, and is held partly in the town, and partly in booths erected on the bank of the river. It commences on the 1st of July and terminates on the 28th, at midnight. Little business is done, however till the 15th.

About the 10th, buyers and sellers arrive in multitudes, and the town, which has not more than the ordinary accommodation for 10,000 inhabitants, receives an influx of 80,000 or 100,000 strangers. Merchants from all parts of Europe, and some from the coast of Africa, attend with their goods and almost every kind of article, however rare, is to be purchased here. French, Italian, Spanish, Greek, Armenian, Turkish, Egyptian and Arab, attend with the produce or the fabrics of their various countries; and notwithstanding the short period allotted to the transaction of business, sales are effected to the amount of several millions of francs. A court, composed of 12 members, pronounces judgment in all disputed cases. After the 28th, the small goods are either re-packed, or disposed of at a low price, and the town sinks into the usual state of quiet. The ordinary trade of the town is principally in olive-oil, wine, and agricultural produce. Steamboats ply to Lyons, and to Toulon, and there is railway communication to Nîmes, Montpellier, Alais, Avignon, Aix, and Marseilles. Pop. 6,065.

BEAUCHENE, a small isl. S. America, about 24 m. S. of E. Falkland Island lat. (S. point) 52° 06' 45" S; lon. 59° 12' 45" W (a).

BEAUCOURT a vil. France, dep. Haut Rhin, 16 m. S.E. Belfort, noted for an extensive factory employing in the town, and its vicinity about 3000 persons, and in which are made all the finest kinds of stock and watch work screws, looks, &c. Pop. 1987.—Three other places in France have the same name.

BEAUDERERT par Eng. Warwick 1286 ac. P. 218.

BEAUFORT—1 A group of islands, Gulf of Boothia, NW or outer isl. in lat. 69° 55' N lon. 97° 5' W.—2 A cape, E. side of Cockburn's Gulf, lat. 67° 40' N lon. 50° W.—3 A cape, Russian America, lat. 69° N lon. 153° W.—4 A bay Russian America, on the Arctic Ocean, lat. 70° N; lon. 142° W.

BEAUFORT—1 A to France, dep. Maine-et-Loire, l. bank, Cousseau, 18 ac. S.E. Angers. It has a parish church with a lofty spire, a college, two hospitals, and a large salicloth manufactory. Pop. 8062.—Several other places in France bear the same name.—2 A tn. German Station, prov. Upper Savoy 10 m. E. Courmayeur, near the Dora. Has some trade in cattle and cheese. Pop. 8000.—3 A m. Cape Colony S. Africa, cap. of dist. of same name, 280 m. NE Cape Town lat. 33° 31' S. lon. 22° 40' E.—4 A seaport, Cape Colony dist. Zwellendam, 145 m. S.E.E. Cape Town, at the mouth of the Breeds river; lat. 34° 20' S lon. 30° E. It is encompassed by a bar and only admits vessels of 800 tons, but is, notwithstanding, one of the best harbours on the S. coast of the colony and has a considerable trade.—5 A seaport tn. U. States, N Carolina lat. 34° 40' N; lon. 76° 41' W. Contrary to an opinion formerly entertained, the harbour of Beaufort has been found to have sufficient depth for ships. By soundings and exploitations, made in February 1850, it was ascertained that there was 23 ft. water on the bar at half flood a depth of several feet beyond former soundings. It is, besides, safe and spacious, and affords a considerable commerce; it has a Methodist church, a congre-

THE CASTLE OF BEAUCAIRE.—FROM FRANCE, ILLUSTRATIONS BY TROUSSEAU.

Rhone being navigable for vessels of moderate burden, up to the town. From his easy communication with the sea, Beaumont is frequented by vessels from all parts of the Mediterranean, and has become the depot of the French trade with

the East. It is favourably situated for commerce the

houses, jail, and several seminaries. Pop. 1974.—8, A small seaport, U. States, N. Carolina, on an arm of the sea off Port Royal, 50 m. S.E.W. Charleston; lat. 33° 30' N. lon. 80° 41' W. (N.)

BEAUFORT.—1, A dist. Cape Colony bounded, N. by part of the extensive basins tract recently included within the colony, E. Graaf Reijnders, and Uitenhage, S. George, and W. Worcester and Olmoultz; area, about 30,000 sq. m. It is divided into three parts, namely, Zwartberg, Gough and Nieuwvald. Zwartberg lying in the S.W. is adapted for agriculture, is well watered, has extensive orchards and vineyards, and raises the greater part of the grain (chiefly wheat) consumed in the division. Gough, an extensive elevated tract belonging to the Great Karoo, is chiefly used as a sheep-walk, consisting principally of heath, with very little grass. The want of water is here greatly felt. Nieuwvald, connecting with the mountain-range of the same name, stretches N. to the limits of the division. It has some grassy pasture on the mountain-slopes, and is tolerably supplied with water but the greater part of the surface is, like Gough covered with heath. Beaufort, the capital of the division, stands near the source of the Gamtoos or Great Lion river about 360 m. E. Cape Town, and has not, as yet, acquired much importance. Bad roads appear to be one of the greatest obstacles to its prosperity. Pop. 5807 of whom nearly a half are coloured.—2 A co. U. States, N. Carolina area, 650 sq. m. Surface low, soil, at times, extremely over-crowded. Principal productions—cotton and rice. Cap. Washington. Pop. 1840, 13,325, of which 7050 are slaves (N.)

BEAUGENCY [anc. *Belpacianum. Castrum de Belgency*] a town, France, dep. Loiret, 16 m. S.W. Orleans agreeably situated on the side of a hill, r. bank, Loire, which is here crossed by a stone bridge of 29 arches. The town was formerly surrounded by a wall flanked by towers and bastions, parts of which still remain. In the middle of the last century the fortifications of the castle extended to the bridge, but they were destroyed in 1767. The square donjon tower of Beaugency 115 ft. high, is a remarkable structure and of high antiquity probably of the 10th or 11th century though the exact date of its erection is unknown. The articles manufactured here are principally cloth and leather. There are also some distilleries. A considerable trade is carried on in the wine of the neighbourhood, which bears the name of Beaugency and is the best grown in the Orleanais and in brandy grain, wool, and beet-root sugar. Pop. 4028.

BEAUFORT a co. Lower Canada, U. States frontier S.W. Montreal length 55 m. breadth 23 m. area, 710 sq. m. Both its soil and climate are good and it possesses considerable local advantages from its extensive frontage to the St. Lawrence, here called the Lake of St. Francis. The principal villages are, Beauharnois, St. Regis, and Dundas. Pop. consisting of natives, Scotch Irish, and Americans, 14,164.

BEAUJEU a town, France, dep. Rhone, around of 14 m. N.N.W. Marseilles. It is the oldest town of the Beaujolais, of which it was the capital and was formerly a place of some importance, being the residence of the feudal lords of that small state. Paper-mills and a cotton-mill driven by water are established here, besides several tanneries. The trade is principally in wine of good quality, grain, iron, leather and cattle made in the town. It is the entrepot for the trade between the Rhone and the Loire. Pop. 3469.

BEAUJOLAIS [anc. *Belpacianum Ager*] a dist. anc. prov. Lyonnais, dep. Villefranche. It is now included in the dep. Loire and Rhone.

BEAULIEU or **BEVLAZ**, par. 1st Louth 1009 sq. Pop. 518.

BEAULIEU a town, France, dep. Corrèze, 20 m. S. Tulle, agreeably situated, r. bank, Dordogne. The church is enriched with some very remarkable Gothic sculptures. Cattle is manufactured here, and the wine grown in the neighbourhood is of fair quality. The trade is in wine and ship-timber. Pop. 2151.—**BEAULIEU** is the name of a number of other small towns in France.

BEAULT, a vil. and port, Scotland, co. Inverness 1 bank,

Beault at the head of the loch of same name, and near the embouchure of the river 9 m. W. Inverness. It consists of one spacious street, with several smaller diverging from it houses of stone, and generally well built; supply of water landlocked. The only building of any note is the N. of Scotland Bank in the Elizabethan style. The parish church is 2½ m. W. from the town, and the Free church about 1½ m. in the same direction. There are two schools in the village under the auspices of the latter. An extensive pork-curing establishment, and a large brewery, are here busily employed. The harbour is an excellent one and has sufficient depth of water for vessels of from 150 to 200 tons. Principal exports—linen, potatoes, and grain imports—coal, lime, salt, &c. The moral condition of the people is good, crime being hardly known among them. At the E. end of the village stand the ruins of its ancient priory founded in the 13th century. They are surrounded by trees of great size and age, and have a very picturesque appearance. The scenery along the banks of the Beault is, in many places, of surpassing beauty the acclivities on either side being covered with heath and fir, and the edges of the stream lined luxuriantly with oaks, weeping birches and alders. Pop. (1841) 560.—[Local Correspondent.]

BEAUMARIS, a town, seaport, and par. N. Wales Isle Anglesey. The town is situated on the W. shore of the Menai Strait, near its junction with the Irish Sea, where it expands into a good roadstead called Beaumaris Bay lat. 53° 18' N. lon. 4° 5' W. It consists of several streets well paved and clean houses, in general, good, particularly in the principal street, which is terminated by the ancient castle of Beaumaris, erected by Edward I. while many modern dwellings, of very handsome appearance have lately arisen, and are (1850) in course of erection, in various parts of the town and vicinity. The chief public buildings, exclusive of the churches, are the townhall, a commodious and handsome edifice, containing a splendid hall-room and other spacious apartments appropriated to public purposes the county hall, the jail and a custom-house. The places of worship comprise the chapel of St. Mary a spacious and elegant structure, in the latest style of English architecture with a lofty square unbelted tower. Wesleyan Calvinistic, Methodist, Independent and Baptist churches. Beaumaris has a free national, and several daily and Sunday schools several charities, and benevolent societies. The harbour is safe and commodious, and may be entered at any time of tide with a moderate breeze. Registered shipping in 1847 17,219 tons entered for the same year 36,762 tons cleared 48,680. Customs revenue for 1846, 24,995, 11s. The town has neither trade nor manufactures, but is much resorted to in the summer season for sea-bathing. It suits with Amlwch, Holyhead and Llangŷn, in sending a member to the House of Commons. Registered electors in 1849 354. Area of par. 1720 sq. Pop. 3465.

BEAUME (La) a vil. France, dep. Ardèche (Vivarois) 6½ m. from Anhemis picturesque situated under a mass of basalt occupying the angle of a valley nearly opposite to the junction of the Fontenette with the Ardèche. The face of the basalt is finely pillared, and the top of it, forming what is called the Casseway of Font-de-Beaume, is covered with vines. Within the rock is a grotto hand and waited with pillars, evidently natural but so regularly joined and indented as to have all the appearance of a work of art. The casseway seems to be the joint product of the lava streams of several extinct volcanoes. Crowning a lofty peak, between the Fontenette and Ardèche, stand the unruined ruins of an old castle which belonged to the dukes of Vintadour. La Beaume is encircled with terraced gardens, formed on the line of the old fortifications and contains numerous antique houses of the 15th and 16th centuries, with some probably of a still earlier date. Pop. 1065.—Other three villages have the name of BEAUME.

BEAUMONT two pars. Eng.—1 par. Cumberland; 1470 sq. Pop. 294.—2 Beaumont-with Moss, par. Lancaster 8861 sq. Pop. 506

BEAUMONT a town, Belgium, prov. Hainaut, 30 m. S.E. Mons. It owes its name to its site on an elevated table-land from which an extensive and richly diversified prospect is obtained. The marble of Beaumont is in great demand for ornamental purposes. It has marble saw-works, forges, sculp-

Antiques of excellent stuff, tapestries, bronzes, distilleries, and tanneries, and also a considerable trade in articles of machinery. Beaumont is a place of considerable antiquity. In the 11th century it was the capital of a large county belonging to the prince of the house of Orey and had an old castle, of which only a few walls and towers now remain. William I., King of England, having blown it up on taking the tower in 1091. Pop. 9064. — Other three places in Belgium have the name of BEAUMONT.

BEAUMONT several towns, France:—1. *Beaumont-de-Lomagne*, a tn., dep. Tarn-et-Garonne, 9 m. S.W. Castel-Sarrasin, beautifully situated, 1 bank, Simone. The town is at once remarkable for the regularity of its plan, the neatness of the houses, and the beauty and fertility of the surrounding country which is particularly rich in vineyards. The square is intersected by a main road, and in the centre is a covered market. The streets run at right angles from the square, and are broad and well kept. Manufactures:—coarse cloth, tins, and leather. A good trade is done in agricultural produce. Pop. 2317. — 2. *Beaumont-le-Roger* a tn. dep. Eure, 9 m. E. Berny near the forest of same name, r. bank, Kilia. Cloth manufactures are established here, employing 400 workmen, and producing annually about 1000 pieces, of 21 yards each. The town has also bleachfields and glassworks. Trades:—principally in wool, flax, yarn, and cloth. Pop. 1250. — 3. *Beaumont-sur-Orne*, or *Beaumont-le-François*, a tn., dep. Sarthe, 13 m. S.W. Mayet, in the form of an amphitheatre, on the side of a hill above the Sarthe which is here crossed by two bridges. The streets are narrow and crooked and the town, in general, badly built. It has manufactures of coarse cloth and matting with worsted and cotton spinning-mills, besides tanneries. The trade is in grain, hemp, flax, dried, honey wax, poultry and cattle. Pop. 1822. — 4. *Beaumont-sur-Oise* (Paris Métro), a tn. dep. Seine-et-Oise, 14 m. N.E. Pontoise, agreeably situated on the brow of a hill, at the foot of which flows the river Oise, here crossed by a handsome bridge. The houses are well built and a ruined tower the sole remains of the ancient castle, overlooks the town. Leather is manufactured to some extent. Trades:—principally in grain, flour and agricultural produce. Pop. 3080. — Numerous other places in France, in addition to the above, have the name of BEAUMONT.

BEAUNE, a tn., France, dep. Côte-d'Or, esp. of arrond., 23 m. S.E.W. Dijon at the foot of a hill, on the Beaune. The houses are well built, the streets spacious, and watered by a fountain. The vineyards are planted with trees, and afford an agreeable promenade. The church of Notre Dame is a handsome edifice, and ranks next to the cathedral of the diocese. The great hospital, however is the finest building in the town. It was founded in 1443 by Nicholas Rolin, chancellor of Philip the Good, Duke of Burgundy. In the court of the hospital are some fine remains of Gothic architecture. Beaune has also a public library containing about 10,000 volumes, a very fine public garden, a theatre, public baths, &c. Its manufactures cloth, serge, druggists, vinegar, cane, and beet-root sugar and is noted for its dyeworks, hawthorn, and tanneries. In the neighbourhood are some excellent orchards. The trade is principally in the wines of Burgundy of which Beaune exports thirty or forty thousand bottles per annum. The vines grown in the district are the best of the ordinary Burgundy. A large trade is also carried on in agricultural produce, grain, provision, and cattle. The agricultural of Beaune contains 10 cantons. In the 17th century Beaune was a flourishing manufacturing town, and had 300 Calvinistic families, who furnished employment to 7000 workmen but the revocation of the Edict of Nantes having driven the Protestant manufacturers from France, the manufactures fell into decay and have never been revived. This town is the birthplace of the celebrated geometer Gaspard Monge, the chief improver of not inventor, of Descriptive Geometry and one of the founders of the Polytechnic School. Pop. 10,768.

BEAUNE-LE-ROGER, a tn., France, dep. Loiret, 11 m. N.E. Fithivert, noted for the quantity of fine cotton, honey and wax produced in the neighbourhood. Pop. 1118. — Other three small places have the name of BEAUNE.

BEAUPORT (Bourgeois) dep. Lower Canada, co. Quebec. The ground on the banks of the St. Lawrence is level fertile, and well cultivated. In the interior the land rises into an

productive ridge, covered with timber; which, however, is of excellent quality. The chief agricultural productions of the neighborhood are grain, fruit, vegetables, and maple sugar. Sandstone and limestone are found in the district; which also contains the quarries that supply the building-stone in Quebec. There is a village of the same name in the neighborhood, beautifully situated on a gentle eminence, and remarkable for its neatness and regularity. It is inhabited by persons of the first respectability. In the vicinity are the celebrated falls of Montmorency.

BEAUPREAU a tn., France, dep. Maine-et-Loire, esp. of arrond., in a fertile country on the Sèvre, 25 m. S.W. Angers. Parts of its former wall, and other defences, still remain. The old castle of Beaupreau, on a hill in the vicinity has a picturesque appearance. The town possesses one of the best colleges of the department. Manufactures:—headkerchiefs, lins, stained, and common woollen stuffs. Trades:—principally in cotton and woollen cloth, and leather. Pop. 5117.

BEAUPRE ISLANDS, a group in the S. Pacific, belonging to the Loyalty Isles, N.E. of New Caledonia. The most N.E. of the group is on lat. 20° 25' S. lon. 156° 14' E. (2).

BEAUREPAIRE a vil France, dep. Isère, 14 m. S.E. Vienne, formerly a place of considerable strength. During the wars of religion it was besieged on more than one occasion. It has manufactures of table linen, corn and fulling mills, and carries on some trade in silk grain fodder and cattle. Pop. 2030.

BEAUCQUESNE, a tn., France, dep. Somme (Picardy) 5 m. S.E.E. Doullens. On its square are to be seen the remains of a castle, built there, in the 13th century by Philippe d'Alsace, Count of Flanders. Pop. 2671.

BEAUSSET (La) a tn., France, dep. Var 5 m. N.W. Toulon. It has manufactures of soap, olive-oil, linens, canes, and tar and some trade in wine, brandy &c. Pop. 3050.

BEAUVAIS (anc. *Bratupacum*, *Bellouacum*) an anc. tn., France, esp. dep. Oise, 43 m. N. Paris, at the confluence of the Avelon with the Thérain, in a rich valley surrounded by wooded hills. Several branches of the river run through and by the side of the town forming canals which are of great service to the manufacturers. The houses of the town are badly built, being for the most part of wood, clay and mortar but what is wanting in solidity is made up in ornament, and the stranger is struck with the prodigious number of wooden sculptures and statues that decorate their exterior. As in most old towns, the streets are narrow,

BEAUVAIS.—From Voyage aux Paysans de France.

crooked, and inconvenient. The main street runs E. and W. and, under five different names, divides the town into two nearly equal parts. A small portion of the present town is called the city. It is very ancient, nearly square, and surrounded by walls two yards thick, strengthened by round towers at intervals. The new town, which is much larger than the city was formerly fortified, but the fortifications fell into decay after the invention of artillery and are now replaced by handsome boulevards, which afford agreeable promenades. The ramparts were demolished in 1805, when the town cit-

derwent several important alterations and improvements. The cathedral, although a fine Gothic edifice, part of it only has been completed on the original plan. Its choir is the loftiest in the world, the height from the pavement to the roof being 158 ft. 18 in. more than that of Amiens. The painted glass, executed in the best period and by the most celebrated masters of the art is particularly rich. The church of St. Stephen has likewise fine painted glass windows and the facade of the St. Saviour is remarkable for the richness of its sculpture. The Hotel de Ville is the finest modern building in Beauvais. The Episcopal palace, now the Hotel de Prefet is an ancient structure, partially collapsed during the Middle Ages. In Beauvais there are also a college established in the old Ursuline convent, two hospitals one for the sick, another for orphans aged persons and foundlings, a theatre, cavalry barracks, and the court-house, where the sittings of the court of primary resort are held. Before the Revolution of 1789, there were here no less than 20 churches, monasteries, and convents, the greater number of which have been appropriated to secular purposes. The principal manufacturing establishments of Beauvais is the Royal tapestry and carpet manufactory famed for the beauty of its productions, and employing about 400 hands. The high price of the articles however confines them to the wealthy. Other principal manufactures are flannels and woollen cloths, and to a smaller extent, lace, earthen ware, and chemical stuffs. In the neighbourhood are some extensive bleaching and tanneries and the dyeworks of Beauvais are in high repute. None of the manufactures, however, can be said to be in a flourishing condition. Printed cottons, formerly made here to some extent are now superseded by other fabrics. The trade, however is extensive a large district being supplied by the town with the articles of ordinary consumption. Large quantities of corn and other agricultural produce are brought to the weekly market, held on Saturday.

Beauvais is a place of great antiquity having existed under the Romans. One of the most remarkable events in its history is the siege which it successfully stood in 1472 against an army of 80 000 Burgundians under Charles the Bold. Though unassured the citizens boldly closed their gates, and made a most heroic defence. The women particularly distinguished themselves. One of them Jeanne Hachette seeing a Burgundian planting a standard on the walls, hurled him to the bottom and bore it off in triumph. In the procession of St. Agathe, which still commemorates the raising of the siege, the ladies, conformably to an ordinance of Louis XI. lead the way bearing the banner which La Hachette so valorously acquired. Pop. 18 355.

BEAUVAIL a tn. France, dep. Somme, 4 m. S Doullens on the highroad from Paris to Lille. It is neatly built has a parish church and manufactures coarse linen chiefly pack sheeting. Pop. 3562.

BEAVER ISLANDS, a group of five or six islands in Lake Michigan U. States. The largest Mig Beaver contains 40 sq. m.

BECOE ES, a market tn. and par England co. Suffolk. The town, 38 m. N. E. Ipswich, r bank, Waveney consists of several well paved and well lighted streets uniting in a spacious market-place houses in general well built supply of water ample. It has a handsome townhall, a theatre, at present used as a corn exchange, a jail, a custom house, and assembly rooms. The church, erected in the 14th century is a spacious and elegant structure in the later style of English architecture with a fine freestone tower and beautiful porch. There are, besides chapels for Independents, Baptists, Wesleyans and Primitive Methodists also two free schools, one of which has 10 exhibitions at Emmanuel College Cambridge, and various charities. Beccles maintains an active carrying trade in coals and corn coastwise by the Waveney which is navigable to Yarmouth. A good deal of mauling is likewise carried on in the vicinity. Races are held annually on a fine course near the town. The environs abound in beautiful scenery. Area of par 1892 aa. Pop. 4398.

BEC-DU-BAZ or **PORT BAZ**, a dangerous promontory France, coast of Brittany surrounded with rocks. There is a lighthouse on it lat. 48° 5' 26" N lon. 4° 45' 45" W (a). Vut. I

BECERRIL-DE-CAMPOS, a tn. Spain Leon, prov. of, and 10 m. N. W. Palencia, on a fertile valley intersected by the Canal de Campos, having a central square, six parish churches, a large townhouse session-house, with attached prison two endowed schools, an hospital, and numerous fountains. Employments—agriculture, and domestic weaving. Pop. 3069.

BECHIN a tn. Bohemia, circle of, and 10 m. S. W. Tabor 47 m. S. Prague, r bank, Lusatia. It has a castle, many factories of woollen cloth and a chalybeate spring (temperature 73 Fahr.) formerly much frequented. In the neighbourhood is found a singular mineral called the stone of Bechin. P. 2180.

BECHLANAS, or **BUCHMANAS** a nation S. Africa, inhabiting the country N. of lat. 27° S. and between lon. 22° and 28° E. They are said to be superior to the Kaffirs in arts and civilization (*Lachmetala*) and in personal appearance their complexion being a brighter brown and their features more European. They inhabit large towns their houses are well constructed and remarkable for their neatness they cultivate the soil and store their grain for winter consumption.

BEDEF a vii Holland, prov. N. Brabant, 12 m. S. E. Hertogenbosch, with a church and school, and 600 R. Catholic inhabitants.

BEDALE, a market tn. and par England, co. York, N. Riding. The town, situated in a valley on the stream called Bedale-beck, which flows into the Swale, 33 m. N. W. York, 46

consists chiefly of one principal street, lighted with gas, houses mostly of brick, and irregularly built. The church, erected in the reign of Edward III. is a spacious building in the early English style, and contains some interesting monuments. The Methodist, Particular Baptist, Wesleyan and R. Catholics have also chapels here. A handsome public building was erected in 1840, comprising a suite of assembly rooms, and various other commodious apartments for public purposes. Beale has an endowed grammar and two national schools, with numerous charities, including an hospital for six decayed townsmen and another for six aged persons. Wool stapling is carried on here to a considerable extent, giving employment to numerous wool-combers. The adjoining country is famed for its breed of hunters and race horses. Market-day Tuesday and on small market fairs. Area of par 7551 ac. Pop. 2582 in 1800.

BEDARIEUX, a tn. France, dep. Morbihan, 18 m. N. Nazaire, agreeably situated 1 bank, Orb, which separates it from one of its suburbs. It is well built, the streets conveniently laid out, and is one of the busiest, and most thriving commercial and manufacturing towns of the same size in France. It has manufactures of fine and common cloth, woollen stuffs, and fine silk, worsted and cotton stockings, hats, soap, olive-oil, tanneries, dyeworks, paper and glass works, and a brass foundry. It has also trade in wine and brandy. Pop. 8792.

BEDARIDES, a tn. France, dep. Vendee beautifully situated, r bank, Orveau, which is crossed by a fine bridge, and near the confluence of the Oudelle and the junction of several canals, about 8 m. N. E. Angers. The environs are very picturesque, fertile, and covered with rich pastures. Bedarides has a mill for grinding meadow. Pop. 1494.

BEDDELEERT or **BEDDELEERT** a vil and par, N. Wales the former in co. Carnarvon, and the latter partly in Carnarvon, and partly in co. Merioneth. The village is situated in a beautiful tract of meadows, at the junction of three rivers, near the confluence of the Glâ-Llyn and the Colwyn, 12 m. S. E. Carnarvon. The scenery in this parish is remarkably wild and picturesque, and derives no little additional interest from the lonely story as beautifully versified by Rhys in his ballad entitled "The Grave of Bethesda." Area of par 718 1/2 ac. Pop. 1258. Soil 7. 7.

BEDDINGHAM par Eng. Sussex 2918 ac. P 321. **BEDDINGTON** par Eng. Surrey 5903 ac. P 1403.

BEDFELKARFEL, a large and populous tn. Central Africa, kingdom, Bornou, 110 m. W. Kouka, r bank Yoni, which falls into Lake Tchad, about 110 m. to the N. E. lat. 12° 45' N. lon. 12° 47' E. It is the residence of the governor commonly called here and in other African towns, Balkan. His dwelling, which is large and extremely clean, consists of a spacious quadrangular enclosure, surrounded with mud faced to high poles. The Arab women of this place are remarkable for their beauty.

BEDDE-GUNA, a tn and territory Central Africa, kingdom, Bornou. The town is 120 m. W. by S. Kouka, and 80 N. W. On the Nile lat. 12° 17' N. lon. 12° 30' E.—The reservoir called sometimes Bedde, lies between lat. 12° 13' and 12° 17' N. and lon. 11° 16' and 12° 40' E., and is bounded on the N. by the Yoni which here bends suddenly in that direction. It includes many towns and villages, and produces Indian corn, wheat, and cotton. Herds of cattle also are numerous. The principal implement of agriculture, as throughout all Bornou, is a hoe of native iron and native manufacture. The reaping is performed with a crooked knife, and merely the ears of corn are cut off and stored in round thatched huts of clay or matting raised on wooden blocks above the ground. The grain is cleared from the husk by hand-sieving, and ground into flour between two stones. The inhabitants of this district are Bornouese, and speak their native language. Although in the centre of the hottest region on earth, Capt. Clapperton and Dr. Oudney found the temperature so low in this part of Africa in a morning in December that the water in their shallow vessels was crusted with thin flakes of ice, the water sticks themselves frozen as hard as a board, and the horses and camels shivering with cold.—(Dunbar and Clapperton's Travels.)

BEDFIELD par Eng. Bedford 1368 ac. Pop. 872. **BEDFORD** (par) with HATTON par Eng. Middlesex 1656 ac. Pop. 1025.

BEDFORD an island co. England, cap. Bedford, bounded N. W. by Northampton W. by Ruses, S. by the latter co. and Hert. S. by the latter and Cambridgeshire, and N. E. by Hert. Bedford area, 895,370 ac. of which about 260,000 are arable, meadow and pasture. The surface is pleasantly diversified by hill and valley, and presents every variety of soil; but, on the whole, of about an average fertility. Chalk prevails in the S. division while a belt of sand varying from 1 m. to 5 m. in breadth, extends from Leighton Buzzard on the S. W. border of the county to Potton on the N. E. particularly well suited for horticultural purposes, and for the turnip husbandry. The vale of Bedford, the soil of which consists mostly of clay is very fertile and the meadows on the margin of the Ouse and other streams are verdant and luxuriant, from frequent over-sowings. The land is chiefly under tillage, but agriculture is by no means in a very advanced state. On the sandy and chalky soils, culinary vegetables are extensively cultivated for the London, Cambridge, and other markets. The colons produced here are reckoned little inferior to the Spanish and the cucumbers, which are raised in great quantities in the open air are much esteemed. On the clay lands wheat and the principal produce on the light soils, turnips, barley, roots and wheat usually follow each other, on the leams, beans or peas are generally sown after wheat. The drill is in extensive use and a good deal of wheat is dibbled. Cattle and sheep, of indifferent breeds. The stock of the farmer has been estimated at about 200 000 and the produce of wool at 450 000 jacks. Average sale of farms, about 150 ac. mostly held from year to year average rent of land in 1843-43 25s 6d. per ac. The Ouse with an exceedingly winding course, W. to E. intersects the county besides which it is watered by the Ivel and some smaller affluents of the Ouse. Truncal manufactures—straw plait for hats reckoned superior only to that brought from Tuscany. The county is divided into nine hundreds and 123 parishes. It returns four members to the House of Commons namely two for the county and two for the borough of Bedford Registered electors (1840) for co. 4287 for bor 1071 Pop. 124 478.

BEDFORD a bor and market in England cap. Bedfordshire, 41 m. N. W. London pleasantly situated on both banks of the Ouse, which is here crossed by a handsome stone bridge of five arches. The streets the principal one of which is about 12 m. long, are open clean and lighted with gas. In the part called New Town near it there are several new terraces, and rows of handsome houses. Water is abundant. The principal buildings are the five parish churches, one supplementary church in the large parish of St. Paul, a range of public schools in the early English style, to be afterwards more particularly mentioned a large infirmary a lunatic asylum, and an elegant and spacious chapel built by the church and congregation over which Bunyan was pastor. There are also public assembly rooms, a seasons-house, a subscription library containing 8000 volumes and a handsome market-house, lately erected. The principal feature of the town is the Bedford Charity founded by Sir W. Harper in 1561 which comprises the ancient grammar school a commercial and preparatory school, a girls and infant schools educating altogether without cost to the parents, about 1200 children Connected with the grammar-school there are eight exhibitions, of 250 each to Oxford Cambridge, or Dublin, tenable for three years. Besides these schools, marriage portions of 250 each are given to poor maidens premiums of 220 to boys, and £15 to girls, on going out apprentices benefactions to the sum of £10 each on the expiration of their apprenticeship donations to domestic servants 56 almshouses, handsomely endowed an hospital for the maintenance clothing and educating a limited number of poor children and lastly 2500 a year given away in alms. The qualification for the schools is residence and personal settlement of the parents in one of the five parishes of the town excepting to the preparatory school for admission to which simple residence is required. The revenue of this establishment is upwards of £12 000 per annum having risen to this amount from a comparatively small sum, through the improved value, in course of time, of the land from which it is derived. There are several smaller charities in the town, the principal of which belong to Bunyan meeting. These latter amount to upwards of £200 a year and are, with the exception of 270 to the minister given to the poor of the congregation. The public free schools have at-

tracted large numbers of residents during the last 20 years. There was once a large trade done in Bedford in yellow lace, the manufacture of which employed most of the poor female inhabitants but this trade has been all but destroyed by the introduction of machinery and there is now no staple trade in the town but within the last few years two manufactories of agricultural implements have been successfully carried on, employing about 150 hands. There is a large and increasing market for corn and cattle held on Saturday and another for pigs on Monday. Bedford has given birth to no very eminent men but is identified with two imperishable names—Bunyan and Howard. John Bunyan was born at Elstow a village situate 1 m. S. of the town. It was at Bedford, however that he lived, preached, and was imprisoned. He lived at a house in St. Cuthbert's parish preached in a barn fitted up as a chapel on the site of the new place of worship and was imprisoned some years in the county jail, and others, in a cell of the old gaol-house on the bridge, probably in both. But the house, barn, and prison are all pulled down. There are several relics of Bunyan in the town the principal of which are, his chair in the vestry of the chapel, and the copy of Fox's *Book of Martyrs* which he read in prison. This letter is in the county subscription library. It is in two vols. folio black leather and has Bunyan's autograph in each of the titles, and several verses in his handwriting scattered over the book. John Howard lived at Cardington, 3 m. S.E. the town. He is identified with Bedford by having constantly attended the dissenting places of worship there. Bedford has railway communication with the London and North Western line by a branch from Blithly station. Pop (1841) 9178 (1851) 11 698.—(Local Correspondent.)

BEDFORD LEVEL, a large tract of low lying land in England comprising about 400 000 ac. in cos. Cambridgeshire, Norfolk, Suffolk, Huntingdon, Northampton and Lincoln, formerly full of fens and marshes and in rainy seasons for the most part under water. Peterborough Fen which is that part of the Level running into Northamptonshire and extending between Peterborough and Crowland, contains between 6000 and 7000 ac. One-seventh part of the Level is situated in Huntingdonshire. Nearly the whole of the Isle of Ely which forms the N. division of Cambridgeshire consists of this marshy ground. The S.E. part of Lincolnshire, usually termed Holland, extending to the river Witham on the N. is also included in the Bedford Level 63 000 ac. are situated in Norfolk and 30 000 in Suffolk. It derives its name from Francis, Earl of Bedford, who in the 17th century expended large sums of money in attempting to drain this feney district. There is sufficient evidence to show that this part of the country was formerly dry land, at a much lower level than the present surface, which is formed by sedimentary depositions. Various expedients have been had recourse to for the purpose of draining these marshes. Numerous cuts have been made, intersecting every part. Some of these are so large and deep as to serve for navigable canals. In the Isle of Ely the Old and New Bedford rivers are two cuts, running nearly parallel to each other. These are both navigable for upwards of 30 m. In various places, windmills have been erected, which raise the water to the requisite height to admit of its being conveyed to receptacles sufficiently elevated, by which it may be carried off to its proper channel but the expense incurred in draining sometimes exceeds greatly the value of the land reclaimed. In Huntingdonshire, about the latter end of the last century the tax raised on the land by the conservators, for its drainage, and the preserving of its embankments, was in some instances so great that the farmers preferred sacrificing their land to paying so exorbitantly for its preservation. In the present day the art of drainage is better understood than when this stupendous work was first undertaken but even yet, in many places, the farmer is still liable to have the produce of his grounds carried away by sudden inundations. Great improvements are now however constantly being made in the drainage and embankment of this extensive tract of land. In 1795 an Act was passed for improving the outfall of the river Ouse, and for making a cut across the marshes, from Haselink to Lynn but it was not till 1818 that this important work was commenced. It was completed in about two years, and has proved highly serviceable. A great part of Bedford Level has been brought under cultivation, and produces grain, flax, and clover, in con-

siderable quantities; but there is still sufficient sunny land to yield a rich harvest of wild fowl, in winter for the London market.—(Elmhurst's *History of the Bedford Level*. Vancouver's *Survey of Cambridge*. Gough's *edition of Camden's Britannia*.)

BEDIZZOLE a vil Italy prov and di of E Brescia pleasantly situated on a rising ground in the dist. of Lonato near the Chiasso. It is well built, and has a handsome church with fountains for the manufacture of silk and agricultural implements, and an extensive silk spinning work. Pop. 2200.

BEDJA, a dist. Nubia, lying along the W coast of the Red Sea, and extending N from Suakin to Cape Camol, between lat. 10° and 22° 30' N. It is chiefly inhabited by the Hisharye a tribe of Bedouins possessing the usual features and characteristics of that race, but with some of their worst qualities in an aggravated form. They are very savage and it is said, will even rob the houses of the persons who receive them as guests. Their food is almost entirely flesh and milk. Much of the former is eaten raw the last blood of slaughtered sheep is highly relished, but the greatest luxury is the raw marrow of camels. A few of them occasionally trade Derv or Asomam with some of the best kind, sheep, and ostrich feathers taking in exchange linen sheets and Indian millet, the grams of which they swallow raw as a dainty and never make into bread. They possess a breed of camels said to be superior to any other and make plundering excursions as far as Dongola and along the route to Sennar. Bedja is generally mountainous, and is rich in minerals, particularly gold.

BEDNORE or **BEDNORE**, a town and dist. Hindoostan Mysore territory. The town is 25 m N.W. Compaopore lat. 15° 05' N. lon. 75° 05' E. It was formerly of great extent and importance, but was ruined by Hyder Ali, who took and plundered it in 1764. It has since however greatly recovered, being a convenient thoroughfare for goods.—The district occupies the N.W. extremity of the Mysore Rajah's territories, and extends over the summit of the range of W hills, some of which are 4000 and 5000 ft. high which overlooks the provinces of Canara and Malabar and is named the W Ghats. The climate is extremely moist, rain falls frequently for nine months in the year but this redundant moisture only favours the peculiar products of the soil, which consist principally of pepper, betel-nut, sandal wood and cardamoms. Great numbers of cattle are reared for domestic purposes, but they are small.

BEIJONIA a town and com. Italy, prov Piacenza 8 m W Borgo Taro at the foot of Mount Salsi tolerably well built, and having a church, medical college, and elementary schools. The surrounding country is hilly well wooded, and produces fine fruits but little grain, cattle and sheep are reared in considerable numbers. Pop. 5378.

BEDOUIN a town, France, dep. Vendee, 8 m N.E. Carpentras, at the foot of Mount Ventoux. It is surrounded by very old walls, of remarkable strength. Bedouin has extensive potteries, and also spins a good deal of silk. This town was the scene of one of the most atrocious massacres of the revolutionary party. Because a tree of liberty had been saved across during the night, the inhabitants were condemned to death, and given up to military execution. Under the direction of Margut, an apostate priest, the town was set on fire, the public buildings blown up, and 180 of the inhabitants either butchered on the scaffold or shot while attempting to escape. Pop. 3550.

BEDOUINS [Arab. *Bedoon*—inhabitants of the desert] a race which supposed to be derived from Ishmael the son of Hagar had its original seat, and formed the great bulk of the population in Arabia. It is not however confined to that country but has spread in all directions particularly to the E and W. In the former direction Bedouins are said to have penetrated as far as China, and are found among the hills of Kurdistan and in the latter they have extended almost over the whole of N. Africa, and made its boundaries denote their peculiar domain, forming no inconsiderable part of the whole population, along the shores of the Mediterranean

to the Atlantic on the W., Egypt and Kuba on the E., and Egypt on the S. For the peculiar characteristics of the race, which in all countries seem scarcely susceptible of change, see ARABIA. The name is now frequently written *Bedouin*, plural, *Bedouins* or *Bahary*.

BEEDER, a prov. Hindustan, chiefly between lat. 17° and 20° N. long. 75° E. bounded by Aungmyeth and Damer W by Aungmyeth and Begapur. S. by Hyderabad, and E. by Hyderabad and Gundwana. It is divided into seven districts, namely Calberga, Kadhrog, Akulotta, Calhany Beeder, Andars and Patree, and is well watered by several rivers, of which the Godavary and Marjara are the principal. The surface is rather hilly though not properly mountainous and the soil generally fertile. Under the old Hindoo Government, Beeder was very populous but since its conquest by the Mahomedans, it has been comparatively deserted. Three languages, the Malabar, Teluga, and Canarese, are spoken in this province. Beeder with the other provinces of the Deccan, was conquered by the Moguls towards the close of the 17th century in the reign of Aurangzeb, from whose successors it was wrested, 1717 by Nizam ul Mulk, the sovereign of Hyderabad, in the occupation of whose successors it has since remained.

BEEDER, or **BEER**, a city Hindoostan east of above province lat. 17° 45' N. long. 77° 32' E. 75 m N.W. and 17 m E. of Hyderabad. It stands on open plain, is fortified by a stone wall, a ditch, and round towers and is said to have been formerly 5 m. in circumference. About the end of the 16th century Beeder was founded near the ruins of an old city by Ahmad Shah Shamsonee, who named it Ahmedabad and transferred it to the seat of government from Calberga.

BEEDORD par Eng. York, E. Riding 5481 ac. P. 1009

BEEL is a town or village several villages, Holland.—

1. A vil. par Lathburg 6 m. N.E. Maastricht. It is a pretty large place, has a large R. Catholic and a Calvinistic church and two annual fairs.—2. A vil., prov. N. Brabant, 2½ m. N.W. Breda with a church and school.—3. A scattered vil. prov. N. Brabant, 3 m. N.E. Eindhoven, lying round the triangular market place, in which is the R. Catholic church, and the townhouse. It has a school, and two annual fairs. Pop. 550

—4. A vil. prov. Gelderland, 7 m. S.E.E. Doesburg with a R. Catholic church and school. Pop. 600, all R. Catholic.

—5. A vil. prov. Gelderland, 3 m. S.E. Nijmegen. It is principally situated on the N. shoulder of a ridge of hills, at the end of which Nijmegen lies. It has two churches, and a school; and besides agriculture a considerable number of the inhabitants are employed in washing and bleaching for

which the numerous clear streams in the vicinity render the place peculiarly well adapted. Pop. 540.—**BEER** is also a name applied to numerous streamlets in Holland, but usually employed with a descriptive prefix, as *Broekbeek* [brood-dike-brook] *Molendbeek* [mill brook] &c.—(Van der Aa).

BEERLEY par Eng. Lincoln 3189 ac. Pop. 176

BEERMEER, a fertile dist. Holland, prov. N. Holland, N. of Purmerenda. It consists of a dried and part of the sea has an area of 18,963 ac., and is divided into Middle, E. W., and S. Beemerter. In Middle Beemerter the most important section are a Calvinistic and a Baptist church, townhouse, and a school; in W. Beemerter are a R. Catholic church and a school and there is a school likewise in each of the other three divisions. Beemerter has two building-yards for vessels, one near either end of the district. The inhabitants are chiefly engaged in making Edam cheese. Pop. 8000

BEENHAM or **BRENNHAM VALLEY**, par Eng. Berks 1890 ac. Pop. 517

BEER, or **BEER**, two tns. and four pars. Eng. —1. *Beer Alston*, a small tn. co. Devon, pleasantly situated on a gentle eminence, overlooking the valleys of the Tamar and Tavy 8½ m. S. Tavistock, and 7½ m. Davenport. It consists of four principal streets, and a few smaller most of the houses are mere cottages, built of claystone brick being used for the chimneys only. There is a moderate supply of water but it is apt to fail in summer. The places of worship are a chapel-of-ease a neat new building, in the early English style, and an independent, Methodist and Baptist chapels. There are three schools, one of which is endowed for a master and 16 scholars another is a dame's school in connection with the Established church, having about 120 children. The principal sources of industrial employment are railing and smelting there being some extensive lead and silver mines in the vicinity. Much employment is afforded, also by picking black cherries in the season of which there are large orchards in the neighbourhood. *Beer-Alston* formerly returned two members to it to House of Commons but was disfranchised by the Reform Act.—2. *Beer-Perre*, a par. co. Devon, in which the above town is situated. 6338 ac. Pop. 2401.—3. *Beer-Regis* a decayed market tn. and par. co. Dorset. The town is pleasantly situated on the small river Beer houses in general modern, and well built abundant supply of water. The church is a large ancient structure in different styles it has a noble roof of carved oak and contains some interesting monuments. The other places of worship are an endowed meeting house of Congregationalists and a Wesleyan chapel. The parish comprises 3894 ac. 1 cop. 1814.—4. *Beer-Crombie* a par. co. Somerset 871 ac. 1 cop. 158.—5. *Beer-Hackett* a par. co. Dorset; 908 ac. Pop. 107

BEERBOOM or **BRENNBOOM** [Brennoot, *Vrieland*—the land of harvest] a dist. Hindoostan, N.W. extremity of prov. Bengal, between lat. 23° 25' and 24° 25' N. and lon. 86° 20' and 88° 20' E. bounded, N. by the district of Boghi poot, E. by Kaphahy 8 by Daulian and the jungle Malah and W. by Boghi-poor and the jungle Malah. The districts is hilly and mostly covered with jungle, the navigable streams are few and trade is consequently limited. The roads and bridges are kept in good order by the Government commissaries, and the prosperity and population of the districts are increasing. The chief productions are silk, sugar and rice. Mines of coal are probably worked for the Calcutta market, and to supply the shipping. Iron ore is found in abundance, and smelted in native ways. The fuel used is wood but though the quantity required is very great, the forests from which it is taken contain undiminished, the power of reproduction rapidly filling up the gaps caused by consumption. Chief towns, Noney Nagore, and Boory in the last of which are the head quarters of the judicial establishment. Area, 3884 sq m. Pop. about 1,387,065.

BEERFELDEN a market tn. Home-Darmstadt prov. Starkenburg at the source of the Mimming, 23 m. E.N.E. Mannheim. It contains a church, synagogue, and townhouse, and has some manufactures of cloth and hosiery also a dyework, hardware, and oil-mill. Pop. 2600

BEERNEEM, a vil. and com. Belgica, prov. W. Flanders, 5 m. S.E. Brugge, not far from the canal from Brugge to Ghent, which traverses the commune. It has trade in linen and cattle and also possesses corn, oil, and malt mills. Pop. 2440.

BEEROO, a kingdom or dist., W. Africa, N of Bambarra. Its principal town Wadai, is large and populous.

BEERSE, or **BEARS**, a river Holland, prov N. Brabant, an affluent of the Demmel, into which it falls near Bortel. It is formed by the junction of the Great Beers and Little Beers. The former originates in a lake within the Belgian frontier takes a N. course, and receives the Little Beers near Oostel Beers. Total course, exclusive of windings, from the source of the Great Beers, 22 m.

BEERZHEHA, or **BEERHA**, the site of an ancient city or vil. on the S. borders of Palestine. Gen. 40 m. S.W. Jerusalem. It stood on a hill of which are still two walls at some distance apart, circular and lined with masonry. The larger is 12½ ft. in diameter 44½ ft. deep, to the surface of the water and partly excavated out of the rock the less is 5 ft. in diameter and 43 ft. deep. The water is abundant pure, and sweet. The ruins, though scarcely any part is standing, can be traced about half a mile along the N. bank of the torrent, and about a quarter of a mile behind it. Beerzsheha possesses great interest from the frequent mention of it in Scripture as the place where Abraham, Isaac, and Jacob often dwelt. The name may mean either Wall of the Seven or Wall of the Oath, referring to Abraham's offering of seven lambs, on making a covenant with Abimelech.

BEERTA—1 A vil. Holland prov of, and 24 m. E by S Groningen. It is an old thriving place, consisting of a row of good-looking farm houses, the corn stacks connected with which are thatched with red tiles. It has a Calvinistic and a Baptist Church, and three schools. The inhabitants are mainly engaged in agriculture. Pop. 1690—2. *See Beerta* a vil. Holland 1 m. BEESTON a township chapel and vil. England co. York, bor. and 2 m. S.W. Leeds with an Episcopal and a Wesleyan chapel. Inhabitants chiefly engaged in the woolen manufactures and the numerous coal mines in the vicinity. Pop. 1973.

BEETGUM a vil. Holland prov. Friesland, 5 m. W. Leeuwarden with a church and school. It was at one time a coast village, but is now several miles from the sea the intervening land having been gained by means of dikes. Pop. 800.

BEETHAM or **BEETHAM**, par Eng. Westmorland 17 449 ac. Pop. 1655. **BEETLIP**, par Eng. Norfolk; 1770 ac. Pop. 422. **BEETTEREWEALP** a vil. Holland, prov. Friesland, 10 m. N.E. Heerenveen with a church a school, and a corn-mill. Pop. 700.

BEFOOT. *See* **BEFOOT**. **BEG** (Lough) a small lake, Ireland, co. Antrim separated from Lough Neagh by a neck of land on which is the village of Toome. It is about 4 m. long 1 to 1½ m. broad contains

several islets, and is considered an expansion of the Lower Bann which flows through it.

BEGA a river Hungary which rises on the confines of Transylvania, and proceeding in a eutroch course, traverses the Banat N.E. to S.W. passing Temesvar and joining the Danube at the Thesia near Turdas, about 6 m. above the junction of that river with the Danube. The navigation of the Bega itself is very imperfect, but, by feeding the Bega Canal, which runs parallel to it during the greater part of its course, it has greatly added to the trade of this portion of Hungary.

BEG-BAZAR, or **BEY-SARAY** a tn. Turkey in Asia, prov. Anatolia in a close valley on three low hills, near a bank, Kirsehir 53 m. W. Angora. The houses cover the declivity of the hills and are of two stories, neatly covered with plaster. It has some manufactures of carpets and in the vicinity which is very fertile, the excellent pears sold in Constantinople as those of Angora, are raised. Pop. about 4000.

BEGBROOKE, par Eng. Oxford 623 ac. Pop. 98. **BEGHLEY**, par S. Wales, Pembrokeshire 878 ac. 1 1650. **BEGHMLER**, a prov. Abyssinia E. from Lemba, about 200 m. in length, and 40 or 60 m. breadth. It is more fertile than the other provinces and rears large numbers of black cattle horses and sheep. The hilly portion of it contains valuable iron mines. In this province is situated the valley of Weckneh where the relations of the royal family suspected of a dangerous ambition are confined.

BFGHARM, or **BAGHAMMER** an extensive, but little-known country, E. part of Central Africa, bounded W. by Dornet, N. by Lake Tchad and the district of Kanem. It is traversed by the river Shary which discharges itself into the lake just named. The inhabitants are warlike and predatory.

BEG SHEHECH, **BEY-SHEHAR**, or **BEY-SHEHAR**, a tn. Turkey in Asia, prov. Karamania, 88 m. S.W. Konya, cap. of same name. It stands near Lake Bey-Sheher on both sides of the river Bey-Sheher which here crossed by a stone bridge of seven arches. The principal part of the town is on the N. side of the river and contains some handsome buildings, amongst others an old mosque richly ornamented, but the place generally is dirty and wretched, and though once possessed of an extensive commerce, appears fast falling to decay. The principal manufacture is common earthenware. Lake Bey-Sheher is vaguely described as 93 hours in extent, as it evidently from the number of tertiary fresh-water shells found about 200 or 300 ft. above its present level, has formerly occupied a much larger space. On the E. it is very shallow and covered with reeds and weeds. On the W. and N. are some rocky wooded islands. Large fish are sometimes caught in it. The water is perfectly fresh though it has been described as salt and even thraler even talks of hillecks of salt on its shores.

BEGU or **BAUW**, a mpa, Spain, N.E. coast of Catalonia lat. 41. 56' 38" N. lon. 8° 14' E.

BEGUILDY UPPER AND LOWER par S. Wales Made 16 645 ac. Pop. 1087.

BEHBEHAN or **BAHANAH** a tn. Persia, prov. Fars cap. dist. of same name, in a very fertile and extensive plain, watered by the Kuristan 126 m. W. W. Shiraz lat. 30° 28' N. lon. 60° 49' E. It is surrounded by a mud wall flanked with circular towers and bastions and at its E. corner is a castle, with thick and lofty mud walls, enclosed by a deep dike. The streets contain few good houses, and are lined chiefly by wretched mud hovels, almost in ruins. The bazaar is small and commerce is almost neglected. Pop. about 4000.—The mountain is bounded N. by the mountains range which separates Irak Ajem from the S. provinces of Persia, E. by Shikistan, S. by the Persian Gulf, and W. by Bam-Hormah and the Chah country. The soil particularly in the plain, is a rich alluvial deposit yielding in it a neighbourhood of the town a return of twenty four fold of corn. Near the gulf, cotton and rice are the staple productions. Among true trees, are the lemon, orange, pomegranate and palm. Of these the last takes the precedence. The whole district is watered by numerous streams; the principal being the Shemsh-Arsh, Kheirabad, and Kuristan. The climate is so mild that in January the meadows in the vicinity of the town are covered with the narcissus, appearing spread out like a white sheet several miles in circumference, and diffusing the most

delicious fragrance. The inhabitants consist chiefly of Khong tribes.

BEHNAED a m. France, dep. Maine-et-Loire (Angou) on the Loire, about 2 m. from Angers. Directly opposite to the town is a little island of the same name containing a Gothic chapel, embosomed among trees and founded on a rock, whose uneven surface forms its only pavement. It was for ages a place of pilgrimage and was visited by Louis XI. whose faded portrait still hangs within. The walls, painted with *scènes de sa vie*, other coats of arms, are hung with the velvet chairs of Christian slaves who had been rescued from Algiers. Pop. 2712.

BEHNESEH or **BARHNEH** (anc. *Oxy-nocles*) a m. Central Egypt, on the Bahr Youssef 110 m. S.S.W. Cairo lat. 26° 33' N. lon. 30° 47' E. It was formerly a place of great strength and importance, but has long been going to decay. It is still however the residence of a governor and was some years ago, garrisoned by Turkish soldiers. In the vicinity are some mounds, covered with mud, on which stand several Shishite tombs and others consisting of broken pottery and bricks. Numerous granite columns, fragments of cornices, mouldings, and altars, lie scattered about, sufficiently indicating the former importance of the town.

BEHRING'S STRAIT **SFA** and **ISLAND**—The **STRAIT** is the channel that separates the cont. parts of Asia and America, and which connects the N. Pacific with the Arctic Ocean. Its breadth at the narrowest part, which is between Cape Prince of Wales on the American coast, and E. Cape in Asia, is about 40 m. but it widens rapidly both to the N. and S. of these points. Its depth in the middle varies from 20 to 30 fathoms. On both sides of the strait are several commodious bays. But the country has a repulsive aspect, being barren and rocky with but a scanty display of vegetation. The sea here is frozen over every winter and foggy hazy weather is almost perpetual. The sea seldom shines even in the summer for more than a few hours and being often invisible for days together. Whales frequent the strait and the walrus is vast numbers. The inhabitants on either shore support themselves chiefly by hunting and fishing, but those on the Asiatic side are greatly superior both physically and intellectually to those on the American. The strait is called after Vitus Behring a German and captain in the Russian navy during the reign of the Empress Catharine, by whom it was first discovered. It was, however, more fully explored by Captain Cook in 1778 who surveyed the whole length of both coasts.—**BEHRING'S SEA** sometimes called the Sea of Kamtschatka, is that portion of the N. Pacific Ocean lying between the Aleutian Islands and Behring's Strait, or between lat. 50° and 65° N. having Russian America on the E. and the peninsula of Kamtschatka and the country of the Tchukotki on the W.—**BEHRING'S ISLAND** is in the S.W. part of the above sea, off the E. coast of Kamtschatka lat. (W. point) 55° 17' N. lon. 165° 46' E. (n.) the most W. of the Aleutian chain. It is uninhabited, and is without wood. It has however several springs of excellent water and fine cascades and is frequented by various marine animals. On this island the celebrated navigator Behring died under the most unhappy circumstances. After undergoing a series of great hardships, his ship was wrecked on this barren island, on November 3 1741 where neither food nor shelter of any kind, were to be obtained and here, as already stated the tired mariner sank under his sufferings, both of mind and body on the 8th of the following month.

BEIGHTON three pars. Eng.—1 par. Derby 5070 a. Pop. 1183 —2 par. North 1015 a. 1 op. 344 —3, par. Suffolk 625 —4, par. 364.

BEIJERLAND or **OLD BEIJERLAND**, a vil. Holland, prov. S. Holland, 7 m. S.S.W. Rotterdam. It is the largest and finest village in the country; has eleven streets, and through the centre a canal planted on either side with chestnut-trees. It has also a fine market-place and two harbours, frequented by numerous vessels during the flat season. The townhouse, an elegant structure, is built over the canal and has a pleasing appearance. There are here two churches, a synagogue, some schools, and a branch of the Society for General Good. Pop. chiefly agricultural 8400.—**BEIJERLAND** is a vil. about 8 m. N. W. the former. It consists of one long, broad street, lined with good houses and rows of elm-trees; and has a church and school.—**SOCIETY BEIJER-**

LAND or **HINTER** is a vil. 6 m. E. of Old Beijerland with a small church and school. Pop. 200.

BELLA or **BELA**, a m. S.W. Asia, Beloochistan, cap. prov. Las or Las, 60 m. from the Arabian Sea lat. 26° 17' N. lon. 66° 34' E. on a rocky height, W. of which flows the Poonalee river. The houses are built of mud and have flat the ground floor. The residence of the Jun, or chief of the province, is also mud-built, and surrounded by lofty castellated walls, flanked with circular towers at the angles. Within the enclosure is a large mosque, covered with a dome. The streets are narrow but always dry, and the houses, though small, neat and clean. In the neighbourhood are some old Mahometan sepulchres. In the ancient bed of the Poonalee, are fields of vegetables and tobacco with a large cultivation of rice. Pop. 4000.—Mason's *Journeys in Beloochistan*.

BEILAN a m. Syria, near the sea, 9 m. S.E. Iskanderom lat. 36° 29' 30" N. lon. 35° 17' E. situated in the gorge of a mountain, from which numerous torrents pour down in winter. One large stream rushes through the centre of the town. The houses, which are of stone, are flat-roofed. The climate in summer is extremely pleasant, though somewhat severe in winter. A great many wealthy Turks have taken up their residence here attracted by its local and political advantages the town being governed by a Shakh elected by the inhabitants from amongst themselves. Pop. between 4000 and 5000.

BEILIN, or **BEILIN** a vil. Holland, prov. Drenthe 30 m. S.S.W. Assen, near the IJssel river. It is a thriving place, has a church and school, and branch of the Society for General Good a good deal of trade, and two annual fairs. Pop. 500.

BEIRA a prov. Portugal bounded N. by provs. Entre-Douro-e-Minho and Trás-os-Montes. E. by Spain, S. by provs. Estremadura and Alentejo and W. by the Atlantic sea 6480 geo. sq. m. Its surface is mountainous, being intersected by the sierra d'Estrella, and traversed by its ramifications. The soil, though by no means fertile, produces wheat, oil, corn, flax, and different kinds of fruit. Chestnuts are particularly abundant. The mountainous districts afford fine pasture both for sheep and cattle, and are famous for their cheese. Considerable attention is paid to the rearing of bees. The chief rivers are the Douro, Tago, Agueda, and Mondego. Among the metals are traces both of gold and silver but the only one wrought is iron. The other minerals are marble and a little coal. The principal trade is in wine, oil and fruit. In 1835 Beira was subdivided into Upper and Lower Beira (Duara Alta and Beira-baixa) the former containing 286 concelhos, esp. Viseu and the latter 29 concelhos, esp. Oporto Branco. The hereditary appellation of Portugal has the title of Prince of Beira. Pop. 615 238.

BEIROUT **Ses BETROUJ**.

BEISAN **Ses BEITHAN**.

BEI SHIETR. **Ses HING-SHIETR**.

BEITAVEND a vil. Persia, Irak Ajem, about 10 m. N.E. Shuster at the foot of gypsum hills, surrounded by green fields and meadows, and intersected by a small stream of brackish water. It consists of about 100 neat and clean houses.

BEIT EL-FAKIR [commonly called *Beit-el-ack*] a m. Arabia, Yemen 22 m. S.S.E. Hodeidah, and 77 N.E. Mokha lat. 14° 21' N. lon. 43° 41' E. It is without walls but has a strong castle. It is celebrated for its trade in Mokha coffee, which is chiefly grown in the neighbourhood. Merchants from Persia, Russia, and Turkey visit the town, for the purpose of purchasing the coffee. Pop. 7000.—The word *Beit*, signifying a house or hut, is prefixed to the name of various other small towns and villages in Arabia.

BEITH a m. and par. Scotland the former is on Ayr the latter is on Ayr and Kintyre. The town which is 15 m. S.W. Glasgow is situated on terrace ground sloping W. at an elevation of 800 ft. above the sea level. It consists of one principal street, stretching N. and S. and intersected by several smaller all tolerably well kept is lighted with gas, but indifferently supplied with water. The churches and schools are, the parish church, two U. Presbyterian churches, and a Free church, the parish school, with library attached, U. Presbyterian school, Free Church school, besides private schools, both in town and parish. There are here a thriving savings bank, a public reading-room, and several benevolent

societies. Principal manufactures—tanning, spinning, and hand-loom weaving, the first employing 150 hands, the second about 300 and the third about 400. A considerable business is also done in wool and grain.—The *Pasam* is about 5 m. in length and 1/2 in breadth, mostly in co. Ayr a small portion only being in Randers. Montenegro, an early and celebrated Spanish poet author of the *Uthery* and the *Blas*, was born at Haslehead Castle, in this parish. Pop. in and per 6425.—(*Local Correspondent*.)

BEITSTAD or **BEITSTAD** a in Norway prov N Tromsø, on the Beitstad Fjord, the most N arm of the Tromsø Fjord; lat. 64° 5' N lon. 11° 20' E. Pop. 2700.

BEJA (anc. *Pas Juba*, afterwards *Pas Augusta*) a in Portugal prov Alentejo, lat. of same name, 35 m. S.E. Lisbon. It stands on a height in the centre of a pleasant district, is surrounded by walls flanked with 40 towers, and defended by an old fort built by King Denis. It is the seat of a bishop and contains a cathedral, four parish churches six monasteries, a well-endowed hospital, and grammar-school. It has potteries and tanneries, but the chief employment is rearing bees goats, and swine. In the neighbourhood are some fine olive plantations. The town was founded by the Romans, and some remains of their works are still visible. Pop. 6814.

BEJAPOOR, a large prov of the Decan, Hindoostan comprised partly in the British dominions, and partly in those of the Rajah of Satara and the Nizam, and containing the Portuguese territory of Goa. It is situated between lat. 10° and 18° N., and lon. 73° and 78° E. bounded N by Aurangabad, E by same province and that of Hyderabad S. by the rivers Wurda and Toombuddra, and the Caversa district, and W by the Indian Ocean, length, 320 m. average breadth, 400 m. The W districts of this province include part of the Ghats, in which are numerous fortresses of great natural strength, usually built on isolated eminences, of which the sides are either naturally steep, or cut perpendicular for 70 or 80 ft. below their upper margin with only one narrow path leading up to the fortress. The country E of the Ghats, although less mountainous is considerably elevated above the sea. Along the banks of the chief rivers, and other flat and arable tracts a black soil prevails. The houses reared in this province were highly adorned by the Mahatras, and mounted their best carvings on a massive table which, where, are spread over the province but their chief strongholds are in the hills adjoining, the Ghats Mountains, S.W. of Satara. They are without caste abstain from eating beef dislike husbandry and mechanical trades but are much attached to hunting and other similar recreations. In 1818 the whole of this province, except the part reserved for the Rajah of Satara, came under British government, and the numerous petty chiefs though most unwilling to adopt peaceful habits, have been coerced into them.

BEJAPOOR (anc. *Vijayapura*—the impregnable city) one, top of the above prov. stands near the E bank of an affluent of the Krishna lat. 15° 46' N lon. 75° 40' E. 132 m. S.E. Satara. From the great extent of its ruins, it would seem to have been one of the largest cities of India, while the splendour of these remains have procured for it the title of the Palmyra of the Decan. In its present state, it may be described as two cities adjoining each other—the fort on the E and the old city on the W. The former, though much less than the latter has one square and regular street, 50 ft. wide and nearly 3 m. long. Groups of houses stand scattered over its extensive area, and numerous mud hovels are seen stuck up among its many ruins. Some of the mosques and mansions of Bejapoor exhibit specimens of elaborate architectural elegance but the prevailing character is solid and massive. The great dome of Mahomet Shah's tomb is visible at the distance of 14 m. and numerous spires, cupolas and minarets, are still standing. The framework on the walls and windows, the panels covered with passages of the Koran in bas-relief and stone carvings pierced with a mosaic work of Arabic characters, are all in the richest style of Oriental sculpture. Among the religious structures is a Jew Hindoo temple, built in the earliest and rudest style of Brahminical architecture, and popularly supposed to have been raised by Pandoo, a mythological race. There are here some ruins of enormous size one of brass, cast in 1649, is said, it is said, of carrying an iron ball of 2646 lbs. weight! It was intended to send this gun to England, but

the state of the roads rendered its removal to the coast impracticable.

BEJAR a in Spain, Leon, prov of and 48 m. S. Sala manco, near the storm de Bajar. It is surrounded by a wall, now ruinous, and entered by nine gates has narrow crooked, steep, and dirty streets a square, three parish churches town and court houses, an asylum and four other schools, some public fountains, an old palace, and several convents with churches attached. The inhabitants manufacture linen and hempen fabrics, bales, and cloth, which they export and import grain, oil, wool, &c. Pop. 4904.

BEJITSK, a in Russia, dep. dist. of same name, prov of and 70 m. N.N.E. Tver near the Malogo. It contains 14 churches, two convents, and a theological seminary. Pop. about 4000.

BEJITIAH a in Spain Andalusia prov of and 19 m. N.E. Jaen, r bank, Guadalequivir. It is well built, and has a parish church, two endowed schools several fountains, and a palace, once a castle, presented at the conquest, by Don Alonso, to the bishops of Jaen. Domestic weaving of linen and hempen fabrics and tillage, are the chief employment. Pop. 2149.

BEJIS, a in Spain, Valencia prov of and 56 m. W Castellon de la Plana, on the skirt of a mountain forming part of the Sierra de Javalambre, at the confluence of the rivers Canales and Pulmanca. It is indifferently built, with irregular and steep streets and has a parish church, town hall endowed school and, at the top of the hill an old castle originally of Roman construction but rebuilt by the Arabs and in the civil war repaired and fortified by the Carlists but, as a place of defence insignificant, being commanded by the neighbouring heights. Paper linen and woollen fabrics, wine, and oil are manufactured and exported. Pop. 3155.

BEJUCAL, or **BUCAL** a in and dep Cuba. The town lies 25 m. S.W. Havana is well built. P. p. 3000.—The DELANTISTA mountains, well watered and fertile yielding excellent tobacco. Pop. 24,000 of whom 10,000 are slaves.

BEKERS, HEMESVAR, or BEKMECH a market in Hungary beyond the Theiss, cap. co. of same name, at the junction of the Black and White K. lies 41 m. S.W. Grosswarman for nearly strongly fortified, and having three churches. Chief productions—flax cattle, corn particularly wheat wine and honey in all of which the trade is constantly large. Fuel is scarce. It has an old castle, whence the province obtained its name. Pop. 18,800.—The country of Bekes, forming the two districts of Gyula and Kassa, has an area of about 1040 sq. m. and a pop. of 157,000. It is watered by four streams—the White and Black Korda (which both flow S. to N.W.) the rapid Korda, and Restyur, which join near Kassa, and fall into them into the Theiss. The soil composed of a rich alluvium is of remarkable fertility and produces a variety of crops particularly wheat but the wine is indifferent, full of water bad, and the climate owing to the numerous swamps formed by the inundations of the rivers very unhealthy. Water melons attain great perfection fish abound and crawfish and tortoises abound in every quarter.

BELA See **BEILA**.

BE LABRI, a in France, dep. Indre, 7 m. S.E. Blanc, r bank Anglin. Near it are iron furnaces and foundries. Pop. 820. In the old castle of Belaire was strangled the Duc de Flavi, whose cowardly order to shut the gates of Compiègne led to the capture of Joan of Arc.

BELALA (WHITE) two rivers Russia—1 A river Siberia, which rises in the mountains of Okhotsk, in lat. 67° N. and lon. 128° E. and, flowing W. joins the Aldan—2 A river which rises in the Ural Mountains prov Orenburg and after proceeding for about 100 m. S.E. suddenly turns almost due N for nearly 100 m. then turns S.E. to Oufa, and continuing in the same direction, with numerous small windings, passes the town of Birsk, and ultimately joins the Kama on its E bank. Its principal affluents—the Oufa from the N., and the Duma from the S., both join it at the town of Oufa. Its whole course is about 500 m. Of these, 240 m. are navigable.

BELALCAZAR (anc. *Castra*) a in Spain Andalusia, prov of and 45 m. N.W. Cordova, l. bank, Capachica, it has a large square, parish church, two schools small hospital, and an ancient fortress, once of great strength and

celebrity The inhabitants are employed in agriculture, weaving, and exporting wine and oil. Pop. 3300.

BELAN, see **Belknap** 1193 sc. Pop. 270.
BELARPOOR, a tin Hindoo temple, Gurkwa L. bank, Sutlej lat. 31° 19' N. lon. 6° 47' E. 77 m. N.W. Suala, and 60 m. N.E. Leodiana. It lies about 1405 ft. above the level of the sea, in a spacious and extremely fertile valley through which the Sutlej winds. The town is said to be well built, chiefly of flint stones to contain about 2000 houses, and to exhibit a regularity, rather exceptional in this quarter of India. Baron Hügel found the streets paved with flint stones about 1 ft. in diameter, and as often found as not dislodging the smooth foot of a luckless wayfarer and knocking it violently to one side or the other. The natives, however, trip lightly over these stones without ever once stumbling. Towards the S. are three fortresses—Jahadpur, Fathpur and Champa, formerly serving as a retreat to petty tyrants, who plundered both travellers and inhabitants indiscriminately. To this, however, as and has now been put. From Belapur the snowy peaks of the Himalayas are distinctly visible.—(Hamilton's East India Coas., Hügel's Travels in the Punjab.)

BELAHG par Eng. Norfolk 804 sc. 1 op. 1.

BELAU or **BEIWAY** a small Isl. Sooloo Archipelago, about 55 m. S. the Isl. of Basilan, or about midway between that and the Isl. of Sooloo lat. (E. point) 6° N. lon. 122° 8' E. (E.) It has a high round mountain on its W. part, with a long space of low level land, extending several miles to the E.

BELLEFS or **BELLEFS**, a town Lower Egypt. 8 m. N.W. Cairo, on the road from that city to Syria—a circumstance which gives it considerable importance, in despite of its want of attractions in other respects, being ill built and dirty. It was occupied in 1569 by the French army when its fortifications were repaired. They are now falling into decay the walls being composed chiefly of mud. Bellefs is successor to the ancient *Belus* from the site of which it is 14 m. distant. In the neighbourhood are traces of the ancient canal that passed the Nile to the Red Sea. Pop. 5000.

BELBROCK (BTON) par Eng. Worcester 4606 sc. Pop. 1830.

BELCASTRO a town Naples, prov. Calabria Ultra, 14 m. N.E. Catanzaro on a rock. It is the residence of a bishop, has a cathedral diocesan seminary, and a *mont-de-piété*. Great numbers of cattle are reared in the neighbourhood. P. 1000.

BELCHALWELL, par Eng. Dorset 1904 sc. P. 232.

BELCHAMP three parts. Eng. Essex.—1 *Belchamp*, 1698 sc. Pop. 79.—2 *Belchamp* (St. Paul) 257 sc. 1 op. 77 sc.—3 *Belchamp* (Waters) 219 sc. 1 op. 648.

BELCHURCH par Eng. Lincoln 3390 sc. Pop. 673.

BELCHITTE, a town Spain, Aragon prov. of and 30 m. S.E. Saragossa pleasantly situated in a plain, at the foot of a small hill which commands it on the S. and W. Its houses are tolerably well built, and its streets generally wide, though unpaved and indifferently kept and it has five squares of which the principal, Plaza Nueva, is handsome, and occupies the centre of the town. The parish church is an old structure, built of brick in the Gothic style, with a lofty tower of the same material. Other public edifices are, a convent, a hospital, two chapels, two schools, and a theatre, formerly a church dedicated to St. John. Manufactures—silk, stuffs, blankets, horse-clothes, and linen fabrics of various kinds and excellent quality which are exported to a considerable extent. On June 18, 1809 an engagement took place here between the French army under Suchet, and the Spaniards, commanded by General Blake in which the latter suffered a signal defeat, and lost 9 or 10 pieces of cannon. Pop. 2353.

BELCLARE par Ind. Galway 7647 sc. Pop. 1793.
BELEM a town Portugal, prov. Extremadura, 7 m. S. Tagus, 2 m. S.W. Lisbon of which it may almost be regarded as a suburb. It has a church and a monastery built by King Emanuel in 1499 the former a fine building, in the mixed Norman-Gothic and Arabic style and the latter containing a royal museum. It has also a hospital, high school, and extensive iron-foundry. A remarkable square tower rises out of the Tagus, called the Torre de Belem, which defends the entrance to the port, and whence ships entering the river are boarded by the custom-house officers. Here also are some *medieval* galleys, and a quarantine station. In the neighbour-

hood is the royal palace of Afonso, with a botanical garden, menagerie, and cabinet of natural curiosities, and the Quinta da Rainha, a royal villa, with fine gardens and extensive parks—all of which are accessible to the public. Belem is inhabited by many of the nobility and rich citizens of Lisbon. Pop. about 5000.

BELEM, or **PARA** a city and seaport, Brazil, cap. prov. Para, 1 m. S. of the mouth of the Para, lat. 1° 54' S. lon. 48° 50' W.; having W. the Mouth of the Guassu, and S. the Amazon, a tributary of the Maja, all falling into the Bahia Guajara, on the N. shore of which the city is placed. Belem has straight and mostly paved streets its houses are of stone, constructed with solidity and some pretensions to elegance. The principal buildings are the Governor's palace and the cathedral, magnificent edifices but, besides these, the ornate church of Santa Anna, and the octagonal one of São João Baptista, are noteworthy. The city possesses several other churches, a convent turned into a barracks, an arsenal an episcopal palace, a seminary in which Latin, theology &c. are taught a college with chairs of jurisprudence, philosophy, geometry and French a normal and two primary schools two convents—one of Carmelites, and another of Capuchins three hospitals, and a botanical garden rich in plants both exotic and indigenous. Belem is the seat of the legislative assembly of the province, the residence of the president, of the commander of the forces, and of the Bishop of Para. The port is defended by forts, and is capable of admitting vessels of any size the tide rises 10 or 12 ft. The trade of the port is in rice, cane, cotton, coffee, sugar, hides, and leather tobacco, balsam copaiba, gum-elastic, and Maranhão chestnuts. The principal disease is intermittent fever. Pop. 10,000 mostly European.

BELENTYEN, a town Hungary beyond the Theiss, co. Bihar 32 m. S.E. Grosswardein on the Black Kocis. It is the seat of a bishop has three churches a salt-office, and in the vicinity quarries of beautiful black marble mines of iron copper and silver ore. Pop. 3250.

BELFAST a town France, dep. Arriège 19 m. S.E. Foix remarkable for an interesting fact in its vicinity which, after flowing 50 minutes, ceases to flow 35 minutes before it again begins to flow, but, after heavy rains, flows continuously without intervals. Belfast has extensive marble quarries, and mills driven by water for sawing marble, porphyry and alabaster. It has also forges and iron mills and a considerable trade in fir timber. Pop. 1212.

BELFAST a seaport town and par. bar. Ireland, co. Antrim 55 m. N.E. Dublin lat. 54° 56' 24" N. lon. 6° 56' 12" W. (a) mostly on low ground on the L. bank of the Lagan near its embouchure in Belfast Bay. The river which is here about 250 yards wide, is crossed by an elegant stone bridge of five arches, each of 50 ft. span. Two other bridges of less pretension, cross the stream—one about a quarter of a mile further up, and the third about three-fourths of a mile above the second. The town owing to its extremely low position has from a distance nothing imposing in its appearance, but, on a nearer approach, is found to improve considerably. The houses mostly of brick are well built, many of them very handsome. The streets are regular, extensive, and cleanly well macadamized and lighted and the whole general aspect of the place eminently calculated to make the most favourable impressions not a little strengthened by the cheerful air and activity which prevails in the mercantile quarters and which associated with an enterprising spirit, have obtained for Belfast the reputation of being the first town in Ireland as commercial prosperity and second to Dublin only as a port. The places of worship in the town and suburbs are numerous consisting of 14 Established churches, 24 Presbyterian, one Independent, 12 Methodist, one Society of Friends, four R. Catholic, one Evangelical Union, two Covenanting one Baptist, one Primitive Methodist, and three Unitarian. Some of these are handsome structures. Of the description is St. Anne's, which is also the oldest; it has a graceful spire, and is fitted up inside with rich old mahogany. Trinity Church is a good specimen of the painted Gothic, built a score 180 feet high. St. George's Church is adorned with a beautiful pediment, but has little other architectural beauty. At the head of the stream are establishments is the Queen's College, a magnificent structure of brick and stone, built at an expense of upwards

of £25,000 and opened for the reception of students in November 1846. The collegiate body consists of the president, vice-president, and 20 professors; and, for the maintenance of the institution £7000 a year is allowed from the consolidated fund. The other educational establishments are the theological college of the General Assembly of the Presbyterian Church in Ireland, the model National schools erected in 1837 the Royal Academical Institution founded in 1810 by voluntary subscription, an annual parliamentary grant of about £1800 a year which it received latterly is now discontinued the Belfast Academy the Ragged School numerous National schools, and private seminaries. The charitable and benevolent institutions comprise the poorhouse with medical and surgical hospitals attached the lying-in

hospital, the general hospital the district lunatic asylum the deaf and dumb and blind asylum, a new and elegant edifice, the Ulster female penitentiary and the union workhouse. The other public buildings are the Commercial Buildings, erected with a capital of £20,000 containing a spacious public news-room hotel offices and assembly room the White and Brown Lion-halls the theatre the music-hall the new house of correction, built on the model of the London prison at Pentonville, and capable of containing 300 prisoners the new county court-house, a handsome pile, with a Corinthian portico of eight columns crowned by a colossal figure of Justice. The Ulster Hall Co has erected in Bedford Street a spacious building, with accommodation for 2000 to 3000 persons, and suitable for concerts, balls, exhibitions &c. The organ which cost £3300 is the gift of Mr. A. Mulholland, D.L., J.P. A new custom house was erected near the quay in 1857. The building occupied by the Belfast Banking Company is also a very handsome edifice. The literary and scientific institutions comprise a natural history society a royal botanical and horticultural society a society for the promotion of knowledge, Belfast music class, rhetorical society working classes association, and the Catholic Institute.

Belfast is the great depth of the linen trade of the N. of Ireland, as well as the chief seat of the manufacture of both linen and cotton. In 1831 there were in the Antrim 28 factories (with 198,978 spindles) employed in spinning, 6 employed in weaving and 12 in both spinning and weaving flax, and in co. Down, 11 factories (with 90,606 spindles) employed in spinning and 2 (with 18,034 spindles) on

Yarn. In 1842 there were in co. Down, Belfast, and the returns do not distinguish them. At the same period there were 300 power looms in Antrim employed in weaving cotton, 1230 employed in weaving flax, and 1834 in factories where the weaving and spinning of flax were both carried on. Since 1831 the trade has undergone a great development, owing to the American war. Several new mills have been erected and others extended. There are two cotton factories in the town employed in spinning and one with 300 power-looms employed in weaving. The manufacture of damasks is carried on at the Royal Damask Factory Ardara. On the 1 bank of the river there is a yard for building wooden vessels and on the Queen's Island which was formed when the new channel was made, the building of iron vessels is very extensively carried on. There are several breweries, corn and flour mills, foundries, and salt manufactures in the town.

The commerce of Belfast is very considerable, and is rapidly increasing the most important branch is across the Irish Channel. The following statement shows the progress in number and aggregate tonnage of the vessels which entered the harbour since 1842:-

Penobscot River 80 m from the ocean with a spacious and safe harbour rarely obstructed by ice and sufficiently deep for vessels of the largest class. It has an extensive trade, chiefly in lumber and fish. As the river above it freezes, Belfast turns the principal mart of the winter trade of Penobscot River. Pop. 5500. — Also the name of another post townships in Allegheny county with a pop of 1046 and of several other places in the U. States.

BELFAST LOUGH or **CARACARRUS RAY** a navigable marine inlet, N of Ireland, between the coe Antrim and Down. It is about 18½ m long with a breadth at the entrance of 8 m, gradually contracting to about 2 m. It is almost completely sheltered from the prevailing winds, by heights on the W and N W. Its banks are studded with woods, parks, elegant mansions, villages, and towns, and at the head of it, where it receives the river Lagan, stands the manufacturing town of Belfast (which see).

BELFORD a market tn. and par England co. Northumberland. The town which is small and neatly built is pleasantly situated on a gentle eminence, 9 m. N E W cooler about 3 m. from the sea, and consists chiefly of two tolerably wide streets; houses well built, and principally of stone water abundant. The church originally erected in 100 has been rebuilt, in the early English style and is capable of containing 600 or 700 persons. Market day Tuesday when an extensive business in corn is done. Area of par 11 064 sq. Pop. 1857.

BELFORT or **BELFORT** a in France dep. Haut Rhin on the Saravense, 40 m S S W Colmar. Before the year 1648, Belfort consisted of little more than a castle, the fortifications of which were considerably increased by Vanban who surrounded the town with a wall flanked with bastions. The new town was built inside of the works and laid out on a regular plan with spacious handsome streets. It is now a fortified place of the first class, and has three gates. Its situation at the intersection of six main roads, is highly favorable to its commerce, and makes it an entrepot for the traffic between the interior of France, and Alsace and Switzerland. Belfort is well built and has a fine parish church barracks townhouse court of primary resort public library containing 90 000 volumes, and a communal college. Manufactures — hats, clocks, wax tapers, iron wire sheet iron, &c. There are also breweries, tanneries, and iron forges. The principal trade is in grain wine hardware and hosiery. Iron is extensively worked in the neighborhood. In 1814 Belfort was besieged by the Allies without success. Pop. 4114. — Other two small places in France have the same name.

BELGIA, the name given by Caesar to the inhabitants of one of the three divisions of Gaul. This division stretched from the Rhine to the German Ocean and extended into France as far as the Seine and the Marne. The Belgae were of Celtic origin, and being very warlike, had succeeded about a 280 m driving out the Celts by whom the country had been previously inhabited.

BELGARD a tn. Prussia circle, same name, prov Pomerania, 20 m E N E Colberg at the confluence of the Lenta with the Persante, and nearly insulated. It is surrounded with a wall, which though old, is still strong, has an old castle, three churches, two hospitals, and manufactures of cloth and tobacco. Pop. 8000. — The circle has an area of 220 sq. m and a pop. of 32 592 of whom only 40 are R. Catholics, and 260 Jews. The surface is for the most part flat, and the soil, though occasionally inclining to sand, is fertile.

BELGAUM a tn. Hindoostan, prov Belgapoor pres. Bombay dist. of, and 65 m N W Darwar; lat 15° 52' N lon 74° 42' E. The site of the town is elevated and healthy, having the benefit of the sea breeze. Supply of water abundant, and of good quality. The fortifications are extensive and complete the walls are masonry and not of brick and deep ditch, surrounded by an area of 600 yards. The latter area is large, but full of the ruins of native buildings, among which are two ancient temples. In 1818, the fort and town were taken by the British, after a gallant resistance by the Peshwa's forces. The former stands in a plain, and is of great strength and extent. Its ramparts are faced with stone, flanked by many round bastions, and protected by an admirable well ditch out of the rock. The soil of the district, though barren in dry weather becomes very fertile during the

rainy season, which lasts for six months. From the salubrity of the climate, and the purity of the water it has been selected as a permanent military station. Pop. of tn 7655.

BELGENTIER a small tn. France, dep. Var arrond. of ant about 14 m. N N W Toulon. It is a place of great antiquity and Roman remains have been found in its vicinity. Its manufactures consist of woollen stuffs, paper and leather; and it has some trade in wine and oilives. Pop. 1520.

BELGERN a tn. Prussia, prov Saxony R. bank, Rbe, circle of and 7 m S E Torgau. It has a church an hospital, and townhouse. The inhabitants live chiefly by agriculture, including that of the vine, the rearing of cattle, and traffic on the Elbe. Their general and cattle markets are considerable. Pop. 2850.

BELGIQJOSIO a tn. Basilien Lombardy cap dist. of same name, gov Milan, prov and 8 m S by F Pavia. It is situated in a beautiful and remarkably fertile plain, between the Po and the Olona, from each of which it is about 1½ m. distant. It is well built, and contains a parish and an auxiliary church. The old castle in which Francis I was temporarily lodged after being taken prisoner at the battle of Pavia, has been converted into a magnificent chateau surrounded by fine gardens. Belgiojoso has an important annual fair which lasts three days. Pop. 3383.

BELGIUM [French *Belgique* German *Belgien*] a kingdom in the W of Central Europe, between lat. 49° 30' and 51° 30' N and lon 2° 35' and 6° 7' E. bounded N by Holland N W by the N Sea or German Ocean W and S by France, and E, by the duchy of Luxembourg Rhinisch Prussia and Dutch Limburg. greatest length N W to S E 165 m. greatest breadth N to S 170 m. area about 11 400 sq. m. Belgium in shape, resembles a triangle, which has its vertex on the W. The base resting on Germany on the E the shortest side facing Holland and the sea, and the larger forming the frontier of France. For administrative purposes it is divided into nine provinces — Antwerp K. Brabant, E. Flanders W. Flanders, Hainaut Liege Limburg Luxembourg, and Namur. These provinces do not differ much in area, and are so arranged as to form a compact and commodious division of the kingdom. K. Brabant, which from containing Brussels, the capital may be considered the metropolitan province occupying the centre while the others cluster round, and, with exception of the extreme province of Luxembourg and W. Flanders, actually touch it.

Physical Features — A general idea of the surface of the country may be obtained by regarding it as an inclined plane, somewhat rugged and considerably elevated in the S.E. from which it slopes, more or less gradually N and W till it sinks into low plains, only a few feet above the level of the sea. The elevated districts are formed by ramifications of the Ardennes, which, entering Belgium from France stretch along the S of Namur occupy the greater part of Luxembourg and attain their culminating point in the S E. of Liege, at Barrois in the neighbourhood of Spa, where the height ascends 2000 ft. The rocks appear to rest on primary formations but it is which reach the surface generally consist of slate old red sandstone and mountain limestone. Proceeding N W in the direction of the dip, these rocks take a cover and the coal formation becomes fully developed. This coal field is a continuation of that of the N of France and stretches through Belgium to a N E direction, occupying the greater part of the province of Hainaut and a considerable part of that of Liege and slanting the provinces of Namur and Luxembourg. It contains numerous workable seams, both of coal and iron. N and W beyond the limits of the coal field, a more recent formation is found, covered by deep beds of clay and mud, the former prevailing more in the interior and the latter near the coast, where it has been drifted into hillocks or downs, and forms the only barrier against the encroachments of the sea. Some of the clay in this district is fit for the manufacture of fine pottery, but the greater part of it is fit only for coarse ware, or for bricks. In accordance with the general slope of the surface already mentioned the main streams of Belgium have a N direction and the whole country lies within the basin of the German Ocean. In the S.E., where the surface is elevated and broken, numerous torrents descend with rapidity and, becoming confined within rocky precipitous, and richly wooded banks, often furnish, if not the grandest, the most picturesque and embellishing of landscapes. On reaching the

lower country their speed is slackened and their augmented volume moves along in a slow winding course. Only two of them—the Meuse and the Scheldt—have a magnitude which enables them to be named rivers but so important are these two to themselves and so numerous their affluents, that no country in Europe is better supplied with water communication. Besides the Scheldt or Schelde and Meuse or Maas the navigable streams are, the Ambere, Dender, Doudere, Durme, Dyle, Lys, Great Nethe, Little Nethe, Ourthe, Rupsel, Sambre, Yserle, and Yser. The climate of Belgium bears a considerable resemblance to that of the same latitudes in England. Though subject to sudden change, it is on the whole, temperate and agreeable. Liezenbourg and Namur where the surface is high and the numerous hills and dales which diversify it, both cheer the animal spirits and freely circulate an air at once keen and pure, are most favourable to health and longevity. The only parts of the country which can be considered unhealthy are the low flats, which prevail in Flanders, and the polders or rich alluvial tracts which have been gained from the rivers by embankment chiefly in Antwerp. These agues, and other diseases engendered by a humid and sluggish atmosphere, are prevalent.

Woods and Forests.—Nearly one-fifth of the whole surface of the kingdom is occupied by wood. The distribution of it, however is by no means equal and hence, while the two Flanders and Antwerp fall far below the average amount, Luxembourg and Namur rise far above it, and are very densely wooded. In these provinces, extensive tracts are covered with natural woods, in which the wolf and wild bear still have their lair. These woods are the remains of the ancient forest of Ardennes, which Cæsar describes as stretching far out into France from the banks of the Rhine. They consist of hard wood, principally oak which is often of great size and furnishes large quantities of the most valuable timber. By carefully dressing the stools after it is cut a fine oak copse is raised, the cuttings of which annually produce many tons of bark which not only supplies the tanneries of the country but leaves a considerable surplus for exportation chiefly to England, while the wood, unfit for the carpenter is partly employed as fuel and partly converted into charcoal for the use of the ironworks, where the superiority of the iron smelted and wrought by it is well known. S. Belgium also possesses several fine forests among others, that of Soignies, with which the field of Waterloo has made so familiar. In the other provinces scarcely anything deserving the name of forest is seen. Wood is distributed over them in occasional patches and more frequently in the form of hedgerow. The timber thus grown is by no means small in aggregate amount, and forms a well known feature in the rich rural landscapes which the old Flemish masters loved to paint but, taking into account the injury which the cultivated moor sustains from it is very questionable whether it ought to be regarded as a source of profit either to individual proprietors or to the country at large. The timber itself, consisting chiefly of various kinds of poplar is soft, and of an inferior description.

Agriculture.—The greater part of the country is well adapted for agricultural operations, and the inhabitants have so fully availed themselves of their natural advantages, that they early began and in some respects still deserve, to be regarded as the model farmers of Europe. In the high lands traversed by the Ardennes, the climate is ungenial and the soil so shallow and stony as almost to forbid the labour of the plough. Here the occupants display their skill not so much by what they do as by what they refrain from attempting. Instead of vain endeavours to force the growth of corn, where it could never yield an adequate return, they have been contented to turn the natural pastures of the district to the best account, by employing themselves chiefly in the rearing of stock. In particular they produce a hardy breed of horses which being admirably adapted for light cavalry are largely exported to France for that purpose, while vast herds of swine are fed almost at no expense, on the mast of the forests. At the same time, no part of the surface is allowed to lie waste. Where arable land occurs, it is carefully applied to its proper use. Even the vane has not been forgotten, and sunny slopes on which little else could have been grown, have been made to yield a tolerable wine. In the opposite extremity of Belgium, chiefly in the province of Antwerp, and partly in that of Limburg an extensive tract occurs which strictly con-

forms in appearance with the hilly districts of the S. D. but is perhaps still less adapted for the ordinary operations of agriculture. This tract, known by the name of Campine is a vast expanse of monotonous waste of the most dreary appearance, a dead monotonous flat, composed for the most part of barren sand, in which the ordinary heath and lichens will scarcely grow. The greater part of this tract seems destined to remain for ever in its natural state, but wherever a patch of more promising appearance occurs, the hand of industry has been at work and corn fields and green pastures have become not infrequent even in the Campine. Agricultural colonists partly free, and partly compulsory have been planted in different parts of the district. The former consist of persons generally in poor circumstances who have voluntarily engaged in reclaiming barren tracts as the means of procuring a maintenance and saving them from the degradation of pauperism. The latter consist of convicts, who, having forfeited their liberty give compulsory labour as the penalty of their offences. By the united exertions of both, a wondrous improvement has been made, and on parts of this waste, some of the finest cattle of the country are reared and much dairy produce of excellent quality is obtained. Still however about 200,000 ac. remain unimproved. It is estimated that the two districts now described there is a part of Belgium in which agriculture does not flourish but the husbandry which has been so much lauded, is seen in its greatest perfection in the two Flanders. Its excellence is owing not to any superior knowledge of what may be called the theory of agriculture nor to any remarkable ingenuity in the invention of implements by which its operations are more efficiently or more cheaply performed, but chiefly to an innate spirit of economy and industry—an economy which carefully appropriates every gain however small and an industry which grudges no labour however great, provided it is possible by the application of it, to obtain an additional amount of valuable produce. In fact the Flemish husbandry partakes more of the nature of garden than of field culture. In many of its operations, no doubt, horse labour is employed. The plough and the harrow are in frequent requisition but the implement on which the greatest dependence is placed is the earliest and simplest of all—the spade. It gives full scope for the use of it, the ground is parcelled out into small fields of a square form which have their highest point in the centre, and slope gently from it in all directions towards the sides, where ditches of sufficient size carry off the superfluous water as it filters into them. To promote this drainage, the ground is trenched to a uniform depth so that the slope of the subsoil corresponds as nearly as possible to that of the surface. In performing this trenching a considerable degree of skill and ingenuity is displayed. The performance of the whole at once, would be a formidable and not a very efficient process. In a few years, a new subsoil would be formed and the trenching would require to be renewed. This is rendered unnecessary in the following manner. The land is laid out in ridges about 5 ft. wide, and when the seed is sown it is not covered, as usual, by the harrow but by earth dug from the furrows to the depth of two spits and spread evenly over the surface. By changing the ridges, and throwing the furrow of the previous year into the ridge of the next, the whole ground becomes furrowed in the course of five successive crops and is consequently trenched to the depth of about 18 inches. This process of trenching never ceases and is unquestionably one of the most important characteristics of the Flemish husbandry. The only other process particularly deserving of notice is the care and skill manifested in securing an adequate supply of manure. Every farm is fully stocked, and the cattle instead of being grazed in the fields, are fed at home in winter on turneps and other roots and in summer on green crops carefully arranged so as to come forward in regular succession and yield a full supply of rich succulent food. In addition to this every homestead has a tank built and generally arched with brick into which all the liquids of the cattle sheds are conveyed and have their fertilizing properties increased by the dissolution of large quantities of rape-cake. This liquid manure is of singular efficacy in promoting the growth of flax, which enters regularly into the Flemish rotation and is perhaps the most valuable crop of all the produce of an acre being not infrequently sold for 250. As this crop is one of the most exhausting which can be grown, and requires the richest

measure while it yields more, the growth of it to any great extent, most, without the aid of the tank, have been impossible. At present, in Flanders alone the value of flax

actually raised has been estimated at 1½ millions sterling. To save the necessity of further details, we subjoin the following table.

THE PROVINCES OF BELGIUM: AREA, EXTENT UNDER CULTIVATION AND POPULATION as at Jan. 1 1849

PROVINCES	Area, in sq. m.	Area, in m.	Cultivated.	Wood.	Waste.	Population.	Pop. per sq. m.
Antwerp	1,028	699,778	894,722	80,801	186,618	618,284	276.61
Brabant (S.)	1,267	840,988	671,504	108,175	3,117	711,232	361.48
Flanders (N.)	1,267	786,824	668,019	75,656	68,667	608,281	308.26
Flanders (V.)	1,157	740,474	631,701	74,488	5,811	611,143	277.94
Hainaut	1,436	918,346	723,997	130,301	9,048	718,080	308.01
Liege	1,135	714,619	518,966	184,151	55,615	690,665	41.79

	11,796	7,75,619	6,870,983	1,300,318	311,116	4,569,780	

It thus appears that about two thirds of the whole kingdom is under cultivation, and nearly eight-ninths profitably occupied, leaving only about one-sixth waste. Of this last, the far greater part belongs to the comparatively barren districts of the E. and N. E. already described, and hence, in the more favoured provinces, particularly those of S. Brabant, the two Flanders, and Hainaut, the quantity of waste is so very small that the whole surface may be regarded as one vast garden. It is an error, however to assert, as is usually done, that Belgium raises more corn than it consumes. For several years the import has considerably exceeded the export. In 1844, the import of wheat for home consumption amounted to above 60,000 quarters. The average price, for the same year was 52 1s. 3d. per qr. Considerable attention has been paid in Belgium to the rearing of stock, and the breeds both of cattle and horses are of a superior description. The herds of Flanders in particular are admirably adapted for draught, and an infusion of their blood has contributed not a little to form the magnificent teams of the London draymen. In general, however Belgian stock of all kinds is inferior to that of England. Throughout the kingdom, the estimated number of horses is 240,000 of cattle, 900,000 and of sheep, 758,000.

Minerals. The mineral riches of Belgium are great, and, after agriculture, form the most important of her national industry. They are almost entirely confined to the four provinces of Hainaut, Liege, Namur and Luxembourg, and consist of lead, manganese, calamine or zinc, iron and coal. The lead is wrought to some extent at Yverin in Liege but the quantity obtained forms only a small part of the actual consumption. Manganese, well known for its important bleaching properties, is obtained both in Liege and Namur. The principal field of calamine is at Liege, where it is worked to an extent which not only supplies the home demand, but leaves a large surplus for export. All these minerals, however are insignificant compared with those of iron and coal. The former has its seat in the country between the Sambre and the Meuse, and also in the province of Hainaut. It forms the largest and most valuable of all the Belgian exports. More than a half of the whole coal raised is taken by France. There cannot be a doubt that this export yields a handsome profit to the coal-masters, and adds greatly to the national wealth but a question has been raised as to the policy of thus lavishly disposing of a raw material which is absolutely essential to the existence of a manufacturing community, and the quantity of which though great, is by no means inexhaustible. One obvious effect of the great foreign demand, is to raise the price and thus place some of the most important manufacturing interests of the country in an unfavourable position for competing successfully with so formidable a rival as Great Britain. Besides minerals, properly so called, Belgium is abundantly supplied with building-stone, pavement, limestone, roofing-slate, and marble. Of the last, the black marble of Namur is the most celebrated.

Manufactures.—The industrial products of Belgium are very numerous, and the superiority of many of them to those of most other countries, is confessed. The fine hosiery of

Flanders, and lace of S. Brabant, are of European reputation. Scarcely less celebrated are the carpets and purlains of Tournay the cloth of Verviers, the carriages of Brussels, the cutlery of Namur the extensive foundries, machine-works and other iron establishments of Liege. The cotton manufacture, confined chiefly to Flanders and the province of Antwerp employs a capital of £2,500,000 and gives an employment to more than 12,000 persons.

Trade and Commerce.—The geographical position, the admirable facilities of transport, and the indefatigable industry of the inhabitants, early combined to place Belgium at the very head of the trading countries of Europe. The gradual rise of competition still more highly favoured, has deprived her of this pre-eminence but her trade is still of great importance and within recent years has made a rapid advance. Her coal and iron, and the numerous products of her manufactures, furnish to themselves the materials of extensive traffic while the possession of one of the best harbours in the world, situated on a magnificent river which directly or by canals, stretches its arms into a cry part of the kingdom, and now made accessible by a system of railways with every kingdom of Central Europe, promises to make it the seat of a transit trade even more important than that which it monopolized during the Middle Ages. The limited extent of the sea-coast, on which alone mariners can be relied, seems to make it impossible for Belgium ever to take high rank as a naval power but if others must be the sea-carriers she certainly bids fair soon to become the greatest land-carrier of the world. This she owes chiefly to the admirable system of railway communication which in the exercises of an enlightened policy was early established throughout the kingdom. This system has its centre at Malines, from which a line proceeds N. to Antwerp; another N. to Ostend, another S.W. through Mons and on to the Northern Railway of France, which communicates directly with Paris and terminates S.E. to Liege, and on into Brussels where it first communicates with the Rhine at Cologne, and thence by that river and by rail runs across both E. and S. to all the countries of Central Europe. In addition to these great trunks, one important branch connects Liege with Namur and Mons and another from Antwerp, after crossing the W. trunk at Ghent, passes Courtray and proceeds directly towards Lille. The navigation is thus complete and there is not a town in Belgium of any importance which may not now with the utmost facility convey the products of its industry by the easiest and the speediest of all means of transport. Electric telegraphs have been an added to all or most of the lines.

From the official returns of external commerce of Belgium published by her government for the year 1856 it appears that the Belgian trade is steadily advancing. Thus, taking quinquennial periods as the best criterion to judge by it results that, from 1835 to 1839 the valued amount was £16,490,000 from 1840 to 1844, £25,000,000 from 1845 to 1849 £28,730,000 and in 1850 £26,440,000. The exports of Belgian produce and manufactures, which in 1840 were to the value of £2,600,000 in 1849 had increased to nearly £9,000,000. The articles of export are far more numerous than those of import, the latter being chiefly raw cotton, wool, and colonial produce. The former are principally coal and flax tissues of flax, cotton, and wool; glass-ware, firearms and sails. In 1853 there were sent to Great

Belgian nearly 7,000,000 eggs wool (sheep) and lambs 1,700,916 lbs. glass (flat) 143,580; plate glass, 36,990 sq. ft.; poultry and game (value) 216,881.

Little more than a half of the foreign commerce of Belgium is of a substitutive nature, the rest depending on her position and policy as a trading intermediary for the produce and goods passing to and from the states of the German Zollverein, the Netherlands, Britain and her colonies America, &c. Thus it appears that the value of the direct exports in 1880, from Belgium to the United States, was about 2,680,000 from the United States to Belgium, about 21,800,000 but these figures give us no clear idea of the balance of trade between the two countries, as much of the American produce finally destined for Belgium was, in some form or other, first sent to the United States through France. To the latter country, in fact, more than a third of the whole exported products of Belgium is sent. Of similar character probably is the Belgian trade with Turkey the imports from which in 1880 were valued at fully 2,150,000 and the exports thither to not quite 280,000.

The external trade of Belgium is chiefly carried on by means of foreign vessels. The returns for 1849 indeed give a list of 161 ships de. employed in deep-sea voyaging but not more than five of these were of considerable burden. In that year the arrivals of vessels in Belgian ports from foreign countries were 2434 total tons of their cargoes 268,981 Belgium is, in fact, much more of a manufacturing than a trading country.

The commercial intercourse between Belgium and Great Britain is considerable. From the report of the Board of Trade, published in 1855 the following table of the chief articles of British export has been drawn up—

Sent to Belgium.		Value.		
		1861.	1862.	1863.
Cottons	yards.	5,123,441	1,578,060	3,302,238

Do. foreign and colonial.				

People.—The Belgian population is the densest in Europe, and is composed of two distinct races—Flemish, who are of German and Walloons who are of French extraction. The former by far the more numerous, have their principal locality in Flanders but also prevail throughout Antwerp Limburg, and part of S. Brabant. The latter are found chiefly in Namur, Liege, Namur and part of Luxembourg. The language of each corresponds with their origin—the Flemings speaking a dialect of German, and the Walloons a dialect, or rather corruption of French, with a considerable infusion of words and phrases from Spanish and other languages. The distinct mixture of races, and the repeated changes of masters to which they have been subjected, have necessarily been very unfavourable to the formation of a national character. Still, in some leading features there is a remarkable uniformity in the population. Though the position of the country between France and Germany has made it the battle-field of Europe the inhabitants show few warlike tendencies and are unwearying in pursuing the arts of peace. Hostile armies have frequently met upon their soil to decide the fate of kingdoms, carrying devastation into every quarter but no sooner have they withdrawn, than the labours of the field and the workshop have been quietly resumed, and the very traces of devastation soon, in a few years, effaced. The fact bears strong testimony to the patient endurance of the Belgians, but bespeaks

a deficiency both of physical and moral courage, and thus prepares us for another leading feature in their character—their kind and slavish submission to the Romish see. Protestantism is fully tolerated, and even tolerated by the state, but cannot count above one-twentieth of the population among its adherents. One astonishing circumstance connected with this state of matters is, that Belgium early embraced, and at one time seemed on the eve of being gamed to the Reformation. Persecution of the most fearful kind took place and did what, perhaps, it has never done in any other part of the world not only forced the people back to a religion which they had renounced but induced them to return to it as willing converts.

Where such a spirit prevails, education of an enlightened kind cannot have made much progress. Numerous schools, partly free and partly supported by the state, are planted throughout the kingdom but the instruction given is of the most elementary description. Under the Dutch, attendance at these schools was compulsory. It has since become voluntary and is said to have, in consequence, declined. In all the large towns, colleges of sciences have been established, where a superior education may be obtained, while a complete course for the learned professions is provided by four universities two of them at Ghent and Liege respectively established and supported by the state one at Brussels, called the free university founded by voluntary association and one at Louvain, called the Catholic university founded by the clergy and apparently the most flourishing of all. Many of the professors in these universities are of distinguished reputation but their works, written in French, which is still the official language, and in general use among the educated classes, are scarcely to be regarded as forming part of a national literature. Of late however patriotic feelings to which the Belgians have too long been strangers have acquired new strength and one of its first manifestations has been an eager desire to cultivate the vernacular Flemish. It is said to possess great power and flexibility and several works have already appeared in it which bid fair to make it a classic language. The population generally is moral and apparently comfortable circumstances. The larger proportion of it is rural and though property is very much subdivided the Belgians are not of exulting the wretchedness so common among the small occupiers in Ireland manage, by a happy combination of agricultural with other industrial employments to derive from their little tenures all the necessities, and not a few of the comforts of life. It is not to be denied however that in some of the provinces, particularly in Flanders population in so far as least, so it can be maintained by agricultural resources, has reached its limit; and that a deficiency of other employment, particularly spinning and hand-loom weaving has placed large numbers of it not within the verge of pauperism. In Flanders and S. Brabant, a fourth of the people is dependent on total or occasional relief and pauper riots have repeatedly occurred. Still the population continues to move on, as if with accelerated pace. In 1841 it was 4,067,893 and in 1849, 4,869,090.

Government.—The Belgian constitution combines most archaic with a strong infusion of the democratic principle. The executive power is vested in a hereditary king the legislative in the king and two chambers, the Senate and the chamber of representatives both elected by citizens paying about 50s of direct taxes—the former for eight years, and the latter for four but one-half renewable every two years. The chief divisions of the territory is into nine provinces each of which is administered by a governor and is subdivided into arrondissements administratifs and arrondissements judiciaires subdivided again, respectively into cantons de milices and cantons de justices de paix. Each canton is composed of several communes of which the sum total throughout the kingdom is 2514. The other great territorial divisions are the ecclesiastical, which divides the kingdom into six dioceses and the military which divides it into four sections. The army has an effective force of 90,000 men, with a reserve of the same amount but all citizens between the age of 21 and 50 are enrolled in the garde civique and form a militia of not less than 500,000. The defensive power of the kingdom is greatly increased by numerous strong fortresses. The navy of Belgium is confined to a few steamers and a small flotilla of gun boats. The public revenues for 1850 derived chiefly from direct taxation and dues of transport amounted to 24,836,420.

The expenditure amounted to \$4,670,000. About one-third of it was absorbed by the interest of the debt, the sum total of which, at the same date, was \$28,747,000. The coins, weights, and measures are the same both in name and value as those of France (which see).

History.—The first mention of the country is made by Julius Caesar who includes it in one of the three divisions of Gaul and describes its inhabitants as particularly distinguished for valor. It continued under Roman domination till A. D. 408 when it became part of the empire of the Franks which, under Clovis, extended from the Rhine to the Loire. On the death of Clovis, in 511 it was divided among his sons, and formed four separate kingdoms. Ultimately about A. D. 800, they all merged in the empire of Charlemagne. In the partition which took place on his death almost the whole of modern Belgium fell to his son Lothaire. It was afterwards subdivided into several duchies, which, having been gradually absorbed by that of Brabant, passed with it to the house of Burgundy in 1406, and continued with it till 1477 when by the marriage of Mary heiress of Charles the Bold, it became united to Austria, and shortly after formed part of the extensive dominions of the Emperor Charles V. Through him, Belgium was united to the Spanish monarchy. On the peace of 1714, it was ceded to Austria which maintained its possession till 1793 when the armies of the French republic overran the country and partitioned it out into nine départements as part and parcel of France. (In the downfall of Napoleon, the above united Belgium and Holland under the king of the latter into the kingdom of the Netherlands. The union was never harmonious, and proved short-lived. Taking advantage of the agitation caused by the expulsion of the Dutch from France, in 1830, the Belgians revolted, and obtained a recognition of their independence. They have since enjoyed great prosperity under the enlightened and constitutional government of their own king, Leopold I. The recent changes in France were generally expected to produce corresponding changes in Belgium and thousands of Frenchmen proceeded to the frontier to bestir the benefits of their republicanism. The Belgians, by the contrary manner in which they rejected the boon, proved that they are both sensible of the better blessings which they already enjoy and prepared if necessary to defend them.—(*Moniteur Belgique Almanach Royal de Belgique Almanach de Gotha Das Gegenwartig Parlamentarische Jahrbuch*.)

BELGRADE [see *Sigundunum* Latin, *Alba Graeca* *Belgrade*] a fortified city N part of European Turkey cap. of Servia, r bank, Danube, at the junction of the Sava with that river, lat 44° 40' N lon 20° 30' E on the activity of a hill. It is composed of the island rising in the centre, and situated on a rock 100 ft. high, the lower town stretching W from the citadel to the river, and the suburbs, Kalemegrad, on the Sava opposite to the mouth of which river is the island Zingara) and Palanka on the E and S, leaning upon the height on which the citadel stands. The houses are in general, very mean, the streets filthy in the extreme, and infested by swarms of half famished dogs and the shops consist wholly of a series of wooden stalls or booths, open towards the street, and in general, poorly stocked. The only public buildings worthy of notice are the court house, the college, the two exchanges, and the two barracks, the residence of Prince Milosch a Greek church and the barracks. Belgrade was at one time strongly fortified, and might still be rendered almost impregnable, but its works have been neglected, and are now rapidly decaying. Within the fortifications are the arsenal and magazines erected by the Austrians, the principal mosque, with its lofty tower and the palace of the pasha, the latter composed of wood and mud. The garrison maintained in the citadel as in keeping with its ruinous condition, consisting of a few half-disciplined ill-equipped, and miserably paid Turkish soldiers. The principal articles of manufacture are carpets, silk stuffs, hardware, cutlery and saddlery but the quantities produced are inconsiderable, compared to what they were in former times, when Belgrade was celebrated for the extent of its manufactures. From the excellence of its port, formed by three islands in the Danube, above the town, and its favorable position on the Danube, which gives it an easy communication with the Black Sea, it still carries on a pretty extensive trade. The military exercises of Belgrade have rendered it famous in history. Being the key of Hungary, it was long an object of fierce contention between the Austrians and the

Turks. It was besieged by the latter in 1456 and again, with more success, in 1521 from which time it was held by them till 1686, when it was retaken by the Elector of Bavaria. Two years afterwards, it was again captured by the Turks, who perpetrated every sort of atrocity in the conquered city besides killing 1300 of the garrison. In 1698, the Austrians made an unsuccessful attempt to regain the town, sustaining a loss of 1000 men. From this period it remained in possession of the Turks till the year 1717 when it was besieged by Prince Eugene, with an army of 50,000 men, the Turkish garrison amounting to 25,000 men, supported by a strong fleet on the Danube, and subsequently by an army of 300,000 men, under the Grand Visier who marched to the relief of the city. After a desperate conflict between the contending armies, the Turks were defeated, with a loss of 18,000 killed 5000 wounded, and 8000 prisoners. The Austrians having only 8000 killed and 4500 wounded. In 1739 the Turks made another vain attempt to retake Belgrade but came, soon after into possession of it by treaty retaining it till 1793 when it was taken by the Austrians, who restored it to the Turks in 1791, the same which time it has remained in their possession except for a short period during the Servian insurrection, when (1812) its suburbs were burned and its fortifications partly destroyed. Pop 30,000.

BELGRAVE par Eng. Leicester 34.00 c P 2870
BELHAVEN a small marine vil Scotland co of, and 10 m N E Haddington and half a mile S W Dunsbar being situate at the head of a small bay. The houses are of stone and most of them neatly built, and in the vicinity are several handsome mansions. Water is abundant, and a supply of gas is obtained from Dunbar. Belhaven has a chapel in connection with the Establishment. It is the only manufactory, for the making of which there is here erected an extensive brewery. The locality is remarkably healthy and fertile, altogether a very desirable summer retreat, enhanced for such purpose by a mineral spring lately discovered there. Belhaven gives the title of Baron to a branch of the family of Hamilton. Pop. 800.—(*Local Correspondent*.)

BELLEVUE par Hon. Aberdeen p. 1699
BELIDA or **ILIDA**, an island in Algiers, at the foot of the Lesser Atlas, near the plain of Metidja, 30 m. S. the town of Algiers. It is surrounded by a wall, entered by four gates. The streets are comparatively wide, and the supply of water abundant. The adjoining country is fertile, yielding grain and all sorts of fruit in great quantities including amongst the latter oranges and olives. To these, and spices, the trade of the place is chiefly confined. The town was nearly destroyed by an earthquake in March 1825. P (1849) 3247
BELITZ, a tn Prussia, prov. Brandenburg 12 m S. by W Potsdam. It is surrounded by old walls and has considerable manufactures of linen. Flax is grown extensively in the neighbourhood. Pop. 3000.—There are several other small places of that name in Prussia.

BELIZE or **BALIZ**, a tn British Honduras or the Settlement of Belize, Yucatan Central America, situated at the mouth of the river of the same name, which is crossed by a substantial wooden bridge lat 17° 19' 18" N lon 88° 16' W. It consists of a long street, running parallel to the sea-shore from which three or four smaller streets diverge. The houses are constructed entirely of wood and are raised 6 or 10 ft. from the ground on pillars of mahogany they are well built, spacious and convenient. The town seems almost entirely inhabited by blacks the streets narrow, and market places being thronged with them. They are described by Mr Stephens as a fine-looking race tall straight, and athletic, and well dressed—the men in white cotton shirts and trousers with straw hats the women in white frocks and short sleeves, and broad and border, and adorned with large ear-rings and necklaces. During the three dry months of the year April May and June, fresh water is extremely scarce here and indeed throughout the whole settlement, there being no rivulets, and the water of the river being brackish for several miles upwards. The consequence is, that the inhabitants, at this season, are compelled to have recourse to wells about 3 ft. in depth, from which they procure a muddy brackish and fed water injurious to health, and productive of a variety of disorders. Serious efforts are now being made to remedy this evil, both by the Government and the European public of Belize and considerable sums have already been

expended in sinking walls. An iron market-house has recently been erected in the town for which £4000 was voted. A savings bank has been established, under the guarantee of the local legislature. There are also, a public hospital

and a dispensary for the relief of the poor, an asylum for the reception of lunatics and a grammar-school conducted on the Mair system and which was attended in 1847 by 100 pupils, while in the year before the number was only 75. This school, which is entirely supported by the local government, has a department for girls annexed. The Papists and Wesleyans have chapels here with schools connected—the former one the latter two. There are five judicial courts in Belle—the court of ordinary and the supreme, grand, summary and police courts. It is also the seat of the Honorary Legislature. The anchorage in front of the town is excellent being protected from the heavy walls of the open sea by the numerous cays but is adapted for vessels of moderate size only. Belle is said to have obtained its name from a noted buccaner called Wallace by whom it was first discovered. The name was written, *Walls* by the Spaniards, and subsequently corrupted into Belle, as it now stands. For trade, &c. see BRESTON (Breston).

BELK or **BELKON** ISLAND, an Isl. Azores Archipelago, one of the Serangan Islands 39 m. S. Serangan Point Isl. Mindanao; lat. 0° 24' N. lon. 125° 31' E. (n.)

BELL ROCK, or **ISLE CARA**, a dangerous reef off the E. coast of Scotland, in the German Ocean opposite the Firth of Tay 12 m. N.E. by S. B. Arbroath, and about the same distance N.E. Fife Ness lat. 56° 26' N. lon. 2° 28' W. (n.) The reef which is of a reddish sandstone, is about 850 yards in length and 110 in breadth. At low water some of its highest parts are from 4 to 8 ft. above the level of the sea, but at high water the whole is covered, in some places to a depth of about 12 ft. In stormy weather the sea breaks over it with tremendous fury and many vessels have been lost on it, as it lies in a much frequented track. To prevent as much as possible the recurrence of such disasters a magnificent lighthouse was erected on one of its points in 1806-10, at an expense of £261,331. The total height of the building, including the light-room, is 115 ft. the lantern being elevated 80 ft. above the sea at high-water mark. The light is revolving the flashes succeeding each other every two minutes. During

foggy weather bells are tolled every half minute. In ancient times, there was a solitary bell on the rock, which was rung by the action of the waves, and warned vessels of their danger. The circumstance, according to tradition, of this bell having been sunk by a Dutch pirate, who was himself, in consequence, afterwards wrecked on the rock, has afforded subject for an impressive ballad by Southey called 'The Inch Cape Bell.'

BELLES (KIRRE) TOWN, a town in Africa, 1 m. W. Agass, 1 m. W. Gambia River near its mouth in the Right of Biafra lat. 4° 2' N. lon. 16° 41' E. cap. of a self-styled royal chief of Gambia. The houses are neatly constructed of bamboo, in wide and regular streets interspersed with plantains and coconut trees. The King's house is well built, with a raised story surrounded by a verandah. A spacious saloon occupies the whole front, and is filled with European goods in abundance, and piles of crockery figures and looking-glasses in shambles adorning the walls. —(Allen's *Figure Expedition*.)

BELLA, a tn Italy prov. Potenza 15 m. S.W. Melfi on a hill. It is a collegiate and one other church on a hill and three charitable institutions. Pop. 5800.

BELLA ISOLA, see BERNARDINI ISLAND.

BELLAC, a tn France, dep. Haute Vienne, on the slope of a hill on the r. bank Vienne 25 m. N.W. Tiroles. It has manufactures of cloth paper tabacco hats and leather with a considerable trade in horses, cattle, mules, oak wood &c. Pop. 3188.

BELLAGIO (Italian, *Bellagio*) a tn Italy Lombardy chief place of dist. same name prov. of and 15 m. N.W. Como on the l. bank of the lake of that name, at the extremity of the promontory which divides the lake into two arms. Here are several beautiful villas and it is said that here Henry the young king had his country house. Pop. 408. —The district is for the most part fertile but in some parts hilly and well wooded. Pop. 301.

BELLANO a tn Italy Lombardy chief place of dist. of same name prov. of and 26 m. N.N.E. Como at the mouth of the Pioverra on the l. shore of Lake Como. It is well built, has a handsome principal street, an archiepiscopal palace, and several curious natural caverns. Pop. 3146. —The district is very productive, and it pastures large herds of cattle. Pop. 7685.

BELLARY (Palahera, a collectorate, Tinianetan presidency of Malabar part of the Delagatout colored districts. It occupies the W. section of Balapant, but its limits have not been well defined. The principal towns in it are, Bellary the capital, Bannagar, Adani, Gooty and Carnool. It is watered by the Krishna, Toomburim, and Vadavati and yields cotton but not in large quantities. —The towns cap. of the above collectorate, the head quarters of a civil establishment and military division is 273 m. N.W. Malabar lat. 12° 5' N. lon. 76° 57' E. The fort is a square building, on an isolated rock, very difficult of access, and protected by three distinct ranges of works one above the other. The pettah, or small fortified town below is spacious and contains perhaps the most regular military bazaar in India. —Bellary is also the name of a tn. prov. Allahabad, 60 m. N.E. Gurrath, where are several fine Hindoo temples, and the ruins of a large town.

BELLAS, a tn Portugal prov. Estremadura, 9 m. N.W. Lisbon, l. bank, Anseira. The chalybeate waters in this neighbourhood are highly valued. Pop. about 2446.

BELLE ALLIA VILLAGE, a farm-house, Belgium field of Waterloo, 7 miles to the highway to Brussels, and about 3 m. S. Mont St. Jean. Here Napoleon marshalled his guards for their last effort at Waterloo and here Wellington and Blücher met after the battle was gained.

BELLEFAU par Eng. Lincoln 1344 sc. Pop. 217.

BELLEKEE par and vil. lral. Fermanagh; 10 778 ac. Pop. 2445.

BELLEGAARD, the name of 12 or 18 small towns and villages in France. One in dep. Pyrénées-Orientales, is a fortification of the first class, intended to command the pass of Perthes between France and Spain.

BELLEHEM, a tn and com. Belgium, W. Flanders, 8 m. S. Courtray with breweries and oil-mills, and some trade in flax and thread. Pop. 3238.

BELLE-ROSE ISLAND (anc. *Colossus*, *Palahera* islands) an Isl. France, dep. Morbihan, in the N. part of the Bay of Biscay lat. (lighthouse) 47° 18' 42" N. lon. 5° 13' 30" W. (n.) 11 m.

long and about 6 broad. It is almost entirely surrounded by rocks, but is accessible by vessels at low water. La Palme is the chief town, and has the best of the three harbours on the island. The depth of water however seldom exceeds 8 ft. It is defended by a citadel. The island is fertile, and produces excellent wheat. There is also a considerable extent of rice polders, on which 90 or 800 busses of the best Breton bread are annually raised. Fresh water of good quality is abundant and, about 1½ m. from La Palme, may be seen the reservoir of Fort Laron constructed by Vauban, for the supply of water to the ships of the French navy. On the S.W. part of the island a level of the first class is situated, 276 ft. above the sea level, and can be seen from a distance of 19 m. Several feudal monuments are to be found in the island. The English took possession of Belle-Isle in 1761, but restored it to France at the peace of 1763. Pop. about 6000.

BELLE ISLE F.—1 An isl. and strait, British America. The former is situated near the middle of the N.E. entrance to the strait of the same name 1½ m. from the most N. point of Newfoundland and about the same distance E. from the coast of Labrador lat. (N.E. point) 52° 1' N lon. 55° 17' W. It is about 21 m. in circumference and has a small but convenient harbour on its N.W. side. The bays round the island are of no great value, but have hitherto been in a great measure monopolized by the French.—The strait is a channel between the N.W. coast of Newfoundland and the coast of Labrador on the continent of N. America. Its length is about 80 m. and its breadth about 12. It is considered unsafe and therefore little frequented.—2 Two other small islands Newfoundland. One on the N.E. coast lat. 50° 40' N lon. 55° 25' W. and the other on the S.E. coast, in Conception Bay about 20 m. N.W. St. John.

BELLEUSE a vil. and Belgium, prov. L. Flanders, 19 m. W. Ghent with a considerable manufacture of sailcloth a brickwork, an oil and a corn mill. The canal from Ghent to Drugges traverses the commune from E. to W. Pop. 1847.

BELLEUSE or **BELLEUSE**, a tn. France, dep. Orne, 10 m. S. Mortagne. The streets are neat, clean straight, & well paved. It has manufactures of cotton, table linen, can. cotton yarn and paper, and has a good trade in corn ship-lumber cotton goods, horses, and cattle. Pop. 3241.

BELLEVILLE.—1 A vil. France, dep. Seine 9 m. from Paris, built in an agreeable situation, on an eminence for the most part covered with country seats. It has very much increased within the last 50 years, and now forms almost a suburb of the metropolis. It has numerous parks, the gardens, and other places of amusement, much resorted to by the Parisians. On the hill of Belleville are springs of water which supply the capital by an aqueduct, which is one of the most ancient in the neighbourhood of Paris, being mentioned as early as the year 1244. It has manufactures of varnished leather chemical stuffs, articles in polished steel, &c. and spinning-mills for fine woollen yarn, which is woven into cambrics. Pop. 16446.

2 **Belleville-sur-Saône**, a tn. France, dep. Rhone, 6 m. N.N.E. Villefranche. It has manufactures of calico and embroidery and carries on a considerable trade in ducks, and is wine produced in the vicinity which is sent to Paris and the N. of France. Pop. 1870.—3, A vil. U. States, New Jersey 3½ m. N.E. Newark. It has an episcopal and several other churches, with a variety of schools, fine mill-streams, and various kinds of manufactures. The cotton printing-works are extensive. Pop. 2446.

BELLEY [anc. *Bellicum*] a tn. France, dep. Ais. opp. Arras, 89 m. S.E. Boury and 89 m. S.W. Geneva, agreeably situated between two hills, a short distance from the Rhone, in a fertile valley watered by the Furon. A suspension bridge across the Rhone, at Balme-vaux-Pierre-Chantal, connects France with the magnificent road of the Mont-de-Chast, leading to Italy by Chambéry and Mont Cenis. The town is very ancient, having been a place of note in the time of Julius

Cæsar and is the seat of a bishopric, founded in 413. It contains a communal college, agricultural society, and court of primary resort. The episcopal palace, the belfry of the cathedral, the college, and the rich cabinet of medals and antiquities, are worth notice. Madras and Indiennes are made here. Silk-worms are reared and lithographic stones, reckoned the best in France, are obtained from quarries in the neighbourhood. Pop. 3666.

BELLHEIM a market in Bavaria, circle, Pfalz, about 5 m. from Germersheim, on the Spessbach. It is a place of great antiquity being noticed so early as the eighth century and has two churches—a Protestant and a R. Catholic. Pop. chiefly agricultural 2376.

BELLIGAM a tn. Ceylon prov. same name, situated on a small, but beautiful bay between Muller and Point de Galle. The houses are scattered among coconut groves. It contains many religious edifices, in one of which is a colossal figure of Buddha, in a reclining posture. The missionaries, who are composed of Singhales and Moors, are chiefly employed in fishing.—(Ceylon Gaz.)

BELLINGWOLDE a vil. Holland prov. of and 27 m. S.E. Groningen, in a moorish district on the Hanoverian frontier. It has a church and two schools. The inhabitants are mainly employed in agriculture. Pop. 1500.

BELLINGHAM a market tn. and par. England, co. Northumberland. The town, pleasantly situated on a declivity 1 bank, N. Tyne, contains an ancient church the only one in the district which has survived the Reformation one Presbyterian and one R. Catholic chapel. Area of par. 2021½ ac. Pop. 1564.

BELLINGHAUSEN ISLAND one of the Society Islands, S. Pacific Ocean lat. 15° 48' S. lon. 164° 30' W. (n.) about 350 m. N.W.W. Tahiti.

BELLINZONA [German *Bellinz*] a tn. Switzerland one of the three caps. of can. Tessin or Ticino, 1 bank Ticino,

BELLINGHAM A.—From Bellingham, looking over the bay.

here crossed by a stone bridge of 10 arches, and about 5 m. from its embouchure in the N. end of Lago Maggiore. It occupies the whole breadth of the narrow valley in which it stands. The walls and ditches prevented the increase of the town, the houses of which, built of stone, have a regular appearance, and are mostly built over arched, but form narrow and dirty streets. It is a place of some commercial importance, as an entrepot for the merchandise of Germany and Italy and from its position at the union of the four roads from the St. Gotthard, the Bernardin, and from Lugano and Locarno on the Lago Maggiore. It contains an arsenal, prison, Benedictine college, some silk-mills, and tanneries. Pop. 1620.

BELLOVAR, or **BELLOVAR**, a fortified tn. Austria, Croatian military frontier on the Belovar 12 m. S.E. Krius lat. 45° 55' N lon. 16° 45' E. It has two churches, and a summary of Florians, all handsome structures; a grammar-school,

and an hospital. A considerable quantity of milk is spun and exported, and the potatoes, which are numerous and extensive, produce warms which are in great repute, not only in Croatia, but the surrounding provinces. Pop. 2800.

BELLUNO a prov. Austria Italy gov. Venice, bounded N. and W. by Tyrol E. by prov. Friuli, and S. by prov. Treviso and Udine, area, 1038 sq. m. divided into eight shires. It is mountainous its principal shires is the Piave, and the only lakes of note are Caplano and Allaghe. Grain, wine, fruit, and timber are produced plentifully and its rich pastures feed a large number of cattle and sheep. It likewise yields copper lead, iron, alum, sulphur chalk, pipe-clay, and marble. Pop. 135 000

BELLUNO (Latis, *Belisano*) a town Austria Italy gov. of and 45 m. N. Udine, cap. of above prov. on a hill, r. bank, Piave, at its junction with the Arco. It is well built, and fortified and contains, besides the cathedral planned by Palladio several churches, convents, and hospitals an extensive public library founded by the prelate Lolini, a gymnasium, and several other educational institutions. It has a considerable trade in timber wines, and fruits and has manufactures of wax, silk, leather hats, and earthenware. The town is supplied with water from a considerable distance, by means of an aqueduct. It is the see of a bishop, who had formerly the title of Count of Belluno, and is the residence of the governor of the province. From this town, Victor one of Bonaparte's marshals, took his title of Duke of Belluno. Pop. 10,000

BELLUS, or **BELUSIA** a market in Hungary so of, and 16 m. N. E. Trevischen, l. bank, Waag. It is governed by its own magistracy has a parish church and a chapel a considerable manufacture of earthenware, and a sulphur spring. Pop. 2330

BELMONTÉ—1 A town Spain, New Castile prov. of and 40 m. N. W. by S. Orense on the declivities of two small hills on the extensive plain of La Mancha. It has irregular and badly-paved streets, two squares two churches, a town house hospital school prison (once a Jesuits college) and some convents. The inhabitants are chiefly engaged in tillage but they also weave some wollen stuffs, and export oil. Pop. 2500.—2 A coast in Brazil prov. Bahia, at the mouth of the Jequitinhonha, also called the Rio Grande or Belmonte lat. 15° 04' S. lon 38° 50' W. It consists of three straight streets, each of upwards of 80 houses surrounded by palm-trees, which give the place an agreeable aspect and has a church townhall prison, and primary school. The port is inconsiderable and is impeded by a sand bar at the mouth of the river. It still admits coasters, and has communication up the river with the interior of the province of Minas Geraes whence, from Minas Nova, considerable quantities of salt are brought. Pop. 800.—3 A town Naples prov. Calabria Citra, 13 m. S. W. Cassano, on a mountain not far from the Mactherone. It has a citadel, and four churches. Silk-worms are reared in the district. Pop. 2914.—4 A small town Naples, prov. Salerno, 18 m. N. E. Salerno.—5 A small town Portugal, prov. Beira-alta, on a hill overlooking a fertile valley 15 m. S. Guarda. Pop. 1144

BELMONTÉ (240) *see* Jequitinhonha

BELMULLLET a small town and port, Ireland, co. Mayo 2½ m. W. W. S. Ballina, consisting of two streets, and a small central square, a messen-house, &c. Corn and fish are exported, and timber iron, slate, and other regulatives imported. Many of the inhabitants are engaged in fishing. Pop. 935.

BELMULL, a town and county, Belgium prov. Namur, 16 m. E. E. Tournai on the road to Mons. It is chiefly remarkable for its old castle, built in 1146, now the seat of the Prince de Lippe. With its gardens and parks, it forms a noble domain and its interior is rich in pictures and other objects of art and curiosity. The commune of Belmull is one of the loveliest in the province, and exports various kinds of agricultural produce, as well as cattle. It has several breweries, two salt-works, and a tannery. Many of the inhabitants live by tannerying. Pop. 2429

BELOOCHISTAN or **BALOOCHISTAN** an extensive country, S. Asia, lying between Persia and the valley of the Indus, having the former on the W. Afghanistan on the N. Baluch on the E., and the Arabian Sea on the S. extended from lat. 24° 00' to 30° 46' N. and from lon. 56° 51' to 67° 30' E. greatest length, E. to W. about 800 m.; greatest

breadth, N. to S. 300, area, 180 000 sq. m. Its south-east from Cape Moera, or Ras Moera to Cape Jask at the W. extremity is of remarkably uniform outline, about 680 m. in extent, and has several well-sheltered roadsteads, particularly Sonmensee Bay and Chocher Bay, but no good harbours. Beloochistan is a little-known country consequently in describing it, only an approximation to accuracy can be attained. It consists of seven divisions, or provinces.—1 Cutch Orcha, on the N. E. bordering E. on Baluch, and N. on Afghanistan.—2 Sarawan, bounded, N. and W. by Afghanistan and E. by Cutch Gundava.—3 Kalat, in which is the reputed capital of the country of the same name, bounded E. N. and W. by the two provinces already named and S. by Jhalawan.—4 Jhalawan, bounded, N. by the three preceding provinces E. by Baluch, W. by prov. Makran, and S. by Las.—5 Las, bounded E. by Baluch, S. by the Arabian Sea, W. by Makran and N. by Jhalawan.—6 Makran, or Makran, occupying the whole breadth of the country from the desert of Afghanistan on the N. to the Arabian Sea on the S. and bounded E. by Jhalawan and Las, from which it is separated by a ridge of mountains, and W. by Persia and Kohistan from the latter of which it is separated by the Bushkard mountain-range.—7 Kohistan the mountain-country and the most W. province, bounded, E. and S. by Makran, W. by Persia, and N. by Sistan. Harard and Degli included in some estimates, appear properly to belong to Baluch. The provinces will be found noticed in separate articles, in their proper place.

Surface and Geology—The general surface of Beloochistan is rugged and mountainous, with some extensive intervals of barren sandy deserts. The direction of the numerous mountain-chains with which it is intersected, are almost wholly unknown with exception of a few of the principal ranges and of these the general parallelism and uniformity are somewhat remarkable one system having an undulation from N. to S. another more palpably from E. to W. of the latter one vast chain stretches along the entire coast, from the vicinity of Ras Jask on the W. to the river Poroloe on the E. apparently a continuation of the great mountain-systems of Armenia, Ascribian Kurdistan and Laurasia which, uniting at Shiraz, hold on their course in a single range to the valley of the Indus. Parallel to this range, and at the distance of about 70 m. from it, another well defined chain intermediate Makran stretching from about lon. 60° 50' to 65° 30' E. where it joins the Sarawanee Mountains near Dera. A third parallel range, called the Wahnutee, or Mee Mountains, about 110 m. from the last-described chain forms part of the boundary of Beloochistan separating it from the great S. desert of Afghanistan. This range is much shorter than either of the other two being not more than a third of the length of the first and scarcely a half of that of the second. The other more remarkable chains are the Bushkard Mountains, stretching S. W. to N. E., or from Ras or Cape Jask, to near Kibbo and forming the S. E. boundary of the prov. of Kohistan. The length of this range may be about 340 m. The Sarawanee Mountains stretching generally N. E. and S. W. from lat. 26° to 28° 50' N. thence to 30° in a N. N. E. direction. The Hale Mountains, forming a part of the S. E. boundary of Beloochistan, are coeval with the elevated region of Afghanistan by the Toba Mountains, of which they may be considered a prolongation. Tracing their course N. to S. they are found overspreading the N. E. part of Beloochistan with their branches and offsets in one of which the famous Bolan Pass, and ultimately terminating at Cape Moera. Many of these mountains are of great height, and covered with snow.

The geology of Beloochistan, like all its other physical features, is but imperfectly known. Some of the mountain-chains are of compact limestone, enclosing marine shells and corals, identical with similar objects picked up on the sea-shore at this day. The strata of the Hale range, where it presents a section of great depth in the Bolan Pass, exhibits similar formations, the hills being of coarse conglomerate secondary limestone, and sandstone of which, also, the more E. portion of the same range, and the low hills extending along the coast on the S. are composed. The Kohistan or hill country in the N. W., bears strong marks of existing volcanic action. Exceptional fragments of quartz, found in Las, primary formations have not been observed in any part of the Belooch mountains. In the same province is a singular paper of fluid mud, resembling the Malacca, or mud volcano of Sidi

The mineral wealth of the country is believed to be considerable, including gold, silver lead, iron copper etc., antimony, limestone, alum, sal-sunomans, and many kinds of mineral salts, and sulphate. Rock-salt is common in Kolahistan.

Rivers.—Throughout Beloochistan there is a great deficiency of water, particularly in summer. The largest streams are the Doston, or the Bhagwar, the Bunti, the Badga, the Sirvo or Tank, the Agher, the Kurmut, and the Poorala, all of which fall into the Indian Ocean. In the N part are the Bolen and the Malloh, which are ultimately lost in the sands of Cutch Gundava. Their courses form the celebrated passes bearing their names, leading from the valley of the Indus to Beloochistan and Afghanistan. The roads through the mountains in this country generally lead through the dry beds of rivers and the plains are everywhere intersected by mounds, intended to collect the rain water for the purpose of irrigation.

Climate.—The climate in the higher parts is extremely cold, particularly during the months of December January and February while in the plains and valleys, the heat in summer is oppressive. Some parts of Makran are said to be the hottest localities in Asia. Snow falls from October to the end of February and in some parts, remains continuously on the ground for two months. In February and March, a good deal of rain falls. From the latter month to September is the dry season.

Soil and Produce.—The soil is not in general fertile; but pasture industry has rendered the plains and valleys productive in wheat, barley and millet. The other old crops are madder and various kinds of pulse and oil seeds, in the districts principally N and E. of Kolat cotton, particularly in Cutch Gundava, and in the low and hot regions, rice, maize in small quantities, indicate of excellent quality and tobacco. The sugar-cane grows chiefly on the plains of Las, and the date in Makran. Vegetables are abundant. The principal vegetables are turnips, carrots, cabbages, lettuce, cauliflower, peas, beans, radishes, onions, celery, parsley, garlic, egg-plant and cucumbers. The gardens and orchards in the vicinity of the towns produce the finest fruits, especially figs, apricots, grapes, pomegranates, apples, plums, peaches, almonds, cherries, guavas, pistachio-nuts, and melons of fine flavour and large size. On the sides of some of the mountains, and in the angle, which generally covers the wide beds of the rivers, trees are numerous consisting of the juniper cedar-tree, the tamarind, tamarisk, mulberry, eucalyptus, baobab, ornamental plantain, bet-tree, chinna, pomegranate, walnut, sassafras wild fig and willow. The oak, ash, fir and other trees common in Europe, are unknown.

Tribes, Manners, and Customs.—The inhabitants are divided into two great branches, called Belooches and Brahooes, differing in their language, figure, and manners, and each subdivided into a number of minor tribes. The Belooches are tall, well formed, and have small bones long faces, with prominent features, a dark complexion, and black hair. They are indolent and dissolute, avaricious, vindictive and cruel. The Brahooes, so called from the word *bak-rat* (for the words) are much shorter and broader than the Belooches and have large bones, round faces, and flat features, their hair and beard frequently brown. Many of the females are pretty. They are most numerous in the province of Jhalawan, and in the N and W parts, but are found everywhere. They have greater physical strength, and are less addicted to rapine and predatory violence than the Belooches. Both races, but particularly the Brahooes, are pastoral. Both races are hospitable, brave, and capable of enduring much fatigue. They live in rude tents, made of black felt or coarse cloth, of goat or camel hair stretched over a frame of wicker-work. Their usual dress is an under-tunic, trousers gathered at the ankle and a white or blue tunic of cotton cloth, with a scarf about the waist. In winter men of rank wear an upper-coat or tunic of quilted cotton, and the lower order a rough capote of felt or coarse cloth. The dress of the women is also such as the same as that of the men, excepting that their trousers are wider and their cotton tunic is open in front below the bosom. When they go abroad, they mudle themselves up from head to foot in a long shawl-like mantle. Both Belooches and Brahooes are of the Soomra race of Mahomedans, and opposed to the Ghilzes. Neither race possesses a written language, and their early histories have not been preserved. The Belooche language resembles the modern

Persian, the Brahooes the Hindoo. The other inhabitants of Beloochistan are few in number and consist principally of Hindoos, who are found in almost all the towns. Delwars or villagers of Pushtun descent, and speaking the Pushtun language, who are engaged in agricultural and other settled pursuits and Jats, of Indian origin, who speak a peculiar dialect, called Jetti, allied to Hindostanee, and form the bulk of the fixed population of Cutch Gundava while others of them lead a wandering life, like the gypsies of Europe. All the Belooches are excellent marksmen, and attached to field sports. Gambling, of various kinds is one of their chief amusements. They keep as many slaves as they can maintain, and often domesticate and treat kindly the captives carried off in their predatory excursions. Polygamy is universal. Few however have more than two wives. Some of the chiefs have four. Wives are obtained by purchase payment being made in sheep, &c. The ceremony of marriage is performed by the mullah or priest, and a man is expected to marry the widow of a deceased brother. On the occurrence of a death, the body is watched for three nights by the friends and neighbours, and the time is passed in feasting.

Animals.—The domestic animals are horses, mules, and asses, camels, and dromedaries, sheep, goats, cows, and buffaloes. The sheep are generally of the fat-tailed species. The horses are strong, bony and large, but vicious. The best are to be found in the N and W where the breed is much improved by the admixture of Arabian and Persian blood. The wild animals are numerous. Leopards, wolves, hyenas, jackals, tiger-cats, and foxes, are found in the jungles but except on the E border lions and tigers are rarely seen. There are also wild dogs, wild asses, antelopes, ibex, red and musk deer, hares, mongooses, mountain goats, and wild hogs, with various sorts of monkeys. Reptiles and insects are not common. Of birds there are almost every kind including eagles, vultures, kites, falcons, and magpies parrots, quails, the variety of kingfisher called *matra*, herons, flamingoes, bustards, black partridges, and snipes. Pheasants and pigeons are plentiful and the quails in the hot districts are about with the jungle-fowl. Geese, ducks, and turkeys are not found in the country. On the coast, fish are caught in great quantities.

Manufactures.—The manufactures of Beloochistan are confined to a few matchlocks and other fire-arms at Kolat, and the trade is very unimportant. Besides horses, the only exports are, gum from Cutch Gundava and Las, and dates from Makran with butter hides, wool a few coarse drugs, dried fruits, and vegetable oil. The imports consist of a small quantity of British and Indian silk and cotton manufactured goods, some metals, rice, betel-nut sugar spices and dyed stuffs with salt from Moottan and slaves from Muscat.

Government.—The government is despotic, the Khan having unlimited power over life, person and property. He usually resides in Kolat and his rule is almost confined to the immediate provinces around it the greater part of the country being held by tribes who acknowledge subjection only to their own chiefs. He has no standing army but all the heads of tribes are bound to furnish contingents of men in case of war as well as to pay tribute—an obligation which is often evaded. The Khan's revenues are estimated at upwards of 250,000. He has a great number of household slaves, from among whom he selects fit persons to be appointed governors of towns and provinces.

Modern History.—About the middle of the last century Beloochistan was made tributary by Nadir Shah, who bestowed it on Nasir Khan, with the title of Beglerbeg or commander-in-chief. The latter greatly extended the Belooche dominions, and was the ablest ruler who has ever governed Beloochistan. On his death, in 1796 the country was left in a comparatively prosperous condition; but since the commencement of the present century especially since 1809 and 1810 it has suffered much from intestine wars and revolutions, and its territorial boundaries have been greatly curtailed. In March 1839 on the advance of the British army of the Indus through the Bolan Pass towards Afghanistan, the conduct of Nasir Khan, the ruler of Beloochistan, was marked with so much hostility that Major-General Willshire was detached to attack Kolat, which, with the exception, was taken by storm after a siege of a few hours, Nov 15, the same year. The Khan himself, and about 400 of his troops were slain; and

3000 of his soldiers became prisoners. In 1840 the governor established at Kelat by the British with a noble garden of *sapaya*, was overpowered by the Belokos; but, at the close of the same year, the capital was re-occupied by the army under General Nott. In 1841 Mir Nasir Khan, the youthful son of Mehrab Khan, was recognized as ruler by the British, who soon after left the country. Principal town, Kelat. Pop. uncertain, being computed at 450,000 in 1,000,000 which is probably to be taken from the fact that the *four* towns of *Belokos*, *Aghosman*, and the *People* *Epiphany* *stony* *Account of Oshet* *Pottling's Belokos* *Hart's Journey from Kurrak*.

BELOKADO a to. Spain Old Castle, prov. of and 25 m. E. Burgos 1 bank, Tiron. It has ill-made streets, three small squares, as many parish churches, a Latin and two other schools, prison, chapter-house, hospital, some convents, a cemetery and some vestiges of the ancient walls and castle. Coarse cloth, socks, linen, and earthenware are made, but tulle is the chief employment. Pop. 1897

BELOP a to Switzerland cen. of and 5 m. S.E. Bern at the foot of the Balpurg near 1 bank, Aar which occasionally inundates it. The mountains of Belp which extend S. from the town parallel to the Aar furnishes excellent grindstones and some good veined marbles. On its side are the ruins of the castle of Hohenburg. Pop. (Protestants) 1145.

BELOPASSO a to. Italy esp. can. same name, dist. of and 8 m. N.W. Orleans, about the same distance S. Mount Etna. Pop. 2500.

BELOPECH, a to. France, dep. Aude, 14 m. S.W. Castelnaudary r bank Lers, formerly a place of importance, but the religious war, and several destructive fires, almost annihilated it. Woollen cloths are made here. Pop. 1496.

BELOPER, a market in England on Derby in a valley 1 bank, Derwent over which there is a handsome stone bridge of three arches 7 m. Derby on the Midland Railway. It consists of several streets partially paved with gas, and amply supplied with water from wells and pumps. The older houses of the town are flat disappearing and are being replaced by handsome and more commodious buildings while numerous neat little villas with flower gardens, orchards &c. stretched, are fast rising on the elevated grounds around the town. An elegant new church was built here recently at an expense of nearly £13,000 and another is now (1880) in course of erection. There are places of worship, besides, for Independent, Wesleyan and Primitive Methodists, Baptists, Unitarians, and Plymouth Brethren a national Wesleyan, and infant school a mechanics institution library and two neat almshouses Belper owes its prosperity to its cotton, and silk and cotton hosiery manufactures, which are very extensive, the latter said to be the largest in the kingdom, while the former one completely alone, employs 2000 persons. Nails and earthenware are also manufactured here to a great extent. Pop. 10,063. (Local Correspondent.)

BELOSTONE, par Eng Devon 1500 ac. Pop. 181

BELT (GEMAL and LITTLE) — The *Great Belt* a strait forming the central communication between the Baltic and the Kattegat, and separating the island of Fikken from that of Zealand. Its length is about 31 m. its maximum breadth 18 m. The depth of its channel ranges between 6 and 96 fathoms. It has many shoals, and the navigation through it is difficult. In autumn and winter ships have often a rough passage. Owing to the strength of the current it is seldom frozen over but is often much embowered with drift ice. Lighthouses with fixed lights, chiefly for the purpose of guiding the packets between Fikken and Zealand, have been placed on Knudshoved, an E. promontory of Fikken, on Halskov on the W coast of Zealand and on Sprog, a small island which lies in the middle of the strait between these two points, and is constantly wearing away by the force of the waves. — The *Little Belt* is another strait, forming the W communication between the Baltic and the Kattegat, and separating the island of Fikken from the mainland of Jutland. Its length is about 80 m. its breadth varies from 1000 yards to 12 m. Its depth ranges between 5 and 80 fathoms. The same inconvenience and danger beset that passage as the former. It is annually frozen up from December to April. The two Belts, with the Sound, form the only communication between the Baltic and the Kattegat.

BELTUBERT a market in Ireland, co. Carra, r bank, Erris, over which there is a new stone bridge, 8 m. N.W. Carra. It is irregularly built has straggling and mean streets, a parish church a R. Catholic chapel a Methodist meeting-house, several schools, a small railway track a dispensary and almshouses for six poor widows. There is a weekly market for corn which is well attended, and houses with timber coals, &c. navigate the Erris to and from the town. Pop. 3054.

BELUGTUN or *BELUGTUN* other names for *BALU* (which see)

BELVEDERE a to. Italy Naples, prov. and 28 m. N.W. Capua, on a hill close to the Med terranean. It has a fort several churches and convents and three *monde-di-pelle* for partitioning poor girls. The wine and raisins of the district are of good quality. Pop. 5970

BELVES, a to. France, dep. Dordogne, 22 m. S.S.E. Périgueux on the brow of a hill that overlooks several valleys. Its public square is large and handsome but the streets which terminate in, or open into, the principal street, are narrow and irregular. The extraction of oil from nuts is carried on here to a large extent. Manufactures — paper, leather, serge, and hosiery. Belves is the metropolis for the wine and agricultural produce of the district, which are conveyed in boats to Bordeaux. Pop. 1851

BELYANDO a river N Australia, about 190 m. from the E. coast to which it runs parallel throughout the greater part of its course. It joins, under the name of Cape River the Sutter River at lat. 20° 25' S. lon. 147° 5' E. The portion of the river called the Belyando was discovered by Sir T. L. Mitchell, in 1846 that part called the Cape was discovered, at an earlier period by Leichhardt.

BELZ, a to. Galicia, gov. Lemberg, circle of and 81 m. N. Zolkow on the Zoloka, in a plain surrounded by forests. The houses are, for the most part, constructed of wood. There are here an old castle, two handsome churches, and a potash works. Pop. 2400, of whom 600 are Jews.

BELZIG a to. and circle, Prussia, gov. Posen. The town on a small stream of the same name 28 m. S.W. Poznan, has an old castle, three churches, an hospital and considerable manufactures of linen and woollen cloth and paper. Pop. 2308. — The *Crozier* area about 660 geo. sq. m. is flat, and of considerable fertility producing all the ordinary grain and pulse crops, hops flax and some wine. Manufactures both of woollen and linen goods exist, particularly the latter. There are also breweries, distilleries, tanneries, paper and other mills. A considerable quantity of vermicelli is prepared. Pop. 65 640.

BEMBATOOKA a to. and bay N.W. coast, Madagascar N.E. or Majunga Point lat. 16° 49' 54" S. lon. 46° 20' 30" E. (n) The town an insignificant place, is on the N.E. side of the bay which is large and safe. The entrance to this bay is about 24 m. wide clear of danger the depths irregular from 13 to 20 fathoms to 6 and 7 fathoms in some places. This bay is esteemed an admirable place, to 25 m. S. of the bay. Bellocks are plentiful at S. 60. each rise and other articles may also be procured at reasonable prices.

BEMBERIDGE, a vil England, E. side, Isle of Wight, 44 m. S.E. Ryde. It was formerly a mere collection of fishermen's huts but is now a favourite watering-place.

BEMMEL, a vil Holland prov. Gelderland, 8 m. N.N. Nymegen. It is an agreeable beautiful village, surrounded by fertile lands and rich fields of grain and tobacco, and fine meadows and orchards. It has a Calvinistic and a R. Catholic church two benevolent societies, three brick fields, and an extensive brewery. Pop. 1900

BEMPTON par Eng York, E. Riding; 2098 ac. P. 343

BEN BUN or *BUN* a Gasho town, signifying 'an elevated summit, and applied with various distinguishing affixes to a number of the highest Scottish mountains, the principal, or at any rate, the most widely known, of which are — 1. Ben-Nevis, co. Perth, 81 m. W. N.W. Perth, height, 9345 ft. being the fourth highest mountain in Scotland. It is of easy ascent, and the view from it singularly grand and imposing. It is rich in rare and beautiful specimens of alpine plants, in-

shading *Geranium nivalis*. *Rehites*, an ore of titanium, a source of metallic mineral, is found here. Scott speaks of this mountain in the *Far West of Peru*, as the crowning mountain of Benavara. — 3, *Benach*, co. Perth, 2 m. W Callender 8000 ft. high. It derives its name from the Gaelic words *Benach* (the hill of God) supposed to have been so called by the Druids, who had a place of worship on its summit. The view from it is magnificent, including the Firths of Perth and Clyde, the towering hills of Arran, and a large portion of the Grampian range. Attention is made to it in Scott's *Lord of the Lake* — *Benach* saw the cross of fire, &c. — 4, *Benach*, co. Sligo, on the E. side of Loughmeal, from which it rises by a succession of swelling knolls. The height has been variously stated, from 8190 to 8240 ft. On the S.E. side, it presents a sheer precipice of about 5000 ft. By the usual route to the summit, the distance is 6 m. of continuous ascent, and generally complex about three hours. The lower regions are finely wooded, and the intervening knolls comparatively smooth and verdant. It commands a prospect of vast extent and sublimity including the beautiful lake below with its numerous islands — 5, *Benach*, co. Sligo, on the E. side of Loughmeal, from which it rises by a succession of swelling knolls. The height has been variously stated from 4290 to 4305 ft. It flanks with Benavara, the base of being the highest hill in Scotland. — 6, *Benavara*, the name of three mountains in Scotland, of remarkable elevation — one in co. Perth 44 m. W by S. from the city of that name height, 3818 ft. a second in the island of Mull, co. Argyll, height 1168 ft. and the third in co. Sutherland height, 3231 ft. — 7, *Benavara*, co. Inverness, reputed the highest mountain in Scotland, the height assigned to it being 4290 ft. It is thus 809 ft. higher than Snowdon, the highest mountain in Wales, and 1214 ft. higher than Snowdon, the highest in England. Its circumference at the base is supposed to exceed 24 m. On the N.E. side there is a tremendous precipice of 1400 ft. sheer descent, and in the clefts of the rocks on this side, snow is found all the year round. To reach its summit is a laborious achievement, and should never be attempted, but by those capable of enduring much fatigue nor ever without a guide — 7, *Benavara*, co. Ross. As in the case of most of the other Scottish mountains, the height of Benavara is variously stated from 3735 to 3420 ft. W. of the exception of the year 1826, the summit of this mountain has never been entirely free from snow in the memory of man. In the September of that year however it had wholly disappeared — 8, *Benavara*, co. Argyll, on the banks of Loch Awe 3669 ft. — 9, *Benavara* (Great Mountain of the lake) co. Perth, S. side of Loch Earn 2180 ft. by other authorities 3300 ft. (For other remarkable elevations, see SCOTLAND.)

BENABERE, or **BENAVARA**, a fortified in Spain. Aragon prov. and 35 m. E by S. Huesca, at the base of a limestone hill defended by a castle, surrounded by a stone wall and having six gates. It has narrow streets, a grand square, parish church, town hall, college, hospital, small and unwholesome prison, public fountain, and baths. Tillage, the manufacture of lampen shoes, brandy distilleries, and an oil exspresso afford the chief employment. Pop 1900

BENACI. See GARDIA

BENAGAULLA, a in Spain prov. and 14 m. N W Valencia, 1 bank, Turia. It comprises two large and three smaller squares, an ancient castle, townhouse, prison, parish church, two medieval schools, and a storehouse. The inhabitants are chiefly occupied in agriculture and weaving. Pop 2577

BENAHIN a vil. and com. Belgium, prov. Liège 3 m. W Hay r bank, Meuse, with manufactures of woollen stuffs, leather, gunpowder and paper and some trade in oil and wood. It has also breweries and limeworks. Pop. 1466.

BENAMARUA, a in Spain, Andalusia, prov. of and 18 m. E. by N Málaga, on the river of same name. It has steep, narrow and badly-paved streets, a square, parish church, chapel, widow of school, two fountains, and a cemetery. The inhabitants are engaged in filage and male-dyeing besides exporting oil, and distilling brandy. A considerable quantity and variety of fruit is grown in the vicinity and sent to Málaga. Pop. 3200.

BENAMEDJ a in Spain, Andalusia, prov. of and 35 m. S. by W Córdoba, in a plain surrounded, on the N.E. and W., by precipitous mountains. It has well-made clean

streets, two large squares, a parish church, chapel of ease, townhouse, hospital, public storehouse, small, damp, unhealthy prison, a palace, and a cemetery. The inhabitants are employed in agriculture, and in the manufacture of base metal, soap, and vinegar, which they export. Pop. 4553

BENAMOCARMA, a in Spain, Andalusia, prov. of and 20 m. E by N Málaga, on a rising ground at the base of the sierra de Baeza near the river Benamocarra. It has three squares, and badly-made, unpaved and dirty streets a Gothic parish church, civil and ecclesiastical court-houses, two schools, a public storehouse, prison, cemetery and three fountains of mineral waters with baths much esteemed as remedies for rheumatism and cutaneous disorders. Manufactures — linen fabrics of all kinds, brandy wine, and oil. Fruit is extensively cultivated in the vicinity and exported. Pop. 2865.

BENAOCAZ, a in Spain, Andalusia, prov. of and 60 m. N E Cadix, in a mountainous district E. of the Guadalete, and W of the sierra de Baeza having a parish church and townhouse. It is celebrated also for its beautiful promenade and avenue, adorned with fountains and gardens. Pop. 3176

BENAOJAN a in Spain, Andalusia, prov. of and 43 m. W N W Málaga, at the base of the sierra de Juan Diego. It has a parish church, two schools, a numerous prison, and two fountains, two oil-mills, a soapwork, and distillery. Trade in agricultural products, grain, fruits, and vegetables. Pop. 2377

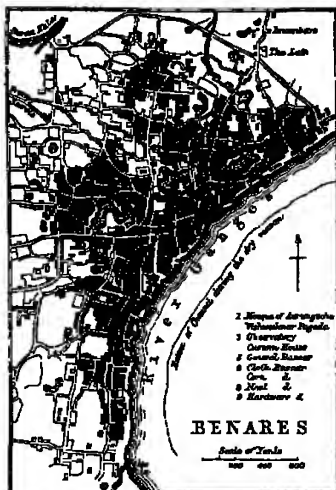

BENAREE, one of the N W provinces, Hindoostan formerly included in that of Allahabad, present Bengal. It lies chiefly between lat. 24 and 26° N. and lon. 82 and 84 30° E. and is divided into five districts, the names of which, with their area, population &c., will be seen in the accompanying table —

	N. of Canton Miles.	Area in sq. m.	Area in sq. m.	Area in sq. m.	Total Pop.	No. of per sq. m.
Gondalpur	15.67	5,621	4,677	788	2,204,538	1,860,821
Amargar	4.77	1,999	1,048,235	140,917	57,740	432.5
Jamunpur	3,280	1,144	898,970	125,365	854,104	609.6
Nunpur	3,208	9,867	1,044,120	50,819	784,198	314.7
Baran	3,013	981	1,044,120	81,423	1,044,120	801.7
Ghosepur	2,854	1,650	1,044,120	146,539	1,044,120	641.9
Total	38,565	12,512	11,185,051	813,179	11,600,707	402.7

About five-sixths of the whole consist of a well-cultivated flat on both sides of the Ganges abundantly watered by that river and by the Gomty Caramansa Sooa, &c. The climate which is cold enough in winter to make fire agreeable, is in summer according, from the N W winds which set in after March, and continue for three months. Not much rice is grown. The chief productions are wheat, barley, legumes, flax, indigo, tobacco, betel-nut, sugar and opium. The last is a Government monopoly and Benara and Balar are the only provinces of Bengal presidency in which its cultivation is allowed. Benares is one of the most flourishing provinces in India. The chief manufactures are flowered muslins, broadens, and ornamented gauzes some sort of inferior quality is made but the greater part is imported. The principal export is indigo. In 1775 the Nabob of Oude ceded Benares to the East India Company and the Rajah has since become merely a stipendiary.

BENAREE (Benares, Benarash or Kashi—the splendid) a large and populous city Hindoostan the ecclesiastical metropolis of India, presidency Bengal, esp. prov. and dist. of same name, 1 bank Ganges, 400 m. N W Calcutta lat. 25° 18' 38" N lon. 82° 55' 51" E (r.). The Ganges here makes a sweep of about 4 m. long, and on the convex side of the curve stands the most holy city of the Hindoos, the Lotus of the world: believed by the natives not to belong to earth at all, but to be perched upon the top of one of the peaks of the trident of the god Shiva. The streets are so exceedingly narrow that it is difficult to pass through them even on horseback, while some houses are connected, with floors on the opposite side of the street, by balconies. The city seen from the river presents the form of an amphitheatre, extending for 8 m. along the banks of the river which are elevated some 40 or 50 ft., above which are reared a series of temples and palaces—but chiefly the latter—with superb ghats or flights of steps. The palaces are those of

the Indian Rajahs and Indian chieftains, from one end of India almost to the other every independent potentate being currently desirous to have a palace in Benares, so that, one in his life, at least, he may make a pilgrimage to the holy

city and that when not there, he may have a resident representative in the person of an official or some member of his family. Many of the houses are built of stone six stories in height with small windows, each story inhabited by a separate family; some of the larger houses thus contain perhaps, 300 persons the walls are decorated with mythological representations from the Hindoo pantheon. The more wealthy Hindoos live in detached houses, with open courts and surrounded by walls. The British and other Europeans reside chiefly at Seewill a handsome wall built village, about 2 m. from the city; they are few in number consisting principally of officials connected with the Government and courts of justice medical men, and a few merchants indigo planters, and persons employed in the Government mint. Besides the native population there are settled in Benares a great number of Turks Tartars Persians, and Armenians. The Rajah's palace stands at Benaresgarh about 1 m. above the city on the opposite side of the river where is also a superb temple built by Chere Singh and, on an elevated and conspicuous site, on the city side of the river the Emperor Aurangzeb erected, in the 17th century a magnificent mosque. There are numerous other mosques, many of them inconveniently situated; also a number of Hindoo temples, struck, says Bishop Heber like shrines, in the angles of the streets, and under the shadow of the lofty houses. Their forms however are not ungraceful, and many of them are covered over with beautiful and elaborate carvings of flowers, animals, and palm-branches equaling in minuteness and richness, the best specimens that I have seen of Gothic or Grecian architecture. Fakirs houses, as they are called adorned with idols, and sending out an incessant tinkling of discordant instruments, occur at every turn while religious mendicants, with distorted limbs, and in hideous attitudes of penance, literally line the chief streets on both sides.

An old observatory founded before the Mussulman conquest, and still very entire though not made use of, is one of the most interesting and singular objects in the city. It is of stone, with a large square tower containing instruments,

chiefly of stone, of which many had been evidently used for judicial astrology. A few miles N. of Seewill is the famous a remarkable monument, 40 to 50 ft. in diameter seemingly of solid masonry considered, by some to be of Grecian origin; but alleged, by the inhabitants of Benares to be a Buddhist structure. This city and its environs, for a distance of 10 m. round, are held sacred by the Hindoos; and the number of pilgrims who resort hither during religious festivals, from all parts of India, and even from Tibet and Bernaul, is very great. It is crowded with mendicant priests, and there are, it is said, 8000 houses occupied by Brahmins who live on the alms and offerings of the pilgrims.

Several of the natives here are men of affluence, who act as bankers, and are wont to facilitate the money operations of the East India Company. Some deal in diamonds, and other precious stones, brought hither from Bundelcund. Benares is in fact, says Heber a very industrious and wealthy as well as a very holy city. It is the great mart where the diamonds of the N. the diamonds of the S. and the muslins of Deccan and the E. provinces centre, and it has considerable silk, cotton, and fine woollen manufactures of its own while English hardware swords shields and spears from Lucknow and Monghyr and various European luxuries, circulate through Bundelcund, Gorruckpoor Nepal and other tracts which are removed from the main artery of the Ganges. Benares has long been the most celebrated seat of Brahminical learning in Hindoostan and is still so revered that many foreign Hindoo Rajahs keep vakils or deputies here to perform for them the requisite oblations and sacrifices. The Hindoo Sanscrit college of Benares, founded in 1791 is the chief seat of native learning in India an English class was added to this college in 1827 when the number of students was 250. In 1830 the number of students was increased to 287. In 1811 it was found necessary to remodel the regulations of the Hindoo college, and to correct the prevailing abuses. A great many other schools have been established here by missionaries

MAHADEV GHAT AND THE BENARES GHAT, both on the River. From Pott's Benares Illustrated.

and others, of late years, which are well attended; in one of these, upwards of 300 scholars are taught English, Hindoostanee, Persian, and Arabic, as well as writing, arithmetic, geography general history and astronomy there are also

private teachers of both Mahomedan and Hindu law. The vicinity of the city is fertile and well cultivated, but very bare of wood fuel is, consequently scarce and high-priced. In 1017 the city was taken by Sultan Mahmood, and, from 1190, followed the fortunes of the Delhi sultans until 1778, when it devolved to the British, under whom it has enjoyed perfect tranquillity with the exception of one plague outbreak of temporary duration. Pop. about 100,000. (Hobbes's *Voyage*, Hamilton's *East India Co. Parliamentary Papers*.)

BENARAI, a tn. Spain, Valencia, prov. of, and 80 m. N. Castellon de la Plana. It has three squares, a parish church, three chapels, townhall prison, a Latin and two other schools, two fontaines, and a cemetery. Manufactures: soap and woollen fabrics, but the chief occupation is agriculture. Pop. 2108.

BENATEK, several small places, Bohemia the only one of importance in the municipal town of Benatek or hew Benatek, cap. of a circle of same name, v. bank, Luss about 20 m. N.E. Prague with an old castle, which was long the residence of the famous astronomer Tycho Brahe. Pop. of tn. 904 of circle 5347.

BENAVENTE.—1 A tn. Spain, Leon prov. of and 23 m. N. by E. Zamora. It is overlooked by a castle, and is surrounded by an old decayed wall, entered by six gates. Its squares and principal streets are spacious, well paved, and clean, but want uniformity. It has six churches, one Latin and seven other schools, bookshops, three hospitals two prisons, a workhouse, ecclesiastical court, a bishop's palace, and one belonging to the Comps of Benavente many of the above edifices, especially the last, are of high antiquity and of considerable architectural merit and in some of the churches several good pictures, and good specimens of monumental statuary are preserved. Manufactures:—linen, woollen, silken and cotton fabrics, and vitreous, which are exported to some extent. Three annual fairs. Pop. 19,464. (Madox).—2 A tn. and par. Portugal prov. Estremadura, dist. Santarem in a beautiful plain, l. bank, Zazza, 26 m. N. b. Lisbon. It has a royal palace, and an annual fair which lasts three days. Pop. 1860.

BENBECULA, a small isl. Scotland one of the outer Hebrides co. Inverness lat. 57° 28' N. lon. 7° 18' W. lying between the islands of h. and S. Uist, separated from the latter by a channel but a mile broad, which is dry at low water. The island is 8 m. long by 3 broad, and mostly flat sandy and unproductive and contains numerous fresh-water lakes, and its shores are fringed with bays, lochs, and inlets. There are no trees now on the island, but the trunks and branches that are being constantly dug out of the moors afford evidence that it must have been at one time well wooded. A good deal of moss land has been lately brought under cultivation here, and considerable improvement generally has taken place in the mode of agriculture. The language spoken is Gaelic. The ordinary food of the peasantry, who are not of very cleanly habits, consists of barley bread potatoes, milk, and occasionally fish. The rents are mostly paid in kind. Anciently there was a monastery in this island, and the ruins of several old castles still exist one of them, called *Castell a Mhàirdeir* or the Weaver's Castle, is a very conspicuous object. Pop. 2107.

BENCOOLEN [Dutch, *Benguelen* and *Bencoolen* properly *Bangka-koelen*] a tn. 3800, cap. id. Sumatra, cap. Dutch prov. of same name. It is protected by Fort Marlborough and lies at the mouth of a small river in an unhealthy situation, on a contracted, uncommunicated, and measureless island, and in a thinly-peopled district; lat. (Fort Marlborough) 5° 47' 56" S. lon. 102° 16' E. (n.) At one time, it was the first town on the W coast of the island; but, not being advantageously situated for commerce, it is now for eclipsed by Padang the residence of the governor of Sumatra. As a whole, the town is mean-looking; the houses of the Chinese inhabitants are nearly all a shanty condition. The houses of the Europeans are built apart from each other, and have stone foundations, but the upper parts are constructed of wood, on account of the earthquakes to which the locality is subject one which occurred in 1883 destroyed the only Christian church, and injured nearly all the houses in the place. The old and new governor's mansions, situated within the fort, are both respectable-looking edifices; the former is surrounded by a pleasant park, planted with coconut and nutmeg trees. The

only other public building of importance is the Rooms-Pandjang in which are all the Government offices. The trade of Bencoolen has declined greatly from what it was formerly. The imports consist of cloths, rice, and salt, by the Bungs and Bell traders; handkerchiefs (tobacco, sugar and various other articles, from Batavia opium, saffron, coarse cloths, shibbons, and white cloths, from Bengali) salt, and blue and white piece goods, from Coromandel iron, steel, cloth, beads, brass wire, ordinary and printed cottons, from Europe and gambir salt fish, oil, salted eggs, poultry salted fish, rice, timber and planks, from the N parts of the island. The principal exports are coffee, sugar and wood, with pepper nutmegs, cloves, benzoin, and camphor. The town was formerly several miles further N where the British settled in 1685 and, in 1690, built Fort York. In 1714, they built Fort Marlborough, on the site of the present town, as being a more healthy locality. In April 1825, Bencoolen, which had always been maintained at a great loss by the British, was ceded, with their other settlements on the island of Sumatra, to the Dutch, in exchange for their possessions on the continent of Asia. The population is very mixed, being composed of Europeans, Javanese, Bengalese, Malays and 600 or 700 poor Chinese; total, 8000, or not more than half the number it formerly contained.—The resources of Bencoolen is a mountainous district, and lies on the W side of a mountainous range and all its streams flow to the Indian Ocean. It extends from the river Mandjoesa, R.E. to Point Base, or from about lat. 3° 20' to 6° S. with a breadth varying from 5 to 40 m. It is thinly peopled. Its principal products are benzoin, camphor, cedar, cotton, mugo rice, ivory gold, and tin. The cultivation of cloves and nutmegs, formerly carried on to a considerable extent, is understood now not to be very extensive. Pop. variously estimated, from 94,000 to 300,000.—(Van der Aa, *Tamboek*, *Ceylon*, *de*, *Moniteur des Indes*.)

BENDALMIR, or *Kum* [see *Armenia*] a river Persia, which rises among the mountains of Zagrosch on the frontiers of Irak Ajem and Khuzistan, and after a S.E. course of nearly 800 m. falls into the W extremity of the salt lake, Baghtegan, 55 m. E. Shiraz. It is wholly within poor Persia, and its chief affluent is the Ab or Cyrus. The passage of Alexander the Great over the Bendumir is celebrated.—A village, also called *Bendarmir*, and traversed by the river lies 20 m. N. of Shiraz.

BENDER, or *European Russia*, cap. dist. of same name, gov. Bessarabia, 34 m. S.E. Kiyev v. bank, Dniester. It is a fortified town, having a citadel. It likewise has a leather manufactory. In the environs is Yurmatia, a locality famed as the retreat of Charles XII. King of Sweden, from 1709 to 1713 after the battle of Poltava. Bender once had some importance, but lost it long before it was ceded by the Turks in 1812. The Russians took it by assault in 1770, and again in 1809. Pop. (1849) 14,530.

BENDER ABBAS, or *Abbas*, or *Gosnemoor* a seaport in Persia, prov. Laristan, opposite the island of Ormus at the entrance to the Persian Gulf lat. 26° 10' N. lon. 56° 15' E. During the period that Ormus was occupied by the Dutch, it was a place of great importance. Though a considerable quantity of goods are still landed here for transshipment into the interior of Persia, yet the town has much fallen off from its former condition so much of its splendour now remaining excepting the ruins of the dwellings of the Europeans. It is a town Arab construction, and is only habitable during winter, the summer heat being so suffocating and being succeeded by dangerous fumes. A good deal of trade is done in fish, caught plentifully in the gulf and salt, fruits, and sulphur the latter obtained in the vicinity are shipped to Mascot. The mudstone is by no means secure. Bender-Abbas, though situated in Persia, is a dependency of the Imam of Muscat.

BENDORF a tn. Prussia, gov. circle of, and 6 m. N. Coblenz, v. bank, Rhine; with a valuable iron mine, and two iron factories. The vineyards and orchards of the vicinity supply a great number of the inhabitants. It has also stone quarries, clay pits, glassworks, some manufactures of cloth, and a mill for spinning woolen. Pop. 9043.

BENE, a tn. Italy, Piedmont, prov. Cuneo, 11 m. N. Mondovì, between the Stura and the Tanaro. It has a col lege, an old castle, and no hospital. This town has arisen out of the ruins of the ancient Augustan *Bagnonorum*, destroyed by Alaric, and of which many interesting vestiges are found at

Novaglia, about half a mile distant. The ruins of an aqueduct, amphitheatre, baths, and other buildings, extend over a considerable tract of ground. North of Bene is the district of Belmonte, anciently called Sarmatia, from the Sarmatians who settled there during the Jovian empire. Pop. 4000.

BENEFIELD, par. Eng. Northampton 5100 ac. P 538.

BENENDEN par. Eng. Kent 9006 ac. Pop. 1608.

BENESCHAU a tn. Bohemia, circle, Berman 25 m. S.E. Prague with two churches one of them ancient, and in ruins; a Lyceum college and gymnasium, and an hospital. The inhabitants live chiefly by weaving and agriculture.

Pop. 2000 — Other four places in Bohemia, two in Prussia, and one in Moravia, have the same name.

BENET a vil. France, dep. Vendée, 12 m. S.E. E. Foixmay in a fertile plain with manufacture of woollen and linen goods. Pop. 1804.

BENEVENTE a maritima in Brazil prov. Espírito-Santo, 1 bank, river of same name, 50 m. S.W. Victoria having the church on an eminence behind, and the vicar's house, seasonal chambers townhall, and prison all in one building which was formerly a church. Before the town is a bay affording shelter to vessels. The port is one of the most frequented in the province. The building of merchant vessels is carried on here to a limited extent. Pop. of tn. and dist. chiefly agricultural, 8000 — The river Benevento has an E.S. course of about 70 m. and is deep at its mouth, forming a good harbour for merchant vessels.

BENEVENTO 10 [anc. Beneventum] an ancient city Italy cap. prov. of same name, situated on the declivity of a hill near the confluence of the Calore and Sabato 81 m. N. N. Naples lat. 41° 7' N lon. 14° 49' E. It is about 2 m. in circumference, surrounded by walls, and defended by a castle. It contains a number of interesting antiquities, and many of the walls of the modern buildings are constructed of fragments of its altars, tombs, and columns of ancient Beneventum. The monument in best preservation is the triumphal arch of Trajan erected in honour of Trajan, by the Roman senate, about the year 114. It forms one of the gates of the city called the Porta Aurea, and is ornamented with sculptures of exquisite workmanship. The other public buildings are the palace of justice or townhall, the archiepiscopal palace, the cathedral and other churches, and several convents. There are here likewise, a seminary of architecture containing a rich library a college, an orphan hospital three other hospitals, and two *monte-de-piété*. The town is the seat of a district court, and of an archbishopric founded in 809 and metropolitan to ten episcopal sees.

The origin of Benevento is attributed to Diomed at first, it is said to have been called Maleventum, on account of the violence of the winds that prevailed in the district. When the Romans established a colony here, they changed its name to Beneventum. In 542, it was taken and partially destroyed by the Goths. The neighbouring plain was the seat of battle where Charles of Anjou, King of Naples, defeated and slew his rival Manfred in 1266. In the 16th century the population of the town was much more considerable than at present. The plague of 1603 carried off 4000 persons and the earthquakes of 1688 and 1703 were also very destructive. Several councils were held here in the 11th and 12th centuries. Pop. 16,816 — The province or delegation is locally within prov. Principato Ultra of Naples, but belongs to the States of the Church. It is of an elliptical form, and is traversed from E. to W. by the Calore, which divides it into two nearly equal parts, greatest length, 10 m.; breadth, 6 m. area, about 45 sq. m. The surface is hilly but the soil fertile in corn, fruit, and pasture. Game is very abundant, and the Sabato, which joins the Calore from the S. teems with fish. In the sixth century Benevento became a dukedom under the Longobards, and was of great extent, including all their conquests in Samnium, Campania, and Apulia. On their subjugation by Charlemaigne, Benevento became independent, and the dukes assumed the title of Princes. The Normans having taken it, gave it to the Pope, in whose possession with occasional interruptions, it has since remained. In 1806, Bonaparte gave it to Talleyrand, with the title of Prince but it was restored in 1815, and is now governed by a cardinal, with the title of Legate. Pop. about 22,000.

BENEFELD, a tn. France, dep. Bas-Rhin, 10 m. N.W. E. Sobolentz; agreeably situated on the river Ill, in a district which is remarkable for its fertility and is the centre of the tobacco culture. It has cotton mills a tannery breweries, dyeworks, tile and brick works, and manufactures of candles, earthenware, and various articles of ironmongery. It also carries on a considerable trade in grain, tobacco, hemp, leather &c. Pop. 3642.

BENFLEET two par. Eng. 1-1 *Benfleet (North)* or *Little Benfleet* par. Essex; 2418 ac. Pop. 572-3 *Benfleet (South)* or *Great Benfleet*, par. Essex 2861 ac. Pop. 570

BENGAL (TAXINDRUM or) the largest and most important of the three presidencies into which the British possessions in E. India are divided, extending between lat. 16° and 31° 15' N and lon. 74° to 93° E; bounded, N. by Rajpootana, the Himalaya Mountains, Nepal and Buton, E. by the Burman Empire, S. by the Bay of Bengal and the presidency of Madras, and W. by Rajpoot, Independent Bundelcund and Rajpootana thus completing the province of Bengal Bahar the government of Agra, composed of the N.W. provinces Agra, Allahabad, Meerut, Delhi Benares, and Rohilkhand; portions of Oude, Gwalior, Meerut, Orissa, and the British possessions beyond the Ganges Assam, Cachar, Arakan the Tenasserim provinces and the possessions in the Straits of Malacca, Penang Malacca and Singapore. The government is vested in the Governor-general of India, at Calcutta, and five councillors, three of whom are appointed absolutely by the East India Company the fourth is also appointed by the Company but subject to the approbation of the sovereign, the fifth is the commissioner-in-chief. These form the Supreme Council of India. The net revenue of the presidency amounting to the N.W. provinces (formerly Agra presidency) for 1847 and 1848, was £17,069,587. The largest items in the revenue returns of the presidency are the land revenue and the customs and stamp duties. The tariff, which came into operation in June 1846, laying increased duties on various descriptions of goods imported into the presidency has had the natural effect of checking the importation of such goods. Woollens have fallen more than a half, metals to nearly a half, and wines and spirits about a fourth the whole reduction in imports amounting to nearly a million and a half. An increase has, however singularly enough, taken place in the importation of English salt to the serious detriment of the Indian revenue, one of the most important sources of which was the sale of the native salt manufactured by Government. Both the exports and imports of the presidency are however on the increase, and have been so since 1835, being now nearly double what they were then. The imports of 1843 amounted to £2,855,836, and the exports to £2,440,880. Accounts throughout the presidency are kept in Company's rupees (value about Rs. each) to which standard all current prices must be reduced. Cowries, and other small coin formerly in use, are now disappearing, being confined to small payments amongst the natives. There is little gold in circulation, the most common coin in this metal is the mooter equal to 15 rupees or 51 1/2s. (*For coins and measures, see CALCUTTA*.) The native industry of the presidency consists of 74 regiments, containing 80,949 men their number however varies according to circumstances, having been at times nearly the double of that named. The principal cities are Calcutta, the British capital of India; Delhi, the Mahomedan capital with Benares, Morshedabad, Dacca, Bahar Patna, Allahabad, and Agra. For an account of the physical features of the presidency its climate, productions &c. see the articles on the different provinces of which it is composed. Estimated area of the entire presidency 220,512 sq. m. Pop. 68,710,071.

BENGAL, a large and important prov. Hindoostan, and the principal seat of British authority in the East; is situated between lat. 21° and 27° N and lon. 86° and 93° E, being about 400 m. N to S, and 470 E to W. It is bounded, N. by Nepal, Buton, and Assam, S. by Orissa and the Bay of Bengal, E. by Assam, Cachar and Tura, and W. by the province of Bahar. Its general physical character is that of a champagne country there being few remarkable elevations within its limits, though surrounded with lofty chains of mountains the N part sitting on the terrace of the Himalaya Mountains, the E. being bounded by the Garo or Garrows chain and the W. being ribbed with effects of the Yindhya Mountains. It is intersected in all directions by rivers, the

general of which are the Ganges and Brahmaputra, whose annual inundations render the soil which they reach extremely fertile, particularly in the production of rice, of which it yields immense crops. In those tracts where this advantage is not enjoyed the soil is in this seldom exceeding a few inches in depth. Notwithstanding however the general fertility of the country the crops sometimes fail chiefly through the abundance of the periodical rains, when all the harvest of summer cereals, the unfortunate natives dying by thousands of starvation. The most inhospitable part of Bengal is what is called the *Sunderbans* (from being covered with the *Sonnera* or *Sunder-tree*) that portion of the country through which the numerous branches of the Ganges seek the sea, or the space lying between the river Hoogly and Chittagong, about 150 m. from E. to W. and about 100 from N to S. This district is infested with tigers, is traversed in all directions by water-courses or nullahs, and interspersed with numerous sheets of stagnant water called *heels*, which abound with fish and water-fowl and are much resorted to by alligators. The greater part of these contain no water during the dry season.

Geology and Minerals.—In the N part of Bengal at the foot of the Himalayas is a band of tertiary formation S. from which, and along the course of the Ganges, more especially E. from that river and including the greater part of its delta and that of the Brahmaputra, the country is wholly composed of alluvial or modern detritus. Calcareous sands and strata of the transition series, which stretch W. into Dekan and are flanked, N and S. by tracts of crystalline formation. In the Garo hills, coal, iron, and limestone are found and nitre effloresces on the surface round Calcutta and elsewhere. Mineral springs are not numerous.

Rivers.—The principal rivers border the Ganges and Brahmaputra, the latter of which enters the province at its N E. extremity and falls into the Bay of Bengal near the principal embouchure of the Ganges, the latter flowing into the Bay of Bengal in lat. $21^{\circ} 32' N$ S. S. W. of the Hoogly, the *Codd* or *Cooch* which rises near Khatmandoo in Nepal, and falls into the Ganges near Bhagulpore in lat. $25^{\circ} 34' N$ and the Damooda which, rising in Babar falls into the Hoogly about 22 m. below Calcutta. There are numerous other streams of less note, mostly tributaries of the Ganges and Brahmaputra, or their larger affluents.

Climate.—There is more regularity in the changes of the seasons in Bengal than, perhaps, in any other part of India, but it is subject to great extremes of heat which added to the humidity of its surface and the heavy dews that fall render it generally unhealthy to Europeans. The prevalence of hot winds which are sometimes loaded with sandy particles, is another source of disease. The seasons are distinguished by the terms hot, cold and rainy. The hot season continues from the beginning of March to the end of May within which period the thermometer frequently rises to 106° sometimes to 110° . The month of September is also often intensely hot, and well so, is the most unhealthy period of the year to natives as well as to Europeans, owing to the fumes exhalations from stagnant waters left by the inundations, and from a rank, decaying vegetation. The rainy season commences in June, and lasts till October. During the first two months of this period, the rain is frequently so heavy that 5 inches of water have fallen in one day the annual average being from 70 to 80 inches. It is in this season that the inundations take place, and that the Ganges overflows its delta, covering the land with its waters for more than 100 m. The cold season the least grateful and beneficial of any to Europeans, continues from November to February during which period N. winds prevail with a clear sky.

Natural Productions.—Almost all kinds of grain and pulses are grown in Bengal but rice (called also *paddy*) is the most generally cultivated being found in almost every part of the province, in an endless variety of species. Forming the chief article of food, much care is bestowed on its cultivation. embankments are formed to retain the water indispensable to its growth, on the plains and reservoirs are formed on the higher grounds for irrigating the lands below. *Silk* (called also *sericulture*) is also extensively cultivated, and in the W districts large quantities of mulberry are grown. At the commencement of the winter season, wheat and barley are sown, and are reaped before the rains set in. The next most

important vegetable productions of the province are cotton, indigo, tobacco, sugar-cane, mulberry and poppy from which opium is manufactured. The fruits are pine-apples, citrons, lemons, limes, oranges, pomgranates grapes, almonds, tamarinds, and plantains. Apples and pears are met with in the N districts, but there only. Orchards of mango-trees are to be found in every part of Bengal, the fruit being held in the highest estimation, and in general deemed during the hot months. Most of the vegetables known in other countries are cultivated in the gardens, including potatoes, carrots, onions, garbs, &c. Many of them, however, become tasteless and insipid as in all other tropical climates. The flowering trees and shrubs that grow wild or with little care, are numerous. Of the former the most remarkable is the *Ficus* *lancea* or *banyan*-tree, whose immense size, beautiful foliage, and golden-coloured berries, with its singular manner of sending down roots from its branches, and then forming new stems, renders it an object of awe and admiration. This tree, though of little use, is much esteemed by the natives of Bengal. Flowers are numerous, and many of them of the most gorgeous hues but excepting roses and a few others, none of them have any scent. Few countries equal, and none surpass Bengal for useful timber. The principal trees of this description are teak (*Tectona grandis*) Bal (*Shorea robusta*) yielding a resinous exudation from (*Cedrela toona*) well adapted for boat-building mahogany (*Swietenia mahagoni*) billoo (*Chloroxylon Swietenia*) or satin-wood (*Pterocarpus santalinus*) red sandal wood (*Pterocarpus santalinus*) which is said to produce a variety of gum kino, and is impervious to insects. Several kinds of ebony and numerous other valuable woods, are also abundant.

Animals.—The wild animals are lions, tigers, elephants, bears, deer wolves, foxes, jackals, hyenas, leopards, panthers, lynxes, hares, deer, zebras, buffaloes, antelopes, apes, and monkeys. The most formidable of all these animals, not excepting the lion, is the tiger which is met almost with every where, and perhaps also its greatest ferocity, there being probably no animal on the face of the earth so tremendous as the Bengal tiger which is said to be able to clear 100 ft. at one spring, and to carry off a large bullock with the greatest ease. The jungles in the province are infested with them; but they are most numerous, as are lions also on the delta of the Ganges, where they every year carry off many of the natives. Dogs, most of them without owners, swarm in the streets of every town in Bengal they are generally of the cur species, with sharp erect ears and pointed tails. The domestic animals are native horses, thin, ill-shaped animals, and not well adapted for any kind of labor, oxen, of a very inferior breed, being extremely small and miserable-looking sheep, likewise of diminutive size, with very coarse heavy wool but when well fed their flesh is excellent. Hogs and goats are also plentiful, and buffaloes are domesticated for the sake of their milk. Ropiches are numerous and formidable including gavials, a kind of crocodiles, with which the larger rivers are infested and, amongst the serpent tribe many of which are highly poisonous, the deadly cobra-de-capelle, Turtles, weas, and lizards, also abound with several species of moorpoles. The turtle are chiefly procured from the island of Chodumba, in the Bay of Bengal. Fish are so exceedingly plentiful as to be within the reach of almost every class of inhabitants. Those most highly esteemed are the mango-fish (a sea fish which ascends the rivers when the mango-fruit is most abundant, hence its name) the blackie, abis fish, and mullet, the first two being especial favourites with Europeans. Game, poultry and water-fowl of all descriptions, abound in Bengal, particularly ducks, of which there is a great variety, and most of them of a superior kind. The *Gallus* crane, commonly called the *ajutant*, from the stately air with which he struts about, frequents the towns in considerable numbers, performing the office of scavenger, by clearing the streets of garbage, in consideration of which duty he enjoys an entire immunity from all disturbances his principal food is offal, fowls, hares, serpents, and insects. The argill or buggill, a species of *order* may also be noticed; it is a large and voracious bird, held in great veneration by the Bramins. Crows, hares, sparrows, and other small birds are numerous. **Agriculture.** *Mangroves* *de* *Thal* being the gardeners by profession in India, vegetables are grown mostly by farmers who, however meet with little demand for them

from the natives, who have never acquired a relish for them, not even for the potato, which is rarely to be met with, excepting in the gardens of Europeans. The plant called *pat*, from which a stout cordage and a coarse kind of cloth is made, is largely cultivated in Bengal. It will grow on almost any description of land, is sown generally in May and cut down in August and September. It attains to a height of 5 or 6 ft.; and after being cut, is steeped in water for about 10 days, when it is reduced to a substance like hemp. The greater part of this crop is cultivated by those who use or manufacture it, almost all the Hindoo farmers weaving cloth from it. About a third part of the whole is sold for exportation. The East India Company are endeavoring to promote the cultivation of an article called the *son*, similar in its use to *pat*, affording excellent material for both sails and cordage, and from which the natives make their fishing nets. Cotton is grown over all India, but the best of the herbaceous kind is raised in Bengal and on the Coromandel coast: the finest grows on light rocky soil. The cotton seed is sown in the latter end of October and is gathered between the middle of April and the middle of June, the produce varying from 500 to about 800 lbs. an acre. In the absence of rain, the cotton field is watered every 5 or 12 days, four men watering about an acre a day. The cotton of India is generally inferior to that of *λ* and *β*. America, but this is believed to be wholly owing to careless cultivation, and to the slovenly manner in which it is prepared for the market. Sugar-cane is cultivated throughout the whole valley of the Ganges, but hitherto without much success. For the four or five years preceding 1849 the average produce of Bengal did not exceed 70,000 tons. Where a proper system of agriculture is observed one crop only of sugar-cane is grown on the same field in three years. There are two kinds of sugar-cane, the *Khagra* and *Kajeli*. The former is a yellow hard cane, about the thickness of a finger; the other is much thicker, deeply stained with purple, and often attains a height of 13 and 14 ft. The *Kajeli* is by far the most productive, but the most troublesome to cultivate and, therefore, avoided by the most industrious farmers on the land on which it is grown requiring 10 or 12 double ploughings and a great deal of manure. These ploughings take place between October and January; the cuttings, about a foot in length, are planted in February and March, and are cut between the middle of December and the end of the following March. Extensive farmers, and these only so much as an acre of cane in a year. One mill and one set of implements used in macerating the juice, thus serve for several farms. The mill and implements generally belong to some wealthy man, who lets them out on hire. Although the expense of cultivating sugar is more than that of cultivating grain, the profit accruing from the former is considerable. Tobacco, which requires a light soil, is grown in three different situations, in rich spots of land contiguous to the farmer's house, in high land suitable for the growth of sugar-cane, and often alternating with that crop and on the banks of rivers. The crop is generally largest in the first of these situations and most scanty in the last. The betel leaf, famous for its intoxicating quality and largely used over all India on that account, is cultivated in what is called a *vorej* or *fort*, and is carefully protected from the sun and wind. So great a luxury is this plant considered and such the importance attached to it, that its cultivators form one of the nine tribes of tradesmen that were admitted to be pure. A betel garden lasts from 12 to 30 years, yielding the best return of any land in Bengal. Indigo being one of the principal articles of foreign commerce with Bengal, is extensively cultivated in that province. It is, however, a very uncertain crop, and both the soils chosen for it, and the seasons for sowing it, are various. The land most commonly selected is high sandy and, in general poor. The seed is sown broadcast in March, April, and May, and is fit for cutting in four months after its cultivation is neither so laborious nor expensive as that of rice. Indigo is also grown on the fat sandy banks of rivers, which are inundated in the rainy season, but have the additional risk in run of the waters rising earlier than usual, in which case the crop is overwhelmed and entirely lost. It is remarkable that the produce of indigo in Bengal has not increased in any degree for the last 30 years.

The luxuriance of vegetation in Bengal is, perhaps, unequalled.

squallid in any other part of the world. The cultivation of the land requires little effort, and large crops are obtained without the application of any other manure than the sediment or sand deposited by the inundations. It is doubtful how ever how far this facility is good, much it seems to have had the effect of preventing all attempts at improvement either in the science of agriculture itself, or in the implements used in its practice. The Indian plough is of wretched construction, having neither coulter nor mould board, and, in some districts, it wants even the share, while the animals by which it is dragged two oxen or cows are miserable, half starved creatures.

The reaping-hook (*haspi*) is a most inefficient implement, the curved or cutting part of the blade is 6 inches long by 1½ broad, with teeth like a saw: the handle is about 4½ inches long. The *haspi*, by which the husks are separated from the grain, is another wretched implement, and so ill adapted to its purpose, that one fifth part of the whole grain is sacrificed in the operation. Nearly all the other implements in use are of an equally rude and imperfect description. Rotation of crops and the use of fallows are unknown to the farmers of India: the land is generally in an exhausted condition, and the soil everywhere bad. Grain is trodden out by oxen and stacking corn is unusual: the corn being often left exposed to the weather. Irrigation however is well understood—necessity giving rise to invention—and is soon plied by the most ingenious and efficient means. Farms are generally small, varying from 1 to 30 ac. and are oppressively high rented: the consequence is, that the farmers are, most of them, miserably poor and are without the means of effecting improvements in any kind. Another obstacle to improvement is the mixture of occupations: the peasants in differently quitting the plough to use the loom, and the loom to resume the plough.

Manufactures.—The principal manufactures are, cotton piece goods of various descriptions, calicoes, blanketing, diaper shawls, woven silks and taffetas, paste-thread and allecloths. Malabar is the most beautiful and the richest texture ever formerly made at Dacca, a city in this province, but the manufacture is now extinct. Some of these fabrics, says Tavernier, were so fine that they could hardly be felt in the hand and the thread when spun was scarce discernible. In Ward's *History &c. of the Hindoos* this character of the muslin of Dacca is confirmed though perhaps in both cases, it is a little exaggerated. When this muslin is laid on the grass, says the latter, and the dew has fallen upon it, it is no longer discernible. In the hyperbolical but poetical language of the East, these delicate airy fabrics were designated as webs of woven wind. The extraordinary fineness and beauty of India muslins manufactured under the disadvantages of rude machinery and ill-prepared material is attributed to the exquisitely fine sense of touch possessed by the Hindoos, an effeminate people to their patience and gentleness, and to the hereditary continuance of a particular species of manufactures in families, through many generations. The delicate formation and flexibility of their fingers is equally remarkable, and presents a striking contrast to the rigid clumsy fingers of the European. The extinction of the muslin manufactures of India has been owing in a great measure to the successful competition of this country and to the circumstances of British fabrics being subject to no duty in Bengal while high duties were levied on the fabrics of Bengal in Britain. In 1831 a great number of natives of the highest respectability individually petitioned the Lords of the Privy Council to allow the cotton and silk fabrics of Bengal to be used in Great Britain free of duty or at the same rate which may be charged on British fabrics consumed in Bengal. The petition was not complied with. Large quantities of a coarse cloth called *tat* or *ohul*, manufactured from *pat*, a plant formerly spoken of as made in various districts of Bengal and many of the poorer people are clothed with a coarse linen (*pasuli*) prepared from the same material.

Commerce.—The trade of Bengal with Britain is at once extensive and various. The chief imports are metals, foreign wines and spirits, beer, woollen and cotton cloths, cotton yarn, glass, and hardware: the exports silk and silk manufactures, cotton indigo, sugar, saltpetre, and tea &c. Bengal has also a considerable trade with France, Portugal, the U. States, China, Borneo, Java, and several of the larger islands of the Asiatic Archipelago. The following Table ex-

shows the proportion of the commerce of Bengal enjoyed by each country in the year 1845-50:—

	Imports.	Exports.
United Kingdom.	\$4,067,575	\$4,778,074
France	128,501	689,081
Hamburg.	12,007	15,683
Other countries of Europe	18,703	6,972
Consolidated coast.	163,634	191,691
Mahar. coast....	203,434	354,440
Malac.	305,075	5,180,000
Madras	448,999	408,976
Other countries of Asia	320,564	460,976
Africa (Mauritius, Bourbon, Cape)	67,577	116,110
South America	112,067	563,586
	—	5,183
	26,497,114	210,933,713

The aggregate exports, as shown above, exceed those of the preceding year by £1 075,303 and the imports by £791 188. For a more detailed account of the foreign trade and commerce of the presidency and provinces of Bengal see CALCUTTA the only port of importance.

People, Education, Social and Domestic Condition, &c.—The natives of Bengal are generally handsome, particularly the young though slightly formed, and small of stature their colour varies from light olive to dark brown faces oval hair and eyes universally black. Their dispositions are lively and their manners mild and polite but their bad qualities are numerous, and their moral character generally exceedingly low. They are overbearing to inferiors, strangers to truth, honesty and good faith, and incorrigible cheats and pilferers. The lower classes live in a state of continual warfare with each other and there are few families without internal dissensions, accompanied by the most bitter and lasting animosities. They want courage to meet their enemies in open combat and to combat shafts attended by danger; but have little hesitation in murdering and robbing when darkness or other circumstances present a safe opportunity of doing so.

It is a necessary consequence of the extreme poverty of the bulk of the population of India, that education should be there at a very low rate. The first rudiments of education are usually given in small schools called *pathshalas* in which the fees are extremely low but still far beyond the reach of the majority of the people they are therefore few in number and did not parents, in many instances instruct their own children, there would not be many who could either read or write. Children usually go to school at five years of age, and are instructed in reading and writing at the same time tracing letters on the floor with a pencil of slate, at a more advanced stage, they write on the palm-leaf with a pen (made of reed or bamboo) and ink afterwards, they begin to write on paper and learn to keep accounts. Nothing is taught in these schools but reading and writing in the common language of the province, together with arithmetic. The Prakrit, or polite language of Bengal is confined to persons of liberal education amongst whom it is the usual means of correspondence. In the common language of the country there is neither grammar nor dictionary nor a single book from which anything can be learned neither are there many books of value in the Prakrit, the usual printed compositions in that language being songs, hymns and poems. The English language is now however making rapid strides in every part of India.

The private houses of Bengal are huts, with thatched, constructed of two sloping sides, which meet in a ridge. One end of this kind serves the poor man for himself, family and cattle readily seen increases the number of houses, without altering the plan, and without having any communication between the different apartments. The walls are generally made of mud and the floor is raised a foot or two above the level of the plain, to prevent its being flooded in the rainy season, which however is not always accomplished in which case the family have to wade through mud to reach the door. The frames of the houses consist of bamboos put together wooden posts and beams being used in the construction of the houses of the wealthy only. The huts, collectively sufficient for the accommodation of a family are usually surrounded by a common fence. Farmers here, in general, larger and better houses than people living in towns. A rich farmer will count them as many as 15 or 14 huts within his enclosure.

The expense of maintaining the table of a Hindoo family

of high rank and station, with eight domestics, exclusive of the master and mistress has been estimated, by Mr. Masters, at about £167 per annum. The maintenance of a common labourer with a wife and two children, is estimated at between 23 and 29 per annum his whole expenses at about £12. Intermediate classes, with one or two more in family very according to position from £37 to £33 and £14 per annum for food alone which consists chiefly of rice, wheat, flour, fish vegetables, and better with various condiments and seasonings. In the case of the labourer there is neither flour fish, vegetables, nor butter the chief food of that class being a coarse description of rice.

History.—The English first established themselves in Bengal in 1656 when, through the influence of an English medical man named Boughton the East India Company obtained the sanction of the Emperor of Delhi to locate themselves on the right bank of the river Hooghly. Thirty years afterwards, the Company's factors having had a rupture with the Mughal commander at the place where they were located, removed to Calcutta then the village of Chittanagore where they continued to carry on their trade. In 1700 the Viceroy of Bengal, being in want of money to dispute the succession to the Mogul throne, obtained a large sum from the Company for the township on which their factory stood at Calcutta, and some adjacent lands. Seven years afterwards, namely in 1707 Calcutta was erected into a presidency and the foundation of British power in India laid presenting a striking proof of the superior energy of the British character there having been settlements in India by the Portuguese Dutch French and Danes previous to, and contemporary with the location of the English in that quarter of the world but the mighty achievement of attaining the supremacy in that vast empire, could it appears, be accomplished only by the British. For nearly half a century the Company pursued a peaceful and profitable commerce but, at the expiry of that period 1756, Calcutta was attacked and taken by the natives of Bengal who threw the Englishmen in found there 147 in number into a dungeon the well-known Black Hole of Calcutta, where 123 of them perished in 11 hours. In the ensuing year Calcutta was retaken by Lord Clive an event which was followed by a series of victories on the part of the British, that terminated in the entire conquest of India (*See India*).

Bengal is distributed into three divisions—Calcutta, Moorshedabad, and Dacca—which have 17 subordinate districts or collectorates. The principal cities besides the three just named, are Barisal, Hooghly, Chanderpore, Purnea, Rajmahal and Dinapore. Pop. estimated at about 25 000 000.—(*Martin's Eastern India. Hamilton's East India Guide. Journal of the Statistical Society of London. The Progress of India. Fort's Progress of the Nation. McCulloch's Account of the British Empire. The Anglo-Indian and Colonial Almanac. Martin's British Colonial Library. Balne's History of the Cotton Manufacture. Parliamentary Reports.*)

BENGAL (BAY OF) a gulf of the Indian Ocean and, with exception of the Arabian Sea, the largest indentation on the E. coast of Asia. It lies between the southern coast of Hindoostan on the W and the coast of Lower Siam, Tenasserim, Tavoy, Burmah and Aracan on the E., or between lat. 7° and 23° N. and lon. 78° and 92° E. It is about 1400 m. in width at the broadest part, or between Cape Comorin the extreme S. point of Hindoostan, and the corresponding latitude on the coast of Lower Siam. From this point it diminishes little in breadth till lat. 15° N. is passed, when it gradually contracts to a breadth not exceeding 250 m., and lastly terminates in a comparatively narrow inlet, of not more than 60 m. in width crowded with islands, and in which are the embouchures of the Brahmaputra and the largest and most E. branch of the Ganges.

BENGALI or **BENGAL** a maritime in regency of Tripoli dist. Bara, E. coast of the Gulf of Sidra. Lat. (centre) 33° 6' 48" N. lon. 20° 5' 42" E. (n.) situated on the verge of a large and fertile plain, extending to the foot of the Cyrenaic chain of mountains. It is wretchedly built, and most of the houses are constructed of mud or of rough stones cemented with that material instead of mortar. Those who can afford it, spend a proportion of time over the mud with which it imparts views to the weather. The houses consist generally of one floor having a quadrangular courtyard within, into which the

doors of the various apartments open. The roofs are flat, laid over with reeds, and thereafter covered with all sorts of rubbish, which is kept down by a thick coating of mud. The houses of the poorer classes are composed of such frail materials, and so tastelessly constructed, that numbers of them fall on their inmates, often seriously injuring them during the rainy season of each year—a calamity which combined indolence and poverty prevent them providing against, notwithstanding their superior experiences. The town is, besides, extremely stinky throughout, and in the market-places is a pool of stagnant and putrid water into which all the blood and offals of the animals killed, and all the rubbish of the town, excepting what is deposited on the streets is thrown. The harbour which was, about 50 years since, of sufficient depth to admit vessels of from 200 to 300 tons burden is fast filling up with sand, and will not now foot vessels drawing more than 7 or 8 ft. water. It is defended at the entrance by a castle, so slightly constructed as to be incapable of a protracted resistance. The trade of the town, which is carried on principally by Jews, is still pretty considerable. The exports consist chiefly of cattle, sheep, corn, wool and salted butter. Provisions, fruits, vegetables, and fresh water abound and ships touching at the port may have ample supplies of them all. Bengo occupies the site of the Baramos of the Ptolemies, of which few vestiges now to be seen above ground, but numerous and interesting remains are found at almost every point within the distance of half a mile, on digging a little way beneath the surface of the earth. In the neighbourhood are to be seen some singular channels of large area, filled with luxuriant vegetation, and surrounded by perpendicular walls of rock, presenting a most picturesque appearance, and supposed to have been the sites of the gardens of the Hesperides. Bengo is in the dominions of the Paahs of Tripoli, under whom it is governed by a Bey who resides in the castle, where, also, his officers and troops are quartered. Pop. estimated at 5000.

BENGEO par Eng Hartford 1867 s. w. Pop 1520
BENGOWORTH (St Peter) par Eng Worcester
Pop 1174

BENGORE HEAD a promontory N coast, Ireland, co. Antrim lat 55° 15' N lon. 6° 29' W. It is formed of a number of capes, the most prominent of which rises 320 ft. above the level of the sea.

BENIGUEA a little-known dist. W coast Africa, lying between lat. 11 and 17 S. and bounded, N by Angola, E. by the Camero river, S. by Kourou river and W by the Atlantic Ocean. The interior of the country is mountainous, the direction of the elevated lands being from N. E. to S. W. It is well watered having numerous springs and lakes, many of the latter brackish and some salt and being thickly intersected by rivers and streams. Its vegetation is luxuriant including every description of produce peculiar to tropical countries. The slopes of the mountains are covered with dense forests of cedars, palms, date-trees, tamarinds &c. The vine, the banana, manna, and other descriptions of tropical fruit, also abound. The soil is well adapted for the production of grain; but, from indolence and want of skill on the part of the natives little is grown. The larger and fiercer animals of the African wilds are numerous in this district. Lions, tigers, rhinoceroses, elephants, hippopotami, and alligators (the latter of a very formidable kind) frequently invading in large bodies the neighbouring towns and villages, where the rivers they inhabit run low. Zebras, elks, deer and antelopes are likewise abundant. Horses are scarce, but cattle, sheep, and goats plentiful. The owl and the peacock are found here; the latter wild in the woods. Reptiles of all sorts, harmless and dangerous, are met with everywhere. The mineral wealth of the district consists of copper sulphur petroleum and crystals. Gold and silver have also been found, but it is not known whether they abound.

BENGUELA (Sao Paulo de) a tn., W coast, Africa, Portuguese cap. of the above dist. It is situated on an open bay formed to the S.W. by projecting cliffs, below Mount Bombarro or St. Philip's Cap; lat. (flag-staff) 12° 53' 15" S lon. 12° 30' 45" E. The buildings are of half-baked bricks, ornamented with mud, and covered with a thick plaster of shell lime. The town is surrounded by a marsh full of elegant ponds, from which the most deadly malarious miasma, reaching the place so unobtrusively that no European can live in it. A large mud fort, going to decay mounted with a few rusty

guns, forms the chief defence of the town. Here an extensive trade in slaves was at one time carried on, 90,000 being annually exported from it, and there is no good reason for believing that there are fewer now. The town was, some time ago, invaded by a herd of elephants in quest of water and almost wholly destroyed by them. The pop. consists of free blacks and slaves and amounts to about 8000.

BENHALLA, par Eng Suffolk 2158 ac. Pop. 718
BENHOLME par Eng Lancashire, about 8 m. square, bounded on the S.E. by the German Ocean. 1 sq. 164.

BENI a river Bolivia, formed by several head-streams having their sources in the high mountain ranges N.W. of Cochabamba, about lat. 18 S. and which unite about lat. 16° 42' S. lon. 68° 10' W. From this point, the Beni holds a generally N course for about 800 m. when it bends N.E., and subsequently joins the Mamore or Marmore in lat. 10° 35' S., the united streams receiving the name of the Madelin, which falls into the Amazon near Surin in lat. 3° 20' S. It is but proper to mention that there are considerable differences of opinion regarding some parts of the course of this stream the whole not having been yet explored. Extensive levels, of great fertility stretch along its banks, which are also adorned with the most magnificent trees many of them fruit-bearing; medicinal herbs and aromatic gums also abound. Fish are numerous and gold is found on its shores. The banks are inhabited by various tribes of Indians some of whom are in a barbarous state.

BENI a dep. Bolivia, formed in 1845, by uniting provs. Canchayan or Apolabae, previously included in dep. La Paz, to those of Moxos and Yuracac, which made part of dep. La Cruz. The new department therefore embraces the territory on both banks of the river Beni. It extends N., according to the Bolivian maps to lat. 10° S. and includes, on the W. the highest point of the Bolivian Andes, Surata, and Tillam on the E. a vast tract of level plain, watered by numerous great rivers clothed with superb forests and extensively irrigated during the wet season. The pop. of this vast territory probably does not exceed 35,000 nearly all indigenous.

BENICARLO a tn and port, Spain, Valencia, prov. of 44 m. N.E. Castellon de la Plana, 14 m. from the Mediterranean. It is entered by four gates and has well-made and paved streets, four squares a parish church, townhouse, custom-house, hospital, adult and free schools, a university and several convents. Manufactures—wool, silks, paper, and sailcloth. There are here two brandy distilleries, tanneries, numerous wine-presses, and oil-mills. Fishing to a limited extent, is carried on. Exports—red wines, honey and oil which are sent to Cadix, Malaga, and other ports of the peninsula. Imports—wheat, ling, sardines, sugar, iron, and timber. Benicarlo is chiefly noted for the red wines of the surrounding country of which it exports upwards of 320,000 casks annually. Most of them wines are sent to Bordeaux, for the purpose of mixing with their claret. A portion, and no inconsiderable one, is also sent to this country to be manufactured into port. During the vintage, says Mr Ford in his *Handbook*, the mail of these towns is absolutely red with grape-busks and the legs of the population dyed from treading the vats. Nothing he adds, can be more dirty, clerical, and unscientific than the *weekend sports*, &c. The process is called the fifth and negligence however. Pop. 549.

BENICIA a recently-commenced export in U. States, California, about 30 m. N.N.E. San Francisco. It is admirably situated on a spit of land in the N. part of the Bay of San Francisco and commands the navigation both of the Sacramento and San Joaquin rivers. The largest vessels lie close in at once. The climate is fine the place is rapidly increasing. Shipbuilding is carried on.

BENIDORX a tn and port, Spain, Valencia, prov. of, and 27 m. N.W. Alicante, on a hill at the head of a bay of same name. It has a parish church, townhall, prison, two public schools, custom-house, and a ruinous castle. The inhabitants are chiefly employed in fishing and as milliners. As a port, its commerce is unimportant; consisting principally in importing grain from Andalusia, and exporting silk, fruit, and vegetables, &c. Pop. 4602.

BENIGNIM a tn. Spain, prov. of, and 37 m. S. Valencia. It has spacious, clean, and well-paved streets, an extensive square, two parish churches, two convents, a substantial townhall, hospital, prison, two public fountains,

a palace of the Marquis of Algida, and several convents. The inhabitants are chiefly employed in agriculture, but also manufacture linen fabrics, soap, and a kind of sweetmeat called *averges* de *Banagium*. There are here also four brandy distilleries, and some wine-presses. Pop. 3318.

BENT ISGUEEN a tn. in Algeria, in the Sahara Desert, on the Wady Mada. lat. 23° 10' N. lon. 2° E. It is described as approaching in size to the town of Algiers, as being strongly built, and surrounded by a rampart, on which are five towers. It has three gates and some trade in grain. The inhabitants are of the Beni Makh tribe. (Dummea, *Le Sahara Algérien*.)

BENI SABIN a tn. Marocco cap prov Daraah or Draha, on bank of streamlet Draha, 224 m. S. by E. the city of Marrakech. lat. 30° 58' N. lon. 6° 45' W. It is a small but rather densely-populated town, and has some trade in goat skins.

BENIA a Negro country or kingdom W Africa, Upper Guinea, on the right of Benia, Gulf of Guinea, extending along the coast on both sides of the Benia River but how far to what distance inland is not known. Indeed respecting the whole country our information is exceedingly defective. It is, however, now understood to be neither so extensive, nor important, as at one time it was deemed. The capital is Benua.

The coast is thickly indented with estuaries, some of them of considerable breadth, and studded with islands. The country is flat for some distance inland, when it begins gradually to rise, till it attains a height of between 3000 and 3500 ft. It is very well wooded, and being likewise well watered it is rich in all the vegetable productions of the tropics. Cotton is indigenous, and its wool is woven into cloth by the women. Sugar-cane of good quality is grown the soil is laid out in square plots, producing yams, plantains, Canina and Indian corn. The religions is Fetishism. Human sacrifices are numerous, and annually in its most atrocious form is characteristic of the people and the Government. An extensive traffic in slaves is carried on in this country. Besides this nefarious traffic, there is a considerable trade in salt, palm-oil, and blue coal.

BENIN a large tn. W Africa cap of above kingdom lat. 6° 12' N. lon. 4° E. (c) r bank, river of same name, formerly called by the Portuguese Rio Formosa, but now supposed to be one of the mouths of the Niger. As in almost all African towns, the houses are set down without the slightest regard to order, and often at wide distances from each other. They are built of clay, nearly finished with mud, straw or leaves, and kept exceedingly clean. The palaces of the king stand outside of the city and is defended by walls. Benin was at one time the great emporium of the district for slaves but this traffic is now carried on nearer the coast, so large vessels could not come within a shorter distance of the town than Gato or Agettou, a port about 40 m. down the river. It is still however the scene of a busy market for cattle, sheep, goats, pigs, poultry, yams, cottons, ivory and European wares with fruits of various kinds. The country around is fertile but low and swampy and very unhealthy for Europeans. Balaou the celebrated traveller died here in 1823. Pop. estimated at 15,000.

BENIN (Benui or) a large indentation of the Gulf of Guinea, extending along the entire coast of Benin and Dahomey. The coast is low and swampy and rendered exceedingly dangerous by the heavy surf which is continually rolling on the beach. The current on the shore sets always E. at a rate varying from half a mile to one and a half per hour. The prevailing winds are W. In the months of February and March the coast is subject to violent tornadoes from the N.E. accompanied by heavy cold rains. There are a number of considerable towns along the coast, carrying on a pretty extensive trade in palm-oil and ivory and at all of which the necessities of life, with fruits and vegetables, may be had cheap, and in abundance.

BENIN (Nivra or) [called by the Portuguese Rio Formosa, and still recognized by that name] in W Africa, kingdom of Benin, and believed to be one of the mouths of the Niger. It falls into the Gulf of Guinea about 150 m. below Benin and about 115 m. N.W. Cape Formosa; lat. (entrance, N.W. point) 6° 48' N. lon. 5° 4' E. (n.) It is a fine bold river. Its delta into two branches both of which were recorded in 1840 in a steamer by Capt. Boscawen, the one branch for a distance of 50 and the other for a distance of 70 m. Further progress was stopped, by the impenetrable

nature of the aquatic vegetation. The river is 2 m. wide at its mouth, across which is a bar of sand, clay and mud, extending from 4 to 5 m. seaward, and on which there are not more than 12 ft. water at spring tides. A few miles up, the river contracts to the width of half a mile. The depth of water does not in any part exceed 24 ft. The climate here is fatal to Europeans the disease, a malignant remittent fever which frequently carries off great numbers of the crews of vessels frequenting the river. The chief articles of export are palm oil, ivory and pod or cayenne pepper for which cloth, particularly muslin, beads, guns, gunpowder hardware, and spirits are taken in exchange. The tide rises in the river 5 or 6 ft.

BENIOLEED, a tn and valley N.W. Africa regency of Tripoli about 100 m. S.E. from the seaport town of that name. The valley which is very fertile, is described by Major Denham as being bounded on all sides by whitish brown hills, capped in many places with greenstone, and amygdaloid, or vesicular lava, ragged villages, and ruinous castles on every point, some overtopping the columns greenstone, and scarcely distinguishable from it. The hills do not exceed 400 ft. in height, and are composed mostly of limestone.

BENIRA, a tn. Spain, Valencia, prov. of and 53 m. N.E. Alicante on a hill overlooking the Mediterranean. It has badly-constructed and mean-looking streets, a parish church, two schools, a townhall, public prison hospital, storehouse, and a Franciscan convent, the church of which is used as a chapel of ease. The inhabitants are engaged in tillage, and in preparing Muscatel valencia, which are exported. A monthly market is held for the sale of the agricultural produce, and for cattle. Pop. 3673. (Hobson.)

BENISALEM a tn. Spain Id. Majorca, prov. Balears, 10 m. S.W. Iba, having spacious streets, two squares, a parish church, two schools, a townhall and a cemetery. Trade in coal, and marble, wrought in the neighbourhood, and in lime, grain, oil, and exquisite fruits. Pop. 3027.

BENISCEFF or Benmoody a tn. Egypt, cap. prov. or beylik of same name, 1 bank, Nile 58 m. S. Cairo. It is the residence of the bey or governor who has a palace in the town, and contains a manufactory for silk and cotton stuffs established by Mahomet Ali in 1825, and large barracks for cavalry. Benmoody was once famous for its linen manufactures, and for its trade in flax, but both are now extinct. An indifferent supplied market is held here once a week.

The bank of the river at Benmoody says Sir Gardner Wilkinson presents the ordinary scenes common to all the large towns on the Nile; the most striking of which are, numerous boats tied to the shore bullocks standing or lying in the water women at their usual morning and evening occupation of filling water-jars, and washing clothes, dogs lying in holes they have scratched in the cool mud, and beggars importing each newly-arrived European stranger with the odious word *bekech* [a present]. Pop. 5000.

BENNECKENSTEIN a tn. Prussia, prov. Saxony on the Elbe, at the foot of the Harz, 13 m. N.W. Nordhausen lat. 51° 40' N. lon. 10° 40' E. It has an iron foundry a nail-work a brewery and manufactures a variety of articles from wood. Pop. 3590.

BENNEKOM a vil. Holland, prov. Gelderland 16 m W by N Arnhem with a church, school and 800 inhabitants. **BENNEKCH** or Benmoody, a tn. America Rhode, on the borders of Moravia, 9 m. E. Tropic. The inhabitants, who are almost all Germans, live chiefly by weaving linen, and spinning yarn. A valuable silver mine which employed a great number of furnaces, once existed in the neighbourhood. It had long been closed, but was again opened in 1817. Nothing, however is obtained from it except iron ore, and clay fragments. Pop. 3760.

BENNINGTON, three pars. Eng.—1, par. Hertford 2908 ac. Pop. 576.—2, par. Lincoln 7496 ac. Pop. 603.—3, Bennington (Lower) par. Lincoln 4420 ac. Pop. 1109.

BENNINGTON a post vil., U. States, Vermont, on elevated ground, 87 m. N.E. Albany, lat. 42° 43' N. lon. 73° W. It has a court-house, Congregational church two academies, and 12 schools. In 1777, an engagement took place on the W. border of the village, between the British and Americans, in which the former sustained a defeat. Pop. (1840), 5429.

BENNIWORTH, par Eng. Lincoln; 1994 ac. P 448
BENIGIT (Sp.) a co. E. coast, Isle of Bourbon, 27 sq.
 A.E. St. Denis, for which place the produce of the district is
 shipped in small vessels. Pop. about 8000.

BENOWM or **BENOWM** a co. N. Africa, cap. of king-
 dom Ladnam. S. border of the Great Desert; lat. 15° 8' N
 lon. 9° 40' W.

BENSBURGH, a to. grand duchy of Hesse-Darmstadt
 prov. Starkenburg on the highest and the railway between
 Frankfurt and Heidelberg, 17 m. S. Darmstadt; lat. 49° 40'
 N; lon. 9° 35' E. It is surrounded with old walls and con-
 tains a gymnasium, a normal school and three churches. The
 inhabitants live by trade and agriculture, including that of the
 vine. Pop., chiefly R. Catholic, 4000.—The numerous
 of the same name, though mountainous, is fertile produces all
 the ordinary crops raises a great number of excellent cattle
 and has a pop. of 25,900.

BENNINGTON par Eng. Oxford 1992 ac. Pop. 1231

 Pop. 3584.

BENTHEIM a prov. or archdioc. Hanover lying be-
 tween the Prussian prov. of Westphalia, and the Dutch prov.
 of Overijssel, area, about 389 sq. m. mostly level and toler-
 ably productive. Amongst its mineral products are potter's
 clay, coals, millstones and freestone. Its only manufactures
 are flax yarn spinning and weaving. The climate is, on the
 whole temperate and healthy. Both the language and manners
 of the inhabitants are Dutch.—The town of Bentheim, in
 lat. 52° 18' N lon. 7° 8' E is built on an acclivity on the
 W. side of the Wesel. The streets are steep and crooked, but
 the palace, which crowns the summit of the acclivity, and is
 of a castellated form, surrounded with walls, commands a
 beautiful prospect. There is a sulphur spring in the neighbour-
 hood, which is much resorted to. Pop. of co. 1973 of
 prov. 38,754.

BENTHACK ISLAND an isl. in Australia, Gulf of Car-
 pentaria lat. (S. point) 17° 8' S.; lon. 139° 30' E. It is
 about 10 m. long, and so many broad of moderate elevation
 and thickly covered with wood. Its S. side is much indented,
 and the projections are lined with mangroves.

BEQUILA ISLAND one of the Grenadines, a chain of
 small islands, belonging to the British, between St. Vincent
 and Grenada, W. Indies, 7 m. S. from the former. It is about
 9 m. in length, and from 1½ to 2 m. in breadth. On the W.
 side is a spacious bay called Admiralty Bay lat. (N point)
 12° 2' N lon. 61° 14' W. (a.) It has a slightly hilly surface.
 Produces cotton and sugar.

BERRAR, a large prov. Hindostan, in the Deccan, incor-
 porated into the British dominions in the year 1854; be-
 comes lat. 17° 45' and 22° 45' N, lon. 75° 30' and 83° 45'
 E. bounded, N. by Candahar and Malwa E. by prov. Guad-

warra, S. by Aungmyethar and Booder and W. by the dominions
 of the Nizam; greatest length, N. to S. 830 m. breadth,
 800 m. area, 56,733 sq. m. It is centrally situated, being
 almost equidistant from the Bay of Bengal and the W. coast
 of India and consists chiefly of an elevated valley reached
 by a chain of plateaus or mountain ranges, sometimes sloping
 gradually sometimes terminating abruptly towards the valley
 which, owing to the undulations of the ground and sometimes
 intervening small peaks, is seldom seen all at once. It is nearly ap-
 proached. The chief rivers are the Warda, the Elahoun,
 Wynagunga, and other affluents of the Godavary and the
 Taptie or Tapti and Mahanuddy. The soil is fertile, yield-
 ing abundant crops of dry grain; also peas, vetches, flax,
 sugar beet and tobacco. The wheat is reckoned the best in
 India, and is harvested three months after it is sown, leaving
 time for a crop of Indian corn. Cotton is grown to some ex-
 tent, and considerable numbers of sheep are reared. Since the
 country has been under the supervision of the British, a large
 proportion of the land has been brought into cultivation,
 and greater attention paid to the means of irrigation generally. The
 agricultural implements in use are still of a very inferior de-
 scription particularly the plough, which is extremely rude and
 inefficient. The indigo-plant is not cultivated though grow-
 ing wild neither is opium much attended to. A large portion
 of the country is in the hands of zemindars, who pay small
 quitrents to Government, but are otherwise independent. In
 the more civilised parts of Berrar the revenue is collected
 by the potel or head village farmer who is responsible to
 Government for the punctual payment of the ryot's rents. He
 himself receiving some 17 per cent. by way of remuneration.
 The office of potel is usually considered hereditary but the
 Government claims the power of dismissal. The judicial
 authorities rank, under the Rajah, in the following order:—
 the subdarbar of the district, the native pergunnah collector
 and the potel. The pergunnah, a body of five subdivisions,
 of whom two are chosen by each party in the cause, and the fifth
 by the local authority decides most petty civil causes finally
 without appeal. Cases of more importance are decided by
 the Rajah in person or by the subdarbar who is usually a
 military officer when the lesser must pay down one-fourth
 of the disputed claim, as a fine to the Rajah and the greater
 another fourth, as recompense for the trouble of decision.
 Education in Berrar is chiefly confined to the children of
 Brahmans and those of the mercantile classes, and as of a
 description little calculated to advance their moral or intellec-
 tual faculties. All the other classes are exceedingly illiterate,
 it being rare to find a cultivator of the soil who can write his
 own name. The only order who ever study books are Brah-
 mins, and these books are exclusively books of theology.
 The trade of Berrar is chiefly limited to internal traffic, and
 that is insignificant, from the want of good roads and other
 means of communication still a considerable quantity of
 cotton, and numerous sheep, are sent to Kanguam, in the
 N. W. part of the province to be forwarded thence usually
 by the Chindore pass to Bombay. The road however is so
 wretched, that large quantities of the cotton are lost or de-
 stroyed on the way and not one-third of the sheep reach
 Bombay alive, and even those that do survive the journey are
 greatly reduced in flesh.

Towards the end of the 17th century Berrar which had
 been formerly ruled by independent sovereigns, was added to
 the Mogul empire. On the decline of that empire it was
 overrun by rapacious hordes of Mahometans, and for some time
 it was nearly equally divided between the Peshwa and the
 Rajah of Nagpore. The latter however in 1808, having
 taken part with Dowry Row Shindia against the British, he
 was, in the December of the same year compelled to cede to
 the latter the province of Outchal, including the part of
 Balasore, as well as the provinces of Sambalpur and Patna
 (afterwards restored to him) also some districts on the Hyder-
 abad frontier which were made over to the Nizam. In 1817
 the new Rajah, Appah Sahib, having joined the Peshwa
 against the British, the latter took upon themselves the
 government of his territory in the name of Rajah Rao Bon-
 slah, then a minor. In 1838, the young Rajah attained his
 majority and was put in possession of part of his territory,
 the remainder of which was given up to him in 1879. The
 died without issue, December 11 1886 and in course of the
 following year his territories were incorporated with the pro-

missions of the East India Company.—(Mills's History of British India, Parliamentary Papers, &c.)

BERLAT or **ABERLAT BEHAT** [anc. *Arconot Belgred*] a town in Turkey in Europe, near the centre of Albania, 50 miles, and 38 m. N. E. of Ankara, romantically situated on both sides of the Tiberius or Ergene, here crossed by a handsome bridge of eight arches. It contains an acropolis or citadel repaired and strengthened by Ali Pasha, situated upon a high hill within which are the palace of the Ylizer, several Greek churches, and about 250 houses. The lower town, without the walls of the acropolis, has 13 mosques and a large and handsome bazaar well supplied with articles from Constantinople and Macedonia, and with foreign goods imported through the port of Anzonia. It has in, and commands a narrow pass, is considered an important post, and its possession has been frequently disputed by contending Powers. It is the residence of a bishop. The Greek women here wear a peculiar kind of cap or bonnet, nearly two feet high and shaped like a bishop's mitre, generally made of blue cloth, well stuffed and fastened under the chin with ribbons. The women's attire in grain, wine, and oil. Pop. about 8000 or 9000.

BERAUN a small walled town in Bohemia, cap. prov. of same name, 17 m. W. S. W. Prague, on the Beroun, near its junction with the Elbe. It has a gymnasium, and a monastery of Franciscans. Its staple manufacture is earthenware, of excellent quality. In the vicinity are marble quarries and coal mines. A few miles off on a rock in the middle of a valley stands the castle of Kartoum, the most remarkable feudal fortress in Bohemia. It suffered greatly during the Thirty Years War but is still tolerably entire. It has a donjon tower 121 ft. high, with walls 13 feet thick. On the third story is an interesting old chapel, and close to it, the magnificent oratory of St. Catherine, built by Charles IV. of Austria by whom the castle itself was erected, in 1348, for the protection of the Bohemian royal. Within the castle is a wall 232 ft. deep. At Beroun, in 1744, the Austrians gained a signal victory over the Prussians. Pop. 2200.—The province of Beraun, area 20 geo. sq. m. consists of mountains intersected at intervals by fertile valleys, and is watered by the Moldau, Saava, Beroun and Lainska. It produces rich crops of grain, and small quantities of wine and hops, and is famous for its breeds of horses, cattle and sheep. Its higher slopes are covered with excellent timber and much of the mountains are covered with silver lead and iron, the last making several blast furnaces and other iron works. Coal, also, and quarries of marble, abound here are the manufactures of Beraun unimportant. Its railways are the most extensive in Bohemia and it has numerous sugar-works, potash works, potteries, and paper-mills, together with manufactures of linen and cotton goods. Pop. 185 000

BERBER, a dust. Nubia, on either side the Nile, intersected by lat. 18° N. It consists of rich alluvial land suitable for growing grain, cotton tobacco, and indigo but it is to a great extent uncultivated. It is the rendezvous for merchants from Senegal and Kartoum, on their way to Cairo. A considerable traffic in slaves is carried on. Pop. 6000 to 9000.

BERBERA, a seaport and town, or rather market-place, E. coast, Africa, Somali country on the Gulf of Aden situated in a beautiful harbour formed by a curvature of the coast line, and a low sandy cape projecting out nearly at right angles with the general line of the coast to a distance of nearly 12 m. The extreme of this sandy cape is in lat. 10° 20' 20" N. lon. 44° 00' E. The situation of the harbour is E. N. E. to W. S. W. and its entrance is the consequence of a mile wide, with 15 fathoms mid-channel shoaling to 5 fathoms within 200 yards of the town. During the summer from April till early in October Berbera is a waste, utterly deserted without inhabitants but no sooner does the season change, than the inland tribes commence moving towards the coast, to prepare huts for the expected visitors. These huts being merely for temporary use, mostly consist of leaves of the dome palm, long dried grass, or badly-preserved skins, extended over a few poles, so as to form a roof. A few huts of the more wealthy are domes which are situated at greater distance but being wholly composed of roof, there is little scope for the exercise of architectural genius. Now the traders begin to arrive from all points of the compass long strings of camels wind through the streets, and now the annual fair commences. Here are met also merchants from Harar and Zila, Egyptians, Mahdani, Abyssinians, Danakil and natives of Somali, Soudan,

Kaffa, Korbah, Jesh, and Zingwa, surrounded with the products of their respective countries; Banians from India, peering forth curiously between piles of rich goods Persian, with shawls from Kerman and acquisitions from the southern coast of the Caspian Sea, the natives of Muscovy, and Ouz, and Hadramut, and Yacon, and the Moges, with whatever commodities the soil of Arabia produces. The harbour is filled with vessels from Arabia, Persia, India, &c. The imports are white and blue cotton cloths of Indian manufacture also, piece goods, Indian headkerchiefs, brass and copper wire, rice and beads, dates and grain from the coast of Arabia, and some few plants from Harar. The exports are ghee, hides, dense horns, ivory game, ostrich feathers, coffee, sheep, and horned cattle. Among the principal subjects of traffic are slaves, particularly young females, most of whom have been kidnapped from their parents. The greater part of the trade of this fair is in the hands of the Danish merchants and the amount of business done, mainly by barter is very great the amount of coffee alone sold having been estimated as high as 15,000 tons. The whole of the multibanded assemblage brought together at this remarkable fair and pervaded by the spirit of gain, is engaged from morning till night in excessive turmoil and wrangling. Honesty moreover is a rare virtue among them. Each endeavours to overreach the other high words are quarrels spring up, blows are given and returned anon scoldings and curses drawn and here and there a pool of Mussulman or Pagan blood tells of the way in which bargains are sometimes concluded by these rough customers. All the dialects and idioms of Bahel pass current each man screaming at the top of his voice, in order to make himself heard amid the indescribable din. By the end of March the fair is nearly at a close; swift of all kinds, deeply laden, sail on their homeward voyage, and hastily depart on their homeward journey and by the first week of April Berbera is again a desolate waste, with nothing left to mark the site of a town lately containing 20 000 inhabitants beyond bones of slaughtered camels and sheep, and the framework of a few huts carefully piled on the beach in readiness for the coming year. Beasts of prey now take the opportunity to approach the sea. Lions are commonly seen at the town wall during summer and ostriches walk quietly about on what recently was the scene of business activity and turmoil.

Berbera has evidently been a market-place for centuries but there are no architectural remains in or near it, excepting the remains of an aqueduct, similar to those at Aden, of a stone reservoir of a small building which has apparently been a mosque, and of a small fort or tower. The water in the town wells is brackish and the wealthier merchants procure supplies of good water from Seybar, a small harbour 18 m. E.—(Lacot, Kerker and Lieut. Cruttenden, in *Your Bag Geo. Soc. Johnston's Travels in S. Abyssinia* D'Hervey's *Voyage dans le Royaume de Choa* Commercial Tariffs Foreign Quarterly Review)

BERBERS, a name given by the Arabs to the original inhabitants of N. Africa who, however do not recognize it, calling themselves, in their own languages, *Amazigh* or *Tamazigh*. The country of the Berbers in its widest acceptance includes the whole of the mountains and deserts of N. Africa, from the Atlantic to the Egyptian coast, and from the Mediterranean to the banks of the Senegal and Niger but it is now generally restricted to the Atlas range, from the Atlantic coast at Morocco to the shores of the Gulf of Gabon, in the regency of Tunis. The Berbers in the mountains live under tents, or in huts covered with mats, or in caves but in the plains they have houses and villages, built generally of wood and clay covered with straw and surrounded by a wall full of loop-holes, to fire through. They subsist chiefly on the produce of their cattle and all other beasts. They have light complexions, fair hair and thin and acromy beards; they are remarkably well proportioned, robust, and active, lively, restless, and bold, and impraisable in their revenge.

BERBICE, a river, British Guiana, supposed to rise about lat. 8° 30' N. and which was acquired by Schomburgk as far as a gross extent of 2. of lat. 4° N. It flows nearly due N. and falls into the Amazon in lat. 6° 54' 30" N. in whole course, so far as known, being upwards of 700 m. The bore which occurs at the mouth of this river is noted for its height and strength, rising, it is said, from 12 to 15 ft. At the dis-

tures of 155 m from the sea, measured along the windings of the river the influence of the tides ceases. Beyond this point, formidable and frequent rapids and obstacles render further navigation impracticable. The river is much infested by the species of alligator called *Crocodon*, some of them of immense size. It was in a basin of this river that Schomburgk discovered the magnificent and gigantic flower known by the name of *Victoria regia*. The Berbice is about 4½ m. wide at its mouth, where there is a bar, having only 7 ft. water at low tide. In the middle of the channel is an island, called Crab Island, from its abounding in crabs which divide the course of the river into two passages, both of which are navigable the one on the E. side having from 17 to 20 ft. water that on the W. from 8 to 13 ft. Vessels of considerable size can ascend the stream for about 50 m. The banks of the river are generally low and covered with mangroves.

BERBICE *see* GULIANA (Berbice).
BERBICE, in. GULIANA. *see* AMSTERDAM (New).
BERBICE a tn. Italy dusky Farms 10 m. N. Berge Tare, near the borders of Tuscany. It is well built, and clean has a castle a church and school. Pop. 900.
BERCHEM a vil. Holland, prov. N. Brabant, 12 m. E. N. E. Hertogenbosch. It is a large spread-out place, something in the form of a semicircle, with a windmill in the centre. It has a R. Catholic church and a school. Three annual fairs are held here.

BERCHEM—1. A vil. and com. Belgium, a short distance S. Antwerp, of which it may be considered a suburb. It has a manufactory of starch a cotton printfield a brewery a distillery and two corn-mills. Here in 1830 a struggle took place between the Belgian and Dutch troops here, also the French besieging army had its head quarters in 1833.
 Pop. 2045.—2. A vil. in com. Belgium prov. E. Flanders r. bank, Scheldt, 6 m. S. W. Amandura, with linen manufactory, two oil mills, and a distillery. It has also extensive establishments for the preparation of oil. Pop. 2386.

BERCK a coast vil. France, dep. Pas de Calais (Picardy) 9 m. S. W. Montreuil. There is here a lighthouse, with a fixed light, which can be seen from a distance of 8 m. lat. 50° 24' N. lon. 1° 33' E. (p.). Pop. 2100.

BERCY a large and handsome vil. France outside the walls of Paris beyond the Barrière de Bercy. It owes its origin to the *pasquerettes* and wine-houses, established outside the barriers of the capital for the retail of liquors, that pay a tax on entry. As the greater part of the wine and brandy that come to Paris arrives by the Seine, it necessarily passes in front of Bercy and the merchants found it advantageous to establish a depot here, which in a short time presented an extensive range of excellent warehouses, and is now one of the best depots of its kind in France. A quay was soon after added and a suspension bridge to communicate with the bank of the Seine. The most noteworthy building is the chateau of Bercy in a park on the r. bank of the Seine a handsome edifice, ornamented with numerous statues. There are distilleries, vinegar-works a sugar-refinery and some tanneries at Bercy. The business done in wine brandy vinegar oil wood for fuel and for building, is very considerable. Pop. 6641.

BERDIAK, a coast B. Russia, gov. Taurica, at the mouth of the Berda, N. shore of the Sea of Azov, 150 m. N. E. Simferopol lat. 45° 38' 18" N. lon. 36° 48' 15" E. (n.). When viewed from the sea, its appearance is by no means prepossessing, but it gains much on a nearer inspection, and is found to be a clean well-built town, consisting of several regular spacious streets, lined with handsome houses many of them provided with gardens, and indicating by their exterior the comfort which prevails within. The roads of Berdiak are the best in the Sea of Azov. They are sheltered on all sides except the S., and have a sandy bottom, affording good anchorage. Coasting vessels moored on the beach, but larger vessels lie at some distance. A lighthouse shows the entrance into the roads. Berdiak is admirably situated for trade, and is rapidly outstripping the neighbouring ports. Its trade is furnished, to a considerable extent, by the products of its own immediate neighbourhood; but it is also the natural entrepot for the products of the surrounding government, which send to it large quantities of grain, oil seeds, and wool for exportation. The interior trade extending by the mouth of the Don, and through it by the Volga, into the whole of E. Russia, and even Siberia, consists chiefly of wood, coal, fish, and salt. The mines in

the neighbourhood furnish the last to the extent of 1000 tons annually and are apparently inexhaustible; while the fishing already employs from 400 to 500 persons. Pop. (1849), 6498.

BERDITSCHIEF [Pol. *Berdzecz*] a city European Russia, gov. Volhynia, dist. of and 25 m. S. Jitomir. It is an ill-built place, swarming with Jews, but contains several churches and a large Carmelite convent in the church of which is an image of the Virgin Mary the object of pilgrimages. It carries on a considerable trade in corn, wine, cattle honey wax and leather and is famous for its salt water fairs. At these, goods to the value of about £200,000 are disposed of and much business is done, especially with Austrian dealers. An almanac of great repute is printed here. Pop. (1849) 35,592.

BERDON BERDOR or BERDOR (par Eng. Essex) 1 71 ac. Pop. 418.

BERE ISLAND *see* BEAR.

BERMCHTESGADEN a tn. in Bavaria, circle, Upper Bavaria, on the Achen, or Alben, in a pleasant valley at the foot of the two Malsbunnen, about 18 m. S. Salzburg. It has a judicial tribunal an office of woods and forests an ancient cathedral church a Franciscan monastery a charitable asylum, and a royal palace. The chief manufactures are cutlery and hosiery. The salt mines in the neighbourhood are important, employing 200 miners, who turn out annually about 500 tons of rock salt. Pop. 1800.

BERECHURCH, or WISE DORLAND (par Eng. Essex) 1450 ac. Pop. 753.

BEREGH several places in Hungary.—1. A circle thus side the Danube, co. Hacs, on the Danube, near the confluence of en. Barany, about 5 m. from Buda. Pop. 2331.—2. A market tn. and co. circle, this side the Theiss. The town stands near the Borsos, in the Jerslap, and about 14 m. S. Munkacs, and has a pop. of 1750.—The country here, 10 gyo sq m. is hilly in the N. level in the S. and in the latter direction particularly is very fertile. Great part of the surface is covered with forests, which abound with game, and in which great herds, both of cattle and swine, are reared. It is well watered by streams, which abound in fish, and are much frequented by water-fowl. Land turboties also are numerous and of large size. The principal minerals are iron, rock-crystal, and aluminos. The last is in great abundance is extensively refined and bears a high name. Gold, in small quantities, has been found near Munkacs. There are several extensive swamps, but the climate is said notwithstanding to be healthy. Pop. 131,500.

BEREGHSLAZS, a tn. in Hungary, circle, this side the Theiss, co. Beregh, on both sides the Verid 16 m. S. S. W. Munkacs, famous for its millstones. In the en. grows an excellent wine is produced; and a gold mine was at one time worked. Pop. 2560.

BEREGUARDO a tn. Austrian Italy gov. Milan prov. of, and 9 m. N. W. Pavia on the grand canal which runs through Pavia and Abbiate-Grasso. The irrigation of the soil in this district is effected through supplies of water drawn from this canal. Pop. 1009.

BERENICE [modern name *Sabkhet Faki*, or the Southern Sahki] an anc. port, W. side of the Red Sea, at the extremity of a deep gulf, formed by the projecting point of Septe Etrima, now Ras el Ana, or Cape Nees lat. 25° 56' N. lon. 35° 24' E. The inner bay which constituted the former port of Berenice, is now nearly filled up with sand. The ancient town was founded by Ptolemy Philadelphus, who named it after his brother. A number of interesting antiquities have been found here, including sculptures of various kinds, inscriptions and hieroglyphics, in which last occur the names of Thebes and Trigon &c. besides a temple built in the Egyptian style, 103 ft. long and 43 wide, the walls of which are adorned with well-executed figures in bas-relief. The ancient town is said, by Balcan, to have measured 1800 ft. N. to S. 2000 E. to W., and to have contained 10,000 inhabitants.

BERENT or BEREND a tn. and circle, Prussia, gov. Danzig. The town lies on the Parna, 33 m. S. W. Danzig. There are two blast-furnaces in the neighbourhood. Pop. 2000.

The crabs, here, 470 gyo. sq. m. is almost entirely covered with forests and lakes. The chief crop raised is potatoes. Fish is very abundant. The manufactures are various,

had some of them are carried on to my great extent. Pop. 36,000.

BERETHALOM, or **BERETHA**, a market in Hungary-Tessyvárs, in a valley between vine-clad hills, 30 m. N E Munkacs. It is the residence of a Lutheran superintendent, and has a Lutheran parish and a Greek non-aided church. Its wines are the best in the principality. Pop. 3390.

BERETTYO a river in Hungary which rises in the Berzsa hills, in the N W part of Tessyvárs. It flows N and then W and, after a somewhat winding course of about 120 m., falls into the Körös near Szarvas. It is subject to frequent inundations, and is the source of numerous marshes.

BERETTYO-UJFALU a market in Hungary beyond the Theiss, on Mitter r bank, Berettyo with a reformed church. Pop. 5426.

BEREZINA a river European Russia, which rises in the gov and N the towns of Minsk lat 54° 58' N lon. 27° 4' E., and after a course mainly S.E. for about 250 m., for the most part navigable, falls into the Dniester 8 m. above Retshanka. It is united to the Dniester, or Dniester, by a canal, which thus gives a communication between the Baltic and the Black Sea. This stream is memorable for the disastrous passage of the French army at Berezina, near Borsari in 1812 on its retreat from Moscow.

BEREZNA a town in Russia, gov. of and 24 m. E N E Tobolsk, on the Dnieper, containing six churches. Pop. including the villages dependent on it, 5600.

BEREZOV or **BEREZOV** (the town of birch-trees) a town, Siberia, gov. of, and 408 m. N Tobolsk capital of same name, on a height above the 1 bank Berov, one of the branches of the Obi lat 63° 59' 59" N lon. 69° 4' 19" E. (h.). It consists of wooden houses, carefully built of large timbers, and generally with high steps in front, and contains three churches and a chapel. The chief trade of the place is in connection with the important fair of Obdorsk. Many of the merchants are opulent, and have their warehouses stored with Ostyak and Kamoy products, personally reindeer skins much valued for clothing. Its inhabitants, who are chiefly Lushes, obtained by the slave and by sale, they border fur, skins, fish, &c. for deer, fish, meat, tobacco, rowers, and brandy brought by the Tobolsk dealers, whose craft are loaded down the Irkutsk into the Obi. Berzov is the favorite place of resort for the Ostyaks and Voguls. Prince Menshikov, the favorite of Peter the Great, died here in exile in 1731 having been banished by his grandson, Peter II. In 1821 nearly a century after his grave having been opened, the coffin was found embedded in frozen soil and the contents so entire, that parts of the clothing and even the eyebrows, hair, and other parts of the body were sent to his descendants. P (1842) 1173.

BEREZOVIE, an isl. Russia, Gulf of Finland, gov. Viborg, separated from the mainland by the Bark Sound or Strait of Berzovie.

BERG [hall].—1 An sac. duchy of Germany forming part of Rhenish Prussia, and now included in gov. of Arnberg, Coblenz, and Düsseldorf. It extended along the Rhine from the Ruhr to the borders of Nassau and had an area of 864 sq. m. It is now a manufacturing town on agricultural district and has long been famed for its minerals which include iron of the finest quality lead, copper also and the precious metals. In addition to the employment furnished by these minerals, the inhabitants, who are very industrious, have, with considerable success, superadded textile manufactures. The duchy of Berg, founded in 1389 had been long consolidated with the Prussian dominions, when, 1806 Napoleon revived the title, and conferred it, with an enlarged territory on Prussia. It is returned to Prussia in 1815. Pop. 876,000.—2 Of the numerous places in Germany of the name of Berg, the most deserving of notice is a vil. Wittenberg romantically seated on the Neckar N E Stuttgart, and containing the remains of the ancient castle of the Lords of Berg. It has a cotton-mill, dye-works, copper-works, and manufactures of leather a considerable wine and general trade, and a strong studyhouse spring. Pop. 1200.—3, A vil. Switzerland, com. of and 4 m. N N E. St. Gall with a church and school. The vicinity yields good fruit and wine the latter of which used to be a favorite beverage of the abbots of St. Gall, and was presented at all high festivals in the monastery. Pop. 600.—4, A vil. Prussia, dep. Bessels, 18 m. N W Saragosa; with three churches. Pop. 470.—5, A vil. Holland, prov.

Limburg, 11 m. N, by E. Moerwicht, a bank, Mass, built in a semicircle. It has a Catholic church, a school, and a town hall. Pop. 200.—6, A vil. Holland, near N. Holland, 9 m. S E. Amsterdam, on an island formed by the Vecht; consisting of a single street, on the W side of which stands the church, elevated on a height, whence the village takes its name. This elevation or mound is supposed to be of artificial formation, raised for the purpose of keeping the church dry during inundations, to which the place is exposed from the overflowing of the river. Besides the church here referred to there is also a R. Catholic church. Hoop, cheese, and vinegar making are carried on but the principal employments are agriculture and cart-fasting. Pop. 600.

BERG-AMBACHT a vil. Holland, prov. S. Holland, 14 m. E. Rotterdam. It is a good-looking well-built place, and has a church, built in the 16th century in place of one burnt in 1515. There is a school here. Pop. 660.

BERGA.—1 A m. Spain, Catalonia, prov. Barcelona, 18 m. N E. Solsona, near the river Llobregat. Its streets are paved, and for the most part narrow and crooked. It has five squares, three churches, a chapel, a Latin, and three other schools a small, but respectable townhouse, two prisons, a hospital, theatre, several fountains, and a castle, with a strong battery by which the town is overlooked and defended. The manufactures of Berge, though on the increase, are confined to cotton fabrics, and the usual branches of mechanical industry the bulk of the inhabitants are employed in laundry and as maletiers by which conveyance the produce of the vicinity grain, wine, oil, fruits, &c. are exported. Two annual fairs are held. Pop. 6299.—2 A vil. Prussian Silesia, gov. Saxony gov. Merseburg, circle of, and near to Ranzershausen with an evangelical church, and hospital. Pop. 1181.

BERGAMO (anc. Bergama) a town Turkey in Asia, pass Anatolia, r bank, Germakli or Calcut, 43 m. N N E. Smyrna. It occupies the site of the ancient town, which was the seat of one of the seven churches of Asia, and contains numerous remains attesting its ancient magnificence. In the centre is an extensive ruin, supposed to have been the palace of a Roman emperor. Numerous houses and mosques—among the latter one which, from its style, appears to have been an early Christian church—occupy the site of ancient buildings. Triumphant arches, and ruined houses, are interspersed with Turkish houses. To the S.W. of the castle are the remains of the amphitheatre, with arches of fine workmanship, though now almost under ground. The semestras are full of beautiful ruins. Pop. about 10,000.

BERGAMO (anc. Bergama) a city Austrian Italy, capital of same name gov. of and 25 m. N E. Milan. It is well fortified, being surrounded by walls flanked with bastions and is defended by several small forts, and is built in the manner of an amphitheatre, on an isolated height, between the Serio and the Brembo. It is divided into the high and the low town. The former or town proper consisting of all that lies within the walls, has steep narrow streets, and old houses, several of them, however interesting, as affording the specimens of the architecture of the Middle Ages. The low town consists of the three districts of St. Ambrogio, St. Teresa, and St. Leonard's the last of which, in particular is well and regularly built, with spacious well-paved streets, and handsome houses chiefly occupied by the more wealthy merchants. Bergamo is the seat of a court of primary resort in civil criminal, and mercantile causes and the see of a bishop, suffragan to Milan. It contains a very ancient cathedral, completely repaired in 1689 after the designs of Carlo Fontana, and adorned with numerous fine frescoes, wood carvings, and figures in basins and marble, and 14 other churches, several of them handsome, and rich in fine paintings. The other public buildings of note are the museum, particularly rich in the antiquities of the district; the old palace Della Ragione, with a fine colonnade; the market hall or fairs, a large quadrangular building, with a handsome piazza, shaded by old trees, and adorned with a beautiful fountain the governor's palace the municipal buildings; the theatre and the Accademia Carrara, so called after its founder the Count of Carrara, a magnificent building, in which, with a view to promote the study of design and painting, numerous pupils are gratuitously instructed. The chief benevolent institutions are, the general hospital, the founding hospital, the house of invalids, the house of industry, the institute of mercy the *monte-pieta*, and the peniten-

BERGEE or **Bergue** an extensive territory in the interior of Africa, bounded, E. by Nubia and Darfur, W by Bagdad. It is more generally named *Wadi* or *Wady* (valley).

BERGHEIM (Bergheim) a town and lordship, Austria, Bohemia, circle, Prussia. The town lies in a narrow valley, 42 m. S.E. of Pilsen, and was once famous for its gold mines. It contains two churches, three chapels, a townhouse, and school. About 50 persons are still employed in the mines, which are nearly exhausted but the inhabitants live chiefly by agriculture and weaving. Pop. of town 1762; of lordship, 4598.

BERGUES, a fortified town in France dep. Nord, 5 m. S. Dunkirk; situated in a marshy country at the junction of the Ruesse, Dunkirk, and Colne Canals. The town is well built of brick, has a good port on the canal, capable of admitting vessels of 250 tons, and is the centre of a considerable trade. The Hotel de Ville is very elegant; but the most remarkable

THE CLOCK TOWER AND HOTEL DE VILLE, BERGUES.
From George's Dictionary and Herald de Ville.

edifice is the belfry upwards of 160 ft. high, of unknown date, but supposed to be of Spanish origin. The other public buildings are two high towers that once belonged to the abbey of St. Winoc, preserved to serve as landmarks to vessels entering the port of Dunkirk a public library and museum. Bergues has manufactures of soft soap, earthenware, hats, cotton yarn and lace. It has also sugar and salt refineries, distilleries, tanneries, and a considerable trade in grain, cheese, butter, wine, brandy and cattle. The weekly grain and cattle market is the most extensive in this part of France. The fortifications were constructed after the plans of Vauban, and it is now a fortified place of the first class. Bergues owes its origin to the castle of Berg, to which St. Winoc retired in 607. Baldwin II. Count of Flanders, walled and fortified it and Baldwin IV. stored it with a magnificent monastery in honour of St. Winoc. In the beginning of the 12th century it had become a flourishing manufacturing town, but suffered greatly during the three following centuries, when it passed successively under different masters, and was subjected to a number of sieges, in one of which, by the French (1658), the most fearful slaughter was committed. It was finally recovered by France by the treaty of Aix-la-Chapelle. Pop. 5637.

BERGUE, a vil. Holland, prov. Friesland, 8 m. E. Leeuwarden; pleasantly situated, at side of lake of same name, in a flat country well covered with underwood, and possessing good pasture and arable land. Bergue has a church and school, and two annual markets—one for cattle, the other for horses. The inhabitants are chiefly employed in agriculture,

and in rearing young trees. Formerly there was a convent here and on some neighbouring moorlands, Oosthoek, the celebrated contractor of fortifications, while a youth, made some of his early experiments. Pop. 1900.—The town has a circumference of about 2 m., and by means of canals communicates with the sea both from the N and from the W side.

BERGZABERN a town, Bavaria, circle, Fels, 10 m. S.S.W. Landau. It contains a St. Catherine and two Protestant churches, a castle and several public offices. It has some tobacco factories, a saw mill, and two flour mills. Ironstone is worked in the neighbourhood. Pop. 2665.

BERINGEN a vil. and par. Switzerland, east of, and 5 m. W. Schaffhausen, at the foot of the Barden, in the midst of vineyards and cherry orchards, from the former of which a good wine, and from the latter a famous cherry brandy is made. Pop. 1417.

BERLA, a town, Spain, Andalusia, prov. of and 22 m. W. Almeria, in a plain overlooked by the Sierra de Gador. The houses are generally two stories high, well built, commodious, and have gardens attached; the streets are clean and paved. It has four squares, of which the principal one contains the parish church and townhouse. The other town buildings are a chapel, prison, storehouse, a Latin and three primary schools, a cemetery and several fountains. Linen fabrics, hats, hardware, wine, oil and leather are manufactured. Lead and antimony from the mines of the Sierra de Gador are smelted and exported to Africa and Roquetas and some of the inhabitants are engaged in banditry. Berla suffered severely from an earthquake in 1904, during which numerous individuals were maimed and 37 lost their lives. Many public edifices were also destroyed amongst others the parish church, which has since been only partially restored. The structure now used as a sanctuary was once a penthouse. Pop. 6709.—(Madrid.)

BERKEL, two vills. Holland.—1 a vil., prov. N. Brabant, 9 m. S.W. Hertenbosch, whose inhabitants, about 500 are employed in agriculture, raising chiefly rye, corn, wheat, and clovered.—2 a vil. prov. S. Holland, about 8 m. N.W. Rotterdam, well built, with a Calvinistic, a Remonstrant, and a R. Catholic church and a school. Pop. 1100.

BERKEL, ROBERT, or ROBERT, a river, Holland, prov. Gelderland. It rises in the Prussian province Westphalia, near Coesfeld flows with a generally N.W. course past Borkelo and Lochem in Holland, and falls into the IJssel at Zutphen after a course, exclusive of windings, of nearly 50 m. It is in many places shallow and meaded, so that it is of very little use as a water-way.

BERKELEY a market town, and par. England, co. Gloucester. The town 16 m. S.W. Gloucester is pleasantly situated on a gentle eminence in the vale of Berkeley & bank, Avon, about 1 m. from its junction with the Severn, and within 1 m. of the Bristol and Birmingham Railway. It consists chiefly of two irregular streets one of which is well paved, and contains some good houses of brick and stone water abundant. The church is a spacious structure style later Norman and early English it contains some curious monuments, and is the burial-place of Dr. Edward Jenner. There is also here a Wesleyan chapel. The Avon being navigable to the town for vessels of 40 or 50 tons burden, a pretty extensive trade is carried on by its means, in coal, brought from the Forest of Dean. At the S.E. end of the town stands Berkeley Castle, renowned for the quality of its specimens of castellated building. It has been the scene of many remarkable events, including the atrocious murder of Edward II. The date of the commencement of the castle has not been ascertained; but it is known to have existed long prior to the 12th century. A tradition, told by Matthew of Westminster respecting an old woman, a noted witch, who lived in Berkeley A.D. 952, has furnished Saxbury with the subject of a curious ballad.—The vicarage is the largest in the county comprising about 16,740 ac. Pop. 2444; of town, 246.—(Local Correspondent.)

BERKEWELL, par. Eng. Warwick 5966 ac. Pop. 1600.

BERKHAMPTON, a town, vil., and three par. England, all in co. Hertford.—1, Berkhampton (Hertford), a town and par., the former borough situated in a hollow, surrounded by hills, on the main road leading from London to Ayles-

bury W side of the Bulbourn stream, and the Grand Junction Canal on the line of the London and North Western Railway 26 m N W London, by railway and 24½ by road. It consists almost wholly of one main street, which is nearly 1 m in length, is well-supplied with water and is lighted with gas. The church is an ancient and beautiful Gothic edifice and contains some curious antique monuments. The other places of worship are, a Baptist, Independent and Wesleyan chapels, and a Friends meeting-house. Schools:—one national with infant school connected, one day school on the British system one charity school called Bourne a school after the founder and maintained by endowment and a free grammar-school where a certain number of boys receive a liberal education. There are various small charities and benevolent associations connected with the different religious denominations, and a mechanics institute on a small scale. The only manufacture is straw plaiting. Market-day Saturday chiefly for corn. Year fairs annually. Petty sessions are held once a fortnight. Area of par 42.8 sq. Pop. 3595.—2 *Berkhamstead (Jatt)* a par and small but seat 11 in hund of Hertford, ½ m S W Hertford. It consists of a national school for boys and girls, and a provincial society, one of the prime pal establishments of the kind in the county. Area of par 1 3/4 sq. m. 1 p 30.—3 *Berkhamstead of Mord* a par hu d Dacorum Area 384.5 ac. 1 p 1285.—*Local (continued)*

BERKLEY SOUND a spacious inlet at the N E. extremity of E. Falkland Island about 4 m wide at its entrance and upwards of 15 m in length, terminating in three excellent and distinct anchorages. Johnson Harbour, Stag Head and Port Louis. This sound is the only place on the E. coast of the island that can be entered by night.

BERKSHIRE, an inland c. England and one of the most beautiful in the kingdom bounded N by Oxford and Buckingham sh. to which it is separated by the Thames E by Buckingham and Surrey S. by Wiltshire and W by Wiltshire. Area, 481,260 ac. of which 231,000 are arable meadow and dairy land. The principal hilly land consists of a range of 2 m. W. by S. which in some parts attains a considerable elevation. The soil is in various better poor on the hills, and in the low lands, cold and laborious to work but in the district called the vale of the White Horse which comprises a large part of the county N of the chalk range, there occurs some of the most fertile lands in England and in its W. parts the richest pastures. Here, also, along the bottom of the hills, lies the fine corn land for which the vale is renowned. The vale of Kennet extending along the N. of the chalk range for about 2 m. is also a fine tract of land and well adapted for corn though not so fertile as the vale of the Wiltshire. The E. part of the county or what is called the forest district, contains Windsor Forest, part of Bagshot Heath and some other considerable tracts of waste land. It is perhaps, the least productive part of the county but exhibits such a pleasing woodland scenery. Rich meadows stretch along the banks of the Thames and Kennet.

Agriculture is a good deal improved in this county but is still at rather a low stage. Fenced crops are less and what farms are usually held on leases for 7 and 14 years but as there are rarely any restrictions imposed on the tenant as to cultivation or mode of cropping, the land is generally in bad condition, and is often left by the outgoing tenant completely exhausted. Farms, for the most part, rather small average rent in 1842-43, 21 4s. 8½ p. per acre. The W. parts of the vale of the White Horse is celebrated for its dairies producing cheese of the description called Double Gloucester. The number of cows has been estimated at 5000 and the quantity of cheese made at 1000 tons. The cattle are now chiefly of the *Holsteins* and *Teeswater* breeds, but Scotch and Welsh cattle are extensively grazed in the forest district. Of sheep, the South Down breed, but much crossed, is at present the most generally diffused. The total stock of sheep has been estimated at about 305,000, and the total annual produce of wool at 4500 packs. Hops are reared in great numbers in this county and are esteemed the best in England. Manufactures and minerals of no importance. Berkshire contains 20 hundreds and 151 parishes. It returns nine members to the House of Commons—three for the county, two each for the boroughs of Reading and Windsor and one each for

Abingdon and Wallingford. Annual value of real property in 1842-43, £397,476. Pop. 170,085.

BERLAERE, a vil. and comm. Belgium prov. Antwerp 10 m. N E Mechlin, on the Greater Meuse. The inhabitants are chiefly employed in weaving and have also a little trade in wool and coal. Pop. 2075.

BERLAERE, a vil. and comm. Belgium, prov. E. Flanders, near Ghent, 12 m. E. Ghent. Agriculture and weaving are the principal employments. Pop. 3505.

BERLANGA, a tn. Spain, Extremadura prov. Badajoz, 15 m. E. Merida in a hilly district. It has a parish church several schools town and court houses, prison poor a hospital large fountain, several convents and a cemetery. The inhabitants are chiefly engaged in tillage, and manufacturing coarse cloth. An annual fair is held in August. Pop. 8410.

BERLEBURG, a tn. Prussia, prov. Westphalia, gov. of, and 28 m. S. S. E. Arnsberg. It is the residence of the prince of Wittenstein has some manufactures of woollen goods and in the neighbourhood are several forges and iron mills. Pop. 4085.

BERLENGEN, a group of small islands in the Atlantic, near the W. coast of Portugal about 3 m. N W Peniche lat. 39° 55' N. lon. 9° 30' W. They are surrounded by shalving rocks and are for the most part, precipitous. Berlangen, the chief of them has some flat ground and a fresh-water spring and is defended by a small fort, which has been occasionally used as a state prison.

BERLICHINGEN, a vil. W. Wurtemberg on the Jaxt, 7½ m. N W N. Stuttgart with a E. Catholic church and a synagogue. Wool spinning is carried on but a large proportion of the inhabitants are musicians in which capacity they travel about to distant parts. There was formerly here a castle, the natal place of the family of Berlichingen from which sprung the famous robber knight (St. von Berlichingen) with the iron hand whom Goethe has made the subject of one of his dramas. Pop. 1410.

BERLIDAM, a vil. Holland prov. Friesland, about 8 m. N W Leeuwarden consisting chiefly of a double row of houses, running E. and W., with some small bye-roads, all well paved. It has a beautiful Calvinistic and a Baptist church, and a school and its inhabitants are chiefly engaged in trafficking in apples, pears, berries, and other fruits, the produce of their gardens and orchards. Two annual fairs are held. Pop. 1200.

BERLIN, a post township l. States, Connecticut, 10 m. S by W Hartford containing New Britain a considerable l. where various articles partly dairy in ware, are extensively manufactured. It has an academy and 16 schools. Pop. 15440 3205.

BERLIN (anc. *Berla*—uncultivated land) the cap. of the Prussian dominions the residence of the king and foreign ambassadors, prov. Brandenburg lat. (near observatory) 52° 30' 16" N. lon. 13° 23' 35" E. (true) after Vienna, the largest town in Germany and for the beauty and size of its buildings, the regularity of its streets the importance of its institutions of science and art, and the activity industry and trade one of the first cities in Europe. It is situated on a dreary sandy plain, about 125 ft. above the level of the sea, on both sides of the Spree, a sluggish stream here about 200 ft. broad which winds through the city from N. E. to N. W. and, near its centre, forms an island by the division of its channel. It is somewhat more than 10 m. in circumference and occupies a surface of 5700 ac. It is surrounded with a wall 16 ft. high with 16 gates besides minor outlets and divided into 11 sections or quarters, namely Berlin Proper Old and New Köpenick Friedrichswerder Lustenau Dorotheenstadt, Friedrich Wilhelmstadt, Spandauer quarter Köpenick, and Stralauer quarter. Besides the two suburbs beyond the walls—Königsplatz and Oranienburg. The principal public buildings are in Berlin Proper. The original portion of the city lies on the E. bank of the river and is very irregularly built consisting, for the most part, of narrow crooked streets, and very inferior houses. The more recent portion rose up, as it may be said, at the orders of Frederick the Great who, having previously adopted a plan subdividing his intended city by straight and spacious streets, partly parallel and partly at right angles to each other, caused them to be lined by elegant houses of uniform appearance, and, for the purpose of occupying a larger space of only two stories in height.

As yet, however, the plan has only been partially completed and nearly a third of the whole space within the walls, towards the S. and E., is still unoccupied. The houses are built partly of white freestone, but the greater number are of brick covered with a thin coating of plaster or stucco. The drainage of the city however owing to the flatness of the ground on which it stands, and to the sluggishness of the Spree, is so bad, that in hot weather the most offensive odours pollute the air and render it unhealthy. The streets are now well paved and well lighted with gas. Hackney coaches and other street conveniences are numerous and under excellent surveillance. The houses are all heated with stoves. Of the many crosses bridges the finest is the long bridge or Frederick's bridge, constructed of iron 245 ft. long and 38 ft. broad with eight arches each of 27 ft. diameter. The city has 37 churches and 1 synagogue. 17 public hospitals, 8 military infirmaries, 17 barracks 8 royal magazines, and 24 cemeteries 16 within the walls, and 8 beyond. Berlin though not advantageously situated is one of the finest cities of Europe. Its principal and most frequented street, the Unter den Linden, is perhaps unsurpassed. It is situated in the new portion of the city and traverses it from E. to W. It is three quarters of a mile in length and of remarkable width, the centre being occupied by a double avenue of lime trees which give it its name, and form a fine shady promenade while on either side of the trees is a carriage-way and beyond each carriage way is front of the houses, a spacious foot pavement. At the E. end of this street are clustered the principal public buildings of the city the museum with its fine collection of sculpture and paintings and behind it the new museum erected for the reception of Egyptian antiquities, and the castle or Schloss royal palace, arsenal, university opera house, and theatre, and, arising from it, several fine squares at the W. end, it terminates magnificently with the Brandenburg gate, a noble structure, modelled on a grand scale, after the Propylæum of Athens, and regarded as one of the finest portals in existence. It is surmounted by a colossal Victory mounted in a car drawn by four horses, and heating in her hand an eagle and two olive branches. Outside the walls, immediately beyond this portal, are two large open spaces on the right, the Kauerler Platz, or exercise-ground, where the troops are drilled and on the left the Tiergarten an extensive and well wooded park. The royal castle or Schloss is a vast pile, more remarkable for a certain air of grandeur than architectural beauty. It is sumptuously furnished, and contains the great library belonging to the bear-apparent the royal treasury a valuable picture-gallery with museums of natural history the mineralogical and the arts, including an interesting collection of historical relics. The arsenal (Zeughaus) is a building of the most exquisite architecture. It is in the Grecian style and above the windows of the inner court are 21 masks, admirably carved in stone by Schiitter and representing the agonies of dying combatants. The apartments on the first and second floors form a kind of military museum the former containing various kinds of recent artillery the latter about 60 000 stand of arms. The palace of Prince Albert

a handsome edifice the architectural academy by the eminent architect, Schinkel one of his most original achievements in this department of art; the Italian opera-house, the colonnade of the new museum the grand theatre, and the university are all beautiful structures. Amongst the more remarkable monuments are an equestrian statue, in bronze, of the great Elector Frederick William, finely placed on an elevated pedestal at one extremity of the long bridge. In front of the arsenal is a statue of Bismarck also in bronze, in which the celebrated Rauch has admirably succeeded in exhibiting both the features and well-known characteristics of the hero. Two marble statues by the same sculptor—one of Bismarck and another of Lohse, are well deserving of notice. There are also, in the square called Wilhelm's Platz, statues of six heroes of the Seven Years War—Prince of Anhalt-Dassau, Generals Zastrow, Schwerin, Winterfeldt, Kuth, and Sandnitz, but they have little merit. The literary institutions of the city are numerous and respectable they include the university attended by nearly 1800 students and numbering among its professors many names of European reputation the academy of sciences the gymnasiums or high schools of which there are six, with a number of less celebrated academies an institution for instructing the deaf and dumb an academy of fine arts, the Gewerkschule or industrial school, where promising young artists are taught drawing, modelling &c gratuitously. Berlin is the literary and scenic metropolis of Germany and in the various walks of literature philosophy science, and art, can show a galaxy of names such as few cities can equal. Since the time of Frederick the Great, it has been the policy of the Prussian kings to attract to their capital all thorough professional men in the university or otherwise, learn of men in every department of

knowledge. Consequently though but a city almost of yesterday the number of eminent men who have laboured or who still labour within the walls of Berlin is very great. Of those who are world-renowned may be named Leibnitz, who founded the academy of sciences in 1700 and became its first president the young Spencer the historian Fustberg and the philosopher Schopenhauer V. A. Wolf, and Hegel the theologians Meierholdt and Hegelstetter the historians Ranke and von Hammer the geographers Ritter and Lepsius the linguists Bopp Popp, the brothers Grimm and many others. In the natural sciences, stands unrivalled in the present or any other age, Alexander von Humboldt and after him are many brilliant names, as Poggenberg, Hermann, Mitscherlich, Bosc, Erichson, Ehrenberg, and Link. Many others might be mentioned but it may suffice further to name the poet Theodor Heine and the famous sculptor Rauch and Schadow and the composer Felix Mendelssohn. The charitable institutions include the hospital of charity the royal institution for providing for widows, the hospital for invalids the hospital of St. Dorothy the new royal hospital, &c. with a great number besides for all kinds of benevolent purposes. The manufactures of Berlin are various and extensive. Its chief productions are silks, cottons, stockings, ribbons

As yet, however, the plan has only been partially completed and nearly a third of the whole space within the walls, towards the S. and E., is still unoccupied. The houses are built partly of white freestone, but the greater number are of brick covered with a thin coating of plaster or stucco. It is in the Grecian style and above the windows of the inner court are 21 masks, admirably carved in stone by Schiitter and representing the agonies of dying combatants. The apartments on the first and second floors form a kind of military museum the former containing various kinds of recent artillery the latter about 60 000 stand of arms. The palace of Prince Albert

cast iron ware, types, silk hats, paper, oils, refined sugars, tobacco, and much more. The iron foundry, hosts, stables, hotels, and shops of pictures, are cast together with a great variety of ornaments of unexcelled delicacy of workmanship. The black varnish with which the ironware is laid over to prevent rust is made of amber dissolved, and mixed with lamp-black. The society of the upper classes of Berlin is difficult of access and their hospitality limited. Music is here extremely and successfully cultivated. The performance of sacred vocal music in particular has attained extraordinary perfection. The open and theatres are on the most respectable footing, and are liberally encouraged, the taste for such entertainments pervading all classes. The local affairs of the place are administered by a magistracy consisting of 16 individuals, with the assistance of the assembly of deputies.

Railways—Berlin is well supplied with railways. It communicates W direct with Hamburg N with Stettin, and thence S.E. with Posen L. through Frankfurt on the Oder and Breslau with Cracow Warsaw and Austria S. by a line of two forks—one to Leipzig by Cöthen and Halle and the other to Dresden, and from these cities communicating with the lines of S.W. Germany S.W. through Potsdam, with Magdeburg and thence through Hanover with Göttinge, Bremen and France.

History—About two centuries ago, Berlin was a place of little importance. It was confined to the immediate bank of the Spree and the island which divides its channel and consisted of a series of villages, which have gradually merged into each other and now form its different quarters. The first important improvement was made by the great Elector Frederick William, who planted the Unter den Linden. His successor Frederick I., seconded his efforts but Berlin never assumed the appearance of a capital till the time of Frederick the Great, who, determined to make it worthy of his extended dominions, enclosed a large space within the walls, and proceeded to build upon it to supply the wants, not so much of actual as of an anticipated population. He was twice interrupted in the work, and almost driven from his purpose when, in 1707 the city fell into the hands of the Austrians and, in 1760 into those of the Austrians and Russians. But he soon repaired the damage and his successors, having followed steadily in his steps, Berlin has rapidly risen to be the second city in Germany in respect of population and perhaps the very first in respect of architectural grandeur and political influence. Pop. 1849 406,481 of whom 13,194 were soldiers and 5,600 Jews.—(Hübner's *Lex. Deutschland* Murray's *Handbook* Förster's *Deutschland* Dietrich's *Das Besondere des Preussischen Staats*.)

BERLINCHEN a tn. Prussia, gov. Frankfurt, on the large lake of the same name, 40 m. S.E. Stettin, with a large church, an hospital, a paper-mill linen manufactures, and distilleries. Pop. 3,400.

BERMEO See VERMEO.

BERMEO a tn. and seaport, Spain, prov. Biscay 15 m. N Bilbao, lat. 43° 35' N. lon. 3° 40' W., on a slope facing a bay. It has two parish churches, two schools, a town-house, which contains the prison and the public storehouse, a custom-house, two fountains (one of medicinal waters) and some convents. The chief occupation of the inhabitants is agricultural fishing and salting and drying fish, which they export, although the trade has much fallen off. Pop. 4,000.—(Madoz.)

BERMONDSEY a tn. and par. England, on. Surrey V bank, Thames. The town is $\frac{1}{2}$ m. S.S.E. London and consists of several principal streets all straight, paved, and well lighted, and a number of smaller. The houses are of various forms and construction and mostly of brick, with some ancient structures of timber intermingled. It is lighted with gas, and amply supplied with water and has four churches,

two of which—one of them a very handsome building—have been erected within the last two years and several dissenting chapels including Baptists and Wesleyans, and a handsome R. Catholic chapel. There is also a convent of the Sisters of Mercy for about 40 inmates, a free school the united charity schools such of the four churches above mentioned having besides, schools attached. Leather-tanning is carried on here to a great extent; there are also numerous woolstaplers, felt-makers, curriers, and manufacturers of valises, parchment, and hair vanguard-walks, a distillery, a brewery and some book-binding. The London and Greenwich Railway crosses the parish by means of a magnificent viaduct. Area of par. 688 ac. Pop. 48,128.—(Local Correspondent.)

BERMUDAS (THE) or BOWEN'S ISLANDS, a group of 13 lands, N. Atlantic Ocean belonging to Great Britain, 680 m.

S.E. Cape Hatteras in N. Carolina, and lying between lat. 32° 14' and 32° 25' N., and lon. 64° 38' and 64° 50' W. They lie S.W. to N.E. based on the edge of a bank stretching in the same direction, 23 m. by 15 but only occupy a space of about 18 m. by 6, though said to be about 365 in number. They are separated from each other by very narrow channels, and are mostly rocky islets five only being of any considerable size. They are of difficult access being enclosed on three sides N. W. and S. by formidable coral reefs, nearly all under water and extending, in some parts, 10 m. from the islands, the only result of this description occurring in the whole central expanse of the Atlantic Ocean. Some of the corals now growing here are asserted by the natives, on the authority of tradition, to have been living in the same spots for centuries and are supposed to be in age with the most ancient trees of Europe. In removing some reefs, by means of divers at the entrance of St. George's harbour in the island of that name, evidences were found confirmatory of the idea that part of the former land of the Bermuda Islands has subsided, and is now below the sea. The islands have little elevation, and in their general aspect much resemble the W. India Islands. The climate is delightful, a perpetual spring clothing the fields and trees in perpetual verdure. Severe thunderstorms, however frequently occur and when S. winds prevail, the atmosphere becomes charged with a humidity unfavourable to various complaints, including those of a pulmonary nature. Though the soil is not so fertile as it was, being now much exhausted, almost every description of fruit and vegetable grows here abundantly and the arrow-root is said to be superior to that of any other place. The orange orchards of the islands are extending and improving, and generally more skill and industry has been applied to the clearing of land, and to cultivation, within the last few years than formerly. The quantity of live stock maintained is small, and the dairy produce sufficient only for the wants of the inhabitants. Domestic fowls are abundant, especially

decades, and during summer numbers of turtles are taken. It is somewhat remarkable that there are neither springs nor fresh-water streams in the islands, and only a few wells, the water of which is brackish. This want is supplied by collecting rain-water in tanks, every house being provided with one, and the roofs being adapted as conductors. The adjoining seas are stored with various kinds of fish, and many whales are taken in the season which is between March and June. The flesh is sold in the markets, and eaten by the natives. The principal employment is building vessels, generally of cedar, small, swift, and durable. Plucking staves and the mid-rib of the palm-leaf, is also carried on to some extent. Principal exports—arrow-root, potatoes, and onions. The amount of imports into the Bermudas for the year ending January 5, 1848, was £188 992 16s. 9d.; exports for the same year £20 505, 6s. 8d. The number and tonnage of vessels upwards for the same period, were 185 tons. 19 899—outwards, 189 tons 30 400. The number and tonnage of vessels belonging to the colony in the year named were 58 tons 572. The largest harbour is that of St. George's, a beautiful and romantic bay capable of containing a large fleet, but of difficult ingress and egress, from the narrowness of its entrance, now however much improved. It is strongly fortified and generally garrisoned by a regiment of the line, with some companies of artillery and engineers. The legislature consists of a governor council and legislative assembly. The council is composed of eight members and a president, nominated by the governor, but subject to confirmation by the Crown. The House of Assembly of 35 members, elected by the nine tribes or parishes into which the island is divided. The islands contain nine churches five chapels for dissenters, and 24 public or free schools, principally supported by different societies in England, and by funds under the control of the Bishop of Nova Scotia, in whose diocese the Bermudas are situated. There are, besides the above, 25 private schools. An establishment for convicts has recently been placed here. The number of the latter in 1848, amounted to 1750. The occupied coast is a converse to the public at the Bermudas establishment, including the expense of the passage out, and every other charge, is about £20 per annum and the value of his labour £28 per annum. The capital is Hamilton on Bermuda or Long Island. Pop (1848) estimated at from 9500 to about 11 000 whites coloured, and free blacks.

BERN or BERNE (CASTON or) the largest, and in rank the second canton in the Swiss Confederation one of the three worst or directing cantons situated in the W. of Switzerland between lat. 46° 19' and 47° 30' N. and lon. 8° 50' and 8° 28' E. bounded N.W. by France N. and N.E. by the cantons of Basel Country Solvère, and Argau E. by Thurgau, Unterwalden, and Uri S. by the Valais S.W. by Vaud and W. by Freiburg and Neuchâtel greatest length 83 m. greatest breadth, 65 m. area, 2560 sq. m. The S. boundary of the canton is formed by the Bernese Alps which include some of the highest summits of the alpine system. Among these are the Fluchli-Aarhorn 14 111 ft. Jungfrau 18 718 ft. Schreckhorn 18 386 ft. the Mithel, 13 498 ft. &c. Offsets from this mountain-range cover the S. part of the canton, and form the high country or Berne Oberland celebrated for the beauty of its valleys the principal of which are, the Simmen the Lauterbrunnen the Grindelwald and the Hasli. The N. part of the canton separated from the S. by the valley of the Aar bears the name of Thurgau or Berne Nid canton from the mountain-range that intersects it. This range is considerably lower than the Bernese Alps. Excepting a small portion on one French frontier watered by the Doubs, the whole of the canton belongs to the basin of the Rhine. The principal streams are the Aar and its tributaries the Emme, Simmen, Kander and Thiele. In the N.W. besides the Doubs, the canton is watered by the Saane and the Dür, with its affluent the Trame the former falling into the Lake of Neuchâtel, and the latter into the Rhine near Basel. The canton contains three considerable lakes, Biel in the basin of the Thiele, and those of the Emme and Saane, in the basin of the Aar. The climate is healthy but rigorous in the alpine regions, where the mountain snows form extensive glaciers and in some localities it is exposed to sudden changes, a warm day being frequently succeeded by a night of frost. In the valleys of the Thiele the Emme, and lower Aar the temperature is much milder. The mountains of Bern are finely wooded with pine and ash the valleys are

fertile, and yield good crops of grain, but not in sufficient quantity for the population. Hemp, and flax of good quality are raised, and indifferent wine to a small extent, is grown in the neighbourhood of the lakes. But cattle form the principal wealth of the inhabitants, the rich pastures of the canton rendering it peculiarly well adapted for the rearing of cattle, of which the breeds found in the valleys of Emme, and Saane or Saane are esteemed the best in Switzerland. The dairy produce of these valleys has a high reputation, the cheese being reckoned only second to that of Freiburg. The total cheese made in the canton amounts to about 2500 tons annually. Bern is famed for its horses those of Emmenthal are exported in considerable numbers to France, for draught and heavy-armed cavalry. The canton contains mines of iron, lead and copper with quarries of marble gypsum freestone, granite, and limestone. Coal is also obtained, but in small quantities. Fine crystals are found among the quartz rocks of the Grindel and gold dust is met with in the sands of the rivers. Mineral springs are numerous and the bathing establishments of Wassenburg, Blumenthal, &c. are much frequented. In the mountain districts, the houses are generally of wood but in the lowlands, and round Bern of stone. The land in general is very much subdivided from being equally partitioned among children, except in Emmenthal where the youngest son inherits the paternal domain. The manufactures of the canton are inconsiderable linen and woollen goods are made in the Emmenthal paper leather hardware, Kurzwaaren fire-arms and agricultural implements are also made, and partly exported. Horses cattle and cheese form a principal export. The imports consist of salt, colonial produce, wine, grain, tobacco, metals cotton wool silk, &c. & d. flax. The transit of goods in the W. part of the canton is much facilitated by the Aar and its tributaries, from which also a considerable quantity of fish are obtained. Schools and educational institutions are numerous. Attendance at school is obligatory. The contingent of troops furnished to the Confederation, is 5024 men and the war contribution 154,094 francs (£5900) annually. The canton is divided into 25 administrative sections or prefectures, the first magistrates of which are elected for six years by the executive council. The prefectures are divided into political communes whose boundaries frequently differ from those of the ecclesiastical communes or parishes. The tribunals are—1. The supreme court, composed of 10 members, chosen for 15 years by the Grand Council, and a president chosen for five years. This is the highest court of appeal both for criminal and civil cases. 2. The district court 80 in number one for each prefecture, and two each for the prefectures of Dälmont or Delémont and Carlar. Ecclesiastical affairs are under the direction of two ecclesiastical committees, one Protestant, the other R. Catholic. One-third of the vacant Protestant churches are filled up by the executive council and the other two-thirds by the seniority of the ministry. The first Protestant minister is the Dean of the Minister or cathedral of Bern capital of the canton. The R. Catholic part of the state belongs to the bishopric of Basel and is dependent on the most-general of Fürstbischöf. The canton of Bern has formed a portion of the Swiss Confederation since 1352. In 1798 it completed a larger extent of territory and was then divided into four cantons, Bern Argau Lemar (which afterwards became the canton of Fribourg) and Oberland which was reunited to Bern in 1803. As an indemnification for its dismemberment it is a Congress of Vienna, in 1815 added to it the town of Biel or Bière, and the territory on the W. side of the Thiele which formed the greater part of the ancient bishopric of Basel and was then possessed by France. With exception of the inhabitants of this district who are of French extraction the Bernese belong to the German stock and speak German. The great majority are Protestants. Pop (1837) 407 913.

BERN (Latin *Berna*, *Arctopoli*) a in Switzerland cap. of above canton and alternately with Zürich and Lucerne one of the federal government, and of the diet or *sevent* of the Swiss Confederation. 59 m. S.W. Zürich, 89 m. W. S. W. Lucerne lat (observatory) 46° 27' 8" N. lon 7° 24' 34" E. (alt.) Height (at the observatory) above the level of the sea, 1912 ft. The town, situated on a sandstone promontory formed by the Aar is bounded on three sides by the river and on the fourth the W. side, it is defended by fortifications. A magnificent stone bridge, 909 ft. long, and the central arch of which is 93 ft.

above the stream, here crosses the Aar and supplies a level road between the town and the high bank on the opposite side. Bern is the handsomest town in Switzerland, and one of the most regularly built in Europe. It has the air of a metropolis, and is the reputed capital of the confederation, being the residence of the ministers from all the foreign states except the Papal ones, who reside at Lucerne. The houses are substantial built of stone and the streets are spacious, all of them are pleasantly enlivened with water by means of fountains, some of which are grotesque others elegant, and many of the streets have a rapid stream of water running under the footpath. The principal street or *Grande Rue* like a majority of the others is steep, but it is also wide and is adorned with many fountains. The houses are lofty and handsome and look over arcades or covered passages which line the street on either side, affording shade and shelter from summer's heat and from winter's snows. Though, from being neither high nor wide, they make the street look rather heavy and sombre. From the platform on which the cathedral stands, which is about 100 ft. above the river a magnificent view of the Bernese Alps is obtained. Gardens, in terraces hang upon the bank which for a mile in length presents a beautiful diversity of view with fruit-trees, cypresses and weeping willows. Beyond the river the country presents a verdant and finely diversified surface sprinkled with villages, hamlets and cottages and in the farther distance a vast range of mountains. The cathedral is a fine Gothic structure built between 1411 and 1519 with a spire 300 ft. high but incomplete. The other public edifices are the church *des Réformés*, the museum, containing an extensive collection of the natural products of Switzerland, the townhouse a Gothic edifice of the 15th century, the mint, where money is coined for several cantons, the extensive citizen hospital *Hôpital Spital*, the new prison and penitentiary, the *Isle* or island hospital, the corn market and corn measure for storing grain in case of scarcity, the bank and the state house. The university of Bern was founded in 1834 and has a full equipment of professors in all the different faculties and arts. There is also an academy of law, with 11 professors, a gymnasium with 11 professors and masters, a school of arts with nine professors, a school of painting and drawing and a deaf and dumb school. The public library contains 35,000 volumes, and 1700 MSS. the medical library 7000 volumes. Bern is celebrated for its number and excellence of its charitable institutions and in addition to the hospitals, has two orphan asylums, an infirmary, lunatic asylum, and a fund for the aid of indigent students. It has also an observatory and a botanical garden. The chief manufactures are cloth, linen, cotton and printed goods, clocks and watches, delicate mechanical and philosophical instruments, straw hats, leather, gunpowder &c. The property belonging to the corporation is very large, and the revenue not only suffices to defray the public expenses, but to provide all the citizens with fuel and still leaves a surplus.

Bern owes its foundation to Berthold fifth Duke of Zähringen, who in 1131 fortified the peninsula on which the town stands and invited merchants and craftsmen to resort thither for protection. In 1218 it was raised to the rank of a free town of the empire, with extensive privileges. In 1352 it entered the Swiss Confederation at that period consisting of seven cantons, and obtained the second rank. In 1798, Bern was obliged to open its gates to the republican armies of France and the canton was disbanded. From 1799 to 1803 it was the seat of the Helvetic Government. The government of Bern had hitherto been oligarchical, but in 1830 the people on their own took the role of the privileged families and organized a supreme council, which entered on its duties October 1831. Bern is said to derive its name from *bera* the plural of the German word *bär* (a bear) and that annual figures on the armorial bearings of the town as well as on the coins, signs, points, fountains, and public buildings. For many centuries living bears have been maintained at the public expense, as part of the state property. The great majority of the inhabitants of Bern are Protestants. Pop. 22,623.

BERNARD (GREAT ST.) is a celebrated pass of the Pennine Alps, near Valais on the mountain-road leading from Martigny in Switzerland to Aosta in Piedmont. Lat. 45° 51' N. Lon. 7° 11' 33" E. (c.) On the E. side of the pass is Mount Valais and on the W. the *Pénin de Dromes*, there is no mountain known by the name of St. Bernard. Almost on the very crest of the pass is the famous Hospice supposed to be the highest inhabited spot in Europe, 8200 ft. above the level of the sea. It is a massive stone building capable of accommodating 70 or 80 travellers with beds, and of sheltering 300. As many as 500 or 600 have received assistance in one day. It is situated on the highest point of the pass, exposed to tremendous storms from the N.E. and S.W., and is traversed by 10 or 12 brethren of the order of St. Augustine, who have devoted themselves by vow to the aid of travellers crossing the mountains. The climate of this high region is necessarily rigorous. There is a lake on the summit, at a short distance from the Hospice on which ice has frequently remained throughout the winter. The several

VIEW OF THE GREAT ST. BERNARD
FROM THE GREAT ST. BERNARD HOSPICE

could recorded is 2½ below zero Fahrenheit but it has often been 18 and 20 below zero the greatest summer heat recorded is 68° Fahrenheit from the difficulty of respiration in so elevated a locality and the severity of the climate, few of the monks survive the time of their vow 15 years from the age of 18 when they are devoted to this service. They are driven often with ruined health to retire to the more genial climate of Martigny where there is a branch establishment for the brethren who cannot live on the mountains. The dogs kept at St. Bernard, to assist the brethren in their humane labours, are well known. In the museum of Bern, the skin of one, called Barry is preserved who is recorded to have saved the lives of 17 human beings. In 1847 the revolutionary government of Valais sold the monastery and the heavy forced contribution of 180,000 francs (£4800) thereby much impairing the resources of the establishment, and, according to a letter of the prior written at the time, rendering its continued existence impossible. Subscriptions from various quarters have since been made to enable the brethren to continue their benevolent labours. The pass of St. Bernard appears to have been known at a very early period and a pagan temple formerly stood here from which a Roman road led down the Piedmontese side of the mountains. The remains of a massive pavement are still visible and the column of the Hospice contains votive tablets, bronze figures, and other antiquities, found in the vicinity. The Hospice was founded in 962 by Bernard de Menthon a Savoyard nobleman, for the benefit of those who performed pilgrimages to Rome. In May 1800 Napoleon led an army of 30,000 men, with its artillery and cavalry into Italy by this pass.

BERNARD (LITTLE ST.) a mountain, Savoyard States, belonging to what are called the Green Alps, about 10 m. S. Most Blanc. It stands between Savoy and Piedmont,

having the valley of the Isère, in the former on the W. and that of the Dore, in the latter on the E. The pass across it is one of the easiest in the Alps, and is supposed to be that which Hannibal used. The Hospice, at the summit of the pass, has an elevation of 7192 ft.

BERNARDIN (Str.) or **BERNARDINO** a mountain Switzerland, near Gfrien, over which a road, constructed at the joint expense of the German and Swiss governments, leads from the Rheinwald into the valley of the Misocco, and forms one of the direct lines of communication, through Switzerland, between W. Germany and the N. of Italy. It leads to Lago Maggiore the pass of the Splügen departing from the same main road in Grisons, leading to Lago di Como. The summit of the pass is 7115 ft. above the sea, and is partly occupied by Lake Misocco, the source of the Misocco. On the S. slope stands the village of St. Bernardin, a post station, the first and largest in the valley of the Misocco, consisting of a few houses on a small plain or ledge. It possesses a mineral spring, which is one of the highest in the Alps and attracts a few visitors.

BERNAU a tn. in Prussia, prov. Brandenburg on the Planks, 14 m. N. E. Berlin. It is surrounded with walls and ditches has two churches an ancient townhouse, and an hospital. It has manufactures of silk, wool, calicoes, linen &c. and a number of breweries. Pop. 1800.—Several other places in Germany and Bohemia have the same name.

BERVAY a tn. France, dep. Eure (Normandy) 20 m. W. N. W. Evreux, agreeably situated, r. bank, Charentonne. The grain market occupies part of an old abbey church the remains of which are very curious and interesting. The church of St. Croix is distinguished by its large and magnificent altar and by marble statues and sea gulls, brought from the abbey of Bee, and the church of La Couture was formerly celebrated for being supposed to cure persons possessed with evil spirits, and is still visited by numerous devotees. Bervay has also a communal college, an hospital, a court of first resort, a board of manufactures, an agricultural society and a savings bank. It has important manufactures of cloth, and flannel, tulle, linen and cotton goods and spins a good deal of cotton thread and worsted. It has also bleachfields, dyeworks, tanneries, &c. Trade—principally in grain, order cloth, from Russia, leather, linen, horses and cattle. The horse fair held in Lent is one of the greatest in France, and is attended by purchasers from all parts of the country to procure good and diligence horses for which Normandy has long been celebrated. Pop. 5490.

BERNDORF or **ANHALT-BERNDORF**, a tn. Germany cap. dist. of same name, on both sides of the Saale, in N. W. Leipzig, with which as well as with Berlin and Magdeburg it is connected by railway. It is divided into the old, the new and the high town the first two surrounded by walls, and communicating by a bridge 172 ft. long. Berndorf is well built, and contains several well paved and well-lighted streets. The principal building is the palace, situated, with a garden, on the highest part of the high town. It is very ancient but has received numerous modern additions and contains a picture-gallery theatre and church. Among the other buildings and establishments are a townhouse court-house, three Protestant churches and a chapel a R. Catholic abbey a synagogue, gymnasium, savings bank, hospital, widow's asylum, bridge, well, and seven schools. Besides an oil-mill and several breweries and distilleries, there are manufactures of paper and earthenware. Pop. 6772.—The duchy forming part of the country of Anhalt (which see) has an area of 256 sq. m., is well wooded and well cultivated and has made considerable progress in manufactures. The minerals include coal, copper lead, silver and iron of which the last is the most important. Pop. 45,353.

BERNE. See **BERN**.
BERNECK, **BERKERS** or **BERKANG**, a vil. and par. Switzerland com. of, and 11 m. E. St. Gall pleasantly situated in the Rhodan, and containing an ancient church, which is used in common by Protestants and R. Catholics. The culture of the vine, spinning, and knitting are the chief employments. Pop. 2119.

BERNECASTEL, or **BERNECASTEL** [ann. Berones Castel-um], a tn. Prussia, prov. Lower Rhine, cap. circle of same name, r. bank Moselle. It is a dirty town, but picturesquely situated at the base of the Hundsrück Mountains, 38 m. S. W. Vuc. 1

Bolton. The wines of the neighbourhood are celebrated. **Berncastel** has several quarries, from which excellent granites are obtained also a lead and a copper mine. Its commerce is considerable. Pop. 2100.—The circle of the same name has an area of 210 sq. m. It is very hilly several of its highest points exceeding 2000 ft. About two-thirds of the surface are covered with wood. The hills are rich in minerals, particularly iron, lead, and copper which are extensively worked, and along with the coal which is also found in the district, maintain numerous furnaces. Pop. 45,318.

BERNERA a small isl. Scotland, the most S. of the Hebrides lat. (N. point) 57° 43' N. lon. 7° 12' W. (N.) about 5 m. in circumference. The S.E. side is rocky, and frequented in the summer months by immense numbers of sea-birds. The interior is fertile. It contains a quarry of granite, beautifully marbled and of a very superior quality. A handsome lighthouse built of this granite, has been erected here. The island is said to have been a sanctuary of the Druids, an entire circle of upright stones giving a plainship to this belief. There are here the remains of two chapels one dedicated to St. Asaph the other to St. Columba. 1 op. 30.

BERNESTADT or **BERNESTADT** a tn. Prussia, prov. Silesia r. bank, W. 14 m. E. N. Berlin. It is well built has an old castle two churches a synagogue, an hospital and manufactures of woollen cloth linen and leather. 1 op. 3000.

BERNIERS ISLAND a small isl. W. Australia, at the entrance of Shark Bay (lat. 34° 10' S. lon. 115° 7' E. (N.)) It is about 1.5 m. long by 8 to 9 broad.

BERKEE a tn. and com. France, dep. Bouches-du-Rhône, and 14 m. W. S. W. Aix on the lagoon of Marseilles. It is well built, but ill supplied with water, there being but one well in the town. The little port is safe and commodious, and carries on an active coasting trade in salt, chemical substances, oils and fruit. Soda and chemical stuffs are manufactured. Pop. 1926.—The lagoon is about 12 m. long by 7 broad and communicates with the sea by the canal of Marseilles and Tour-de-Bonne. It depends on its great large quantities of salt, the gathering of which gives a considerable amount of employment. The lagoon also abounds in fish.

BERRI a tn. a former prov. of France which with the exception of the single arrond. of St. Amant belonging to the Bourbonnais, now forms the departments of Indre and Cher.

BERRIAN a tn. Africa, in the Sahara of Algeria, 35 m. E. Gardania. It is walled and has 250 to 300 houses including some mosques and schools and has a little trade in grain.

BERREDALE or **BERREDALE**, a small fishing hamlet and new, or headland, Scotland, co. Caithness, par. Lethen. The village is situated at the mouth of the Berriedale water which rises in the mountains in the E. W. part of the parish, and is one of the most picturesque and romantic streams in Scotland. In the vicinity are the ruins of the ancient Castle of Berriedale.—The river, or promontory is about 2 m. S. by W. the village and is in lat. 58° 12' N. lon. 2° 30' W. This district gives the title of Lord Berriedale to the Earl of Caithness.

BERRIE W. or **ANZEL** a new par. N. Wales Montgomery 13 010 ac. 1 p. 217.

BERRIMA a tn. New S. Wales co. Camden 66 m. S. W. Sydney on a remarkable bend of the flat which forms the channel of the Wingcarec River. Pop. 97.

BERRIN a tn. W. Africa Benignia, in the country of the Felops on the left bank of the Lasamansa lat. 12° 28' N. lon. 16° 22' W.

BERRINGTON par. Eng. Salop 8520 ac. 1 p. 217.

BERROW two par. Eng.—1 par. Somerset 5763 ac. Pop. 524.—2 par. Worcester 2180 ac. Pop. 491.

BERRY HEAD a promontory England co. Devon S. point of Torbay lat. 50° 24' N. lon. 8° 28' W. (N.)

BERRY POMPKROY par. Eng. Devon 4525 ac. P. 1088.

BERRYN ARBOR par. Eng. Devon 4956 ac. P. 654.

BERSTEDT par. Eng. Sussex 3008 ac. 1 op. 2964.

BERTHOLODORT a market tn. Austria, Duchy Lower Austria, on the railway between Vienna and Trieste. It lies among the hills between Brunn and Rodan, surrounded by vineyards, and contains an ancient church, with a lofty tower and a curious subterranean chapel. Behind it are the ruins of an old castle which was repeatedly occupied by Genghis

premises of the house of Haddingburgh. Bath, and a swimming establishment, have recently been erected here. Pop. 3226.

BERTHOUD *Sc DUNDEE*
BERTHOUD (a) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (b) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (c) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (d) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (e) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (f) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (g) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (h) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (i) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (j) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (k) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (l) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (m) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (n) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (o) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (p) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (q) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (r) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (s) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (t) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (u) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (v) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (w) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

BERTHOUD (x) is a Italy pre and 7 m S.P. Fossil on a hill at the foot of which flows the River. It is a seat of a bishopric, and has a cathedral, three parish churches and five convents. The river is introduced in the neighbourhood in highly esteemed. Pop. 4000.

extensively introduced but in the black parts of the country the black-headed breed keep their ground. The stock of sheep has been estimated at about 110,000. Average rent of land in 1843-48, 18s. 9d. an ac. The principal river connected with the county is the Tweed, which is here a beautiful and unspoiled stream. There are a number of smaller rivers, amongst which are the Whitadder Blackadder and Leader all well stored with trout. There is only one lake in the county Coldingham Loch, a small sheet of water covering about 80 ac. The county is all but purely agricultural, the majority of its population subsisting by its pursuits, and the various arts connected with them almost the only exception is found in the bleak, hilly district of Lammormoor which, being unfit for any other purpose, is appropriated to the grazing of sheep. Interesting remains of antiquity are numerous in this county every parish containing old castles towers abbeys, priories, &c. with many tumuli, earns &c. The county contains 33 parishes and has Greenlaw for its capital. It returns one member to Parliament. Registered electors in 1849 1050. Pop. 36,377.

BERWICK (North) a royal burgh, seaport, and par. Scotland, co. Haddingburgh. The town is situated on a small bay near the base of a beautiful conical hill, 940 ft. in height called N. Berwick Law at the S. entrance to the Frith of Forth, 21 m. N.E. Edinburgh lat. 46° 14' N. lon. 2° 41' W. It is built on a sandy plain and consists chiefly of two principal streets straight and well kept, running nearly at right angles to each other and one of which is adorned with a row of fine plane-trees. The houses are mostly plain, and are built of hard trap rock. They are generally white, and have a weather-beaten appearance but of late years, some handsome houses have been erected in this E. and W. of the town. The supply of water is obtained from springs, and is generally much impregnated with lime. The churches are, the parish church, a free church, and a Free school, and a Presbyterian church. Schools—the parochial burgh and two private schools some of them very extensively attended. The harbour is small but of great access. The seaport trade which was at one time considerable is now altogether extinguished by the railways. Of late years the town has come into some repute as bathing quarters and a number of the inhabitants depend, to a considerable extent, on letting portions of their houses to summer visitors. About a quarter of a mile W. from the town, are the ruins of the abbey of North Berwick, beautifully situated on the summit of a gentle elevation. The town forms one of the Haddingburgh district of burghs which return a member to Parliament. Pop. (burgh and par.) 1843—(Local Correspondent).

BERWICK ON TWEED a port, but market to par. and on of itself England, on a gentle acclivity 1 bank, Tweed, near its confluence with the sea, 48 m. N.E. Edinburgh, and 300 N. by W. London lat. (highbanks) 55° 46' 12" N. lon. 2° 41' W. It occupies an area of nearly 2 m. in circumference and is surrounded by fortified walls 12 m. in circuit, formed of earth and faced with stone, along which is an agreeable promenade. The streets are for the most part narrow steep straggling and irregular but some of the principal ones are wide and open. Houses chiefly of stone, and well built supply of water indifferent, and the quality often objectionable lighted with gas by two companies, an old and new. There are altogether 12 churches in the town namely the parish church four L. Presbyterian, an Independent, a Baptist, one in connection with the Church of Scotland one with the English L. Presbyterian a Wesleyan a Primitive Methodist, and a Catholic. There are also the corporation academy for the education of the children of burghesses no others being admissible, conducted by a rector with three male and three female teachers, and managed by the town council a classical academy the management of which is vested in 21 trustees, appointed by the Lord Chamberlain a charity school, founded in 1725 a school of industry established in 1819 and an infant school the workhouse, and various private schools. The principal public buildings are—the town hall erected between 1750 and 1760 a handsome modern freestone structure, with a beautiful portico of the Tuscan order and a spire 150 ft. high; the barracks for infantry built of stone in the form of a quadrangle capable of accommodating upwards of 600 men the parish church, a commodious building, without a spire, having been built in

the time of the Puritans a prison, finished in 1830 affording accommodation for 12 prisoners, and containing, besides, a room in which the petty sessions are held, a chapel, etc. The Tweed is crossed at the town by a bridge of 15 arches, measuring 1184 ft in length and only 17 ft in width, commenced in the reign of James I and by a magnificent railway viaduct, considered to be the largest stone bridge in the kingdom, consisting of 28 semicircular arches, each 61 ft 6 inches in span. Of literary and benevolent institutions Berwick has a naturalists club, a public subscription library established in 1812 and a dispensary combining the advantages of an infirmary. The only manufactures carried on, and these but to a small extent, are linen, sack and sail cloth, ropes, homery carpets, and hats. The river is not navigable to the bridge only though the tide flows for several miles beyond it. The harbour which is naturally inconvenient has been recently deepened several feet, and the shipping trade of the place thereby much improved, large steamers and other vessels now expediting the smacks and small craft by which the traffic of the port was formerly exclusively carried on. The number of vessels registered at Berwick-on-Tweed, for the year ending December 31 1847 was 201 ton 17 219. The number and tonnage entered for the same period was 995 ton 53,859. Cleared 553 ton 89 082. The chief exports are salmon, of which great quantities are caught in the Tweed and mostly sent to London packed in ice, ool haddock, herrings, corn, wool and coal. The imports—timber—staves, iron, hemp tallow and horse for manure.

In the beginning of the 12th century during the reign of Alexander I Berwick was part of the realm of Scotland, and the capital of the district called Lothian. Soon after this date, it became populous and wealthy was the chief seaport of Scotland contained a strong castle, which includes hospitals, and monastic buildings, and was created one of the four royal burghs of Scotland. In 1216 the town and castle were stormed and taken by John Balliol. During the competition between Baliol and Bruce for the Scottish throne, Baliol's Parliament sat in Berwick and in the hall of the castle, Edward I pronounced judgment in favour of Baliol. Bruce retook the town and castle in 1318 but, after undergoing various sieges and a vain defence, he was surrendered to Edward IV in 1469 and have ever since remained in possession of England. By 6 and 7 Will IV Berwick is constituted a county of itself in all respects and purposes (except the return of members of parliament). Area of par 6195 sq. Pop. of par 10 067 or for the entire parliamentary and municipal bur 11 094. —(Local Correspondent.)

BERZOCANA DE SAN FULGENCIO, a tn. Spain Istria, prov. de Caceres, 6 m N.E. Logroño, on the borders of New Castile. It has spacious castle, and paved streets, a parish church, endowed school, townhall, vineyards, several fountains, and a cemetery. The inhabitants are almost exclusively engaged in agriculture, and in rearing goats, pigs, horned cattle and a few sheep. Pop 2020.

BERALU a tn. Spain Catalonia, prov. of and 15 m N by W Gerona lies a plain, between the river Fluvià and the brook Campallès. It has two squares two churches, an endowed school, a printing press, and a public fountain. The inhabitants, engaged in agriculture and as carriers also spin and weave cotton. Pop 3013.

BESANCON (anc. *Yasconia*) a fortified in France, cap. of dep Doubs, and of the sixth military division of the kingdom 206 m S.E. Paris lat (outlet) 47° 19' 46" N lon 6° 29' E. (s.) It is agreeably situated at the extremity of a valley watered by the Doubs, which almost surrounds the town, and divides it into two parts. These communicate with each other by a stone bridge, part of which is a Roman structure of large blocks and part a modern erection, for the purpose of enlarging the roadway. The town is surrounded by hills covered with vineyards. The isthmus or peninsula, on which it is built is composed of a mass of rocks crowned by the citadel which commands the country towards the S. but the citadel itself is commanded by several eminences in the neighbourhood, on which forts have been erected for the purpose of covering the approaches. Besançon, which is a fortified place of the first class, and one of the strongest towns in France is also considered to be one of the best built. Within the walls it contains 1465 houses, all built of hewn stone, two or three stories high, and ornamented with balconies.

The streets are spacious and well laid out, and the squares which are of considerable extent, are adorned with fountains. A splendid promenade is formed, within the town on the banks of two branches of the Doubs. The public buildings are, the cathedral, and three other churches (containing some fine pictures and sculptures) the hospital the hotel of the prefecture, the college, the palace of justice, and the citadel which is one of Vauban's finest works. There are also a theatre, and a public library containing 50 000 volumes and some valuable manuscripts and an aqueduct cut in the rock by the Romans in the second century and called now *Porto Thille*. The celebrated architect Faria bequeathed in his native town, Besançon, a collection of antiquities pictures drawings, books, and other objects of rarity now forming a museum here. In the environs are the splendid ruins of the castle of Montfaucon supposed to have been built by Louis XI. Besançon is the seat of a royal court for the departments of Doubs, Jura and the Haute Saône, of a court of first resort and of commerce and of an archbishop. It likewise has a school of artillery academy of arts and sciences royal college, agricultural and medical societies, deaf and dumb institution and gravel seminary. Previous to the Revolution of 1789, it was the capital of the Franche-comté had a parliament, univers ty, mint, eight parishes, two chapters, a college and 18 convents or abbeys. Besançon came under a considerable trade, especially with Switzerland. It is prince pal and also are, wine, brandy, liqueurs, vinegars, salt, drapery, silks and various filices iron chains, nails, horse-cattle, grain, butter, cheese, &c and manufactures carpets, lace, stone, ironmongery, printing presses, coach-springs, stained papers, artificial flowers, liqueurs and mustard. It has also extensive foundries, breweries and tanneries. Watch making is the principal trade. It was introduced from Switzerland about 50 years ago and employs 2000 workmen who work principally at the two burgesses. About 600 000 bottles of artificial bolivier water are made here annually.

The origin of the town is too remote to be traced. Julius Cæsar entered it 58 years before the Christian era, and mentions it in his *Gallie Histonie* as a place of great extent and natural strength. Louis XIV besieged and took it in 1680 and by the treaty of Nijmegen its possession was secured to France along with the rest of the Franche-comté. In 1690 a council was held here under Charles of Neuchâtel 1st par. (1646) 27 &c.

BESIKI K or **BESIKCHI** (anc. *Polis*) a lake, Turkey Macedonia a little E. of the Gulf of Corinthus, into which it pours its superfluous waters, and about 20 m S. of Salona. Its greatest length E. to W about 14 m greatest breadth 4 m. To the N it is bounded by a chain of mountains stretching E. and W and the scenery in its neighbourhood is very magnificent. It bears some resemblance to that of Switzerland. Various kinds of fish are found in the lake. On the N shore are the two villages of Gruden and Lesser Heshik, both beautifully situated the former on the water edge the latter on a rocky tongue of land at the junction of Enx with the Neckar. It has two Roman towers, and is called. On the Schallstein a hill hard by the best wines on the Neckar are produced. 1 op. 2412.

BESIKI IM a tn. Wittenberg 10 m. N. Strassburg, on a rocky tongue of land at the junction of Enx with the Neckar. It has two Roman towers, and is called. On the Schallstein a hill hard by the best wines on the Neckar are produced. 1 op. 2412.

BESIKI a tn. Turkey in Asia, prov. Marash 38 m W N W Semurrah. It is 2840 ft above the level of the sea but, being built on a narrow limestone plateau and having neither trees nor gardens within it is hot and unhealthy in summer. It is 10 m S. of 2600 houses of Mahomedans, and 750 of Armenians, clustering round the castle, which stands on the summit of a cliff, and is in a very ruinous condition. There is a tolerable bazaar.

BESORKI See BESORKI.

BESSARABIA once the E. division of Moldavia now the most S.W. gov. of European Russia, bounded, S. by the Danube N. and E. by the Dniester and the Black Sea, W. by the Pruth which separates it from Moldavia, and by the Bukovina, part of Austrian Galicia. It thus forms, between two rivers, a strip of territory 872 m. long by 50 of medium breadth, area, 14 256 sq. m. On nearing the maritime borders, it gradually widens, and naturally divides itself into two portions. The portion named by the Tartars *Budjak*,

is composed of a flat, reaching to the sea-shore, between the mouths of the Danube and the lower course of the Dniester and has the common aspect of the Russian steppes, being chiefly suited to the breeding of stock. The N portion presents a hilly country beautifully undulated, covered with noble forests, and extremely fertile. The climate is in general mild, salubrious, and agreeable; the grapes, the finer kinds of fruit, and melons, growing in the open air. The chief mineral product is salt, obtained from lakes in the Buljak. Sulphureous mineral water, bituminous lime, are also found. Bessarabia is divided into six districts—*Ismail Akermann, Bender, Khotin, Khotin, and Tsey.*

In the Buljak territory are met Russians, Gossacks, German Jews, Bulgarians, Swiss vine-dressers, Gypsies with Greek and Armenian traders. The N part of the province, again, is almost entirely inhabited by the Moldavian race, the line of their villages extending along the Dniester to near Akermann.

Bessarabia was the furthest and most productive portion of Moldavia at the beginning of this century and perhaps has more capabilities natural and commercial than any portion of the Russian empire of the same extent. Yet, till very recent years, it has been strangely neglected, being poorly cultivated, and in many places almost deserted. The Prussian Government has established in different parts of the territory colonies of Bulgarians, Germans, Gossacks, and even some heretofore wandering Gypsies. The people of Bessarabia are a simple, hardy, and brave race, but they are less civilized than the rest of the empire. The customs are entirely of the domestic kind. Of what is understood by the term manufactures, there are none. The Moldavian peasants are generally frank, cheerful, and hospitable, but are hated by the Russians to be insolent. Monseigneur de Hall, however, asserts that in the Moldavian villages the houses are usually kept in the neatest order and are carefully surrounded with gardens and fruitful orchards.

Bessarabia once formed the E. limit of the Roman province of Thrace. After various vicissitudes consequent upon the fall of that empire, it was invaded by the Arabian Turks, and became a portion of European Turkey. It was ceded to the Russians by the treaty of Bucharest in 1812. At first, the Bessarabians were allowed to retain their peculiar laws and privileges undisturbed, but misunderstandings soon arose, and since 1819 the administrative institutions of the country have been assimilated to those of the rest of the empire. I 1850, 807-000. BESSASTADIR [Danish: *Bessastad*] a vil and church S W coast of Iceland dist. Gullfingurs Bay on a prominent opposite to and about 3 m S W Hekla Ik to which the school formerly possessed by Bessastad has been recently removed. (Buggesen.)

BERNE is a small town in France particularly in the Basses-de-Brege dep Berthe, 7 m S St. Calais r bank Braye. It has manufactures of coarse cottons, paper and wax candles. Pop 1135. — 2 Berne, dep Puy-de-Dôme on the Coast, 1 m W Issoudun. It lies in the midst of a mountainous district and is built on an immense mass of basaltic lava. All the houses are built of the same material and have in consequence a gloomy appearance. An ancient building in the town of a circular form has been supposed to be the remains of a temple of the sun, but is now probably only a bakery. In the neighbourhood there is an cultivated spring. Pop 698.

BIRSELYMAN, a mountain dist. Mohegan F order a tending between lat. 39° 30' and 20° 30'. It is watered by several rivers, and contains two considerable towns, Devermont and Montpelier, both of which are situated on the coast, at the mouths of rivers bearing respectively the same names.

BETANZAR, a city Spain, Galicia, prov of and 12 m. S.E. Coruña on an eminence, at the base of which flow the rivers Mazon and Mendo subsequently uniting to the N

The houses are well built and commodious, forming several streets, but clean streets and the square, *Campo de la Fama*, contains a handsome edifice, once used as a depository for the archives of Galicia, but now converted into a barracks. Here are also two parish churches, several chapels, a handsome hospital, two endowed schools, two suppressed convents, and an Augustinian monastery on the bank of the Mendo, near the old bridge. Loin fabrics earthenware leather and bread are manufactured considerable quantities of the latter article being exported to Coruña. An annual cattle fair is held in May. Pop 4210.

BETHLEWORTH or BETHLEWORTH par Eng Surrey 8736 ac. Pop. 1994

BETHANIA, or BETHANY, a tn Syria, about 2 m S E Jerusalem on the way to Jericho. It is now a mean village inhabited by a few Turkish families, by whom it is called *Lazari*. In memory of Lazarus who dwelt here, and who was here raised from the dead. The inhabitants of the village show the pretended sites of the houses of Lazarus, of Martha of Simon the leper, and of Mary Magdalene. The alleged tomb of Lazarus, a large excavation in the rock is also shown to the credulous. The situation of Bethania is extremely picturesque.

BETHLEWORTH par Eng Kent 6345 ac. Pop 110.

BETHLEWORTH (UPPER and LOWER) or BETHLEWORTH FOKA and BETHLEWORTH-TAHTA two vils, Palestine, near Gaza, about 9 m N W Jerusalem. They are small but exhibit traces of ancient walls and foundations. They were both fortified by Solomon. The one stands on a hill, and the other at the bottom of a hill and between them is a pass of Beth-hor, which still as in ancient times is the great thoroughfare between the sea coast and Jerusalem.

BETHLEWORTH, a tn Syria, honored above all other towns, having been made the birthplace of our Saviour. It stands 6 m S W Jerusalem on an eminence surrounded by small valleys or depressions, covered with vine and olive-yards. Half the town is in ruins and the other half consists of houses irregularly huddled together. There is much artifice in the walls and several of the windows are encased by gates. The convent, which is separated from the town by a plain, is on a hill, and is occupied by three sets of monks Greek, Armenian and Latin. The church called

THE PRINCIPAL STREET BETHLEHEM. — From Major's Views in Palestine.

St. Mary of Bethlehem and the Church of the Nativity was built by Helen, the mother of Constantine the Great and is said to stand on the spot where our Saviour was born. It is a structure of considerable grandeur though of irregular architecture. The roof, which is of a moderate height, is supported by a double row of marble Corinthian columns. The floor also is of marble, and both the walls and ceiling are covered with half faded pictures, and representations of mosaic, apparently of great antiquity. Beneath the chapel is a cave, which is entered from above by a flight of steps, and is shown by the monks as the Cave of the Nativity. An inscription bears, *Hic de Virgine Maria Jesus Christus natus est*. — Here Jesus Christ was born of the Virgin Mary.

and the chief watch-house. There are here four churches (Calvinistic, Evangelical Lutheran, Catholic and Baptist) and a small Jewish synagogue. The town, moreover possesses two ordinary and two boarding schools (of the latter one being for boys, the other for girls), an orphan hospital, and two hospitals for the sick. Beverwijk has an annual leather market, and formerly had cattle markets the latter have, however, been discontinued. It is much exposed to inundations. Pop. 3200.

BEVILACQUA a vi) Austrian Italy gov. Varese, prov. Verona, 6 m. E. Legnano on the Tugna. Its only object in it deserving of notice is a feudal castle built in 1354. The greater part of the ancient edifice has disappeared but a palace, of modern erection, has been united to what remained and the whole, though much dilapidated during the revolutionary wars, has a very picturesque appearance.

BEWCASILLE par Dag Cumberland 30 000 ac Pop 1326

BEWDLEY a market to and bor. England on of and 14 m. N W Worcester beautifully situated: a lock. River here crossed by an elegant stone bridge. It has two or three spacious paved streets, is lighted with gas, and amply supplied with water. The houses in the principal street are in general well built and of respectable appearance. The townhall is a neat structure of stone. Places of worship—a chapel of ease (a spacious steeple building with a tower and peal of bells) and chapels for Baptists, Wesleyans, Unitarians and a Friends meeting-house. Schools and charities—two grammar-schools, a blue-coat school and several sets of almshouses. Manufactures—comb and rope making tanning and braemaking, some making is also carried on. The corporation consists of a mayor four aldermen and 12 councillors. Bewdley returns a member to the House of Commons. Registered electors (1849) 394. Pop. 3124.

BLX a large vil. Switzerland can Vaud, 26 m. S. S. E. Lausanne, on the Arve, an affluent of the Rhone, and in a mountainous and picturesque country. It is a beautiful village, with substantial stone houses and a tastefully built church and five annual fairs. Near it are saline springs and boxes of rock-salt, the most important source in Switzerland whence salt is derived. Besides, sulphurous springs and baths and marble quarries. In the salt mines beautiful crystals of sodium and carbonate are obtained. Pop. 2554.

BEXWELL par Eng. Norfolk 1877 ac. Pop. 87.

BEYED a lofty mountain Abyssinia prov. Samen k. n. g. dom of Tigre lat. 13° 18' N. lon. 38° 40' E. covered with perpetual snow and believed to be nearly 16 000 ft. high. About 16 m. S. by W. from Mount Beyer is Amba Hal the highest mountain in Abyssinia also covered with perpetual snow.

BEYELAND See Beyerland.

BEYROUT BEIRUT or BAIRUT (anc. Berytus) a seaport in Asiatic Turkey pass. Acre agreeably situated on a promontory which on one side projects about 2 m. into the sea and on the other merges into a beautiful plain backed by the mountains of Lebanon 50 m. W. W. Damascus lat. 33° 40' N. and lon. 35° 25' 15" E. (N). It consists of the town proper and of suburbs far surpassing it in extent. The latter are situated among fine gardens, orchards and groves, and contain a great number of villas and other commodious buildings. The former occupies a kind of shoulder sloping from the N. W. side of the promontory to the shore, where two castellated buildings defend the anchorage on the land side; it is enclosed by a substantial wall of no great height, flanked by large square towers and is entered by six gates. The houses, all of stone, are well built, and generally lofty but have the disadvantage of being much crowded, and arranged in narrow and ill-clean streets. Its principal edifice is a mosque, a spicuous convent, a nursery belonging to the sisters of charity and the monasteries occupied by the different orders and rendered conspicuous by their national flags. The manufactures consist chiefly of silk and cotton goods, the latter produced to some extent by European machinery; the bazars are large and well supplied and the trade—though wanting the benefit of a proper harbour and possessing only an anchorage capacious and deep enough but exposed to W. and N. W. winds—is already extensive and

promises a rapid increase. As the port of Damascus, Beyroul has extensive communications with the interior. Its chief imports are Manchester goods, rice, and hardware. Its exports, the above articles of manufacture, tobacco, gall nuts, madder and oil. It is considered the healthiest town on the coast of Syria, is the residence of a wealthy class of Armenian Christians, and has every appearance of being in a flourishing condition, though possessing little of the splendour for which it was celebrated in early times, and of which some traces still exist in the fragments of granite columns strewn along the shore. It is supposed to be the Beryth of Scripture or Bait Beryth of the Phoenicians. Under the Romans it had a famous school of jurisprudence, and in the 6th century was considered the finest city of Phoenicia. It subsequently experienced disastrous changes and suffered much particularly during the Crusades. Pop. including suburbs at least 30,000.

BEY SHLEHER See Bazarum.

BEZIERA a tn. France, dep. Hérault cap. arrond. of same name 38 m. S. W. Montpellier on a hill on the banks of the Orbe 1 are crossed by a stone bridge and at its mouth of the Languedoc Canal. The situation of the town is celebrated for its beauty and is likewise a deemed healthy. Beziers is surrounded by old walls, but has no gates. The streets are, in general narrow but the houses are tolerably regular and substantially built of stone and the inhabitants boast greatly of the recent improvements made in the town which is a busy thriving place. The general aspect of Beziers, on the Barbours side, is extremely picturesque, as it seems to rise high above the plain. The effect is heightened by the

THE CATHEDRAL, BEZIEERS.—From a drawing done by Andrew French.

old cathedral which stands on the top of the hill and is a regular Gothic structure with a handsome nave an elegant choir in form of a semicircle surrounded with columns of red marble, and well painted windows. On the terrace of the cathedral there is a reservoir to supply the town with water which is raised from the river Orbe by a steam-engine. Besides the cathedral there are two other churches of interest in the town. Beziers has courts of first resort and of commerce a communal college, a public library containing about 5000 volumes, a courthouse formerly the episcopal palace, and an agricultural society. In the vicinity excellent red wines are produced. Brandy-distilling is carried on here to a great extent this being one of the chief markets for that spirit in France. Other manufactures, some of them extensive are, cloth, silk stockings, gloves confectionary chemical stuffs, silk yarn, glass, paper soap leather and casks. It has a considerable trade in wool, grain, oil, soda, verdigris,

almonds, nuts, fruits, and the articles manufactured. In 1909 Bezoara was the seat of a horrible massacre of the Aborigines by a fanatical crusade, headed by the bishop of the district, and the abbot of Orléans. The number of victims has been stated at 60 000 but the abbot himself in a letter to Pope Incent III humbly apologises for not having succeeded in slaying more than 40 000. 1 op 18 922

BEZOARA, a town in Hindustan (Carnatic) presid Madras, 1 hank Alath 42 m. N W Manipalpur lat. 16° 27' N. lon. 80° 4' E. The town which is here crossed by two or three bold projecting mountains, is 8310 ft. wide, and is crossed by a ferry, which forms the great thoroughfare between the Carnatic and the Carnatic. The town contains a well-known Mahometan serai and mosque. The rocks are embellished with picturesque Hinduo pagodas, and cave temples of an inferior description have been formed in the bow of the mountains. Brahmins and Bengalis are the only inhabitants.

BEZOARA, a prov. Java occupying the whole of the E end of that island, bounded W by prov. Passaic, N by the Strait of Madura, E by the Strait of Bali or Bally, and S by the Indian Ocean area 30.2 sq. m. It is volcanic and contains the highest peaks, v. leane area, 101 010 ft. Wide Darun 7456 ft. and Lemongan 5561 ft. and those not volcanoes. Argoero, 830 ft. and Arung 820 ft. The E. part is thickly wooded and y. elds sugar, and in the W. limestone rocks are found. Towards the shore the land is low marshy and unhealthy but over the interior is fertile. Coffee, rice, and sugar are the principal products. Among the trees is the and the upstems. The animal are horses, buffaloes, oxen, sheep and numerous birds. Fish are plentiful on the coast. The province is divided into the districts Probolinggo, Macao and Banoewangi. 1 op 1833 394 061

BEZOARA, a town in Java cap above prov. on a rivulet of same name, at its mouth in the Strait of Madura, 83 m. S W. Bezoara. It is a town on a plain formed by the alluvium of the river and sand thrown up by the sea, the middle of rice fields, and at its foot of high wooded mountains that prevent a free circulation of air. It is a very unhealthy place, even for Java. The stagnant water in the muds devoted to the culture of rice brings at certain seasons, run off the decomposition of vegetable matter and of the thousands of worms and marine animals exposed under a tropical sun, as a stench felt on and around the roads, though vents make it a considerable way off. Intermittent fevers are then prevalent, attacking both natives and Europeans. These last however, hurry round up the river from the town, in a more healthy locality. A good deal of business is done here in the products of the province. The roadstead is secure. The Province

BHADRIKATH or BATHRIKATH (anc. Fodorineika) — 1. A small town in Hindustan prov. Kumaon, in the centre of a narrow valley of the Himalayas on the Alaknanda, 10 290 ft. above the sea, 50 m. N Almorat lat. 30° 43' N lon. 79° 20' E. famous for a Hindu temple, said to possess 100 villages in different parts of Garwal and Kumaon and visited yearly by upwards of 50 000 pilgrims from all parts of India. There are here warm sulphureous and cold springs — 2. A peak of the Himalaya, 17 m. W. the town 23 440 ft. high

BHAG or BACH in Bulochistan dist. Cutch Gun dars 140 m. E. S. E. lat. It is a large place, and surrounded by walls which are in a ruinous state. It has not much trade in the products of the district, but its situation on the caravan route from Shikarpore to Khairat, gives it an important transit trade. 1 op 8000

BHAMO BAZO or BAZO (also Zee-choo-ah—the new mart land no place) a large trading town, Bhamo, the seat of a vicery 1 hank, Iravadi which is here a deep navigable stream. It has 170 m. N N E. Ava, and 15 m. W from the frontier of the Chinese province of Yunnan lat. 24° 9' N lon. 94° 4' E. (Guthrie). This is a modern town, erected for the convenience of water carriages to Ava the old Shan the river Yapa which falls into the Iravadi about 1 m. above the new town of Bhamo. It lies on unequal clay ground, 40 to 50 ft. above the level of the river and is surrounded with a bamboo palisade. The houses, about 2000 in number are large and comfortable those belonging to the

natives being made of reeds thatched with grass, but those belonging to the Chinese are mostly substantially built of stone-stained bricks. The Chinese temple is built, and the streets are paved with the latter material, and the grounds of the temple are surrounded by a neat brick tile-covered wall. Besides the regular inhabitants, who are chiefly Iars, there always numerous strangers in Bhamo—Chinese, Bhamo, and Kachya, who come either as purchasers or in search of work. There is here a good bazaar and the principal merchants are Chinese with an intermixture of Burmese. The principal article of export trade, cotton, is entirely in the hands of the Chinese. Other articles of trade are salt, dried fish, rice, betel-nuts, and other vegetable produce. Irons, tin, ivory, copper pots, carpets, and warm jackets. From China, the imports are, tea, manufactured goods, paper &c. It is the chief entrepot between Bhamo and (Kha), and in many respects may be considered a southern Kachya. The people are wealthy and comfortable, and pay for every thing in silver the export of which however from Bhamo is prohibited. The Palaung, who inhabit the neighbouring hills on the Chinese frontier are remarkably industrious they are good dyers, carpenters and blacksmiths, and make all the swords used in this part of the country.—*Four Bengol Asiatic Soc. April 183*

BHATGONG a city N Hu dootan, Nepal 9 m. E. S. E. Katmandoo, once the seat of an independent chief and said to have formerly contained 19 000 houses. It is now much decayed but is still a favourite residence of the Nepaulian Brahmins. It has a palace, several public buildings, and an extensive bazaar. Pop 19 000

BHATNEER or BHUTNEER a town in Hindustan Rajpootana modern cap of the Bhatia Country and the most E town in the presidency of Bengal, 180 m. W N W Delhi 180 m. N N E Bhojpur lat. 26° 36' N lon. 74° 27' E. It was taken and destroyed by Timurlen in 1398 and in 1807 was again captured by the Rajah of Bhojpur who kept possession of it for so many years.

BHATTAL (THE COUNTRY OF THE) Hindustan prov. Ajmer. Its limits are not fixed but it may be assumed to be bounded N by the river Gar or Ghara S. by the border of the Bikaner Rajah E by Bhurwarra and parts of Jullin and W by the most sandy desert. Bhatmer and Bhatnagar are the chief 11 city towns, but those best known to Europeans are, Futehabad Sirsah Bhatnagar. The fishable and export little produce, and import only white cloth, sugar and salt being almost wholly dependent on pre-stated habits. They were originally shopkeepers whose descendants are still to be found in the Panjab, and E. of the Indus from the sea to Cochin

BHAT (CLIPPORE, or BOELPORE, a dist. Hindustan presid Bengal chiefly in prov. Bihar but the E portion in Bengal between lat 23° 4 and 25° 49' N and lon 86° 15' and 87° 51' E bounded N by districts Tirhoot and Patna E by Patna and Moorshedabad S by Rangpur and Beerbhoom and W by Bihar and Rangpur length N W to S E 133 m. breadth 80 m. area, 8225 sq. m. It lies on both sides of the Ganges, and has several clans and groups of hills forming part of the Vindhya Mountains. The two principal groups are situated respectively near the N E. and N W boundaries of the district. The former close by Rajmahal are pretty well cultivated but the hills to the W are mostly waste and, in many places covered with almost impenetrable forests. A great part of the surface of the level land is mere rock. In other parts, the ground is studded at intervals with fragments of rock, particularly in the W hills, where the plough cannot be employed. It has been estimated that the area of the rocky level ground is upwards of 1700 sq. m. and that of the uncultivable hills, 1250 sq. m. The remaining arable portions consist of rich and productive soil about 3000 sq. m. being under tillage. The chief crops are, wheat, barley, maize, cotton, sugar-cane, and indigo. Of the last large quantities are exported. Potatoes are grown near Monghir and Beglipoor. Small quantities of silk and salt-petre are produced. Thousands of cotton, and silk and cotton mixed fabrics, sugar and domestic articles in general, are the only manufactures. Owing to the want of good roads and bridges, there is little trade. Besides the Ganges which runs through the district for 60 m. the chief rivers are the Gogga and the Gandah. South of the Ganges, the streams

are merely hill torrents, which, though broad are usually fordable during the rainy season, when several of them are deep enough to float down bamboo canoes. The winds from the E. and W. they are also the most violent. The winters are less cold than in the adjoining district of Purneah and the summer season is often oppressively hot. There are a few wild elephants on the hills in the E. part of the country but the most destructive quadruped is the Hanuman baboon (considered by the Hindus nearly as sacred as the cow) which abounds here. Great numbers of pughris, soldiers, and European travellers are constantly passing through the district both by land and water and this forms a principal source of profit to the inhabitants, who furnish travellers with provisions and other necessaries. It is estimated that at certain seasons, no fewer than 100 passage boats stop daily at Rajmahal besides those stopping at 1 mile Golang Balaungang Bhogpur and Mongdur. In the 17th century W Bhagulpore was seized by the Mahometans, and E. by the Bengalees, and until the British ascendency was established security prevailed in both. Pop. 90,000 of which one-third are Mahometans. (Fennell's *Indian Excursions* Martin's *History of East India* Rennell's *History of a Map of Hindostan* Report on East India Affairs Hamilton's *East India Co.*)

BHAGULPORE, (more commonly now *Bhogpur* [the abode of refugees] cap. above that, nest of a governor, meat, resident, and ancient court, best fully situated near a bank, Gaucha 118 m N W Moonsabad lat. 25 18 N lon. 86 35 E. The town is large and finely situated, but is usually built, and even the numerous houses are inconveniently placed. The European houses and Mahometan mosques are handsome buildings, and the monument of Hosam Khan is well worth notice. Bhagulpore has a neat jail and hospital, Arabic college, with about 40 scholars and an English school well attended chiefly by the children of the hill chiefs. There is a small E. Catholic church attended by persons of that religion partly descendants of the Portuguese, and partly by native converts, and a few others. Religion is our own dress and manners. A little N. W. of the town, are two singular round towers, supposed to be of Jain origin, and a mound for the accommodation of the numerous worshippers of this sect who annually visit them. As the traveller approaches the town, the numerous mosques, overtopped by lofty palms and mingled with the hanging foliage of the tamarind tree, give it a very pleasing appearance. The vicinities abound with swelling hills, and is very fertile, well-cultivated and healthy though much infested by snakes, particularly the Cobra de capelle. Pop. chiefly Mahometan, 90,000.

BHAWULI OOR. See BHAWULPOOR.

BHELLA, a race of mountaineers Hindoostani inhabiting the mountains of Candahar and the wild and unsettled country along the bank, Nerwinda, from the plains of Newwar to those of Goojerat. They differ from the other natives in appearance and manners and are believed by some to be the original inhabitants of the country. They are small have dark complexions go almost in a state of nudity constantly armed with bows and arrows and are greatly addicted to thieving and robbery. They are said to be Hindoos of the Brahminical persuasion but they bury their dead eat beef and pork drink spirits of every description and indulge in many other practices which are in direct opposition to the requirements of the Hindoo religion. Many of them in certain districts go down to convert to Mahometanism of which however they seem to know little beyond the name.

BHEERJOON or **BURKHAN** a town, Persia, prov. Khorasan cap. dist. of same name about 180 m S. Mehabad. It is of great antiquity and though much decayed is still a place of considerable importance. It is the seat of Government, and has extensive felt-manufactures. The population has been stated at 30,000 families but Fraser thinks that it does not exceed that number of individuals.

BHOANESHPUR or **BEVAWAWARA** a small town, or village Hindoos prov. Orissa 16 m S. Cuttack, on the site of a very ancient city founded in the seventh century. It consists of a few hundred mud huts. At one extremity of it is the *Burra fallora* or great tank half a mile square, and very deep, with a magnificent temple in the centre.

BHOOG a city Hindoos, prov. Oudeh of which it is the modern cap. on an alluvial plain, S W a fortified town.

hill called Bhogpur, 240 m N W Surat and 35 m N the Gulf of Cutch lat. 23 17 N lon. 69 05 E. It is situated on a rising ground and presents, from a little distance, a picturesque appearance, with its numerous pagodas and brilliant white houses, shining from amidst thick plantations of date-trees. As in the case of most Eastern cities however a nearer view dispels the illusion. The fort of Bhogpur was taken by the British in 1819 and both part and town suffered considerably from an earthquake in June of the same year. West of the city and close to the walls, is a large tank with stairs to the water's edge, and in the centre an elevated terrace, formerly a place of recreation for the chiefs. But the hill has now no ruins. Bhogpur is well famed for the skill of its artists in working gold and silver. Infanticide is frequent in the vicinity. Pop. 30,000. (Boswell's *Researches* *Trans. Bombay Soc.*)

BHOONGHAI A district, India, N. part of Beluch, about lat. 28 10 N lon. 60 E. It contains 10 villages and formerly yielded an annual revenue of Rs. 6000. It has repeatedly changed masters, and in 1843 the British authorities in Beluchistan placed it under Mahomed Khan ruler of its own right as a reward for his zeal and fidelity.

BHOOL ALL or **BOPART**, a territory Jhin loonien, under British protection, prov. Bengal, provs. Malwa and Girdwar, between lat. 22 33 and 23 46 N and lon. 74 40 and 75 20 E bounded N. W. and S. by the Chinese dominions. The whole forms a natural boundary between the whole extent of the front length, S. to W. 140 m breadth, N. to S. 81 m area, 6784 sq m. The surface is uneven and full of jungles and is traversed chiefly from W. to E. by a hill tract forming part of the Vindhya Mountains. The soil is generally fertile especially in the valleys, and the wheat, maize, millet, rice and other vegetable productions peculiar to Central India. Rice is not largely cultivated but sugar tobacco, ginger and cotton, are raised in quantities exceeding the home consumption, and exchanged for salt and manufactured goods. The district is well watered by the Nerbudda, Betwa, and other minor streams. The dominant people are Patanas, established here by Aurangzeb, in the early part of the 18th century. In 1812 the Tamer Mahomed made a gallant and successful defence against the combined forces of Scindia the Rajah of Nagpur and the Pindarries but on his death in 1816 the British took Bhool under their protection conferring on Mahomed's son, the Tamer Mahomed Khan, a considerable part of the present territory. The country is well cultivated, and is a peaceful and prosperous one. Population estimated at 12,875.

BHOUL A.L.L., a Hindoos cap. of above territory on the boundary between M.W. and G.W. lat. 10 10 N lon. 73 15 E lon. 72 25 E. It is surrounded by a stone wall and has on the N. W. a native fort or place with square towers, all much dilapidated. F. and W. of it is town are two large tanks the source of the rivers Bhoi and Purna.

BHOULAV See BHOULAV.

BHOWAUGULI, a seaport town, Hindoos, prov. Co. Jowar, W. side of the Gulf of (Arabia) 60 m W. Barocha lat. 21 40 N lon. 72 10 E and the chief mart of import and export for Ahmedabad, &c. The trade with Arabia is considerable.

BHURTOOR a native state Hindoos, prov. E. by Agra, and S. by the Rajput states extending from lat. 28 43 to 27 40 N lon. 76 54 to 77 49 E area, 1978 sq m. The chief towns are Bhurtoor (the cap. lat. Deeg) Bagra Ham, Chaudhary Gopalghar and Kurnava. Some parts of the country are low and flat, as to be completely inundated during the rainy season. The soil is generally light and sandy but well watered, and well cultivated. The chief productions are corn cotton, and sugar-balls also are obtained from low springs. From the country not being well wooded fuel is scarce, and consequently high priced. The villages are in good condition and indicate an industrious population. There are numerous wells constructed by building the masonry first, and afterwards underground and sinking it. The paoonik is an object of such veneration here, that it is dangerous to kill it.

About A.D. 1700 the Jats settled in this district, having emigrated from the banks of the Indus, in the lower part of the province of Mooltan; they assumed the title of the military caste and their chief that of Rajah. In 1768, the territory was at its greatest extent stretching along the course of the

river Jamnah, from near Delhi to Etawah but in 180, Nandji Khan conquered it and reduced it to an insignificant area, disestablishing in proportion the revenue of the Rajah. After various changes Baldev Singh in 1824, ascended the throne of his father Ramesh, and his son, Bulwant Singh was recognised by the British in 1825 as legitimate Rajah. In 1826 Darjeet Sah attempted to sweep the throne of the young Rajah and have reinstated his interference was defeated, and himself and thirty sent prisoners to Allahabad. Since that time, Bhutpoor has been under British protection.

BHUT POOR is a hill station in the N.W. corner of the Punjab, 110 m. S.W. Delhi and 30 m. E. Agra. lat. 27° 12' N lon. 77° 50' E. It is about 4 m. in extent and was formerly strongly fortified but its defences have been long demolished and it is now surrounded by a low wall only. The streets, as in all Eastern towns, are extremely narrow and dirty but are full of life and bustle. The houses are of stone and two or three stories in height. At the N.W. part of the town is the fort, in the form of a pentagon. It consists of walls of heavy stone 60 ft. high, reckoning from the bed of the moat, which is 80 ft. deep and is full of water in which are a number of tortoises. Within the walls is the Rajah's palace, situated on

THE RAJAH'S PALACE, BHUTPOOR.—From an original drawing, by Capt. R. Smith, 18th Regiment.

an eminence, surrounded with pretty flower-gardens and fountains. The building is of red and yellow freestone, in the Mogul style, and has a singularly picturesque appearance not a little heightened by the fine trees with which it is encompassed. Bhutpoor derives no small interest from having been the scene of two sieges, in one of which the flower of the British army was destroyed. The first occurred on January 1, 1803 when the place was invested by Lord Lake, and taken after a siege of upwards of 14 weeks, with a loss to the British, 10 killed and wounded, of 2100 men. The second took place in January 1826, when it was again taken, but with a loss on this occasion, of no more than 108 killed, and 446 wounded. Standing on a plain, Bhutpoor is seen from a great distance in approaching it, luxuriant fields of wheat and barley are seen on every side. Pop. about 100,000.

BHUTNIP

BIAFRA (Bhur or) Africa, Gulf of Guinea, having Cape Lopez on the N., and Cape Formosa on the S. distance from each other 390 m. The shores of the light extend to about 600 m. between lat. 0° and 4° N and lon. 6° and 10° E. The N. African and Guinean current terminates in it is light, coming slightly in contact with the equatorial current before entering it. There are three islands in the light, Fernando Po, Prince's Island and St. Thomas's and it receives the Old Calabar river the Cameroons and some others.

BIAGIO (By), or St. Biase, a town in Italy, Naples, prov. Caserta 23 m. W. Nola. In the vicinity good wine is produced and there are some mineral springs but the situation of the town is unhealthy. It suffered from an earthquake in 1783. Pop. 3350.

BIALA.—A town in Austrian Silesia, Galizia, gov. Lemberg on the frontier of Mikaya, circle of, and 18 m. S.W. Wadowice, on the Biala. It has manufactures of woollens, linens, nails, and iron utensils. It has been a free town since 1793, and was made capital of the circle by the Confederation of

Bar. Pop. 4000.—A town in Poland, gov. Polesian, 63 m. E. & S.E. Siedlce, on the S. river. It contains the fine castle of the Radzwill family. Pop. 8600.

BIALYSTOK, or Bialostok.—1 A prov. Russia in Europe, formerly belonging to Poland, but ceded to Russia by the treaty of Tilsit, in 1807. It is bounded, N. & S. by the Grodno territory and N. & W. by Poland and is divided into four districts—Bialystok, Sokolka, Bialsk, and Drohobysk. It covers an area of nearly 8400 sq. m. The surface is flat and marshy at intervals but is in general fertile; and a considerable portion is covered with fine forests, those belonging to the Crown comprising about 250,000 acres. In these forests, bears and wolves are not uncommon, and game abounds. The agricultural produce includes rye, wheat, oats, barley, flax, hemp, and hops. Its manufactures comprise coarse cloth, linen, leather soap, &c. The chief exports are grain, flax, hemp, hops, tallow, and timber. Pop. (the majority R. Catholic) 260,044.—2 A town in Russia, gov. of above prov. on the Bialy, 4 m. S.W. Grodno. It is a well built, handsome town. In the east of a criminal court, and of a civil court of appeal and contains a gymnasium and seven other schools, with about 500 pupils. It has some manufactures employing about 700 hands also a busy trade. Here are the fine dwelling and domains formerly possessed by the Counts of Bialostok, since called The Versailles of Poland. Pop. (1860), 15,837.

BIANA, or BIANA, a town in Hindoostan, prov. of and 32 m. S.W. Agra, dist. Bhutpoor on the Banpura lat. 26° 56' N lon. 77° 14' E. situated at the foot of a hill. It was formerly the capital of the province of Agra, and is still a considerable town containing large stone buildings, and a spacious and flourishing bazaar. In the environs may be traced the remains of a more extensive city.

BIANCAVILLA, a town in Sicily dist. of and 14 m. N.W. Catania. It stands on the S.W. slope of Mount Ima, from which it is about 10 m. distant, and is supposed to occupy the site of the ancient Etna or Inca. It has some trade in grain, silk and cotton. Pop. about 6000.

BIANCO (white) four capes, Mediterranean Sea.—1 A cape Tunisia the most N. point of Africa lat. 37° 30' N lon. 9° 47' E. 2 A cape, Cyprus lat. 34° 29' 18" N lon. 33° 25' 12" E. 3 A cape, Jordan Islands, the most S. point of Corfu lat. 39° 21' 12" N lon. 20° 7' 45" E. 4 A cape at Sicily S.W. coast lat. 38° 22' 24" N lon. 12° 15' 30" E. (n.)

BIAK, a town in Spain Valencia, prov. of and 20 m. N. by W. Alicante, in a valley of same name. It has steep but generally wide and well paved streets, two squares, a parish church, townhouse, containing the prison an hospital, poor-house, endowed school, and stonework. The inhabitants are engaged in agriculture, weaving woollen fabrics, and in cutting tombstones &c., and manufacturing earthenware. Two mines of copper and iron are wrought in the neighbourhood, and oil made, and excellent honey produced. Pop. 2963.

BIARRITZ, an important seaport in France, dep. Basses Pyrénées, 4 m. from Bayonne. There is here a light-house, situated on a point called St. Martin de Biarritz; lat. 43° 30' N lon. 1° 33' W. The light is revolving and visible from a distance of 16 m. The town is much frequented by the inhabitants of Bayonne as a watering-place. Pop. 1897.

BIASCA or BALESCA, a vil. and par. Switzerland, cant. Tessin, on the Lago, 6 m. N. Bellinzona. It contains a very ancient church, from which a series of chapels forming what is called a Via Crucis, leads up to the chapel of St. Peter, commanding a fine view. In 1513 a mass of earth and rock, thrown down by an earthquake, dammed up the Lago, which soon formed an extensive lake. Two years after the barrier gave way and the flood carried devastation into the district. Biasca, then a flourishing place, was almost destroyed, and has never recovered. Pop. 1912.

BIBBIENA a tn. and com. Tuscan, prov. of, and 11 m. N. Arezzo, near l. bank, Arno, commanded by a castle of considerable strength and extent and having two churches, a townhouse, theatre, several palaces, an academy of sciences, and other educational institutions. Some grain and fruits are grown and a considerable number of sheep and cattle reared.

Pop. 6079

BIBBONA a tn. and com. Tuscan, prov. of, and 24 m. S. by E. Pisa, 16 m. N. Cambray, on a rocky N. W. Mount Gherardese. It possesses a spacious square, and handsome church and is commanded by a castle, defended by a wall flanked with towers and surrounded by a deep fosse. Here are extensive ironworks, supplied with metal from the island of Elba. The commune is fertile in grain, and is rich in pastures. Pop. 1506

BIBBACH, a tn. Württemberg circle Danube, on the River 25 m. S. S. W. Ulm. It is surrounded by walls has a townhouse five churches numerous educational institutions and an hospital. It carries on an active business in skin dressing tanning and brewing and in the manufacture of strong woollen fabrics. It has also a considerable trade in grain. In the vicinity is Oberholzhelm the birthplace of Wieland. The French under Marmont, defeated the Austrians near Bibbach in 1796. Pop. 4687—Several other places in Germany have the same name.

BIBIANA a vil. Italian States, Piedmont, prov. Turin and about 8 m. S. W. Pinerolo on the Fobos. It contains a parish church, a convent, and a castle, and has two annual fairs. Pop. 2500

BIBLIS, a tn. Hesse Darmstadt, prov. Starkenburg, r. bank, Wachsen 15 m. S. W. Darmstadt with a R. Catholic parish church. Pop. 2950.

BICANERE BUCANERE, or BUCANAN, a principality in Hindoostan prov. Ajmeer of which it occupies the centre. It lies chiefly within lat. 27° and 29° N. and has, to the great Ajmeer desert and the Bhatty country. S. the Joudpoor and Jeypoor dominions, E. the British district Marwar and the Shekawaty country and W. Jewelmere and the great desert into which it merges but like all other states in this desert of moving sand, its limits are not easily defined and are continually changing. Area, supposed to be about 18,000 sq. m. The country is somewhat elevated but the surface is flat and the soil which is a light brown sand, absorbs the rain as soon as it falls. Various kinds of Indian pulses are almost the only produce of the soil. Artificial irrigation must, in almost all cases, be resorted to, in order to obtain a crop of any kind. Here are cattle, of a very inferior kind are the sole exports; while rice sugar opium and indigo are the principal imports. This is the poorest of the Rajpoot principalities, and in 1818 was admitted within the pale of British protection. The capital is Bicanere. Pop. 639,250

BICANERE, or BUCANERE, a fortified tn. W. Hindoostan prov. Ajmeer cap. principality of same name, 240 m. W. by S. Delhi lat. 27° 57' N. lon. 73° 30' E. It stands within a tract of desolate country and has a magnificent appearance at a distance, which is not borne out by a closer inspection. It is surrounded by a wall, with numerous round towers and Indian battlements. There are some elevated houses and temples, one of which has a lofty spire but the great majority of the dwellings are more huts, with mud walls, painted red. The citadel a confused assemblage of towers and battlements about a quarter of a mile square, and surrounded by a wall 30 ft. high, is regarded by the natives as a place of great strength. In it is a well 900 ft. deep and 20 ft. diameter. There are generally several Europeans in the service of the Rajah. Pop. vaguely estimated at 40,000

BICCARI a tn. Italy Naples prov. and 13 m. W. S. W. Foggia, on the E. declivity of the Apennines. It has a collegiate, and several other churches. Large fairs are held here. Pop. 2460

BICENTER, a market tn. and par. England co. Oxford The town stands on a plain, 54 m. N. W. London and 11 m. N. E. Oxford. It consists of three principal streets, two of them straight, and all wall kept houses mostly of stone and all well built. The town is lighted with gas, well supplied with water and has been much improved of late by gassing and draining. The churches are, the parish church, a spacious structure with a lofty tower and peal of bells, rebuilt in

1409 and containing many interesting monuments and antique sculptures; an Independent chapel and Wesleyan chapel both handsome edifices. The principal schools are, the national school, for girls only; the blue-coat school founded 1721 for 80 boys the diocesan school two private schools for girls, and two for boys, and several sabbath-schools, two of which are endowed. There are also several benevolent and charitable societies and associations the most remarkable of which is an ancient institution called The Town Stock, for the relief of deservant parolarians who have been formerly in good circumstances. A savings-bank was established in 1843. The manufacture of leather slippers and soaking and the combing of wool, were formerly carried on here to a considerable extent but one only of these branches (the manufacture of soaking) now remains, and that only on a very small scale. Ale is brewed to some extent, and has obtained considerable celebrity its excellence being supposed to arise from the purity of the water. Area of par. 2680 ac. Pop. 2654.—Local Correspondent

BIDASSOA or **VIDASSA** [Basque] way to the west, or two streams] a river Spain, about 45 m. long the last 12 of which form the boundary between France and Spain. It rises in the mountains of Spanish Navarre, and after various changes of direction falls into the Bay of Biscay near Fontarabie. In former times, Spain claimed not only the entire river but so much of its banks, on the French side, as its waters curved at last tide. This difference was finally settled by each country containing itself with its own share. Near Irun, there is a small island in the middle of the stream called the Island of Phasanas on which, being a sort of neutral ground, Louis XI and Henry IV met in 1493. Here, also a peace was concluded between France and Spain in 1654 and here, again, in 1690 Cardinal Mazarin met Louis de Haro and arranged the marriage between the daughter of Philip IV and Louis XIV.

BIDEFORD a market tn. river port, and par. England co. Devon lun. Shebbear The town is 44 m. N. Plymouth lat. 51° 4' 30" N. lon. 4° 12' W. (2.) picturesque situation on both sides the Torridge the principal portion being on the W. side on a bold acclivity 3 m. from the sea. A handsome stone bridge of 24 arches, and 677 ft. in length, connects the two divisions of the town. There are six principal streets, all well paved, and which, from their being on a slope, are always clean and dry houses mostly of stone, and generally well built. The town is abundantly supplied with water from numerous springs there being scarcely a house without a pump and it is well lighted with gas. Near the centre is a spacious market-place and, on the margin of the river, a commodious quay. The principal public edifice buildings are the town and guild halls, both extremely plain. There are six different places of worship including the parish church an endowed grammar-school, two other public schools, and two private seminaries, and a number of minor charities also

a dispensary (lately established) a library and scientific institution, with a good library. The woollen manufactures, formerly considerable, have been discontinued. The most important manufactures now are coarse earthenware, and pottery of a fine description, ropes, sailcloth, shipbuilding and the various branches connected therewith. A calum mine, also has lately opened which promises to form a considerable addition to the ordinary trade of the town. It is for the most part a extensive shipping trade, having, at the close of the 17th century more ships engaged in the Newfoundland trade than any port in England, except London and Tupaiah. It is also said that it imported more tobacco in some years of last century than the metropolis. The trade of the port is still considerable. The number of vessels registered, in the year ending December 1847 was 150 tons. 12,436. External during the same period 572 tons. 26,570.—cleared 230 tons. 12,913. The exports consist chiefly of timber, hemp, tallow, wax, fruit, cattle, coal, iron, flagstones, &c. The principal export is agricultural produce. The amount of customs received in 184 was £3,50. By the municipal act of 1835 the government of the town is vested in a mayor four aldermen 13 councillors a recorder and several borough magistrates. The scenery around the town is singularly beautiful and the climate is salubrious. Area of par 3149 ac. Pop. 57 b of in 4830 —(Local Correspondent).

BIDFORD par E g. Warr ck 7 40 ac 1 p. 153
BIDFORD, a small river France an affluent of the Adour into which it falls 16 m. W N W Bayonne. It rises in the Pyrenees, near St. Jean l'ed de Port, dep. Basses Pyrenees, and by means of the tide is navigable for a small part of its course which in all does not exceed 60 m. The chief article of traffic upon it is heavy stone, for Bayonne, from the quarries of Camet and Bidache.

BIDSCHOW (Rus) or New Bidschow Bohem. Aow-Bidchow) a tn. Bohemia, circle of same name, 45 m. E N E France on the Casidina, near a small lake. It is very old and has a church a synagogue a townhouse and an hospital. The inhabitants live chiefly by agriculture and weaving. The cattle raised here are of a superior kind. Topaz, chalcedony agates, and Jasper have been found in the environs. Pop. 7891 of whom 580 are Jews.—The castle is bounded N by Prussian Silesia, W by circ. Dusseldorf, S by (Brunswick, Meissen, and Chemnitz, and E. by Kötteritz area 744 geo. sq m. The surface consists of three marked descriptions—the highlands, belonging to the Rungsbirge, and containing several ridges of considerable height, broken by narrow valleys the midlands, exhibiting generally an undulating surface and the plains. The summits of the mountain are granite, and their sides mica-slate the lower hills are chiefly of red sandstone, in which are some appearances of coal. The plains have usually a substratum of chalk covered by a deep alluvium. The principal rivers are the Elbe, which rises in the circle the inner the Miluta, and the Cididina. The minerals are of no importance. The hilly districts are in general well wooded, and the lower fertile producing all kinds of corn and pulse. The principal fruits are cherries and plums. Excepting in the lower valleys, the climate is unfavourable to agriculture consequently the inhabitants are chiefly engaged in trade and in the manufacture of cotton, linen, glass, iron, paper &c. Pop. 251,414.

BUSTONE, par Eng. Chester 4244 m. Pop. 1533
BIEBEICH or BIEBERACH a tn. duchy of Nassau, 20 m W S W Frankfurt prettily situated, r bank Rhine, which here forms the boundary between Nassau and Hesse-Darmstadt. It is the usual residence of the Duke whose palace is a large and handsome edifice, surrounded by gardens and an extensive park. The railway from Wiesbaden to Mainz has a station at Bieberich. There is here also a quay at which coal can be had and unloaded. The weaving and polishing of marble is carried on to some extent. Pop. 8000.

BIEBERKOPF a tn. Hesse-Darmstadt, on the Lahn, 23 m. N N W Gießen with ironworks, and considerable manufacture of cloth serge, and hosiery Pop. 3290
BIEL. See BERNEX.

BIELLA, the name of numerous small German villages, particularly in Bohemia.

BIELF or BIELLA a tn. Nassau, cap dist. of same name, gov of, and 63 m. S W Tula. 1 bank, Oka; lat. 58° 45' N

lon. 26° E E. It is the second town of the government, and gives name to the Greek bishopric of Tula-and-Biel. It has manufactures of soap, leather and hardware. Leather-dressing and tallow-melting are carried on, and a considerable general trade. Pop. 8000.

BIELFELD a tn. Prussian prov. Westphalia, circle of same name, 38 m. R. Münster. It has walls with ramparts, along which apollon walls have been formed; several R. Catholic and Protestant churches, a synagogue, and an orphan asylum with a fine old castle, now turned into a prison. It has extensive manufactures of thread and linen; the last the best made in Germany and is celebrated, also, for its tobacco pipes made of carbonated magnesia, and called macramas. Pop. 5800.—The circle, area, 80 geo. sq m. is of far greater importance than its extent would seem to indicate. The inhabitants are remarkable for their industry. The chief agricultural products are hemp and flax but bleaching, and the weaving of common linen and damask, are carried on to an extent which makes Bielefeld one of the most important manufacturing districts of Prussia. The other industrial products are ironmongery tobacco, woollen stuffs, leather soap and yarn. Pop. 45,903.

BIELGOROD a tn. Russia, cap dist. of same name, gov of, and 76 m. S. Kowno, on the Dniester. lat. 50° 40' N lon. 26° 30' E. It comprises, properly speaking, two towns, the old and new with three suburbs the houses are nearly all of wood. It is the seat of an archbishop, contains 13 churches and two monasteries and has three very important fairs, of a week each. Its name, which in Russian means 'the town is derived from a chalk hill on the vicinity. The environs are noted for producing fine fruits. 1 op. 8931

BIELITZ a tn. Austrian Russia, gov. Boline, circle of, and 18 m. N E Teschen 45 m. W S W Crecow 1 bank Rhine, which divides Silesia from Galicia. A stone bridge connects it with the town of Biela in Galicia. It has extensive manufactures of woollens and linens and dyeworks and printworks of considerable repute. A large amount of business in manufactures is done with Hungary Italy Poland, Russia, and in Hungarian wine sent to Prussia, Silesia, and Galicia, from which last province it in return receives rock-salt. Here are several charitable institutions, and a Protestant convent having under its jurisdiction Moravia and Austrian Silesia. The town was totally destroyed by fire in 1808. In 1751 Bielitz was erected by the Emperor Francis I. into a duchy and has since belonged to the prince Salkowsky who has here a castle converted into public offices, with a handsome park attached. Pop. of the duchy about 10,000 of the tn 6000

BIELITZ, two tns. Russia.—1 Bielitz (Now) gov. Mohilew at the confluence of the Mien and Boy with the Dniester 68 m. N Tchernigov. Pop. 3000.—2 Bielitz gov. of, and 55 m. E Grodno, r bank, Mienas. Pop. 900.

BIELLA (Latin Biogelia) a tn. kingdom of Italy Piedmont formerly cap. prov. of same name, now in prov. and 36 m. N N E Turin. It is the seat of a bishop and of a district court of justice; and contains a cathedral three parish churches, eight convents and monasteries, two hospitals and a college. Manufactures.—cloth serge linen and stockings, silk wool, and paper and carries on some trade in silk, oil and wood. Pop. 7700.—The province of Biella is 20 to long and 16 m. broad mountainous, formed by spurs of the Pennine Alps and has no rivers except some small affluents of the Po. It produces the best wine in Piedmont, departs a large number of cattle, and yields copper and iron. The inhabitants are industrious, and carry on an active trade. The province is divided into 10 mandements, which are again subdivided into 78 communes. Pop. 94,955
BIELON a tn. Russia, gov. of, and 80 m. N N E Smolensk, on the Mga or Oshna. It has a considerable trade, particularly in grain. Pop. 8476.

BIELPOLJE a tn. Russia gov. of, and 108 m. N W Kharkof in the Vire. It contains eight churches, has several large distilleries, and a considerable general trade. Pop. 9600

BIELO-OZERO (White Lake) a lake, Russia, gov. Novgorod, about 340 m. E St. Petersburg 25 m. long by 20 broad. Several streams flow into it and it sends its waters by the Volkhov into the Volga. It is very deep, abounds in fish and, by means of canals, communicates with the Onega, Sekona, and Dwina.

BIELOZERUK a tn Russia, esp. dist. of same name
gov Nizhny Novgorod, S. side of Lake Bielo-Ozero; agreeably situated
on a hill, and possessing a pure, healthy air. Indifferently
built of wood. It contains 16 churches, and a summary list
chief manufactures is candles and it has some trade in pitch,
tallow, cattle, corn, and especially fish. Biulozeruk is an
ancient city and was capital of the old principality of the same
name. It was taken and ravaged by the Lithuanians in 1678
Pop. (1849) 4785.

BIELSKA a tn. Russia, esp. chief. of same name, gov. of and 86 m. S Bialystok, on the Biala. It is well built, and paved; has a fine custom-house, and was once capital of a Polish palatinate. In 1881 the Poles gained a victory here over the Russians. Pop. (1850) 2595

BORN (German: *Doorn*) is a town and lake, Switzerland, in Bern. The town is situated at the N end of the lake at the foot of the Jura Mountains 16 m. N.W. Born. It is surrounded by ancient walls and watch-towers is well built, approached by several avenues. It has a parish church, townhouse, public library, college, and hospital, with extensive tanneries, dyeworks, and a cotton mill. The transit trade is considerable, from several main roads meeting at the town. Six stars are held to the year 1 *loper* (principally Protestants) 4248 — THE LAKE (German, *Bornsee*) is unglacial, N.P. to S.W. 10 m. greatest breadth 5 m. It stands 1400 ft. above the level of the sea, and has a depth of about 80 fathoms. It lies S.R. lower than Lake Vendelhut, whose superfluous waters it receives by the Tünel and afterwards by the *Wasserfall* (waterfall) some 1000 ft. above the town. The scenery around is beautiful, but not bold. One of the most interesting objects is its little islet of St. Pierre, where S. J. Rousseau took up his residence for two months, in 1770, to avoid machinery persecution.

BIFENTIA a tn and com Tuscany prov Pisa, 2½ mi N E. Vico Pisano at the ft. base of Mount Pisano. The town is well built, and has a square and a parish church in which are some good pictures. Pop 2,377

BIENVENIDA, a m. Spain Extremadura, prov of, and
49 m. S.E. Badajoz in a fertile plain. It has a church, a
large and substantial building a chapel of ease approached
by a fine avenue of poplars a townhouse, prison, two schools,
a storehouse, and cemetery. Some little trade is done in
wine, fruits and wool. Pop. 2800. (Mador.)

BIEQUE, YIRQUO, or CRAB ISLAND one of the Virgin Islands, W Indies lat. 18° 7' N lon 63° 54' W (n. i.) It is uninhabited and is about 16 m. long E. and W. and 4 broad N. to S. low towards the E. and covered with traces of bushes and towards the W. rising to an elevation of 800 to 800 ft. It has no harbour but has some good roads. The British, Danes, and Spaniards have the right of cutting wood and felling here but none of them are allowed to form settlements on the island.

BIGORRE [anc. *Bigorren*]. France. A dist. of the former prov. of Gasconne, of which the cap. was Tarbes. It now forms almost the whole of dep. Hautes Pyrénées.

BIHARS or **BHARACH** a fortress, Turkey in Europe, prov. Croatia, on an island in the Urmu or Umanly about 60 m. E the Adriatic. It is one of the strongest places in N. Turkey and its possession was often keenly contested during the Turkish wars. It consists of old Hungarian stone buildings, and more modern Turkish houses the latter looking as if they would tumble to pieces. A mosque has recently been constructed, and a Christian church which once stood without the walls is now ruined by its site and ruins. The Turkish garrison is small and their condition, though the Turks have so completely destroyed the building, that not a stone is standing. Owing to the lowness of the situation the town is unhealthy and the inhabitants have a deadly look. Pop. 3000.—(Faxon's *Adriatic*.)

BIHAR, a co. Hungary carols, beyond the Theiss, area, 3700 geo. sq m Its capital, which straddles near its centre, is Grosswardein. The E side is controlled by the Carpathians

HIHAR, a co. Hungary carols, beyond the Theiss, area, 3700 geo. sq m Its capital, which straddles near its centre, is Grosswardein. The E side is controlled by the Carpathians

Mountains, the W stretches out into an extensive plain. It is watered by the Acora, the Black Acora, and the Borestry. All are subject to great overflows which have covered the plains with lakes and marishes, and made them very unhealthy. A clearer air and better climate are found in the upper grounds, and also in the valley of the Korah which is of great extent and very beautiful. The country is on the whole fertile, producing large crops of wheat and summer corn, about 120,000 pipes of wine, and 600,000 tons of hay. The higher grounds are well the plains but indifferently wooded. The minerals are numerous and valuable. Lead and silver are found in small quantities copper lead and iron, in abundance. The woods are well supplied with game, and the rivers and lakes teem with fish. Crayfish also, and land tortoises, are found in great numbers. There are several mineral springs and baths. The chief employment of the inhabitants is in pursuits connected with agriculture. There does not seem to be any manufactures. Pop. 459,200

BILHAR, a market in Hungary above eo. to which it gives its name, within 8 m. of Grosswardin, with a Protestant church. Pop. 2440

BILKE *See BIRKE*

BILJANACUR (Biljanagara)—the city of triumph) a city Hindoostan of great antiquity and once of great importance, but now nearly uninhabited, and little more than a heap of ruins spread Madras, prov. Belajoor, 8 m. N. of Tombedra. 30 m. N. W. Bilhar lat. 15° 15' N. lon. 76° 37' E. It stands in a plain surrounded by enormous masses of granite in some places assuming the appearance of hills, and in others, presenting detached blocks heaped together in the most extraordinary manner, sometimes obstructing all passage excepting through the narrow winding defiles which separate the fragments. N. and W. the city is bounded by the Tombedra, and S. E. it is enclosed partly by natural barriers and partly by strong stone walls the whole nearly 8 m. in extent. The main streets, which often follow the tortuous passages between the stone blocks are paved with large flags of granite, and are intersected at intervals by a series of small, but the remains of numerous temples, and public and private buildings exhibit the pure style of Hindoo architecture. There is a continued succession of paved streets, now almost unhabited for 3 m. W. from the Tombedra ferry. Near the W. extremity and turning a street 90 ft. wide is a magnificent temple dedicated to Mahadeva (the great god) it is surrounded by numerous cells for devotees facing the E. is a pyramidal portion, about 160 ft. high, divided into 10 stories. The attendant Brahmans are an union and the establishment is well endowed. The street leading to this temple is lined by a row of handsome stone buildings, decorated with sculptures and appropriated to the use of pilgrims during the annual festival. Another temple near the centre of the city is dedicated to Vittala (an incarnation of Vishnu) and occupies an area of about 400 by 200 ft. enclosed by cells, and entered through a painted pyramidal portion. The temple of Rama is known by its pillars of black boulders to rest with myrtle leaf sculptures of the main deity, and near the ferry among a group of picturesque temples, is a gigantic figure of Himmaman the huge monkey carved in baso-relievo. Besides these there are the ruins of numerous other pagodas, temples, &c. Biljanagar was built between 1236 and 1243, by two brothers, named Ala Herryhar and Junes Herryhar who ruled here in succession the former until 1350 and the latter until 1378. In 1564 it was taken, and completely sacked, by a confederation of Mahomedan rajahs which caused it to be almost totally deserted.—Hamilton's East India Gazette. *See BILJANAGAR.*

BILJA PUR, or **VIJAYA PURA**. *See BILJANAGAR.*

BILJALIAK, or **VEIKARA**, a tn. Chakras, 8 m. N. of Jaulm, 20 m. S.E. Haranagar with nothing in it worthy of a place except a large bazaar. Next to the capital it is the largest town in the valley. Over the river here is a wooden bridge.

BILJNFE, or **KHURSTAVANT** a principality Hindoostan, on some more, prov. Bengal adj. along Amara consisting partly of independent territory and partly of lands under the British jurisdiction. It lies on both sides of the Pichmanga, and consists chiefly of a tract country watered by the affluents of that river. The soil is suited for the production of rice (the chief crop) wheat, barley, mustard, legumes, the

betel, sugar-cane, and mulberry. Many of the villages are stationary, and much nearer than those of Bengal and many have plantations of betel-nut and sugar-cane; but numbers of cultivators are migratory and, on the least dispute, withdraw into the territories of Assam and Bochar. The inhabitants are divided into two castes, the Bhaktar, or worshippers of Krishna, and the Gorman, who eat pork, and indulge in strong drink.—Barua, the capital, is 810 m. N. E. Chaitanya lat. 26° 35' N. lon. 90° 51' E. It is surrounded by a brick wall has some small brick temples, and a few thatched huts and is the residence of the rajah.

BIJORE. *See BAZORE.*

BILBAO () a city Spain, cap. prov. Biscay is a fertile plain surrounded by mountains on all sides, except towards the sea, r. bank, Nervion, 26 m. N. Vittoria lat. 43° 15' 40' N. lon. 3° 54' W. (n.) The appearance of the town, when viewed from any of the heights around it is very picturesque. It is generally well built. The houses are usually of three stories, with ornamental facades; and some of the principal streets are straight and spacious, though the majority of them are narrow and winding. All of them, however, are remarkably clean and well paved. There are, properly only two squares in the town, but both of them are handsome. The principal buildings are, the four parish churches, several monasteries and convents, the hospital, a magnificent stone building supported by voluntary subscription, and containing 800 beds, the custom-house, townhall, court-houses, the theatre, and slaughter-house. The last, which serves also as the fish market, is a fine building of the Tuscan order and is kept perfectly clean by a copious fountain, which is constantly flowing. The river is crossed by three bridges one of them

THE CHURCH OF SAN ANTONIO ABAD, BILBAO.
From the Plaza Arriaga by M. M. M.

a very handsome suspension bridge of recent construction and along its banks is a wide and pleasant promenade, well planted with oak and lime trees. The chief educational establishments are the general college of Biscay. There is also a Latin five public, and numerous private schools. Bilbao is abundantly well supplied with water which is conveyed in stone tunnels under the street and, in order that these may not be disturbed wheeled carriages are absolutely prohibited all the traffic being carried on on horseback, or by means of sledges. The chief manufactures are, woollen and linen goods, silk, iron and copper ware, hats, paper and soap. Ship and boat building is also extensively carried on. The port of Bilbao is reached by the tide, but does not admit vessels of more than 70 tons. The trade, however, is still important, though much less so than formerly. Marine wool used to be the staple export, but has suffered much by the competition of the fine wools of Saxony. One of the chief imports is dried oak which is transmitted to all parts of the interior. Bilbao was twice besieged by the Carlists without success, in 1836. The first siege was conducted by the celebrated Zumalacarraga who received a death-wound. Pop. 10,324. **BILBOROUGH** par Eng. North 1090 so. Pop. 263. **BILBROOK** par Eng. city of York Almsy 1889 so. Pop. 242.

BILDESTONE, or **BILTON** a decayed market tn. and par. England co. Bedford. The town is 11 m. W. N. W. Ipewich. The parish church on an elevation at a short distance W. the town is a spacious and handsome structure. There is also a Baptist chapel here. Bildestone was at one time

noted for its manufacture of blue cloth and blankets, but both have fallen into decay. The market which used to be held here has been discontinued for some time. Area of par 1430 sq. Pop. 818. —(Local Correspondent.)

BILEDULGERID an extensive and little-known tract, N Africa, lying between the S. declivity of Atlas and the Great Desert, and between Fuzan on the E. and Cape Mes, on the Atlantic, and the W. It consists of gently inclined plains, which spread to the foot of the mountains, and which are nearly as sandy and barren as the desert itself, excepting along the courses of the numerous streams descending from the S. slopes of the Atlas Mountains, all of which are absorbed by the sand, and many of which are strongly impregnated with salt. Along these streams date-palms abound, with camels, horses, and cattle, forming the sole wealth of the inhabitants. The real name of the place is said to be *Biledul-Jerid*, which has been translated by some, into the land of dates; by others, into the parched country. Both would, to a certain extent, apply as the date-tree flourishes luxuriantly in its limited localities, while an utter sterility characterizes all other portions of the country.

BILQHAY a town in Russian Poland, dist. of and 50 m S Lublin l. bank, Lada. It contains three churches, and has several important fairs. Pop. 1600.

BILARSK [Tan. *Bulawski*] a town, Russia, gov. and about 80 m S.E. Kazan, l. bank, Tobozer Kanu. It is a place of great antiquity, and, though now decayed, its former magnificence is attested by numerous ruins, particularly those of an ancient temple, which is still held in great veneration by the Tartars. Pop. about 2500.

BILIN (Bohemian, *Bylina* Latin *Belina*) a post in Bohemia, circle Leitmeritz, 42 m N.W. Prague, prettily situated in the vale of the Elbe. It is walled, contains a fine old castle built in 1590, and one of more modern date in which is a good collection of minerals, an armoury, and a museum. In the town there are several churches, chapels, cotton-spinning mills, and best-root sugar-manufactories. Within 1 m of the town are mineral and springs, much resorted to, and from which 900,000 jars of water are exported annually. The waste water of the wells is evaporated, and the salts and magmas thus obtained form important articles of commerce in the vicinity are found coal and garnet. Here is also the singular basaltic rock called *Borsenberg* or *Biliner Stein*.

BILIERICAY a small market in England, co. Essex, on a hill 24 m. E.N.E. London. It consists of two principal streets, one of which is straight, spacious, and about half a mile in length. It is amply supplied with water from numerous and copious springs, and is well lighted with gas and contains a plain but neat market-house, in which a corn market is held every Tuesday. The churches are, the district church, having an ancient and handsome tower adorned with turrets; and a chapel belonging to the Independents, a very tasteful structure. Principal public schools — a national and British school, also a respectable academy, several minor schools, and a thriving mechanics institute. No manufactures, and the chief business of the town is limited to a retail trade. The scenery in the vicinity is exceedingly beautiful, and from several points extensive and delightful views are obtained. Pop. 1,033. —(Local Correspondent.)

BILLEDON a small market tn. and par. England, co. of and 8 m. E. Leicester. In the town are 2 churches, Baptist chapel, almshouse, and other charities, also a school house, erected in 1850. In the vicinity are vestiges of a strong Roman encampment and pagan temple, and, though the trade and population are now inconsiderable, Billedon appears to have been, in the time of the Romans, a place of some consequence. A fair is held in April. Area of par., including the chapels of Goadby and Rolleston, 4480 a. Pop. 948.

BILLITON *Bilittion* or *Bilittion*, an old Indian Archipelago, belonging to Palembang in Sumatra. It lies E. of Banca and W. of Borneo between lat. 2° 3' and 3° 20' S. lon. 107° 28' and 108° 22' E. rises to a considerable height above the sea, and is surrounded with dangerous rocks and shoals. Billiton, as well as Banca, contains vast deposits of tin, which the Dutch Government keeps in reserve in case of the exhaustion of that metal in the larger island. At present the iron and steel ores only are worked and are found, without much trouble, in the form of slightly oxidized iron. It produces the same woods as Banca. The inhabitants live chiefly by fishing and the sale of trepan tortoise-shell, wax, resin and edible birds nests. They were, for a long period, notorious pirates, but having, in 1871, had the audacity to attack and plunder a Dutch gun-boat conveying stores and money to Sarawak, the Dutch Government made Billiton a military post, and gradually brought the island entirely under its sway. The inhabitants, being excellent boat-builders, were employed in constructing light cruisers, which have proved of great use in suppressing piracy. Billiton was recognized as a Dutch possession by the treaty of London in 1824. Pop. 6000.

BILLONKLY or *Billockan* par. Eng. Norfolk 899 a. Pop. 63.

BILLOM a tn. France, dep. Puy-de-Dôme, 13 m E.S.E. Clermont, on a hill in a fertile district. The town is ancient, and in the 15th century was surrounded with walls and had a flourishing university. At that period its commerce was very considerable, but the walls have now disappeared and the trade has long been on the decline. Still, however, it has manufactures of linen, serge, cloth and coarse earthenware, bricks, and tiles, and a considerable trade in hemp (the great staple of the district), wool, honey, corn, cattle, wood, and tanned leather for gloves. Storms are of frequent occurrence, and the great quantity of rain that falls at Billom has become proverbial. Pop. 3265.

BILLQUAY a vil. to gland on Durham, 3 m E. Gateshead. It has extensive works for smelting lead ore, and making litharge and red lead, green glass bottle-works on a large scale, a tar naphtha, and turpentine distillery, and an establishment for distilling oil from bones, also manufactures for preparing colours and painting mustards besides a large ship-building yard and floating dock.

BILTY par. Ireland Antrim 1730 a. Pop. 6080.

BILMA a tn. in N.W. Africa, Sahara, and in the W. limit of the Tibbo country of which it is the cap. lat. 18° 30' N. lon. 15° 30' E. It stands in a hollow on the oasis called *Wady Kessa* and is surrounded by low mud walls, which with the 10000 women, are mean and miserable.

The women of this town, says Major Denham, are of a superior class to those of the other towns, some having extremely pleasing features, while the pearly white of their regular teeth is beautifully contrasted with the glossy black of their skin. They are further described as dancing with great taste and skill, and being altogether exceedingly attractive. Bilma is the residence of the Sultan, and derives further importance from the caravans which pass through it on the road between Murrook and Bornou, and from its vicinity to some salt lakes from which large quantities of fine crystallized salt are collected and sent to Bornou and Foonan. Dates also grow here abundantly but other provisions are scarce and dear.

BILNEY two pars. Eng. —1 *Bilney* (West) par. Norfolk 544 a. Pop. 187. —2 *Bilney* (West) par. Norfolk 2750 a. Pop. 804.

BILSA (*Bilvesa*) a large tn. Hindoostan prov. Malwa, belonging to Scindia, r. bank Betwa, near its junction with the Betwa, 84 m N.E. Bhopal; lat. 23° 55' N. lon. 77° 56' E. It is surrounded by a stone wall, and some years since contained 80000 houses. The vicinity is celebrated over all India for its tobacco.

BILSBY AND THURLEY par. Eng. Lincoln 2620 a. Pop. 611.

BILTHORPE par. Eng. Notts 1672 a. Pop. 217.

BILSTON a market in England, co. Stafford, 3 m E. Wolverhampton, on a rising ground and extending nearly 2 m in length. It is irregularly built, but the principal

street contains some substantial and handsome houses. It is lighted with gas, but very inefficiently the smaller streets are unpaved, and the larger macadamised. There are few public buildings, and none of any note. The church is a neat edifice, in the Grecian style, with a bell tower. St. Mary's chapel is also a handsome structure, in the perpendicular English style, built in 1839. A third church has been recently erected. There are places of worship, besides, for Baptists, Independents, Primitive and Wesleyan Methodists, Methodists of the new connection, and R. Catholics also a small Welsh chapel. Schools numerous, including what is called the Chobers orphan school, maintained for the gratuitous education of the children under 12 years of age of those who died of cholera in the town in the autumn of 1832 amounting to no fewer than 742 in less than seven weeks leaving 450 orphans children. The manufacturing industry of Belait is very great. The noise and smoke of engines and furnaces is heard and seen in all directions, and for many miles around the town. The manufactures include tin, japanned and enamelled ware of every kind iron wire nails, screws, iron gages, and pallades, machinery steam-engines, &c. There are also some mills for forming sugar into bars, and many iron and brass foundries. Course pottery is made with the clay which is found in the neighbourhood in great abundance. A particularly fine sand for casting and a very hard stone, suitable for grindstones, are also obtained here in great plenty. Pop 2,500.

BILTON (two parts, Eng. —) A par and small vil. Warwick 2 44 ac. Pop. 631. — A par. A small of the city of York. 4100 ac. Pop. 845.

BIMA, a resort in, lat. Sembawa, Asiatic Archipelago, cap. dist. of same name, N. side of the island, and near its E. extremity at the head of the Bay of Bima. It is a place of some importance, being the residence of the Sultan, of a Dutch agent, and having a considerable export trade in rice, plantains, timber wax, and horses. During the dreadful volcanic eruption of the Tambora Mountain, 40 m. distant, which occurred in this island in April 1815 many of the houses in Bima were choked up with ashes, while the lower parts were inundated with the sea, which, through them, was a perfect cube, rolled in upon the shore. The Bay of Disembawa 21 to 24 m. into the island, with soundings of 60 or 80 fathoms at the entrance 2 or 3 m. inside of which the bay narrows, and has on each shore a native fort. Ragged Point, the E. entrance into the bay is in lat. 8° 11' S. lon. 118° 51' E.

BIMBIA, a river W. Africa falling into the Bight of Biafra, W. the Cameroons lat. 4° 9' N. lon. 9° 20' E. On its banks are numerous villages, built on a beautiful amphitheatre of rocky ground. The inhabitants, who are of the Duala nation, are principally occupied in the collection of palm-oil which forms the staple article of their traffic. In 1833, their chief placed himself under British protection.

BIMLIPATAM a small seaport in Hindoostan (Orissas), 18 m. N. N.E. Visakhapatnam lat. 17° 53' N. lon. 85° 22' E. The only tolerable buildings are a few houses in the European style near the beach, and a temple on the slope of a mountain that bounds the town on the S. Traces of a Dutch fort still remain. A considerable trade is carried on from hence in native craft.

BINAR, a town in Persia, prov. Azerbeijan 1 bank of the Chai 55 m. S.W.W. Tabreez, and 8 m. E. Lake Urmia lat. 37° 17' N. lon. 46° 0' E. It is abundantly supplied with water and is one of the nearest and cleanest towns of Persia having numerous good caravanserais, and a bazaar. It is surrounded for many miles by orchards and vineyards and, from its mild climate, is well adapted for the cultivation of grapes, vast quantities of which are exported to Tabreez. It is a dependency of Maragha yielding a considerable revenue, and furnishing a quota of 400 men to the Austrian army. Binar is quite a modern settlement, no mention being made of it by any of the Oriental geographers. Pop. about 7500.

BINABOLA, or **TRINTRA PIRA**, a group of mountains Ireland, co. Galway about midway between Lough Corrib and Achill Head, consisting of two distinct mountain-ranges, separated by a deep elevated pass called Maun Line, and occupy large spaces of about 20 sq. m. The highest summit is 2460 ft. above the level of the sea, and the lowest about 1800 ft. It is intersected by glens, and enclosed by lakes and by most

places is very precipitous. Quartz is the principal formation, but towards the foot of the mountains limestone abounds.

BINACRO, or **BENACRO**, par. Eng. Bedford 1690 ac. P. 223.

BINACRO a town, American July gov. Miss. cap. dist. same name, prov. of and 15 m. N. by W. Favia, and intersected by the Favia Canal. The town is defended by a castle and has a handsome church. It was burnt by the French in 1796. Pop. 1182. — The district is well irrigated, and produces fine crops. Pop. 9338.

BINBROOKE, (St. Gabriel and St. Mary) a united par. Eng. Lincoln 6070 ac. Pop. 1810.

BINCHE, a town, and com. Belgium, prov. Hainaut, nearly midway between Mons and Charleroi. It is pretty the structures are picturesque and it contains several handsome buildings; among others a church, a communal house, a small college, and an hospital. The manufactures are considerable, including metal forging cutlery glassworks soapworks, sugar refineries, hat factories, tanneries, three breweries and distilleries. Some hundreds of women are engaged in flower-making. Bincbe was walled, in 1110, by Baldwin the builder Count of Hainaut and burnt, in 1634, by Henry II. of France. Pop. 5131.

BINCUMBE, par. Eng. Dorset 977 ac. Pop. 221.

BINDRABUND a large town, India prov. of and 25 m. N. W. Aggra, r. bank, Jumna lat. 27° 57' N. lon. 77° 48' E. It is chiefly famous as having been the scene of the youthful sports of Krishna, the eighth avatar of Vishnu who is an object of enthusiastic admiration to the Hindoos, and to whom many temples, still existing, were dedicated. Some of these

HINDOO TEMPLE AT BINDRABUND. From Double View to India.

are of a remarkable style of architecture, and the great erudition of the priests is attested one of the most many and elaborate works of Brahminical antiquity. There are likewise several sacred pools, where the pilgrims perform their ablutions, and wash away their sins. Different parts of the neighbouring woods are pointed out as the abode of ancient Hindu sages and seers and which are now occupied by religious mendicants.

BINEGAR par. Eng. Somerset 1216 ac. Pop. 352.

BINFELD par. and vil. Eng. Berks 5307 ac. P. 1290.

BINGEN a town grand-duchy Hesse-Darmstadt, prov. of, and on bank Rhine, 15 m. W. Mainz. It occupies about 500 houses, and is the place of sale for the wines produced in its vicinity which are much esteemed. It has also a considerable trade in corn, several extensive tanneries, and manufactures of tobacco, and carries on an active traffic on the Rhine. It is a place of high antiquity, having existed under the Romans. The bridge across the Rhine into Bingen, is said to have been constructed by Drusus, the Roman general. On an eminence near the town are the ruins of an old fort, called Klops, or Drems Castle, commanding a fine view. The inscription of the Rhine was formerly situated near Bingen, by a ledge of rocks that ran obliquely across the river; but by blasting,

a channel of 810 ft width, called Blinger Loch (hole of Bingham) has been opened in them, through which vessels now pass in safety. In its vicinity are the Mausethurm (mouse tower) the retreat and death-place of Bishop Hatto of Mainz, the castle of Rheinslein and other architectural remains. Pop. 4415.

BINGHAM a small market tn. and par. England co. Norfolk. The town 9 m. E. Nottingham, has two principal streets, and a few smaller a large church several dissenting chapels a poorhouse, some parochial and Sunday schools and other charities. The petty sessions for the hundred of Bingham are held here and it is one of the polling places for the 8 division of the county. Two annual cattle-fairs are held in February and May, and two others, one in Whitweek and one in November for hops &c. The par. intersected by the Grantham Canal, has an area of 3980 ac. Pop. 1898.

BINGHAMTON a port vil., U. States, New York co. Broome co. 138 m. E.W. Albany. It contains a court-house jail academy and several churches, and exports a large amount of lumber. Pop. 3800.

BINGLEY a tn. and par. England, co. York, W. Riding. The town lies on the sides and summit of a gentle eminence between the Aire and the Leeds and Liverpool Canal 36 m. W. S.W. York and consists chiefly of one long street, is tolerably well built, lighted with gas, and amply supplied with water. The churches and schools comprise the parish church a spacious and venerable structure, with a square embattled tower in the later English style. Baptist Independent Primitive Methodist, and Wesleyan chapels, a free grammar national and several day and Sunday schools. The manufacture of woollen and cotton is carried on here, and in the neighbourhood to a great extent. There are also paper manufactories and some trade in malt. The town is altogether rapidly increasing in importance and prosperity. Area of par. 15 180 ac. Pop. 11 850 of in 10 167.

BINTANG **FURU BINTANG**, or **BINTAN** an Isl. Indian Archipelago between lat. 1° 10' N. and 1° 10' S. lon 104° 15' and 104° 37' E. bounded N. by the Strait of Singapore E. and S. by that of Roon and W. by the China Sea. It is 30 m. in length and nearly the same in breadth. Numerous small islands and reefs make its waters dangerous to seamen, to whom it and some of the neighbouring islets are best known under the name of Roon, a port in the small island of Pandang Pinang. Bintang is subject to a Viceroy of the Sultan of Lampa, but the supremacy of the Dutch is fully recognized. It contains 6000 ginger gardens 1 op. with surrounding islets 6000.

BINIG, a seaport in and com. Franco dep. Cotes-du-Nord 7 m. N.N.W. St. Briere at the foot of a semicircular hill whose base is washed by the sea. A wooden bridge across the river Le unites the communes of Pordic and Binic. The port has a depth of above 18 ft. in spring and about 8 ft. in ebb tide and is one of the most convenient on the coast of Brittany. It has several vessels engaged in the New-found-land cod fishery. Pop. 2224.

BIOBIO the largest river in (Chil) prov. Concepcion its head streams, which are numerous rise in the Andes, and uniting at Nacimiento, or about lat. 37° 20' S., form the Bio-bio which falls into the Pacific at the town of Concepcion lat. 36° 48' 20" S. lon 73° 5' 30" W. (n. after a total course of about 180 m. but not more than 80 m. from the junction of the head streams at the point above named. It is about 2 m. wide at its mouth but is so shallow for large vessels small river barges, however and cannot navigate it as far up as Nacimiento. The Bio-bio forms the N. boundary of the territory of Araucania.

BIR or **Bese** (anc. *Bithra*) a tn. to Asiatic Turkey 62 m. N.E. Aleppo on the side of a steep hill 1 bank Euphrates which is here about 600 yards wide and from 10 to 12 ft. deep. The town is surrounded on the land side, by a wall with towers at the angles, and placed with loop-holes. The streets are narrow but clean. In the centre, on a steep rock is an old ruined fortification. The rocks on which Bir is built are of chalk and the houses of the same material the whiteness of which in bright sunshine is painful to the eyes. Bir has long been the point where caravans and travellers from Aleppo to Orfa Diarbekir Bagdad and Persia cross the Euphrates. It is also the point from which it is proposed to navigate the Euphrates by steam. Pop. between 8000 and 4000.

Vol. I

BIRBHOO See **BIRKENHOOD**.

BIRD ISLAND See **AYES ISLAND**.

BIRD ISLAND numerous small islands.—1 An Isl. Banda Sea lat. 5° 29' S. lon 180° 1° E. (n.)—2 One of the Falkland Islands about 14 m. long and 410 ft. high lat. 52° 11' S. lon 60° 54' W. (n.)—3, An Isl. Ladrones about 2 m. in extent and having rocks round it lat. 16° 1' N. lon 146° 9' E. (n.)—4 An Isl. Low Archipelago, called also Halmah about 24 m. in extent, and having a lagoon in it lat. (N. point) 17° 48' S. lon. 145° 7' W. (n.)—5, An Isl. S.W. coast, Papua, lat. 4° 38' S. lon 133° 28' E. (n.)—6, An uninhabited Isl. Sandwich group lat. 23° 6' S. lon 161° 57' W. (n.)—7 A Low Isl. Baybelle Archipelago in which water may be procured by digging. It is about 2 m. in extent, lat. N. E. points 8° 42' 42" S. lon 65° 16' 42" E. (n.)—8 An Isl. W. coast Africa, about 2 m. long lat. 13° 59' 50" N. lon 16° 40' W. (n.).

BIRD ISLANDS—1 A cluster of low islands, N.E. coast, Australia, named by Capt. Cook lat. 11° 46' S. lon 148° 9' E. (n.)—2 A small cluster of islands called also Chaon off Algoa Bay Cape Colony extending over a space about 7 m. by 2 m. lat. (S. one 35° 52' 8" S. lon 26° 18' E. (n.)—3 Two small islands, N.W. the Magdalen Islands Gulf of St. Lawrence lat. (S. one) 47° 51' N. lon 61° 94' W. (n.).

BIRGHAM a small vil. Scotland co. Berwick on the Tweed, 15 m. S.W. Berwick, formerly called *Birgach* from a bridge which it is supposed united the two kingdoms at this point. The village is worthy of notice on account of its historical associations only. It was here that Hugh Bishop of Durham ambassador of Henry II of England and William the Lion of Scotland attended by his bishops earls, and barons met on the subject of the *Splach* tenth, a tax which Henry proposed to levy in Scotland, as he had done in England to carry on a new crusade; but which William then formed the bishop 1 could not prevail on his people to pay. It was here also that a numerous meeting of the community of Scotland assembled to express their approbation of the proposed marriage of Prince Edward son of Edward I with Margaret of Scotland, but which in consequence of the death of the latter never took place. In July of the same year 1290 another meeting was held at Birgham at which were present the Bishop of Durham and five others were chosen in the name of the King of England, certain measures taken by the Scots to secure the independence of their kingdom.

BIRIOLSSA a river Siberia, forming part of the boundary between govts. Irkutsk and Yenisei. It is one of the head streams of the Ona, an affluent of the Tedzue, and has a N. course of about 200 m.

BIRIOUTSK a tn. in European Russia, cap. dist. of same name gov. of and 80 m. S.W. Yennisei 1 bank, Boma, a tributary of the Don. It is surrounded by a garden rampart and a ditch of considerable depth contains seven churches, and has four important annual fairs. Pop. chiefly agricultural (1848) 3023.—A stream of the same name near the town, is remarkable for the pearls occasionally obtained from its oysters and the bones and teeth of elephants often exposed upon its banks.

BIRKENHEAD a principality cap. same name belonging to the grand duchy of Oldenburg but locally separated from it 1 bank Rhine N. of Hesse-Homburg and surrounded on all sides by the Prussian government of Trer and Coblenz. It has an area of 154 sq. m. and is divided into the three bailiwicks of Bickenfeld Oberstein and Reifeld. The surface is generally rugged the soil by no means fertile and the climate particularly in the neighbourhood of the Hunsdicken cold and severe. The chief streams are the Naha, Frale, Idar and Kanne. The wood is principally oak and beech, and the minerals are coal iron roofing-slates and whetstones. Pop. 28 069.—The town is 24 m. E.S.E. Trer or Trer with a sharping and polishing mill linen manufactory and tanneries. Pop. 2855.—Numerous small places, particularly in Prussia, have the same name.

BIRKENHEAD a market tn. and port, England co. Cheshire, on the estuary of the Mersey here 1840 yards wide opposite Liverpool lat. 53° 28' N. lon. 3° 2' W. It is of entirely modern erection and owes its formation and the prosperity which has attended it, to its commodious docks. It has five principal streets, running from N.W. to S.E. crossed

at right angles by a number of shorter ones a handsome square, having an area of 64 sq. feet of which are enclosed and planted with shrubbery a townhouse that cost £10,000

market on an extensive scale, which cost £30,000. The slaughter houses on the most approved plan and ranges of dwelling houses for workmen, mutually complete its accommodation and in all their appointments. The system of drainage and sewerage is also singularly complete. The width of streets is regulated and the streets are generally wider than in the best parts of most towns. It is well paved, lighted with gas, and abundantly supplied with water. There are six churches belonging to the Establishment, an English and three United Presbyterian churches a Wesleyan and a R. Catholic chapel, and numerous excellent schools. There is also a theological college, where young men are prepared as clergymen for foreign missions. A mechanics institute was established in 1840. The benevolent institutions comprise an hospital or infirmary a lying-in hospital and a dispensary. In the N.W. part of the township, on rising ground, a large public park beautifully laid out, has been formed, having a noble carriage entrance, in the Ionic style. Its magnificent docks, however, form the great distinguishing feature of Birkenhead and are the source of its prosperity. The dock warehouses are on an equally magnificent scale.

The communication with Liverpool is kept up by small steamboats which ply from each side of the river every quarter of an hour. Birkenhead is connected by railway with Chester and thence with all parts of England. The rails are brought round all the corners of the docks. It returns a member to parliament. Pop. (1861) par. bor. 51,649; par. 56,912.

BIRMINGHAM See BIRMINGHAM.

BIRMINGHAM [see Birmingham] one of the greatest manufacturing towns of England, N.W. extremity of co. Warwick, division of its name, h'm. Hemmingford, on the borders of the counties of Stafford and Worcester 109 m. N.W. London and 113½ by railway. It stands nearly in the centre of England, on a slightly elevated ground, 474 ft. above the level of the sea, with annual rainfall 24 inches is somewhat circular in form, and about 7½ m. in circumference. The streets are generally irregular few of them running parallel to each other a few of them however are imposing and are lined with handsome buildings. A great part of the town is crowded with workshops and warehouses, and occupied principally by manufacturers; but the central and western part contains a number of new broad and regular streets houses well built chiefly of brick, the more recently erected being, in many instances, faced with Roman cement and plaster. The town is lighted with gas and the leading thoroughfares are well paved with flag-stones. In the smaller streets the footways were until recently most uncomfortably paved with boulders, but on account of paving of blue brick is now being substituted. The roadways throughout the town are macadamized.

Public Buildings, &c.—The most remarkable of these are the townhall, and free grammar-school, the latter founded and endowed by Edw. VI. The townhall situated at the E. end of Paradise Street, erected for municipal purposes, public meetings, and musical performances, is the great boast of the town, and is so lofty and large that it is seen from almost every part of it. The building is rectangular and after the model of the temple of Jupiter Stator at Rome. It rests on a rustic basement of 23 ft. in height, placed with doors and windows, which is surmounted by a series of Corinthian columns supporting entablatures above. It is 180 ft. long 100 broad, and 63 high, and is of brick, faced with Anglian marble. The large saloon or hall is 145 ft. long 65 wide and 65 high. It can accommodate above 4000 persons sitting, and contains a large orchestra capable of holding 400 performers, with a lofty white, and deep recess for the organ, one of the largest and finest in the world. The free grammar-school a beautiful structure, erected in 1634 at an

expense of about £50,000 stands nearly in the centre of the town. The architect, Sir Charles Barry has employed in it the same general style as that which he has adopted in the

THE TOWNHALL, BIRMINGHAM.—From Nature and on wood, by C. W. Badely.

new Houses of Parliament. It is of a regular quadrangular figure, 174 ft. in front 125 deep, and 60 high and embodies an adaptation of the collegiate, civil and ecclesiastical pointed architecture of the latest Gothic or Tudor style. It contains both a classical and a commercial school each being assigned for a separate class of boys. The income of the foundation from landed property is about £12,000. There are about 470 pupils in the central establishment and 1000 (half being girls) in the four branch schools which have been erected in suitable situations for the children of artisans and others, thus conveying the benefits of this noble foundation very extensively. The institution is open to scholars of every denomination. It is under the management of 20 governors, and the bishop of the diocese. Among the other public buildings of note besides several of the churches to be afterwards mentioned are the Queen's college, a very unassuming institution situated opposite the townhall in Paradise Street, founded in 1828, incorporated by royal charter in 1848—up to 1846 open to medical students only but now open to all classes of students and entitled to issue certificates for degrees in the university of London, in arts, law or medicine. Queen's hospital lying-in hospital deaf and dumb institution blind school, blind asylum Bingley exhibition hall Hebrew school Odd fellows hall bankruptcy court, the building belonging to the society of artists, two theatres, the post office the dispensary and the market hall wash-houses, and baths and to these may be added the public office the proof house the London and North Western Railway station the general hospital, the barracks, the Birmingham library three sanctuaries—one belonging to the corporation and two to joint stock companies—county court, public dining hall, two clubs Midland Institute free libraries public gallery of art, the Exchange buildings, the Masonic hall the Cornhill hall (erected specially for the annual dog show), three music halls the Corn Exchange, and statues of Lord Nelson, Thomas Armitage, Sir Robert Peel Joseph Sturge, and the late Prince Consort. There is also in the suburbs of the town, the handsome Jacobean mansion of Aston Hall situated in a domain of 45 acres lately purchased partly by the corporation and partly by private donations, as a place of public recreation with two other public parks.

Places of Worship.—Birmingham, within the borough, which includes Edgbaston, a suburban par. and town and part of Aston contains 84 churches in connection with the Establishment in addition to several rooms licensed for worship. The old parish church of St. Martin—supposed to have been founded in the seventh or eighth century though the present structure does not seem earlier in date than the 13th—has been sadly disfigured in its exterior by alterations made in the Georgian period but the massive tower and handsome spire (210 ft. high) have lately been rebuilt in the style of

their original architecture. The interior contains some fine and remarkably curious monuments of the De Birmingham, the ancient lords of the place. St Philip's Church, erected

Charitable Institutions.—Amongst the charitable institutions, the most important are the General hospital supported by subscriptions and by the profits arising from the biennial

THE WILKINS & St. MARTIN'S CHURCH, BIRMINGHAM.—From a drawing by W. Wood, by G. W. Baskett.

in 1718, on the most elevated spot in the town is a beautiful structure, in the Palladian or Italian style consisting of a pedestal line, of good height, a range of lofty Doric pilasters enclosing the large and well proportioned windows and a handsome balustrade. The tower carried upwards by a series of curved figures, is surmounted by a dome and cupola. The steeple of this building having decayed it has lately been raised at a heavy expense defrayed by public subscription. St George's Church, erected in 1822 is a handsome and graceful structure, in the decorated English style with a lofty square, embattled tower. St Thomas's Church, the most spacious in the town built in 1821 gives a fine specimen of Doric architecture. The other churches are St Mary's, belonging formerly to the parish of St Martin erected by subscription in 1774. St Paul's, erected by subscription in 1779 somewhat heavy in its architecture but relieved by an extremely light and elegant spire, Christ Church, a large plain, and commodious stone building admirably situated on an angular tongue of land, formed by the convergence of several important streets, St Bartholomew's, a plain brick building, with a powerful organ by England, and a handsome altar-piece. St Peter's, formerly a chapel of ease to St Philip's in the Grecian style, with a massive Doric portico, in imitation of the Parthenon at Athens, St James's Chapel a chapel of ease to Aston Church is an also St John's, built in 1765 and Holy Trinity Chapel a handsome Gothic building. All Saints erected in 1833 a large and handsome brick structure interspersed with Bath stone and Bishop Ryder's Church so called as a testimonial to the memory of the prelate of that name, by whose example and influence subscriptions were raised for its erection. To these may be added the old and the two new churches at Edgbaston and several churches recently built in those populous parts of the adjoining parishes included within the Ecclesiastical boundary of the borough. The dissenting places of worship are very numerous. There are a large R. Catholic cathedral and three or four chapels; thirteen Wesleyan Methodist chapels four new connection and one belonging to the Wesleyan Association, besides several smaller belonging to other sections of Methodists fourteen Baptist chapels, two Independent chapels seven places of worship for Unitarians, a Presbyterian church in Broad Street, and a chapel belonging to Lady Huntingdon's connection. A New Jerusalem church, a Quakers meeting-house and a Jews synagogue. Some of these places of worship are very elegant and spacious buildings. The most remarkable is the R. Catholic cathedral of St Chad erected at an expense of £200,000 it contains a melodious peal of bells conspicuous as a handsome building, the residence of the R. Catholic bishop and clergy

the ordinary ecclesiastical branches and religious instruction; the girls are also taught sewing knitting and household work and are prepared for domestic service—the pupils are boarded and lodged as well as taught the Protestant Dissenters charity-school established in 1760 and entirely supported by voluntary subscription at present sixteen, male and female, educates 40 girls but the number is not limited. St Philip's industrial free school originally established in 1834 though the present building was erected in 1849—admits 220 children boys and girls. Besides these there are numerous private ordinary and boarding schools National, British and L. M. Christian schools a Hebrew school infant, Sunday and ragged schools, &c. Springhill College for the education of young men for the dissenting ministry amongst Independents is a well-endowed seminary and in the neighbourhood of Birmingham is the R. Catholic seminary of Oscott. A diocesan training institution is erected at Salford. There is a public subscription library in the town containing from 80,000 to 40,000 volumes a society of arts and Government school of design, an Odd fellows literary institute, a phreanographical institution entitled the Midland Institute, and a society of artists. There are also free libraries, erected by the corporation, and two reformatory institutions.

Manufactures.—The origin and progress of the prosperity of Birmingham is wholly attributable to the excellence and extent of its hardware and miscellaneous manufactures. Its geographically central situation on the border of a great coal and iron district, combined with the command of a wide and ready transit, both by canal and railway have contributed to render it one of the greatest manufacturing towns in the world. Nowhere else can we find such extraordinary developments of human skill and ingenuity nor such perfection in the arts in which they are employed. The vast variety of trades renders it a doubtful case for the talented and skilled artisan and the variety is such that it has seldom happened that Birmingham has been distressed, like many towns from utter lack of employment. Of the early history of Birmingham as a manufacturing town little further is known beyond the general fact that it has enjoyed a reputation for its iron and steel manufactures for several centuries although its greatest and most rapid progress has taken place within the last fifty years. In 1806 the amount of hardware and cutlery exported was 4268 tons, in 1844 it amounted to 22,562 tons, all the intermediate years, with two or three exceptions, showing a progressive increase. In 1831 the value of the exports was £1,297,692. In 1844 £1,719,067 and in 1864 £4,169,107. But the value of hardware goods was, probably fully a third more in the former than in the latter year; so that the quantity exported

In 1864 exceeds that of 1821 or 1844 far more than the respective statistics indicate. In addition to hardware Birmingham is more or less interested in brasses, glass, leather, machinery, iron and steel wire, plate, copper, brass, zinc, tin and coal, the aggregate value of the exports of which amounted in 1864 to £27,987,750. The extraordinary reduction in the price of Birmingham ware has arisen, partly from a reduction in the cost of the material, but chiefly and in many cases solely from improved methods of production as the cost of the material forms generally a very small portion of the value of the finished article. Some of these reductions are truly extraordinary on firearms the reduction is about 50 per cent on gun locks, from 65 to 85 per cent on epaulet straps, &c. from 61 to 69 per cent, and on iron chains 68 per cent. One of the most important manufactures of Birmingham is that of firearms. During the war against Napoleon 5,000,000 were furnished on account of Government and of the private trade; those for the former being supplied at a rate of 15,000 muskets weekly. The manufacture of sword and bayonets is also one of the staple trades of Birmingham. Both of these trades, however, fluctuate considerably with circumstances. During two years of the civil war in America 1,023,351 military weapons were exported to the United States. In the vicinity of the town, was formerly by one of the largest steam-engine makers, factories in the world belong to Boulton & Watt, the celebrated James Watt, but the steam engine department is now carried on, excluded, at Sauldwick a short distance to the west of town, where extensive works have been erected by successors of the company. This manufacture of copper coinage formerly conducted at Solihull, now carried on by Messrs. Hirst & The Mint. Cast iron articles of all kinds, and of the most beautiful patterns and workmanship are manufactured here, to a great extent superseding those made of more expensive metals. In former years, iron foundry was limited to large and heavy articles, but is now extended, with the most entire success to the lightest and most graceful, in the finishing of which brass is now very generally employed. Designs are often prepared at enormous expense. In the establishment of Messrs. Messinger & Son may be seen models by the late sculptor Gintrey. The quantity of solid gold and silver plate manufactured in Birmingham is large. The most delicate and finished at the Assay office average 30,000 ounces per annum silver wares 190,000 which is additional to the vast quantity manufactured and sold without being marked. The consumption of silver in plating is very considerable being estimated at about 800,000 ounces a year. Notwithstanding the introduction of such metallic compounds as that called *electro*, which competes with plated goods, the consumption of the latter is steadily increasing. The beautiful invention of electro plating first discovered in this town tends very greatly to the increase of the consumption of silver and also of gold. The vast establishment of Messrs. Lillington & Co. Newhall Street, employing 1000 work-people is an object of great attraction. Japaning in all its forms and varieties is carried on here to a large extent and has attained to a great degree of perfection, especially in the pictorial department the trays and walters manufactured in Birmingham particularly those of paper mache, often displaying in the conception and execution of their ornamental designs, taste and talent of the highest order. Glass manufacturing and glass staining or painting, forms another important branch of manufacture. In the former ornaments of a sort are made which it was once thought could be produced only in metal on these the most beautiful delicate and brilliant surfaces are raised by the lathe and cutting tool. The manufacture of steel pens scarcely known 35 years ago, is another important branch of the trade of Birmingham. Mr. (Holt, who is the principal manufacturer of this apparently in this article, employs 500 operatives, and sometimes upwards of 100 tons of fine sheet-steel annually each ton making 10,000 gross of pens. The price of this article has fallen from 12s. per dozen to 1s. per gross, and still lower for an inferior article. The whole quantity of steel pens now manufactured is estimated at 900,000,000 annually consuming above 500 tons of steel. Large quantities of these are exported. Pins are also manufactured here in enormous quantities and such is the extraordinary productive powers of the machinery employed and

of the system of minute subdivision of labour that 15,000 pins can be sent and pointed in an hour and 60,000 heads rounded off in the same space of time. The manufacture of booklets was at one time carried on to a great extent at Birmingham but has decayed in one of its branches in consequence of the general decay of the article. Buttons are made in large quantities, and though there has been a great falling off in some of the branches of that trade, in others there has been a vast increase. The whole number made annually in the town is estimated at about 1,000,000,000. When gilt buttons were more in demand than they now are, so extraordinary a degree of perfection was attained in the art of gilding that 3d. worth of gold was made to cover a gross of buttons. In making flannel or silk buttons fourteen pairs of hands, and a number of machines are employed and yet a set of fourteen buttons can be sold for a 1d. or 1½d. Several hundred tons of mother of pearl shells—fished on the coast of Central America, the Eastern Archipelago, and the Persian Gulf—are annually consumed in the manufacture of buttons and lately a species of palm-nut has been to an equal if not larger extent employed. Fancy seals, brooches, clasps, and other trinkets composed of what is called Birmingham gold, and polished steel are made in immense quantities, of the most beautiful workmanship and at prices which excite astonishment. Great numbers of collars are also manufactured in some years nearly 90,000 wedding gold rings have been assayed and worked at the Assay Office in Birmingham. The above sketch gives only a selection of a few of the leading articles manufactured at this great seat of human industry and ingenuity. It is a simple enumeration of all without any statistical detail would occupy a far greater space than could be afforded in a work of this nature but we may mention in addition wire drawing, scale making, railway carriage building, brass-founding, works in bronze, and manufacture of lamps metallic bedsteads, gas fittings, lead or wood cast tools, percussion caps and sewing machines. The machinery employed in the manufacture of nails, screws, button shanks, and in rolling out thick bars, or ingots of metal into long thin sheets are amongst the most wonderful inventions of the mechanical genius of this extraordinary place all of these combining prodigious power with the most delicate and beautiful precision of movement. The most delicate engraving on metals are often produced by the die-making stamp. It has been observed that not many large capitalists are engaged in the manufacture of Birmingham a great proportion averaging from £500 to £1000. These persons give out their work to the workmen they employ who are generally paid by the piece, and sometimes work at home. The employer has thus no expense of establishment to maintain and no wages to pay but when he has orders to execute. The workman again when the work put into his hands requires the use of machinery may hire, for any given time, one or more rooms, together with a certain quantity of steam power in any one of a number of buildings appropriated to such purposes which are furnished with steam engine, working shafts, ladders, benches &c. At the present time however (1865) there are many large houses as well as large capitals engaged in the business of the place. The engine-power of Birmingham, in 1849 was estimated at that of 400 horses, and consumed 377 tons of coal per day. The working of this power employed 8000 to 10,000 persons. In 1850 the number of steam engines employed was 231 consuming 500 tons of coal daily. The horse-power was, high pressure 6233 low pressure 2287 total 9510. There were 1013 melting and casting furnaces at work. The estimated value of the steam-engines was £22,337. 20,000 families were engaged in manufactures 40,000 persons were members of friendly societies. The municipal revenue was £123,962 the poor rate, £75,154. It has been lamented by those who take an interest in the morals of this town that the employment of married women and of children in the manufacture should occasion much domestic evil and should exercise a prejudicial effect upon education. There is a branch bank of England in Birmingham and six other banks, all on the joint-stock principle two of them being with limited liability. The savings' bank which was one of the largest and most flourishing in the kingdom has been amalgamated with the post-office system.

signity of an ancient town. The borough comprises the parishes of Birmingham and Edgbaston, and the townships of *Bordesley*, *Durston*, *Duddleson*, and *Neuballa*. Area, within the parliamentary and corporate boundary 8780 ac.

Name and History.—As far as can now be ascertained Birmingham was not known to the Romans. The first mention of the place is in a Domesday Book, under the name of *Bermingham*, the derivation of which probably is from the home *Berengus*, of the *Bormas*—a tribe which may have come from the ancient Bormas now the Russian province of Perm. Of its early history however very little is known. It was the centre of the Saxon kingdom of Mercia and at the time of the conquest, was a place of some consideration. Birmingham was distinguished in the course of the parliament, and was the scene of some conflicts, in the last of which in 1643 it suffered considerably having been taken partially burnt and heavily fined, by Prince Rupert. It suffered to a fearful extent, from the plague in 1665. Its first considerable increase in size and population took place in the reign of Charles II. Toward the middle of the last century it began to assume an important appearance and has since continued rapidly to increase. It is not 100 years since it was made a port town previous to this, letters used to be directed to Birmingham near Walsall. The American and French wars, during the latter part of the last century and the early part of this, were the great causes of the prosperity and increase of the place, the great demand which they created for iron. In July 191 Birmingham was the scene of a series of disastrous riots property was destroyed to the amount of £200,000. In 1831 riots again took place when several private buildings in the neighbourhood were set on fire and various other excesses committed. During the excitement of 1838, of one man was taken into custody for any political offence—a circumstance indicative of great moral improvement. The moral healthiness of Birmingham is proved by its having been exempt from cholera on both occasions of that malady visiting England. Dr Price considered it the healthiest place in England. For this it is thought to be indebted partly to the quantity of vitriol which is consumed in the manufactures, and it is considered to have a purifying influence on the atmosphere, but a more certain and more extensive cause may be found in the larger quantity of open space which Birmingham possesses, when compared with such towns as Manchester and Liverpool. In the general salubrity of its drainage greatly facilitated by the substitution of sand and gravel on which it is built and in the important fact that there is scarcely an underground dwelling or what is called a cellar within its precincts. One man in Birmingham lives on the same space as two in Manchester and three in Liverpool. Edgbaston already named a suburban part and in Birmingham is pleasantly situated about a mile S.W. from the latter. It is a fine villa residence of the wealthier classes of Birmingham and is almost exclusively inhabited by them. It is in consequence rapidly increasing and becoming quite a fashionable resort. It consists of several principal streets, regularly laid out and remarkably well kept. The houses mostly modern are well built chiefly of brick surrounded there being few of stone. Water is abundant, and all the thoroughfares are lighted with gas. There are here three churches connected with the Establishment, and a public school. No workshops of any description are allowed to be erected in the parish. There are botanical gardens here, open to the public one day in the week on the payment of 2d. Area of par 2790 ac. Pop 14 625.

Periodical Celebrations.—Birmingham is remarkable for three occurrences of a periodical nature. One is the Musical Festival, celebrated every third year for the benefit of the General Hospital, another the simultaneous congregational collections held in every pulpit of the place on the same day of each year by which about £2500 is annually realized for the local charities the third the show of cattle and poultry in Bingley Hall—an exhibition which is scarcely equalled by any of its kind in Great Britain by that of the Smithfield Club in London.

Population.—In 1901 the population of Birmingham was 73 670 in 1841 it was 192 223 being about 150 per cent increase in 40 years in 1951 it was 253 941 in 1861 296 076 and at the present time (Oct. 1866), is estimated by the registrar general at 278,847. If the immediate suburbs, not

included in the borough were taken into account, the population would be about 400 000. (Local Correspondent.)

BIRNAM a hill Scotland, co. of, and 13 m. N.W. Perth according to the last statistical account 1860. It was recently included in a royal forest, but has long since been felled of the wood rendered famous by Shakespeare. Birnam is 12 m. distant from Dunnichen.

BIRNEBACH a town Prussia, cap. circle of same name, on the Wartha, 46 m. W. N.W. Posen with a R. Catholic and a Reformed church, a synagogue, an orphan hospital and manufactures of linen. Pop 2800.—The circle, area 400 sq. m. is in general flat and covered to a great extent with forests and meadows. The inhabitants are chiefly occupied with agricultural pursuits. Pop 28,168.

Numerous small places in Germany have the same name.

BIRNÉL, or **BIRNIX** (Oto and Nuv), two the Birnion both W. Lake Tebal. Old Birnion, formerly cap. of the kingdom, but now deserted and in ruins, is near the bank of the Leon 70 m. N.W. Kooka, and 75 W. the lake; lat. 13° 0' N. lon 18 15 E. In the days of its splendor it covered a space of 8 sq. m. and is said to have contained a population of 200,000. The walls, of which portions are still standing in large masses of hard red brickwork, were from 16 to 18 ft. in height and from 3 to 4 ft. in thickness. New Birnion is about 75 m. S.E. K. Old Birnion, 20 m. N. Kooka, and 15 from Lake Tebal lat. 12° 30' N. lon 14° 16' E. This town is also walled and contains a royal palace, a large mud edifice. Pop about 10 000.

BIRNIE par Scot. Egl. 7 m. long and about 2 broad 1 pop. 407.

BIRK or **PANON'S TOWN** a market in and par Ireland King's co. The town stands on gentle acclivity, on both banks of the Little Borena, 60 m. W. S.W. Dublin. It consists chiefly of one principal street and several smaller streets a better description of which are straight and well kept, houses generally of stone, and the greater number have a respectable appearance. The only buildings of note are the parish church and the R. Catholic chapel. There are two national schools in the town one for boys the other for girls—the latter conducted by the Catholic school on united with the parish church, with the 18th century a classical school and several smaller primary schools. There is a fever hospital a dispensary a public reading room and a mechanics institute. In the town and neighbourhood are several corn and distillery and a distillery. There is no trade of any importance. Area of par 7 18 ac. pop. 10 000. Pop 11 m. 481.

BIRSA par Orkney Mainland, 1/2 m. long, 1/2 broad 1 pop. 1634.

BIRSE par Scot. Aberdeenshire, 10 m. long and about the same breadth. Pop 129.

BIRSHIS, a small maritime town Tripoli dist. Jeb-el Akhar lat. 22 17' N. lon 29 39' E.

BIR-SPIRA See BIKSPIRA.

BIRSK a town Russia gov. Orenburg at the confluence of the Bir with the Salais, 50 m. W. N.W. Oufa. It contains three churches. Pop (1849) 1 182.

BIRSTALL, a par and vil Eng. co. York W. Ridgr 13 180 ac. 1/2 m. S.W. Leeds. The inhabitants are principally employed in the manufacture of woollen cottons, linen silk and in the coal and ironstone mines. Pop 29 723.

BIRU or **BIRAO** a kingdom W. Africa, in Focdon N. and W. of the Niger with the Sahara bounding it N. between lat. 15° and 16° N. and lon 0° 30' and 7° 15' W. The cap town Walat, is 240 m. S.W. Timbuctoo.

BIRACCIA a town Italy Naples prov. Avellino 12 m. N.E. St. Angelo de Lombardi on a hill with several churches and a hospital. Pop. 5016.

BIRACQUINO or **BIRACQUINO**, a town Sicily 28 m. S. Palermo with a considerable trade in grain oil and flax. Pop. 8000.

BIRAMBERG a vil Lower Austria about 8 m. N. Vienna, esp. of a dust and situated on a hill of the same name the summit of which is 1180 feet above the sea. In its neighbourhood one of the best wines of Austria is produced and a great deal of lavender grown. Pop. 642.

BIRAYAS, a name given by the Spaniards to all the Philippine islands excepting Luzon which is derived from the language spoken throughout them called *Besugo* which has

Barrington school, a Quakers school, and four or five private schools. There are likewise several benefit societies, and a mechanics institute. No manufactures the town depending on the coal trade, being situated in the midst of a coal field known as S. Durham. Pop. 5112.—(Local Correspondent.)

BISHOPBRIDGE or **BISHOPSTON**, a vill Scotland, co. Lanark, par. Cadzow, about 8 m. N. E. Glasgow, and station on the Edinburgh and Glasgow Railway. The quarries in its vicinity are very extensively worked, and furnish much of the fine freestone of which Glasgow is built. Above the freestone is a good seam of Roman cement.

BISHOPBRIDGE, par. Eng. Kent 8007 ac 1 348 BISHOP CASTLE, a market in and par. England, co. Salop, hund. Purwile. The town is situated on a gentle acclivity 17 m. S.W. by R. Shrewsbury. It consists chiefly of two streets both straight and well kept, houses of stone, and, though old, generally well built, supply of water ample. The only buildings of note are the union workhouse, the market-house, a neat modern building and the parish church a fine old structure, partly in the Norman style. The other places of worship are a Primitive Methodist chapel and a chapel belonging to the Independents. The schools are a national school and a partially free school for the benefit of the inhabitants of the town. With except of a little chair-making no manufactures are carried on here, the people being chiefly engaged in agriculture. The castle from which the place takes its name is not now in existence, its site being occupied by the Castle Inn. It belonged to the Bishops of Hereford. Area of par. 5644 ac 1 op. of par. 1699 of m. 1010.—(Local Correspondent.)

BISHOP'S STORTFORD a market in and par. Eng. land co. Hertford. The town which is 27 m. N. N. London is built in the form of a cross, and occupies the acclivities of two hills, on the river Stort. It consists chiefly of four streets, all nearly straight and well kept, houses mostly brick, lighted with gas, and supply of water abundant. The *crn* exchange, built in 1828, is a handsome and commodious building containing assembly and coffee rooms. The church is also an elegant structure, having a tower at the W. end, with a spire about 80 ft. in height. Other place of worship are, Wesleyan, Baptist, and Independent, and a chapel, one of which and 7 Quakers meeting-houses. There are here likewise a fr. grammar-school a national school, and a British and Foreign school, some almshouses several minor charities, a savings-bank, and a mechanics and literary institution. The principal trade of the town is weaving which is carried on to a very considerable extent. A large patent tanning manufactory which employed many hundred hands, is now and has been for some years closed. The business of the town is facilitated by the Eastern Counties Railway which has a station here and by a canal, which joins the r. or Lea. The market, now one of the principal in the county is held on Thursday. Petty sessions are held once a fortnight, and a county court once a month. Area of par. 2241 ac. Pop. 5280.—(Local Correspondent.)

BISHOP'S STORTON par. Eng. Hants 2510 ac 1 494 BISHOPSTORPE, or THORPE, Lincs-Down, par. Eng. co. York 700 ac. Pop. 408

BISHOPTON par. Eng. Durm. 4081 ac. Pop. 464

BISHOPTON par. Eng. Monmouth 1211 ac. Pop. 218.

BISHOPAN par. Eng. (Bismarck) a fr. Italy Naples, prov. Capua, 14 m. N. Cosenza, the seat of a bishop and defended by a citadel occupying the summit of the highest

of the seven hills that surround it. It contains a cathedral, 19 churches, several convents, a seminary, two hospitals and a house of refuge. The cultivation of the silk-worm forms a principal branch of industry. Pop. 10,000

BISK See BISKRA.

BISKRA, a fr. N. Africa, in the Sahara, 314 m. S.E. Algiers lat. 34° 47' N. lon. 5° 22' E. It is less a town than the collection of seven villages, or urban quarters lying among plantations of date-trees covering nearly 50,000 ac. of land. Nearly in the centre rises the *harab*, a kind of citadel where a garrison is lodged. The summit of the chief *maquis* surrounds the highest palm-trees near it. The general aspect of the town buildings is not otherwise remarkable than that, like all other houses in towns of the Sahara, they are built of baked earth and have terraced roofs. Biskra is the capital of the Sahara. Pop. about 4000.—(Sahara Algeria.)

BISLEY—1 A vil. and par. England, co. Gloucester. The former 11 m. S.E. Gloucester consists chiefly of one main street, houses well built, supply of water indifferent. There are here but one church, and a parish school. Broad cloth was formerly manufactured here to a great extent, but is now very limited area of par. 8053 ac. Pop. 4909—2 par. co. Surrey area, 950 ac. Pop. 340.—(Local Correspondent.)

BISHAM par. Eng. Lancashire 5886 ac. Pop. 2857 **BISHAM** (THIS) or **BISHAM ISLAND**, a group of small volcanic islands, about 30 in number W. coast, Africa opposite the mouth of the Rio Grande, between lat. 10° and 15° N. and lon. 15° 30' and 16° 30' W. The largest, Marab, is about 1 m. in length. Most of them are inhabited, but some of them are merely bare rocks, and visited only occasionally. The soil of the more fertile islands is excellent, consisting principally of decomposed lava, and vegetable matter. They are mostly covered with wood, but present a few clear spaces covered with a rich verdure, on which herds of elephants, deer, buffaloes, and other wild animals depasture. The inhabitants cultivate maize, and have plantations of bananas and palms, but their chief dependence is on their cattle, goats, and fisheries. They are a brave but treacherous people and go always armed.—There is a town of the same name on the 1 bank of the Bolivia River about 23 m. from its embouchure lat. 13° 12' S. lon. 55° 15' W.

BISSAO an isl. and support in W. Africa coast of Bessé gambia at the mouth of the Juba or Gambia the latter in lat. 11° 52' N. lon. 15° 37' W. (n) The island is extremely fertile, and densely peopled by a race called Papia, remarkable for their industry and fidelity. On the E. side of the island and close to the beach, is a tortoise ground for a large square building with four bastions and several guns, garrisoned by about 300 soldiers, who are chiefly convicts and mutineers excepting the officers, who are detached from the Cape de Verde Islands, of which this settlement is a dependency. Good anchorage may be had off the town in 7 fathoms mud. Refreshments of all kinds are to be obtained here, but at high prices. Water of good quality is also to be had but the supply is scanty. The Portuguese have been in possession of this island for upwards of two centuries but of the numerous fortifications with which it was formerly protected the one above spoken of is all that remains. The present trade is confined to a very few annual ships from Lisbon.

BISSELT, a fr. two towns, India.—1 A fr. Punjab a bank, Ravee lat. 32° 28' N. lon. 74° 44' E. with an irregularly built bazaar and a remarkable palace of the Rajah, regarded by him as the finest building of the kind in the East.—2 A fr. prov. Delhi, 81 m. S.W. by W. Bareilly lat. 28° 19' N. lon. 79° 10' E. It flourished under the early Mogul Emperors and the Rohillas but is now comparatively desolate. It contains the tombs of some of the family of the Rohilla founder.

BISSELTPOOR, an ass. fr. Hindostan, prov. Bengal 70 m. S. W. Calcutta lat. 23° 4' N. lon. 88° 23' E. It is situated in a tract of fertile land, about 80 ft. above the alluvial plains of the Ganges, and is still a place of considerable trade and importance. The only note-worthy structure is the old fort where the Rajah resides, at one time a place of great strength and consequence, though now fallen into decay.

BISTRAD a fr. Bohemia, circle, Chrudin, par. Jorladisch of same name, in a deep valley 80 m. W. by S. Olmitz. It has a church with a fine altar-screen, an industrial school, and a weekly market. Pop. of the 1926; of lordship, 10,178.

BISTRITZ.—1 A tn. and lordship, Moravia, circle, Prague. The town, situated on the Bistritza, 25 m. S.E. Olmütz, has a parish church two chapels a castle, and an hospital. Pop. 1468. The lordship has an undulating surface, and is watered by the Bistritza and Rausawa. Pop. 8612.—2 A tn. and lordship, Moravia, circle, Igau. The town 43 m. W by S. Olmütz, has its own magistracy, two churches a town house, an hospital, and considerable manufactures of cloth Pop. 3447. The lordship is generally level, though in part hilly and is watered by the Bohvawwa, Nedwiedicka, and Bobrawka. Pop. 6328.—3 A tn. and lordship, Bohemia, circle, Klattau. The village has a castle a chapel, a manu factory of looking-glasses, a mill and two workhouses. Pop. of vill. 524. of lordship, 14,999.—4, Bistriz (Ves) a tn. and lordship, Bohemia, circle, Tabor. The town lies in a valley almost level, 85 m. S.E.E. Tabor and contains a church, a castle, a townhouse and hospital, and has some woollen and linen manufactures. Pop. of tn. 3450 of lordship, 10,164, all R. Catholics.

BISTRITZ, a royal free to Transylvania, cap. dist. of same name, on the Bistritz, opposite to the Borgo Pass, in a fine valley 39 m. E.W.E. Sasmaroczar lat. 47° 0' N. lon. 24° 30' E. It is walled, has two churches, one Lutheran, with a tower 350 ft. high, and one R. Catholic a monastery of Florians, and one of Minorite Friars, a Protestant, and a R. Catholic gymnasium, a printing-office, two hospitals, two schools, and a handsome corn-market. The inhabitants manufacture cloth cordage, leather potatoes, and soap, and trade with Bukovina Austrian Poland, and Moldavia. Two large cattle-markets are held here annually. Wine is produced in the vicinity. Near the town are the remains of an old castle, formerly the seat of the Hapsburgs. Pop. 8620.—The distance area, 520 sq. m., is intersected by a branch of the Carpathian Mountains, and particularly in its higher parts has a severe climate. Agriculture is necessarily of very limited extent, but the woods abound with game, and the rivers with fish. There are about 30 salt springs in the district. The great Samos is the largest stream, but the most celebrated is the Little Bistritz known by the name of Golden Bistritz which it owes to the gold dust found among its sands. Pop. 35,000.

BISTRITZ a tn. Rhenish Prussia, gov. Trever or Treves, cap. circle of same name, between the Nyme and the Kyll 18 m. N.W. Treves. It is the seat of several public offices has two R. Catholic churches, and a castle, some manufactures of cloth and leather a weekly and four yearly markets. Pop. 3000.—The circus, area, 320 sq. m. lies between the Ardennes and the Kifel, and is watered by the Moselle or Mosel, Kyll, Prüm, Nyme, Sauer, Dambach, and Farbach. The surface is much broken by hills, which are generally well wooded, and in the N.W. furnish quarries of slate, limestone, and sandstone. The valleys are fertile and well cultivated, and produce good crops of grain, pulse, potatoes, rape, flax, and hops. Iron is worked to some extent. Pop. 89,041.

BITCHE a fortified tn. of the first class, France, dep. Moselle, 69 m. E. by S. Metz. The lower town formerly called Kellenstein, is built at the foot of a rock, near a lake, from whence the Huns take its rise. The castle, situated on a rock about 150 ft. above the valley mounts about 60 pieces of cannon, and requires 1000 men for its defence. It consists of four bastions and a half-moon battery and is well supplied with water from five ditches, and a very deep well sunk in the heart of the rock. Bitche has manufactures of earthen ware and paper snuff-boxes and in the neighbourhood are the glassworks of Münsthal. Pop. 3181.

BITHFIELD par Eng. Lincoln 1344 ac. Pop. 209.
BITHETTO a tn. Italy Naples prov. and 10 S.W. Bari, in a fertile plain, W. shore Adriatic. It is the seat of a bishop, has several convents, and a cathedral containing numerous interesting pictures and murals. Pop. 4664.

BITTOUG a river, Russia, which rises in the S. of gov. Tambou shortly after enters Voroneje, and, after a course of about 120 m. joins 1 bank Don, about 15 m. above Pavlovsk. Its banks are covered with fine forests.

BITULIA See Berrin.

BITUNTO [anc. Bituntum] a tn. Italy Naples prov. and 15 m. W.S.W. Bari in a fine plain. It is the seat of a bishop, and has a handsome cathedral 13 parish churches, convents for both sexes, an hospital and a seminary. The

Vol. I

environs produce excellent wine, called Zagarolo. A short distance from the town the Spaniards gained a decisive victory over the Austrians, May 25, 1784. Pop. 16,235.

BITRITTO a tn. Italy Naples prov. and 6 m. S. from Bari. It has a collegiate church and its territory is noted for the excellence of its wines and olives. Pop. 2607.

BITZERWILLER a tn. France, dep. Haut-Rhin, 13 m. N.N.E. Belfort, in the valley of the Thur. It has cotton mills, iron furnaces, and manufactures of numerous articles in the steel, and common iron. Pop. 3647.

BITTADON par Eng. Devon 1018 ac. Pop. 67.

BITTER See Birsau.

BITTERFELD a tn. Prussia, prov. Saxony cap. circle of same name, 1 bank. Müste, 21 m. N. Leipzig 18 m. S. Dessau. It is founded by a colony of Flemings, is walled and has some manufactures of cloth and earthenware. Pop. 8860.—The circus, area, 210 sq. m., is level and the soil fertile. The railway between Leipzig and Magdeburg skirts the circle. Pop. 41,878.

BITTERLEY par Eng. Salop 8591 ac. Pop. 1070.

BITTERWELL, par Eng. Leicester 2680 ac. P. 474.

BITTY a vil. lat. Bardonia, about 55 m. S.E. Samsan in a mountainous district. The rearing of cattle is the chief employment. Pop. 2900.

BITTON par Eng. Gloucester 7156 ac. Pop. 3452.

BIVERI or Bistriz a lake, Italy 15 m. S.W. Catania. In summer the greater part of it, converted into a mere marsh produces a miasma which makes the whole district unhealthy, but when swelled by the rains of winter it has a current of nearly 20 m. It communicates with the sea by the river Leontini and contains various kinds of fish the taking of which employs from 50 to 60 boats.

BIX or Bixham par Eng. Oxford 8075 ac. P. 807.

BIXLEY par Eng. Norfolk 760 ac. Pop. 128.

BIYA a river Siberia, uniting with the Kaluznya, 10 m. S.E. Biyak, and forming the Obi. It rises in Lake Altin, flows N.W. then S.W. and has a total course of upwards of 100 m.

BIYK Biak Biak, or Biak, a tn. Siberia, gov. of and 370 m. S. Tunka, on the Bira, lat. 52° N. lon. 85° 10' E. It is wholly composed of wooden houses, and derives its chief importance from the facilities it offers for carrying on trade with China from the frontiers of which it is only 190 m. distant. The country around is fertile in wheat, pastures numerous cattle, and produces a considerable quantity of honey. Pop. (1850) 8973.

BIZERTA or Bismerta [anc. Hippo Zarphus] a seaport tn. and bay regency of Tunis. The town stands on the W. side of the bay 85 m. N. by W. Tunis; lat. 37° 16' 30" N. lon. 9° 49' 15" E. (p. and is thus the most N. town of Africa. It is about a mile in circumference, and is fortified towards the sea, by several castles and batteries which, however are all but useless as defences, in consequence of being commanded by a hill at the distance of a quarter of a mile. Bizerta was formerly one of the best ports in Tunis and is still good, though now seldom frequented, except by small vessels. The shores of the bay are chiefly composed of sandy deserts there is good anchorage at a little distance from the shore, m. 6, 4, and 7 fathoms. A lake, or rather lagoon, runs from the bay a considerable distance into the land and is said to have a depth in some places, of 40 to 50 fathoms but its entrance from the sea is narrow and has not more than 9 ft. over the bar. There is an extensive fishery here, which is famed at a high rate the fish taken are chiefly mullet, of a large size and fine flavor. The country around is singularly beautiful and fertile, producing corn, pulse, oil, cotton, and fruit in great abundance. Notwithstanding this its inhabitants have been represented as living in a state of the greatest poverty. Pop. about 10,000.

BJÖRKO.—1 An isl. Sweden in Lake Malar about 18 m. from Stockholm. It is supposed that here stood the famed large and great city Björkö and ruins of walls, gates, the seem to confirm the accuracy of the supposition.—2 An isl. E. coast, Sweden lat. 59° 58' N. lon. 19° E. 10 m. long by 4 broad.—3, An isl. Basia Gulf of Botnia, W. coast, Finland lat. 63° 21' N. lon. 19° 15' 22' E.

BJÖRNEBORG a seaport in Russian Finland, dist. of, and 70 m. N.W. Åbo, and on a sandy tongue, of land, at the mouth of the Kumo, in the Gulf of Bothnia. It has some

shipbuilding and exports of timber pack, saw articles of wood, and fish, the two last chiefly to Stockholm. Its export to N. Russia, above a mile from the town. The States of Sweden met here in 1602 10p (1841 4927

BLABY par Eng. Lancaster 2300 n. Pop. 1963

BLACK FOREST See SCHWARZWALD.

BLACK HEAD -1 A bay Ireland, co. Clare, S. side. Galway Bay having the promontory of Black Head - lat. 53° 5' N. lon. 10° 17' W. N. - on the W. and Flannery Point on the E. - 2 A point N.E. coast, Ireland, co. Antrim, N. side of the mouth of Belfast Lough. lat. 54° 46' N. lon. 6° 41' 15' W. (2)

BLACK RIVER a river U. States, New York falling into Black River Bay in the N.E. part of Lake Ontario after a N.W. course of about 108 m. of which about 40 m. near its centre, are navigable for boats. The lower part of the river is obstructed by rapids.

BLACK SEA, or Euxine [anc. *Pontus Euxinus*] a large inland sea, bounded, N and N.W. by Russia, N.E. by Caucasus, W. by Turkey to Europe, S. by Anatolia, and S.E. by Armenia, between lat. 41° 0' and 46° 37' N. and lon. 37° 25' and 41° 46' E. Greatest length, from E. to W. about 700 m. breadth, about 800 m. extent of coast, upwards of 2000 m. area, variously estimated at 160,000 and 180,000 sq. m. It receives some of the largest rivers in Europe, including the Danube, Dnieper and Dniester and drains a surface of 550,000 sq. m. Its waters are in consequence only brackish. Its depth in general is great, no bottom having been found in some parts with a line of 140 fathoms although in a few places, as the Strait of Yeniköy, it does not exceed 10 fms or 30 ft. while off the mouth of the Danube the water deepens so gradually from the shore, that the distance from the latter may be ascertained within half a mile by soundings alone. Throughout the whole of the Black Sea there are usually low rocks, and almost everywhere are excellent anchoring places. Shores are rare, and when they do occur are of short duration, seldom lasting more than 12 hours, without considerable abatement. During the summer N. winds prevail and S. in the beginning of autumn and spring. The former frequently detain vessels from the Mediterranean in the Dardanelles and Bosphorus for weeks together. The currents of the Black Sea, generally have a tendency towards the Bosphorus or channel of Constantinople. The most constant currents, is that which sets along the W. shore, from the mouth of the Danube to the Bosphorus occasioned by the great influx of water especially on the melting of the snow from the great rivers that fall into the N.W. portion of this inland sea. There is no flow of tide in the Black Sea, the slight difference of elevation that occasionally occurs arising solely from the winds and currents.

The S. coast of the Crimea and the coast of Anatolia and Caucasus, abound in lofty mountains, which rise up immediately from the margin of the sea, and afford excellent land marks. On the N.W. and N. the coast is generally low and on this account dangerous as it can be seen only from a very short distance. Harbours and bays are numerous, and many of them good, but there are none of any great extent. Those that penetrate deepest into the land are the Gulf of Kerch on the N. between the Crimea and the mainland the Gulf of Kizilirmak and Burgas on the W. and those of Sinope and Samson on the E. There are no remarkable projections or headlands, excepting those formed by the W. and E. extremities of the Crimea, and Cape Isthak and Sinop on Anatolia. The Black Sea communicates with the Sea of Azov by a narrow channel, called the Strait of Kertch or Yeniköy, and with the Mediterranean by the Bosphorus or Channel or Strait of Constantinople the Sea of Marmara, and the Dardanelles.

There are few fisheries of any importance carried on in the Black Sea, although it abounds with various kinds of fish, including porpoises, caracaras, dolphins, mackerel, mullet, brans, &c. &c. &c. are numerous. One of the most extensive fisheries is at the entrance of the Strait of Yeniköy, where considerable quantities of sardines are taken. The N. ports are frequently shut up by ice for three or four months in the year or from about December to March.

The Black Sea extended, at a remote period, much further E. and N. than it now does, occupying the whole of the vast plains and steppes that surround the Caspian and the Sea of Azov, its Tertiary neighbour of which had then a separate exten-

sion, being included in this great inland sea. The relative level of the Black Sea, with the Caspian on the one hand and the ocean on the other were long undetermined points; but seem now to be pretty well ascertained. It has been found that the Caspian is 101 ft. lower than the Black Sea, and that the latter is precisely of the same level as the ocean. That it is, however, a little, though, perhaps, but a very little above the level of the Mediterranean, which is itself just below that of the Atlantic by evaporation, would appear from the almost constant flow of a current towards the Gironde. Archipelago through the Dardanelles. The amount of evaporation which takes place in the Black Sea must be also very great, as the discharge by the Bosphorus is wholly insufficient to account for the disposal of the immense quantities of water passed into it by its rivers. How it should retain its saltness, notwithstanding this large and constant accession of fresh water has not yet been satisfactorily explained.

The Black Sea was explored at an early period by the Greeks, who from their ignorance of the arts of navigation and shipbuilding represented it as beset with dangers of the most formidable kind and who, it has been said gave it the name of Black Sea, as expressive of the dread and terror in which they held it—a feeling further manifested by their placing the Cimmerian land of everlasting darkness on its N. shore. Having gathered courage from experience, the Greeks, at a later period, formed numerous establishments along its shores from which they carried on an extensive trade in slaves, cattle, and corn, and in this day their vessels are the most numerous in the Black Sea, the greater part being employed in exporting the corn, hides, tinned iron, and furs of Russia, and in importing wine and fruits, and the manufactures of England and France.

BLACK WARRIOR RIVER, a river U. States, Alaska, falling into the Tomlinson at lat. 53° 35' N. lon. 68° W. after a S.W. course of about 150 m. For several boats, it is navigable to Tualchee, 48 m. direct distance; and for boats, much higher up.

BLACKAULTON par Eng. Devon; 5646 n. P. 1309

BLACKBURN a pari. bor. market tn. and par. Eng. land co. Lancashire. The town is 21 m. N.W. Manchester pleasantly situated in a valley sheltered by hills on the N.E. and S.W. It is very irregularly built, but contains many respectable houses, all lighted with gas, and amply supplied with water, but indifferently paved. The church, a spacious and elegant edifice, in the later English style, with a lofty square tower was almost wholly rebuilt in 1819-26, at an expense of £30,000. The other churches are the district churches of St. Paul St. John, and St. Peter the latter two most modern edifices. There are places of worship for Baptists, Independents, W. Methodists, Primitive Methodists, Wesleyans, and Society of Friends also a Scotch Kirk, and E. Catholic chapel a free grammar-school, several national and numerous other schools, in which 5000 children altogether are educated; a number of charitable institutions, and a gymnasium established by a private company for the recreation of their workmen, for whose children the same benevolent individuals have erected a school at a cost of £1000. There is a spacious covered market, with tower and clock a small theatre, assembly rooms, and a cloth hall, now seldom used for that purpose, the stalls for the sale of cloths being erected in the streets. The house is still shown in Blackburn in which the father of the late Sir Robert Peel was born. It is a homely looking dwelling situated in what is called Fish Lane.

Blackburn is the seat of extensive manufactures of cotton goods, of which from 50,000 to 60,000 pieces are manufactured weekly in the town and vicinity employing above 10,500 persons. The annual value of the goods produced, is estimated at upwards of £2,000,000. This species of manufacture has entirely superseded the Blackburn greys, a fabric for which this town was formerly celebrated as it was, also, at an earlier period, for Blackburn cloths.

Some of the most important improvements, in the spinning and manufacturing of cotton, originated with James Hargreaves, a carpenter in Blackburn, who was the inventor and patentee of the spinning-jenny.

Blackburn commands an extensive inland navigation by means of the Leeds and Liverpool Canal, which passes the outskirts of the town railways afford it still further facilities,

connecting it, on the E., with Burnley and the W. Riding of York; on the W., with Preston and Liverpool; and on the S., with Bolton and Manchester. There are two railway stations in the town, belonging, respectively, to the East Lancashire, and to the Bolton and Clitheroe Railway Companies. Blackburn receives two members to the House of Commons. Registered electors (1848) 1116. Area of par 45 269 ac. Pop. 84 919; of in 44,538.

BLACKFORD par Eng Somerset; 578 ac. Pop. 178
BLACKHEATH, a vil. and well known heath, England, co. Kent, the former about 6 m. S.E. London with which it is connected by the Greenwich Railway pleasantly situated on a gentle slope on the verge of the heath. It consists of one principal street, spacious, but irregular; the houses plain and mostly of brick; those of the working classes said to be ill drained and otherwise exceedingly uncomfortable. Close by is Morden College, a quadrangular red brick building, founded by Sir John Morden for the benefit of decayed Turkey merchants, many of whom reside here in the greatest comfort, and are remarkable for their longevity. The only place of worship in the village is the Wesleyan chapel. There are no manufactures in the village. The market contains about 70 ac. within its present limited bounds. It is very picturesque and, in summer is much resorted to by pleasure parties, loquacious being one of the amusements for which it is well adapted. This celebrated heath has been the scene of many remarkable events, some of them of great historical interest. —(Local Correspondent.)

BLACKLAND par Eng. Wiltshire 537 ac. Pop. 72
BLACKMORE, par Eng. Essex 2576 ac. Pop. 704.
BLACKNESS, a vil. Scotland, co. Linlithgow; a burgh, Forth 3 m. E. Borecastle. It has been long in a decaying state, and is now only resorted to by a few families in summer as bathing quarters. On a peninsula near the village stands Blackness Castle, one of the four forts in Scotland, stipulated to be kept in repair by the articles of union and famous as the place of confinement of many of the Covenanters.

BLACKPOOL, a vil. England, coast of Lancashire, between the estuaries of the Ribbles and Wyre, 17 m. S.E. W. Lancaster, which sea of late years attracted many visitors by its advantages as a watering-place. It is elevated considerably above the sea at low water affords excellent accommodation for visitors, a range of lofty houses about 1 m. long facing the sea. A library and news-room are kept open during the bathing season and an excellent promenade has been formed along the edge of the breakwater. The air is healthy and bracing. The number of visitors present at one time, during the bathing season, varies from 2000 to 6000. Statutory pop. 2190.

BLACKRATH par Iral Kilkenny 1759 ac. P. 573

BLACKROCK—1 A to Ireland co. Dublin, 4 m. E. Dublin Castle, S. shore of Dublin Bay intersected by the Dublin and Kingston Railway. It is much resorted to as a bathing place by the inhabitants and its numerous handsome villas form suburban retreats for the wealthy citizens of Dublin. Pop. 2343.—2 A vil. U. States, New York near the foot of Lake Erie, 23 m. below Buffalo, with which it is connected by railway. It has a church, with several stores, warehouses, and manufactories of different kinds. The harbour is formed by an immense pier projecting into the Niagara, built by the State of New York for the accommodation of vessels on the lake and of boats which here enter it from the canal. Pop. (1840) 1800.

BLACKTOFT par Eng York E. Riding 8313 ac. Pop. 522

BLACKWALL, a to England forming an important suburb of London co. Middlesex, par Poplar 4 m. E.S.E. St. Paul's, at the confluence of the Lea and the Thames. It is a scene of immense bustle and activity containing a great number of alighting yards, and also the E. and W. India docks. It is connected with the city of London by a railway and numerous steamers are continually arriving and departing from its wharfs. The Cabinet Ministers take an annual white-bait dinner here, prior to the prorogation of Parliament. Pop. of par (1841) 36,648. See LONDON.

BLACKWATER, several rivers Ireland—1 Blaine in the N part of co. Tyrone, and flowing, for a considerable portion of its course, the boundary between that county and co.

Monaghan and Armagh. After flowing S.E. N., and N.E. and rejoining the Ouliff and several other affluents, it falls into the S. part of Lough Neagh. Total course, 80 to 40 m. It long formed the boundary between the English Pale and the Tyrone O'Neill's.—2 The principal stream, co. Cork, and celebrated for the romantic and picturesque beauty of its banks by Mr. Inglis estimated not inferior to either the Rhine or the Danube. It rises on the confines of co. Kerry and Limerick flows, generally E. by Malloy to Cappoquin, where it bends S., and falls into St. George's Channel, through Youghal harbour after a course of upwards of 80 m. It is not navigable, but it abounds in salmon, and propels numerous mills.—The other streams of the same name, nearly 20 in number, are all small and famous for nothing but trout.

BLACKWELL par Eng. Derby; 1700 ac. Pop. 467
BLACKWOOD RIVER, a small stream, W. Australia, co. Sussex, falling into the Indian Ocean at Cape Leveque, after a course of about 50 m.

BLAIGN par Eng Somerset 8535 ac. Pop. 1128.

BLAIR ATHOL a vil and par Scotland, co. Perth the former on a plain near the confluence of the Tilt and Garry on the great Highland road from Perth to Inverness, 20 m. N.W. Perth. It consists of a single row of substantial cottages, and a commodious inn erected by the Duke of Athol. At a short distance are the parish church and school both plain but substantial buildings. At the distance of about a quarter of a mile is Blair House or Castle, the seat of the noblemen whose name—a plain but beautifully situated building. There are here some large trees of enormous size which derive no small interest from their being amongst the first planted in Scotland. The park is about 80 m. in length and 18 in breadth, and is remarkable for the beauty of its scenery. Pop. 2084.—(Local Correspondent.)

BLAIRGOWRIE a vil and par Scotland co. Perth. The village is on a rising ground with a S. exposure 15 m. N.W. Perth. The streets are, in general straight and well kept; houses of stone, and slated and, for the most part, well built. The churches and other places of worship comprise the parish church a Free church, and independent chapel, an Episcopal chapel, and a R. Catholic chapel, none of which have any claim to architectural beauty. The principal schools are, the parish school, the Free church school and a school supported chiefly by private subscription. There is here a charitable clothing society. Flax-spinning is carried on here and in the vicinity to a great extent, there being no fewer than 13 mills in the village and around it all driven by water-power from the river Earn. They employ altogether about 1800 hands from 800 to 400 more are engaged in hand-loom weaving. The salubrity of the climate, and the beauty of the scenery around Blairgowrie, have rendered it a favourite summer resort.—The FARM is about 11 m. in length and upwards of 8 in breadth. Pop. of par 4377.—(Local Correspondent.)

BLAIR-LOGIE, a small vil Scotland co. of and about 8 m. N.E. Stirling beautifully situated at the base of the Ochil at the entrance to Glenhead and much resorted to by invalids on account of the salubrity of its climate. Pop. 134.

BLAIRDON par Eng Gloucester 900 ac. Pop. 999
BLAISE, two small rivers, France the one rises above Senones, arrond. Dreux, dep. Eure-et-Loire, and running N.E. falls into the Eure, after a course of about 20 m.; the other rises above Juttancourt arrond. Chantonnay, dep. Maine-et-Loire, and after a course of about 36 m. falls into the Maine.
BLAISE (R.) a well-built vil. Switzerland, can. of and 4 m. N.E. Neuchâtel and on the borders of the lake. It has an old church with a lofty tower three schools, and an extensive cotton printing work. Good white wine is grown in the vicinity. Pop. 1050.

BLAISOTIS, a dist. France, which formed a dependency of the prov. Orleansais, and had Blais for its capital. It now forms the greater part of dep. Loir-et-Cher.

BLAKEMERE, or BLACMOOR, par Eng. Hereford; 1187 ac. Pop. 189.

BLAKENEY a par and small seaport, Eng. Norfolk 1805 ac. The harbour is spacious and safe, and numerous vessels are employed in oyster-fishing. Pop. 1108.

BLAKENHAM, two pars. Eng Suffolk.—1 *Blakenham* (Great), 689 ac. Pop. 244.—2 *Blakenham* (Little), 1084 ac. Pop. 159.

BLAKESLEY par. Eng Northampton 2840 ac. P. 798.

BLAMONT—1 A. in France, dep. Meurthe, 17 m. E. Lunéville, on the Vesme. Its old castle was occupied by the allies in 1814. It manufactures oilcloths, woollen yarn, earthenware, and leather. Pop. 2671.—2 A small tn., dep. Doubs, on the frontier of Switzerland 40 m. E. N. E. Besançon. It has a castle of considerable strength. Pop. 669.

BLANC (La, a tn. France, dep. Indre, 32 m. W. W. Chateauroux, picturesquely situated on the Creuse which divides it into the Upper and Lower town, and formerly a place of great strength, but now its fortifications are dismantled. It is, however one of the neatest towns in the department, and has recently received great improvements. It has a court of first resort, manufactures of coarse cloth, vinegar earthenware, woollen yarn, linen thread and an extensive brewery and in the vicinity there are several blast furnaces, and other ironworks. Trade—principally in the wine of the district, iron, wood, and fish. Pop. 4770.

BLANC MONT See MONT BLANC.

BLANCA a tn. Spain, prov. of, and 90 m. W. Murcia in a rocky and barren district, near L. bank, Segura. It has a spacious paved, principal street, with several smaller streets and narrow hilly lanes diverging from it a large square a parish church, town and chapter house, prison, hospital school and some remnants of a Moorish castle. Manufactures—silk, linen, fabrics, hats, hats, and, still, but people mainly engaged in agriculture. Pop. 2240.

BLANCHVILLESKILL, par. Irel. Kilkenny 854 ac. Pop. 152.

BLANC CAPE numerous capes in various parts of the world.—1 A well-known cape, W. coast Africa lat 20° 46' 30" N. lon 17° 4' W. (n) It forms the extremity of a rocky ridge named White Mountain or White Mountain which, bounding it, forms with the shore, a spacious harbour called the Great Bay. It was discovered by the Portuguese in 1441. A lucrative fishery is carried on here by natives of the Canary Islands, who resort to it in boats or vessels of 100 to 150 tons burden.—2 A cape, N. W. Africa lat. 23° 5' N. lon 8° 38' W. (n)—3 A cape, N. Africa, Tunis lat 37° 15' N. lon 8° 59' E.—4 A cape, Corsica Island, lat. (n)—9 A cape, E. coast, Patagonia, N. of the Gulf of St. George lat 47° 15' S. lon. 65° 44' W. (n).

BLANDAIN a vil. tn. and com. Belgium prov. Hainaut, 6 m. W. W. Tournai. The chief employments are weaving and spinning. Much oil is made here and better honey and wax are exported. Pop. 2183.

BLANDFORD FORD is a market tn. and par. England co. Dorset. The river is 14 m. N. E. Dorchester beautifully situated on a bend of the Stour across which are three bridges one of them having six arches. It has regularly laid out, well-paved, and lighted streets a townhall and theatre, neat and commodious buildings the church, situated in the centre of the town, an elegant modern structure, in the Grecian style, with a tower and spire places of worship for Independents and H. Catholics, a free grammar school, a blue-coat school for clothing and instructing 12 boys, besides daily and boarding schools, with almshouses, and other charities. Blandford was formerly celebrated for its fine point lace; but shirt buttons are now the only manufacture, and even that is declining. Races are held in August, on fine downs, in the immediate vicinity. The weekly market is on Saturday and fairs are held on March 7 July 10 and November 8, for horses, sheep, cattle, and cheese. Blandford is a borough by prescription and a charter of incorporation was granted by James I. The government of the town is vested in a town clerk, four aldermen, and 12 councillors. Petty sessions are held every alternate week. The town has suffered severely at four different times, from fire the last time, June 6, 1781 it was nearly wholly destroyed. It gives the title of Marquis to the Duke of Northborough Area of par 863 ac. Pop. 8948.

BLANDFORD (St Mary) par. Eng Dorset; 1688 ac

Pop. 567.

BLANKENBERGH a vil. and com. Belgium, prov. W. Flanders, 9 m. N. W. Bruges. The village was once a seaport, and called Scherphout, but was destroyed, with a great number of other villages, in 1584, by a rise of the tide; and afterwards rebuilt under its present name. Fishing is nearly the whole support of the inhabitants. Pop. 2126.

BLANKENBURG a tn. duchy of, and 88 m. S. S. E. Brunswick, cap. circle of same name situated on the Harz Mountains, surrounded by walls, and has a gymnasium, with several educational and charitable institutions. On the summit of a height close by the town is the ducal palace of Lüneburg a heavy-looking structure, containing 370 apartments, and a large collection of paintings. Pop. 2800.—The circle, area, about 144 sq. m. is, in some parts, well cultivated but a great portion of it is covered with forests. Pop. 32 600.

Several other places in Germany have the same name.

BLANKENHESE a tn. Denmark, prov. Holsten, par. Eibe, 5 m. W. Altona, to which there is a good road, and about lat 53° 34' N. lon 9° 45' E. Three small creeks of the Elbe divide it into three parts, which rise up to terraces to a considerable height. It is irregularly built but has a beautifully laid out park containing about 110 ac. the price of admission to which a small sum yields a considerable yearly amount, which is appropriated to charitable purposes. The inhabitants are nearly all engaged in manufacturing pursuits. About 240 vessels, together 15,870 tons, belong to the place but there being no harbours they are obliged to winter in Altona and Hamburg. There is a ferry across the Elbe, which is here about 1½ m. broad. Pop. 3000.

BLANKENHAYN a tn. Germany duchy of Saxony, situated on a height 8 m. S. S. E. Weimar. It contains a castle, two churches, and a R. Catholic chapel and has manufactures of glassware, porcelain common pottery and tiles. It has also some trade in wool and ribbons and three yearly fairs. Pop. 1690.

BLANKHYE white-timber par. Eng Lincoln 6006 ac. Pop. 600.

BLANQUEFORT a tn. France, dep. Gironde, 6 m. Com. Bordeaux. In the vicinity excellent white wines are grown. Four fairs are held annually. Pop. 1648.

BLANQUILLA an Isl. Caribbean Sea 58 m. N. N. W. Santa Margarita lat. 11° 56' N. lon. 64° 37' W. (n) It is about 15 m. in circuit abounds in turtle, and is inhabited by a few fishermen.

BLANTYRE, a vil. and par. Scotland co. Lanark, the former on a plain 8 m. S. E. Glasgow and 8 m. W. Hamilton. It is kept extremely neat and clean, and being tastefully adorned with trees, has a remarkably pleasing appearance. The houses are of stone, and generally well built. The parish church is in the village and at a little distance from it is a Free church. Pop. 261.—About 1½ m. from Blantyre stands a village called Blantyre Works, or Low Blantyre containing a manufacturing pop. of 1780, connected with the works owned on there by Henry Moncrieff and Co. including the branches of cotton spinning weaving by hand and power loom, and Turkey-red dyeing. The houses of the village are beautifully situated about 90 ft. above the level of the river and over look a fine sloping bank of about 4½ acres laid out in grass sward as recreation ground for the inhabitants. The houses and streets are lighted with gas and well supplied with river and spring water. A station of the Hamilton branch of the Clydebank Junction Railway is within 200 yards of the village affording communication with Glasgow Hamilton &c.—The FARMER, about 6 m. in length, and about 1 m. in breadth, contains the ruins of Blantyre Priory founded by Alexander II. situated on a high rock on the banks of the Clyde, opposite Bothwell Castle. Pop. of par 2848.

BLANZY a vil. France, dep. Saône-et-Loire (Burgundy) which gives its name to part of a very important mining district, known as the coal field of Creusot and Bligny.

BLARENZ, a vil. Ireland, co. of, and 4 m. N. Cork, on a rivulet of same name, here crossed by a handsome bridge of three arches. It is small but well built, and besides the parish church, contains a national school and dispensary. Flax and cotton were formerly manufactured to some extent, but both of these branches have now decayed. Spinning and dyeing woollen yarn is, however still carried on and there

is an extensive paper-mill, employing about 170 hands. Blarney Castle stands on an isolated limestone rock, at the junction of the Blarney and Comeragh, erected in the 15th century and the scene of several interesting historical events but deriving its chief notoriety from a stout in its N.E. angle, about 80 ft. from the top, bearing a Latin inscription recording the date of the erection and called the Blarney Stone; to which tradition ascribes the faculty of communicating to all who kiss it, that wisdom of most persuasive fluency of speech, commonly called *blarney*. The groves of Blarney are extensive and interesting and beneath the castle there are also some curious natural caves. The Dublin and Cork Railway passes close to the vi.

BLAS (San).—1 A point or cape, and bay (the latter called also Mandingo Gulf) Caribbean Sea N. coast, Isthmus Panama, and presently at the narrowest part of the latter which is here not more than 30 m. broad. The point which forms the N.W. side of the bay is in lat. 9° 32' N. lon. 78° 59' W. (n.). The mouth of the gulf from Cape Blas to the anchorage of Mandingo is 6 m. N. and S. and from that thus, as much to the W., its coasts are low and covered with mangroves, which run into the sea. The anchorage is sheltered and has depth sufficient for any class of vessels. In the gulf, and extending from it several miles E. there are numerous islets and cays, with banks. It is about 50 m. E. Forto Bella, and 70 m. N.E. Chagres. —2 A seaport in Mexico, Jalisco, on an island at the embouchure of the Ranzagua, in the Pacific Ocean, 87 m. W.W. Tepic; lat. 21° 37' 50" N.; lon. 105° 15' 30" W. (n.). The altitude is extremely unhealthy the harbour bad, and the trade very inconsiderable. —3 A co. S. America, La Plata, on the bay of same name 480 m. S.W. Buenos Ayres lat. 40° 38' S. lon. 68° 10' W. The port is known also to sailors as the *Rubie de la Cruz Santa*. Port about 2000. —4 A cape, N. shore, Gulf of Mexico, mainland of Florida, U. States lat. 33° 40' N. lon. 85° 29' W. (n.).

BLASENDORF or **BLASAPALVA** a market tn. Transylvania, in a very fertile district on the angle formed by the confluence of the Great and the Little Kokel, 39 m. N.N.W. Hermannstadt. It is the see of a bishop of the Greek United Church and contains besides the cathedral several other churches, a divinity hall, a diocesan seminary, a gymnasium, a normal school and a monastery. Pop. 4000.

BLASEWITZ, a vil. Saxony circle and about 5 m. S.S.E. Dresden, 1 km. Elbe, and only 5 m. from the camp because Schiller has named the female Butler in the camp of Wallenstein *Gretel* of Blasenitz, doubtless after a person of the same name, who, in Schiller's time, sold cakes at the inn close to the ferry. Pop. 280.

BLASKAT or **BLASQUET ISLAND**, a group of 12 rocky islets, lying off the S.W. coast of Ireland, N. side of entrance to Dingle Bay co. Kerry the largest of which called the Great Blasket, is 2½ m. long.

BLASTON (St. MICHAEL) par Eng Leicester 1267 ac. Pop. 16.

BLATHERWITKE, par Eng Northampton 187 ac. Pop. 249.

BLATNA, a tn. Bohemia, circle, Prashin, cap. lordship of same name on the Sclawa, 52 m. S.W. Prague. It contains a palace, a demerit church townhouse, school, and hospital and has a potash refinery. Gold was at one time found in the neighbourhood. Pop. 1500.

BLATON vil. and com. Belgium prov. Hainaut 14 m. N.E. Tournai, with manufactures of woolen stuffs hosiery serge, &c. It has also hemlock, and some trade in cattle. Pop. 3608.

BLAUBERG a tn. Württemberg, circle of the Danube, on the Aach, 9 m. W. Ulm. The principal buildings are the church, and the manse which was founded in 1487 and contains some good pictures. Besides woolen and linen manufactures, Blaubeurg possesses several breweries, a vinegar work, and numerous mills, among others an iron, a saw an oil, a paper, and a fulling mill. Pop. 1973.

BLAXHALL, par Eng. Suffolk 1976 ac. Pop. 577.

BLAYDON, a vil. England, co. Durham r. bank, Tyne, 4 m. W. Newcastle, a station of the York, Newcastle, and Berwick Railway. It has an Established, and three Wesleyan churches. Large quantities of coals are embarked here in boats, to be shipped at Shields. Here are extensive works

for the manufacture of lead, several white lead and sulphuric acid works, a chain and nail manufactory; a foundry for iron, brass, and other articles a coke and lamp-black factory, a steel and iron forge, and a five-brick manufactory. Pop. 1114.

BLAYDON BURN a hamlet, England, co. Durham, 6 m. W.W. Newcastle, pleasantly situated on the Tyne, at the confluence of a small rivulet. It has extensive works, where fire-bricks and various articles of fire-clay are manufactured. Here is also an extensive millery employing from 300 to 500 hands.

BLAYE (anc. *Blayne*) a seaport in France, dep. Gironde, r. bank, Gironde lat. 45° 7' N. lon. 0° 41' W. It is a fortified place of the fourth class, and lies at the foot of a rock, on the top of which stands the L. tower, which the citadel a modern fortification, built round an old Gothic castle. The place is planted with trees and forms an agreeable promenade. Blaye is also defended by Fort Madaon, on the r. bank of the Gironde, and by the Fort a fortified tower on a small island in the middle of the river here 2½ m. wide which is thus completely commanded. The fort of Blaye is much frequented inward bound vessels delivering their manifests here, and outward bound usually calling for provisions. This town has courts of first resort, and of commerce, an hospital and an agricultural society with manufactures of linen and woolen stuffs, brandy distilleries glassworks, potteries, and building yards for coasting vessels, a considerable trade in wine brandy, oil, soap, apples, nuts, dried fruits, ream ship and house timber &c. In 1823 the Duchess de Berry who had been arrested in Nantes, was confined in the citadel of Blaye. Pop. 2848.

BLEFOVO a river and valley Switzerland, com. Tessin.

The valley lies in the N. part of the canton, formed by the mountains of the Laventis Valley on the one side, and the Grisons on the other. It is watered by the river as a fertile yielding fruit and grain and pasturing cattle.—The river falls into the Tessin, after a course of about 15 m.

BLETRACH a tn. Austria, Carinthia, circle of, and about 5 m. W. Villach, in the valley of the Drava, and not far from the famous Bleiburg or Lead Mountain. It contains two churches, a R. Catholic and Lutheran. Pop. 5600.

BLEIBERG a vil. Austria, Carinthia, about 7 m. W. Villach, and so called from standing in the centre of the important mining district of Bleiburg which yields annually about 1600 tons of lead and copper.

BLEICHRODE a tn. Prussia prov. Saxony gov. Erfurt, 11 m. W. S.W. Nordhausen, at the foot of the Ilkum. It is walled and has considerable woolen and cotton manufactures tanneries, bleachfields and oil-mills. Pop. 2780.

BLEISWIJK a vil. Holland prov. Holland 7 m. N. Rotterdam, in a pleasant fertile situation, surrounded by a canal called *de Balle*. It has a respectable townhouse, in which is a weigh house two churches and a school.

BLEIJING a small principality esp. name name, N. side, tal. Bal, against which a successful expedition was directed by the Dutch in July 1846, in consequence of the piratical dungs of the Rajah and his subjects.—The town lat. 8° 15' S. lon. 115° 5' E. is the second on the island.

BLENDWORTH par Eng Hants 3804 ac. Pop. 256

BLENEHEIM or **BLANENBURG**, a vil. Prussia, on the Danube circle, Schwaben and Neuburg near the town of Hohenheim celebrated as the scene of the great battle fought between the English, aided by Princes Eugene and the Imperialists, under Marlborough, and the French and Bavarian forces under Marshal Tallard, on August 13, 1704 when the latter were defeated with a loss of 40,000 men, killed, wounded and taken prisoners 120 pieces of cannon, and 800 standards.

BLENHEIM PARK, a tract of land, England, co. Oxford, 80 m. W. W. London, containing 2940 ac. bestowed by

Queen Anne, upon the great Duke of Marlborough, in reward of the splendid victory of Blenheim and subsequently confirmed by Act of Parliament, the House of Commons further voting the sum of £250,000 for the erection of a suitable palace. The structure was completed in 1715 after a design by Sir John Vanbrugh.

BLERE, a *tu*, France, dep. Indre-et-Loire, 16 m. E.S.E. Tours, 1 bank. Cher here crossed by a bridge, built about the middle of the 12th century by Henry II. of England. Bléré is the entrepot for the timber from the forest of Loches, and for most of the merchandise that comes down the Cher from the Berry and the Bourbonnais. In the canton and near the town of Bléré, is the castle of Chénouencen, which at first was a simple manor-house, but extended to its present dimensions in the reign of Francis I. It was purchased, in 1555, by Henry II., who gave it with the duchy of Valentinois, to the celebrated Diane de Poitiers, who embellished it with great magnificence, but before her designs were completed, was obliged to cede it to Catherine de Medici, who continued the embellishments on a still more lavish scale. It was afterwards possessed by the house of Condé and, in 1793, was purchased by M. Dupin (former General) the wit and beauty of whose widow attracted the most distinguished literati of the last century to the castle. Voltaire, Montesquieu, Buffon, and Rousseau, who wrote one or two pieces for the theatre, were amongst the visitors. The castle is constructed on a kind of bridge across the Cher and has a long gallery that leads from one side of the river to the other. It fortunately escaped the Revolution, and is in perfect preservation. Many fine pictures decorate the interior. The architecture, furniture, and decorations all belong to the time of the Valois. Among the curiosities, is shown the mirror used by Mary Queen of Scots, when married to the Dauphin. Pop. 19,13.

BLESSINGTON, a *tu*, and par Ireland, co. Wicklow on the Liffey 16 m. S.W. Dublin. The town is tolerably well built, has a thriving appearance and comprises a handsome church, two R.C. chapels, several schools, a dispensary and numerous elegant private dwellings. Markets—frises cloth and linen. Fairs are held on May 7th and November. —In the parish which is for the most part hilly are several quarries of excellent granite. Area 15,781 ac. Pop. 1733.

BLETCHINGLY, a *tr* and par England on Surrey The town, 13 m. S. London, is pleasantly situated on an eminence, and commands an extensive prospect of the S. Downs and other parts of Sussex. It has a church, a venerable and spacious edifice, in the early English style, an Independent chapel, an endowed grammar-school for 25 boys, almshouses for 10 aged persons, and several smaller charities. The inhabitants are principally employed in agriculture. It formerly returned two members to Parliament, but was disfranchised by the Reform Bill since which it has sunk into a mere village. The market has long been discontinued but there are two annual fairs, for horses, cattle, and pigs. The South-Eastern, and the London, Brighton, and South-coast Railways, have each a station at Bletchingley. Area of par 5585 ac. Pop. 1665.

BLOIS (anc. *Blavus*, *Blannet*) a *tu*, France, cap. dep. Loire-et-Cher 39 m. S.S.W. Paris lat. 47° 55' 20" N. lon. 1° 20' 24" E. (u.) built in the form of an amphitheatre, r bank, Loure, as one of the finest sites of the kingdom. From its position, on an acclivity it is divided into upper and lower town. The upper portion which more properly forms the town of Blois, is all built with narrow crooked streets, almost impassable by carriages but clean, and crowded with fountains. The lower town consists of a series of 11 built houses, extending along a handsome quay a same ridge of 11 acres, which crosses the river at this point, unites it to one of the principal suburbs. The castle of Blois is celebrated from its historical associations. It was for several centuries the abode of the Counts of that name, and afterwards the favourite residence of the Kings of France. It has been inhabited by more than a hundred princes or crowned heads, who from time to time embellished and enriched it. Louis XII. was born there; and Francis I. Henry II. Charles IX., and Henry III. held their courts in it. Amongst other events, the Castle of Blois was the scene of the murder of the Guises. During the religious wars which at that period (1588) assailed France, the states known by the name of the States of Blois, were convened in the castle by Henry III. to put an end if possible to the troubles by which the kingdom was distracted. The Duc de Guise, and his brother the Cardinal, were on their way to attend the sitting when the former was stabbed almost in presence of the King. The Cardinal was murdered next day by some soldiers in the tower of the castle, and his body was burnt, to prevent the insurgents from making relics of his remains. The castle has been rebuilt and extended at so many various periods, that

nothing remains of its original structure, except the Gothic tower. The E. portion was built by Louis XII., the N by Francis I., and the fine W. facade by Gaston of Orleans, after the designs of Mansard. The castle is now used as a barracks but the state-hall, the Queen's room, and the cor-

CORNER OF THE CASTLE OF BLOIS. — From France Macmillan's Picturesque.

ridor where the Duke of Guise was assassinated are still pointed out. The finest modern building of Blois is the episcopal palace, built by Gabriel, architect to Louis XIV. It is now used as the hotel of the Prefecture. The old church of the Jesuits, built after the designs of Mansard is an interesting structure. The aqueduct that supplies part of the town with water is cut through the solid rock. It is a stupendous work and is supposed to have been executed by the Romans. Blois has also a fine public promenade, a public library containing 17 000 volumes a theatre hospital hotels garden, lunatic asylum, and several interesting monuments. It is the seat of a bishopric, a court of first resort, and of commerce and has an exchange and an agricultural society communal college, two seminaries, and a royal stud Manufactures—glazes, enamel, earthenware and leather. It has a considerable trade in wine, brandy, cloth, paper, timber and firewood. Blois is the principal entrepot for the spirit called Orleans brandy. The town is of great antiquity and was formerly the capital of an extensive county. In the 18th century it was twice the seat of the states-general of the kingdom. When the allied armies menaced Paris in 1814, the Empress Marie Louise retired here and made this place for a short period the seat of imperial government, the last seat of which were dated and despatched from Blois. Pop. (1846) 15,182.

BLOKJIL, a market in Holland prov Overijssel 16 m. N N W Zwolle, at the embouchure of the Blokzijl Aa. in the Zelder See. It is a regularly built, good-looking town, with two churches Calvinistic and Baptist; a synagogue, three schools, and a weigh-house. The chief occupations are trade shipping the manufactory of salt and leather. Pop. 1700.

BLOMBERG, a tn. Germany Lippe-Deinold, on the Diemel 28 m. S S E Münden. It is entered by three gates, contains two churches, a townhouse, and old castle and has a bark-mill, a tanning mill and a tilework. Pop. 1950.

BLOOMINGTON, a vil. U States, Indiana, 48 m. S. Indianapolis. It has five churches belonging to different religious bodies a female academy and a university. Pop. (1840) 1550.

BOBINO *to Italy Piedmont, prov Alessandria, 87 m N. E. Genoa, on the Trebbia. It is surrounded by walls, has a diemal appearance, and is the seat of a bishopric suffragan to Genoa, and of a district court of justice. It owes its origin to a monastery founded here in the 7th century. In 1748 it was ceded to Sardinia by Austria. Pop. 4000.*—The province is 25 m. long and 10 m. broad. A spur of the Apennines divides it into two parts the S. portion watered by the Trebbia, and the N. by the Stura and Tidone. It is divided into four mandamenti, which are again subdivided into 27 communes. Pop. 31,354

BOBER, a river Prussian Rhine, which rises near a vil of same name, in the Koenigsberg, after receiving 1. bank, the Queke and Ode, and, 2. bank, the Spoota, flows into the Oder near Crossen, after a N. W. course of nearly 180 m.

BOBERKA, or **BOBERKA** a small tn. and lordship, Austria, Galicia, circle, Borsany 19 m S. E. E. Lemberg. It contains a R. Catholic and a Greek church. The inhabitants are chiefly employed in weaving linen. Pop. 4700

BOBIA *Abasco or Filates Island.* See **ABOSCHIA**.

BOBLINGH *N. a vil. Württemberg 10 m. S. W. Stuttgart with woollen linen and cotton manufactures vineyard and chemical works. Pop. 3500.*—The tract area, 54 geo. sq. m., has a pop. of 40 000 employed chiefly in weaving the culture of hops and the timber trade.

BOBROUSK, a fortified tn. Russia, cap. dist. of same name, gov. of, and 85 m. S. E. Nizhny at the junction of the Bobrovsk with the Berezna. It has four churches and a school, and forms a station for steamboats navigating the Berezna and Dnieper. It was besieged by the French, without success, in 1812. Pop. 8500.

BOBROV, or **BOBROV** [beaver] a tn. Russia, cap. dist. of same name, gov. of, and 53 m. S. E. Voronez, 1 bank, Bitovog. It has two churches, extensive gardens, and some trade. Pop. 5000

BOCA, or **BOCCA** [mouth]—1. *Boca del Toro*, a channel between two islands, leading into the bay of the same name, Caribbean Sea, N. coast, Veragua lat. 9° 20' 30" N. lon. 82° 15' 15" W. (n.)—2. *Boca del Dragon*, a channel leading into the same bay 15 m. N. W. the former—3. *Boca de Chagres*, a channel, Caribbean Sea, leading through a cluster of islands into a lagoon of the same name, N. coast, Veragua, 40 m. S. E. Boca del Toro—4. *Boca Chica* [little mouth] the entrance into the harbour of Cartagena, New Granada lat. 10° 30' N. lon. 75° 35' W.

BOCAQUE, (L.) two dists. France, the one forming part of dep. Vendée, and so called from the great quantity of wood which covers it and the other called also *Beauve Marchand*, which belonged to prov Normandy and had Vire for its capital, is now included in dep. Calvados.

BOCAINA a mountain-range, Brazil prov Rio de Janeiro. It is an offshoot of the Olympos or Organ Mountains.

BOCA YRENE, a vil in Spain, prov. of, and 50 m. S. S. W. Valencia, on a small canal built at the W. extremity of the valley of Agre. It has hills and mountainous streets, five squares, a parish church, three well-attended schools, a town-hall small and very unwholesome embarrasment prison, an hospital, public storehouse, and an extensive palace of the Barons de Casanova. Manufactures—linen and woollen fabrics, cloth and hats of all kinds hats, soap, tannery, and brandy. A monthly market is held. Pop. 4074.

BOCCA TIGRIS, or **BOCCA**, the name given to the embouchure of the principal branch of the Cha Kiang, or Canton river China. At this point the river suddenly expands into an estuary of 30 m. in breadth. To the S. W. there are several shallow channels, by which the flat-bottomed trailing craft of the Chinese can reach Canton. But British ships, and all others of large draught of water can ascend the river by the Bocca only. On this account it was strongly fortified by the Chinese, but, though mounting 120 cannon,

was forced, with little effort, by the British frigates *Impresso* and *Andromeda*, in September 1834.

BOGHINIA, a tn. Austria Galicia, cap. circle of same name, gov. Lemberg, 25 m. E. S. E. Cracow, near the Beha. It is tolerably well built, with several churches, a gymnasium, a grammar and other schools and a board for the government of mines and saltworks. The salt mines here employ 500 persons, and yield about 13 000 tons per annum. Pop. 3600. —The town, area, 800 geo. sq. m. contains five municipal and eight market towns, and 377 villages. In addition to agriculture and the ordinary handicrafts, mining particularly that of salt, gives employment to the inhabitants. There are also considerable manufactures of linen, and various articles of woollenware. Pop. 178,760

BOCHOLD or **BOCHOST** a tn. Prussia, prov Westphalia, gov. Münster on the Aa, 16 m. N. E. E. Cleves. It contains three churches, one of them a beautiful structure, in the Gothic style, and a castle of the persons of Salm-Salm and has manufactures of silk, cotton, and woollen stuffs, bonnets, and hosiery with several distilleries. In the neighbourhood are valuable iron mines and ironworks which produce sheet iron, and all kinds of castings. Pop. 4462

BOCHOLZ, a vil. Holland, prov Lumburg 18 m. E. S. E. Maastricht with a R. Catholic church a school an old castle, a brewery and a distillery. Pop. 680

BOCHUM a tn. Prussia, prov Westphalia gov Arnberg cap. circle of same name, 25 m. N. N. E. Düsseldorf. It is walled, contains four churches and chapels, and has manufactures of kerseymeres and worsted yarn. Pop. 8813. The church, area, 194 geo. sq. m., consists of an undulating plain, which is very fertile, watered by the Ruhr and the Ensch and strided over with old estates, which gives the whole district a very picturesque appearance. Pop. 48,058, almost all Protestants, only 2000 being R. Catholics, and 300 Jews.

BOCKAU a mining vil. Saxony circle, Zwickau, dist. of, and 4 m. W. N. W. Bockwarum. It has a tin furnace, several churches, and numerous iron works. In the neighbourhood silver and cobalt are worked, and medicinal herbs extensively grown. Pop. 1700

BOCKENHEIM, a tn. Hesse-Cassel prov. and circle of Hanaus not far from Frankfurt-on-the-Main. It is a very stirring place and has numerous manufactures—cloth, straw hats, ironware, machinery and the well-known Hanaus crucibles. It has also a bleachfield, and a distillery for spirits of wheat. Pop. 3900.

BOCKING a vil and par England co. Essex. The village lies on a gentle acclivity on the Blackwater a little N. from Bradstreet with which it forms a continuous town, though in a different parish. It consists of one principal street, and several smaller some of the houses are well built most of the others are merely lath and plaster. It is well supplied with water but not lighted. The only buildings of any note are the parish church, an Independent and Wesleyan chapels, and the union workhouse. The schools are, a national school, a British school and a respectable boarding-school. There are several minor charities also a literary and mechanics institute Bocking was, formerly, celebrated for its lace manufactures but this branch has given place to the silk trade, which is carried on here to a great extent the weaving of silks, satins, and velvets, employing many hundred hands. There is also a rope manufactory. Area of par 4807 ac. Pop. 3846 —(Local Correspondent)

BOCKLETON *par Eng Hereford* 3292 ac. Pop. 683
BOCOGNANO a tn. Prussia lat. Godes, 16 m. N. E. Ajaccio in an extensive and very fertile plain, near 1 bank Gravona. Many persons in easy circumstances retire to it during the summer heats, to enjoy its cooling breezes. Pop. 2631

BODMIN a port bay and in England, co. Cornwall near its centre, chiefly on the slope of a hill, 26 m N W Plymouth. It has three principal streets lying E and W all straight and well kept houses of stone and those of recent erection commodious and substantial well lighted with gas, water abundant. The church erected about the middle of the 15th century and situated at the E. end of the town is the largest in the county and in the interior the handsomest. It contains, amongst other interesting relics a curious font, evidently of high antiquity. There are chapels, besides, for Bynastons, Independents, and Methodists. The schools are as a national school an endowed British and Foreign school and an academy. There are also a literary institution and a dispensary. The town has much improved since 1839 when the whole of the county sessions and sessions began to be held in it, although its population does not seem to be increasing. It has no manufactures. By the municipal act, its government is vested in a mayor four aldermen, and 12 councillors. It returns two members to the House of Commons. Electors (1851) 401. 1 up 437. — (*Local Correspondent*).

BODNLY par Eng Norfolk 2605 ac. P 108.

BODOL, a to Norway prov Tromsø, esp. banl. Nordland, on the Baltic-ford, at the extremity of Bodø peninsula, the youngest and most important chief town in the country. It has a good harbour, trade is its only support and fish its only export. P 800.

BODROGH KERESZTUR, a market to Upper Hungary 3 m. N W Tokay, a bank Bodrog. It has two churches a synagogue, and large annual cattle markets. The environs produce rye, and the famous Hargyalla wine known by the name of Tokay. P 4500. — An important river which is formed by the confluence of the Latorca, the Lapt, the Labore, and the Opatava, takes the name of Bodrog in the latter part of its course before joining the Theiss at Tokay.

BODO (Lark) *see* Lighthouses *Providence* the most W point of Sicily about 1 m. W Marsala. lat. 37° 40' 10" N lon. 12° 22' 10" W. The cape like the rest of the coast in the vicinity is low and the shore is full of shelving rocky bottom extending more than a mile out, and making the navigation dangerous. This cape being the point of Sicily nearest to ancient Carthage early became an important naval station, and near it was fought a famous naval battle between the Romans and Carthaginians. The decisive victory gained by the former put an end to the first Punic war.

BODOTIA, a division of ancient Greece, now included in the modern nome or province of Attika and Viotia. *See* ATTICA. Vol. I.

BOG *see* BUS.

BOGAN a river New S. Wales, Wellington district. Its chief sources are in Harvey's Range, in about lat. 33° 50' S. lon. 148° 37' E. It flows N W and falls into the Darling in lat. 30° S. lon. 145° 51' E. whole course, about 80 m. The uniformity of the river is remarkable neither the character of its banks nor the breadth of its bed undergoing any perceptible change throughout its entire length.

BOGARRA, a to Spain New Castile, prov of and 29 m S S W Albacete near I. bank, Madara with irregular and steep streets, a large square, a parish church, townhouse prison endowed school and two public storerooms. Manufactures: — linen, woollen, and silk fabrics trade, cattle and grain. P 1627.

BOGDOLIN DABASSI, a salt lake Russia, gov. Astrakhan, at the foot of the remarkable hill Bogdoola, and 14 m. E. Tobolsk. It is about 10 m long from N to S. and 6 m. broad produces a fine sparkling white salt, the accumulation of which along the shore makes it look as if covered with snow. The salt, owing to the expense of transport, has ceased to be an object of traffic.

BOGDO-OLLA a remarkable hill Russia, gov. Astrakhan, not far from the banks of the Akkate, and about 14 m. E. Tobolsk. It stands isolated in the middle of a vast steppe and rising up to a conical peak, to the height of nearly 500 ft. forms a conspicuous object from a great distance. Its base forms a mass of earth and rock of a triangular form and appears to rest on Kineton. Higher up it consists of sandstone which, on the N. E. side rises perpendicularly like a rampart and is cut into deep cliffs, which are the resort of innumerable birds from the steppes. The sandstone is succeeded by layers of clay and sand alternately white and red giving it a very strange appearance. The summit contains fragments of fossil insects but is chiefly composed of masses of rock-salt. Bogdoola or Holy Mount, is the name given to the hill by the Kalmaik, who hold it in the highest veneration, and have a tradition that the Dalai Lama once passed a night upon it, and while dining, let fall a grain of salt, which grew up into the present salt cone. At the foot of the hill is the salt lake Bogdool Dabass (salt sea).

BOGENHAUSEN a vil. Bavaria, a bank far in the Innthal, vicinity and almost a suburb of Munich. It contains two palaces and a fine royal observatory. P 198.

BOGENEE a to Denmark N W coast, lat. 57° 10' N lon. 17° 10' W Odense with a small harbor from which there is regular communication to the coast of Jutland. P 1400.

BOGIE, a rivulet, Scotland co. Aberdeen formed by the confluence of two burns near the name of Anghindor and after a course of about 11 m. through the beautiful strath to which it gives its name, falls into the Doyran a little below Huntly.

BOGLIPOOR. *See* BHAGALPOOR.

BOGMUTTI BOGMUTTI or BOGMUTTI a river Hindoostan rising in Nepal S W Khatmandoo and after a S. E. course of 23 m and receiving numerous affluents, it falls into the Ganges opposite Monghur lat. 25° 26' N lon. 83° 28' E.

BOGNOK, a small market and maritime to England co. Sussex 6 m. S F Chichester on an extensive plain sheltered from the N. winds by the S. Down hills. It is lighted with gas supplied with excellent water and has three principal straight, spacious, and well kept streets, houses built without any attempt at regularity but generally substantial. There are, besides, two handsome terraces, and numerous elegant villas in the vicinity. Bognor has four churches, the parish church a chapel of ease and a dissenting and Wesleyan places of worship, all of them plain structures a national and infant school, and an academy. It has become a favourite watering place. P 8000. — (*Local Correspondent*).

BOGÖ, or **BLAGÖ** a to Denmark between islands Misen and Falster. It is fertile, has a village named Bogby, and about 1000 inhabitants.

BOGODOUKHOF or **BOGODOUKHOF** a to Russia, esp. dist. of same name, gov. of and 34 m. N W Khar'kov on the Mele. It has some trade in ox-hides, and goat-skins, which are prepared in considerable quantities. P (1849) 8619.

BOGORODITZK, a to Russia, esp. dist. of same name, gov. of and 33 m. S E. Tula. It is a mean-looking place, but contains a fine church, a fine park, and it seems export of grain, flax and honey produced in the dist. P (1850) 7316.

BOGORODSK or **Bogorodsk** a tn. Russia, gov. of and 30 m. E. Moscow, bank, Kama, and on the road between Moscow and Vladimir. Though it ranks as a town, and is chief place of a circle of the same name it is in appearance a mere village. The houses are of wood, and have steps to the doors, and covered balconies. Most of them have bath chambers, and at almost every front door an earthen vessel is hung up called *rukavitsa* [hand vessel], which is used by the inmates every morning. The neighborhood are quarries, with strata of compact quartz, generally yellow, but sometimes brown and exhibiting marks which have evidently been made by the action of glaciers. Pop. (1850) 1735.

BIGUSLOVSKA, a mining rd. Russia, Ural Mountains, gov. of and 185 m. N. E. Perm, near lat. 50° N., 960 ft. above the sea. The copper ores obtained here are found in limestones, about 2 m. from the village. The mines are the property of the bank of Russia, the workmen convicts. Grain will not ripen and turnips do not thrive here.

BOGOTA (formerly *Sancta Fé de Bogotá*) a city R. America, cap. republic of New Granada, the seat of government and of an archbishopric. lat. 4° 35' 48" N. lon. 74° 15' 45" W. (L). It is situated on an elevated plain 8663 ft. above the sea at the foot of two lofty mountains with a delightful though most climate resembling a perpetual autumn the temperature rarely exceeding 59° Fahr. Seen from a distance, it presents a very imposing appearance, rising in the form of an amphitheatre. The streets are narrow but regular crossing each other at right angles and many of them having a stream of water flowing down the middle. They are all paved and have footpaths, but are indifferently lighted and there being no common sewers, are often in a filthy state. The principal street *Calle Real*, is very handsome, terminating at one end in a square, formed by the palace of the president, the cathedral the custom-house, &c. There are several other square boulevards, of inferior pretensions though spacious, and all ornamented with fountains. Bogota being subject to earthquakes, the houses are low and strongly built few of them exceeding two stories in height. They are constructed of sun-dried brick, whitewashed, and tiled without chimneys, stoves only being used. Traffic is carried on in the streets by mules, no vehicles of any kind being employed. The religious structures of the city are disproportionately numerous, there being no fewer than 26 churches, a cathedral nine monasteries and three seminoles to which more than half the houses in the city belong. The churches, though gorgeously adorned internally display more splendor than taste. Bogota contains a university three colleges, most of the professors in which are monks or priests, a school of chemistry and mineralogy a Lancasterian school a national academy a public library an observatory a botanic garden and a well-attended theatre. The inhabitants mostly Creoles are described as a mild, polite, and cheerful people. The women are reputed handsome with fair and clear complexion, and Spanish physiognomy. The market is well supplied with provisions of every kind and with fruits and vegetables, the former including straw berries, pineapples, peaches, &c. Manufactures—soap cloth leather and precious metal trade active. Bogota was founded in 1538 and made an archbishopric in 1561. It was formerly capital of the Spanish vice-royalty of New Granada, and also capital Republic of Colombia. Pop. 30,000 to 40,000.

BOGUSLAW or **Boguslaw** a tn. Russia gov. of and 70 m. S.E. Kiev cap. dist. of same name, r. bank, Dnieper. It contains three churches, two Greek and one Uniate. A great proportion of the inhabitants are Jews. Pop. 5000.

BOGOWONTO a river lat. Java, rising in prov. Bagien skirting the W. of Djokjarta, and falling into the Indian Ocean.

BOGUTSCHAR, a tn. Russia, gov. of and 128 m. S.E. Voronezh, on the Bogutsharskaya, at its junction with the Don. The district is productive of corn and cattle. P. (1851) 1775.

BOGWA NGOLA, or **Bogwa ngola**, a tn. Hindostan, presid. and prov. Bengal 8 m. N.E. Moorshedabad r. bank. It is a busy place, presenting more the appearance of a fair than a town and is built entirely of bamboo and thatch. The encroachments of the river have caused the town to be removed back several times. Having always plenty of water, it is a busyemporium for inland navigation.

BOILAIN a tn. France dep. Aisne, 13 m. N.N.E. St. Quentin. Cashmere and light silk shawls are made here, and

in the surrounding villages, to a large extent. Mynal cloaks are also manufactured. Pop. 3745.

BOHARM, a par. Scotland, co. Banff and Moray length, 9 m.; breadth, from 2 to 3 m. Pop. 1868.

BOHEMIA (Königreich) [German, *Böhmen* or *Böhmen* French *Bolonia*] an administrative division of the Austrian empire in the Germanic Confederation. Pop. 7,000,000. E. by Moravia, N. E. by Prussian Silesia, N. W. by the kingdom of Saxony, W. by Bavaria, and S. by the archduchy of Austria, and between lat. 48° 55' 56" and 51° 3' 39" N. and lon. 12° 4' and 10° 47' 8" E. length, E to W 210 m. breadth, N to E. 171 m. circuit, 814 m. area, 20,223 sq. m. Bohemia forms an extensive upland valley with an inclination to the N. W. It is surrounded on all sides by mountains and belongs almost exclusively to the basin of the Elbe, by which stream nearly all the water that falls in the country is drained off through a single saddle on the Saxon frontier which separates the Erzgebirge from the Lauritz branch of the Illmenau. It is divided into 16 circles (kreise) or provinces, and the metropolitan districts of Prague.

CITIES.	Area in sq. m.	CHIEF TOWNS.	Population.
Bautzen	924	Schneeberg	(1849) 6,190
Beroun	1113	Leitmeritz	(1849) 3,000

Prague	8	Prague	(1849) 6,004

Mountains—Four chains of lofty mountains constitute the natural boundaries of the Bohemian basin. N. and N. E. it is separated from Silesia by the Riesengebirge [great mountains] the highest of the principal branches of the Silesian chain. The highest peaks, which are likewise the loftiest of N. or Central Germany are its Kniebis (3,000 ft.) or Schneekoppe (snow cap) 5400 ft. the double-topped Brannberg, or Bannberg 5007 ft. and the Kniebis (snow-head) 4755 ft. N. and N. W. it is separated from Saxony by the Erzgebirge [ore mountains] parted N. E. from the Riesengebirge by the defile through which the Elbe leaves Bohemia. The Erzgebirge is not so much a chain of mountains as a huge continuous mound, sloping gradually on the Saxon side, but remarkably abrupt on the Bohemian. It is well wooded and its undulating ridges are broken in some places by considerable depressions. Its highest peaks are the Schwarzwald or Sonnenwühl near Joachimsthal 4124 ft. Little Fichtelberg near Wismuthal 4008 ft. Schneberg 3200 ft. W. and S. W. Bohemia is separated from Bavaria and the archduchy of Austria by the Böhmerwaldgebirge [Bohemian forest mountains] a range which forms part of the Sylva Hercynia of ancient geographers. At its N. W. extremity it is separated from the Erzgebirge by the depression through which the Elbe flows. It is wild, precipitous, and full of deep chasms and ravines towards Bavaria it is very steep, but of more gradual inclination on the Bohemian side. Its most elevated points in Bohemia are the Himmelsberg 4623 ft. Knaul or Knaul, 4521 ft. Fichtelstein 4483 ft. Ouseberg 4345 ft. S. E. and E. the Mühlviertelgebirge [Mühlviertel mountains] separate Bohemia from the archduchy of Austria and Moravia. This chain, uniting at its S. W. extremity with the Böhmerwaldgebirge and at its N. E. with the Riesengebirge, connects the circle of mountains by which Bohemia is enclosed. The Elbe rises on a gentle declivity of the average height of 3281 ft. and separates the basin of the Elbe and Moravia from that of the Danube. Several offshoots from these chains of inferior height, intersect the highlands.

Geology and Minerals.—The whole of these mountain ranges, generally speaking, are of primitive formation though later formations are found on the N. W., where the Elbe

quite Bohemia, and on the N.E. near Trautman. In the centre of the country is an extensive sandstone formation and that the carboniferous series likewise exists, is evidenced by the presence of coal, of which the quantity produced in 1845 was 986 180 tons, and in 1846, 221 655. Indeed, one of the chief sources of the country's wealth has been its valuable minerals, found chiefly in the Kragebirge and the spine of the Fichtelgebirge. Of gold and silver it now yields little of the latter in 1844, the quantity obtained was only 21 243 lbs. Troy. But it produces chalcum, tin, bismuth, copper, zinc, nickel, lead, manganese, borax, sulphur, iron, iron, arsenic, chrome sulphate of iron and copper and plumbum, some of these in considerable quantity. For the years 1842 1843 and 1844, the total money-value of the produce of the mines was respectively £317 172 £322 093 and £286,109. The plumbago, or graphite, is said to be inferior to that of England, though still of good quality. In 1845 the quantity produced was about 400 tons; and in 1846, upwards of 500 tons. Quarries are worked everywhere, and excellent marble, alabaster, quartz, granite, breccia, superior millstones, and gradstones are obtained. The beautiful granite, famous over Europe, are found chiefly in the circles of Cassau and Leitmeritz and in various localities toponame chalcidomae, anethys Jasper, sapphires, carnelians, rubies, agates, and many other kinds of precious stones porcelain earth, and potter's clay.

Rivers, Lakes, and Springs.—The streams of Bohemia converge from all sides towards the Elbe, which rises in the Riesengebirge, and of which, either directly or indirectly, with an exception of some inconsiderable tributaries of the Danube and Oder they all are effluents and through which their waters are drained off through a mountain delta in the Saxon frontier where the level of the river is 267 ft. above the sea. The principal affluents of the Elbe in Bohemia are the Moldau with its tributaries the Berawa and the Eger the first rising in the Moravian mountains, and the second in the Fichtel and the third in the Bohemian forest. These streams afford excellent water-ways for navigation, and Bohemia has not only large lakes, but it is said to possess 20 000 ponds and 160 mineral springs. Some of these last are famed over Europe, of which may be specified the saline chalybeate springs of Franzensbrunn near Eger those of Marienbad and Giesebitz the warm alkaline spartan springs of Carlsbad and Toplitz (186 and 99° Fahr. re positively) one at Marienbad, and others at Billin and Liebenwerde the bitter chalybeate waters of Seditz, Badelitz and Pilsna the sulphurous springs of Toplitz besides a host of others of less repute. The warm spring in which Carlsbad owes its celebrity seems to have been known in the seventh century 200 000 gallons of these mineral waters are exported annually.

Climate.—The climate is variable, but in general healthy and warmer in the low districts, the central parts and towards the N. than in the S. The mean annual temperature at Prague is 48.48 Fahr. winter 32.81 spring 47. summer 69° 50' autumn, 60° 23'. In the Böhmerwald, the snow is often found 12 ft. deep and lies till the middle of April; in some of the other ranges it remains throughout the whole year. The prevailing winds are W. N.W. and S.W. bringing drought in winter and rain in summer the annual fall of rain is about equal to that of the midland counties of England.

Vegetation, Agriculture, &c.—Excepting in the lofty mountain-ranges, the soil of Bohemia is generally fertile, more especially in the N. and E. and in the valleys of the Eger and the Elbe. The whole amount of arable land is estimated at 12 255 962 ac. of which 8 101 640 ac. or nearly one-half is under the plough, the remainder being laid out in orchards vineyards, pastures, &c. The principal crops raised are rye and oats, about equal in quantity; barley and wheat, about half the two former. Potatoes and turnips are grown extensively and considerable quantities of legumes poppies rape and clover seeds, flax, and hemp. Of the hops which are good, a large portion is sent to Bavaria. Fruit is abundant on the lower grounds and in the warmer localities, on the banks of the Elbe, the vine ripens and yields about 350 000 gallons of wine. Besides the garden under cultivation 8,736,290 ac. under wood, yielding annually 8,686,000 cubic fathoms of timber value £1 916,811. The horses are superior, though of small size, being handsome and vigorous

especially in the circles of Santa, Leitmeritz, and Chrodin. The horned cattle are small and ill formed, owing, in part, to the scarcity of fodder and the supply for home demand is so inadequate, that it is found necessary to import large numbers from Poland and Moldavia. The breed of sheep is now greatly improved, and the wool excellent. Comparing the stock of cattle in 1834 with the stock in 1846, as follows, it will be found that cattle-rearing has been on the increase:—

	1834.	1846.
Horses	144,769	158,819
Horned cattle	1,031,619	1,059,682
Sheep and goats	135,489	1,429,364

The rearing of poultry and bees is extensively prosecuted; but attempts to introduce the silkworm have not been successful. On the whole, agriculture has made considerable progress in Bohemia of late years but still the utmost capabilities of the soil are not and cannot be fully developed under a system which as there, excludes the cultivator from participation in its produce. In Bohemia there are no tenancy, property speaking and, therefore, no class corresponding to our farmers, the owners of estates keep them in their own hands and employ labourers to perform the necessary work. Hence arise two evils of great magnitude—the land is not parcelled out into manageable farms, but retained in immense tracts, in the hands of the landlord and the immediate cultivator of the soil, receiving no share of the produce, takes no interest in its amount.

Animals.—Game is still abundant and hunting is a favourite amusement, though from the progress of agriculture gradually on the decrease still extensive preserves exist, containing large numbers of the wild boars for which Bohemia is noted. *Falco* martens, foxes and squirrels are met with but wolves and bears have been nearly exterminated. Pike, carp and trout are plentiful in the rivers and ponds and in the Moldau and some other streams, large numbers of pearl muskies are found.

Manufactures.—For manufacturing skill and activity Bohemia has long ranked as one of the most important countries of the Austrian empire. In 1844 there were reckoned 1,500 000 pieces of linen of 90 alls each value, £1 050 000. There are 53 cotton-spinning factories in the kingdom with 896 000 fine spindles, producing about 3,500 000 pieces, and employing about 150 000 persons. Much cotton yarn, of the inferior numbers is spun by machinery but the higher numbers are imported from the archduchy of Austria, and from Bavaria. Calico-printing has increased of late, and blackdyeing is numerous. The whole quantity of wool produced in Bohemia, is estimated at 156,985 cwt. and the cloths made at about 126 000 pieces—value, £1 088 000. Types, ribbons, and lace are also manufactured and in Prague, silk to a small extent. The manufacture of potash employs nearly 6000 people, and leather 4000. In 1845 there were 10 manufactories of sugar from potatoes, and 25 from beet-root but the quantity produced was too small to supply the home consumption. Besides these, there are five sugar refineries.

There are likewise 911 breweries, and 1228 brewery distilleries mostly on a very small scale producing 4 069,562 imperial gallons of spirits distilled from various articles, such as rye potatoes, wine-lees, plums, cherries, &c. but the national beverage is beer made from barley. The total amount of beer manufactured in Bohemia, in 1845, was 1,000,000 cwt. may be estimated at 17,500 tons per annum employing about 6000 persons; and the value of the whole beerworks produced £170 000. Gold silver and pewter are manufactured at Zittgenau Budweis Kautzschitz and Prague, at the last of which and at Carlsbad good needles are made. Other manufactures are white lead and brass to a small extent spoons, buckles, buttons, porcelain earthenware, and paper the last extensively. Glass has been a staple article of Bohemian manufacture since the 13th century although it is not supposed to be now so flourishing as it was formerly. There are in the kingdom 67 glassworks, properly so called, besides mirror factories, and glass-cutting works, and factories of glass pearls employing in all about 50,000 persons. It has been estimated that about one-third of the entire population of the kingdom is employed in the various manufactures.

Roads, &c.—By means of the two navigable rivers, the Elbe and the Moldau, and the numerous excellent roads throughout the country the business of Bohemia is greatly

furthured. The first railway completed in Germany was that from Badens in Bohemia, to Linz in the archduchy of Austria, and subsequently prolonged to Gentinden. From the capital there is direct railway communication with Vienna, through Olmitz, and also to the N W with Dresden and W. Germany excepting 15 m. between Leitmeritz and Tetschen, all (1851) incomplete. Besides these there is a short line SW to Lams.

People.—The greater proportion of the inhabitants of Bohemia are Czeches or Teutches, of Slavonian descent, and remarkable for bravery, general intelligence, strength of memory and a passionate love of music. The second, in point of numbers, are the Germans, about 900 000, who dwell chiefly at Prague and in the districts bordering on Saxony, Prussia, and Bavaria. They constitute the most industrious part of the population, and in mercantile and mechanical pursuits excel the Slavonians. The Jews seem to have settled in the country at a very remote period for inscriptions, discovered on several tombstones, indicate their presence as early as the first century of the Christian era. They number about 70 000 and apply themselves principally to trading in corn, cattle, leather and wool, and to banking or exchange business. Most of the brewers, distillers, and potato factories are in their hands. The average ratio of deaths to the whole population is 1 in 33 including the capital in the low country it is said to be 1 in 39.

Religion.—The R Catholic is the prevailing creed, and the state religion of the Bohemians; other Christian denominations are tolerated. The secular clergy are governed by the metropolitan Archbishop of Prague three bishops at Leitmeritz, Breggrate and Budweis, one titular bishop, and 14 prelates. The total number of parishes is 1765. The regular clergy though much reduced by the reforms of Joseph II still possess 75 monasteries or communities and six numerous Protestant are almost exclusively confined to the N E districts, and have 55 parishes. The Jews have a head rabbi at Prague, and several district rabbis.

Educational Establishments.—Bohemia is abundantly supplied with educational establishments, comprehending a university at Prague, with 53 professors, 14 assistants, and more than 5000 students; a model academy at 3400 scholars, of which 48 are chief grammar 2,711 R. Catholic, 4 Protestant and 19 Jewish schools, a polytechnic institute, 28 gymnasia, with about 6000 scholars for the most part kept by monks especially Piarists three diocesan philosophical schools, three diocesan seminaries of theology a Jewish college, an academy of painting, a conservatory of music, and several military academies. The school attendance is, male one to five, and female one to six, of the population; while in the whole Austrian empire, the proportion is only male one to nine female one to 10. The total sum expended on schools chiefly by provincial districts and local and municipal governments, is about £26,000.

Charitable Institutions, &c.—There is no legal provision for the poor in Bohemia, consequently the number of street beggars is almost incredible. There are, however numerous benevolent institutions at Prague, and in the chief towns of the kingdom, for the relief of the sick and destitute, such as foundling and lying-in hospitals, dispensaries, infirmaries, houses of refuge, &c. for widows and orphans asylums for the blind, the lame, the deaf and dumb, &c.

Language.—The use of the vernacular tongue, a dialect of the Slavonian, is confined in a great measure to the lower and middle classes. A knowledge of Bohemian is not deemed necessary in the service of Government. Among the educated classes, German is generally spoken and in the schools, German alone is taught, and has been so since the time of Maria Theresa, who enjoined its use in all educational establishments. Of late years, however, there has been a great national movement amongst the Bohemians, directed chiefly to the cultivation of their language and literature. This movement is discouraged but not openly opposed by the Austrian Government.

Government &c.—Bohemia, with the title of Kingdom, forms a provisional government of the Austrian empire, with certain special political rights. The Emperor of Austria is styled King of Bohemia, and is crowned at Prague. The crown is hereditary in the Imperial family both males and females but, in case of extinction of the reigning dynasty

the right to elect a king appertains to the Estates, consisting of the clergy the high nobility the knights, and the burghers. The civil administration is managed by a central government at Prague subordinate to the higher powers at Vienna. Military affairs are under the direction of the Commander-General.

History.—Bohemia derives its name from the Bui a Celtic people, who settled in the country about 600 years a. c., and who were expelled, in the time of Augustus, by the Marcomanni. About the middle of the sixth century a numerous army of Czeches entered the country and subdued it. The first Duke known to us by name is Premislas, a peasant, whom the Princess Labasa married in 475 and raised to the throne. In 1061 the Emperor Henry IV gave the royal title to the Duke of Bohemia. By the extinction of the male line, the crown came to the House of Luxemburg in 1310 when Charles IV united Bohemia with the German empire. After many vicissitudes, Bohemia fell to the House of Austria, in the person of Ferdinand the Archduke, brother of Charles V and brother-in-law of Louis II, King of Hungary and Bohemia, who was killed in 1526, in a battle with the Turks near Mohacs. At this period Bohemia possessed a comparatively free constitution and the most of its inhabitants were Protestant. In consequence of the encroachments of the succeeding emperors on the religious liberties of the Protestants, serious disturbances arose, which threatened the House of Austria with the loss of the kingdom. In 1619 the people offered the crown to Frederick V, Elector-palatine, to the exclusion of Ferdinand II. But the battle of the White Mountain fought in November 1620, and in which Frederick was totally defeated put an end to the rising hopes of the Protestants and proved the source of innumerable calamities to the Bohemians, who were subjected by their conquerors, the Austrians, to a persecution scarcely paralleled in history. The Protestant religion, held by three-fourths of the people became well nigh extinct the free constitution was totally subverted and Bohemia converted into an absolute and hereditary monarchy and the R. Catholic faith established, to the exclusion of all others. From this time the kingdom continually declined. More than 80 000 families including many of the nobility all the Protestant ministers and teachers, numerous artists, mechanists, &c. were forcibly driven into exile, or had their estates and property confiscated. When Frederick II died in 1687 out of 8,000 000 inhabitants which Bohemia contained in 1617 there remained only 780 000. On the death of Charles V (1740) Charles Albert, Elector of Bavaria claimed the crown but Maria Theresa succeeded after an arduous struggle, in securing possession of the kingdom. She was succeeded by her son, Joseph II in 1780 and from that time downwards, a more liberal and enlightened system of administration has been pursued, under which Bohemia is advancing in prosperity as steadily as any other portion of the Austrian empire. Pop. (1845), 4,249 666, of which 1 991 667 are males and 2 258 000 females being 210 14 to the sq mile. —[Haller's *Lehr. über Österreichs Statist. Ökonomie* 1845. *Statistisches Jahrbuch* (Parliamentary Papers).]

BOHILAHANE pop. Irel Cork 1097 ac. Pop. 442
BOHMERWALD [Forest of Bohemia] a wooded mountain-range of considerable extent running nearly N W and S E., and separating Bohemia from Bavaria and the archduchy of Austria. W N W it joins the Erzgebirge (see mountains) and S S E. the Mährisch-schlesische [Moravian mountains]. Length, about 120 m. mean breadth, about 25 m. In its whole length it is traversed only by six roads, along one of which at Freustadt, the railway from Budweis to Loun passes. It is the *Sylva pubes*, forming part of the European forest of the Romans. The chief is mainly composed of granite, overlaid by granite, schist, and calcareous deposits. Towards the N and N W, the hills are frequently basaltic, isolated, and almost of a conical shape. The principal peaks are Monte Arber 4948 ft. and Raasdorf, 4745 ft. in Bavaria and Heidelberg, 4623 ft. and Kufani, 4521 ft. in Bohemia.

BOHOL pop. Irel Fermanagh 15 050 ac. Pop. 1933.
BOHOL, one of the Philippine Islands, dependent on Zebu, and lying between that island and Leyte, and N of Mindanao lat. (S.E. point) 9° 48' N. lon. 124° 28' E. (w.) about 53 m. long by 54 broad. It is watered by several

river, one of which comes from a lake in the centre of the island. Rice is grown, and cattle reared. The inhabitants make coco-nut oil, cultivate and weave cotton, producing strong cloth, and weave also silk.

BOHOLA, prov. Iran. Mayoy 8674 sq. Pop. 2907
BOGOROICHA a market in Austria, Galicia, circle of, and 10 m. S.W. Stanislaw, on the R. It contains a Dominican cloister and a Greek church. Pop. 1990

BOIABAD or **AYAN**, a tn. Turkey in Asia, pach. Anatolia, r. bank, Karaman an affluent of the Kizil Irnak, 95 m. N.W. N. Anatolia. lat. 41° 28' N.; lon. 34° 45' E. It consists of about 300 scattered houses, contains three khans, and, with its luxuriant gardens, full of fine fruit-trees and overgrown by vines, presents a pleasing appearance. There is here a castle, attributed by the natives to the Genoese, but bearing no inscriptions. It was long the seat of an independent chiefdom. Pop. 1800

BOIPEBA-VELLIA a tn. Brazil prov. of and 65 m. S.W. Bahia, on the island of same name. It has a church, and primary school but is a poor little place exporting to Bahia yucca, rice, and bark for tanning.

BOIS (Lam) (*German, Fiedelsloh*) a vl. Switzerland, can. of, and 26 m. W. W. Bern; 1431 ft. above the sea level on the Yura Mountains. It has an old church, and a school. Watch-making is carried on to some extent and two well-frequented cattle-markets are held. Pop. 994

BOIS BLANC, or **WHITE WOOD** an Isl. U. States, Michigan, in Lake Huron lat. 45° 45' N. lon. 84° 55' W. It is 11 m. long by 5 broad, and is generally fertile, though the under portion of the soil is sandy. It has a lighthouse on the E. end.

BOIS-DE-LESSINES, a vl. and com. Belgium prov. Hainaut. 26 m. N.E. Tournai with some linen manufactures. Pop. 1752

BOIS-LE-DI-C See *HINROCKBOCK*
BOIZENBURG a tn. Mecklenburg Schwedn circle, Wenden on the Elbe, 32 m. S.W. Schwerin. It has walls, with two gates and is a handsome well-built sitting place, containing numerous manufactures among others leather glue, vinegar, sugar, and carrying on a considerable shipping trade, for which its situation on the Elbe gives it great advantages. The vessels belonging to the town amount to 30. Pop. 3184

BOJADOR (*Cape*) a promontory W coast Africa lat. 26° 7' 10" N. lon. 14° 30' W. (n.) one of the projecting points of the Great Desert of the Sahara, and forming the W extremity of a rocky ridge, called the *Jebel el-hal* or *Black Mountain*. The coast N of this cape is extremely dangerous, being shallow to a great distance out, and constantly enveloped in a haze. It has been in consequence the scene of many melancholy disasters. Cape Bojador was long the limit of navigation towards the S. and was first passed by the Portuguese in 1433

BOJANA a river Turkey in Europe, prov. Albania, pach. Scutari. It issues from Lake Scutari near the town of that name, and after a winding course of from 20 to 25 m. falls into the Adriatic lat. 40° 5' N. lon. 19° 21' E.

BOJANO (anc. *Boventes*) a tn. Napier, prov. and 10 m. S.W. Combermere, on the Biftum in a deep dell, at the foot of Mount Matara. It is the seat of a bishop, and has a cathedral, several churches and convents a university and an hospital. Two fairs are held annually. Pop. 3117

BOJANOWO a tn. Prussia, prov. and gov. Posen 9 m. N.W. Rawitz. It is divided into the old and new towns. Most of the houses are of wood. It has some manufactures of coarse cloth, linen leather and earthenware. Pop. 2450

BOKA, a vl. Hungary circle, this side the Theiss, co. Temesvar, on the Tamas between Kanak and Szentgyorgy 86 m. S.E. W. Temesvar. Pop. 3599

BOKEARA, or **UNKEHMAN** [*Tibet land*] a kingdom Independent Turkey Central Asia, cap. same name. Its geographical limits have not been precisely ascertained, hardly any two authorities agreeing exactly as to the space it occupies but it may be said to lie between lat. 36° and 42° or 45° N., and lon. 61° or 65° and 87° or 70° E. for all these different boundaries have been assigned to it. Khandkoff a Russian traveller who was there in 1843 says that the *Kandir* way extended over the space of country comprised between lat. 37° and 43° N. and lon. 61° 50' to 69° 50' E. Arrow

smith a map places it between lat. 36° and 1° 20' N. and lon. 63° 35' and 70° 10' E. It is bounded, N by the Kirghis steppe and the khans of Khokand, W by Kalha, S by Afghanistan, and E. by Hissar and the khans of Khokand. Burmes makes the Sea of Aral, and the river Sir or Jaxartes the N boundary but the former at all events, is now known to belong to Kalha. Khandkoff makes the Amou or Jihoun the S boundary though Balkh and Andkoo are understood to be at least tributary to the Khan of Bokhara. Area estimated at 226,806 sq. m. According to native authorities, the political divisions are Karakool Bokhara, and seven districts around, Karmama Moenkool or Kutta Koorghas Samarand with five districts, and Jumanak, all in the valley of Samarand and besides these Kharshid, Lumbab or banks of the Oxus, and besides the provinces S. of that river. It is mountainous and elevated towards the E. where it includes the valleys forming the W slopes of the great Asiatic plateau, some of the summits of which Burmes estimated at 18,000 ft. high, being enveloped in snow in June and S. it leans on the Hindoo Kosh and V. encasement of the Persian plateau. All the rest of the country is uniformly low and flat, belonging to its characteristics, to the dry steppes and sandy wastes of the Caspian and Aral Seas. Bokhara forms part of the plain of Khorassan, which has an elevation of 3000 ft. It slopes N.W. towards the Sea of Aral to whose basin it exclusively belongs. It is very imperfectly watered, possessing only two streams of any consequence, the Amnu, Jihoun, or Oxus, traversing the country S.E. to N.W. and receiving accretion to some, as affluents, the Helich or Adirahm on the left, and the Zourkab on the right though according to others, both these streams are absorbed in the sand before reaching the Oxus. The other principal stream is the Samarand, Zerashen or Zaurushan, which traverses the country E to W., passing the cities of Samarand and Bokhara, and falling into Lake Dargah a short distance N of the Oxus. Besides these, there are some other smaller streams, as the Karabeh or Karohi described by Burmes as a mere rivulet. Along the banks of these rivers lie the only cultivable lands in the country not reaching to more than a tenth of the entire area. Along the stream Samarand is the valley of the same name, so valued for its bounty by the Arghun conquerors that it was called an earthly paradise. Though certainly beautiful, its attractions are doubtless heightened by comparison with the sandy wastes which on every side surround it. The territory on the banks of the Oxus is likewise greatly favoured by nature. N of the Oxus, and from the mountains W to Bokhara the country is occupied by a succession of low rounded ridges of oolite, limestone and gravel covered with a scanty verdure between these ridges are hardened plains of argillaceous clay forming excellent natural roads. On these, occur sand and hills of no great extent but sufficient to shroud the rivulets flowing towards the Oxus. W the city of Bokhara and S the Oxus, however, the country is covered with these hills or rather mounds of loose sand, of a horse-shoe shape about 15 to 20 ft. in height, resting on a firm soil having been accumulated by the winds, and so numerous that little space is left for cultivation. In the valleys formed by these sand hills, deposits of salt and saline rivulets frequently occur. The only lake of importance is Dargah or Karakool, about 50 m. S.E. W the city of Bokhara. It is deep, brackish, and about 10 m. long.

Mineralogy—Gold in considerable quantities, is found among the sands of the Oxus but there are no mines of that metal in the kingdom, neither are there any of silver copper or iron, all these being imported from Russia. Sulphur is found in its native state, and salt deposits are numerous.

Climate—The climate of Bokhara is salubrious and pleasant; it is dry and in winter very cold the Oxus being frequently frozen over so strongly that travellers pass across it in the ice. In summer the hottest wind rises above 90° except in the desert, where in June, it reaches 100°. In Balkh also, the heat is oppressive and the climate unhealthy. The sky is always clear and of a bright and beautiful azure. The country however is subject to violent tornadoes, which usually follow excessive heat. In winter snow lies for three months on the ground and around the city of Bokhara, and the spring rains are often very heavy.

Vegetable Products—The tree most abundant in Bokhara is the poplar which is used for house-building. The cotton

plant is cultivated, and hemp is likewise grown; but the only use to which the latter is turned by the natives, is in extracting oil from the seeds, and also an intoxicating drug called *hemp* the stalks of the plant are given to cattle. The principal grain crops are rice, wheat, barley, Indian corn, and sesamum. The fruits of Bokhara are celebrated, especially the melon, which here attains an excellence known nowhere else. The other fruits are the peach, plum, apricot, cherry, sour cherry, apple, pear, quince, walnut, fig, pomegranate, mulberry, grape, pumpkin, and cucumber. The raspberries of Bokhara are large, and of delicious flavor, but the wines are very indifferent. Neither indigo nor sugar-cane grow here, but an excellent substitute for the latter is found in an article called *terapshen*, a molasses, gum which exudes from the cane's thorn. This singular and valuable plant abounds in the vicinity of Kurahoe and Samarcand to which locality it is almost wholly confined, not being found W. the city of Bokhara. Tobacco, of a superior quality is grown at Kurahoe, and wild rhubarb abounds in many places. Vegetables are in great plenty—turnips, carrots, onions, radishes and beet-roots.

Animals.—The only beasts of prey in Bokhara are leopards, and a very small species of tiger; the other wild animals are deer, antelope, fox, wolf, jackals and bears; there are also wild dogs and wild asses. Bats, tortoises and lizards are found in the deserts. Scorpions are common but completely harmless. Eagles and hawks are met with and plover will peep and water-fowl abound but there are no sturgeon birds, and game of all kinds is scarce. There being few rivers or lakes fish is not abundant, those taken in the Oxus are similar to what are found in other Asiatic rivers, with the exception of an enormous kind of dog fish called *lulur*, which has no scales and sometimes attains the weight of 600 lbs. European. In the Lake Derwent or Karakul fish of good quality and flavor are caught. There are no alligators in the Oxus, nor any other animals to be dreaded. Locusts sometimes infest the country but few other noxious insects are met with. Silk-worms are reared in great numbers in all parts of the kingdom where there is water especially on the banks of the Oxus the silk produced there being considered the most valuable, both from the softness and the fineness of the thread. The silkworm, called by the natives *raikis*, which burrows in the flesh of the human body and causes great pain and annoyance, is one of the greatest evils with which Bokhara is afflicted. It is calculated that one-fourth of the entire population are annually attacked by this animal. The natives are singularly dexterous in the extraction of the worm, which they effect with needles. Of the domestic animals the sheep and goat are the most important, the former furnishing valuable skins, and the other a wool second only to that of Cashmere. Both feed on fescue and dry grass, and their flesh is sweet and well favoured. The sheep have large tails, sometimes weighing as much as 15 lbs. those that produce the black, curly fleece, in such demand in Persia for caps, are peculiar to Karakul and it is said the animal will thrive nowhere else, and that when removed to any other place, the fleece becomes deteriorated. The skins having the smallest curls are most prized of these about 200,000 are annually exported. The goats of Bokhara are about the common size and of a dark colour; their wool is grey and less than the skin. The camels of Bokhara, of the Bactrian or two-hump kind, are greatly superior in appearance to those of India, being covered with a sleek coat of hair whereas the latter are almost naked, and often disfigured by eruptions. The use of this country is large and strong and is much used both for saddle and burden. The horned cattle are of good size, but greatly inferior to those of England. Beef is eaten by the lower orders only mutton being always preferred.

Manufactures and Commerce.—There are no manufactures in Bokhara of any extent, the most considerable are those of silk and cotton, and of a kind of cloth in which both are combined. Articles of steel, gold and silver are also made, and of good quality such as shawls, kurvas, rings, and other jewellery. The art of dyeing is well understood but in tanning the Bokharians are inferior to the Russians, and their leather generally bad, with exception of Morocco. The principal articles of export to foreign countries are cotton, raw and manufactured, leather consisting of coarse hides and goat-skin, thread, silk, sent chiefly to India and Cabool; hand

skins, of which, as already stated, 200,000 are annually exported. In former years, the greater part of the trade of Bokhara in European goods was carried on through Russia, it is now conducted chiefly through India and Cabool. The chief articles of import from India are muslins, broads, white cloth for turbans, sugar and clove shoes from Bazaar are white cloth, muslin, chintzes, broad cloth, velvets, minkens, gold thread, hardware, metals, eastern jewellery, leather, paper, &c., the greater part of British manufactures, as are also the greater part of the goods imported from India, the cloths of England being greatly preferred to those of any other country. Owing, principally to the want of good roads and other means of communication, the internal trade of Bokhara is very limited although large quantities of merchandise are brought yearly to the city no less than from 12,000 to 15,000 camel loads, but this is owing to the circumstances of its being the central point of all the commercial routes between E. and W. Asia, and being on this account made a depot for goods intended ultimately for remote destinations. The trade with Russia is carried on by caravans, from 6000 to 6000 camels being yearly employed in the transport of merchandise from Bokhara to that country, the value of which amounts to between \$200,000 and \$300,000 the returns to about \$450,000 having increased nearly threefold within the last 20 years. The trade with Cabool, Herat, and Cashmere employs from 8000 to 9500 camels, the chief articles imported from Cabool is indigo most of which is used in Bokhara, the rest being sent to Russia.

Government.—The Government of Bokhara is a monarchy the Emir or sovereign, having all but absolute power including the right of life and death and being limited only by the Mussulman canonical law. The Emir appoints chiefs, or governors, to the distant towns giving them the fullest powers, excepting life and death, which he reserves in his own hands. The number of troops of all arms which the Emir can raise, is conjectured by Khankhoff to be about 40,000 men of which the musk authority says, not more than a third is completely armed the rest consisting merely of the followers of the army or such as are indifferently equipped. During Khankhoff's stay at Bokhara, there were only 1000 regular infantry who he supposed fire-arms. The Emir's private revenue and highest state officer is the *Kash-gah* or *Vizier*, who is keeper of the seal, and general receiver and disburser of the national revenues. The public revenue has been estimated at about \$400,000, derived chiefly from land, but in part also from farm produce, fruits, and skins. The present Emir (1847) is Near Ullah Bahadur Khan Melik el Mumtaz, second son of Emir Seld, who died in 1838.

Race of Man.—Bokhara is at present inhabited by no fewer than 11 different nations the Uzbek, Tajiks, Turkmen, Araf, Persians, Mongols or Kalmaiks, Kirghis Kara Kalpaks, Jews, Afghans, Lashis, and Gupans. The most numerous by far are the Uzbeks, who were the last conquerors of the country. Most of them lead a wandering life, while a few apply themselves to the arts of peace inhabiting the large towns and cities. The Tajiks consider themselves the aborigines of the country they resemble Europeans in personal appearance, and are remarkably industrious. The Turkmen, Kirghis, and Kara-Kalpaks are all of Turkish descent; the former inhabit the desert W. of the Oxus, the latter are few in number and live N. of the Karakum and in the vicinity of Karahoe. The other nations settled in Bokhara at different periods, and have no particularly distinctive characters.

Religion, Education, Habits, Dress, &c.—The people of Bokhara are all *Acclimated Mahomedans*, and no other religion may be publicly professed. There are daily public prayers in the capital during which time there is a cessation of all business. Bokhara was long celebrated as a seat of learning, but although there are still many educational establishments both in the capital and throughout the country the greater portion of the population remain wholly uneducated. The diet of the people generally is simple, consisting chiefly of tea, rice, vegetables, mutton, cheese, and milk. Kurvas and forks are not used, all kinds of food being raised to the mouth with the fingers. Large white *broccas*, close short drawers, and caps of red cloth form the principal articles of dress of the Bokharians. The dress of the women is very nearly similar to that of the men, with the addition of highly decen-

shed boots, and black velv. Both sexes are in the habit of staining their suits with henna.

History.—Bokhara, in short, corresponds to the Bactria of the ancients. After the destruction of the Greek Bactrian empire, it formed a powerful kingdom, conquered in 705 by the Arabs. In 1357 it fell into the hands of Genghis Khan, whose descendants were dispossessed by Timur in 1368. In 1505, the Uzbeks became masters of the country and the throne.

Bokhara contains 19 towns of some note including the capital. The pop. has been variously estimated, by Meyendorf at 2 473 000 by Khanikoff at 2 000 000 and by Burnes at 1 500 000. (Burnes's *Travels in Bokhara* Khanikoff's *Bokhara, its Empire and its People*, etc.)

BOKHARA [the treasury of solomons] the cap. of the kingdom or khanate of Bokhara; lat 39° 43' N lon 64° 26' E. It is situated in a flat country and is embosomed in trees is surrounded by a mud wall with battlements has 11 gates

PLAN OF BOKHARA.—From Eyewitness's *Notes on Travels in Bokhara*.

and is between 8 and 9 m. in circumference. The streets are extremely narrow and the houses small. of the former there are, altogether about 850 few of which are paved, and these that are, are so very ill kept, that the large rough projecting stones rather impede than facilitate locomotion. The principal public edifices are the Emir's palace, which stands on an elevated piece of ground, of about 300 ft. high, in the centre of the city. It is surrounded by a brick wall of 70 ft. in height. Within this area, besides the palace of the Emir is the residence of the Vizier, his public courts of audience, and the dwellings of several other grandees with the houses of their numerous retinues, and three mosques. There are, altogether 800 mosques in the city there being thus one for every street but eight only of any note. The largest occupies a square of 300 ft. and is encased with tiles of same blue attached to this mosque is a tower of 210 ft. high from which criminals are thrown. Of colleges, there are 103; none of them, however have any architectural pretensions but a few have their fronts ornamented with coloured tiles. The number of students, in 1840 amounted to about 10,000. The city contains 38 caravansaries, 24 of stone and 14 of wood and 16 principal baths. The private dwellings, all built of sun-dried bricks, and flat roofed, generally enclose several four-cornered courts the inner walls are sometimes plastered, but the windows are without glass, and the houses of the poorer classes often extremely filthy. These, however of the wealthy are frequently tastefully adorned with comfortable and elegant apartments. The city is intersected by a canal, shaded by mulberry-trees; but in summer it is often dried up for months, when water becomes extremely scarce and what is to be had is so exceedingly bad, that it gives rise, it is said, to the terrible disease occa-

sioned by the guinea-worm, as mentioned in the preceding article. The bazars are numerous, these being places of this kind appropriated to each of various different articles of provision, fruits, clothing drugs hardware, &c. Khanikoff in this way enumerates 94, three of which are for bad boots. The streets of Bokhara during the day are densely crowded, and the din of the busy population perfectly stunning; immense quantities of fruit are exposed for sale, and the demand for it incessant. Tea is in universal favour with the Bokharans and is drunk at all times of the day and in all manner of ways it is sold prepared, in the market-places, in small bowls, and is largely consumed. Grape jelly or syrup, mixed up with chopped ice and called, in Eastern phrase, the delight of life, is another much-prized luxury of Bokhara, which is always to be had on the streets during the warm weather. With regard to the population of Bokhara, accounts differ widely. Burnes, in 1835 states it 150 000 while Khanikoff, in 1843 estimates it at 60,000 to 70 000.

BOKOL, a large vil. Sasapamla, near the Sorogal river lat. 16° 24' N lon. 16° 24' W governed by a marabout. It has some trade and the people are cultivators and cayman hunters.

BOLAROLA. See BORAROLA.

BOLAM par Eng Northumberland 7386 as P 634.

BOLAN PASS a formidable defile in the lofty ranges of mountains that traverse the N.E. corner of Beloochistan prov Sarawan about lat 29° 30' N lon. 67° 40' E. The elevation of the crest of the pass is 5793 ft. above the sea its total length between 54 and 55 m. average ascent, 80 ft. in the mile. The minutest description says Lieut Conolly could hardly convey a just idea of its strength. It is a defile which a regiment of brave men could defend against an army. The eminences bounding the pass however are not generally of very great elevation but there are points where it is edged by perpendicular cliffs of 500 to 600 ft. in height, and approaching so near as to leave but a narrow lane between tremendous in its depth and overshadowed by huge walls of

THE BOLAN PASS.—From Aldrich's *Scenes in Afghanistan*.

living rock, which seem almost to close over the gloomy path below. The air in the lower parts is, in summer oppressively hot, and so excessively unhealthy that scarcely any persons then venture through it, except messengers on urgent business.

It is traversed by a small river called the Bolan which

when there is rain in the higher parts of the mountain, comes down in an almost perpendicular volume, without warning, and sweeps all before it. The pass is infested by Delinquentes, a lawless, treacherous, sanguinary race, who rob and murder all travellers whom they think they can overpower. In 1828, the Bengali colonist, with his accompanying artillery marched through the pass, on their way to (about, taking six days to accomplish it).

BOLANOS, a town in Mexico Jalisco, 65 m. N.W. Guadalajara; chiefly remarkable on account of the rich silver mines in its neighbourhood.

BOLAS (MADONNA AND KISSON) per Eng. Seloy 1945 ac. Pop. 279

BOLDEC a town in France, dep. Seine-Inférieure 17 m. N.E. Le Havre, agreeably situated on the side of a hill washed by the Bulbe, and at the junction of four valleys. It is well built, partly of brick, partly of stone, the streets are wide and straight, and have a lively appearance. On July 14, 1785 a fire occurred in the town, which destroyed 806 houses, and reduced 3000 persons to destitution. The modern town in consequence of the conflagration, was built without that admixture of wood so common in the houses of Normandy. It is a thriving and industrious place, and well situated for commerce. It carries on the manufacture of cotton goods to a large extent, receiving the raw cotton from La Havre, coals from Flanders and Harbinger and disposing of the products at Rouen. Its printed cottons and handkerchiefs have long been held in high estimation. Besides these, it produces linen and woollen stuffs, lace, cotton, velvet, and thread, and has several dyworks and tanneries, with a considerable trade in grain, horses, and cattle. Pop. 8658.

BOLIVIA, per Eng. Durian 3364 ac. Pop. 1008.

BOLIVIE, per Eng. Hantz 11 850 ac. Pop. 25 4

BOLIVIE, per Eng. Hantz 1950 ac. Pop. 220

BOLIVIE a market in Austria, Galicia, gov. Lemberg, circle of, and 14 m. S. by the Bukel. The salt springs in the neighbourhood furnish a large quantity of salt and the convent of Hesse is much frequented by pilgrims. Pop. of whom more than a half are Jews, 3322.

BOLSKINE-AND-ABERFAR a united par Scotland so Inverness. Length, about 10 m. average breadth about 10. It lies a rough almost all around with farm, and is intersected by Loch Ness. Pop. 1997

BOLI a city Asiatic Turkey with Amstola 37 m. N.W. Angora, on an eminence, at the W. extremity of a fertile plain on or near the site of the *Hedra-nopolis* of the Romans. It has several mosques a square, market-place, and public baths and is the residence of a pasha of two talis. It is a thoroughfare for the caravans travelling between Erzeroum and Constantinople. There are mineral baths within a short distance of the town in which frequented by the Turks. Pop. 6060

BOLILMEN or **MAWITCH** a lake, Russia, formed by the Mamch between gora. Den Cassack and Lancasta. It is a long irregular expanse of brackish water stretching nearly 60 m. S.E. to N.W. and in average breadth does not exceed 3 m.

BOLINGBROKE, a market in and par England, co. Lincoln. The town, 72 m. S.E. Lincoln comprises an ancient church, several Nonconformist chapels, some schools and churches, and the ruins of an old castle. The market is held on Thursday and a annual fair on St Peter's day. Area of par 2470 ac. Pop. 692.

BOLIVIA (formerly called **UPPER PERU**) an independent republic, S. America, confining on, and partly enclosed by the States of Peru, Brazil, the Argentine republic, and Chili. When the freedom of the Spanish-American colonies was definitively won by the victory at Ayacucho, on Dec. 9 1824 the future government and political organization of Alto (Lower) Peru, as the country was called, which embraced the provinces of Chucuito, Potosí, La Paz, Cochabamba, and Santa Cruz de la Sierra, became the first and most pressing object of consideration. These territories had originally belonged to the viceroyalty of Peru, the seat of which was at Lima, 500 m. distant along the cordillera, but in 1767 they were annexed to that of Buenos Ayres, still further off, and the road to which, through the desert of the Grand Chaco, was hardly less dangerous than that of the mountains. The incursions arising from the remote distance of the seat of supreme authority were universally felt and admitted, it was resolved to unite the ill-used provinces in question into a

separate republic, which, through gratitude to General Bolívar, was named Bolivia, and this resolution was carried into effect in 1826.

Boundaries—The boundary of Bolivia, towards Peru, begins on the shore of the Pacific Ocean, at the river Loa, in lat. 21° 38' S., and follows up the course of this stream S. to the Andes, where it turns N., inclining a little to the W., as far as the Nevado de Tacora above Arica, in lat. 18° S.; it then goes N. by E. across the Lake of Titicaca to the Cordillera, in lat. 14° S. and continues along a branch of these to the river Yapurá, whence it turns to the confluence of the Beni with the Mamoré, at about lat. 10° S. Here the Brazilian frontier commences, going along the Mamoré, and its great affluent the Guaporé or Iténez, and from the latter river in a straight line to the Yacaré which falls into the Paraguay. Such was the boundary fixed by treaty between Spain and Portugal in 1750 and 1777 but the Brazilians have in fact encroached so much on this line, that from the Iténez or Guaporé, in lat. 18° S. to the Orinoco, which falls into the Paraguay in lat. 20° S. a distance of at least 500 m. they have occupied a tract 50 or 100 m. wide on the S.W. or W. banks of the river marked by treaty as the line of demarcation. Along the Paraguay the Bolivian frontier extends S. to lat. 23° S., where it meets that of the Argentine republic, a conventional line running generally W. from that point across the plains to the Andes separating these two states. The boundary towards Chili is undefined, parts of the territory being in dispute.

Area—Thus it appears that Bolivia, with a frontier of more than 3000 geo. m. yet possesses but a small extent of sea-coast and this maritime tract, which is extremely inhospitable throughout, is commercial with the inland and productive provinces by a portion of the cordillera, not more than 80 m. in length. Owing to its remoteness, therefore, as well as to its natural character, which unites the disadvantages of steep, rocky mountains with those of sterile, sandy deserts it is of little value. The most N. point of Bolivia is at the junction of the rivers Beni and Mamoré, in about lat. 10° S. its most S. the confines of Chili. In width it extends through rather more than 12° of longitude, from the Paraguay on lon 58° W. to the shores of the Pacific Ocean. The area of Bolivia probably does not fall much short of 450 000 geo. sq. m. or nearly five times the surface of the British Islands.

Divisions—Bolivia is divided into seven departments, namely Chuquisaca, La Paz, Potosí, Cochabamba, Oruro, Santa Cruz de la Sierra, and Beni besides two provinces, namely Cobiza and Taraja, which, in respect to local government, are on the footing of departments. These divisions are all named from their chief towns respecting which it will be sufficient in this place to mention, that Chuquisaca is the capital of the state, and the seat of Government, and that Cochabamba is in public documents, sometimes called Orcepe, though this name having failed to become popular is now seldom used. The subdivision of the departments is as follows. For the little information possessed respecting the area and population of the departments, the reader is referred to the separate articles.

Departments.	Provinces.	Departments.	Provinces.
1. Chuquisaca.	Chuquisaca Oruro Yari yari Tarija.	4. Cochabamba.	Cochabamba Ayacucho Oruro Cobiza Migue Oruro Potosí Cobiza
2. La Paz.	La Paz de Ayacucho Potosí Cobiza Yari yari Oruro Cobiza.	5. Oruro.	Oruro Cobiza Cobiza Cobiza Cobiza
3. Potosí.	Potosí Ayacucho Cobiza Cobiza	6. Santa Cruz.	Santa Cruz de la Sierra Yari yari Cobiza Cobiza Cobiza
		7. Beni.	Beni Ayacucho Cobiza Cobiza Cobiza

Two of the provinces, Chiquitos, in the department of Santa Cruz de la Sierra, and Moxos, in the department of Beni, are

no important on account of their magnitude—forming, as they do, nearly two-thirds of the whole Bolivian territory—their great natural capabilities, and the civilization partially diffused among their indigenous inhabitants by the Jesuit missionaries, as to deserve especial mention.

Aspect.—There is no country in the world, perhaps possessing such a variety of soil and climate of physical aspect and productions as Bolivia. Everywhere there are to be seen grand scenes exhibited in clean juxtaposition and on so grand a scale. The broadest part of the Andes where these mountains encompassing the great lake of Titicaca divide into two chains, known as the E. and W. cordilleras lies within the limits of this state. On the W. side, therefore Bolivia presents to view an immense pile of mountains, rising in many points beyond the limits of perpetual snow and enclosing within them an elevated plateau nearly 100 m. wide. The slope of the W. cordillera, towards the Pacific Ocean, presents a most forbidding aspect: bare rocks, fearful precipices, and moving sands with but few and partial traces of verdure, weary the eye of the traveller as he toils up the steep paths which lead him from the burning climate of the coast to the regions of perpetual winter. Arrived on the elevated, treeless plain, and having now in view the snowy peaks of the E. cordillera, he may admire the grandeur of the scene, but not without a sense of its dreariness and monotony. But when he arrives at the passes of the E. cordillera and looks down in the deep valleys which stretch beyond he is ravished at the total change which the garb and aspect of nature at this point undergo, and gazed with delight on the luxuriant prospect of interminable forests, and the hundreds of lively streams which hasten on to form the mightiest rivers in the world. The Andes, while they present to the W. an abrupt and uniform ridge, throw off to the E. numerous racial foothills, which extend a long way from the cordillera. In the valley of the Oruro or Rio Grande, the chains of hills connected with the Andes may be traced to a distance of 850 m. from the sea-coast such that in the width of the Bolivian mountain region. And here again nature takes a new face. The hills cease and are succeeded by a plain exceeding Great Britain in superficial extent, in which no stone nor even a pebble is to be found and which is annually flooded to such a degree by the numerous fine rivers which run through it towards the Amazon, that communication by boat are practicable narrow it through the stately forests is nearly all directions. This is the country of the Moxos. Beyond that, towards the Paraguay the plain rises in general above the reach of inundation, and rocks and hills of moderate height again make their appearance. This is the country of the Chiquitos. These dry plains separate the basin of the Amazon from that of the La Plata but some of the affluents of the Paraguay approach so close to the sources of the Amazon, that in floods it is a canoe can pass from the one river to the other. Such is the general outline of Bolivia but the chief natural features of its remarkable country its mountains, valleys, plains rivers &c. demand a more attentive and detailed consideration.

Mountains.—The W. cordillera of the Andes in Bolivia attains a great height at no great distance from the sea, and exhibits not a few nevados or summits rising above the limit of perpetual snow which in the vicinity of a great table-land lies higher than on an insulated mountain, and rarely descends here below an absolute elevation of 17,000 ft. The road from Arica into Bolivia passes between the nevados of Tacora and Rinza, while on the left is seen that of Chigüitani, and on the right a still loftier series of snowy crests. The heights of these mountains, as determined by Mr. Pentland, are as follows:—

	Feet.		Feet.
Tacora.....	18,000	Pennacota.....	99,000
Chigüitani.....	19,740	Humapaca.....	21,700
Salama Peak in lat. 16° 7'—	22,250	Guatani in lat. 16° 25'	20,000

The pass of Tacora is itself at an elevation of 14,400 ft. which is about the general height of the W. portion of the table-land to which it conducts. The village of Tacora, one of the most elevated inhabited places on earth, is but 150 ft. below this ridge. Of the nevados in the E. cordillera, on the opposite side of the plain, the most conspicuous are:—

	Feet.		Feet.
Amakusa for the Nevado of Rinza.....	21,365	Humapaca Peak.....	20,000
Illimani.....	21,140	Chadacoma (two summits).....	20,215

Vol. I.

How it must be remarked, that Anacolum and Illimani were long regarded as the highest mountains in America, or even, with the exception of one or two points of the Himalaya, in the whole world. The re-ascension, however of the observations made to ascertain their height, has recently reduced them to the measure given above, Boria Jomg by this correction nearly 4000 ft. of its supposed elevation. With this fact before us it is impossible not to revise with mistrust the heights assigned by the same observer to the series of nevados between the parallels of 18° 7' and 18° 25' and which all exceed the height of Chimborazo. From Illimani a chain of mountains runs W. by S., which bears, throughout a great portion of it, perpetual snow and may therefore be assumed to reach an elevation of 18,000 ft.

Valleys.—Between the snowy heights of the cordilleras extends a great plain from N.W. to S.E. for above 300 m. widening towards the S. The W. side of this plain has an elevation of 14,400 ft. for a width of about 40 m. It then sinks abruptly about 1000 ft. and slopes to the shores of the Lake of Titicaca the level of which is about 12,700 ft. above that of the ocean. The Lake of Titicaca is connected by its outlet, the Rio Desaguadero, with the Lake of Atlagua or Ulagua, 160 m. S.E. from it, and lower in level by nearly 490 ft. Here then is a great valley equal in area to Ireland, and lying at the height of from 12,280 to 14,400 ft. above the sea. This remarkable feature in the geography of Bolivia is the more deserving of attention, inasmuch as it was on the shores of Lake Titicaca that the power of the Incas chiefly lay and the indigenous civilisation of America, credited in that elevated region, grew up with a character harmonising completely with the skies above and the scenes around it. Besides, the peculiar husbandry of the indigenous inhabitants of these plains, who are still numerous and who keep large herds of llamas and alpacas employing it a former almost exclusively in the mountains as herds of burdon depends altogether on the boundless extent of their dry plains and elevated pastures. The S. and more depressed part of this high plain is traversed by several low ridges running nearly from W. to E. The openings between these break off towards the E. into numerous valleys some of which pour their waters into the Pilcomayo, which joins the La Plata, while hundreds more contribute to swell the Mamoré, Beni and other great affluents of the Amazon. The chief of these valleys, in respect of magnitude, is Yalla Grande or the valley of the Yungas.

Rivers.—The W. slope of Bolivia, as the coast between the W. cordillera and the Pacific Ocean, has no river deserving of notice but on the E. side of the E. cordillera, the rivers are countless and the utmost we can do here is to group them. The hills of Chiquitana separate the streams which flow into the Pilcomayo from those running into the Rio Grande. The Pilcomayo is probably navigable from the commencement of the plains to the Paraguay but, owing to the indeterminate character of much of the country through which it flows, it has hitherto engaged but little attention and nothing is known of its capabilities. Between the Pilcomayo and the Rio Beni, the Parapiti descends into the plains, and seems long doubtful whether it shall ally itself with the floods of the Amazon or with those of the La Plata; it decides however for the former and spreads into extensive marshes, which overflow during the rainy season into the Rio Grande. This great river descends from Chiquitana, in an E.S.E. direction, for 300 m., till it turns the last hills connected with the cordillera; it then winds N.W. under the name of the Beni, till it meets the Mamoré when the joint stream flows N. through the low country of the Moxos till it reaches the Beni, and leaves the territory of Bolivia. The river-course thus described from the source of the Rio Grande to the junction of the Beni and Mamoré, exceeds 1000 m. in length, and the lower half of it is navigable for large boats. But the Mamoré, and Beni also with several of their affluents, are noble streams, navigable, to a great extent, at all seasons, and, after the rains, even to the foot of the cordillera. But again the Mamoré is joined on its W. bank, by the Guaporé or Indio, a great and navigable river which marks the Brazilian frontier and the head waters of the Indio are separated by a portage of only a few miles from the Yungas, which may be navigated in canoes to the Paraguay. A latter communication, however (for Bolivia at least) with the last-named great river may be found in the Orquiola or Orquiola, which

join the Paraguay on its bank in lat 19° 50' S. and resolves the Tupiza, into which flows the Beni. The Beni flows from the hills of the Chapare. From the same heights flow the Beni Miguel and Baura or Rio Blanco, both navigable streams, N N W. to the ocean.

Lake.—The few and inconsiderable rivers of the elevated plain between the cordillera, may be considered as belonging to the lake or lakes which form one of the most striking features of that region. Lake Titicaca, the position of which has been already described in general terms, has a length of perhaps 30 m. and a breadth of about 25, but the dimensions of it hitherto published are much at variance with respect to its shape, and are obviously not entitled to implicit confidence. At about a third of its length from the S. end, it is contracted by peninsulas from both sides, which divide it in fact, into two lakes of these, the S. and smaller one is properly named the Lake of Chucuito, and lies wholly in Bolivia of the larger basin or Titicaca, the E. shores alone fall within the limits of that state. The waters of Lake Titicaca and Chucuito are carried off at the S. extremity of the latter by the Rio Desaguadero, which is about 150 m. to the S. of Lake of Anzures or of Potosi, as some call it. This lake is about 490 ft. lower than that of Titicaca, the waters of which it receives. It has itself, no outlet, but is wasted by evaporation and is, consequently salt. The Rio Desaguadero has a general width of 800 ft., with a moderate uniform current and appears to be navigable throughout. In the plains of E. Bolivia, lakes are numerous, particularly during the rains but these inundated tracts however they may be denominated, are still forest as well as lakes. Little is fact is known, as yet of the situation and extent of the permanent standing waters in those great plains nor can we even tell exactly the position of the Salinas, whence the Indians of the mission of the Chiquitos draw in the dry season, large quantities of excellent salt. They are vaguely described as lying about 150 m. S.W. from the most southern of these missions.

Geology.—The slope of the W. cordillera towards the sea, is formed almost wholly of trachytic conglomerates, in various stages of decomposition. It is generally whitish or of a reddish hue, but dark-colored rocks of basaltic origin frequently break through it. The point which shelters the harbour of Cobija is a mass of basaltic porphyry. The Cerro de Tacora, and other dome-shaped summits of the ridge, are of trachyte, the bare rock being often exposed, as on the nevado of Chiquitani, in consequence of its steepness. It has been said that some of the conical summits of these cordilleras are extinct volcanoes, and that the Cerro de Tacora is a true Soliman but it seems now fully established, that no lavas or other volcanic productions, of a geologically recent age, are found on the Bolivian table land which is never disturbed by earthquakes and as to active volcanoes, the Bolivians know of only one, which is situated, in the S. part of the maritime cordillera, in the province of Carabaya. The disintegrated trachyte, which covers the W. and more elevated part of the table-land abounds in quartz crystals, exhibits much saline effluence and is generally adverse to vegetation. The river Manu, running S.E. through this tract till it falls into the Desaguadero, has worn its bed in a white channel, 600 ft. deep, the W. side of which presents to view horizontal strata of the whitish trachyte conglomerate while the E. side is formed of basaltic porphyries. The country thence E. has a more diversified and broken outline, the hollows of the ground not being filled up, as on the W. by mouldering trachyte. This geological character continues across the plain to the E. cordillera there the masses of the Illimani rest on an immense pile of granite. The general direction of the granite range is N.W. and S.E. In its neighbourhood the trachyte rocks become micaceous, on the E. the granite is overlaid by rocks of the Silurian and Devonian systems, through which it has forced its way upheaving them so that some of the sand stones of the Devonian series nearly reach the height of perpetual snow. The granite seems to extend from Illimani N.W. but towards the S. from Oruro to Potosi, it is probable that the silurian and other overlying strata have been raised by trachyte. The granite shows itself only in the elevated parts of the E. cordillera, but in the E. of it are found a few spots of porphyry and with these and all traces of Plutonian rocks throughout the lowlands of Bolivia. The rock next met with in the plains is older and of a totally different char-

acter. The hills or mountains of the Chiquitos are 200 m. distant from the nearest branch of the cordillera and form a system quite distinct from the Andes on the one side, and the Brazilian mountains on the other. They consist of gneiss, a stratified rock, which here extends from W.N.W. to E.S.E., and resembles a long island in the midst of a sea of alluvium. It is, in many places, broken and dislocated by the forces which have raised it into its present position. The gneiss is overlaid by foliated aluminous strata, the lowest of which has a thickness of at least 600 ft.; and on this again rests a mass of the Devonian series, after which comes the red carboniferous sandstones. The strata in these formations are, as it may be supposed, filled up, and levelled by alluvium or sedimentary deposits of various ages. Of these, the most remarkable are—the alluvium of the Pampas, which seems to have been derived from the wear of the gneiss rock, and contains in great abundance, the fossil remains of mammals, many of them of great size, as the giant armadillo the three-toed sloth, the American horse, &c. this stratum which contains the remains of an extinct animal world, is covered immediately by a deposit enclosing the shells of existing species another alluvium called the guaraní tertiary contains hydrates of iron in abundance and is generally found resting horizontally on the carboniferous limestones. It may be remarked that the ortoceras and marine tertiary formations are here wholly wanting, and that the plain, in general has been levelled by a sea of mud now distinguished as the fossiliferous alluvium, and which is, in many places, covered by modern sediments made up of fine sand and decayed vegetable matter.

Mine.—Here, as elsewhere, the precious metals are found chiefly in the aluminous strata, where these approach the igneous rocks. Gold is found in many of the streams that fall down the E. side of the cordillera, and at Chocomaquia near Cochabamba, at the source of the Rio Grande, as well as at Tipuani near Boreto, the washing of the gold-sands is still carried on with profit. In the same district the schists of Potosi are rich in silver and thence S.E. by Oruro to Potosi, the whole country is famed for the inexhaustible treasures which have been drawn from it chiefly in the form of silver-bearing alluvium. The celebrated Potosi was once the richest silver-mine in the world. From the year 1556 down to 1834 it yielded £164 000 000, without counting, the large quantity of silver taken by the Indian labourers probably equal to one-fourth more. Though many of the veins are now exhausted and the rest are imperfectly wrought the annual yield of this renowned mountain is still \$450 000. The tin mines in the department of Oruro, are said to be the richest in the world. At Loroque and Huallabamba, both in the same department, but 120 m. asunder copper is found nearly pure. But these and all other sources of wealth are rendered comparatively valueless for export purposes from the difficulty and great expense of bringing them down to the coast.

Climate.—From the foregoing account of the physical aspect and configuration of Bolivia, it might be at once concluded that it embraces every variety of climate, from the heat and aridity of the torrid zone, to the perpetual frost of the polar circle. On the elevated table-land there is frost every night, and the morning ice on the river Tacora is always strong enough to bear a man, but here on the borders of perpetual snow the climate has one great advantage over that of polar regions, for the sky is always bright and cloudless, and the air dry. The atmospheric phenomena which characterize this region may be best studied on the E. cordillera, whence may be seen towards the E. like a murky sea, the clouds which roll over the luxuriant forests of the plains and valleys beneath. This sea of clouds generally rests, at a certain elevation on the side of the cordillera; but, during three months of the year it rises and fragments of it pass over to the table-land. These follow violent storms and showers of rain and, at this season (chiefly in December, the hottest month) the *veranos* put on their annual covering of new snow. But the clouds and rains rarely reach the W. half of the table-land and never pass the S. cordillera. From the coasts of Bolivia, on the S. as far as M. de Payta, in Peru, or about the parallel of 5° S. it seldom or never rains. Adjacent to this arid region, the table-land of Bolivia enjoys bright sun for nine months in the year, and but three months of rain to restore the verdure, and of mountain-moors to supply the

river. But a little further E. even a day's journey down from the crest of the cordillera, may be found places where rain falls every day in the year. The inhabitants of these countries distinguish three regions of climate, the Puna, Paramo, and Yungas. The first is elevated and cold and disagreeable to those unused to it, from the difficulty of respiring in an attenuated atmosphere. This is the region of the llama and alpaca, higher up still is the Puna brava, which is frequented by the wild guanaco and the vicuña. The country round Lake Titicaca cooes, for the most part, under the denomination of Puna. The second or middle region is the Paramo, which is temperate and productive. The Paramos have been naturally taken advantage of by the European settlers who have filled them, as in the valley of La Paz, with European grains and fruits. Below the Paramos lie the Yungas or valleys, having a decidedly hot climate and distinguished by a rank vegetation. Thus La Paz seated in a Paramo, and enjoying a climate resembling that of the S. of France is close to the region of the llama on the one side and on the other to valleys yielding excellent coffee, cooes, and other tropical productions. The inhabitants of these deep valleys are not unfrequently afflicted with pox but are said to be not liable to the scurvy which in Europe, often attends on that disease. Intermittent fever is frequent in some of the valleys on the E. side of the cordillera, but it is not easy to trace the source of the malarial producing it as some spots, quite exempt from the disease, enjoy no visible advantage of situation above others, the air of which is reputed to be most deadly. Water does not seem in this part of the world, to be a principal agent in creating or disseminating disease for while some valleys, apparently favoured by nature, are scarcely habitable, owing to fever the villages of the Indians, in the midst of marshes or of inundated forests, are often quite healthy. In the plains of the Moxo and Chiquito, the prevailing wind is from the N. the E. wind blows sometimes, and is likewise a warm wind. The W. wind is never felt, being intercepted by the cordillera. The S. wind is extremely cold, and to the inhabitants of the plains, disagreeable. The rains fall chiefly from October to April.

Botany.—The botany of Bolivia is of course, as various as its climate. On the ridge of the W. cordillera, there is no deficiency of species of Alpine plants, but taken collectively they form but a scanty vegetation so that the tree trunks and shrubby plant cooes, at the first place, to be wholly destitute of vegetable life. Yet dwarf plants occupy the clefts of the loosened rocks. A broom grows to the height of 5 or 10 inches, according to the elevation of the ground and several small plants (as *Larrea canicola*, *Verbena musina*, and *Lycopodium Austro*) attaching themselves to the projecting parts of rocks, there increase, in the course of ages perhaps, into tufts of considerable magnitude, so compact that lichens grow upon them, and so strong that the axe alone can lay them open. Owing to their density and resistant nature, these tufts are valuable as fuel. An aromatic little bush characterizes the trachytic plain lower down as soon as available and is met with the Indian plants, potatoes, and in favourable spots, barley is sown not for the sake of the grain which does not ripen here, but as green food for the loaded mules that cross the plain. Towards the shores of the lake, though rivers are still wanting, the grasses become luxuriant, and 20 species of graminaceous plants have been gathered there in a hasty excursion. In descending the E. cordillera, the first plant which attracts especial attention is the cactus, like a candle-labra, or in other majestic forms and which, in a particular one (perhaps about 7000 ft. above the sea) attains a height of 40 ft. This is followed by the zone of acacias; and lower down the species increase and the forest thickens, till at length, near the foot of the mountains, the bamboo and true ferns grow beneath the canopy formed by the graceful foliage of palms nearly 50 ft. high. An effort to describe systematically the productions of these forests would here be out of place. Let it suffice to say that, in these primeval forests, the Indians find all their wants supplied. Here they procure the trunks of trees, from which their large canoes are made as well as the canes to build and palm leaves to cover their houses. From the inner bark of a kind of mulberry they obtain a vegetable gause, of which they make their shirts, and which does not lose by a comparison with cotton. The woods of the Moxo abound in the mate leaf or Paraguay tea

near the cordillera is found the tree which yields the balsam of Peru and higher up, that producing dioscorea or Peruvian bark.

Cultivation.—The valleys occupied by the Spanish settlers on the E. slope of the Bolivian high land and varying in height from 12,500 ft. to 8000 ft. above the ocean produce abundantly all the fruits and grains of Europe. The vine, the cultivation of which was forbidden by the jealous policy of Spain, is now introduced. The warm and well watered valleys as that of Cochabamba, supply with corn and fruit the populous but comparatively sterile districts of the table land. In the Yungas, and the hot plains of Santa Cruz, the objects of culture are coffee (said to be excellent) cooes, tobacco, indigo, cotton, maize at all seasons yuca or manioc, potatoes guavas the chirimoya (a delicious fruit) the sugar cane, and above all cooes. This is the last of a stratum (*Hypoxylon Peruvicum*) which the inhabitants of this part of the world consider as the Malays show the best and such is the force of habit, that cooes, to the Bolivian and Peruvian, an article of the utmost necessity without it he pines with it, the smallest quantity of food will sustain him through great fatigue. The yearly sale of cooes in Bolivia amounts to 10,150,000 lbs.—a large quantity to supply the wants of a particular class, in a population of 1,000,000 at the utmost.

Zoology.—The quadrupeds inhabiting the elevated parts of the cordillera, are few in number as well as in species. The llama and alpaca, which are domesticated are thought to be but varieties of the guanaco, which is still wild, the vicuña is a different species. On the same heights with the guanaco is often to be seen the rough haired deer (*Cervus Andeanus*). The chinchilla, hunted for its beautiful fur and now almost exterminated prefers the neighbourhood of the snow as does also the viscacha or long-eared marmot, the burrows of which sometimes occupy a great space in the plains. On the wooded sides of the E. cordillera, the cactus thicket affords shelter to bears. Lower down the pear warts the marmots feed, and the jaguar attacks the cattle. The number of these beasts of prey however is rapidly diminishing the governor of Santa Cruz paying a cow for every jaguar skin brought in. The tapir the glutton sloth armadillo, and many other animals, are killed by the natives for food. The large rivers flowing into the Amazon are frequented by the fresh-water dolphin sometimes to the quarter of the globe. These have a formidable enemy in the cayman or alligator which, together with the palameta or armed beaver, and some voracious small fish renders the waters of the Bolivian plains extremely dangerous. The vampire bat is so troublesome in Capachico and other parts of the Yungas, as to prevent the rearing of cattle. The forests are crowded with monkeys of different species always social and active. Their varied cries mingled with those of birds show how much life there is in these wild solitudes. But that which chiefly astonishes the naturalist here, is the multitude of the feathered tribe. Whether on the sea-shore or in the forests, they are numerous enough when on the wing to darken the sky. From the condor which soars above the Andes, to the diminutive humming-birds, from the loud-streaming parrot to the musical organio birds of all character size, and plumage are to be found in Bolivia.

People.—The population of this country is variously estimated from 600,000 to 1,800,000 probably does not exceed 1,000,000 of whom two-thirds belong to the aboriginal race of the country and the remainder are mestizos, or descendants of the original settlers by native women. The indigenous inhabitants of the Bolivian highlands, near Lake Titicaca are, the Aymara; while to the N. and E. dwell the Quechua, with whom the former were united under the dominion of the Incas. These two nations speak distinct though cognate languages. Numerous monuments of the national prosperity and civilization of the Aymara still remain. Ancient villages, with domed houses built of stone, or of sun-dried brick, and with enclosures for cattle truncated obelisks facing E. and W. and wall-built tombs containing the mummies of whole families, arranged together in a sitting posture, are strewn thickly over the country and seem to indicate the former existence of a considerable population. The Aymaras are industrious, good, and intelligent. They seem to prefer the pastoral life, and the cultivation of the potato, to any other occupation. As Christians, they

retain many of their pagan usages, dancing in masquerade at certain church festivals, for two or three days without intermission. The clothing of the peasantry is generally black. In the towns, the women pride themselves on the number of

COUTURES OF AYMARAS AND QUECHUAS.—From D'Osbey

petticoats they wear they load themselves accordingly till with felt hats of immense circumference these swartwits bask in as bared as they are long. The Quechua Indians, on the I side of the cordillera, do not differ much from the Aymaras. In the provinces of the Moxos and Chiquitos,

THATCHED HOUSE OF THE AYMARAS.
From D'Osbey's 'Voyage dans l'Amérique Méridionale'.

there are the remnants of perhaps some 20 nations or communities, speaking different languages but the judicious policy of the Jesuits, who founded these missions, and sought by all means to unite the scattered tribes under one language (the Chiquito) and uniform customs is still persevered in and the original dissensions between the aboriginal tribes are rapidly disappearing. The Indians are collectively treacherous and hostile, and some of them, as the Moxos seem to have entered fairly on the career of civilization. The Spaniards in Santa Cruz, and other remote parts of Bol. in, have adopted the simplest mode of life: the clothing of both sexes is scanty their houses, far from being luxurious, want even comfort. Their amusements, which occupy much of their time, are dancing and drinking chicha, a kind of beer made from maize.

Trade.—It might be supposed at the first view that a state, possessing such extensive territories as Bolivia, with a soil so prolific, such variety of climates and productions, and such a river as has within itself all the elements of commercial prosperity but a little consideration will show that the state is in question is debarr'd to a great extent, by nature and position from those facilities of communication without which commerce cannot flourish. The enormous cost of carriage from the sea-coast across the cordillera, to the populous towns of the interior must necessarily operate to discourage trade by that route. And as to facility of intercourse with the sea, by means of the rivers Orinoco, Paraguay, Paraná, and La

Plata, or by the Beni Guapey, Madeira, and Amazon, these courses suppose a river navigation of 1500 or 2000 m.—a preliminary condition which, so far as commerce by sea is concerned must subject the foreign trade of Bolivia to great disadvantages. With these drawbacks the trade of the country is not of much importance, the most of it being internal with the neighbouring republics of La Plata and Peru. The Yungas supply the high lands with coca, coffee sugar and cocoa, and other products of the warmer regions: the high lands send chichas (or dried meat) and corn to the Yungas and the silver of Potosí: the tin of Oruro, the copper of Coroico, the emeralds of the forest, and the gold of Lipián, constitute the medium of exchange for European commodities. The Spanish settlers, who thought of nothing but the precious metals, have never condescended to profit from the example of the Incas, and to construct good roads. Hence it is that wheeled vehicles are unknown in Bolivia. The construction of a good road for wheel carriages over the W cordillera, and of a railway connecting the Paraná with Chiquitos, may appear perhaps to be undertakings far beyond the present resources of the republic but they must, nevertheless, precede any considerable development of the trade and industry, and under judicious management would doubtless prove eventually remunerative.

History.—The early history of Bolivia is included in that of Peru. As the state was constituted in 1825, Bolivian history properly so called, commences with that epoch. The constitution which was drawn up for the new state, by General Bolívar and was adopted by the Congress in 1826, makes ample provision for personal and political liberty securing religious toleration the freedom of the press and the independence of the tribunals. It established a legislative body composed of two chambers, namely the congress and the senate with a president elected for 4 or 6 years. The public debt amounts (£1850) to about £1 084,943.—(Preston's *Var of Jour across the Cordillera of the Andes and of a Residence in Lima Stevenson's Historical and Descriptive Narrative of Twenty years Residence in S. America, &c.* Lieut.-Col Brand's *Journal of a Voyage to Peru and Passage across the Cordillera of the Andes Memoirs of Gen. Mill* & in the *Servicio de la República de Peru* Beauchamp's *Histoire de la Conquête des Pérou* D'Osbey's *Voyage dans l'Amérique Méridionale* 1796-33 *Précis de l'Amérique*).

BOLLEHNAIN a tn and circle, P'ussan Bolca. The town has 19 m. S.W. Lagunita, 1 bank house and five two churches two schools, a townhouse and hospital with some woollen, linen, and ribbon manufactures. Pop 2450.—The circle area, 98 sq m is mountainous, and covered to a great extent with wood but is fertile yielding flax, hops, and potatoes. Silver copper arsenic, and sulphur are found, and linen is manufactured extensively. Pop 32,413.

BOLKHOFF or BALKHOV a tn. Russia, pop dist. of some 2000. gov. of and 34 m N Orel on the Volga. It is a very ancient place, is chiefly built of wood and contains 22 churches, a monastery and a seminary. It has manufactures of leather and of worsted stockings, and a considerable trade in hemp, flax and tallow. Pop (1851), 18,799.

BOLLAT a tn. Italy Lombardy prov. of and 6 m N Milan with a square and a parish in each. Pop 2021. BOLLENE, a tn. France, dep. Yvelines, 23 m N Argenne in a fertile territory watered by the Sen. Silk of good quality is spun and several important markets, two of them of them days each are held here. Pop. 2660.

BOLLULLOS DEL CONDADO a tn. Spain Andalusia, prov. of, and 18 m. E. by N Huelva. It has narrow ill-made streets a square two churches a session-house, townhall hospital three schools, a prison and several convents. Manufactures—earthenware, tiles, and brandy. Products of vicinity:—wine and oil. Exports—grain and wine. Pop., chiefly agricultural, 4688.—(Málaga).

BOLM a maritime dist. or territory W Africa, S S.E. from the peninsula of Sierra Leone, extending N from the Sherbro river to Yarry Bay and intersected nearly in the centre by the parallel of 8° N.

BOLMEN, a lake Sweden, Jönköpings län, 53 m N N.W. Christnastad about 20 m long, by 7 broad. In it is the island of Bolmen, forming a whole parish.

BOLOGNA a prov Italy bounded on the N by prov Ferrara, E. by prov Ravenna, S by Tuscany and W by Modena area 1296 sq m The surface in the S is mountainous, being traversed by ramifications of the Apennines but, in the N slopes down toward the plains of Lombardy It is watered, by numerous streams, which are extensively employed in irrigating rice fields, and make the air rather unhealthy In addition to wheat and maize, which are the principal cereal crops, rice, hemp to a great extent, and flax, are raised The olive also is cultivated, and a good deal of wine of moderate quality is produced Considerable attention is paid to the rearing of silkworms, and silk is both spun and woven to a considerable extent The chief trade is in hemp, cordage, rice, and silk Pop 876 681

BOLOGNA [Latin, *Bononia* French *Bologne*] a city Italy Emilian Prov cap, cap prov of the same name residence of a cardinal legate, east of an archbishopric and of one of the four appeal courts of the States, in a beautiful and fertile plain, at the foot of the lower slopes of the Apennines, between the Savena and the Reno, 190 m. N. N. W. Rome, and 896 ft. above the level of the sea. It is surrounded by a high brick wall in which are 12 gates, and has a circuit of about 5 m. being nearly 3 m. long and 1 m. broad. It is divided into four quarters, the older of which, indifferently built, and consisting of narrow tortuous streets, have a heavy antique and gloomy aspect and strikingly contrast with the broad and well-paved thoroughfares and the noble structures of the modern city One of the peculiar features of Bologna is the line of arcades continued through all the streets, and covering the footpath, so as to afford both shade and shelter The public edifices are numerous and many of them magnificent The churches alone exceed 70 and are remarkable not more for the beauty of their architecture than the works of art which they contain. The most deserving of notice are the cathedral (*di Duomo*) founded in very early times, but repeatedly rebuilt and not completed in its present form till 1748 of imposing appearance, arranged in the interior in the Corinthian style, and adorned with numerous fine paintings and frescoes particularly an Annunciation, the last fresco executed by Ludovico Carracci the church of San Petronio, the largest in Bologna, and though unfinished, one of the finest specimens of Italian Gothic San Stefano, the oldest, and perhaps the finest church, founded by the union of seven churches, containing numerous fine paintings and very early relics of antiquity San Domenico with its adjoining cloister of the same name San Salvatore, San Giacomo, and San Giovanni in Monte. Of numerous public and private palaces, the most deserving of notice are the Palazzo Maggiore del Pubblico where the legats reside adorned with numerous fine statues and containing among other magnificent halls, the Sala Terrena, whose roof and walls are covered by paintings of celebrated masters and the Palazzo dei Podesti, remarkable as the prison of King Edmund son of the great Emperor Frederick II. captured by the Bolognese, in 1249 and detained, in spite both of the threats and offered ransom of the Emperor till his death in 1272 Among the most conspicuous structures of the city are two leaning towers near its centre. The one, built in 1109 by Gerard Asinelli whose name it bears, was originally higher than at present, but an earthquake overthrew the upper portion of it, and reduced its height to 256 ft. It inclines 3 ft. 2 in. from the perpendicular. The Gherardini tower was built in 1110. Its height is 180 ft. and its inclination 8 ft. From one of the gates of the city an arcade, nearly 3 m. long with 700 arches, leads to the handsome church of La Madonna di San Luca in the vicinity of which is a fine public cemetery This arcade is one of the finest structures of the kind built since the time of the Romans. Bologna has always held a prominent place in the annals of art and science Its university is the most ancient in Italy having been founded in the year 435 by the Emperor Theodosius. It was considerably augmented by Charlemagne. The number of students attending it, at one period, was not less than 10 000 and its professors were of European reputation. One remarkable honour peculiar to this university is the number of its learned female professors, of whom three distinguished themselves, respectively in the chairs of law mathematics, and anatomy Legal studies at one time had the pre-eminence, but medicine now holds the first place. The building including the university

institute, and other similar establishments, was originally the Palazzo Cellesi, purchased by the Senate to receive the noble bequests of Count Marignoli, a friend of Newton, including a rich cabinet of natural history a museum of antiquities

THE ASINELLI AND GARISENDA TOWERS, BOLOGNA
From Gaby Knight's Illustrated Antiquities of Italy.

and a library of 150 000 volumes, with many MSS. Count Marignoli also founded and endowed an observatory in an astronomical hall and a botanical garden, which is one of the most complete in Europe. There is another public library containing 88 000 volumes and 4000 MSS. The collection of works of art is numerous among which that of the academy of painting endowed in modern times by the municipality principally with the treasures of abolished churches and monasteries, as well and full of historical interest. In the 16th century the Cardinal, Giulio Ben. Domenico and Albano, founded a school to which their works have given great reputation. Many of their paintings adorn the churches and collections of the city Bologna has likewise three theatres and a casino or assembly room for the upper classes supplied with literary and political journals and several well endowed and well-managed hospitals, of which the first place is due to the Ospedale Grande. One curious fact connected with it is, that the number of cases of *strepitus* annually admitted into it averages 500 The manufactures of Bologna are important consisting of silk goods, velvet, crape, coarse linen, common cloth cordage, and paper excellent liquors, scented soap, artificial flowers and fruits, and salted provisions The *corvales* and *mortadelle* sausages of Bologna, are known throughout Europe. Glass, jewellery leather needles and small steelwares, straw hats, nitric and sulphuric acid, and cream-of-tartar are likewise manufactured here. Commerce is facilitated by the Bologna Canal.

The people of Bologna are frank, gay and spirited; their bearing is the most manly and independent of any people of the Papal States, owing probably to the ardour for political freedom, inherited from their ancient political institutions. The women are generally handsome. The dialect spoken is the most smooth and corrupt of all Italy. Foundlings are numerous, illegitimate births being one-eighth of the whole. The air of Bologna is pure but, from the proximity of the Apennines liable to sudden changes causing frequent Indian rainy seasons. Bologna is the *Bononia* of the Romans. A Christian church was erected in it in the third century and in 728 it passed into the hands of the Lombards, from whom it was taken in 800 by Charlemagne. In the 12th century Bologna took possession of several of the surrounding cities, and for 156 years (1118 to 1274) formed the most flourishing republic in Italy. In 1506, it was united to the Papal States. Bologna has produced eight popes, 100 cardinals, the naturalists Galvani and Aldrovandi, the anatomists Malpighi and

Mondano, the astronomer Maraldi the mathematician and engineer Manfredi, the painters Guido, Albano, Barbieri, Domencchino, the three Caracci and the professors Monti, Ortolani, Tommasini, and Mazzoni. Pop. 72 000

BOLONCHEN a large the vine vil. Central America, Yucatan, 66 m. N.E. Campeche. It derives its name from two Maya words *Bolon*, mine, and *chen*, walls, now walls having formed from time immemorial the centre of a population, and these walls being now in the place or square of the village, which consists of a long line of straggling houses or huts on either side the road. The walls are circular open rings cut through a stratum of rock, evidently communicating with a common reservoir for the water is always at the same level in one that it is in all the rest. The village authorities make it a principal part of their business to keep these walls in a proper state of preservation but with all the care bestowed upon them, the supply of water completely fails for four or five months in the year. During the season of scarcity the inhabitants derive their supply of water from a remarkable cavern (cave) at a considerable distance from the village. The entrance to this cavern is by a lofty and abrupt opening under a ledge of overhanging rock. At the distance of 60 paces from the entrance, the descent is precipitous for about 80 ft., and is accomplished by a ladder. A little further advance leads to the brink of a great perpendicular descent to the bottom of which a strong body of light is thrown from a hole in the surface, a depth of 210 ft. From the brink of this precipice the descent is made by a ladder between 60 and 80 ft. long, and about 12 ft. wide, rudely constructed of the rough trunks of saplings, lashed together lengthwise and supported by horizontal trunks, braced against the face of the precipitous rock. In the large cavern at the foot of this ladder seen in the accompanying view a village fete is annually

WELL AT BOLONCHEN.—From Colquhoun. View in Central America.

held at the opening of the wells in the cave, which takes place on a day appointed by the municipality. The walls of the rocky chamber are dressed with branches and hung with lights and the whole village comes out with refreshments and music, the pastor at their head, and pass the day in dancing in the cavern and rejoicing that when one source of supply fails, another is opened to their need.

By a ladder descent from this great cavern, Mr. Stephens reached a pool of water calculated to be at a depth of 450 ft. perpendicular height, and 1400 ft. distant from the entrance to the cave. The number of ladders leading down is seven; and of

the nature of the whole descent some idea may be formed by an examination of the accompanying section. There would

Scale of 1 ft.

SECTION OF WELL AT BOLONCHEN

appear to be seven water pools, several of which Mr. Stephens visited, reached by various passages diverging from the great cavern, at the foot of the ladder. The surface of the surrounding country is mountain limestone. Top. of vil. 1000—(Stephens *Academy of Travel in Yucatan*).

BOLSHIY TAGH a lofty mountain-range, Central Asia, W. of Laila Tilet, stretching nearly due N. and S. It forms one of the N. branches of the Himalaya, connecting it with the Thian Shan range, and several others beyond or further N. Its most elevated summits are supposed to exceed 19,000 ft. in height. In these mountains great numbers of a diminutive species of ox called yak or beak-yak are reared.

BOLOTANA a tn. in Sardinia, 41 m. S.E. Sassari in a fertile district that produces excellent corn and pasture. It contains a monastery. Pop. 2274.

BOLSAN a river America, rising in confederacy and state of Mexico, and, after a considerable W. course, in part of which it forms the boundary of the state of Mexico and Valladolid falls into the Pacific Ocean at Zaratula, 240 m. S.W. the city of Mexico lat. 17° 53' N. lon. 102° 24' W.

BOLSHIAYA RYBKA a river Kamtschatka, which rises among hills in the S. of that peninsula, and, flowing W., falls into the Sea of Okhotsk, below Bolshoiurk. Its chief affluent is the Kitchika, after receiving which it becomes navigable for barges. In spring tides, it admits the largest vessels at its mouth.

BOLSENA [anc. *Fulmenum*] a tn. and lake Papal Blasen, Silesia, of 20 m. N.W. Vitarbo. The town stands on the N. side of the lake of the same name. It is surrounded by a high wall flanked with towers, and defended by a ditch and is rich in remains of antiquity. Pop. 2000.—The lake [anc. *Lacus Fulmenensis*] supposed to have been a crater is about 8 m. long and about 7 m. broad 325 ft. deep at the deepest part, 1000 ft. above the level of the sea, and well stocked with fish. It is surrounded by wooded hills, affords some charming scenery, contains the two islands of Basmina and Martana, which were anciently believed to be floating; and gives rise to the river Marta, which flows to the Mediterranean.

BOLSHEREZK, a small tn. and port, Kamtschatka, S.W. coast, about 180 m. N.W. Cape Lopatka lat. 53° 50' N. lon. 156° 50' E. (R.) The houses are built of wood, and thatched.

BOLSOVER, a tn. or vil. and par. England, co. Derby. The town, about 22 m. N.N.E. Derby, stands upon a high

table-land overlooking the vale of Bowdoin, and has tolerably straight, and pretty well kept streets. The houses are irregularly built, and generally of a mean appearance. The church an ancient building, is in the early English style, and contains some curious specimens of ancient sculpture. There are also an Independent and Wesleyan chapel, and a national school. Bolswere was at one time celebrated for the manufacture of bookbinder, but now it has no manufactures of any kind. Area of par 6900 ac. Pop. (1841) 1512. —(Local Correspondent)

BOLSWARD a town, Holland, prov. Friesland, 15 m S.W. Leeuwarden at the junction of several canals. It is bordered N.E. by rich corn and pasture lands, and on the W and S. by several lakes thus fringed with fish. It is circular surrounded by a high earthen rampart, now a public walk planted with trees and is everywhere intersected with deep canals, crossed by numerous stone and wooden bridges. The streets are wide and airy the houses and gardens remarkably neat and clean. The parish church is said to be the largest and finest in Friesland, and has an elaborately carved pulpit, representing the four seasons, and supported by two eagles. There are two Reformed churches, two R. Catholic, a Baptist church, and a synagogue. A Latin, a Dutch and French, Dutch and English schools. Bolsward has highly ornamented town-hall, a court house, a wall-enclosed porchouse for Reformed, R. Catholics, and Baptists, a porchouse for the Reformed alone, and an hospital called the Provener's House in which frugal patients by yearly payments beforehand may purchase a comfortable retreat for their old age. The trade consists chiefly in cattle cheese, and butter above half a million lbs. of cheese, and nearly as much butter are yearly brought to market. Many of the inhabitants make their living by spinning what under the name of Friesland worsted, is sent largely to other provinces. There are also two woollen and one linen manufactory shipbuilding yards tile and brick works, potteries, and tanworks Pop. 3650

BOLT HEAD a cape, England, co. Devon, the west S. point of that county lat. 50° 13' N. lon. 3° 49' W.

BOLTAÑA, a tn. Spain, Aragon, prov. of and 80 m. N.E. Huesca, 1 bank, Ar. It has pretty good though steep streets, one principal and several smaller squares, a collegiate church chapel two convents, a public prison, and other houses. Manufactures—linen, woollen and silken fabrics, and leather shoes. Trade—cattle, oxen, swine, and apparel, manufactured goods and raw silk. Pop. 2860

BOLTON or **BOLTON MOORS**, a large manufacturing tn. bor. and par. England co. Lancashire. The town has 10 m N.W. Manchester and consists of two divisions, called respectively Great Bolton and Little Bolton. It contains a great number of narrow and irregular lanes but by far the larger portion of it is modern, the public improvements within the last 30 years, having been very extensive. The principal streets unite at a spacious market-place and are crooked and irregular ill paved and worse drained. The houses are chiefly of brick badly built and of every form and dimension, and destitute, in most cases, of all comfort and convenience. The town is lighted with gas and, since 1824, has been plentifully supplied with water. The public edifices comprise a town-hall, exchange buildings, erected in 1825 in which year a mechanics institute was established, a theatre, the old cloth hall, the Bolton dispensary and infirmary, a spacious temperance hall, in Little Bolton, used for lectures public meetings, concerts, &c. In 1845, splendid baths with private rooms for concerts, &c., were erected. A handsome building has recently been finished for the savings bank. Great Bolton has also several new-rooms and public libraries. The parish church of St. Peter in Great Bolton is a spacious and very ancient structure with a beautiful stained-glass window. In 1845 an elegant new church, in the later style of English architecture with a tower was erected and since then, Emmanuel Church and Christ Church have been built, all in Great Bolton. In Little Bolton there are three Established churches. The Wesleyans have three large chapels in the borough, one of which is also used as a Sunday school. The Wesleyans are also erecting (1850) a spacious new chapel in stone, in the perpendicular Gothic style. The R. Catholics have two chapels and the Independents three. A Scottish church, in the early English style, was erected in 1845. There are many other places of worship, for Baptists several denominations of Methodists, Unitarians, and Swedenborgians.

The local charities are numerous and well conducted. The free grammar-school, containing 60 boys, was founded and endowed in 1641. A charity school containing 90 pupils, was founded and endowed in 1693 and another the Church-bridge charity school, was founded in 1714. There are, besides, in the parish, numerous public schools, connected on the systems of the National and British and Foreign School Societies. Some of these are in addition that are highly creditable to the friends of education, and ornamental to the town. There are Sunday-schools in connection with almost every place of worship in the parish, embracing in their operations, nearly one-fifth of the population, and frequently retaining the scholars until they become adults. The one in connection with the parish church numbers more than 1500 scholars, and is conducted in a building of freestone, in the later English style, erected in 1819. Within the last 70 years the town has greatly increased, and attained to a high degree of commercial prosperity. In 1537 emigrant Flemings introduced the manufacture of woollen cloth into Bolton and laid the foundation of its future importance. So early as the reign of Henry VIII. the town and its vicinity were celebrated for producing what *Leland* calls cottons, which however were not the vegetable cotton now having been introduced until the reign of James I. After the revocation of the Edict of Nantes, in 1685 many of the French refugees took up their abode in the town. Prior to the introduction of the cotton trade, some weavers from the palatine of the Rhine had introduced the manufacture of a mixed fabric, partly of linen yarn chiefly imported from Germany and partly of cotton. The chief articles were fustian jeans, and thickened velvets entirely of cotton, were first made here in 1756 and mulins, cotton quiltings, and dimities in 1763. Many of the subsequent improvements in the cotton manufacture originated in Bolton, and to these it mainly owes its present flourishing condition. Between 1767 and 1776 Sir Richard Arkwright, originally a barber and resident here, brought the spinning jenny and the water-frame machines to perfection and Samuel Crompton, a native of the parish who resided in the neighbourhood, invented a machine called the mule, combining the properties of both. The factories of Bolton commenced long on a small scale, in consequence of the scarcity of water till the employment of steam as a motive power and the adoption of power looms enabled the proprietors both to enlarge their works, and greatly to improve and extend the trade. In 1847 Bolton had 61 cotton mills using annually about 6000 tons raw cotton and other four large factories are just now (1850) being built. The articles chiefly made are plain and fancy muslins superfine printing calicoes, quiltings and counterpanes dimities, jeans cotton shawls and the generally of power-loom production. The power of the steam engines used, exceeds that of 2200 horses. A large proportion of the cotton fabrics manufactured here are bought up by the Manchester manufacturers; and the principal Bolton manufacturers have warehouses in Manchester where they generally attend every Tuesday for the sale of their goods. Bleaching is also carried on to a great extent, there being 24 bleaching grounds some of them very large. More than 10 000 000 pieces of cloth are annually bleached in the parish. In each of the three most extensive establishments, from 180 000 to 180 000 pieces are, on an average bleached every month. There are 23 iron foundries and machine-works, some of them on a very extensive scale. They can consume together about 35 000 tons of coal and coke, and use nearly 20 000 tons of metal. Besides these, there are several paper-mills, saw mills, and chemical works. The whole amount of horse power employed in the different works of Bolton in 1846, was 3810. The abundant and cheap supply of coal from the neighbouring collieries, and the advantages of an extensive inland canal navigation together with the introduction of railways, have added materially to the prosperity of the place. A canal connects Bolton and Manchester and has a branch to Bury. The Bolton and Leigh Railway a branch of the Liverpool and Manchester line, was completed in June 1831. The Bolton and Radford Railway which, running almost parallel with the Bury and Bolton Canal, establishes a direct line of communication with Manchester was opened in 1838; a railway to Exton, a few miles S. of Exton, in 1843; and a railway to Darwen and Blackburn, in 1847. The market-days are Monday and

Thursday the former for general provisions, being the principal. There is likewise a large market on Saturday for timber and meat and for store cattle every alternate Monday between January 5 and May 12. Fairs for horned cattle, horses, and sheep, livestock, and toys are held on April 28, July 30 and 31, and October 13 and 14.

The name of Bolton-in-moors or Bolton-on-the-moors, is derived from its situation—in the midst of moors a portion of which has been brought under cultivation having been enclosed under an Act passed in 1794. The town received a charter of incorporation in 1838 and is now governed by a mayor 12 aldermen a recorder and 86 councillors. Petty sessions for the borough are held every Monday and Thursday. By the Reform Act, Bolton returns two members to the House of Commons. The boundaries of the parliamentary borough and the municipal borough are the same. Number of electors (1849) 1537. Bolton is the centre of a poor-law union, comprising 26 other townships and chapels. The parish of Bolton includes, altogether 12 populous townships, and 212 chapels area, 30,062 ac. pop. (1831) 63,084 in 1841 8,906 Pop (1841) Great Bolton, 33,010 Little Bolton 16,105 together 50,165. It is now 1851 87,280 —(Barnes *Lancashire Parliamentary Papers Local Tax respondents*.)

BOLY or GALVULY par Irell Tipperary 1268 ac. P 246. BOMBA A vil Italy Capua prov Chieti 18 m. W B Yanto on the side of Mount Pallano watered by the Sangro. The parish church is one of the most remarkable and most richly ornamented churches in the province. On the mountain above the town stands, as some gigantic ruins, whose history is unknown.

BOMBAY (PRESIDENCY) one of the three presidencies into which British India is divided, situated between lat. 14° and 29° N and lon 68° and 77° E. It comprehends the districts Ahmednuggur and Poona in prov Astrungabad N and S. Cochin, and Darrar in prov Bompoor Ahmeda had Beroch, Kaira, and Sarat, in prov Cooperat the island of Bombay Candlesh and Scindia, recently added. The surface is irregular presenting the diversity of low barren hills mountainous tracts, valleys, and elevated table-lands. The mountains comprise a large portion of the W. Ghats range, which line the whole W coast of peninsular Hindoostan, the Satpoutra chain, the W portion of the Vindhya chain, and further N the Aravalli chain. Z of the latter lies the tableland of Malwa, having an average height of 1600 ft above sea level, and of which two-thirds are in the presidency of Bombay. The principal rivers are the Nerbudda and Tapty both falling into the Gulf of Cambay but there are several other considerable streams that have their sources only in the presidency such as the Godavary and Krishna, which fall into the Bay of Bengal. The valleys are remarkably fertile, and many parts of the presidency are in a high state of cultivation, although there is still much waste land, particularly in Surat. The roads, also, are so exceedingly bad, as not only to affect the development of its resources, and, conjoined with the absence of navigable rivers, to limit greatly its internal traffic. So detrimental to the interests of the country have these evils been found, particularly the former, that in 1850, the merchants and bankers of the city of Bombay presented a memorial to the Governor-general of India requesting so materially inadequate are the means of communication with the interior that many valuable articles of produce are, for want of carriage and a market, often left to perish on the fields, while the cost of those that do find their way to Bombay is enormously enhanced, to the extent sometimes of 300 per cent. considerable quantities never reach their destination at all, and the quality of the remainder is almost universally deteriorated. It appears further that in consequence of this wretched state of the roads in the presidency of the vast numbers of sheep fed in Candlesh and the Deccan, which are sent down to the Bombay market, not one-third reach the city alive, and those greatly reduced in flesh. A railway however has recently been commenced at Bombay which will be the precursor of a better state of things, as regards internal communication.

Climate and Vegetable Productions.—The climate of the presidency is various in some parts, such as Bombay and its immediate vicinity it is exceedingly unhealthy liver complaint being more frequent and fatal there than in any other part of India. In other places, again such as Poona, which is only about 90 m. distant from the city of Bombay and lies in an elevated situation the climate is so favourable to Europeans that the rate of mortality amongst the British troops stationed there, has not much exceeded that of the Foot Guards in England. These extraordinary differences in the salubrity of adjoining districts, are now carefully attended to by the Bombay Government in the distribution of the European troops, by which means a great saving of life has been effected.

The principal vegetable productions are cotton rice, wheat, and coconuts. In the N. parts, a great abundance of variety of fruit is produced, and in S. Cochin, and the central districts, large quantities of rice are grown. Cotton also is cultivated to a great extent, particularly in Baroch, and is the best raised in India. It is brought from Baroch to Bombay in half-screwed bales. Sugar and indigo are grown in Candlesh, the latter of superior quality but considered rather light in the colour.

Animals.—These are such as are met with generally throughout India—elephants, tigers, panthers, leopards hyenas, but falcons wild boars, deer antelopes and jackals. Snakes abound, and many of them of the most venomous description including the whip snake and the cobra de capello. Birds are numerous and of great variety.

Government, &c.—The government of the presidency is vested in a governor subject to the authority of the Governor-general of India but independent of all other local control. He is assisted by three councillors, with several secretaries, and various officers of state. The law department is presided over by a chief and one puisne judge. Civil justice is administered almost exclusively by the judges and is remarkable for efficiency. In 1841 the number of cases decided by them was 74,067 and of these 3571 were appealed, or 4.82 per cent. and of this number 946 were reversed, or 1.26 per cent. that is, not more than 1.25 cases were reversed in 100 tried, affording strong testimony to the carefulness of the decisions by the native judges. There are at Bombay as at Calcutta, courts of requests for the recovery of small debts the records of which are Europeans. The public revenue for 1846 was £2,647,171. Expenditure, £2,741,281. The expense of maintaining the military force in the presidency in the same year amounted to £1,704,852.

Church Establishment and Education.—Bombay is the see of a bishop, subordinate to the Bishop of Calcutta and has also a recognized branch of the Church of Scotland which annually receives a grant of £1964 and a grant of £2826 is also made to the K. Catholics, who are more numerous in this, than in either of the other presidencies. The most numerous body of Christians here are Nestorians. The Government educational institutions in Bombay are under the management of a board of education. This board consists of a president, five members, and a secretary. Three of the members are Europeans, one a Parsee, one a Hindoo and another a Mahometan. A maximum sum of £12,500 is fixed for educational purposes, under the Bombay presidency and the board control a sum of £2000 constituting the Sanscrit College Fund. The provincial English schools are at Poona, Trichin, and Surat at which the scholars, in 1842 amounted to 174. Of the district vernacular schools in 1842 there were 120 with an attendance of 7760 scholars. There are besides, a number of village schools.

Manufactures Trade, &c.—The principal manufactures are of sugar indigo, and silk a description of the latter ornamented with gold and silver, as worn at Poona; but, with exception of these, there are no other manufactures worth mentioning. The internal trade of the presidency for the

regions mentioned at the beginning of this article, namely west of route and of navigable rivers, is much more limited than it would otherwise be. For an account of the foreign trade, see BOMBAY (CITY OF). The population of this presidency including Poind, is estimated at about 8,500,000.

BOMBAY (Portuguese, *Bom-Bahia*—Good Harbour) a well-known city and seaport. W coast of the peninsula of Hindocstan, cap of the presidency of Bombay and situated on a narrow point of land at the S.E. extremity of the island of the same name; lat. $18^{\circ} 53' 42''$ N; lon. $72^{\circ} 45'$ E. (n.) 660 m. N W Madras, and 1050 m. S W Calcutta overland,

and somewhat more than double that distance by sea. The city is divided into two portions, one lying next to the sea, and surrounded by fortifications and situated about 1 m. N W the other called the Black, or Native town. The streets of the former are narrow without any foot pavement, and in many places choked up with dirt. The houses are three, and sometimes four stories high, and are provided with verandahs, which run one above the other and are supported by wooden pillars; they have also small low windows, adorned with neat trellis-work. In the lower part of the town are the bazars, which are narrow and dirty and are chiefly kept by Parsees, an industrious and angularly intelligent race, of Persian descent, to whom a large portion of the mercantile wealth of Bombay belongs and who assimilate themselves to Europeans in habits, manners, and mode of living more than any other race in the East. Between the fort and the nearest part of the native town without is what is called the esplanade, used as parade and airing ground, on which no permanent building is allowed to be erected. The European population is accommodated, partly within the fort, in the largest and best-situated houses but the greater proportion in bungalows, or villas, in various parts of the island these are generally large and handsome, with extensive areas, called compounds, in front, and built with careful reference to the climate, verandahs encircling the rooms of the house. Bombay Castle, the treasury the Government-offices and almost all the merchants' warehouses and offices, are situated within the

fort. The principal building is the townhouse within the fort, and occupying the E side of the square called the Bombay Green; it contains many of the Government-offices a library rich in collections, gathered from all parts of Asia, and a spacious saloon, adorned with marble statues of Montezuma, Epistemon and St John Malcolm. In the centre of the Green itself is a statue of Lord Wellesley; and another to the memory of Lord Cornwallis, stands outside the fort, at what is called the church gate. There are now several Protestant churches in Bombay—four of the Church of England, one being a cathedral a handsome building one Established Church of Scotland, and one Free Church of Scotland a graceful structure, with an elegant spire, lately erected and one American Presbyterian. There are also a great many Portuguese and Armenian churches in the city several synagogues, for both white and black Jews and a great number of Mahometan mosques and Hindu temples. Bombay is the seat of a Protestant bishop, of English and American missions, and of missions from the Established and Free Church of Scotland. There is also a large R. Catholic population in the city whose religious establishments enjoy the support of the East India Company. A great portion of the Black, or Native town is built on a low tract of land which in former times, suffered much from inundations, and was during seven or eight months in the year an unwholesome swamp. Much has been done of late to remedy this evil by draining, and the formation of roads and streets, and with some success although the streets which are here also most inconveniently narrow still continue to abound in nuisances while, during the rainy season, much sickness and suffering prevail in consequence of the excessive damp. The houses in Black town are small built of brick, and two stories in height. The lower stories are kept open as bazars, in which the dealers sit cross-legged surrounded by baskets containing piles of merchandise. In the swamps, the scene here is very animated the streets and bazars are lighted up with numerous small lamps, and crowds of natives throng the stalls, examining the goods and making purchases.

The markets of Bombay though not equal to those of Calcutta, are well supplied with provisions, mutton, kid, poultry and fish in abundance, and generally good quality the oranges are particularly excellent, and as such are celebrated all over the coast. The wages of servants here are much higher than in Bengal but food is dearer which is probably the cause yet the salaries of the public servants are smaller here than in any of the other two presidencies.

The harbour of Bombay is one of the largest and safest in India while its scenery and that of the neighbouring coast, presents a rare combination of grandeur and beauty it is 12 or 14 m. long with a general width of from 4 to 6 m. It is situated between the islands of Colaba, Bombay and Salsette on the one hand and the mainland and islands of Caranjah and Elephanta on the other and is defended by formidable batteries particularly strong towards the sea. The usual anchorage is on the W side of the harbour off the town of Bombay. The general depths in approaching the former are from 14 to 18 fathoms. The docks, which are the property of the East India Company are under the management of Parsees, by whom the shipbuilding is conducted. Two ships of the line can be completely built and equipped in these docks every 18 months, and the ships and boats are calculated for vessels of any size. The ships constructed here include merchant vessels of large dimensions, occasionally frigates, and even ships of the line the timber being amply supplied from the neighbouring districts of Malabar and Cochin.

The trade of Bombay is of great extent and importance. The following table shows the value of exports, imports and exports in various years, from 1847-8 to 1855-6.

	Exports	Imports
184-5	2,238,796	2,240,181
1851-2	2,238,796	2,240,181
1852-3	2,238,796	2,240,181
1853-4	2,238,796	2,240,181
1854-5	2,238,796	2,240,181
1855-6	2,238,796	2,240,181

Great Britain furnishes a large amount of the imports, and takes a large quantity of the exports than any other country excepting China. In 1853-4, the cotton wool exported to the former amounted to 81,771,000, and the opium chiefly to the latter to 23,750,000. After these, but to a much smaller extent stands the trade with the Persian and the Arabian Gulf the coast of Africa the Portuguese posses-

ships in the East. France, including the ships of France and Bourbon. America and Australia. In 1853-4, the square-rigged vessels that arrived had an aggregate burden of about 200,000 tons, and the native craft about double as much. The total tonnage outward about equally divided between square-rigged and native vessels, was 257,296. About 5000 tons of shipping arrived from America, and about 4000 departed for it; above 30,000 tons left for China; ports chiefly Hong-Kong and 29,000 arrived from it, about one-half by the P&O and Oriental Steam Company's vessels. For New S. Wales 46,000 tons were despatched, and from it 5000 tons arrived.

Bombay is the chief Indian port connected with the establishment of steam navigation between India and this country. In 1827 three steam vessels sailed between Bombay and Buss and in 1843 there were eight. There is now a regular trans mission of mails by steam, every fortnight, by way of the Mediterranean and the Red Sea. Steamers ply between Bombay and Freetown de Galle in Ceylon where they meet other steamers which proceed to Madras and Calcutta, and also to Canton in China. A railway between Bombay and Tannah, a town and fortress on the island of Salsette, about 25 to N N E. from the former was commenced on October 31 1850 and is the first railway begun in India.—The island of Bombay on which the city is situated is one of a cluster of islands, and the largest of all excepting Salsette, with which it has long been connected towards the N E. by a wooden and arched stone bridge another connecting mound was formed towards the N W a few years ago. It is about 8 m long from N to S. and about 3 m broad formed by two ranges of rock of unequal length, running parallel to each other on opposite sides of the island these ranges are united at the extremities by hills of sandstone, which are only a few feet above the level of the sea. The interior of the island was formerly liable to be overflowed by the sea, which is now prevented by substantial works and embankments, but the lower parts are still covered with water during the rainy season. On the S W, the island terminates in a rocky peninsula 60 ft. high, called Malabar Point stretching far into the sea, and forming the W side of Back Bay by which the S end of the island is hollowed out. It is adorned with a pleasing variety of country seats, interspersed with groves of coco-nut trees, and traversed in all directions by good roads. Magnificent views are obtained from this point. The S. E. extremity of the island again, terminates in a smaller but much longer projection, formed in part, by Old Women and Colaba islands connected together and to Bombay by causeways. This projection, which, by the junction of the islands, appears an entire peninsula, forms the E. side of Back Bay. Here also, are a number of spacious houses, most of which are surrounded by small gardens and overshadowed by mangoes, palms, and acacias. At the extremity of this point, which forms the S. entrance point of Bombay harbour is a light house. The jurisdiction of the supreme court is confined to the island of Bombay and to European in the rest of the presidency the civil and criminal laws are those of England. Bombay is, next to Madras, the eldest of our possessions in the East. At present it rules the whole N W coast of India. The mean temperature of Bombay is higher than that of Calcutta, but lower than that of Madras, which is 84 Feh. January 87 and Calcutta 79°.

The population of Bombay has increased tenfold within a century. In 1718 it was estimated at 16,000. In 1813, at 161,550; it is now according to the census of 1842, upwards of 500,000, composed of British, Portuguese, and Armenians, Jews, Mahomedans, Hindoos, and Parsees.—(Hamilton's East India Gen. Von Otter's Travels in India, Forster's Progress of the Nation, Maculloch's Account of the British Empire, British Colonial Library, Historical and Descriptive Account of British India, Hurlingham's East India Directory, The Oriental Interpreter, Present Information, &c.)

BOM FIM, the name of several towns and villa. Brazil—1 a small in prov. of and 26 m. S. E. Goyas. Once more

populous than at present the falling off being the result of the exhaustion of the gold washings in the vicinity.—3 A. a. prov. Minas Geraes, 120 m. W Villa Rica; having a church, and a pop. for town and district, of 3000.—3, A considerable vil prov. Minas Geraes, 75 m. N. Talisco or Cidade Diamantina. Pop. vil and dist., 2000.—4, A suburb of the city of Bahia.—There are several other unimportant places of this name.

BOM JARDIM [good garden] a m. Brazil, prov. Ceara, 80 m. S. Crato in a fertile valley of the serra Caldeira-Novas. The town is small but the district extensive; yielding mandiocas, sugar &c. Pop. 6000.

BOM JESUS [good Jesus] the name of numerous places in Brazil all unimportant. Among them are a vil. prov. Pernambuco three vila prov. Bahia; a par. prov. Matto Grosso and an isl. prov. Rio de Janeiro.

BOMMEL, or De BOMMEL, a vil. Holland prov. Zealand, 14 m. E. by S. Bruden, on the Haringvliet. It has a handsome octagonal church, with painted glass windows, and a copper-covered steeple.

BOMMEL (ZALT) See ZALT-BOMMEL.

BOMMELERVAARD an enclosed dist. or hl. Holland, prov. Gelderland. It lies immediately above the meeting of the Waal and the Maas, and is 16 m. long and 6 m. across at its greatest breadth. Besides the town Zalt Bommel it contains 17 villages. The soil is a rich clay and particularly suited for flax and hops. The pop. of which about two-thirds are Protestant and one-third R. Catholics, is chiefly agricultural and amounts to about 15,000.

BOMST a m. and curio, Prussia, prov. and gov. of Posen. The town lies on the Obra, 10 m. N E. Zollikhan and has three churches, a good deal of hop and garden ground, and some vineyards. It has also some manufactures of coarse cloth, and a considerable trade in shoes. Inhabitants, Germans, Poles, and Jews, 2250.—The manors are, 308 ges. sq. m. is flat and the, though light, tolerably fertile. A considerable part of it is in pasture, and feeds great numbers of cattle. Pop. 44,272.

BONA (CAIR) or RAS IDRA, a cape, Tunis, on the Mediterranean, lat. 37° 4' 48" N. lon. 11° 3' 30" E. (s.)

BONA [anc. Hippo Regius] Arabic, Baid-el-Anab—the town of [jubah] a maritime city Algeria, prov. of, and 85 m. N. E. Constantine, W side of the Gulf of Bona Ist. (Leon point) 36° 54' 30" N. lon. 7° 40' 30" E. (u.) It is built at the foot of a hill which rises to the N and N W of the city and is surrounded by a wall 80 ft. in height, and nearly 2 m. in circumference, with four gates and is further defended by a strong fort or citadel on the top of the hill and the fortifications have been greatly strengthened since the place came into the hands of the French. It is the seat of French judicial courts. The streets are narrow and crooked, but many

BONA, from Port Chaguan. From Strasbourg Algeria.

of the houses substantial and well built. There is a good market, with shops, reading-rooms, coffee-houses, and a theatre. The harbour is now nearly choked up with mud but there are good landing-places in the vicinity and the trade of the town is still considerable. Its chief manufactures are of burracoons, a piece of Arab dress, and other garments; tapestry and

addles. Its exports are corn, wool, ox hides, wax, and coral, being the seat of a fishery of the last. In 1843 the exports amounted to 279,526 in 1845, to 256,364 the imports (1843) 247 681 (1845) 2327 889. The citadel and town were taken, in 1835 by the French, by whom it has been greatly improved. About 1 m. S. the town are the remains of Hippo Regius, once a residence of the Numidian kings, and the episcopal seat of St. Augustine. Pop. (1858), 6510 (1847), 5792.

BONABONA. See BONAONA.

BONAIRE also BUNOS-AYRES, or BUNOS AYRE, an Isl W Indies, belonging to the Dutch, off coast of Venezuela, 27 m. N. E. Curaçao, by which it is used as a place of transshipment lat. (Dutchbush, S. point) 12° 2' N lon. 68° 17' W (s). It is 20 m long by 5 to 10 broad of a very irregular shape high and hilly chiefly composed of calcareous deposits, but, in some places, of pure quartz. It is thickly wooded the soil is hard and dry suffering from a deficiency of rain yet not without excellent pasture. On the S. coast, the land is covered with low knolls clothed with verdant creepers and cactuses which yield considerable quantities of cochineal. The chief product is Turkish wheat, constituting the general food of the people, the hill sides are covered with Brazil and yellow wood, but there are no fruit-bearing trees. The island produces sheep and goats as also asses, which run wild, and are caught, for sale, by the Government, to American and other foreigners. The flamingo frequents the S. E. peninsular. Turtles are caught on the coast. Large quantities of salt are produced and lime is procured by burning the corals with brushwood, but the quality is bad, in consequence of its being slaked with sea-water for want of fresh. The inhabitants, though not rich are frank and hospitable. The roadstead is on the S W side in a deep exposed bay where there is a fort, but vessels can come close up to this shore. Pop. (1851) 2254.

BONACCA or QUARAZA an Isl Caribbean Sea, Honduras Bay 80 m N Cape Castille lat. 16° 28' N lon. 85° 55' W (s). It is about 9 m long and from 1 to 3 broad covered with wood, and, towards the centre attains a height of 1200 ft.

BONATI a tn Naples, prov Principato Citra 21 m S. La Sala, near the Gulf of Policastro. Pop. 8300

BONAVISTA, Cape de Verde Islands. See BOAVISTA.

BONAVISTA a tn A Bay E coast, Newfoundland, N America, between Cape Freels on the N and Cape Bonavista on the S. Its entrance is 35 m wide but the bay is crowded with islands, and the whole coast is extremely rocky and dangerous.—S A cape, forming the S. E. limit of the above lat. 48° 42' N lon 53° 8' W (s). It is a bluff bold headland having a lighthouse, with a revolving light at two minute intervals, alternately red and white, 160 ft. above the level of the sea.—S A tn N America, Newfoundland 34 m S. E. the cape and on the E coast of bay of same name. It is a large and straggling place, but is surrounded by a good deal of cultivated land, and has upon the whole, a respectable appearance. The want of a good harbour or even good shelter for boats, prevents its advancement.

BONBOY (LARGE) See BATAVIA.

BONBY par Eng Lincoln 2410 sa. Pop 454.

BONCHURCH a vil, and par England Isle of Wight the former pleasantly situated on an elevation embowered among trees and commanding a delightful view of the sea, about 1 m. E by W Ventnor. It is much resorted to by invalids on account of its genial climate, and is rapidly rising into importance. Area of par 618 sa. Pop 523

BONDENO a tn Italy prov and 10 m W N W Ferrara, at the confluence of the Po and Po d'Argenta. One of the dikes that lead across the Apennines, commences at this place. Pop. 8000

BONJOL, a strong native fortress, Isl Sumatra, prov Padang, famed as the first scene of the immolation of the Dutch, called Padris in Sumatra, in 1833 and that of their last stand in 1827 when, after much fighting it fell into the hands of the Dutch.

BONDOUT a little known country Sasegumbe, cap. Bombani lat. 14° 21' N lon 12° 30' 37' W; bounded N by Galam W by Youta Danga, E by the Faldan (a tributary of the Bengul which separates it from Bambock) and S. by the Tunda and Woll countries, close to

the Gambia, extent supposed to be about 97 m. N to S. and 80 m. E. to W. It is mostly a flat country with some elevations of no great height, in its N and central parts and watered in its E side by numerous small streams that fall into the Faldan. It is very fertile and well cultivated producing cotton, millet, maize, indigo, plantain, tobacco &c. Vegetation is exuberant, and there are extensive forests including the baobab, acacia, &c. Iron, abundant, but not worked, and also some gold is obtained. The people have a tolerable stock of horses, cattle, and sheep. Wild beasts are numerous. The Faldan swarms with crocodiles. The natives are spirited, brave, and (for Africans) industrious weaving of cotton cloth is carried on to some extent, chiefly of long and narrow strips of cotton called *pagas* which besides being made up into garments, serve as a kind of currency. The Bondon people are chiefly Foulahs, but include several tribes many of them can read and write Arabic, there being regular schools for teaching that language and all or nearly all, are professed Mahomedans but the bulk of the people trust in a kind of sorcery, and are firm believers in the supernatural efficacy of their *gris-gris* or charms some of which are merely written words, taken from the Koran. Nineteen twentieths of the men of Bondon are in a servile condition and not a few are absolute slaves. Among their superiors, the chief are the *sufo* or relatives of the emory or sovereign next in order are the *sufo* or official functionaries then come the *tanaris*, or judges after them the *talibis* or learned men. All these come under the general name of marabouts and the sovereign himself is a head marabout, or pontiff. He is in all respects, an absolute prince and the office is hereditary usually passing from brother to brother. His influence is very extensive and he has a considerable revenue, derived from the produce of land, the sale of slaves tribute from neighbouring countries tolls on traffic, and presents from French and English traders. Pop not certainly known, but estimated by some at 1,600,000.—(Raffines Voyage dans l'Afrique Occidentale in 1843-44)

BONGA a tn E. Africa, cap of Kafia or Kafia lat. 7° 10' N lon 87° 30' 25' E represented to be in a richly wooded and fertile country in some respects resembling Brazil

BONGAY RAJAST or RAJAST, an Isl Indian Archipelago, E coast, Celebes, between Faling and Kola or Ryda lat. (S. point) 2° 10' S lon. 123° 55' E (s). It gives name to a group of about a hundred islets, much resorted to for slaves and wood

BONGO a small Isl Philippines, Iloilo Bay Isl Mindanao, opposite the river and town of that name lat. 7° 16' N lon. 124° 16' E. Nearly opposite, also, is a well-known watering-place, called Pallock Bay or Cove, where good anchorage is to be had but the treacherous disposition of the inhabitants render it dangerous to land unless every precaution is used.

BONGOR, a tn on a bay of same name, W coast, Isl Sumatra a few m. S. the town of Idang. It consists of 80 to 100 bamboo houses, inhabited chiefly by fishermen. The large quantities they daily take, are immediately bought up for the most part, by inland dealers, who dry the fish for future sale. The bay is small, and expanding reefs and shoals make it dangerous for large vessels

BONHILL a vil, and par Scotland, co. Dumbarton. The village is beautifully situated in the valley of the river about 4 m from the junction with the Clyde 3 m. N. Dumbarton. It has one principal street, and two smaller houses generally well built of a reddish-coloured stone, obtained in the neighbourhood, and roofed with slate well supplied with water from the Leven, and the houses, but not the streets, lighted with gas. There are three churches in the village—the parish church a neat and handsome structure the Free church, a U Presbyterian church, and four schools, one of which is liberally endowed by the proprietors of one of the printworks in the vicinity not only for their own work-people, but for the public generally. There are three public libraries, one of which is in connection with a mechanics institute. The inhabitants are nearly all employed in the extensive printworks in the vicinity in one of which 17,000,000 yards of cambric gamme, de laines, &c. are printed and finished annually.—The parish is about 4½ m. in length, and 4 in breadth. Pop of par 7843 of vil 2827.—(Local Correspondent.)

BONI or **BONY** [called by the inhabitants *Bono*] a territory S.W. peninsula of Id Celebes, W side gulf of same name N of Bonobokanah, about 80 m in length, and stretching from a half to two-thirds across the peninsula. The N part is beautiful and fertile, producing rice, sugar, and coconuts. The inhabitants excel in the working of gold, iron and cotton, in which they trade with the whole Archipelago. The ancient institutions of Bony, whose first prince is believed by the people to have come from heaven, are remarkable for their near approach to constitutional monarchy and its annals from the commencement of authentic history are highly interesting. Its first king gave the country settled laws, and appointed seven elective lords to assist the Crown in administering the government. Women, as well as men, might form part of this chosen council, which had to be consulted on all matters of public importance, and especially about the settlement of the crown and the making of peace and war. When a crime was committed the culprit was denounced to the King, who called upon the grandees to try the accused, and, when judgment was pronounced if the sentence was capital, the Prince gave a wink, and instantly the criminal was dragged out and stabbed to death. If there were aggravating circumstances, the King commanded him to be bound to a tree, and his body to be pricked all over with the points of *krises*, and then be smeared with *asirup*, on which the ants immediately attacked him, and he expired under the direst tortures. The Dutch East India Company having repeatedly assailed the Bony people against their enemies, is said to have made them over-powerful and haughty. When the British took Celebes in 1811, they offended the Bonese by prohibiting the slave trade, and on being refused indemnity for injuries done to British commerce were attacked by General Nightingale, who took and plundered their capital. This only produced exasperation and was followed by some British ships being attacked and their crews sold into slavery. Hence another expedition against them in 1814, when the King was slain. The Dutch returned to a milder policy and succeeded in re-establishing friendly relations in 1836, though not until after considerable bloodshed caused by the obstinacy of the Bonese in claiming a supremacy over all other principalities in Celebes. Pop. 200,000.—The *RAY* or *GULF* is formed between the S.E. and S.W. peninsulas of Celebes, and is about 180 ge in long by about 120 broad at the mouth narrowing to 4 at the upper end. It has numerous shoals and its navigation is intricate.

BONIFACCIO [Latin *Bonifacium*] a seaport in Corsica, 45 m. S.E.E. Ajaccio on the strait of Bonifaccio which separates Corsica from Sardinia lat. 41 23 48" N lon. 9° 15' E (u). It stands on a peninsula about 180 ft above the sea is well built and tolerably well fortified, and contains several handsome churches. The port is good, but difficult of access on account of its narrow entrance. The town has a court of commerce, and exports wine and oil. The cord service is carried on here. In the neighbourhood are curious marine grottoes and granite quarries, in which may still be seen huge blocks and pillars left half finished by the Bonese. Pop. 8120.—The *STRAIT* of Bonifaccio is 7 m broad and contains several small islands on one of which is an ancient pillar 19 ft high.

BONIFATTI a town, Italy, Naples, prov. Caserta S. m. S.E. Belvedere. It has several churches and a convent. Silk is produced to a large extent in the district. Pop. 2670.

BONIN or **ABORIGENES ISLANDS**, several groups of islands, N Pacific Ocean, extending from lat. 27 44 30" to 26° 30' N. The N.W. Island of the most N cluster called Parry Group is in lat. 27 45° 30' N lon. 142° 8' E. the cluster consists of small isles, pointed rocks and very irregular bottom. The largest of the chain is Peel Island on the W side of which is a good harbour called Port Lloyd, in lat. 27 5° 30' N lon. 142 11 30° E. nearly surrounded by hills, crowned with palm-trees. Almost every valley has a stream of water. Green turtles abound in the sandy bays. Sharks are numerous, and fish of several kinds plentiful.

BONMAHO, or **BUNMAH** a maritime vil. Ireland, co. of, and 14 m N.W. Waterford on St. George's Channel, at the mouth of the Mahon, from which it takes its name. It has a fine beach, and numerous respectable lodging-houses, and is a place of great resort during the summer months for sea-bathing.

Near it are lead and copper mines, which have been occasionally worked to some extent. Pop. 1771.

BONN [Latin, *Bonna* or *Almona*] a town Prussia, prov. Rhine pleasantly situated on a gentle declivity 1. bank, Rhine about 16 m. S.E. Cologne having a very pleasing and cheerful appearance; encircled with walls, and surrounded with beautiful gardens. The streets are narrow and ill-lighted, and the air often black and cold, yet from its delightful situation it is one of the most desirable places of residence on the Rhine. It comprises about 1500 houses 26 public buildings, eight churches and chapels with a number of mills and manufactories, the chief of which are of cottons, silks, and sulphure acid. Bonn enjoys the reputation of a high antiquity but derives its greatest celebrity from its university which has had many distinguished men amongst its professors among others, Schlegel and Niebuhr the historians. The number of students attending it is generally between 600 and 800. In 1844 the number was 714, of whom 196 were students of theology (76 Protestant, and 120 R. Catholic) 232 of law 103 of medicine, and 190 of philosophy. The building of the university is an immense pile, and was formerly the residence of the electors of Cologne. It has a library of about 100 000 volumes. The principal square in the town is called Minister Square, a fine area planted with trees, and which derives its name from the Minister or church of St. Cassian, an ancient Gothic structure. The townhall is the headquarters of the modern public edifice. In the vicinity at Poppelsdorf, are an extensive botanic garden an agricultural school museum of natural history with 200 000 specimens of minerals, and 10 000 petrifications, besides a large collection of zoology and plants. Amongst the scientific associations of Bonn is an academy of naturalists, called the Leopold-Caroline Academy which has extensive collections. There are five elementary schools in the town, and a free school for the education of poor children. Beethoven the celebrated musician, was a native of Bonn having been born there on Dec. 17 1770. Franz Albert was a resident here. Bonn has ample means of conveyance by the railway from Cologne which was opened in 1844, and passes the town and the numerous steamboats which ply on the Rhine. Pop. 14,869.—The *CANAL* area, 80 geo sq. m. is level well wooded well watered and fertile, producing in abundance corn of all kinds, flax tobacco, and wine. Pop. (mostly R. Catholic) 50 000.

BONNETABLE a town France dep. Sarthe 12 m. S. Mamers consisting of two principal parallel streets joined by numerous smaller ones. The old Gothic castle is one of the best preserved monuments of the feudal times now to be found in the kingdom. In one of its halls are curious wooden sculptures with figures of the lords of Bonnetable. The manufactures consist of calicoes, bombazines and cotton handkerchiefs and the trade in grain grass-seeds, fruit, and cattle is considerable. Pop. 3247.

BONNEVAL, a town France, dep. Eure-et-Loire, 9 m. N.W. E. Chartres formerly fortified but nearly demolished by Henry V of England while besieging Orleans, and rebuilt by the successors of Charles VII. The parish church has a singular spire, of great height. There are here some spinning-mills, and extensive manufactures and fannels, blankets, calicoes, and printed goods are made. Trade—in agricultural produce. Pop. 1780.

BONNEVILLE [anc. *Berym* Austria], a town France Haute Sav. is cap. prov. Faucigny on the Arve is near the junction of the Rhone 16 m. E.E. Geneva is well built, and contains a college and handsome town-houses. The river is crossed by a good stone bridge and near it is a statue lately erected to King Carlo Felice and placed on a column 90 ft high. A fine hard pavement is extensively quarried in the neighbourhood. Pop. 1500.

BONNIEUX, a town France, dep. Vaucluse, 6 m. S.W. Apt, formerly surrounded by strong walls. About 2½ m. from it is a Roman bridge of three arches, in a state of perfect preservation; supposed to have been built by the Emperor Julian. Pop. 1554.

BONNINGTON par. Eng. Kent 1109 sq. Pop. 166. **BONNY**.—1 A river, W. Ashton, Upper Guinea, forming one of the mouths of the Niger and falling, with the New Calabar into the Mouth of Biafra, its E. point, according to Botelier being in lat. 4° 23' 45" N; lon. 1° 52' E. It can

be entered at any time of the tide by vessels drawing 16 ft. water. It *is* deep inside the bar and affords safe anchorage at all times of the year. Its banks are low and swampy. Large quantities of palm-oil are exported from this river and it has long been notorious for the extent to which the slave-trade has been carried on along its banks.—S. A. In, on a narrow and deep brook of the above river. Although the residences of the King it consists merely of a collection of huts, differing much in quality, size, and style of building, but strongly resembling English cottages in shape. They are composed chiefly of stakes, plastered with mud roofed with palm-leaves and all extremely dirty not excepting the King's dwelling. The inhabitants are reckless and superstitious; and great numbers of them die annually of dysentery and jungle fever occasioned by the malarial and unwholesome situation of the town.

BONO A, or **BONOA** an isl. Indian Archipelago Moluccas, 8 m. from the N.W. end of Isl. Ceram lat. (S.W.) point 8° 8' S.; lon. 127° 57' E. (N.). It is about 12 m. long and 10 m. broad, very hilly and so stony towards the W. that it is not all cultivated. It was once a noted haunt of piratical Malays, but the inhabitants now devote themselves to fishing and tillage. There was formerly a Dutch establishment on the island for exporting clove-trees.

BONOEVA a tn. in Sardinia, Algeria 17 m. N. E. Bone, on the declivity of a mountain. It has two monasteries, and a breeding stud of horses. Pop. 4274.

BONSALL, par. Eng. Dorset 2464 m. Pop. 1449.

BONTHAIN, or **BONTAIN** the W. part of the territory Bookkamba-and-Bonthain, with town of same name, in the N.W. peninsula of the isl. Celebes. The country is beautiful, abounding in rice, timber, and fruits, and swarming with wild beasts. It has been twice conquered by the Dutch and by the Bongsy contract was left in their possession. See **BOOKKAMBA** and **BONTHAIN**.—The town lies in a bay of same name, 85 m. S. E. Macassar lat. 8° 50' S. lon. 130° E. About 3 m. off there is good anchorage, in 7 or 8 fathoms, nearly bottom.

BONVILSTON par. S. Wales Glamorgan Pop. 294
BOVTHAD or **BOVTHAD** a market in Hungary circle beyond the Danube, co. Tolna 21 m. N. E. Fünfkirchen with a R. Catholic church a Reformed church an almshouse and a synagogue Pop. 6840

BOO or **Boo** a group of islets between Gilolo and Papua lat. 1° 12' S.; lon. 129° 20' E. (N.).

BOOAN or **BOGAN** a small isl. Asiatic Archipelago off the N.E. coast of Borneo lat. 6° 29' N. lon. 115° 10' E.

BOOHY ISLAND, a mere rock Torres Strait lat. 10° 36' S. lon. 141° 52' 50' E. but derives interest from containing a depot of provisions and water left by men-of-war and other vessels passing for the use of those who have been wrecked in the strait. It is one-fourth of a mile in diameter flat, and about 80 ft. high, the summit being bare porphyry rock. A valley intersects the N.W. side of the island in which grow a few creepers, some bracken and two or three trees of tolerable size, with a peculiar broad green leaf, which gives shelter to some reptiles and quails, in which latter the island abounds even more than in the bird which gives its name to the locality. Turtle were once found upon this isle, but none are now taken.—[Stokes a. Australia.]

BOODBOOM BOODBOOM, or BOODBOOM.—A seaport in Asiatic Turkey pass Anatolia, 95 m. S. Smyrna lat. 37° 12' N. lon. 27° 36' 18" E. beautifully situated on a rising ground at the head of a bay opposite the island of Cos. The houses are of stone, the streets narrow and dirty and the bazaar miserable. The harbour is small, but well sheltered with two or three fathoms water and convenient dockyards. On a projecting rock on the E. side of the harbour is an ancient fortress, built by the knights of Rhodes, in 1402 and still mounted with cannon. Boodroom is believed to occupy the site of the ancient *Boothromus*, the country of Herodotus, and the magnificent ruins that abound in the town and vicinity would seem to strengthen the idea. Amongst these are a number of temples, and other buildings, ornamented with cornices and columns, and rows of pedestals,

finely sculptured, and of admirable workmanship. On the side of a hill above the town are the remains of an elegant theatre, 280 ft. in diameter and with 36 rows of marble seats. The seats and the great part of the proscenium remain, and the cornices and statuary are but little impaired, although

THE PORT AND CASTLE OF BOODROOM.—From Turkey Description de l'Asie Mineure

part of the front wall has fallen in. A picturesque church of the earliest Byzantine age stands near the W. extremity of the terrace that overlooks the city.—J. A. in (see *Supplement*) Asiatic Turkey pass Anatolia, about 80 m. S.W. Isauria with the remains of seven or eight temples and numerous other Greek buildings. A picturesque Byzantine church overlooks the city.

BOOKARIA, a tn. W. Africa, 100 m. N.N.E. Free Town Sierra Leone lat. 9° 58' N. lon. 12° 31' W.

BOOKHAM two par. Eng. Surrey—1 *Bookham* (Great) 8249 ac. Pop. 1061—2 *Bookham* (Little) 950 ac. Pop. 187

BOOKIT BARISAN a chain of mountains, of primitive formation, in Sumatra running along the whole length of the island, from Achou Head to the Straits of Sunda.

BOOLEAL. See **BOUAL**.

BOOLEKOMBA, **BOOLAKAMBA** or **BOOLOKOMBA**, a prov. esp. same name, S.W. peninsula of isl. Celebes. It is now subject to the Government of Macassar and forms part of the territory called Bookkamba-and-Bonthain. It is the most S.W. portion of the peninsula, about 43 m. long by 20 broad, and is particularly productive in rice, which is sown here while gathered in Macar, where it is sown when gathered here, although the two provinces are separated only by hills of no great height. It produces much gum also, but has no good timber. Wild animals abound particularly deer. The people are industrious. The chief river is the Kalekang, on which the town stands, near its mouth. In 1840 the sea rose, in a few moments from 60 to 80 ft. above its usual height, and again retired, after destroying two villages and many lives. In the W. monsoon, the roadstead is very dangerous for large vessels, though small craft can find shelter in the river. The Dutch have a fort here, which was attacked, without success, in 1825, by the Bongs.

BOOLEKOMBA **ARDY-NORTAIN** a territory S.W. peninsula, isl. Celebes about 48 m. W. to E., and 20 m. N. to S. and bounded N. by the mountains Kindan and Torontan, S. and E. by the sea and W. by the Tano. The inhabitants are reckoned the most peaceable and best disposed of the subjects of the Dutch in Celebes. Pop. 25,000.

BOOLEKOMBA **1 OIAI** (called also *Cape Lassa*, or *Borak*) the S.E. point of the W. peninsula of Celebes lat. 5° 55' S. lon. 120° 27' E. (N.).

BOOLEY BOON, or **BOON**, a tn. Bocha, near the mouth of the Bocha river 130 m. S.E. Badagry; lat. 5° 40' N. lon. 6° 7' E. The caboose or head governor of the river resides here. There are two other towns close by—Fish Town and Salt Town.

BOOM, a tn. and com. Belgium prov. Antwerp at the junction of the Brussels Canal with the Rupa, 12 m. S.

Antwerp city Boona, being also richly situated for trade, is a busy island port. It contains 50 brick and tile works, six building-yards, many breweries, tanneries, and millworks, sawparks, ropewalks, and sundries manufactories; numerous oil, saw and corn mills, fish-salmon, woodyards, &c. P. 7464.

BOONDEE (sun. *Bundji*) — A principally Hinduistan, prov. Almor under British protection bounded, N by Jay poor and Conjara, W by Jay S. and E. Kotah; area, 2500 sq m. It was pretty extensive before Kotah and its territory were separated from it. In 1817 more than half the revenues was usurped by Seindia and Holcar.

and the peasantry were impoverished by oppressive exactions but in 1818 the Rajah received a considerable addition of territory together with the town of Palam, from the British Government. Although small, Boondee is important as the medium of communication between the N and S. The inhabitants are of the Hara tribe which has given birth to many famous men, and among others, to Ram Singh Hara, one of Aurangzeb's most renowned generals. — 2. A in Hinduistan prov. Almor east of above principality and residence of the Rajah, on the S. declivity of a long range of hills lat. 28° 28' N; lon. 76° 50' E. It consists of Old Boondee and New Boondee the former surrounded by a high stone wall extending up the declivity behind it and connected with the fortifications on the cliff above the houses are of stone, and, for the most part two stories high.

The natural situation, eminently numerous temples, and magnificent fountains of Boondee, give it a very interesting appearance. The picturesque effect, its main street is almost unbroken. At its upper extremity stands the palace a remarkable edifice, built of stone, with tiered windows and battlements, supported partly by the perpendicular rock and partly by solid piers of masonry 400 ft high. At its lower extremity is the great temple dedicated to Krishna. Old Boondee, which is W of New Boondee, contains some fine fountains and pagodas, but is in a state of general decay. The passes N of Boondee are strongly defended. The country around is exceedingly picturesque. — (*Asiatic Researches*).

BOONEVILLE, a city and port of U States Missouri on bank Missouri river 40 m. N W Jefferson city. It has a court house, Methodist church two academies, and two schools two ropewalks, and some trade in cattle and provisions. Pop. 2541.

BOONTING ISLANDS a group of five small islands, Indian Archipelago, N of Paganay and of moderate height. The most N. is m lat. 5° 42' N lon. 109° 50' E.

BOORHANPOOR (sun. *Burhanpur*), a in Hinduistan in the Deccan prov. Candahar, of which it was the met. cap. 137 m S by E. Ogela in a plain, on bank Tapti which is fordable during the dry season lat. 21° 19' N lon. 76° 18' E. It is one of the largest and best built cities of the Deccan.

most of the houses are of brick, with neat facades and roofed with tiles. Many of the streets are wide, regular and paved with stone as are also the Raj bazaar and the market-place an extensive square, the two best-known places in the town. The most remarkable public edifice is the Jumma Masjid or mosque a fine pile of grey stone. Boorhanpur is supplied with water by aqueducts 4 m. in length, which distribute it through every street beneath the pavement, whence it is drawn up by means of leather buckets. A singular sect of Mahometans, named Bohra, have their head quarters here. They are the chief merchants in this part of Hinduistan, have Arab features, wear the Arab costume, and derive their origin from a disciple of their great prophet. Grapes grow abundantly in the neighbourhood, and are said to be the finest in India.

BOURLON, or Bourlon, a lagoon, Lower Egypt, delta of the Nile, separated from the Mediterranean by a narrow strip of land, the W extremity 5 m. E. Rosetta. Utmost length 38 m. average breadth about 15 m. It is shallow and marshy and is connected by canals, with both the Damietta and Rosetta branches of the Nile.

BOURO or Booro, an Isl. Indian Archipelago, 46 m. W Amboloa lat. (Fort Defence, Capel Bay) 8° 22' 56' S. lon. 127° 6' 15' E. (c.) It is oval shaped, 62 m. long

by 55 m. broad, and the third largest of the Moluccas. Its largest bay that of Capel, says Sir Edward Bolehar possesses great advantages over Amboloa, as regards supplies of poultry eggs, water and wood. The harbour also is snug and safe, sheltered from the southeast and less troubled with the thermal runs than Amboloa; consequently better adapted for coastal trade, as well as astronomical observations. Viewed from this bay Booro presents a magnificent panorama. On a shore of the richest verdure, the minarets of the mosques and the bamboo

TEMPLES AND HOUSES AT CAPEL BAY BOORO.

houses of the natives are seen through the openings between the trees, or crossing the infinite variety of forms assumed by the rich vegetation of the tropics while, behind this beautiful foreground rise the lofty mountains of the interior wooded to their very summits. On the L. a succession of rising grounds exhale the odours of plantations of balsams. The N W side, on the contrary presents nothing but vast swamps, partly under water and swarming with crocodiles. Even the higher grounds are watered by a thousand fresh and generally rapid streams, which meander in all directions, and moisten the turf covered by the *Juncus tenella*, with its beautiful flowers. From the height of its mountains Booro is seen at a great distance at sea. Mount Dome has an altitude of 10 400 ft and Tomaboo 6258 ft. above the sea level. The island is watered by 125 rivers, large and small, the Abbo the Boy the Ila, &c. In the centre of the W part, a spacious lake, 20 fathoms deep, is fed by mountain streams, and communicates by three rivers with the sea. The interior is difficult of access, and dangerous from the number of serpents. Booro has a variety of valuable woods. Its myrtaceae supply the best balsams. It produces, besides many odoriferous flowers and resins the *ard*, a gummy plant, gives a highly aromatic oil. The wooded marshes are frequented by large herds of the *Bos siva* or banyan, a kind of hog peculiar to the islands of the Indian Archipelago. The interior of Booro is occupied by Althorras, reputed to be as wild and fierce as those of Ceram are among the quinquina, and verities. They live a frugal life among the hills, feeding chiefly on sago and what game they kill abandoning the coast to the Malays. To their rooted aversion to the visits of Europeans and the circumstance of the island producing no cloves, we probably owe its being, till very lately neglected by the Dutch although so near Amboloa. The population is in state of conjecture, but, by the last estimate, Booro, with some smaller isles, contained 18 000 souls. — (*Van der Aa* *Tumbeck*, *Ceylon* &c.).

BOOROGHILL Boorogor or Boorogor, a in Persia, prov. Irak ajem, cap. gov. of same name, 190 m N W Isfahan lat. 33° 43' N lon. 48° 45' E. with a castle and several mosques. It lies in a fertile and well-cultivated valley yielding saffron belonging to the Lack tribe. Pop. 12 000.

BOOSEMPRA or Boosom Praa a river N W Africa, kingdom, Ashantee. It is formed by the junction of two streams, which rise in the interior at the distance of about 100 m. from the coast, and fall into the Atlantic lat. 4° 52' N lon. 1° 30' W. It has yet been examined but a short way inland, and, so far as explored, was found to be 100

yards broad, and 4 fathoms deep. The water is quite fresh and the banks, which are fringed with mangroves, are only 8 or 4 ft. above the stream. There are but 3 ft. on the bar the difficulties of which for boats, as by these alone it can be attempted, are increased by the enormous rollers that sweep over it. The natives, nevertheless, most skilfully paddle their canoes both in and out of the river.

BOOTAN *Dzongar* *Dzongar* or *BORAN* an independent state, N. Hindustan, between lat 94 18 and 28 5 N and lon 88 55 and about 92 80 E bounded N by the Himalaya, which divides it from Tibet, S. by Bengal and Assam, and W by a branch of the Teesta, which separates it from Sikkim. The E boundary is not certainly known. Length E. to W 250 m. breadth N to S 120 m. area, 19 000 sq. m. It is a mountainous country consisting chiefly of terraces of the Himalaya, of which, on the frontiers of Tibet, it contains some of the loftiest peaks that of Chomolungma or Chomolungma attaining an elevation of 27 900 ft. The country lowers gradually by steps to the Brahmaputra, to the base of which it wholly belongs, and near which, on the frontier of Bengal, is a strip of jungle-covered country 25 m. broad forming the only plain in Bootan. The loftier mountains are bare, many of them covered with snow. Lower down at an elevation of 8000 to 10 000 ft. are fine forests of pine, birch, maple, ash and yew but no oak. The hilly tracts likewise, produce the smaller fruits of Europe—blackberries, raspberries, apples, apricots, &c. The valleys are more water-courses between the hills and their vegetation is similar to that of the S. of Europe. In the lower parts the vegetation is tropical. Iron is the only metal as yet wrought, and good building stone abounds.

The chief river is the Teesta, which enters Bootan from N. to S. traverses the valley of Tenzin, and after an impetuous course of about 160 m. falls into the Brahmaputra, below Rangpo, under the name of the Ganga. All the rivers are remarkable for the number of falls in them and the impetuosity of their courses.

In the N. parts the climate is rigorous in the lower terraces at an elevation of 8000 to 10 000 ft. it is pleasant and healthy and in the lower grounds, hot and pestilential. Showers are frequent but the heavy falls of rain which accompany the S.W. monsoon in Bengal seldom occur.

The wild animals of Bootan are comparatively few in number. The elephant, rhinoceros, tiger and buffalo, are found among the jungle and marshes of the plains and a monkey of a large and handsome species, well known both by Bootan and Hindostan. The only domestic animals are horses, cattle and dogs. The first consists of a breed called Tangm, indigenous to this part of the world and usually 13 hands high, of a yellowish colour and fine symmetry, strong and active, but said to be somewhat headstrong. They are chiefly bred in the valley of the Teesta.

Agriculture, Trade, &c.—The natives are industrious cultivators of the soil. Irrigation is extensively employed, and, where the climate is temperate, every part of the mountain which has a favourable aspect and a coating of soil is cleared, and adapted for cultivation, by being cut into horizontal beds. Rice, wheat, and barley are the common agricultural products. The culture of vegetables, excepting turnips which are remarkably good, is much neglected although shallots, cucumbers, gourds, and melons are grown. Bootan trades with all the neighbouring countries, but chiefly with Tibet and Bengal. In horses, linen cloth, musk, furs, walrus, oranges and Indian molasses exchanged for woollen cloth, cottons, drugs, sandal wood, saffron, and spices. Part of the articles brought from Bengal are sent to Tibet, with rice, wheat, and flour. Tea, gold, silver and embroideries are received in exchange. From Cooch-Bihar cattle, hogs, dried fish, tobacco, betel, and various odours are imported. The chief manufacture is that of paper made from the bark of a tree, from which material a fabric like silk and satin is also manufactured.

People.—The inhabitants of Bootan are generally Buddhists in religion, and are partly vigorous, tall, with smooth and dark skins, broad faces, and high cheek bones—features prevalent among the Tartars and Chinese. They are not deficient in courage, but are possibly inclined and have little skill in the military art. Goats is a common complaint with these who live near rivers liable to inundations. Woolen

cloth is the usual wear and animal food, tea, and spirits, the common articles of consumption. The houses are usually one story high. The bridges are ingeniously built, some of timber others of iron of this latter kind, is one across the Teesta at Chooka, an admirable structure. The aqueducts are formed of hollowed trunks of trees. No religious forms are observed in marriage and both men and women are addicted to polygamy. The dead are burnt, and the ashes thrown into the river. On such occasions the Gyangs, a sort of priests officiate.

Government.—The Dharma Raja, regarded as an incarnation of the Divinity is their ecclesiastical chief as well as sovereign. Being a sort of spiritual entity and of course immortal he is quite absorbed in the contemplation of his own essence, and leaves the regulation of the affairs of the country to the Deb Raja, saving only that he appoints one member of the state council which consists of eight persons, without whose authority the Deb Raja can do nothing important. The power from the low countries to the most famous are numerous, under the jurisdiction of officers styled *cooks* who live in their respective fortresses, visiting the lower country in the reign of winter either to enforce their authority or to invade the neighbouring states. Both the lower hill and the plain country are partitioned into small domains each having a distinct officer for the collection of the revenue, and the superintendence of the police. The Raja's revenues are usually paid in articles of produce, and war-chandises. Tassoon, Wandpers, Icomah, Ghim, Puro and Murchom, are the chief towns.

History, &c.—In ancient Brahmin legends, Bootan is called *Madra* but little was known about it till 1772 when Cooch-Bihar was invaded by the Deb Raja, with whom, however peace was eventually concluded. The boundaries of the country are uncertain a regular system of encroachment on the British possessions having been long practised by the latter. In 1816, the advance of the Chinese forces towards Nepal excited great alarm at the court of the Deb Raja who was induced by his fears of the enemy and hopes of assistance from the British to declare himself friendly towards the latter.—(Capt. Turner's *Embassy to Tibet Asiatic Researches*.)

BOVTHIA GULF a large inland sea, N. of Hudson's Bay between the island of Boothia Felix and a portion of the continent of N. America on the W. and McVillie, Fox and Cockburn Island on the E. between lat. 67 and 72 N. It is about 810 m. in length, N. E. to S. W. with a breadth varying from 60 to 100 m. The gulf is entered by Prince Regent's Inlet, off Barrow's Strait, or by Fury and Hecla Strait, from Fox's Channel.

BOOTLE, a market tn. and par England to Cumberland. The town, 5 m. S. by E Ravenglass, has a church an independent chapel and some schools, and a little trade in corn, pork, bacon, &c. Area of par 7146 ac. Pop. 811

BOOTON par Eng Norfolk 1040 ns. Pop. 244

BOOTON *Bouton* or *Baton*—1 An ill. strait and tn., Indian Archipelago. The strait lies off the S.E. peninsula of the island of Celebes lat. (S. point) 6° 43' S. lon 128° 44' E (alt); 90° m. in length, and varies in breadth from 20 to 30 m. A long narrow strait to which it gives its name separates it from the island of Mooka, and the large bay of Kallinacoco or Dwellby lies on the E. presenting a safe anchorage during the W. monsoon. The N. coast is rendered dangerous by a shoal and the S. by a reef. Booton is hilly and much wooded. It produces rice, Turkish wheat, sweet potatoes, beans, fruits, sago, spices, among which is the dwarf nutmeg also buffaloes and goats a variety of birds, and a dark brown, small ill-looking race. Though brightly and vigorously when well treated some are not uninteresting of trust. They profess Mahomedanism and manufacture cotton stuffs, and a tissue from the fibres of the aloes. By treaty the Dutch were long allowed to employ an *Eschepier* to traverse the island, and destroy the clove and nutmeg trees, for the preposterous purpose of enhancing their monopoly but the

Shelan, by a renewal of the Dongy contract, on improved terms, may now grow spruce. Pop. including Pangassai, 32,300,000.—The town stands on the strait, lat. 4° 26' S. lon. 122° 45' E. is large and well settled. The houses are of bamboo. The straits straight and narrow.—S. Two shallow Indian Ocean N.W. entrance of the Malacca Strait off the W. coast of the Malay peninsula, from which they are distant about 45 m. They are close together in about lat. 6° 24' N. lon. 99° 17' E. They are both high and the westernmost is formed of a regular sloping pyramidal mountain, generally called Bontoe Domm, visible from a distance of upwards of 50 m. When seen from the W. they appear as one island.

DOOWANG BESI, Owa, or HAROOKO an Isl. Indian Archipelago, 1½ m. N.E. of Ambon, and about 12 m. long and 1½ m. broad. It is hilly and the climate reckoned very healthy yet frightful extenuous diseases prevail among the natives, and which is very uncommon in the Indian islands, malarialism of the limbs. There are hot springs on the island resorted to for rheumatism and gout. Many tropical fruits and vegetables thrive in the gardens. The inhabitants on the S. side profess Christianity those on the N. Mahomedanism. The Dutch have possessed the island since 1527. Pop. 4000.

BOPAL. See BOPPAID.

BOPPAID or **BOPPAID**, an anc. in Prussia, prov. Rhine, S. bank of that river where it is joined by the Kouge back, 9 m. S. Coblenz. The houses are mostly of wood and the streets narrow ill paved dark, and dirty. It has several large woollen and cotton factories considerable manufacture of linen, houses tobacco-cases and leather and numerous mills. Pop. 2654.

BORABORA, **BOLABOLA**, or **BOSABORA**, one of the Society Islands, S. Pacific Ocean lat 16° 30' S. lon 151° 45' 30" W. (a). It is about 21 m. in circumference and presents a singularly picturesque appearance from the sea,

THE ISLAND OF BORABORA.—From Dreyer, Voyage autour du Monde.

from which it rises abruptly in the form of a lofty double-peaked mountain, the highest summit of which, called Piton, attains an elevation of 1695 feet. The sudden ascent of the land from the sea is, however, more apparent than real, there being a considerable margin of level ground next the water which is fertile, and covered with cocoa palms, and bread-fruit trees. Borabora is in an atoll or lagoon, being surrounded by a chaplet or ring of coral the water within which, at such in such cases, is remarkably pure and limpid. The island abounds with albatrosses, several kinds of petrel, and other birds, including woodpeckers, and small parrots of red and splendid plumage. Domestic fowls also are numerous, and were found on this, and the adjoining islands, when first visited by Europeans. Borabora was discovered by Captain Cook in July 1769.

BOPPAID, a town in Sweden Westmanland or Edsberg, lies on the Wike-ån, 25 m. E. Göteborg or Gothenburg, surrounded by mountains and forests, and in an underland district. It is regularly built, is the centre of some local trade and around the town spinning, weaving, and working in slates are carried on. The most important works are the

dyeworks. In the vicinity is a mineral well. The town was founded by Gustavus Adolphus in 1632. Pop. 2522.

BORBA, a tn. Portugal, prov. Alentejo, dist. of, and 19 m. W.S.W. Elbas. It is surrounded by walls, and has an old castle, two churches, three monasteries, an hospital, and a poorhouse. Its annual fair is of some importance. Pop. 2635.

BORBA, a poor old tn. Brazil, prov. Para, advantageously situated on an estuary 7 bank, Belém, about 70 m. above its embouchure in the Amazon lat. 4° 22' S. lon. 59° 30' W. It has a church, and is a meeting-place for the canoes navigating the Madeira. Tobacco and cacao are cultivated in the vicinity to a considerable extent, for export. The inhabitants have much on the flesh of the tortoise, which is here abundant.

BORBOREMA a mountain-range, Brazil forming the S. boundary of prov. Ceará, and trending N.W. to the sea, through prov. Rio-Grande-do-Norte. In general it is well wooded, presents a vigorous vegetation, and, from its considerable height, has a low temperature.

BORCETTE. See BOURCETTE.

BORCULO or **BORCULO**, a small tn. Holland prov. Gelderland, 15 m. E. Zutphen, on the Rhenel. It derives its importance from the royal stud kept at the old castle of Borculo, the lordship of which was bought by William V. Prince of Orange, from Prince Adam Chastarnack, in 1777. A stud of above 100 of the finest horses and mares is kept on the grounds, and has greatly contributed to the improvement of the breed in Holland. The district round Borculo is purely agricultural, eight-ninths of the inhabitants Raimond, seventh E. Catholics. Pop. of tn. and par 3760.

BORUM. See BOURBON.

BORDEAUX [anc. *Burdigala*] an important commercial and maritime city France, cap. dep. Gironde and of the 11th military division of the kingdom 284 m. S.W. Paris lat. 44° 50' 18" N. lon. 6° 34' 30" W. (a). 1 bank, Garonne, 87 m. from its mouth. The approach to it by the Paris road from the E. is very striking. The road winds round the shoulder of a hill, consisting of gently terraced slopes and on reaching its foot leads by a straight avenue 2 m. long to a magnificent stone bridge of 17 arches, which spans the Garonne, and was erected in 1821 at an expense of £290,000. This bridge furnishes perhaps the finest view of the city which is built in a crescent form, along the bank of the river lined with magnificent quays for more than 3 m. while Gothic towers and antique spires rise behind, and form the most conspicuous objects in the background. Bordeaux consists of an old and a new town, the boundary between them being formed by the Rue de Chapelle.

Rue, a wide and handsome street, which, commencing at the quay near the centre of the crescent at the Bourne, stretches across the city E. to W. The old town, lying to the N. of this street, is chiefly composed of irregular squares, and narrow crooked streets, with houses which, though substantially built of stone stone are mean and ugly. In this respect they present a striking contrast to the new town, which is laid out with great regularity and on a scale of magnificence not surpassed by any provincial town in Europe. The streets, squares, and avenues are of the most splendid description, and, in particular, the Fausbourg des Chartreux to the N.E., is composed of edifices which at once indicate the good taste and great wealth of their inhabitants. The objects chiefly deserving of notice in the old town are the triumphal arch, called Porte de Bourgogne, placed at the extremity of the bridge, and forming the principal entrance to the town; the cathedral; the Gothic edifice, said to date from the sixth century but destroyed by the Normans, and rebuilt in the 13th century by the English, who are said to have given it its two elegant spires, 150 m. high; St. Michael's Church, in the line of the bridge, distinguished by its lofty

BOREE, a large fortified town in Afghanistan, prov. Bawistan, on the route called the Boree Pass, leading from Dara Ghasee Khan to Kandahar and Ghaznee lat. 31° N; lon 69° 10' E. 185 m. B.R.E. Ghaznee. The country around is fertile, well cultivated and has a dense population almost exclusively agricultural.

BORG (Tas) **BORG**, or **Tax BORG**, a tn. Holland, prov. Gelderland on the Old IJssel, 9 m. E.E. Zutphen. It is open, and beautifully situated amid woods and has a Reformed and a R. Catholic church, and a school. The inhabitants, though chiefly agricultural, have a linen trade, and an iron foundry. At one time there was much traffic through *T. Burg* to and from Germany, but the business of the roads has diverted it to other places. Pop. 700.

BURGA a seaport in Finnish Russia dist. Nyland 8 m. N. E. Revel on the *Borgy A.* near where it falls into the Gulf of Finland lat. 59° 22' N. lon 25° 45' E. It has miserable houses, crooked streets, and is the seat of a Lutheran bishop, and chief place of one of the two parishes of Finland. It possesses a stone cathedral a wooden church a gymnasium and small public library and has some manufactures of linen and woollens but its harbor is bad and its trade insignificant. Pop. (1841) 2786

BORGFAITREICH a tn. Prussia, Westphalia, gov. Minden, circle of and about 7 m. N. E. Warburg. It contains a R. Catholic parish church and a synagogue. The inhabitants live chiefly by agriculture. Pop. 1734

BORGHEIOL a tn. and com. Belgium prov. Antwerp on the high road from Antwerp to Turnhout with bleach fields dyeworks, and corn mills. Pop. 4491

BORGHETTO a tn. Italy Lombardy prov. Milan m. 6 Lodi on the R. streamlet *Silero* 2 m. from its junction with the Lambro. An annual cattle-fair is held here in August. Pop. 4587

BORGHOLM a tn. Sweden in Öland and the only one on it. It was a free harbor for coasters was founded in 1817 and is increasing. Pop. 320.

BORGIA a tn. Naples prov. Calabria Ultra 6 m. N. W. Catanzaro almost entirely destroyed by an earthquake in 1788 and rebuilt nearly on its former site by Ferdinand IV. It has a parish church and wine and silk of good quality are produced in the neighbourhood. Pop. 3497

BORGNE BAY or **GULF** U. States, Louisiana, can. notes with the Gulf of Mexico by Pascagoula Sound and on the N.W. with Lake Ichautrain. It is about 40 m. long and 15 broad.

BORGIO with various offices, the name of numerous towns Italy — 1 *Borgio Forno*, a tn. Austrian Italy cap. dist. of same name, prov. of and 9 m. S.W. Mantua. I bank Po, defended by a citadel, now ruins. Pop. 3186. — The district much exposed to the inundations of the Po, is marshy and unhealthy. Pop. 7853 — 2 *Borgio Forno* a tn. and com. Austrian Italy prov. of and 24 m. S.E. Mantua, I bank Po. The vicinity is marshy. Pop. 2000. — 3 *Borgio Lombardo* a tn. and com. Sardinian States, prov. of and 9 m. S.E. Novara, on the *Arborea*. *Silkworms* are reared to a large extent in the vicinity and the town has several silk spinning-mills. Two annual fairs are held. Pop. 4000 — 4, *Borgio Forno*, a tn. Sardinian States, prov. of and 8 m. N. W. Ivrea, near I. bank, Douve. Fine grain and fruits are produced here. Pop. 1800. — 5 *Borgio Manero*, a tn. and com. Sardinian States, prov. of and 17 m. N. W. Novara, on the *Goppa*. It has a college, hospital, and several convents. Pop. 8000. — 6, *Borgio Scia*, a tn. and com. Sardinian States prov. Val d'Aosta. I bank, river of same name with manufactures of silk. Pop. 7284. — 7, *Borgio-Scalzone*, a tn. and com. Sardinian States, prov. of and 5 m. S.W. Cuneo. It has an ancient Benedictine abbey and a tolerably active commerce. In the neighbourhood are iron and copper works and grain and fruits are grown. Pop. 8000. — 8, *Borgio-Scalzone* a small city duchy of Parma, cap. dist. of same name and see of a bishop, suffragan to the Archbishop of

Bologna. It is an agreeable plain, r. bank, *Stilone*, 15 m. N. W. Parma. It is surrounded by walls, has several good streets a cathedral, four parish churches, a college, *Palazzo* and some other schools and literary institutions a dual palace, *Stabile* townhouse, hospital, theatre, cavalry barracks, several convents, public baths and storerooms. Manufactures: — woollen linen and silk fabrics, oil and wine. An annual fair is held in October. This town obtained its name from St. Donnino, who was beheaded here in 304. Pop. 8839. — The district is well watered and fertile, about 38 m. long, and 16 broad area, 706 sq. m. Pop. 180 185 — 9 *Borgio-Musone*, a tn. duchy of Lucca, cap. dist. of same name, 13 m. N. Lucca, r. bank, *Serchio*. Pop. 1500. — 10 *Borgio-Scia* (n. *Calzone*) a tn. and com. duchy of Piacenza, 3 m. S. by E. *Castellum-Glorioso*, in a plain at the foot of Mount *Vallidone*. The vicinity is mountainous, but the valleys are fertile. Forests of oak, beech, chestnut, &c. cover the hill sides and rough cattle is reared. Pop. 6262. — 11 *Borgio-san-Bernardino* or *Bettolo-san-Bernardino* a tn. and com. Italy duchy of, and 20 m. S. Piacenza, I bank, *Nure*. The vicinity is mountainous, and covered with forests. The valleys are fruitful, and cattle and pigs are reared in great numbers. Pop. 5252. — 12, *Borgio-Lorenese* a tn. and com. Tuscany prov. of, and 15 m. N. Florence, on the *Stivo*. Grain and fruits are good and abundant here, and cattle are reared. Pop. 8225.

BORGIO DEI VALI MAGNANI a tn. Austria, Tyrol in the valley of the *Eugana*, on the *Brenta*, 12 m. E. by S. *Tront*. It is well built, has a parish church, with three fine pictures a Franciscan monastery which was founded in 1608 several schools an hospital richly endowed a theatre a musical spring and a handsome stone bridge over the *Brenta*. The raising of silk employs about 340 persons. Pop. 9450

BORGIOBELLO a tn. Austria Transylvania, gov. Dobok cap. dist. of same name 13 m. N. E. *Bistriar* at the entrance of a pass over the *Carpathians* leading from Transylvania into *Roumania*. It contains a Greek non-united church and has some manufactures of earthenware, particularly tobacco-pipes. The whole district is mountainous. Pop. about 800

BORGOMANERO a tn. Sardinian States Piedmont, prov. of and 18 m. N. W. Novara, I bank, *Gogno*, and nearly equidistant from the R. extremities of *Lake Maggiore* and *Orta*. It is well built and contains a communal college, several convents, an hospital, a most *de pedit* &c. It has little trade, but some manufactures, and three annual fairs. Pop. 6000

BORGIOO three countries interior Africa — 1 A country in the land of the *Tibboos* or *Tippos*, 15 days journey S. *Fexen* — 2 A country four days journey S. S. E. the former and called also *Wadai* (*whet* see) — 3, A country on the S. W. frontier of *Houssa*, and separated from it by the *Joliba* or *Niger* and bounded E. by *Dahomey* and *Yariba*

BORGOTARO a small tn. Italy Parma cap. dist. of same name, 22 m. S.W. Parma, I bank, *Taro*. It is well built, surrounded by walls, has three gates, handsome streets, two churches, town and assize houses, an hospital public library cavalry barracks, theatre some schools, and public fountains. Four annual fairs are held here. Pop. 2387. — The district of *Borgotaro* is hilly and well wooded area, 489 sq. m. Pop. 48 784

BORGUE, a par. and vil. Scotland stewartry of *Kirk* cuthair area, 40 sq. m. interesting ruins of the tower of *Balmacrae*, and *Flinton Castle*. Pop. 1048

BORGIOLO or *BORGIOLO* a tn. Parma cap. dist. of same name gov. of and 44 m. N. E. *Minsk* I bank *Bersina*. Near to *Barnasoff*, at the village of *Strofilanka* the French made their dismounting passage over the *Bersina*. Pop. 8003.

BORISPOLE, two tns Russia: — 1 A tn. gov. of and 55 m. N. W. Yaroslavl, I bank, *Volga*, opposite *Novoslov* built among woods. It has several forges, chiefly employed in making iron pots and some trade in grain and fish. Pop. about 4000. — 2 A tn. cap. dist. of same name, gov. of, and 102 m. S.E. *Tambor* on the *Volga*, near its junction with the *Khopor*. It contains two churches and is an entrepot for some inland traffic by water. Pop. (1851) 6360

BORJA a city Spain Aragon, prov. of, and 38 m. W. by N. *Saragossa*, at the foot of a small hill, on the top of which stand the remains of an ancient castle. It has well built and paved streets and squares a collegiate, and two other churches, a college, two endowed schools townhouse,

two prisons, an hospital, a storehouse, three convents and a cemetery. Manufactures—cloth, blankets, silk, hamper, fishnets, and brandy. Pop., chiefly agricultural, 4339.

BORJAS, a town, Spain, Catalonia, prov. of and 14 m. E. by El Llorenç, tolerably well built, and having a parish church, a chapel, townhall, school-house, an endowed school, hospital, prison, and storehouse. Pop., exclusively agricultural, 3000.

BORKAI or **BORUAI**.—1 A bay Arctic Ocean, Siberian coast, between lat. 70° 4' and 72° N. lon. 123° and 133° E.—2, A cape, forming the N.E. boundary of the above.

BORKEH.—1 A town and circle, Prussia, gov. Münster. The town lies on the Aha 34 m. W.S.W. Münster has a chert factory and both manufactures and deals largely in linen. Pop. 8000.—The circle, area 190 sq. m., is undulating and well wooded, fertile, and well cultivated and rears a great number of cattle. Its manufactures of woollen silk, and cotton stuffs, worsted, sherry and cutlery are also extensive. Pop. 41,873.—2 A town, Hesse Cassel prov. Niederhessen, circle of and 4 m. W.N.W. Homberg on the Ohmloch at the N. foot of a little heath hill, on which a strong castle of the noble family of Borke once stood. It contains a church, synagogue, burgher school and hospital. The inhabitants depend chiefly on agriculture five yearly markets. Pop. 1873.

BORKEUM **BORKUM** or **BORUUM** [Latin *Borkehus*] an isl. N. Sea, belonging to Himmer of the mouth of the Ems, hall. Pevum lat. lighthouse 58° 30' 30" N. lon. 6° 40' 42" E. (n.) about 14 m. in circumference. At low water the sea flows through a hollow in the centre of the island, and divides it into two nearly equal parts. Borkum is a parish. Its church has a tower 154 ft. high which is used as a lighthouse, and provided with English lamps and 16 parabolic reflectors, which guide the entrance into the Deth. Most of the male inhabitants are seamen, the remainder support themselves by husbandry gardening and the rearing of cattle. Pop. about 500.

BORLEY par Eng Essex 776 ac. Pop. 121.

BORMIDA a river, Bavaria, which rises in the Maritime Alps near Mount Calvi, and in two branches, the one called the W. and the other the E. The Bormida proceeds N. to Disago, where the two branches unite. It turns E. till it passes Asper, near which it resumes its N. course, and after receiving the Orbe, joins R. Isère, 7 miles N. of Alpe d'Huez.

BORNIO [German *Born*, a town in a Austrian Italy gov. Milan, on the route of the Salvo 91 m. N.E. Sondrio, in the valley of, and on a bank. Adda, 4550 ft. above the sea level near it, upon the side of Mount Braglio, are hot saline springs and baths (100° F.) celebrated by Cascardone, and much frequented by invalids. It enjoyed a considerable trade with Venice and the Grisons, but in 1790 it was partly burnt by the French, when it fell into decay but is again reviving. Pop. 3500.

BORNA a town and half Saxony circle of and 17 m. N.E. Leipzig. The inhabitants live by spinning weaving, and the ordinary handicrafts. Pop. of in 3600 of hall 30,988.

BORNALI or **ACROBORN** one of the Caroline Islands, N. Pacific Ocean lat. 6° 45' N. lon. 156° 25' E. It is about 80 m. in circumference, of volcanic formation and so lofty that it may be seen, in clear weather 40 m. from a ship's deck. It is surrounded by coral reefs between which the island is many small islets, that do not rise more than a few feet above the water, yet are covered with coco-palms, trees and other shrubs. Bornali have more communication with strangers, on account of its good harbours, than any of the surrounding islands, is much resorted to by their inhabitants for the purpose of obtaining tobacco and other foreign commodities. The two principal harbours, Mahalan and Born Kidid, are situated, the former on the N.E. side of the island, the latter on the S. side. They are much frequented by whalers.—[*Norfolk Magazine*, 1843.]

BORNEO an isl. Indian Archipelago, lying under the equator and nearly bisected by meridian 114° E. Excepting Australia, it is the largest island on the globe. Its most N. point (Cape Sangamang) is in lat. 7° 5' N.; its most E. (Cape Salatan) in lat. 4° 13' S. so that it extends through 13° 18' of latitude, while, in longitude it stretches through 10° 26', from Cape Pandan on the W. (108° 54' E.) to Cape Ousang on the E. (in 119° 20'). The form of Borneo is that of an irregular pentagon with a small rhomboid attached to

it on the side facing the N.E. or to use a homely simile, it may be compared to a shoulder of mutton—the knee-joint pointing to the N.E. and the blade-bone expanding to the S.E. The greatest length of the island is in the direction of N.F. by N. and S.W. by S. from Cape Sangamang to Cape Salatan a distance of 850 m. Its width taken at right angles to the direction here indicated is, in some places, 600 m. but diminishes towards the N. The area cannot fall short of 270,000 sq. m. and consequently exceeds threshold that of Great Britain.

Surrounding Seas.—Borneo forms the central mass of the Archipelago which extends from Sumatra in the W. to the Moluccas and Philippine Islands in the E. and which is sharply circumscribed, on the S. by the chain of islands that stretches from Java to the Arru group in the vicinity of Papua. The seas surrounding it are variously denominated from the adjoining shores. From N. to S.W. it is washed by the Chinese Sea which narrowing in the latter direction between Cape Sambar and the island of Biliton takes the name of the Straits of Carimata. On the S. Borneo faces the Sea of Java on the E. is separated from Celebes by the Straits of Macassar N. of which, from Cape Kamoongan to Cape Ousang a distance of 250 m. its shores are washed by the Sea of Celebes. From the vicinity of Macassar (lat. 6° N.) the Sooloo Islands extend across in an E.N.E. direction, to Mindanao and N. of them is the Sea of Mindoro, which mixes its waters with those of the Chinese Sea, at the N. point of Borneo. The coasts of this great island are beset by numerous reefs which in many places rise into countless islets and further off the clusters of islands, such as those of Balabala, or Little Peterborough in the Straits of Macassar of Carimata in the straits of the same name and the islands of Tondolon and Natuna, in the Chinese Sea. These hostile groups, usually considered with little reason as belonging to Borneo, are as yet hardly known in detail.

General Aspect.—Though the mountains of Borneo are in some places, while from the sea, particularly off its coasts yet the general character of its shores is that of mangrove wastes, or of interminable low plains, liable to inundation, and covered with dense forests. The parts frequented by Europeans are chiefly in the vicinity of great rivers, which form extensive deltas wherein there is hardly anything to be seen but the water and the unproductive forest. There exist, of course, the great extent of elevated country in the interior whence descend the numberless streams intersecting the maritime tracts but still there is reason to believe that a very large portion of Borneo consists of immense alluvial plains of the greatest fertility and raised but little above the level of the sea.

Mountains.—The mountains in the interior of Borneo it has been already observed, become more conspicuous towards the N. The highest of them, Kailashoo in lat. 8° 8' N. and lon. 116° 33' E. attains an elevation of 13,680 ft. On the S. side of this mountain, there is said to be a great lake of the same name from which, if the accounts of natives are to be relied on, many numerous rivers. From this culminating point, a chain of mountains may be conjectured to extend S.W. throughout the whole extent of the island, terminating a little E. of Cape Sambar. From about lat. 2° N. and from that part of the central ridge named Ang-ang, a range known in its successive portions as the Longmole and Sakoon extends E. by S. to Cape Kamoongan, lat. 1° N. A second range leaves the central ridge further S. and running S.E. about 300 m. turns E. and finally S.W. till it terminates in Cape Salatan the most E. point of the island. Again, from the mountains of Mada, in the central region, lat. 1° N. a chain of mountains runs W. about 200 m. and then S. till it ends in Mount Pang near Cape [Nanjong] Datoe, lat. 3° 5' N. Thus it appears that Borneo, the mountain chains of which all break out from one central nucleus resembles the neighboring island of Celebes in its formation much more closely than might be suspected from the hasty comparison of their figures on the map. For if the former island were cut 1800 ft. or even 500 ft. it would lose immediately its compact form, and its mountain-ranges would figure as narrow peninsulas, some hundreds of miles in length, separated by immense gulfs instead of alluvial plains. The following list of heights—all probably, with exception of the first and last, to be considered only as rough estimates—

may serve to give some idea of the configuration of the country—

long as respectively in lat. 2° 45' and 2° 55' N. These rivers, though barred, are not inaccessible, and may be sailed a long way up. Further N. for some hundreds of miles, the details of the coast are but little known, but the Kinabatangan, in lat. 5° 45' is reported to be a great river.

Lake.—Of the lakes little is known, and that little chiefly through native information. The most celebrated of them is that of Kinabalu, E. side of the mountain of the same name. About three degrees further N. near the source of the Boanglong, reports place another great lake (no doubt erroneously) to be, like the former, the source of many great rivers. These two lakes are situated in or near the mountains. In the alluvial plains also, particularly near the large rivers lakes are numerous but not remarkable either for magnitude or as interesting physical features. Yet the chain of lakes which connects the Kapoos and the Kotawing is said to prove that the principality of Matan at the S.W. angle of Borneo was isolated at a comparatively recent period by a narrow strait or arm of the sea.

Geology.—Borneo being so little explored its geological formation is necessarily very imperfectly known. All that can be done, therefore, is to bring together those ascertained facts which seem to indicate the general structure of the island. In Sarawak granite with the several allied varieties of rock prevail along the coast the valleys being filled chiefly with a detritus of feldspathic materials, while limestone mountains encompass this district on the S. The Uluang Ratuos [hundred mountains] also a chain 8000 ft. high separating the Tanah Laut or maritime country at the S.E. angle of the island from the valley of the Banjarasin, is formed of granite rocks, underlying probably the limestone, which shows itself further N. in the same valley. In both the granite districts here mentioned, are found quartzose masses, resembling corals widely disseminated and containing iron. It is in the alluvial formation of quartzose gravel reddened with oxide of iron that the gold and diamonds of Borneo are found in such abundances. In the vicinity of Brunei or Borneo, and also in Labuan, 80 m. further N. coal has been discovered, under circumstances which indicate the existence of a large field of the valuable mineral. On the river of Marapout also, E. of the town of Banjarasin have been found beds of excellent coal. Basalts, and other volcanic rocks, occur in Maludu Bay at the N. end of the island, and also at the falls of the Looson or Banjarasin river where it issues from the mountains. Besides gold, the annual produce of which has been estimated at a quarter of a million Borneo yields copper tin, antimony and iron, which last is of the best quality. The diamonds are widely disseminated in the red soil, but the largest are said to be found at Mount Landa in Pontianak. The business of mining for gold and diamonds is wholly in the hands of Chinese adventurers and is carried on chiefly in Pontianak and Pampas.

Climate.—The wet season in Borneo begins in September and ends in April during which time the rain falls heavily attended with much thunder and lightning and violent squalls. During the rest of the year or the dry season, as it is called, copious showers fall nearly every day. In the equatorial parts the winds are variable throughout the year, sea-breezes however blowing once on shore. On the N. the rain in the mountains are those of the Chinese Sea in general—N.E. from October to April and S.W. the remainder of the year on the S. shores, about Banjarasin, the monsoons resemble those of Java being from the W and E. respectively in the seasons already mentioned. The heat is not by any means so great as might be expected from the geographical position of the country—a circumstance attributable, no doubt to the prevailing humidity the vast extent of forest, screening the ground and itself incapable of accumulating or reverberating heat, and to the frequency of the sea-breezes. In Pontianak, the summer heat rarely exceeds 82° F. This equality of temperature, and the atmospheric circulation may perhaps explain why the European visitors to the swampy lowlands of Borneo, rarely complain of their insularity.

Zoology.—An equatorial land, exceeding France in extent varied and fertile, and still for the most part, in a state of nature, may well be supposed to teem with animal life in great diversity of form. Here it will be sufficient to point

out what is peculiar to, or characteristic of, Borneo in the department of Zoology. A great portion of this island is covered with dense forests, reaching the light, and frequently inundated beneath to a depth of some feet. In these obscure retreats lives the orang-outang (*Panama aspera*), an animal peculiar to Borneo and Sumatra. It is less formidable than is commonly supposed, and rarely ventures to the ground but, in running through the forest from bough to bough, or on the compact foliage which forms its roof, it displays much address and activity. Two other remarkable apes, the long-nosed and the crested, inhabit the skirts of the same woods, near the banks of rivers and lakes. The only gibbon (lar) found in the island inhabits the fig-tree thickets on the slopes of the mountains. In the mountainous districts is found also the striped tiger (*Pelis maculosa*) which is here the chief beast of prey though not so powerful nor voracious as the panther. But the most remarkable animal in Borneo, after the orang-outang, is a singularly whiskered carnivorous creature, resembling at once the otter and orinorhynchus, and which has received the scientific name of *Potamophilus barbatulus*. The bear which spoils the coco-nut trees, and steals the honey in the woods, does not appear to be a new species. A porcupine (*Hystrix javanica*) supplies a favorite food to the natives who say that this animal alone can feed with impunity on the upas. There is reason to believe that neither the elephant nor rhinoceros exist in Borneo which possesses however a peculiar species of hog, *Sus barbatulus*, distinguished by its enormous whiskers and hideous aspect. The banteng, a large and handsome species of buffalo, inhabits the mountainous tracts, the naga, a snake, frequents the borders of the woods. Of deer only three species are known, respecting one of which, the sambar, it is said by the natives, that whoever eats its flesh will die of enormous disease. In the river of Borneo are three species of crocodile, one of which resembles the gharial of the Ganges. Fish are extremely abundant along the shores. In the Chinese Sea, all the reefs and islets are covered with oysters. In the Straits of Macassar pearls and mother-of-pearl are ordinary productions.

Botany.—Of the countless forms of the vegetable kingdom which clothe this prolific island, only a few can here be mentioned. The coco-nut, betel sage, and gambut the skins of which serve as make up the palms most highly esteemed by the natives. The *Nipa fruticosa* also which adorns the banks of the rivers where it invariably grows on the side of the deep water while the mangrove overspreads the shallow side is of great importance. Its scented flowers feed the bees which furnish the wax exported in such quantity its fruit resembles the coco-nut, and its branches serve to form the roofs of houses. This must not be confounded with the mangrove, the leaves of which are used to cover the roofs, and its extensive sheath of wood for flooring and boatbuilding. A species of sugar-cane here grows wild as well as a kind of nutmeg (in this state flavourless) and a cinnamon which has a taste of cloves. The mountain sides, where there is a sandstone soil, are covered with pine woods and still higher up the iron wood tree (*Diospyros*) attains, with slow growth colossal dimensions. In the district of Sarawak and probably throughout the island, the gutta percha tree (*Ficus elastica*) is plentiful. It attains a diameter of 8 ft. and is called *Niato* by the natives who are ignorant of the use of its juice.

Inhabitants.—The Europeans who now arrogate the dominions of the shores of Borneo, find themselves preceded in that island by three different races—the Chinese, the Malays and the Dyaks. The first of these are temporary visitors in constant circulation and led to the country by the desire of exercising a lucrative industry. The Malays are conquerors, who have issued from Sumatra or the Malayan Peninsula, within the last five centuries, and have established themselves on the coast, throughout the Indian Archipelago for the sake of engrossing the commerce. In Borneo they are strictly confined to the coast, and banks of the navigable rivers. The interior of the great island still remains wholly to its aboriginal possessors—the Dyaks. But it must be observed, that the native wild tribes of the interior are properly called Dyaks only in the W. Dutch residencies and the adjoining district of Sarawak. In other parts, they are called Majow, Kajan, Marat &c. Yet, notwithstanding the doubts and contradictions uttered on this subject in recent accounts of Borneo it may be confidently assumed that the nations dwelling

these various appellations are all connected together by the use of a common origin, a common language, and similar manners though varying in dialect and fashions, and divided into numberless petty tribes each of which usually bears the name of the river whereon it is settled.

Dyaks.—The Dyaks are of middling stature, well made, but not vigorously developed. They are fiercer than the Malays have good features regular features and a frank, agreeable aspect. Their eyes are somewhat oblique, and their cheek-bones prominent thus seeming to betray a mixture of Mongolian blood. Their dress varies much in different parts of the island. In general, they wear a cotton cloth round the loins. The Deosons of the N coast wear immense rings of solid tin or copper round the lower parts of the body and the shoulders. While the Bagis of the S E are dressed in

DYAKS.—A DYAKMAN AND A BAKUL.
From Murray, Borneo and Islands of the Sunda.

tigers skins and rich cloths, with splendid head-dresses made of monkeys skins and the feathers of the argus pheasant. Others wear rings of rattan in place of metal the neck is loaded with collars of human teeth or of the teeth of apes and wild boars. The head-dress is made of cloth decorated with feathers or of the bark of trees with tufts of fibre resembling feathers. Their ears are loaded with as many heavy rings as they can bear which stretch the lobes immediately. Some tribes are tattooed in blue lines from head to foot, others make war dresses of handsome peltry preferring the skin of the tiger. Their arms are a bundle of hard wood a spear and sword or knife some tribes use also the marteau or sumpitan, a slender tube, about 5 feet long through which is blown a small dart, 8 inches long, and as thicker than a strong wire, the point of which is dipped in a poison made from the upas. The women's dress is becoming, but their shawls, made of bark, sometimes stuffed with rind of brass, are sewed on them and never removed except in case of pregnancy. The Dyaks of the W side of the island generally dwell in sheds or houses, capacious enough to contain the whole community some have been seen nearly 500 feet long and capable of lodging 400 people. These houses are uniformly erected on piles of iron wood from 5 to 20 feet from the ground. The floors are of split bamboo the roof covered with the leaf of the Nibong. Thin partitions of split cane separate the apartments of the married people from the common room. The chief occupies the centre of the building, and in front of his chamber usually a portion of the common hall is set apart as the head-house. And here we are led to consider the most revolting characteristic of these people for the Dyaks, though ordinarily neither fierce, treacherous, nor sanguinary yet covet human heads and no man so merry till he has won the object of his affections, by presenting to her at least one of these horrid trophies. These tribes and some

rials of murder are pickled, and, with covey shells in the eye-sockets, and tufts of grass in the ears, are hung up in the head-houses. On Fridays they are taken down to adorn the persons of the horses to whom they respectively belong, who dance with these ornaments dangling at their sides, suspended by belts over the shoulders. A similar custom of obtaining *hau* is prevalent among the Alfornes of Celebes and Ceram. The Dyaks *spect* from Malay influence, seem to have no ideas of religion. They have no form of worship, and no priests, the only superstition distinctly recognized among them consists in anxiety or in attention to the flight of several birds. Most of the tribes bury the dead some burn the body and others suspend the coffin from a tree. In all cases, the head first acquired by the deceased accompanies him to the grave. The Dyaks marry but one wife and though there is said to exist among them much license before marriage infidelity is rare. Their government seems to be republican, their chiefs exercise influence, but are not as yet with effectual authority. These people, even when turned cultivators, and residing in villages still retain a trace of nomadic habits, when the fertility of their rice grounds is exhausted they abandon them, and settle elsewhere. They have little industry yet their rumpuses or blow-pipes, their stencils of painted rice, and their prahms, often 50 feet long, are so many specimens of excellent workmanship. Some of the native tribes on the N shore of Borneo live much on the water where they are always ready to attack those who seem weaker than themselves.

Language.—The language of the Dyaks is radically related to the Malayian both being apparently derived from that universal Polynesian language the remains of which may now be traced from Madagascar to the Sandwich Islands. It is reported that in the mountainous interior of the island N of the valley of the Baram, there exists a wild people who to quite naked live in trees and share all intercourse. They are called by the S. tribes *Orang Uai* on the W coast they are known as the *Orang Bani*.

Customs.—The Chinese who crowd to the shores of Borneo belong to the drags of the people, yet in their newly adopted country they exhibit a decided superiority in social and industrial capabilities and their villages are patterns of good order, comfort, and abundance. The mining business is wholly in their hands and after years of strenuous labor they return to China, generally as well as circumstances, enriched it is supposed by the accumulation of gold dust and diamonds. They are accused of turbulence, that is to say rapacious of Malayian rule, and in truth, if they could bring with them Chinese wives, and dispose themselves to settle permanently in Borneo, they would have long since dispossessed the Malays. For their own protection they combine in societies called *Kong-sees*, the members of which are bound by an oath solemnized by drinking blood, and the administration of which, in China, is forbidden under pain of capital punishment. The three great *Kong-sees*, which may be said to govern the mining interests of W Borneo are *Lang-fong* in Pontianak, which is said to have at its command 6000 fighting men, the other two viz. *Tay kong*, and *Lau-tai-kion*, able to levy 10 000 and 5000 combatants respectively are in Sambas.

Malays.—The Malays in Borneo have lost none of the distinctive characters of their nation: they manifest the greatest inclination towards a seafaring life, and many of them may be said to have their home on the water, following piracy as an occupation as well as commerce. Though habitually indolent, they are not without capability of exertion as well as skill, and, with their excellent iron, they can imitate to perfection the finest work of our millers and gunsmiths.

Antiquities.—It deserves to be remarked that, both in the valley of the Nagara, E. of the *Berjarmasin*, and near the banks of the Kapoos, in Pontianak, remains have been found of Hindu temples, with sculpture, coarse indeed, yet indicative of art and civilization, superior to any now existing in Borneo among either the Dyaks or Malays. At one village on the Nagara, the memory of the Hindu deity (*Orang Keling*) is still traditionally preserved. Among the Dyaks also are preserved, as precious heirlooms, with religious care, certain large jars, with dragons in relief, said to have come from Java, but thought, by good judges, to be of Chinese origin. Such jars, however, are no longer made in Java or in China, and nothing seems to be preserved of the history of

their manufacture which can throw light on the question of their age.

Products.—The productions of Borneo which find their way into commerce are, gold, platinum, tin, antimony, copper, iron, and diamonds. Edible birds nests, collected in the interior as well as on the coast, *troupe* or *kolostera*, fished in the Straits of Macassar—these three articles are destined wholly for the Chinese market. Camphor iron wood *donny nutmeg*, cassia, wax, sago, and rice, are in general demand.

Dominions.—Of the great island of Borneo above two-thirds are claimed by the Dutch, either as actually possessed by them, and subject to their immediate authority or by virtue of treaties made with the native princes, who have acknowledged their supremacy. The portion exempted from their rule is the N and narrow part, its limits on the coast being Tanjung or Cape Dato, on the W lat 2° 5' N and the mouth of the river Atas lat 3° 20' N on the E. This maritime region 12 000 m. in extent was till lately divided between two States; the Sultan of Borneo Proper claiming the dominion of the N W coasts from Tanjung Dato to the river Kiamas, lat. 6° 35' N while the Sultan of Suluco dominated over the remainder. But a third power capable of counterpoising the influence of the Dutch has recently arisen here which threatens to extinguish the preceding two, ere long if that result be not indeed virtually accomplished already. The district of Sarawak, extending from Tanjung Dato E. S. L. about 0 m. to the mouth of the river Pemangahan and consequently within the dominions of Borneo Proper was purchased in 1842 from its native chief, by an English gentleman, Mr. Broke and formally and absolutely ceded to Great Britain in the following year by the Sultan of Borneo, who probably foresaw that he could never reckon on the obedience of his new vassal. In fact the English chief of Sarawak attacked and took the city of Bruai or Bheru in July 1848 and among the fruits of his victory he is reported to have ceded to Great Britain a few months later of the small island of Labuan situate about 80 m. N the Borneo river and well fitted, by local circumstances to command the trade of these coasts. Thus the British are now established on the N coasts of Borneo, where they figure as the protectors of lawful commerce but, as the Sultans of Borneo Proper and Suluco with their subordinate chiefs, are always more or less obstructive to the general progress of trade and the consequent penalty of extermination it is obvious that the sway of the British in these seas, must eventually extend itself over both the shores protected by them and the States coerced by the act of protection.

The Dutch possessions and dependencies in Borneo are embraced by a coast line of not less than 1800 m. from Tanjung Dato, round by the S. to the river Atas on the E coast. The former are divided into three residences or provinces, of very unequal size—Sambas, Pontianak, and Banjarassin. The first of these adjacent Sarawak, from which it is separated by the mountains on the S.W. and extends about 120 m. along the coast from Tanjung Dato to the river Doorn. Mount Bapang, its furthest inland limit, is probably 100 m. from the sea. Between the rivers Doorn and Kotaringo the coast boundary of Pontianak, the distance is 300 m. in a straight line while in the interior the residences embrace the entire valley of the Kapoos. It comprises 24 principalities of which however only the following seven are immediately under Dutch control—Mampawa, Pontianak, Landak, Kuching, Sempang, Samarang, and Matan. And here it may be observed that the name *Samarang*, which means terrestrial paradise, and belongs properly to a small district E of the Sempang river as by some writers extended to the whole of this region, including Sambas. Among the dependencies of Pontianak are reckoned about 100 islands. The residence of Banjarassin or of the S. and E. coasts far exceeds that of Pontianak in magnitude and besides, as the chief seat of Government, it claims the vassalage of the dependent states on the E coast—these are the kingdoms or principalities of Tumb-Bumut, Paitir, Kootai, Geong-Tahar, and Balingas. Within this ample territory in the town of Marapoos, about 70 m. from the Dutch capital, the Sultan of Banjarassin is allowed to retain, within a narrow district, the semblance of independence. The Governor of Banjarassin was, till 1844, subordinate to the Governor-general of the Dutch Indies, in Batavia, but since that date, he has

exercised, under the title of Governor of Borneo, plenary and independent powers.

Population.—The population of Borneo may be estimated, with some probability to be 3,000,000 of whom 400,000 are Malays, 100,000 Bugis from Celebes and 140,000 Chinese the rest are Dyaks or indigenous tribes.

History and Name.—The Europeans who first visited this island early in the 16th century—Lorenzo de Gomez, in 1518 and Pigafetta, with the ships of Magellan's expedition, in 1521—both named it *Brunei* or *Borneo*, from the port and principal city on the N.W. shores at which they touched. This name, written by the Malays themselves *Bidni* or *Borneo*, is obviously the Sanskrit *Bhūm* or *Bhōmā* [land] its conversion into Borneo, and application to the whole island, came into use, among Europeans, in the 17th century. Some writers have stated that the island, in its whole extent is called, by the natives *Pulo Kalamantan* but those who have had most intercourse with the native tribes of Borneo, deny that they have any general name for the whole island.

The first Dutchman who arrived at Borneo was Oliver van Noort, in 1598. The reputation of the island for abundance of diamonds and other precious stones (the latter was considered at that time, as a universal medicine) induced the Dutch settled in Batavia to send, in 1608 to the Queen of Succiadana, an officer demanding a treaty of commerce to whom she replied that the trade of her country was free to all nations. In 1609 however they succeeded in making a treaty with the Sultan of Sambas. A factory was thus established and the factors gradually raised themselves into sovereigns, by steps which cannot be here detailed. In 1769 the English, having taken Manila, obtained from their ally the Sultan of Suluco the cession of his claim to the N. coasts of Borneo and took possession of Belambangan. But, in 1775 the garrison of that island composed chiefly of Bugis, was cut to pieces by a band of pirates and the settlement was consequently abandoned. When Java was taken by the British in the late war the Dutch power in Borneo fell to the ground and the native chiefs, watched by a few British political agents resumed the exercise of their original authority but they now found themselves unable to cope with the Chinese King also and were, therefore well placed at the return in 1815 of their Dutch masters. In 1842 the boldness of Mr. (now Sir James) Brooke, who had become acquainted with the lucrative commerce of those seas, and contrived to obtain the territory of Sarawak, with the title of Rajah broke through the limits of the monopoly so long maintained by the Dutch. These to meet the danger have renewed their treaties with all the native princes within their influence in terms which assign them an express supremacy. But British influence must necessarily extend from Labuan and Sarawak over the N. of the island, and if the maxim of the Queen of Succiadana, in favour of a free trade with all nations be steadfastly adhered to that influence will probably gain the ascendancy in the S. also—[Van der Aa's *Aardrijksbeschrijving* *Waaromacht der Nederlanden* *Tumanduk, Coup d'œil sur l'Inde Néerlandaise* *Moniteur des Indes* *Far's Eastern Seas* *Low's Sarawak* *Sir E. Belcher's Voyages of the Samarang* *Keppler and Brooke's Borneo* *Hausmann's Voyages en Malacca* &c.]

BORNEO PROPER, a kingdom or independent principality N.W. coast, all Borneo extending from the northern bounds of Sarawak and Suluco (lat. 1° 28' N. lon. 110° 40' E.) about 500 m. N.W. to the river Kramas in lat. 6° 40' N. It was at the capital of this kingdom that Europeans first learned the name *Bidni* or *Borneo*, which they afterwards changed into Borneo and extended to the whole island. The river of Borneo is a noble stream, 1½ m. wide, and with a depth of water for a frigate up to the city which is situated about 12 m. above the river's mouth, in lat. 4° 28' N. lon. 114° 52' E. The city is built on piles in the river like most Malayan towns occupying, in three portions both above and as island, or rather mud bank, projecting from the S. side. The houses are raised about 8 ft. above high water and are connected together by narrow plank bridges the intercourse of the place is carried on chiefly by means of canoes. Borneo has been lately described as a Venice of borois. It presents a singular spectacle on market-days when the river is covered with little canoes paddled by women, selling catfish, and screened by immense hats made of palm leaves. When Pigafetta visited this place in 1521, he sup-

posed it to contain 25,000 houses, or about 100,000 inhabitants; subsequent estimates fell lower and we find the population of Borneo, at the present day variously estimated at 50,000 or 10,000; the latter number probably being near the truth. Before Europeans had penetrated so far to the E. Borneo enjoyed, in an eminent degree the prosperity derivable from a most advantageous position on the Chinese seas but those active rivals quickly intercepted the chief sources of wealth Chinese emigrants, however still frequented the old emporium, where they were deeply engaged in two branches of industry namely the cultivation of pepper and the building of junk, but the disquietude of the country at the commencement of the century arising probably from the progressive decline of trade, and general loss of fortune, had the effect of driving away those industrious sojourners and there are few or no Chinese in Borneo at present. The alarmation of Sarawak in 1845 and the forced exodus of Labuan to the British in 1846 were events calculated to hasten the downfall of Borneo Proper for Labuan enjoying equal advantages of position with that of the perfect security afforded by civilized governments, and an efficient police, will easily become the nucleus of these seas, and the old city of Borneo will sink into decay. The dominion of Borneo extends 500 m. or more in little more than nominal. There exists no social organization in the country; there are no roads nor regular communications by land; the Government exercises no prompt or prevailing authority but its wild subjects, habitually pillaged and oppressed, are always ready to disobey when there ceases to be the power to compel their obedience, and that day is evidently not far distant.

BORNHOLM, a small island in the Baltic, prov. Antwerp, 1 bank, Scheldt, 15 m. W. Maastricht with numerous islands for linen-washing several breweries, mills, blacksmiths, and tanneries and trade in seeds, flax and linen. Pop. 4184.

BORNHOLM *anc. Bornagum* in N. Denmark, Baltic Sea, 80 m. E. Zealand and 25 m. S. the most S. point of Sweden. Its most N. point is Cape Himmeren on which is a lighthouse, 279 ft. high in lat. 56° 17' 42" N. lon. 14° 46' 40" E. (p.). It is about 23 m. long by 18 broad area, 470 geo. sq. m. In general the coast is high and rocky presenting perpendicular cliffs, close to which is deep water. Where cliffs do not prevail, rocks and sandbanks stretch out to sea rendering all approach dangerous, more especially in stormy weather when the surf is heavy. The island has no good or secure harbour for large vessels and only few and indifferent ones for small. The best is at Rønne on the S.W. side with 1½ ft. water. The island however is not very good, being exposed to the S.W. winds. Bornholm both geographically and geologically belongs to Sweden. In the N. and N.E. it is composed of granite and gneiss, occupying more than a half of the whole area. W. from this crystalline formation and lying generally N.W. and S.E. are seams of inferior coal, connected with the coarser and the older green sandstone. In the S. are strata of sandstone, schist, and limestone, of the transition series. Excepting a heath tract near the centre of the island on a plateau, 280 ft. above the sea, the land is generally fertile, producing the same grain crops as the rest of Denmark, and the same trees, beech excepted. The island has no lakes of any size and its streams, numerous enough, are merely rivulets, with narrow rapid courses. Good building stone and marble are quarried and exported. The metals are likewise raised and used to some extent, but they are of inferior quality. The island has long been famous for its rock crystals. Its watches have likewise a local reputation. The chief support of the inhabitants is agriculture, cattle-rearing, fishing and seafaring. The principal towns and ports are Rønne, after which come Nexsø, and Svaneke. Pop. 26,600.—[*Dagbogen der Danske Slægt*].

BORNO a large vil. kingdom of Italy Lombardy prov. of and 39 m. N.E. Bergamo 7 bank Oglio. It has a large square handsome church two chapels and a court-house. Pop. 2228.

BORNOR, a town in Spain Andalusia, prov. of, and 28 m. E.N.E. Cadix on a slope near a bank Guadalquivir, and built with considerable regularity. The houses are generally of two stories and many of them have good gardens. There are fine spacious squares, and the streets are usually of good width, but those which follow the direction of the slope on which the town stands, are more or less steep. The most

remarkable building is the palace of the Duke of Medinaceli, part of which consists of an old Moorish castle, in good preservation. The parish church is large and handsome and has some good pictures. Manufactures unimportant, and consisting chiefly of linen and cotton cloth, and soap. Bornes is famous for its water and the sweetness of its climate, which makes it the resort of invalids. Pop. 4334.

BORNOU an extensive kingdom, Central Africa, lying S. and W. Lake Tchad having the latter part of Kanem, and the river Shary and Beghram, on the E. and S. E. Houses on the W. Mandara on the S. and the Desert on the N. and N. W. a tract comprehended between the parallels of 15° and 10° N. and the meridians of 12 and 16 30° E. The whole country is flat, and by far the greater part is covered with thick underwood, high coarse grass, and creeping and climbing plants while all around Lake Tchad, and for a considerable distance W., S. W., and S. is alluvial and marshy and by no means cultivated to the extent it might be.

The heat in Bornou is very great but not uniform. In the hottest season, that is, from March to May or June the thermometer sometimes rises to 105° and 110° at two o'clock in the afternoon and is rarely below 100° even during the night. The hot season is followed by violent thunder-storms, seasons passed by heavy rains, which are then sooty continual with cloudy weather and a damp and sultry atmosphere. The inhabitants now begin to prepare the ground for corn and now the rivers and lakes begin to overflow their banks, and confer fertility on the soil. The dry and cold season commences in October. Towards December and in the beginning of January the thermometer no part of the day mounts higher than 74° or 75° and in the morning it descends to 58° and 60°.

The country produces little besides grain, the principal kind raised being a species of millet called *gawo*. Prepared in various ways, it forms the staple food of the inhabitants. Four kinds of beans, all known by the general name *gawo* are also grown in large quantities. Cotton and indigo the latter of excellent quality grow well close to the Tchad and overflowed grounds. There are no fruit trees of any description in the kingdom, with exception of a few lime and fig trees in the gardens of the Sheikhs at Kooka. The only implement of husbandry is an ill-shaped hoe.

The domestic animals are dogs, sheep, goats, cows, horses, and asses the last in considerable herds. Horses are also bred in vast numbers. Domestic fowl and game are abundant and best so everywhere, as in some places to obstruct the passage of travellers.

The wild animals of the country are these common to tropical Africa—the lion, leopard, crocodile, hippopotamus, giraffe, &c. Most of these are eaten by the natives the flesh of the crocodile in particular being reckoned extremely fine, having, according to Denham, a green firm fat resembling turbot while the calipee has the colour, firmness, and flavour of the finest veal. The crust of all the above and its secretion forms an important article of trade. Reptiles are numerous, including scorpions, centipedes, enormous lizards, and many varieties of serpents one of which said to be harmless, measures from 14 to 16 ft. The rivers and lakes abound with fish. The country is frequently desolated by the visitations of the locust, which though a favourite article of food is on this account much dreaded by the natives.

The people of Bornou consist of two classes—the descended sons of Arab settlers, and the native race the former called Shuwas, and the latter Kanowry. The Shuwas, who are of a light copper complexion, with an open pleasing countenance, are a shrewd, cunning and intelligent people, but deceitful and overbearing the Kanowry or aborigines exhibit all the Negro qualities, both moral and physical. They are simple, peaceable, and inoffensive, but wanting in energy have flat noses, large mouths, and unexpressive countenances, of a deep black colour. The latter acknowledge the superiority of the former and conduct themselves towards them with a servile inferiority. There are many different dialects spoken in the country besides the Arabic. The government is an absolute despotism and the King can, at any time, muster a well-disciplined and well-equipped army of 15,000 or 20,000 men, mostly cavalry armed with sabres, pikes, and bows. A favourite and important body of the infantry consists of spearmen from Kanem, on the N. side of Lake Tchad. The

laws are arbitrary the punishments severe and summary but generally administered with justice.

The chief articles of export are gold dust, slaves, horses, salt, and ivory. The only manufactures known in Bornou are

POLICE OF BORNOU

Kanem, Bornou, and Bornou, in the Month of Bornou. Bornou.

coarse linen, made from the hemp of the country a species of carpet, used as a covering for the horses and a coarse cloth from wool mixed with the hair of goats and camels of which they make tents, for the use of the army. Principal towns, Kouka.—(Narrative of Travels in Northern and Central Africa by Denham, Clapperton and Oudney).

BORODINO a village near Moscow, on a small tributary of the Moskwa. Near this village, an obstinate battle was fought, September 7 1812 just before Napoleon reached Moscow—the French gaining a costly victory.

BOROFF or BOROFF, an em. in Russia, cap. dist. of same name, gov. of and 49 m. N. N. E. halouga, traversed by the Prota. It gives title to a Greek bishop, contains four churches has important manufactures of muslin one factory employing 250 hands and in addition to this staple carries on a considerable trade in flax, hemp leather &c. Boroff is famous for its cattle and onions. In the environs is one of the richest convents in the empire, founded in 1444. Pop. (1850) 763.

BORONGO or BORONGO, a small market in England, co. York, W. Riding 17 m. N. W. York, in a valley on the Ure.

BOROUGHBRIDGE a small market in England, co. York, W. Riding 17 m. N. W. York, in a valley on the Ure. It has three streets, straight and well kept and is well supplied with water. The houses are mostly of brick, and tiled or slated. The places of worship are the parish church a Wesleyan and Independent chapel. There are eight schools, including a national school, and a mechanics institute. Boroughbridge returned two members to Parliament from 1568 to the passing of the Reform Act, when it was disfranchised. It has neither trade nor manufactures, the inhabitants being nearly all employed in agricultural labour. The York, New castle, and Berwick Railway have a station here. Pop. of chapelry 1006.—(Local Correspondent.)

BOROVITSKI POROGUI a town in Russia, cap. dist. of same name, gov. of and 98 m. E. Novgorod, on the Msta. It owes its additional name, Porogui (atarata) to extensive rapids in its vicinity which though passed by boats greatly obstruct the navigation. The worst of the obstructions have been removed and the trade of the town has increased 1 op. (1842) 5807.

BORROWSTOLNESS, or BORST, a bor. of haven, airport, and par. Scotland, co. Linlithgow, 7 m. E. of Forth. The town is situated on low ground, 17 m. W. by N. Edinburgh lat. 56° 1' N. lon. 8° 38' W. It consists of

two principal streets, and numerous narrow lanes; and has altogether an exceedingly irregular and confused appearance. Its general condition also as regards cleanliness, &c. is very indifferent, although somewhat improved in the respect of late years. There are some good houses in the town, but many of an inferior description, and most of them much blackened by the smoke of surrounding manufactories. The town is lighted with gas but extremely ill supplied with water. The townhouses though now never used as such, is a large, square, castellated building with a tower at each corner. There are a parish, a United Presbyterian, and a Free church, all substantial, but plain buildings; and six schools several of which are taught by females. The parish school is the largest, and in 1859 attended by nearly 300 children. There are several religious benevolent, and provident societies, and a good public library. The working population are mostly employed in a pottery within the town, and in extensive ironworks, and numerous coal mines, in the vicinity. Close by there are also a chemical work, and a distillery and a considerable business is done in corn.

The harbour which is of safe and easy access is formed by two piers carried out into the firth. It is 240 ft. broad and 563 ft. long with a depth of water at spring tides of from 16 to 20 ft. Registered shipping, in 1847 58-7 tons. The number of vessels that entered the port in the same year was 186; tonnage 13 390. About 60 years since, Borrowstonness had eight ships engaged in the whale-fishing; there is now but one. Salt also was manufactured here, and exported to the extent of 37 000 bushels annually but it has now altogether ceased. Borrowstonness is one of the oldest seaports in Scotland, having been the great emporium of commerce with Holland and the Baltic in the 17th century. The piers is about 4 m. in length and 2 in breadth, and nearly the whole of it is built. The great wall of Antiochia, commonly called Graham's Dyke, traverses it, and is supposed to have terminated hereabouts. Pop. of town and parish 5192. —(Local Correspondent)

BORRIOL, a tn. Spain Valencia, prov. of and 4 m. N N W Castellon-de-la-Piña, at the foot of a steep hill and in the vicinity of an extensive and fertile plain. It is very largely built and has a parish church, which though small is handsome. A considerable number of modern constructions, and several endowed and well-attended schools. Borriol is of great antiquity and contains numerous Roman remains. Pop. 2069.

BORRIS, several small tns., vills and pars. Ireland — 1 *Borris-in-Ossory* a market tn. Queen's co. 5½ m. E. Roscrea consisting of one long street, of mean appearance and having a brewell, dispensary and small market-house. Pop. 594. — 2 *Borris-o-Kene* a small tn. and par. co. Tipperary 8 m. N by W Nenagh 11 m. S W Birr having a church R. Catholic chapel, and places of worship for Wesleyan and Baptist. Several schools, a brewell, fever hospital and dispensary. Area of par. 6128 ac. Pop. 3461. — 3 *Borris-leigh* a small tn. co. Tipperary 5 m. S.W. by 8 Templemore with a dispensary. Pop. 1129. — 4, *Borrisleigh*, par. Tipperary 11 940 ac. Pop. 2361. — 5 *Borris*, or *Borris-leigh* par. Carlow 14 m. N New Ross, on the Borris rivulet consisting of a single row of houses, extending parallel to the bank of the stream of the Borris Liff. Here are a R. Catholic chapel school fever hospital and dispensary. Pop. 719. — 6, *Borris*, par. Kilkenny 1271 ac. Pop. 154.

BORROWDALE a small dist. England, co. Cumberland, par. of Crosthwaite, 6 m. S. Keswick chiefly famous for the production of black lead or coal, as it is provisionally called, in great abundance, and of the finest quality. The scenery of the district is extremely beautiful and near a lake at the lower extremity of the dale is a salt spring, resembling that of Cheltenham. Pop. 423.

BORROWMEAN ISLES [see *Islands Channel Islands*] situated in a bay of Lake Maggiore, and belonging to Mardinia, in Piedmont, prov. Novara. Their names are Isola Madre, Isola Bella, and Isola Superiore. The first is the largest contains a fine garden, and has great natural beauty. The second is the most celebrated and is greatly valued on account of a vast unfinished palace of Count Borromeo which occupies one end of it; its fine terraced gardens rising from the edge of the lake in a pyramidal form, lined with statues, vases, obelisks, and black cypresses and in which, owing to the extreme mildness of the climate not rarely the orange, No. 7.

citron, myrtle, and pomegranate, but the camphor-tree, sugarcane, and other tropical plants flourish in the open air. The surface was originally barren slate, and every handful of mould is artificial. The third island contains a small fishing village.

BORSA, a vil Hungary, co. Marmaros, on the Vise 46 m. S. E. Sighet. It stands at the mouth of the gorge of Tater-Volgy, which leads into Bukovina, and its neighbourhood are mines of argenticiferous lead and copper. Pop. 3478. — Several other small places in Hungary have the same name.

BORSOD a co. Hungary circle this side the Theiss; divided into four dists. Miskolcs (containing the esp. of co. of same name) Erian Borsod, and Eszt Pater arae, 1043 geo. sq. m. Its surface is partly hilly partly alluvial and the soil, in general extremely fertile, producing abundant crops of grain and a good deal of wine. On the pastures and meadows, some of which are of great extent numerous cattle are reared. The forests furnish excellent timber of various kinds, and abound with game. The rivers of which the principal are the Theiss, Sago, Hernad, Bodva, Sanyva, and Illoz teem with fish. The chief mineral is iron which is worked to a considerable extent, and partly converted into steel. Pop. 218 500. — The village of Borsod which gives its name to the county stands on the Bodva, dist. of and about 5 m. from Borsod is the property of several noble families and contains a Reformed church, and an old castle. — Two other small places one in this county and the other in Bacs, have the same name.

BORSELE or **BRANSKALE** originally two islands Holland prov. Zealand but now part of B. Beveland, by means of gradual accretions from the river and the sea. History shows that its villages have to sustain a constant struggle to defend what they have taken from the surrounding waters, to which they have had more than once to give back what they had attempted to enclose.

BORSECALL, par. Eng. Bucks 8080 ac. Pop. 352. **BORT** a tn. France, dep. Corréze, 14 m. S.E. Ussel r. bank, Dordogne, here crossed by an ancient bridge, leading to the principal suburb. It has manufactures of linen, held in high estimation throughout the S. of France, tanneries, breweries, and wax blancheries, with a considerable trade in agricultural produce and live stock. Marmontel was a native of Bort. Pop. 1083.

BORTHWICK [see *Lochever*] a par. Scotland, co. Edinburgh, 6 m. in length and 4 in breadth. The ancient uninhabited castle of Borthwick built, in 1430 by the first Lord Borthwick, in the valley of that name, is one of the finest old structures in Scotland. It was frequently visited by Mary Queen of Scots, and was the scene of several passages of painful interest in the history of her unhappy connection with the infamous Bothwell. Pop. 164.

BORTHWICK a vil sd. Sardinia prov. Cagliari, place actually situated on a hill in a healthy district, about 40 m. S.E. Sassari. Pop. 2600.

BORTSCHE BLEK, a small stream Holland forming the boundary between Guelderland and Overijssel between Zutphen and Deventer.

BOSA a seaport in W coast, Isl. Sardinia division, Cape Sassari, 18 m. S.E.E. Alghero, near the mouth of the Terno est. 40° 1' N. 10° 8' 27' E. The town is built partly on the side of a hill on the summit of which is an old castle now in ruin and partly in an unhealthy plain. It is surrounded by walls in bad repair and has a cathedral, and other Gothic churches several monasteries, and a theological seminary. A bishop suffragan to the Archbishop of Sassari resides here. The port is inconsiderable, and admits only small vessels. Wine grain and cheese, are exported from it, and it is frequented by the Genoese who come here to fish coral fine specimens of which are found on the coast. Pop. 600.

BOSBURY WITH UTLEADER, par. Eng. Hereford 4709 ac. Pop. 1153.

BOSCASTLE, a small seaport, England co. Cornwall 5 m. N N W Camelford, with a commodious quay and a considerable trade in corn, slate, and mangroves, of which last there is a mine in the vicinity. Pop. 807.

BOSCO — 1 A m. Sardinia, Piedmont, dist. of and 8 m. S.E. E. Alexandria, in the midst of a forest. It possesses a fine library and is the birthplace of Pope Pius V. Pop. 2680. — 2 Two towns, Naples, the one called *Bosco Tre*

Cave, and the other *Bosco Reale*. They stand at a short distance from each other at the S. foot of Mount Vauvau, and contain several churches and convents also a royal manufactory of arms and a powder-mill. A famous *pastr* is made here, and good wine and much silk produced in the district. Pop. of *Bosco Tre Case* 2355, of *Bosco Reale*, 5046.

BOSHINGTON, par S Wales, co. Pembrokeshire. P. 248.

BOSJEMAN N., or *Dumuk*: a race supposed to have descended at a remote period, from the Hottentots and the remainder of which—for they are now nearly extinct—are to be met with chiefly in the Karroos or desert plains lying between the district of Clan Williams and the Orange river Cape of Good Hope colony. They are of remarkably low stature, olive colour, small twinkling eyes, thick projecting lips, and small depressed nose, altogether their appearance is singularly repulsive, being at once diminutive and deformed. They have long been a persecuted race, having been shot down like wild beasts by the bores of the colony who were in the habit of hunting the numbers they had slain. The miserable remnant of this ill-fated tribe had a life of great wretchedness.

Holes scraped in the earth serve them as houses, in which no other domestic utensil is found than a wild gourd or ostrich egg-shell to carry water. In seasons of scarcity they devour all kinds of wild roots, ants, eggs, locusts, snakes, &c. Their most efficient weapon is the bow and arrow which they use with great dexterity at short distances. The arrow is poisoned and speedily fatal in its effects. Notwithstanding their most unimpressive personal appearance the *Bosjemen* are remarkable for vivacity and are at great pains in decorating their figures. Though reckoned the lowest in civilization of all the inhabitants of S. Africa, they are the only tribe that practise instrumental music and painting.

BOEKHOOP, a large vil. Holland prov. S. Holland, 10½ m. S.E. Leyden, on the Oonwe with a handsome Reformed church. In central position makes it a bustling place from the perpetual passing of vessels from Amsterdam, Leyden, the Hague, &c., to Goos, the IJssel, Zeeland, Brabant, and other provinces. Boekoop is famed for its butter and beef also for its puzery-grounds the timber and fruit trees and like wise the straw-herbs and other small fruit raised here, being much in request. The local branches of industry are very various comprising the manufacture of agricultural and horticultural implements also shipbuilding, tinworks, corn mills, wooden shoe making, and, among the poor the manufacture of sulphur matches, from stalks of hemp. Pop. 1884.

BONKOWITZ, a town and lordly *Mitau* circle Prussia. The town which is about 22 m. N. N. E. Brinn, is fortified has a modern palace belonging to Count Francis of Dietrichstein, with some fine pictures, a parish church a synagogue, a school and almshouse, and several mills.—The *Lomawur* area, 58 geo. sq. m. has a pop. of 10,989.

BOSNA, a river Turkey in Europe prov. Bosnia. It rises in the *bully* district in the S. W. part of the province, flows N. and falls into the Save in lat. 45° 7' N. Jun 19° 15' E.; total course, exclusive of its mouth, 95 m.

BOSNA SERAI SERAI, or *SERAJEVO* [anc. *Theropolis*] a city Turkey in Europe, cap. prov. Bosnia, situated on the *Milantz*, which is here crossed by a handsome stone bridge, 5½ m. W. N. W. Constantinople. It is well built, and, although most of the houses are of wood, has a gay and pleasant appearance, from the number of steeples and minarets with which it is embellished. It contains a *serai* or palace, built by Mahomet II. to which the city owes its name. 100 mosques great and small, four churches, three monasteries, two large libraries, several schools, baths, and charitable institutions. It was formerly surrounded with walls but these are now completely decayed and its only remaining defence is a citadel, built on a rocky height at a short distance E. from the town, crowned with cannon. *Rome* is the chief mart in the province, the centre of the commercial relations between Turkey, *Belmania*, *Cristia*, and S. Germany and has, in consequence, a considerable trade. The people are industrious, and manufacture arms and utensils of copper for the Turkish market, ironware, weapons and carved stuffs, *seropene* leather home-bear bags (for holding wool) *ostene* &c. There are also several *tanneries* in the city and at a short distance from it, several important iron mines and on a plain which

stretches to the W. the baths of *Sargievanke*. Pop. 60,000; of which 40,000 are Turks, 8,000 *Orthodox* and the remainder *Greeks* and *Jews*.

BOSNIA [Turkish *Bosna-ül-Hi*] a prov. Turkey in Europe, sometimes extended so as to include Turkish Croatia, Herzegovina, and *Rumia Proper* but more correctly confined to the last, which lies between lat. 42° 35' and 46° 50' N., and lon. 17° 10' and 21° E. and is bounded, N. by the *Sava*, which separates it from Austria, E. by *Serbia*, S. by *Albania* and *Montenegro*, S. W. by *Herzegovina*, and W. by *Turkish Croatia* greatest length, from S.E. to N.W. 240 m.; average breadth 85 m. area, variously estimated, but probably about 16,000 sq. m. Bosnia is not very regular in shape, but bears some resemblance to a triangle, which has its base on the *Sava*, and gradually narrows to its apex in the S.E. Viewed generally it may be regarded as a plateau which has its highest elevation in the S. and slopes partly from S. to N. and partly from S.W. to N.E. Its surface is much broken by mountains, which have an average height exceeding 6000 ft. and consist of ramifications of the *Dinaric Alps*. The principal range stretches, from N.W. to S.E. along the frontier of Bosnia, presenting towards *Montenegro* and *Albania*, a lofty mural face of calcareous rocks, apparently of secondary formation. The same formation containing the sandstones and shales of the *carboniferous* system and also, it is said, beds of coal is general throughout the country. Valuable minerals including the precious metals *quicksilver* &c. abound, but the working of them, for some reason or other is prohibited, or at least discontinued by the Turks. The only metals wrought are iron and lead. The principal rivers are the *Vrbas*, *Bosna*, which gives its name to the province, and *Drina*. They all take their rise in the principal range above mentioned, and proceed, in a course in the main, to join the S. bank of the *Sava*, thus belonging, in common with it, to the great basin of the *Danube*. The valleys in which these rivers flow are steep and confined in the S. but gradually widen out as approaching the N. still however continuing to be too much broken and inclined to descend the name of plains. The proper plain of *Bosna* occupies the centre of the province, having its greatest length N.W. to N.E. above 50 m., with an average breadth of 20 m. It forms an extensive basin enclosed by mountains and appears formed by the prolongation of their base. It is not uniformly level but broken by numerous small protuberances. The strata, as indicated by these consists of calcareous and *schistose* rocks, but the surface is covered by a thick bed of yellowish clay, evidently a lacustrine deposit, indicating that the whole basin has once been the bed of a lake. The climate of Bosnia, considering its latitude, is severe. The warm winds of the S. and S.E. can scarcely reach it, being intercepted by the mountain ridges in those directions while the valleys, lying open to the N. and N.W. give free access to the colder winds. In the mountains exceeding 8000 ft. night frosts begin in the end of September and even in the lower grounds, snow begins to fall in the end of October and often continues on the ground till late in spring. Frost and snow cover the higher plateaus till the end of April. *Bosnia* being geographically cut off from the mountain belt which gives the *terry* plains of Hungary strongly resembles that country in its vegetation. The loftiest summits are generally bare but the descending slopes are densely clad with the oak, beech, and pine, which afford excellent timber and shelter great swarms, both of larger and smaller game, the hunting of which is too often preferred by the inhabitants to more useful employment. The walnut grows at 1,000 ft. above the level of the sea. On the lower slopes fruits of various kinds are grown, particularly cherries and pears, from the latter of which a weak brandy is extensively made. The vine thrives in low and sunny vales, and would grow in many other spots where its culture is not attempted. The wine made is of indifferent quality and the inhabitants, probably on good grounds, instead of forming the culture of grapes, prefer that of prunes, on which they can calculate for a sure crop. Pears and apples are of excellent quality and a good deal of elder as well as a spiced apple-pie, called *pekmis* is made. Much of the country is incapable of cultivation but the great plain and the wider valleys are fertile, and yield good crops of wheat, rye, barley and corn. A rare mountainous district a kind of *blue corn* (called in Turkish, *Arasot-darad*) is commonly grown. Maize is grown only

in low valleys, particularly those to the N of Sarajevo tobacco and hemp on alluvial flats, on the banks of rivers and harbours, to a great extent, in the great plain. The potato thrives well, and flax is frequently seen in mountain valleys of considerable height. The mountain pastures are excellent, and feed large flocks of sheep and goats. From a mixture of these, milk and excellent cheese, resembling Gruyère, is made. Manufactures are comparatively insignificant. Iron is mined, smelted and manufactured to some extent at Voluntia, and good linen cloth is made in the S. of the province as at Boujia, coarse woollen covers are made in several places, and bear a high name both for quality and cheapness. To these may be added the Russian leather manufactures, particularly at Sarajevo and Vlasica, and cordwainers, especially that of Central Bosnia, where the manufacture of a species of yellow vases extensively used throughout the country has long had its principal seat. Trade, for which several districts are well situated, is rendered almost impracticable by the state of the roads and the quantity of wood and debris, which is allowed to choke up and impede the navigation of the rivers. The principal exports are fruit, chiefly prunes, and wheat. Bosnia is governed by a Vizir who has under him two Pashas of one tail, and several Agas. For judicial purposes, it is divided into 64 cadliuks. The people are of Serbian extraction, and about two-thirds of them are Mahometans. The remainder profess Christianity Bosnia, after the disruption of the Slavonian, Croats, and Servians, into Turkey passed to different masters, particularly Hungary and sometimes maintained its existence as an independent State. It ultimately fell under the domination of the Turks, and yields them a reluctant allegiance, which it has repeatedly attempted and only wants a favourable opportunity to throw off.

Pop. 700,000.

BOSPORUS STRAIT, or CHANNEL of CONSTANTINOPLE (often incorrectly written *Bosphorus* Turkish, *Bosphos* Latin, *Bosphorus Thracicus*) a narrow passage which connects the Black Sea with the Sea of Marmara and separates Europe

from Asia. It is about 17 m. long, and varies in width from a half to 1½ m. A current sets constantly through it from the Black Sea, running with great violence and rapidity when the wind is from the N.E. but hardly perceptible when it blows from the opposite quarter namely the S.W. The depth of water is considerable and the navigation safe. At its S. entrance, which is rather more than 1 m. wide, are two lighthouses one on either side that on the right or E shore is situated on a bill of point of land, about 1 m. to the S.W. of the ruins of Kavra Sarai, the other on the left or W side, stands a little to the S. of the celebrated mosque of St. Sophia. The former light may be seen from a distance of about 5 m. the latter from about 10 m. On entering the Bosphorus from this end the voyager has the city of Constantinople, the Golden Horn or harbour of Persul, and the suburbs of Galata, Pera, and Topkapi, on the left and on the right, the town of Scutari in Anatolia Turkey. At the N entrance of the strait there are also two lighthouses, which exhibit fixed lights on an improved principle one on either side with a fortress near each, and a few houses. This entrance is difficult to make by vessels, and the attempt is often attended with the most disastrous consequences the danger being increased by a false entrance about 15 m. E. from the real one. The scenery along the banks of the channel is extremely beautiful—magnificent palaces of which no fewer than 10 are imperial summer residences, and most of them on the Asiatic side handsome houses and noble gardens being thickly distributed over the face of the country in the vicinity of the strait, on both sides, alternated with picturesque cliffs of Jasper porphyry and granite. Animals and vegetables of every variety abound in this favoured region. At the narrowest part of the channel, about 8 m. from the S. entrance, occur the two castles or forts, called respectively Rumeli Hisar and Anadolu Hisar the former on the W or European side and the latter on the E or Asiatic. The Bosphorus was in ancient times remarkable for its turmy-fishery which is still a source of considerable profit to the inhabitants. The rivers great and small that fall into the strait are said to amount to 50 in number. The Bosphorus of Constantinople is called the Thracian Bosphorus, to distinguish it from the Thracian Bosphorus, i.e. a narrow channel of 41 m. between the Sea of Azov with the Black Sea, now called the Straits of Yankalf. By a treaty executed in 1829 between the Russians and the Porte the navigation of the Bosphorus was opened to the merchant ships of all nations.

BORRA or **BOSTRA** See **BOSRA**.

BORSAI L. par Eng York N Riding 9417 as P 1178. **BOSIAN** (EL) (anc Comana) is in Turkey in Asia, Nactia pleasantly situated on a plain, near the Syphos. A considerable trade in wheat is carried on here with the Turkomans. The town can be surrounded with water at any time should the attack of an enemy be threatened. It contains four mosques one of which is very ancient. El Bosian (Comana) was celebrated in remote times for the worship of Mithra, the Cappadocian Bellona, the population then consisting principally of soothsayers priests and slaves belonging to the high priest.

BOSTON, a seaport market to and for England and America, 100 m N London and 98 m S.E. Liverpool lat. 53° 0' N long 0° 2' W on a plain, on both banks of the Witham. It has two principal streets, called respectively High Street and Bargate one on each side of the river and a number of smaller streets and lanes all generally clean and most of them well paved. There is also a spacious market place near the centre of the town. It is lighted with gas and abundantly supplied with excellent water brought from a distance of 14 m. in iron pipes. The houses are almost entirely of brick, there being no stone quarries in the vicinity. An iron bridge over the Witham of a single arch 86½ ft. span erected at an expense of upwards of £20,000 connects the two divisions or wards of the town. The church built in 1809 is a noble structure, and is the largest parish church without cross aisles in the kingdom the width of the nave, including the side aisles, being 100 ft. and the extreme length 300 ft. The tower 282 ft in height, on the plan of that of the cathedral of Antwerp, is surmounted by an elegant octagonal lantern, forming a conspicuous landmark for sailors, being visible at sea from a great distance. The other places of worship are, a chapel of ease, a Baptist, Methodist (Wesleyan and Primitive) Independent, Unitarian and a B. Catholic chapel. The charitable institutions are very numerous, the funds administered by the charity trustees exceeding £2000 per annum. A staff of clergy for the parish church are supported out of this fund, and the free grammar-school, founded by the Royal Charter of Philip and Mary the other schools are, a blue-coat school for 83 boys and 55 girls Loughton's school, for 25

from Asia. It is about 17 m. long, and varies in width from a half to 1½ m. A current sets constantly through it from the Black Sea, running with great violence and rapidity when the wind is from the N.E. but hardly perceptible when it blows from the opposite quarter namely the S.W. The depth of water is considerable and the navigation safe. At its S. entrance, which is rather more than 1 m. wide, are two

boys, founded in 1767, with one upon Dr. Hall's system, and another on the national plan. There was also a dispensary or mechanics institution, permanent library and news-room (founded in 1799) library of the people, working-men's society and several other virtuous book-ethic but none of great magnitude, or very flourishing. The theatre, however, was a magnificent building, and the most attractive; the borough jail, the assembly rooms, and the season's-house, completed in 1844 at an expense of £15,000. There are in the town branches of the Standard and Boston Banking Company and the National Provincial Bank, with two private banks, a city house, a post office, and a large fish market. On the coast there are commodious harbours, surrounded by numerous villages.

Boston can hardly be said to have any manufactures, beyond a few iron-foundries, where a number of steam thrashing-machines, have been lately made and some shipbuilding there being two building yards with patent slips, where vessels of 300 tons can be constructed. The shipping trade, however is considerable. Up to 1751 an accumulation of silt in the river greatly impeded the navigation but the channel has been deepened, and the harbour enlarged so that vessels of 1000 tons can now pass quite freely. The extensive lumber forests, constituted a very extensive portion of its trade at present the exports consist chiefly of corn, and other agricultural produce. The principal imports are timber, hemp, tar and iron from the Baltic. The number of vessels registered at the port on December 31 1847 was 185 tons, 8 3/4. The number of vessels entered during the year ending same date was 1998 tons 95 1/2—cleared 591 tons 20 6/25. As at early stated, the principal trade of Boston lies in grain of all kinds, and of all sorts of foreign goods, which are annually imported to the amount of \$1,000,000. The following Table shews the extent of the trade for five consecutive years.

Grand total in 1941	1942 1943 1944 1945
184	238,453
1943	17,178
1944	9,154
184	2,913

It is worthy of note, that Boston at one period namely A.D. 1204 ranked second in mercantile importance among the English seaports if we may judge from the amount of a tax levied on them. London paid £256, Boston £280. Southern towns £12. (Lynn *Loc.*)—*(Madox's History of the Exchequer)*

The wealthiness of Boston has been impaired, and its general prosperity materially increased, by draining the surrounding fens, which now furnish a rich tract of nearly 70 000 acres. The principal occupations of the country are the raising of turneps in large quantities in the fens, and the raising of wool. Large quantities of wool and wensels are taken in Boston, dyed, and sold in the market. A cattle market is held once a week sometimes twice; and there are four important annual fairs. Boston received its first charter of incorporation from Henry VIII. By the Municipal Act of 1835 the government of the town was vested in a mayor, six aldermen, and 28 councillors, with the usual municipal officers. Petty sessions are held every Tuesday, and the assizes are held on the circuit twice a year. Monthly Bazaar sends two members to the House of Commons. Registered electors (1849) 1,106.

The early history of Boston is obscure, but it is believed that the Romans built a fort at the mouth of the Wiltam. The monastery built by St. Botolph was destroyed by the Danes in 840 but was afterwards rebuilt on the N side of the site of the present church. Its remains were lately visible in a dwelling-house called Botolph's Priory which was now pulled down and the new mansion house stands on this site. In the Middle Ages, Boston was a place of considerable commercial importance. It was the chief port of the East Angles in 1281 the town suffered much from fire and in 1295 was greatly injured by another fire. By 27 Edward III. it was made a staple port for wool, leather, tin, lead, and other commodities and the Flemish merchants who settled in England here established a guild. Boston afterwards suffered by the plague, and by famines, to which its low situation rendered it particularly liable. The principal cause of its decline was the increasing difficulty of the navigation of the Wiltam. The channel having been improved, however, the sea trade was restored, the prosperity of the place has been in some degree restored. John Foxe, the celebrated martyrologist, was a native of the town.

town. Boston has direct railway communication with London through Peterborough, and with the W through Lincoln, by means of the Great Northern line, opened in October 1848 and with Hull by the East Lincolnshire Railway opened at the same time. Pop. 17,518 — (Thompson's *History of Boston*, Noble's *Go of Lincoln Parliamentary Papers Local Government*).

BOSTON a city U States, cap. Massachusetts, on Suffolk, situated principally on a peninsula, 3 m. long, and 1 m. broad at the W extremity of Massachusetts Bay. lat. 42° 21' 24" N lon. 71° 5' 30" W (a.); 210 m. N E. New

BOSTON a city U States, cap. Massachusetts, on Suffolk, situated principally on a peninsula, 3 m. long, and 1 m. broad at the W extremity of Massachusetts Bay. lat. 42° 21' 24" N lon. 71° 5' 30" W (a.); 210 m. N E. New

York. Boston consists of three parts. Old Boston on the peninsula, St. Boston on the S side of the harbour and N. Boston built within the last 15 years situated on an island and communicating with Old Boston by a steam ferry which starts every five minutes from each side. The promontory on which it is built is connected with the mainland by a narrow schuim, called the Neck, about 1 m in length. The streets are all paved with granite, and the sidewalks are of granite and curbs of granite and granite. In the older parts of the town the streets are narrow and crooked, the houses small, and constructed of wood, but in the newer portions, the streets are wide and straight, the houses spacious, and many of them built of granite, though the greater part are of brick. This change for the better is gradually pervading the whole city. Communication with the mainland is maintained by six daily ferries, which cross the harbour at intervals of 15 minutes, and by a horse-drawn line between Hull forming a conspicuous object from a distance, and from which one of the finest views in the U. States is obtained. Faneuil Hall marked, an elegant market-house of granite. Faneuil Hall in which public meetings are held in the city hall or old state-house, an old building used formerly as a public office, the Massachusetts Hospital, a handsome granite building, 183 ft. long by 56 ft. wide, with 4 stories, the Boston house, a splendid one with building of Greek architecture. Twenty

see besides nearly one hundred churches in the city many of them very handsome structures. Among the public places, the Common is the most important. It occupies the S. delivery of Beacon Hill and contains about 60 ac. On its

W side is a botanical garden, containing about 25 ac. The literary institutions are also creditable to the intelligence of the citizens. The public libraries contain 70 000 volumes, and are yearly increasing. The library of the Boston Athenaeum con-

BOSTON from above Charlestown. 1810. — After L. Leveque.

tains 30 000 and that of Harvard College, 40 000. There are 80 newspapers published in Boston eight of which are daily. Besides these, there are a number of magazines and reviews, including the *North American Review*, a work of European as well as American reputation. Its principal literary societies are the American academy of arts and sciences, the Massachusetts historical society and the Boston natural history society which has a fine cabinet. It contains, likewise, two theatres—the Tremont and the National theatre. The medical branch of Harvard University has its seat in Boston, and schools are numerous, and in general well conducted. There are also a number of religious and charitable societies in the city.

The harbour is esteemed one of the best in the U States, being spacious safe, and easily defended. The passage to it is not more than 4 m. wide, with several islands obstructing it, so that the main entrance will scarcely admit two vessels to pass abreast, while 500 may ride at anchor within with a good depth of water. The outer harbour has about 40 small islands, 15 of which afford excellent pasturage. The wharves are extensive commodious and some of them of great length, with ranges of lofty brick warehouses. The trade of Boston is extensive. The imports consist principally of wools, cotton, linen and silk manufactures sugar coffee indigo, hemp, and iron and the exports chiefly of fish and fish oils salted meat, foreign soap candles, and iron. In 1852 the total value of the foreign exports of cotton manufacture amounted to \$216 019 and the total foreign imports amounted to \$2,797,428. In the same year the aggregate tonnage of the shipping amounted to 283 068 tons. Three-fourths of the trade between Russia and the U States, and above half of that with India passes through Boston. There are, besides a packet line of large steam-ships between Boston and Great Britain and other packet lines to every port of importance throughout the U States. Six different lines of railway connect Boston with various places in the state. A line also communicates with the state of Maine, passing through New Hampshire.

Boston has a history of some interest. It was founded in 1630 by the settlers established at Chastestown, on the shore of Massachusetts Bay. The name was given in compliment to the Rev John Cotton, a pious and eloquent clergyman from Boston in Lincolnshire. It was here that the revolutionary movement, which terminated in the independence of America, first commenced, several of its most active leaders being natives of the city. Boston was the scene also of hostilities connected with that event. The royalist forces under General Howe, were here blockaded by the American troops under General

Putnam but the latter were ultimately subdued from their position on Dorchester heights, after a serious loss on the part of the British. During this action, usually named *Barker's Hill* fought June 1775 Charleston then a suburb of the city and the scene of an act on was set on fire by the latter and entirely consumed. A month afterwards Boston was invested by Washington and the British General eventually (March 1776) compelled to evacuate the town. The city is governed by a mayor eight aldermen, and a common council of 48 members. The well-known philosopher Benjamin Franklin was a native of Boston, having been born there on January 17 1706. 1 op (1849) 93 38d (1860) 136 881

BOSZEA, BOSNA, or BOMA [the Bosna of the Greeks] a town, 80 m N.E. Jerusalem anciently of great importance, now for the most part, a heap of ruins some of which, however are magnificent, and mark the height from which the prostrate city has fallen. Amongst these are the great mosque, a triumphal arch, a castle of great strength, built by the Saracens; and a vast reservoir for water; besides numerous pillars, and other ruins of the most elaborate workmanship. The corners of the streets and alleys are almost wholly obliterated, and the few inhabitants that now remain are lost in the labyrinthine of shattered edifices and crumbling walls, which

which they are surrounded. The vicinity was at one time celebrated for its vineyards but they have long since wholly disappeared. After the establishment of Christianity it was an archbishop's see, with 19 bishoprics under its jurisdiction. *Souma* is mentioned in several places in Scripture.

BOTAFOGO, a considerable vil Brazil prov of, and about 4 to 8 W Rio de Janeiro, on a bay of same name, commencing with the Bay of Rio de Janeiro. This village, which is rapidly increasing in size, is composed of fine country houses, ranged in a semicircle round the N margin of the bay.

BOTANY BAY a bay New S. Wales co, Cumberland, and so called by Captain Cook, the first discoverer of Australia on account of its profuse vegetation. It is copious and safe, with an entrance about 1 m wide, but afterwards enlarging to 3 m. Good anchorage is found in from 4 to 7 fathoms water but both on the N and S. side, and in the bottom of the bay false extended to a great distance from the shore, having only 4 or 5 ft. of water on them. The anchorage on the E. side, too, conveys to the entrance of the bay is exposed to heavy seas, from the E winds. Cook landed here on his first voyage, in 1770, and took possession of the country in the name of his sovereign, calling it New S. Wales. Eight years afterwards, Government having resolved on founding a penal settlement in the S. hemisphere sent out Governor Phillip, to establish such a settlement in Botany Bay. Finding it to possess the disadvantages above enumerated the Governor proceeded to Port Jackson, a few miles further N and there planted the new colony founding at the same time the now large and populous town of Sydney.

BOTANY ISLAND S. Pacific Ocean, off the N.E. extremity of New Caledonia lat 22° 27' S. lon 167° 1' E. (a)

BOTEL TOBAGO (Great and Little) two small islands China Sea, off S.E. coast of Formosa, from which they are distant about 45 m. The largest is in lat 21° 50' N lon 121° 28' E. the smaller in lat 21° 50' 30" N. The former is 3 or 4 m in extent, of considerable elevation, and the higher part crowned with trees. It is well inhabited, having several large villages on the S. portion. The latter or Little Botel which is about 2 or 2½ m. to the S.E. of Great Botel, is also of considerable height with some houses on it.

BOTESDALE, or **BOTENSDALE**, a tn. England co. Suffolk, 13 m. N.E. Bury St. Edmund's, is a dale and consisting of one street, nearly 1 m. long. Houses, chiefly of brick. It contains a chapel of ease belonging to the established church, a Baptist and Wesleyan Methodist chapels, and a free grammar-school founded by Sir Nicholas Bacon father of the celebrated Chancellor Bacon. Pop 626. (Local Correspondent)

BOTHEHAMPTON par Eng. Dorset 823 ac. P 548

BOTHNIA (Gulf or) [Swedish *Botnia* When] the N portion of the Baltic Sea, beyond the Åland Isles, between Sweden and Russian Finland. Length, from N to S. 600 m. extreme breadth, 156 m. Its depth is very various, round the small islands 4 fathoms and elsewhere 20 to 50. It has fewer shoals than other parts of the Baltic, and its harbours are better. It receives a great number of considerable streams from Sweden, and several small ones from Russia. On its shores are the towns of Åbo, Torné, Helsingfors, &c.

BOTHNIA, **Boten** or **Botnia**, a territory N Europe, both sides of the gulf to which it gives its name. It was composed of the provinces of E and W Bothnia, both of which once formed a portion of Sweden but the former now belongs to Russia, as well as a small part of the latter. E. Bothnia, or *Öster-Boten*, is now comprised in Russian Finland (which see). W. Bothnia, or *Väster-Boten*, is now comprised in the two Swedish N. or counties of Umeå and Västerbotten.

BOTHELWELL, a par Bedford, co. Leicestershire, with vil. of same name. The parish, extreme length, about 8 m., extreme breadth, 4 m., is rich in coal. In a picturesque hollow at the N.E. end of the village, through which runs the Clyde, is Botwell Bridge, now much altered and improved, but originally of great antiquity which gave name to the battle fought there between the Covenanters and the royal troops, under the Duke of Monmouth on June 22 1679 when the former were defeated. The ancient castle of Botwell, a

magnificent ruin, once a stronghold of the Douglases, is situated on the summit of a steep bank, sloping down to the Clyde, and surrounded by fine woods and extensive pleasure grounds. It forms an exceedingly interesting and striking object. Joanna Baillie, the celebrated authoress, daughter of the Rev James Baillie at one time minister of the parish was born in Botwell manse. —The village consists chiefly of a row of houses on either side the road from Glasgow to Hamilton, about 8 m. S.E. the former and 2 m. N.W. the latter. The houses are of stone mostly of respectable, some of neat appearance. The latter is more especially the characteristic of various recent erections, built to accommodate the increase of summer visitants since the opening of the Clydebank Junction Railway which has a station about a mile from Botwell. Besides the parish church, there is here a Free church, and some schools. Pop. of par 15 283.

BOTZEN (Italian, *Bozzeno*) a tn. Austria Tyrol, gov of and 64 m S. Innsbruck at the confluence of the Teller with the Elzsch, near where these fall into the Adige. It is a well built flourishing town, surrounded by a wall 2 m. in length and in some places 34 ft. thick, built to protect it from a mountain-terror close by. Its situation at the junction of the roads from Switzerland, Germany and Italy has secured it a share of the trade of these countries rendering it a thoroughfare for the transit of goods and making it the first trading town of the Tyrol. The parish church is a Gothic building of the 14th century with an elegant spire adjoining. It is the new cemetery. The other objects worthy of notice are the church of St. Anselmo a grandiose, ancient house, two monasteries, a normal school and a nursery. It has also some silk and woolen manufactures, tanneries dyeworks and a printing-office. Botzen is known principally for its four annual fairs, resorted to by commercial travellers from all parts of Italy and Germany. In the environs wine and fruits are produced in abundance, and of excellent quality. The inhabitants of the town are chiefly German, but in the neighbourhood a dialect of the Italian is spoken almost universally. It is thought that the town occupies the site of the ancient Roman *castrum Frea Drun.* Pop. 19 000. —The *Cinella*, area, 964 sq. m. produces all kinds of grain, hemp and flax. A great quantity of silk is produced, and some of the waxes, particularly the Koebelberger and the Lentscher are celebrated. The cheese of Botzen also bears a high name and is largely exported. Pop 107 072

BOU NOURA a small tn. Algerian Sahara, 8 slopes of the Atlas lat 28° 28' N lon 2° E. It is walled, and has three gates; and some trade in grain

BOU SAIDA a tn. Algerian Sahara, lat 28° 22' N lon 4° 9' E. In a fertile site, amidst an arid plain among the Atlas Mountains. It consists of 500 or 600 houses, and five mosques, divided into eight distinct quarters, each of which being surrounded with its own gardens gives the whole the aspect of a cluster of villages. In one of these dwell the Jewish inhabitants apart from the others. They have a synagogue, and their own cemetery and schools. Each quarter has its school where are taught reading writing, and religious precepts. The *Kabhat-el-Naher* or public market-place has daily all the bustle of a fair, and it is not uncommon to see 500 or 600 camels of burden there at once the town being, in fact, one of the greatest entrepôts of N Africa, and frequented by the people of many Arab tribes, who there exchange country products for local and foreign manufactures, of which part come from Algiers and Constantine. It is also a busy seat of industry containing 60 soapworks 10 mills and armaments shops, several forges, four dyeworks and numerous shops for general ware. Each family makes its own vestments and pottery. The

Jews are employed either in commerce, or as wool-carders, tailors, dyers, goldsmiths, &c.

BOUCHES-DU RHONNE, a dep. France, Provence (cap. Marseilles) situated, as its name implies, at the mouth of the Rhone. Bounded E. by dep. Var N. by dep. Vaucluse, from which it is separated by the Durance and W. by dep. Gard from which it is separated by the main stream of the Rhone as far as Arles, and thence to the sea by the W. branch of that river and S. by the Mediterranean between lat. 48° 20' and 48° 55' N. and lon. 4° 25' and 5° 49' E. about 76 m. N. to W., by about 80 m. N. to S. Area, 1,287,083 a.c., of which about one-half is under cultivation, the remainder being occupied by forests, heaths, wastes water &c. A great portion of it is occupied by calcareous hills, the last elevations of the Alpine range in that direction, of which St. Victoire (541 ft.) is the highest peak. Between the mountains are various basins and towards the shore are extensive plains, sloping gently to the sea. Between the Rhone and the lagoon of Berre is the great plain of the Crau d'Arles. Its borders are tolerably well cultivated, and support a number of cattle but the centre is little better than a desert of stones and pebbles, scantily mixed with reddish-brown earth, but affording winter pasture for sheep, which are fed on the pastures of Dauphiny in summer. The Rhone is the principal river. Near Arles it divides into two branches, leaving a large delta, called the Isle of Camargue; other streams are the Durance the Touloubre, the Ares, and the Eyranne. Several canals facilitate transport, and are especially useful for irrigation. Some small islands in the Mediterranean belong to the department. The climate in general is very warm, with little rain during summer. A cold, and generally violent wind called *mistral* from the Cevennes so invariably follows rain that even a shower will bring it. It lasts from three to nine, and sometimes though rarely to twelve days and produces evaporation which dries the ground with astonishing rapidity. The soil of the department is generally arid and unproductive without irrigation. Some alluvial spots are fertile, but the total produce of grain is inconsiderable, except in the territory of Arles. Vines, however thrive, and some of the wines are esteemed, though seldom exported. The plants of Crau and Camargue produce many plants not indigenous in the V. of France. The cypress, laurel and myrtle appear in the hedges the oleander along the banks the elms and rosemary cover the rocks and lavender thyme, sage and other odoriferous plants on the hills. Almonds give sapot, and nuts, and particularly olives, are extensively cultivated. The pastures are only used in winter cattle being unable to endure the intense summer heat which likewise parches the grass. Coal limestone, marble, alabaster gypsum, clay for pottery and crucibles &c. are found, but the minerals are of little commercial importance. Salt is extensively manufactured from the lagoons and the saltworks of Berre are celebrated both for the quantity and quality of their produce. The articles manufactured are principally soap brandy olive-oil (the best in France) soda, chemical stives vinegar scents, essential oils, cloth, leather articles in coral silk, glass tiles, bricks tobacco &c. The fisheries are numerous and productive. The tunny anchovy and sardines are caught on the coast, or in the lagoons which, during winter are also frequented by the numerous water-fowl that migrate from the N. of Europe. The common language of the people is a combination of Celtic Greek and Latin mingled with Catalan and Italian, and is very expressive. The inhabitants are frank hospitable and sober but excitable and passionate. They are robust and industrious have great natural vivacity and an energetic propensity to belligerence. The women of this part of France are celebrated for their personal attractions. Before the first Revolution, paternal authority was recognized to an extent now altogether unknown. The head of the family was its chief and nothing was done without his sanction. This authority descended from father to son and a general register was kept of domestic proceedings in a book called the *livre de raison*. This book contained a record of titles genealogies partitions divisions of property inventory of movables, &c. and was contained in a chest appropriately sculptured, of which the head of the house alone kept the key. During the lifetime of the father the eldest son made the entries in the *livre de raison*, and each was signed by the father who, on winter nights, brought forth the family treasure and caused it to be

read for the general edification. Most of these singular books have now disappeared but some of them are still extant in the vicinity of Arles, and carry back the history of families to the time of Charles of Anjou, or even to a period more remote. Principal ports—La Vigneole, Arles Martigues, Port St. Beuve, Fontenay, Marseilles, Cassis, and La Ciotat. Pop. 1849 418,918.

BOUFARIK, a vil. Algeria, prov. of and 16 m. S. S. W. Algiers. It has well-frequented markets, and is an important military station on the road from Algiers to Biledul and Oran. Pop. 2181.

BOUGIAH (French, *Bougie*) a tn. Algeria, prov. of, and 118 m. E. Algiers, on the Mediterranean near Cape Carbon. It is strongly fortified, and has a considerable garrison. It has no harbor but the anchorage is secure. Considerable trade is carried on here in oil, honey was bred, and grain, and the town gave its name, Bougie, to the wax candles, for the manufacture of which it has been long famous. It was formerly a place of great importance and contained extensive and interesting remains of antiquity. The French troops took possession of it in September 1835. Pop. 6000 a.c. of garrison, 467.

BOULLON a tn. Belgium prov. Luxembourg 17 m W. S.W. Neufchateau, 1 bank, Semois in a deep gorge of the Ardennes, and overlooked by a strong castle, built on the summit of an adjacent rock, surrounded in its turn by the surrounding hills. The town is small, but regularly built and possesses two churches, a town-house, prison hospital posthouse and two schools. Manufactures—woollen stuffs leather and oil, with filling bark, and saw mills. Trade—hardware, cattle, oak-bark, &c. Bouillon was once capital of an ancient duchy of its name, and was the property of the famous Godfrey leader of the first crusade and subsequently King of Jerusalem. The duchy was annexed to the French republic in 1794 and the town was besieged by the allied troops in 1810. The castle was restored to Belgium, and fortified, in 1827. Pop. 4510.

BOULIN a small Isl. and con. W. coast, France, at the bottom of the bay of Bourgneuf dep. La Vendée. It is separated from the mainland by a narrow channel, now crossed by a causeway. The circumference of the island is about 16 m.; and although low and marshy it has some excellent pasture age, and produces large quantities of salt, obtained from the salt marshes besides some corn, cattle, and horses. It contains only one village, that of Boulin (anc. *Bouvenon*) from which the products of the island are exported. Pop. 3678.

BOULAC, BOULAC or BULAC, a river port, Egypt, t. bank, Nile, 8 m. N. Cairo, of which it is the port. The houses, generally of one or two stories fling the river at the port, and present an indifferent appearance, excepting the palace of Ismael Pasha, which is a singular compound of Italian Greek, and Saracenic architecture. Here passengers for Suez and India embark; and here is a custom-house, at which all duties on goods imported from Alexandria are levied. Boulac also has a school for engineers, a Government printing-house, a cotton factory a silk-mill and some other manufacturing establishments. It was taken and burned by the French in 1799 and was rebuilt by Mahomet Ali since which time it has become an important place. Pop. 19,900.

BOULAY a tn. France, dep. Moselle, 16 m. E.N.E. Metz, r. bank, Nied. It is well built. The streets are regular and spacious and the market-place, where the townhouse

stands, is of great extent, and adorned with a fountain. The parish church is large, and richly decorated. Its manufactory items are cloth, blankets, glass, ivory black, hardware, foil blades, cotton yarn, and leather. Pop. 2894.

BOULEBANI is in W Africa, cap. Boudon near bank Faidon lat. 14° 20' N. lon. 12° 35' W. It lies in a large plain bounded E by low rocky hills, and on other sides by forests. The buildings, many of which are mere huts, are grouped together in clumps the whole surrounded by a rudely embattled wall pierced at intervals with gates. The streets, or rather irregular passages around these groups of dwellings are not paved or kept with the least regard to cleanliness although the place is famous for its spring water and, indeed takes its name from its wells. In the centre of the town is an area, on which stands a mosque, an extensive building of very rude architecture and the late, or fortified residence of the amany or sovereign of Boudon. Most of the people here are the slaves of the monarch who draws a large revenue from their sale. Pop. about 2200. — (Radford's *Afrique Occidentale*).

BOULGE par Eng. Boulogne 543 ac. Pop. 38.

BOULOGNE [anc. *Bonna Paris*] a large and handsome ville France, dep. Seine 5 m. W. the centre of Paris, of which it forms a kind of suburb, between the wood of same name (Bois de Boulogne) and the Seine which is here crossed by a stone bridge of twelve arches leading across to St. Cloud. It is well built, and is especially celebrated for the promenades in its vicinity. The Bois de Boulogne contains about 2400 ac. was replanted and remodelled by Napoleon when he fixed his residence at St. Cloud. In 1815 the English troops encamped in it; and it has recently suffered from the construction of the fortifications of Paris, which traverse one of its extremities. The wood is surrounded with walls, has eleven gates, and is intersected with an infinity of roads and avenues which form the resort of the fashionable population of the capital. Pop. 6000.

BOULOGNE MER [anc. *Bononia*] a seaport in France dep. Pas de Calais at the mouth of the Liane, 20 m. S.W. Calais lat. (normal) 50° 44' 30" N. lon. 1° 37' 16" E. (a.) It is divided into the upper and lower town. The former situated on an eminence is surrounded with ramparts of ancient construction, along which is a promenade, from which a fine panoramic view is obtained embracing not only the surrounding country, but extending across the Channel to the chalky cliffs of England which in clear weather are distinctly visible. It contains the imperial palace formerly inhabited by Napoleon and the house where Le Sage, author of *Gil Blas* died. The Hotel de Ville occupies the site of the palace of the Counts of Boulogne. The castle, situated at a corner of the ramparts was built in the 15th century by Simon de Villiers. On the ruins of the ancient cathedral a modern cathedral is in course of erection which when completed, will far outstrip all the other public buildings of Boulogne. One of the gates lead down by a steep but narrow street, called the Grande Rue to the lower town which stands on a flat, and is well built in the modern style and presents a greater appearance of activity and commerce than is usual in French towns. It has several churches including an English Protestant church a public library containing 25 000 volumes a museum of natural history and antiquities an hospital and an elegant bathing establishment. The harbour formed by two large basins, defended by several forts was enlarged by Napoleon when he proposed to invade England and was the scene of Nelson's successful attack on the flotilla by gun-boats. A French army of 150 000 men was then encamped in the neighbourhood of the town where, on August 15 1805, were distributed the first decorations of the legion of honour. To commemorate the foundation of that order and also, by anticipation, the conquest of England, the army erected a monumental column at its own expense, and dedicated it to the Emperor. The column which is 164 ft. high, stands on an elevated plain about 1 m. from the town, and is surrounded by a statue of Napoleon, and ornamented with bronze bas-reliefs. The port is safe, but counterbalanced by a bar and of difficult access. A fixed red light is placed on the N.E. jetty and two other lights one above the other on the N.W. jetty. The harbour has lately been improved, but is still, and in all probability must ever remain, only a tide harbour. The town is the seat of courts of first resort and of commerce. It has also an exchange, a custom-house,

and several societies—agricultural, commercial, and scientific. It manufactures coarse woollen stuffs, sailcloth, lace, fishing nets crochery and fine hawthorn for the colonies, bottles, crockery, bric-a-brac, and leather. The inhabitants are mostly employed in fishing and daily dispatch large quantities of fresh fish to Paris. They also engage extensively in the herring-fishery and in 1848 had nine vessels employed in the Newfoundland cod-fishery. They are also understood to carry on a large contraband trade, particularly in brandy with the English coast. The general trade of the port is extensive and steam communication is kept up with London, Dover and Brighton. In 1843, the foreign vessels entered at Boulogne were 831. Tonn 80 610—cleared, 865. Tonn 83 403. The vessel (1848) completion of the railway to Amiens has brought it into communication with Paris. The annual number of passengers who embark and disembark, is about 60 000. Many English reside at Boulogne; and there are numerous educational establishments and boarding-schools for English children. The fishers are a body by themselves, inhabiting a particular part of the town, speaking their own dialect and seldom intermingling with the other inhabitants. They are bold seamen, and their boats are not surpassed by any in the Channel.

Boulogne still exhibits some Roman remains. The Northmen took it in 889 and massacred the inhabitants. On September 13 1544 the town capitulated to Henry VIII of England after a siege of six weeks. The English retained it till 1550 when Edward VI restored it to France, upon payment of 400 000 crowns. Charles I demolished it in 1653. During the Republic Boulogne received the name of Port de l'Union. Pop. (1821) 18,007 (1831) 30,856 (1846) 28,741.

BOULSTON par S. Wales 1 inch scale 182° ac. P. 324.

BOULTHAM par Eng. Lincoln 1410 ac. Pop. 74.

BOUNG a prov. Japan, one of the largest in the Kin

BOUNJUL BELANDS two islands about 13 m. apart, Australia. Gulf of Carpentaria. The larger is intersected by the meridian of 140° E. and is 3½ m. long and three-fourths of a mile broad. The smaller is about half a mile each way. They obtained their name from the great quantity of turtle found on them.

BOURBON (Isle of) an African isle belonging to France Indian Ocean about 400 m. E. Madagascar and 90 m. S.W. the Mauritius lat. (St. Denis) 20° 51' 30" S. lon. 55° 39' 45" E. (a.) 45 m. long N.W. to S.E. and 33 m.

extreme breadth area, 900 sq. m. It is nearly circular, has no great indentations on its rocky coast, is volcanic, and composed of a mass of mountains, rising to a considerable elevation near the middle of the island and sloping down on all sides to the coasts along which is a grille of cultivated

land 8 to 4 m broad. The mountains form two principal groups (that of Piton des Neiges [snowy peak] an extinct volcano in the N.W. the most extensive and that of the active volcano, Piton de la Fournaise, in the S.E.). The culminating peaks are Piton des Neiges, 10,384 ft., Grand Bernard 9743 ft. and Chimaneuf 7492 ft., all in the N.W. group and Piton de la Fournaise, 7217 ft. The plains between the two mountain groups are not extensive. The principal ones, called the plain of the Caffres, and that of the Palmiers separated by a respect of volcanic rocks, are at a considerable elevation above the sea level. The soil of the former is entirely composed of lava and other volcanic substances; and it is scarcely destitute of vegetation although in some places a few stunted shrubs exist. In the latter many trees are found, including palms, whence the plain derives its name. Streams are numerous coursing down the mountain sides in all directions and forming deep rugged ravines. They are, however mostly torrents of no great use, except during the rainy season when they descend with devastating force on the cultivated plains below. Earthquakes are rare and little felt.

The climate is delightful and healthy especially in elevated situations on the windward side. The air is pure, and the sky always clear. At St. Denis, the hottest part of the island, and at the sea level—extreme heat 90° 50' mean of February and March, the hottest months, 81° 50' mean of August the coolest month, 72° 50' lowest temperature 61° 25'. There are two distinct seasons, the hot and rainy season, from the end of November to the beginning of May and the temperate season from May to the end of November. The prevailing winds throughout the year are from the E. and S.E. except at new and full moon. The island is often times swept by terrible hurricanes but was calmed, until recently entirely free of endemic malarial and fevers. It would appear however that now after a recurrence of four or five years, Europeans are subject to bloody flux and typhoid fever. The mountains were at one time well wooded and are still partly covered with forests, in which many useful trees are to be found. Excepting a circular basin near Piton des Neiges, no part of the interior is cultivated or inhabited. All cultivation is on the shore fields nearly adjacent to, round the foot of the mountain where the soil generally speaks for itself of the greatest fertility and presents all varieties of levels, from the margin of the sea to 8000 ft. high. The principal articles cultivated are sugar coffee cloves, peppers, tobacco, and potatoes. Wheat, maize, and rice are also raised but not in quantity sufficient for the consumption of the island. Manioc, the excellent arum legumes, &c. are also grown to some extent. The fruits of Bourbon are those both of European and tropical countries, and include pine-apples, bananas, bread-fruit, dates, figs, grapes, oranges, strawberries, raspberries, &c. The dryness of the pasture-lands prevents the rearing of cattle in numbers sufficient for the wants of the population of domestic animals pig, as usual in greatest plenty their numbers nearly equalling that of the inhabitants. A few wild goats are to be found in the woods and knolls and are obtained in the W. districts. Bats are numerous and are esteemed a great delicacy by the natives. The coasts abound with fish, and the shores with beautiful shells. Ambergris is also found. The island has neither metals nor useful minerals other than volcanic stones and earth. It has one superfluous alkaline spring, in the vicinity of Piton des Neiges, which is somewhat frequented. Manufactures there are almost none, excepting that of bags for holding sugar &c. some lime-burning and tanneries. The principal exports are—raw sugar rum coffee cacao, cloves, mace imports—rice, wheat, oil, wines, cattle, salt, porcelain, &c. with notions and other manufactured goods. After France Bourbon trades chiefly with India, to which it sends slaves and from which it imports rice. Madagascar from which it obtains large cattle, and rice and the Mauritius. In 1840 the imports amounted to 2,688,894 and the exports to 4,240,871. The island has no harbour but only about a dozen of open, exposed roadsteads of which, the best are those of St. Denis on the N., and St. Paul on the N.W. side. It is divided into two arrondissements subdivided into 18 communes six caisses, and 13 parishes and has two principal towns—St. Denis the capital and St. Paul and 11 other towns and villages, mostly built on the coasts. Bourbon is presided over by a Governor assisted

by a council of 80 members, elected for five years and there are a royal court, two courts of assize, and two of first resort. Besides a college, there are numerous schools on the island, 18 churches, two hospitals two establishments for the relief of the poor and two prisons.

The island was discovered by Mascareignes, a Portuguese navigator in 1543 at which period it was not inhabited and received the name of its discoverer. In 1642, the French sent here some criminals from Madagascar and, having formally taken possession of it in 1649 named it Bourbon. At the beginning of the first French Revolution the name was changed into that of *Éléonore*, and during the Empire into that of *Bonaparte* and *Napoleon*. It was captured by the British in 1810 and restored to France in 1815 when it resumed the name of Bourbon. Pop. (1841) 111,682 of which 60,998 were slaves.

BOURBON L'ARCHAÛMENT [anc. *Barbe Fréchaudelle*] is in France dep. Allier 13 m W Moulins, whence the royal Bourbons are said to have been named. The ruins of a castle, which belonged to the first lords of Bourbon are pointed out as all that remains of the ancestral halls of the royal families of France and Spain. The town is now only noted for its thermal springs, used in cases of rheumatism, paralysis, gun-shot wounds, and diseases of the eye. The baths were known to the Romans who appear to have had an establishment in this locality 1 op. 161.

BOURBON VILLE, a tn. France, dep. Vendée 931 m W V. Paris agreeably situated on a hill & bank XN. The streets are broad straight, clean and lined with good-looking houses and nearly all end in the Place Royale a spacious square, bordered with rows of fine trees and surrounded by public monuments and elegant mansions. The parish church, with a peristyle of six Doric columns and the massive or mansion house, an elegant Italian building, are both in the Place Royale. Besides these, there are an elegant market house, centre and extensive public edifice, large barracks and a small public library. Bourbon is likewise the seat of a court of first resort and it has an agricultural society and lyceum. It has no manufactures, and scarcely any trade. The town occupies the site of the ancient *Boconerion*, a large feudal castle founded prior to the Crusades and dismantled by Charles IX. at Louv. XIII and in 1798 thoroughly destroyed by the Republicans. In 1805, Napoleon selected Bourbon for the capital of the department and devoted 2,000,000 francs (£240,000) to the erection of the public edifices requisite for the chief town of a prefecture. It was named *Napoleon Ville* until 1814, when a decree of the Comte d'Artois dated April 25 changed it to Bourbon Vendée. Pop. 6280.

BOURBONNAIS a prov. France, now forms the dep. of Allier and also the arrond. of St. Amant dep. Cher.

BOURBONNE-LES-BAINS [anc. *Durbonna*] is in France, dep. Haute Marne, 21 m. N.E. E. Langres, occupying the site of Roman thermal baths, succeeded by a feudal castle, and then by a small town. The present town was built about the commencement of last century the former one having been almost entirely consumed by fire. The baths, whence the town is named, are derived from three springs of the respective temperature of 186° 124° 121° F. The latter belongs to the military hospital. The public bathing establishment is a very handsome edifice where every convenience is provided for the invalid. The waters are used extensively for chronic complaints, and for old wounds, in the cure of which they enjoy considerable reputation. The town is agreeably situated, and has some fine promenades. Its manufactures are cotton and cotton hosiery 1 op. 3643.

BOURBOLLE a tn. France, tp. Nord, 9 m S W Dunkirk in a marshy country near a bank, &c. on the canal from that river to Dunkirk. It is an ancient town, and during the Middle Ages, was the place where the Kings of England usually held their interviews with the Counts of Flanders. It has manufactures of lace self-refined breweries, and oil-mills. Pop. 3428.

BOURG ARGENTAL, a tn. France, dep. Loire, 12 m S E St. Etienne on the Decaux in a district where silk of a superior quality is produced, bought principally by the manufactures of Lyons, St. Chamond, and St. Etienne. The silk is white, and being the best in France for the manufacture of blonde lace, brings a high price. The manufactures are

hens, crabs, and rabbits. There is an excellent blackfield and silk and cotton are spun in the town. In the neighbourhood are extensive nurseries. Pop. 1860.

BOURG DOISANS, a town in France dep. Loze, 18 m. S.E. Grenoble at the extremity of the dark and picturesque valley of the Romanche which is completely hemmed in by wooded heights, with numerous cascades. In the neighbourhood are the remains of a natural embankment formed by two torrents which having overtopped the steep down rocks and trees into the valley bed, and gave rise to the Lake of St. Laurent. The lake thus formed in 1131 covered the valley at Bourg-d'Oisans to a depth of about 90 ft. Thirty years afterwards the embankment suddenly gave way and the vast volume of water rushing down carried devastation into numerous villages in the base of its course, and almost drowned the town of Grenoble. Lead mines and rock crystal are wrought in the vicinity. Pop. 1643.

BOURG DU PAYS, a town in France, dep. Drome, 11 m. N.E. Valence on the bank of the Isère which separates it from St. Roman. The soil is extensively cultivated in the vicinity and silk is spun in the town. Silk is also manufactured here. Pop. 3300.

BOURG EN BRASSIN [anc. *Burgis Engannorum*] a town in France cap. dep. A. 27^m in S.E. Paris 1 hour, Reims 1 hour. It is well built with good streets, tolerably clean and ornamented with public fountains, one of which in the form of a pyramid was erected by the inhabitants to the memory of General Foubert. On the Promenade du Bastion is a bronze statue of Bichat the celebrated anatomist who founded his early medical studies in the hospital here. Bourg has a parish church a handsome edifice of the 17th century a public library containing 10,000 volumes a museum and a spacious corn market. Outside the town is a magnificent hospital surrounded by gardens and the beautiful Gothic church of St. Remy built by the direction of Margaret of Austria, daughter of Maximilian I. In front of the portal stands a curious elliptical mural monument to the celebrated astronomer Lalande, who was born of this place. Bourg is the seat of a court of first resort, and has also a lycée, a seminary and agricultural society some manufactures of linen and hosiery several tanneries and a cotton mill and a considerable trade in grain poultry, wine, leather, horses, and cattle. In 1814 the inhabitants of Bourg offered a stout resistance to the Allies and held 1500 Austrians in check for some time but the town was ultimately taken and pillaged. Pop. 8502.

BOURG ST ANDREAS a town in France dep. Ardèche 20 m. S. Privas agreeably situated on a fertile and well cultivated country on the bank of the Rhone which is here crossed by a suspension-bridge. It has manufactures of silk and some trade in grain flour wine brandy olive-oil and other productions of the S. of France. The church contains a Roman tomb in marble and in the immediate vicinity of the town is a grotto with a temple to the god Mithras and curious sculptures. The principal square wears the Roman name. Pop. 2753.

BOURG ST MAURICE a village France 60 m. N. of Tarantaise on the Rhone, about 6 m. N.W. of the Little St. Bernard. It was almost entirely destroyed by fire in 1794 but has since been rebuilt in an improved form. A cheese of some celebrity is produced in the neighbourhood and with cattle, forms the only article of trade. Pop. 2380.

BOURG ST MATHIEU, or *BOURG ST. MATHIEU*, a town in France dep. Gironde 8 m. S.E. Bay, on the bank, Bordeaux, near its confluence with the Garonne. It is tolerably well built has a small port, admitting vessels of 200 or 300 tons and in the neighbourhood some quarries of excellent stone from which Bordeaux is supplied. The town has a considerable trade in wine. Pop. 1556.

BOURGNEUF a town in France, dep. Cressa, 17 m. S.S.W. Clermont, on the Thonon. It gives its name to a coal field or basin extending through four of the neighbouring communes and has manufactures of porcelain and paper. Pop. 2491.

BOURGAS, *BOURGAS*, or *BURHAS*—A seaport in Turkey in Europe, prov. Rodoska, on the Black Sea, at the bottom of gulf of same name, 70 m. N.E. Adrianople lat. (measured) 42° 30' 18" N. lon. 27° 30' 45" E. (n.) It is built on an eminence, and has a prepossessing appearance. The shops

are kept neat and clean and being well stocked with showy articles, look very pretty. Its principal source of prosperity is in the manufacture of pottery pipe-bowls, cups, &c. for which a superior clay is found in the neighbourhood. They are handled tastefully made, richly ornamented, and are sold at a high price. The town has also a considerable trade in grain wine, iron, woollen stuffs, butter, cheese, and other productions of the country. Pop. 6000.—The town is formed by Cape Eminah on the N. and the town of Blashah or Muspoli on the S. 17 m. apart. It opens a fair and stretches about 22 m. inland—2 Turkish Bourgas or Burgas, a town some 45 m. S.E. Adrianople lat. 41° 31' N; lon. 27° 18' E. with an old castle a fine mosque, hospital, baths, small market place manufactures of terra-cotta, and about 2000 houses.

BOURGES [anc. *Bithurice* or *Bithur*] a very ancient in France cap. dep. (bar 124 m. S. Paris at the confluence of the Allier and Yèvre. It is surrounded with ramparts now converted into public promenades and is about 2½ in round. The streets are generally broad but deserted and gloomy owing to the small population, and peculiar construction of the houses. Large air built spaces, likewise generally planted with trees or occupied as gardens and nursery-grounds are met with here and there. The principal public buildings are the cathedral erected in the 13th century and esteemed one of the finest Gothic structures in France the church of Notre Dame founded in 116 destroyed by fire in 1487 and rebuilt in 1520 and the church of St. Etienne founded in 1200 destroyed by the same fire of 1487 and rebuilt in 1510. The glass in the chapels of the latter is exquisitely painted. The archiepiscopal palace is a handsome building with gardens, designed by Le Notre. The hotel of the prefecture occupies the site of the old palace of the Dukes of Berry. Next to the cathedral however the most remarkable building of Bourges is the Hotel de Ville built in 1448 and originally the mansion of Jacques Cesar a native of the town and the celebrated and unfortunate treasurer of Charles VIII. who after losing his master 200,000 gold crowns was cast into prison, and all his property confiscated, for certain imaginary crimes, of which he was accused by courtiers who shared in his spoils. He was condemned to death but escaped to Rome and died on a naval expedition in the service of

HOTEL DE VILLE, BOURGES.
From France, Manufacture of Pottery.

the Pope. This building is in the solid Gothic style and of great magnificence. Besides the mansion of Jacques Cesar contains the halls of the royal court the courts of first resort, of commerce, and judiciary. The

modern seminary is also a handsome edifice, now occupied as barracks. Bourges has a public library containing 50,000 volumes, a college museum, primary theatre, general hospital, prisons, and a house of refuge. The town is the seat of an archbishopric, of a royal court for the departments of Cher Indre and Nièvre of a diocesan theological seminary ecclesiastical school and normal school for the department. It is also the capital of the 21st military division of the kingdom. The manufactures are innumerable consisting of some coarse woollens, blankets outwore and leather. It has also extensive works in iron, steel, and tinware. The number of silversmiths is remarkable for a provincial town. The principal trade is in grain, hemp, wool, flannel, hides, wine and fruit-trees. Bourges is of high antiquity. Six centuries before the Christian era, it was the capital of Celtic Gaul. In the time of Julius Caesar it was called *Avaricum*, and was the capital of the Bituriges, from whom the modern name appears to be derived. Caesar besieged and took it in 52 B.C. Under the Romans it became the capital of Aquitania. In 475 it fell into the hands of the Visigoths, but submitted to Clovis, when he had vanquished Alaric, in the plains of Vouille. It then became the capital of the Berry, and during the Middle Ages partook of the vicissitudes common to the towns of France. The great fire of 1437 destroyed 8000 houses and gave a blow to the commercial prosperity of the town from which it never recovered. The cloth manufacturers who were at that time numerous, removed from the place and Lyons profited by the disaster as the fairs were transferred to that town. In 1683 the plague carried off 5000 of the inhabitants. Seven councils have been held at Bourges and the Pragmatic Sanction was accepted here by the clergy in 1486. Pop. (1846) 18,235.

BOURGET—A lake France Savoy 7 m N Chambéry and near the E. border of the dep. It is about 11 m long from N to S and on an average, not more than 2 m broad. It empties its surplus water into the Rhone by a tortuous channel which permits steam vessels to enter and navigate the lake. The scenery is very romantic the W shore consisting of a precipice of limestone which rises almost perpendicularly 2000 ft. at the S.W. extremity of the lake. It is a place of great antiquity and many Roman remains have been found in it. Pop. 1650.

BOURGOGNE. See **BURGUNDY**.
BOURGOGNE [anc. *Bergundia*] a town France dep. Jura 8 m W N W La Tour-du-Pin on the Rhone. It is surrounded with marshes, which have been partly drained and which afford inexhaustible supplies of turf for fuel. The town has some woollen cotton and silk manufactures, and numerous flour-mills. It carries on a good trade in flour of excellent quality, hemp flax and woollen cloth. See Pop. 3337.

BOURGUEIL, a town France dep. Indre-et-Loire 26 m S.W. Tours, v. bank, Dole, here called the Antium. This district produces red wine of good quality, flax, hemp, and liquorice, oats, onion and other vegetable seeds. Trade in nut-dried fruits, butter, maize, millet and wine. Pop. 1720.

BOURKE, a co. S. Australia, 6 m. long and 60 broad area 8500 sq. m. or 2,495,000 ac. It contains 35 parishes. Pop. 17,831 of which 9449 are males 1891 females.

BOUSSA, a city Africa, Soudan cap. of a province of same name on an island in the Niger or Quorra about 3 m. long and 1 m. broad lat. 10° 14' N lon 6° 11' E. It is walled, and being surrounded by rocks is a place of considerable strength. As in all African states the houses are irregularly placed and thus cover a space of ground disproportioned to the number of inhabitants. The soil of the province is fertile producing cereals, yams, cotton rice, and timber trees, in great abundance. Amongst the wild animals are elephants hippopotami, lions, tigers &c. Boussa has obtained a notoriety from the circumstances of its being the place where the enterprising traveller Park met his death. The population of the town of Boussa has been estimated at 12,000 to 18,000.

BOUSSU a town and com. Belgium, prov. Hainaut, 7 m W Mons with the fine castle of the Counts of Carman and Beumont whence Louis XIV. threatened the siege of Saint Omer, in 1655. The commune has extensive breweries in iron and dry and forges &c. Boussa has obtained a notoriety from the circumstances of its being the place where the enterprising traveller Park met his death. The population of the town of Boussa has been estimated at 12,000 to 18,000.

BOUZY a river France which rises at the foot of one of the towers of the ancient castle of Malestribes, near Chef Bouteaux, dep. Deux Seines and, after a S.W. course of about 60 m. falls into the Charente, about 10 m. above its mouth. It passes, and is navigable from St. Jean d'Angely.

BOUWILLE, or **BOUWILLAN**, a town France, dep. Bas Rhin on the Moselle 20 m. N.W. Strasbourg formerly walled. It has extensive chemical works, producing alum, vitriol, Prævalent blue, ammoniac animal charcoal, pyritesous acid, &c. It likewise has some large tanneries glassfields madder-works ropeworks and manufactures of Russian linen ironmongery, and excellent glass. Pop. 8861.

BOUZONVILLE a town France, dep. Moselle on the Nied 19 m. N.E. Metz. Its manufactures are leather (common and shammy) glue, nails, and cabinet-work. In the neighbourhood are the ruins of an abbey founded in 1090. Its extensive Gothic hallioid crown, a hill whose sloping sides are covered with orchards and at the foot of which the Wind meanders through large and verdant meadows. Pop. 1580.

BOVA a town Naples prov. Calabria Ultra, 1 m S.E. Reggio, on a mountain not far from the sea. Seat of a bishop, suffragan to Reggio. It has a cathedral, and several other churches a seminary hospital and two monasteries. Silk worms are reared in the neighbourhood. Pop. 3883.

BOVENO a vil. kingdom of Italy Lombardy prov. of and 16 m. N. by E. Brescia, near 1 hunk, Mella. It has a parish church an hospital, and manufactory of iron vessels, and cutlery. In the vicinity are iron mines and several mineral springs. Pop. 2048.

BOWDITCH ISLAND an isl. S. Pacific; lat 1° N point 9° 20' S. lon 111° 4' W (N.) of coral formation, and triangular form, with the apex S. It is 8 m long N to S and about 4 m broad. On the N W and N points the land is of considerable elevation, and on the E. are extensive groves of coco-nut trees and shrubbery. The scenery on some parts of this little island is of surpassing beauty, smiling all that the imagination has pictured, or can picture of these paradises of the ocean with their balmy climates and luxuriant foliage. The inhabitants of whom there are about 600 are friendly gentle and good-natured but extremely timid. In their persons they are well formed and the expression of their countenances is extremely agreeable. The younger portion of the community go naked but those more advanced in life wear the sarong, a sort of apron, which the men is from 16 to 14 inches wide in the case of females it is of proportionate size, and weighs about 50 lbs. presenting a very smooth and ridiculous appearance. They do not cultivate the soil but live chiefly on its spontaneous productions, which include coco-nuts and on the produce of the sea and that these resources afford them sufficient sustenance says Capt. Wilkes, is amply proved by their robust and healthy looks. They are a very ingenious people exhibiting great taste and dexterity in the manufacture of various small articles, such as fish bones boxes and working-implements, axes, files, and such, which they manufacture with great skill but well adapted for their purposes. They also manufacture an excellent kind of matting for sleeping in, and for clothing. Bowditch Island was discovered by Commander Wilkes, of the U. States Exploring Expedition, on January 29 1841 the island not having been laid down in any chart previous to that period and being still wanting in many maps.

In the W. it is traversed by a chain of the Andes, and in the E. it is composed of mountain plains, watered by affluents of the Orinoco. Pop. (1840) 46500.

BOYANAGH par Ire Galway 1 837 ac. Pop. 391.

BOYANNA BAY a bay N. W. coast of Madagascar N. W. point lat. 15° 59' S. lon 49° 28' E. It is about 3 m wide in the entrance, and 6 or 7 m in length extending S. with depths from 6 to 4 fathoms and which abut on 2 and 1 fathom near the shore and at the bottom of the bay around which there are several small villages and on the W. side is the principal town of the province.

BOYD (OWN) a seaport Australia, head of Wales at the head of Twoold Bay lat. 4 10' S. lon 149° 57' E. separated from E. Boyd by the river Hugh. Though but lately founded it is in a flourishing condition and has already a pretty extensive trade, and is laid out in good taste, and composed of well built brick houses, and neat cottages, with verandas. It contains a handsome Gothic church, with a lofty spire a spacious hotel and several ranges of commodious shops. There are here a large whaling establishment, employing nine sperm whaling ships and several extensive salting and boiling down houses. The port has a convenient jetty 300 ft. long and vessels refitting have here the advantage of a heaving-down bulk and every necessary mechanical assistance, abundance of wood and every description of provisions and vegetables. Both Boyd and E. Boyd are consequently favourite resorts for shipping.

BOYLE, a garrison tn and par Ireland co. Roscommon. The town is 22 m. S. E. Sligo, on a stream of same name connecting Lough Gara with Lough Key in a valley nearly surrounded by hills. It consists of four principal streets crossing at right angles, two of which are straight, the other two winding one of the latter ascends a very high hill all judiciously paved and kept. The more modern houses, many of which are of stone, are well built, great improvement in this respect

having taken place of late years but in the outskirts are many miserable hovels. Boyle has an Episcopal church, and chapel of ease, a R. Catholic, and two Methodist churches, a work house, in the old English style, court-house, and bridge, the latter a plain building, with freestone front a national school for boys and girls and a male and female infant school connected with the church a dispensary and a charitable farm. Cattle and flour are made at very extensive mills erected on the Boyle river at the extremity of the town and coarse tins and stamens are manufactured by some of the peasantry but to a very limited extent, and only for the home market. A large number of cattle is sold at the fairs which take place nine times a year and being the centre of an extensive district, there is a good retail trade. In the environs is a public garden, decorated with a statue of King William III. with well laid-out walks, for the recreation of the inhabitants, provided by Viscount Lorton, the proprietor of the town. Pop. 8462. Area of par 19 618 ac Pop 10 265 — (Local Correspondent).

BRAAK or **BRACK**, several streams, S Africa, Cape Territory — 1 *Brack* or *New River* rising in Graaf Reuvet, near lat 31 S. flowing N W and falling into the Gariep or Orange River after a course of 120 m. exclusive of windings — 2 *The Great and Little Brack* the two head streams of the Great Fish River — 3 A small affluent of the Little Fish River

BRAAKE *See* **BRACK**
BRABANT (Dutch *Herzogdom Brabant*) an ancient duchy of the Low Countries of which Brussels was the capital. On the emancipation of the United Provinces of Holland it became divided into two parts — one Dutch or N Brabant, and Austrian Brabant comprehending not merely the present provinces of S. or Belgian Brabant, but both it and the present province of Antwerp.

BRABANI (Dutch, *Acord-Brabant*) a prov Holland and on the frontier between it and Belgium along which it extends about 20 m. area 543 540 ac. It is generally flat, and is drained by the Meuse, the Marweide, the Scheldt the Amer, the old Meuse, the Dommel, the Aa or Aa, the Doyne, the Mark, and the Dintel to which may be added the great South William's-van't Canal Careful drainage has made the province famous for health and longevity, and while epidemics

have raged in other parts of the Netherlands, N Brabant has been exempt from their attacks. There are no minerals of any consequence, the soil varies from barren moor and wet bog to the richest arable and pasture land. Besides the common cereals, it produces hops, madder colored flax hemp and orchard fruit. Not the least important product is the running plant, found indispensable for the preservation of the dikes from abrasion by the water. Oak and elm thrive well. The lower grounds afford excellent pasture and lucerne, and the white mulberry is much grown for silkworms which are reared chiefly at St. Michael's Gestel. The horses and cattle of N Brabant are smaller than those of some of the neighbouring provinces. The wool of the sheep is mostly used within the province, particularly at Tilburg. The pigs are excellent. Immense quantities of geese and poultry are raised and exported. Bees also are an object of profitable attention. The rivers abound with fish of which the anchovy of Bergen op Zoom and the salmon of Gertrudenberg are in great repute. Manufactures — Woollen cloth, made at Tilburg Middelburen and Guldorp coloured cottons at Helmond and linen and cotton fabrics at Flushing and the villages around Middelburen, where also the finest damasks and diapers are manufactured. In other towns there are carpets, hat and pin manufactures, potteries brick fields many celebrated breweries, lace-making from mule &c. For the administration of justice N Brabant is divided into three districts, and these again into 18 cantons. It is a 449 primary and 14 1 stn schools, it a latter attended by about 800 scholars Pop. 578 487 of whom R. Catholics 388 741 Protestants 47 536 Jews 1061 attached to no religious communion 210

BRABANT (Sourin) [Dutch *Land Brabant*] a prov. Belgium which though in population only the third and in extent only the fourth is from its central position, and possession of the capital the most important of all the provinces of Belgium. Its boundaries are N prov. Antwerp E prov. Limburg and Liège S prov. Hainaut and Namur W prov. E. Flanders. It has an area of 810 956 English ac of which 671 484 are cultivated, 100 181 under wood of which one tenth belongs to forest Soignies, and only 8107 uncultivated and waste the remainder being occupied by water roads, towns &c. Its soil, which owes much to nature but more to industry produces in abundance all the ordinary grain and pulse crop seeds and grasses its manufactures are various and extensive, consisting chiefly of cotton stuffs, various velvets, lace and carpets. It has numerous picturesque townships and currying houses hat factories, sugar and salt refineries, coachworks, paper-mills glassworks distilleries, and very extensive breweries. There is also a very large book trade the chief works of which are obtained not from native authors, but from the neighbouring literature of France. Brabant is divided into three administrative and judicial arrondissements, of which the chief places are Brussels Louvain, and Nivelles. According to the proportion of one to every 45 000 inhabitants, it should send 18 members to the Chamber of Deputies. Pop. 691 857 of whom 220 547 use the French and 487 696 the Flemish language

BRADFORD a flourishing manufacturing town and par. England, co. York W. Riding 9 m. N. E. Manchester. It is pleasantly situated at the junction of three beautiful and extensive valleys and is almost entirely built of fine freestone. In the older parts of the town the streets are narrow and ill constructed but in the more modern they are spacious well paved and lighted. The exchange is a beautiful building with a library and news-room attached. Opposite to it is the stock-exchange for the exhibition and sale of wool goods. Thursday is the day of sale, but of late years sales of goods have been effected, to a much larger amount, at the rooms now warehouses of the leading manufacturers and merchants both on Mondays and Thursdays. The courthouse erected in 1824, is a handsome and convenient building. There are also a good market-place, with a spacious enclosed area, a mechanics institute in which a commodious and handsome building has been erected a flourishing philosophical society and a dispensary liberally supported. Churches — the par. 1 church erected in the reign of Henry VI. in the decorated style of English architecture. Christ Church a chapel of ease a most structure, with a low tower. St James's St John St Jude's, and St Paul's. The other places of worship are three large Baptist chapels three Independent three Wesleyan Methodist one New Connexion Methodist two Association Methodist one U. Presbyterians (recently erected) one Unitarian, one Soc. of Friends, one Moravian, and one E. Catholic. Bradford has a free grammar school liberally endowed by Charles II. and rebuilt in 1659 four national schools, and one conducted on the system of the British and Foreign School Society and seven parochial and Wesleyan schools. In the immediate vicinity is Alkdale College for the education of young men for the ministry among the Independents. The Baptists have a similar academic institution at Little Horton and at Woodhouse Grove, 4 m. distant. The Wesleyan Methodists have a school for mechanics near. The railway erected in 1842 is a noble building in the Tudor style, with wards for 60 passengers, and a dispensary. The staple manufacture of the town is worsted stuffs, and mixed worsted, alpaca and mohair also cotton and silk fabrics. The spinning of worsted yarn employs a great number of hands and when spun it is largely exported, and also woven in the worsted-looms factories of the town. There are not less than 112 mills in the par. for spinning and weaving worsted of these, 36 are in the town. Broad and narrow cloth employing six extensive mills, chiefly in adjoining towns of wool-cards, and ivory and horn combs are made in great quantities. In the town and neighbourhood, some very extensive dyeworks have of late years been erected. The cotton manufactures are of recent introduction but are making rapid progress. The vicinity abounds with coal and limestone and about 7 m. S. E. the town are the Low-wood quarries and 1 m. S. E. the Buntingfords, both of

which are on a very extensive scale, and particularly celebrated for the quality of their iron. Bradford has suffered less from the depression of trade than most other large manufacturing towns. Thursday is the market-day and there are three important annual fairs. There is here a flourishing savings bank, with a handsome building erected in 1887. Commercial operations have been greatly facilitated by the cutting of a branch from the Leeds and Liverpool Canal near Shipley into the very centre of the town. The admirable position of the town in respect to railways is also of advantage to its prosperity. The station of L. & Leeds and Bradford Railway through which communication is established with the N. E. and N. W. of England, and with Scotland is within 800 yards of the exchange. Equally easy communication is afforded with the S. E. and S. W. of England by the Lancashire and Yorkshire Railway connected with Bradford by two branches proceeding respectively in a S. E. and S. W. direction. A direct line from Bradford to Leeds is contemplated.

Bradford was incorporated in 1847. A mayor 14 aldermen, and 42 common councilmen constitute the corporate body. By the Reform Act, it returns two members to Parliament. The boundaries of the borough comprise four townships. Number of electors (1856) 1811. Bradford is a polling station at elections for the W. Riding of the county. The rapidity with which the population of the town has increased affords one of the best evidences of its prosperity. In 1801 it was only 6393. In 1841 58 498. The four townships comprise the part bet. in 1801 contained 13 294 and in 1841 66, 18 inhabitants. — THE TOWN OF Bradford is 11 m. in length and at an average 4 m. in breadth, and comprises the town of Bradford three chapels and nine townships area, 34,146 ac. Pop. 149 548. — *(Local Correspondent)*

BRADFORD GREAT an anc. market tn. and par. Eng. and co. W. York. The town is beautifully situated 26 m. N. W. Saltaire, on a declivity on the banks of the Wharfe, crossed by two bridges, a very old one of masonry arches, in the centre of the town, and a modern one of four. The town consists of three regular streets, containing many handsome and some elegant houses. It has a spacious church with a fine altar-piece, and w. windows of stained glass. places of worship for Baptists Independents Friends, the Connexion of Huntingdon Connection Wesleyans and Unitarians an endowed free school for a education of 80 b. y. a news room, two almshouses and a workhouse. Woollen cloth is the staple manufacture of the place particularly that one pound of fine thread and Haxony wool for the dyeing of which the water of the river is highly favourable. Weekly market Saturday two fairs annually. Bradford was of some note in the time of the Saxons. Duranton having been elected Bishop of Worcester at a synod held in it. The Kennet and Avon Canal passes through the town and the Thrubridge station of the Great Western Railway is 4 m. distant. Area of par. 11 310 ac. Pop. 8959. Pop. of m. 3656.

BRAGA [anc. *Bracara Augusta*] a in Portugal cap prov Minho and seat of an archbishop, primate of Portugal

It contains seven squares ornamented by fountains, an erectorial palace, a large quadrangular building containing a library, a fine richly ornamented Gothic cathedral of the 18th century, six parish churches, eight monasteries, a seminary, college, hospital, and numerous antiquities, among which are remains of a Roman temple, amphitheatre, and aqueduct. The inhabitants are industrious, and have manufactures of some importance with which they supply the fairs of Portugal and of Galicia in Spain. The principal articles produced are hats, shoes, iron and horn ware, harness, linen cloth, &c. Besides weekly markets Braga has two annual fairs each of which lasts a fortnight. In the vicinity are cold sulphurous springs. Braga is supposed to have been founded by the Carthaginians. On a hill about 1 m. E. from the town is the famous sanctuary *Dom Jesus do Monte*, the most conspicuous and best frequented of any in Portugal. Pop. 16 077

BRACAN, (A.—1. An anc. in Brazil, prov Para 100 m. N. E. Belém 1 bank, (Aite, near its mouth in the bay of same name lat. 1° 50' N. lon. 4° 30' W. Its district is fertile lands numbers of cattle and pigs for the Rio de Janeiro market, and has a number of sugar-mills. Pop. 10 000

BRAGANZA, or **BRASAGUA** [anc. *Brasagua*] a in Portugal prov Tras-os-Montes. In a pleasant and fertile plain on the little river Fervença. 24 m. N. W. Miranda. It lies as a fortress, being surrounded by walls, though in a ruinous condition and defended by a citadel, is the seat of a bishopric, suffragan to Braga. has two churches three monasteries, a college, and manufacturers of silk and velvet. Braganza is said to have been founded by Infante I. in 1187. In 1540 John II. a great Duke of Braganza, ascended the throne of Portugal under the name of John V. and from him is descended the present royal family who retain the name of Braganza. P. p. 3315

BRAGNÄS. See **DRANEM**
BRAGNÄS a small station, Rissens Finland N. R. shore of Gulf of Bothnia, lat. 58° 10' and 57° 10' N. W. Ulsburg. The port is good, and some trade is carried on in pitch and tar. Pop. 1841 1984

BRAGH or **BRAGHLOFF** a fortified in Turkey in Europe. *Wallad* is a river Danube, of which it is one of the ports 90 m. from its mouth and may be reached by any vessel capable of entering that river lat. 45° 10' N. lon. 2° 04' E. The houses are regularly built, and several handsome new streets have recently been added—a result of the increase in prosperity of the town in which all the foreign trade of the province centres. It contains no small large granaries and commodious warehouses. The principal exports are wheat, rye, barley, hides, beef, wool, salt, timber, staves, &c. It has besides, a valuable sturgeon-fishery. The chief merchants are Greeks, but of late years several English houses have been established in the town. Pop. 6000

BRAHMAPOOTRA **BRAHMAPUTRA**, and erroneously **BEHRAPOOTRA** [Syring of Brahmaputra] one of the largest rivers of Asia, formed by the junction of three streams which unite in the N. E. part of Upper Assam in lat. 24° 47' N. lon. 95° 20' E. 1228 ft. above the sea level. These rivers are called, respectively, the Dihang, Dibang, and Lohit, and have each in turn, been represented as the head stream of the Brahmaputra, but without any of them having been left in undisputed possession of that honour. Nor in the present state of information on the subject, can this point be yet confidently decided. All probability however is in favour of the Dihang; but this, again, is on the presumption that it is a continuation of the Sargo—a presumption which, although apparently highly probable, is by no means free from uncertainty. The Sargo, a very large river and on this account worthy to be the head stream of the Brahmaputra, rises in Tibet, on the N. slopes of the Himalaya, in lat. 28° 30' N.

THE SQUARE AND FOUNTAIN OF TOWER, KHARRA. From Pictorial History of Portugal and Spain

28 m. N. N. E. Oporto, in a plain watered by the Este, and about 8 m. S. of the Cavado. It is surrounded by walls flanked with towers, and defended by a castle. The houses are old, and the streets though broad, are not well laid out.

lon. 82° 10' E. nearly opposite the sources of the Ganges, on the E. side of the range and not far from those of the Indus. It flows in an E. direction parallel to the Himalayas for about 750 m. or to about lon. 45° E. when it is presumed it suddenly bends round to the S. cuts through the Himalayas, as the Ladra flows between Iskard and Attock, and enters Upper Assam under the name of the Dihong where in lat. 27° 50' it is joined by the Dihong and Lohit, and then becomes the Brahmaputra, a name which it retains till within about 30 m. of the embouchure when it is called the Megna. From the point at which it is joined by the Dihong and Lohit, the Brahmaputra flows in a S.W. direction, through the centre of Assam, to lat. 26° 15' N. when it bends round, proceeds nearly due S. and falls into the Bay of Bengal. Its outlet mingling almost indistinguishably with those of the Ganges. The length of the Brahmaputra, from the point at which it obtains that name, or from the junction of its head streams in Assam to its embouchure, is between 500 and 600 m. If the Sampo is taken as the original stream the entire length of this great river will be nearly 1400 m. The volume of water discharged by it during the dry season, is about 146,188 cubic ft. in a second the quantity discharged by the Ganges in the same time, and under the same circumstances, is only 80,000 cubic ft. In the annual floods, the quantity of water poured through the tributaries of the Brahmaputra from their snowy sources is very great the plains of Upper Assam are an entire sheet of water from the middle of June to the middle of September the only means of communication then being by elevated causeways 8 or 10 ft. high. Its waters unite also with those of the Ganges in overflowing the E. portions of Bengal. In its course through Assam and Hindoostan, the Brahmaputra forms a numerous island some of which are of very considerable extent. For 60 m. from its embouchure it is about 4 or 5 m. in breadth, and interspersed with numerous islands and mudflats, and were it not for the freshness of the water it might be taken for an arm of the sea. From its mouth to the junction of the three head streams in Upper Assam, the river is navigable for the boats of the country and above the junction, up the Lohit there is plenty of water for rafts for many miles further. Its waters are usually thick and dirty and its banks during the latter part of its course, heavily covered with jungle or marsh land. It is subject to the mounds, and abrupt ridges of the tide called the *bars*, but not so much as extent as the Hooghly the principal branch of the Ganges. Its principal affluents in Upper Assam are the Dihong, Jessung, Noor-dehing, Noa-dehing and Debooroo with a great number of smaller streams. Those in Bengal are the Jomah Barak, and Coonty on the left and the Gadada, Neelcomer and Teesta on the right. The Dihong and Lohit the two other alleged head streams of the Brahmaputra, flow from the N. E. and have their sources in a mountainous district in the E. corner of Tibet and within about 30 or 40 m. of each other. The Lohit is formed by the junction of two mountain-streams, the Tselong and Tselooka, which unite at lat. 28° 12' N. lon. 97° 10' E.

BRAINE LALEULLE a town and com Belgium par Brabant 13 m. S by E. Brussels. Part of the operations of the battle of Waterloo were in this commune, in which is raised a mound surmounted with a colonial lion, to commemorate the event. Clothing, leather glass &c. are manufactured here and in the commune are some quarries of paving stones, but the inhabitants are chiefly agricultural. Pop. 4645.

BRAINE LE COMTE—1 A small and nice town Belgium par Namur, 54 m. S.W. Brussels containing a handsome church, founded in the 13th century and a large well built chateau. The Southern Railway branches off from this town, on the W. side, to Mons and Quilvrain, E. to Namur and Charleroi. Amongst its public works are, breweries, saw-works, dyeworks of cotton and corn mills. At one time it manufactured and dealt extensively in tin ware, but this branch of trade is almost if not entirely extinct. Pop.

1400.—2 A com. Belgium par Brabant, with a brewery and a paper and two cotton mills. Pop. 2850.

BRAITFIELD par Eng Hertford 1540 ac. P. 110.

BRAINTREE a market town and par England co Essex.

The town pleasantly situated on a rising ground on the Braan 404 m. N. E. London consists of three principal streets, and several smaller the former spacious commodious, and well kept, but the latter dirty and inconvenient. A new town, in which the streets are wide, and most of the houses provided with small gardens is forming between the railway terminus and the town, and rapidly extending towards Braintree. All the new houses are of brick. The town is lighted with gas, and tolerably well supplied with water from wells and pumps. The corn exchange recently built is the only public building worthy of notice it is a commodious structure in the Corinthian style of architecture. Braintree has a church a Congregational and two Baptist chapels one boy's free school two boys boarding and day schools, two girls schools, and several other smaller schools several religious and benevolent societies, and a mechanics institute. The manufactures consist of silk and cramo weaving. The former gives employment to about 470 persons altogether the latter employs about six looms. The town is increasing in size and population. Area of par. 2242 ac. Pop. in a.d. par. 4340.

BRAITHVELL par Eng York W. Riding 7904 ac. Pop. 89.

BRAKE a vil duchy of Oldenburg circle, Oldenburg on the Weser 16 m. N. E. Oldenburg. It forms part of the parish of Hammelwarden and has a wool market, and some woollen manufactures a dyework, and gristmill. It is chiefly known as a shipping port that Brake possesses importance being one of the principal commercial entrepôts in the duchy. The Bremen ships usually stop here being unable to go further up the Weser and in the building yards, vessels of 300 to 400 tons are built. In 1848 the number of vessels that entered was 284 and in 1849 297. Of the former 109 were British of the latter 0. Pop. 1397.

BRAKEL—1 A in Prussia, Westphalia, gov. Minden on the Bruch near its confluence with the Nethe, 32 m. N. N. W. Cassel. It is walled, has two R. Catholic churches a synagogue, a monastery an hospital and a workhouse. The inhabitants depend chiefly on agriculture many particularly the cultivators of flax. They have also breweries and distilleries. In the neighbourhood are glassworks and a mineral spring of some repute. Pop. 2600.—2 Brakel (Dy) a vil and com. Belgium par F. Flanders, 13 m. S. by E. Ghent 1 bank Zwalm a small tributary of the Scheldt. It is regularly built, and has a church communal and several private schools dyerles, bleacherles, breweries malt houses, a salt refinery three oil-mills, and a flax mill. Several cattle-fairs are held annually. Pop. 3765.—3 Brakel (Dy) a vil and com. Belgium par F. Flanders, 1 m. S.W. the above. The village is small but neatly built, and possesses a church and two primary schools. The inhabitants are chiefly engaged in weaving grinding corn and oil and in husbandry. Pop. 2120.

BRAMBACH—1 A in Saxony circle, Zwicken, on the Gelseburg on the Bohemian frontier 11 m. N. Eger. It contains a castle and several mills and has some linen manufactures and general trade. Pop. 1200.—2 A in Nassau, cap. hill of same name, 7 bank Rhine 7 m. W. Nassau. It lies well but in a dull place, with dark narrow streets. It contains a palace and a parish church. Pop. 1507.

BRAMHMAN a dist. Isl Java, par Soerakarta, famous for its magnificent remains of Hindoo temples. These were first visited by a Dutch engineer who found them nearly buried under the luxuriant vegetation of the soil. They were afterwards examined by Colonel C. Mackenzie, in 1812. An intelligent sepooy from Benares, who accompanied him, and who was perfectly acquainted with the history and purpose of the sculptured objects in Hindoo temples, was lost in surprise at the number, magnitude, and superior execution of those at Bramhman, to which he said that India could furnish no parallel. The temples at Bramhman are entirely composed of plain brown stone without the least mixture of brick, mortar or rubbish of any kind, even to fill up the floors and basements of the largest structures. Capt. Baker afterwards employed by Sir T. B. Raffles to take measurements and drawings of them, declares, after extensive experience

of like surveys in India, that he had never met with such finished specimens of human labour and of ancient science and taste, crowded together in so small a compass as at the Chandi Sewa or Thousand Temples, at Brambran. On the S face there are two gigantic figures in a kneeling posture and of terrific forms, appearing to threaten, with uplifted clubs impertinent intruders. The ground plan is disposed in five parallelisms one within the other of which the outer one alone of 84 small temples, 22 on each face the second, of 8 the third, of 64 the fourth of 44 and the central one of 8 in all 296 temples. In the centre of the whole stands the great temple, about 90 ft. in height, and still a magnificent monument, though ruin and overgrown by the trees that cover it. The style, taste and execution of the sculpture with which the great temple in particular is covered are light, chaste, and beautiful and the figures 3648 in number display a wonderful variety of mythological characters. But of the smaller temples at least two-thirds lay strewn on the ground. **BRAMBER**, a vil and par England co. Sussex. The village is 9 m W Brighton on the Adur which from these place to the sea, at New blitham is called the Bramber water and is navigable for small craft. It has a Norman church and the remains of an old castle. Though now consisting of only a few cottages Bramber was once a parliamentary borough and continued to send two members to the House of Commons till it was disfranchised by the Reform Act. BRANDENBURG, a tn. Prussia has a pop. of 1179

BRANDENBURG (MARK, or *MAHRIAVIE* 107, an ancient fief of the German Empire, and identical with the modern prov. of the same name with the addition of a part called the Old [Alt] Mark, which is now included in the province of Saxony. The country was first possessed by the Slaves and thereafter from the fifth century by the Wends, till their subjugation by Charlemagne. In 906 the Mark was united to the dukedom of Saxony but in 1143 under Albert the Bear it was separated and became an immediate fief of the Empire. In the 14th century it passed to the two houses of Bavaria and Luxembourg the latter of which sold it to the burgraves of Nürnberg Frederick a younger branch of the house of Hohenstaufen under whom it became the nucleus of the present Prussian Monarchy

BRANDENBURG, a prov. Prussia the centre of the monarchy bounded N by the two great duchies of Mecklenburg-Schwerin and Stettin, and the Prussian province of Pomerania. E. by provs W. Prussia, Posen, and Sillesia. S. by provs Silesia, and Saxony and the Anhalt principality. W. by provs Saxony and the Hanoverian dominions. 16,330 sq m. about a seventh part of the whole surface of the Prussian States. It is divided into the governments of 1 stadium and Frankfurt, and 34 circles. Its principal towns are Berlin, Potsdam, Frankfurt, Brandenburg &c. The province is almost an entire plain slightly elevated above the level of the Baltic Sea. The soil is extremely poor being composed mostly of a tract of barren sand and extensive heaths and moors. Its principal products are grain chiefly buckwheat, potatoes, wool hemp, flax tobacco under hops &c. Much attention is also paid to the rearing of cattle and sheep, particularly the latter the breed of which has been much improved of late years. There are numerous cones of tuffaceous sandstone and well supplied with fish. Its principal streams are the Elbe the Oder the Spree, and the Havel but the first two merely skirt the territory the one forming the N W boundary the other the E. The climate of Brandenburg is temperate but exceedingly variable, and subject to violent winds. It is mineral is iron gypsum lime alun brown coal (lignite) and sulphate. There are several mineral springs. The greater portion of the inhabitants are of German descent, a few of French most of whom are settled in Berlin. The majority of the former are of the Lutheran religion. The manufactures are confined almost exclusively to a few towns.

BRANDENBURG, a tn. Prussia, prov. of same name gov. Potsdam cap circle of W. Havelland 85 m. W. S. W. Berlin on the Havel which divides it into two parts, the old town and the new with an island in the middle, on which is a castle cathedral church, aqueduct college, and other buildings. The streets in the old town are narrow and crooked, those in the new town broad and straight. They are both walled the former having five gates, the latter four. Some of

These gates are very handsome. It contains, inclusive of the cathedral church, eight churches, one of which, the church of St. Katharine, church of brick, is of beautiful architecture. Five hospitals, a council-house, a public library, a gymnasium, with a number of elementary and charity schools. Its manufactures consist of woollens, flannels, breeches, leather stockings, &c. It has, besides, a considerable trade in shipping, and in fishing, and is on the railway from Berlin to Angermünde. Pop. (1846) 17,569.—Numerous places in Prussia have the name of BRANDENBURG.

BRANDENBURG (New) the largest and most beautiful in the grand duchy of Mecklenburg-Strelitz. It lies at the N end of Lake Tollern, 55 m. W N W Berlin. It is walled, and has four gates. It is regularly built, has a palace, a townhall, two churches, a chapel, several schools, a theatre, and two squares. The palace stands in the marketplace, and is a long low building. The inhabitants are generally in comfortable circumstances, and carry on trade in tobacco, hides, rags, paper and horses. Manufactures:—tobacco, paper, soap, leather and cloth with oil bark tanning and saw mills. Pop. 6145.

BRANDSTON two pars. Eng.—1 par Norfolk 784 ac. Pop. 155.—2 par Suffolk 1224 ac. Pop. 508.

BRANDON a market town and par England, co. Suffolk. The town consists of two portions, the more important of which called Town Street, is pleasantly situated 23 m. N W Ipswich, on the Little Ouse or Brandon over which is a neat stone bridge, and the remaining portion, called Ferry Street, about 1 m. lower down where there is a ferry for the conveyance of goods to the Isle of Ely. The church situated midway between the two streets, is a handsome structure, with a lofty embattled tower. There are also places of worship for Primitive and Wesleyan Methodists, a free school, an almshouse, and several minor churches. Gun-flint was once so common as to be extensively manufactured here, and a considerable trade is carried on in corn, malt, cattle, bricks, iron, and timber. The extensive rabbit-warren in the neighbourhood afford large supplies to the London market. Weekly markets on Thursday and annual fairs in February, June, and November. The Eastern Counties Railway has a station here. The Duke of Hamilton and Brandon takes the latter title from this place. Area of par. 6739 ac. Pop. 2215.

BRANTOME (sua. Brantomacus) a tn. France, dep. Dordogne, 18 m. N W Périgueux, on the Dronne. It was formerly fortified, and had a rich Benedictine abbey, said to have been founded by Charlemagne. The building still remains, and annexed to it is a church of singular construction. A crypt near the abbey has some bas-reliefs, with curious colossal figures. The town has some manufactures of serges and bombazines, muslin, and dyeworks, and exports large quantities of timber. Sometimes the historians told this story in error, and wrote part of its walls here. In the neighbourhood is a curious dolmen, consisting of a large horizontal block, 10 ft. long by 4 ft. broad, resting, about 7 ft. from the surface, on three smaller blocks. Pop. 1512.

BRANXTON par Eng. Northumberland 1487 ac. Pop. 284.

BRASS—1 A river Africa, Gaboon, taking one of the mouths of the Niger, falling into the Gulf of Biafra lat. 4° 10' N; lon. 8° 15' E.—2 A tn. near the mouth of the above, where the slave-trade is carried on to a great extent, chiefly by agents from Harware and Brazil.

BRASSA—1 A tn. France, dep. Tarn, 13 m. E N E. Castres, traversed by the Agout, which it here crosses by a bridge. It has manufactures of cordage, ironmongery, and cotton fabrics. Pop. 1801.—2 A vil. France, dep. Puy-de-Dôme, 8 m. S. Issoire, 1 bank, Allier which is here navigable, and makes Brassas the entrepot for the coal which is extensively worked, in a coal field of the same name in the neighbourhood. Pop. 326.

BRASSCHAET a vil and com. Belgium prov. of, and 7 m. N E. Antwerp, on the great road between that city and Bruck. The inhabitants are chiefly occupied with agriculture, disposing of their produce at Antwerp. They have also some trade in madder. Pop. 2468.

BRASSO see KNOWLTON.

BRÄUNA—1 A fortified tn. Upper Austria, gov. Zara, on the confines of Croatia, 28 m. S W Fiume, at the confluence of the Sava, with the Inn. It has manufactures of cloth, and paper some celebrated lawrean, several churches, one of them an old Gothic church built of tufa stone; a townhall barrack, and an arsenal. Pop. 9600.—2 Bräuna, a tn and lordship, N E. corner of Bohemia, circle, Kralupitz. The landscape consists of a valley about 30 m. long by 5 m. broad, bounded towards the N.E. and S.W. by lofty hills. It is fertile, and rears great numbers of cattle. Pop. 17 040, who are almost all R. Catholics, and speak German. The town stands in the centre of the valley, on the Steine, a river two churches, one of them a large building with two towers, several fine fountains, and an excellent organ, a gymnasium, and a town school, with 260 scholars. The chief employments are weaving and spinning. Pop. 1699.

BRÄUNCEWELL with DUNSTON par Eng. Lincoln; 3470 ac. Pop. 131.

BRÄUNFELS a tn. Prussia, prov. Rhine, gov. of, and 36 m. E N E. Coblenz. It has a handsome palace adorned with fine pictures, and surrounded by well laid out gardens. Pop. 1473. The proximity of the same name has an area of 6000 ac. m. and pop. 26,000.

BRÄUNHIERSCHE a vil Austria, in the immediate neighbourhood of Vienna. It contains a palace, and a church and has several large manufacturing establishments. Pop. 2700.

BRÄUNSBURG a tn. Prussia, prov. E. Prussia, gov. Königsberg, circle of same name on the Passarge, about 4 m. from its junction with the Frische Haaf; lat. 54° 15' N. lon. 19° 54' E. Situated by the river into the old and new towns. It is the residence of the Bishop of Ermland, and the seat of a royal court of justice consisting of R. Catholic churches, and one Protestant church; a R. Catholic lyceum, with theological and philosophical faculties, a gymnasium, and military par. with six professors, a normal school, an asylum, and three hospitals. It has some linen and woollen manufactures, and tanneries; and a considerable trade in yarns, grain, and ship-chamber, the river being navigable for small vessels as far as the town. Pop. 8161.—The circle, area, 220 sq. m. contains 172 parishes, four towns, and 178 villages. The surface is well wooded, and the soil tolerably rich, both in arable and pasture land. It is visited by several considerable streams, and has good roads. Pop. 44,734.

BRÄUNSTADT a small tn. Austria, Moravia, circle of, and 16 m. E N E. Olmütz; with a handsome parish church, adorned with frescoes, an hospital, two workhouses, and a great number of houses for weaving linen. Pop. 2095.

Mountain Table-land and Plains.—In ten arduous con-
trast to the countries on the W side of the S American con-
tinent, Brazil has no mountains of very great elevation with
exception, perhaps of Itambé an isolated peak in the pro-
vince of Minas Geraes, which is variously stated at 5960 and
8430 ft. above the sea. The higher mountains of Brazil must,
of them occurring at greater and lesser distances from the E
coast, extend generally like the Andes, from N to N. although
numerous and river valleys traverse the country in various other
directions. The most connected chain is that in which
the highest summits occur are the Serra do Espinhaço, the
Serra dos Orgãos and the Serra do Mar. The first originates
at Itah, about lat 15 S and interesting the province of
Minas Geraes terminates at lat 23 S. It lies parallel to the
coast, and at a distance from it of about 250 m. Its culminat-
ing peaks are Pico da 5530 ft. high and Itacolum 540 ft.
The Serra dos Orgãos (organ mountains) so called from the
fasciated resemblance of its peaks to the tubes of an organ, and
the Serra do Mar which runs, in fact but not in a chain the first
name being applied to the N E half of the range and the
second to the S W. he also parallel to the coast N N E and
S S W but at a distance from it of a very few miles only
extending from about lat 22° to 0°. The culminat-
ing point of this range Morro do Candelo which occurs in the
Serra dos Orgãos station has an elevation of 42 ft. It lies
nearly east and west and W from it lie a series of mountains
through the province Minas Geraes, I. Itambé, Morro do
S. Martinho Grosso but none of the peaks appear to attain as
high as the elevation of Pico da Serra do Mar, the hills
become lower and terminate on the Belo Horizonte in the
S. of Minas. In this locality occurs the watershed between
the affluents of the Amazon and La Plata. It is of very in-
considerable elevation and some of the sources of the Madeira
which falls into the former and of the Paraguay the head
of which the latter is not in this S. apart and must
enter the Amazon at a considerable distance. The hills ter-
minating at Itambé extend along the E side of the empire as far
as lat 3° S but within it in Mato Grosso not farther than 12 S.
and 4 of lat 10 S the Serra Itapagaya may be taken as the
W limit. This table-land occupies half the surface together
with part of the Argentine republic and the Paraguay and its
average elevation is from 2000 to 2500 ft. Along the Amazon
and its affluents the vast plains or *sertões* are said to occupy a
space equal to six times the size of France. Another great
plain stretching between the Serra Itapagaya and the river
localities is occupied from 10 S upwards of 40° S and
from E to W, as far as 400.

Rivers and Lakes.—The river system of Brazil is
equalled, perhaps in no other part of the world for the
number and magnitude of the streams of which it is composed
the surface of the whole W portion being intersected with
rivers of great length and volume present the complex
appearance of veins in the human body to which the Amazon
and its larger tributaries may be said to stand in the relation
of main arteries. By far the greater portion of these num-
berless streams have a N direction, and finally find their way
either directly or through their principal, to the N shores of
the empire. The largest river of Brazil and the largest it is
classed in the world though not the longest is the Amazon,
which enters the empire from the W about lat 4 30' N.
from 0° W and after a N E course from the point named
about 600 m. falls into the Atlantic near the equator. The
next in size is the Rio Francisco which after flowing N for
about 800 m. suddenly turns due E. and subsequently S E.
It lies in the sea about lat 11 S. In order of magnitude
it is the Rio Negro and Madeira both tributaries of the
Amazon, the former flowing from the N W, the latter from
the E W. The other large rivers in this portion of the empire
are the Ipanema a tributary of the Rio Negro the Tapajós
at Xanxara, other two large tributaries of the Amazon the
Aragua Tocantins Maranhão and Paranaíba flowing
into the Amazon from the embouchure of the Francisco the
flowing into considerable rivers occur the São Paulo Itapicuru
Igarapé, Juruá, and the Juruá, and the Paranaíba do Sul
the boundary of the same. In the continuation of the
rivers having the embouchure in the E coast of Brazil
we have omitted an immense number of smaller streams, per-
haps not many below a hundred in the interior of the S.

portion of the empire, occur the large rivers Uruguay
Iguazú, Paranaíba, Tietê, Para, Paraguay and Paraná,
with numerous smaller streams—smaller in comparison to
these but still large rivers—winding in all directions through
every province. Most of the rivers in this part of Brazil have
a N and S direction those having the former proceeding
from the W side of the curve by which this part of the coast
is lined and those having the latter issuing from the hilly
tract which crosses the centre of the province of Mato Grosso
from E. to W. and which forms the watershed of the W. and
central part of the empire the rivers of the province of Para
flowing from it N. and those of Mato Grosso S. and W. Of
the rivers last named the Paraguay and Paraná are the largest
and have the longest courses. The former has its sources in
the central high lands of Mato Grosso whence it flows nearly
due S. quelling the Brazilian territory at lat 21° N. and from
this point forming the W. boundary of the independent state
of Paraguay. The latter rises in the hilly district of the pro-
vince of Goiás not far from the source of the Tocantins
although those subsequent courses are nearly in direct opposi-
tion the latter proceeding due N while the former flows
S S W. The Paraná forms throughout a portion of the course
the boundary between the Brazilian territory and Paraguay
quelling the former about lat 25 40' S. Although unrivalled
in the number and magnitude of its rivers Brazil has con-
siderably fewer lakes than any other extensive country. The largest is the
Lagoa dos J. lakes in the province of Rio Grande do Sul. The
next largest is the Brazilian province it is 150 m. in length
and 50 m. in breadth at the widest part, and is separated from
the sea by a narrow strip of land only it discharges its waters
into the ocean by a channel called the Rio da Moura. Further
N several small lakes occur the largest of which may be
from 20 to 30 m. in length. There are hardly any others
with much more than the width of the Rio da Moura.

Geology and Mineralogy.—Granite prevails in the extent of
2000 m. along the coast of Brazil and with events, forms the
base of the table land. The superstructure of the latter con-
sists of metamorphic and old igneous rocks sandstone clay
stone, limestone, in which are large caverns, well bones of
extinct animals and alluvial soil of which the N part of the
country is almost wholly composed being intersected by num-
erous large streams. The mineral wealth of Brazil is considerable
and includes gold silver and iron diamonds topaz, and
other precious stones. Amongst the earliest discovered
and first wrought for its value were those of diamonds, but it is a
long time since it has been regularly worked. The precious metal
found more easily and in greater abundance associated with
the sands and alluvial deposits of rivers. The process of
separation the gold being in small particles, is effected by
repeated washings which are continued until nothing but the
pure metal remains at the bottom of the vessel. The entire
quantity of gold produced has greatly fallen off in late years
being now hardly a fourth of what it was in two quarters of a
century since even owing chiefly to the audacious and having
been exhausted. In country as rich in diamonds as Brazil
the neglect cultivated mines and mines of Serra do Rio de
Janito surrounded by almost inaccessible mountains and guarded
with the utmost vigilance. The diamonds have been hitherto
found in the beds of rivers only and are washed from the sand
and flints with which they are mingled much in the same way
as the gold. The largest known diamond was found in the
Rio Alameda in 1781 and weighed 134½ carats. Another worth
£4500 was found, according to the Brazil journals in 1847
by a negro. The negro who finds a diamond weighing 17
carats obtains his hereditary variety of proportionate rewards
being appointed for those of lesser value. About 20,000
negroes are employed in the diamond mines. The Govern-
ment receives one-fifth of the total value of all the gold and
diamonds found in the country. Notwithstanding the sound-
ing names of these two items of the mineral wealth of Brazil
neither of them have been nearly so profitable, nor so bene-
ficial to the general interests of the country as the homestead
of its agricultural productions. In the short space of a year
and a half the exports of sugar and coffee amounted to more
than the value of diamonds found throughout a period of 80
years.

Climate.—At almost the whole of Brazil lies 9° of
the equator and in a hemisphere where there is a greater propo-
tion of sea than land its climate is generally more cool and

moist than that of countries in corresponding latitudes in the N hemisphere. This is particularly applicable to the flat portions of the *azuleiro*, where impenetrable forests occupy the alluvial plains; and by preventing the sun's rays reaching the earth, cut off one of the principal sources of heat—radiation. In the S. parts of Brazil in consequence of the gradual narrow- ing of the continent, the climate is of an milder character—less uniform, and the quantity of rain that falls is less. In Brazil differs widely in amount. In the S. provinces the provinces generally are subject to heavy rains and violent storms but the S. regions rejoice in a stifled mild, and *salubrious* climate. The rainy season commences in October and usually lasts till March setting in with heavy thunder- storms. At Rio where the climate has been much modified by the clearing away of the forests in the neighbourhood the rainy season is not so oppressive as in the interior, but is so diminished as to have seriously reduced the supply of water to the city. Generally the climate of Brazil is delightful diffusing and maintaining a perpetual summer throughout the favored land. In the N. parts, the air is the lower tracts is somewhat sultry and oppressive but vegetation is vigorous and profuse the ground being covered with flowers and the trees with a foliage that is ever green while the nights are deliciously cool. Near the coast the temperature is modified by the trade wind, which after blowing the Atlantic, freshens the shores of Brazil imparting a refreshing, coolness to the atmosphere.

Salt, Vegetable Productions of.—The land of Brazil is so far as its capabilities have been tested is highly fertile, although but a comparatively small portion has yet been subjected to this test not more than a hundred and fiftyth parts of the whole surface being under cultivation and this portion is entirely limited to the coast, and to the N. E. part of the empire which seems peculiarly well adapted for the cultivation of maize, sugar and coffee. The pasture however are of vast extent and being covered with prodigious herds of horned cattle form one of the principal sources of the wealth of the country. The vegetation of Brazil is characterized generally by the peculiar physiognomy which that beautiful family of vegetables imparts on tropical countries. Of these no fewer than 100 species are native to the country. The chief food plants are maize, coffee, cotton, cocoa, rice, tobacco, manioc, wheat, manioc beans bananas ipomoea, ginger, yams, lemons, oranges &c. the two first sugar and coffee, however, the staple products of the empire. The manioc is a native of Brazil and its acrea is almost the only kind of yield used in that country. An acre of manioc is said to yield as much nutriment as 6 acres of wheat. The Indians find in the manioc and its products a more abundant and nutritious food than the other products of the Old World. But it is in the boundless forests of Brazil that the vapour of the vegetable power is exhibited in its most imposing form. No language is able to describe or can describe the glory of the Brazilian forests the endless variety of form the contrast of colour and size, the largest tree bearing brilliant blossoms of every hue, and clothed with a drapery of carmine epiphytes and festoons of climbing plants, while thousands of a diameter of not less than 8 and 12 ft. stand so close together that it is impossible (the intervals being filled up with an undergrowth of plants) to obtain a passage between them. In some of these groves of the forest the trees are so tall and so delicate that the tops of the trees grow to the height of 40 ft. If the cane of a principal forest, say Bumbold, can be given as any forest on the face of the earth, none can claim it perhaps so truly as those that fill the connected banks of the Orinoco and the Amazon. But it is not in the plains alone that this gigantic vegetation is met with the sides of the mountains are also clothed with trees of enormous size, including the most beautiful specimens of the palm and tree-fern. The ocean-nut palm attains a great size on the sea-shore and the curious Bertholletia, or monkey-pot tree the kernels of which are exported from Brazil under the name of Brazil nuts, a nut with a many-seeded kernel, but more especially the tree of the baobab, the tree of life. A peculiar character of the vegetation of the coast is the host of species of sea-weeds which, though not of much use to the human race, perfume the air with their exhalations. Amongst the more valuable trees of the Brazilian forests are the anacardium, or Durao da Paraitia (the *Conium*) the seeds of which

yield a tasteless oil more powerfully emulsive than castor-oil, and was imported into Europe; the cacao or chocolate-tree the *Cassia palustris* or Brazil-wood tree, used, under the name of Pernambuco wood for dyeing silk of a truer colour than the rosewood-tree, the frutin, mahogany and a variety of others well adapted for the purposes of shipbuilding. The different kinds of forests and woods in Brazil are distinguished by the inhabitants by particular names. There are the *Matos* or *Virgens* or *virgin forests*, such as those which exist on the *Campana* peninsula, and along the whole maritime frontier, where the tallings are generally *palmeiras* or palms, and the trees the *Casareos* *clowowiro* or shrubs about 8 or 10 ft high and the *Cap* *lira*, such wooded tracts as are formed by the small trees and shrubs, which spring up where virgin forests have been cleared away. The beauty variety and abundance of the flowers of this extraordinary country are no less remarkable than a y other of its vegetable productions. The whole country says Mr Gardner through which we travelled, was a garden, and the flowers were everywhere, where, like a child at a flower show, he would choose a group at first everything was not only new to him, but as more beautiful or more rare than the others.

[illegible]

Literature, Education, &c.—In every town schools for teaching the first rudiments are now to be found to which all citizens are admitted free. There are two universities—one in São Paulo the other in Pernambuco of which, the former is held in the highest estimation. In all large towns there are professorships of Latin Greek, English, French, philosophy, rhetoric, geometry, chemistry, botany &c. and printing; sciences are now common throughout Brazil.

People.—The free population of Brazil consists of Europeans, white persons born in Brazil or native Brazilians, mulattoes, Mamelucos, a mixed caste between whites and Indians, Indians in a domesticated state called Caboccos, Indians in a savage state, called Tapuyas, free negroes, born in Brazil, manumitted Africans, *Mestizos*, a mixed caste between Indians and negroes. The slave population consists of Africans, *negro*, mulattoes, and *Mestizos*. The race of the *Mestizos* are an idle and inactive race with few wants and fewer enjoyments. The mulattoes, the offspring of Europeans and negroes, are ingenuous and evince an aptitude for the mechanical arts. The Tapuyas or native Indians of Brazil are of a copper colour, robust and well made, but of short stature. They generally go naked, paint their skins, and are fond of ornamenting their heads with feathers. To this race belong the Botocudos or Botocudos a ferocious tribe, who inhabit the banks of the Rio Doce and the Belmonte. They are said to be descendants of an ancient people called the Ayayaras, who distinguished themselves by their cruelty to the Portuguese, whom they slaughtered on one occasion about the middle of the last century without mercy leaving impressions of horror and apprehension on the Portuguese colonists which are not yet effaced. They go entirely naked, and render themselves hideous by the insertion of large circular pieces of wood in the lower lip and lobes of the ears, the former giving the mouth the semblance of an ape. In other respects they have all the personal characteristics of the Tapuyas, while some of their young women are said to be really handsome. Their light copper colour glows all over when they blush. They are said to be cannibals and there seems little doubt that they were so at one time, but it would appear that the practice is now becoming obsolete amongst them. Those inhabiting the banks of the Belmonte seem to be of a somewhat more native than those on the Doce who manifest an irreconcilable hostility to the whites and are by far the most savage tribe in Brazil, if not in all S. America.

Commerce.—The principal articles of import and export and the countries with which trade is carried on will be seen in the following tables—

TABLE OF THE EXPORTS AND IMPORTS OF BRAZIL IN 1854

	Imports	Exports	Total
	1854	1854	1854
Great Britain	2,312,575	2,121,118	4,433,693

In September 1850 a law was passed declaring the slave trade piracy.

Religion.—The established religion of Brazil is Roman Catholicism. Although other religions are tolerated the Government of the empire is non-sectarian. Hereditary constitutional and representative. The Legislative power is in the Central Assembly which consists of two chambers, the Senate and Chamber of Deputies. The former elected for life and the latter for four years. In 1850, the public debt stood at \$100,000,000. External \$10,000,000. Internal \$90,000,000. The latter figure for 1849 is \$22,000,000 being less than the

receipts. The military force for 1850-51 was fixed at 25,000 men of the line besides which there are 60,000 national guards, and each province has a well-equipped municipal guard or police force. The navy in 1850 comprised 40 vessels of all arms, three frigates, seven corvettes and nine steamers, the remainder consisting of brigs, schooners &c. manned in all by 3500 men. The steam force is annually on the increase.

History.—Brazil was discovered May 8 1500 by Vicente Yáñez Pinçon, one of the companions of Columbus, but was subsequently taken possession of by Pedro Álvares Cabral. Various towns now sprung up along the coast under the auspices of the Portuguese Government, but without much success from the emphy and jealousy or envy of other nations, especially the English, Dutch, and Spaniards, who repeatedly attacked and destroyed their settlements. The Portuguese however still retained possession of the country which notwithstanding these calamities continued to prosper. On the invasion of Portugal in 1808 by the French, the sovereign of that kingdom, John VI. sailed for Brazil, accompanied by his court and a large body of emigrants. Soon after arriving there he began to improve the condition of the country by placing the administration on a better footing and throwing open the ports to all nations. At the fall of Bonaparte the King sailed Brazil to a dukedom of a kingdom and assumed the title of King of Portugal, Algarve, and Brazil. The revolution which took place in Portugal in 1820 compelling the King to return to that country, he next year sailed for Lisbon leaving Pedro, his eldest son and successor as lieutenant and regent. In the following year 1822 Don Pedro gave himself the title of Emperor of Brazil, acknowledged the independence of it in a letter country in 1825. Some years afterwards a series of tumultuous proceedings ended in the abdication of Don Pedro, who left Brazil on April 1821 leaving his son who was under age, as his successor. The rights of the latter were recognized and protected and a regency of three persons appointed by the chamber of deputies to conduct the Government during his minority. In 1840, the young Emperor was declared of age being then in his 15th year and was crowned on July 18 1841. Peter and Marianne were crowned as King and Queen of Brazil. *Private Information.*

BRAZIL.—A large river, 1. States Texas, runs among the mountains in the W part of the state, under the parallel of 33 N. flowing S E between the Colorado and Trinidad and after a course of about 900 m. falling into the Gulf of Mexico between Quintana and Velasco 56 m. W. S. W. Ulveston lat 25° 45' N. lon 85° 40' W. It is navigable, during freshets for a considerable distance, but there are only 6 ft. water on the bar at its mouth. The plain through which it flows is strongly impregnated with salt and iron and one of the streams which forms its head waters, issues from a saline lake, 20 m. long and about 6 broad. Its principal affluents are the Rio Fork and Navasota. Among the towns on its banks are Milan, Nashville, Washington and Richmond. The cotton plantations along its banks are highly productive.

BRAZZA (anc. Bruck) an isl. Austria, in the Adriatic Sea, and belonging to Dalmatia lat 45° 15' N. lon 16° 37' 30" E. It is 34 m. long and from 5 to 7 broad, contains 50 villages, and is separated from the mainland by a channel 12 m. broad, which affords excellent anchorage for shipping. The island is very mountainous and well wooded and in the valleys vines are grown, from which are made the best wines in Dalmatia. It produces also, good oil, almonds, and cotton, and grain in small quantity. Much attention is paid to the cultivation of bees and silkworms. The kids and lambs of this island are prized for the delicacy of their flesh and the cheese is also in high repute. Near St. Martin in the E. part of the island there is an extensive stone quarry, from which large quantities of building-stones are exported. The chief town, St. Pietro di Brazza has a small port de-

fenced by a mole. At Milne there is a considerable ship-building yard. The island of Bracon forms a district, divided into seven communes, and gives a title to the Bishop of Lons-Bracon. Pop. 14,690.

BREADALBANE, or **BRATIALBAN**, a mountainous dist. Scotland, co Perth in the centre of the Grampian range, about 88 m in length, and 31 in breadth. The hills afford excellent pasturage, and the valleys are many of them susceptible of profitable cultivation. One of the most striking features of this romantic district is Loch Tay a beautiful sheet of water of about 16 m. in length with an average breadth of about 1 m. From the N.E. extremity of this lake issues the river Tay one of the three principal rivers of Scotland. Loch Lyon at another beautiful, though much smaller lake. It is situated at the head of Glen Lyon, is about 3 m long and half a mile in breadth. The district abounds in numerous and various kinds of minerals. Breadalbane gives the title of Marquis to a branch of the family of Campbell who are also principal proprietors. The chief seat of the family is Taymouth Castle, a magnificent residence.

BRECH a St. France, dep. Morbihan about 20 m from Lorient.

A battle fought here in 1364 in consequence of a challenge given by Jean de Montfort son of Edward III. to Charles de Blois was gained by the former chiefly by the aid of his Flemish allies and gave him the crown of Burgundy. Charles Cadwallader, the celebrated Welshman was a native of Brecon. A monument, begun to be erected to his memory was abruptly terminated by the Revolution of 1830. 1 p. 184.

BRECH A or **BREUNY** par S Wales Carmarthenshire 530 ac. 1 op 107.

BRECHIN a royal bur and par Scotland co Forfar. The town is situated on an alluvial 1 bank S Eak 8 m from its junction with the sea at Montrose, 28 m N N E Dundee. It consists of one principal street stretching N to S of another nearly three fourths of a mile in length and several cross streets. The houses are all stone and have a respectable appearance particularly those of recent erection and on the whole, the town is rapidly improving. The cathedral church, which now forms the parish church, is situated on the N bank of a river—formerly a moat—which separates the town from Brechin Castle. It has a large and beautiful Gothic window over the W door and a tower and spire 130 ft. high. Near the church stands the tall slender tower of Brechin commonly called the Little Steeple, which has long been a puzzle to antiquarians. It is an undecorated turret of freestone, 26 ft. in height to the cornice and 15 ft. more to the pinnacle of the spire, which has more than once been repaired. There is an interior communication to the cornice, by means of movable ladders. There are here also the remains of an ancient chapel called *Maison Dieu*. The other churches are—two Free, three United Presbyterian, one Original Secession, and one Congregationalist. A Scotch Episcopal chapel and a R Catholic meeting house. The two Free churches are handsome edifices. The public schools, which have been long celebrated are situated in the lower floor of a building erected by Lord Panmure for educational purposes. Besides which a building has been erected called the Educational Institute, amply supported by Free Churchmen and Dissenters, in which also are schools, well attended by young children. Brechin has likewise a mechanics institution, comprising a handsome building, erected and endowed a few years ago by Lord Panmure, with a large library attached. The linen trade is the staple of the town. A considerable quantity of fax is annually spun into yarn, employing a large number of hands. There is also an extensive bleaching establishment here but the greater part

of the working population within the town are employed in hand-loom weaving of linen fabrics. There are also two distilleries and two breweries the former manufacturing not less than from 80 000 to 100,000 gallons of whisky per annum. Brechin Castle, for many centuries the residence of the Marquis of Farnham, stands on a precipice overlooking the Eak and is separated from the town by a deep ravine. Brechin unites with Montrose, Forfar, Bervie, and Arbroath, in returning a member to the House of Commons represented electors in 1850 172.—THE TOWN is about 7 m. in length, and 8 m in breadth. Pop. 3310. Pop. of tn 4515.—Local correspondence.

BRECHIN a tn and com. Belgum, prov. of, and 14 m N E. Antwerp with manufactures of cloth tanneries, breweries, a dyework and a brick and tile work. Pop. 3123.

BRECKIN L. S. par Eng Norfolk 1890 ac. Pop. 156.

BRECKON or **BRECKNOCK** an island co England S.

Wales, about 38 m N to S and varying from 34 to 14 m E to W bounded N and N.E. by co Radnor E. by co Hereford S.E. by co Monmouth S. by co Glamorgan, and W by co Carmarthen and Cardigan area 483,000 ac., or 754 sq. m.

It is one of the most mountainous counties in the principality and is distinguished by great sublimity and beauty of scenery.

The prime peak mountain-range, called the Black Mountains traverses the S part of the county from E to W and near its centre rises the *Tau* or *Brecon* forming the high est summit of S. Wales, and having a height of 2802 ft.

The chief geological formation of Brecon is the old red sandstone, which is most largely developed in the central and S.E. districts.

According to Mr. Murchison, it is divisible into three minor formations viz. a mass of tile stones, a centre of marls, limestones, locally called *coronatus* sandstones &c. and an upper portion, consisting of sandstones and conglomerates, which usually compose the great *coronatus* masses, and, as in the case of the Brecon, directly described, second to their highest summits.

In the N districts the rocks are still older in the series, consisting chiefly of graywacke slates traversed and penetrated by a remarkable line of trap and porphyry.

To the S near the borders of Glamorgan a band of mountain limestone appears forming part of the long narrow zone which encircles the important coal fields of S. Wales.

A very small and inferior portion of this coal field is included in Brecon and though some workings have been established near its E. border, they must derive their chief supplies of coal, and even from adjoining counties.

As a whole, Brecon can not boast of minerals. The river Wye forms a natural boundary between this county and Radnor and the Lk. ranging in the Black Mountains crosses the county and flows through a fine valley towards the town of Brecon.

About 2 m E. from the latter is Brecknock Mere or Llano-fellder one of the largest lakes in S. Wales abounding in otters, pike, perch and eels.

The climate is, in general temperate and salubrious. The farms are small and the land under cultivation is about 230 000 ac.

The lower parts of the county contain several fertile valleys, which yield considerable agricultural produce, consisting of oats, wheat, rye, barley, turneps, vetch and potatoes also of wool, timber, butter, cheese, and cattle which are sent to the markets in the neighbouring English counties.

The mountains are usually of a sterile nature and, towards their summits, produce little herbage but their lower slopes are verdant, and are chiefly used to pasture sheep, which are generally small but much prized for their excellent quality.

The manufactures of the county consist principally of coarse woollen cloth, stockings, and other woollen stuffs.

The trade has been considerably facilitated by a canal from Brecknock to Llanelly 18 m in length and 9 ft. deep, and navigable for barges of 25 tons burden thus opening a communication with the sea and by the Brecon and Merthyr-Tydvil Railway.

The county is divided into six hundreds, and possesses four market towns—Brecon, Builth, Crickhowell, and Hay.

It sends one member to Parliament; number of electors (1850) 2548. Pop. 61 474.

BRECON or **BRECKNOCK**, cap. of above co., and nearly in its centre in an open valley at the confluence of the rivers Honddu or Honddu and Lk., over which there are four bridges 145 m. W by N London.

It consists chiefly of three principal streets, and several smaller; most of them tolerably straight, and well kept; and all of them paved and flagged.

The houses are of stone, and generally well built, and

particularly those of recent origin. It is badly supplied with water and is but indifferently lighted though furnished with gas. The town, however, is in the whole improving in appearance particularly as regards its shops and public buildings of which last the most noteworthy are the new court hall a handsome structure in the Grecian style a new girls and infants school in the Elizabethan style a large and commodious market house and a barracks. Breda has three churches two chapels belonging to the Independents, two Wesleyan rev. Baptist and one Cal. m. m. Methodist. The Priory church one of the best was a fine structure, partly Norman and partly English style. Its schools are—the college school and several others for boys for girls and for infants there are here an infirmary and a mechanics institute. The trade of the town is merely of a local nature and it has no manufactures except that of flax and coarse woollen cloths wrought to a small extent. Markets three times weekly and fairs annually for hops leather cattle, &c. Breda returns a member to the House of Commons registered electors in 1850 340. The celebrated Mrs. Henry Siddons was born here in 1750. The town is of high antiquity its origin dating A.D. 1092 at which time its castle was built. Of this building hardly any trace now remains. Pop. 10,000.

BREDA a town and former fortress, Holland prov. N. Brabant on the Mark about equidistant from Berz in op-Zoom Antwerp and Hertogenboech in a fine wood and river. Its defences are strong though irregular and capable of being crossed by flood up the surrounding country. The town is of a triangular form has four gates and above 30 streets, one of which opens into the market place which is surrounded with trees. There are other charming public walks within the walls. At Breda now the part of the church of the Reformed adorns the market place with its lofty tower. Destroyed by lightning in 1744 it moved its restoration chiefly in William III. of England. The Lutherans also have a handsome church. The R. Cath. here are divided into three parishes of which each has a church and the Jews have a synagogue. The other public buildings are the castle used for the royal military academy until the revolt of Belgium the government house—a handsome town-house the palace of justice, &c. and the local courts next a brewwell and two prisons. On the parade ground is the great arsenal a beautiful building also the new and the little arsenals, and various other buildings required in a fortress of the 1st order. Among the public institutions there are hospitals for the old and sick and two orphan-houses, a drawing school a scientific and literary association, a branch of the institution against a department of the public utility society and three musical societies besides a Latin there are other 1) schools of various kind. From its central position and water communication with other provinces and the sea Breda is frequented by vessels trading with all the principal towns in Holland but its trade has suffered from the separation in 1815. It has manufactures of carpets hair cloth linen hats soap tallow and wax candles also cotton print and dye works tanworks breweries ropewalks, tanneries and lithographic printing houses, a leather factory a copper foundry and a gunpowder work coopermakers, armurers, &c. Previous to the revolt of the Netherlands against William III. Breda was a favourite residence of William I. of Orange. There he held court, and exercised a personally homelike occupation more with hounds and hawks than with politics. At Breda, in 1566, the famous league of the nobles was first proposed by Count Louis of Nassau and the famous Marquis of St. Aldegonde. Breda repeatedly fell, by force or fraud into the hands of the Spanish or Dutch during the 80 years war of independence but was finally secured to the latter in 1737. The pop. of the town 13,000 and ne 2700 for the parishes 11,700 of which 11,780 R. Catholics, 5700 Protestants, and 180 Jews.

BREDEVOORT a in Austrian States, cap. of the Vorarlberg gov. of and 7 m W. of Innsbruck beautifully situated on the slope of a hill on the banks of Lake Constance. It is well built divided into the old town which is an ugly place, and occupies the eminence and the lower town which is more pleasant, and spread along the shores of the lake. It has three churches and a school two monasteries an orphan asylum and a military engineering school. Wharves in cotton spinning are carried on and articles in wood and straw are manufactured. The inhabitants are very industrious, and export large quantities of framework wooden fittings for houses, and even wooden shales ready for erection, to the Swiss cantons. They likewise do a good business in corn, fruit, wine butter and cattle. In the neighbourhood are salt-petre works blast furnaces and coal pits. Bredevoort is supposed to be the Argentinus of Strabo and Ptolemy whence the *Leus Brigantius* has Lake of Bregeus but now Lake Constance got its name. The old castle once the stronghold of the powerful Counts of Montfort and the ruins of which are to be seen on Mount Leihard belnd the town was for a long time one of the most important fortresses in this part of Germany. P. 4-60

BREDEVOORT par Eng Lancashire 6410 as. P. 27. BREDEVOORT, or BREVEN, one of the Pulis Lacs in England off the Land's End, on Cornwall at the W. entrance into the English Channel about lat. 43 30 N. lon. 8 20 W. It is about 1 1/2 m in length N to S, with an average breadth of half a mile and comprises an area of 370 ac. It consists of several small hills connected by tracts of low land, a considerable part of which is in cultivation. A small group of houses is called the town of Bredevoort in which there is a church erected a few years ago on the site of a more ancient one. Pop. between 2000 and 3000

BREDEVOORT par Eng France coast of Brittany dep. Côtes du Nord 24 m from St. Brevé in the English Channel lat. 46 35' N. lon. 2' W. It is about 3 m long and 2 m broad and is separated from the mainland by a channel 1 m broad. It has three harbours. One on the S. is the Corderie on the W. and is the Corderie on the E. The last of which has 8 to 15 fathoms water according to the state of the tide. Bredevoort is the only point on the French coast, between Brest and St. Malo, where frigates can enter and in time of war is much frequented by convoys navigating the channel. On the rocky reef of Haux Bredevoort there is a lighthouse the light of which is visible from a distance of 14 m. The island is defended by 12 small batteries. It has no springs the inhabitants using rain water. P. 151

BREDEVOORT par Eng Hereford 1829 as. Pop. 866 BREDEVOORT (Aix) (Lash, Bredevoort) a in grand duchy of Baden circle, Upper Rhine, 15 m W. Freiburg 8 1/2 m W. Strasbourg 7 1/2 m Rhine, opposite Neuchâtel, and Fort Mörser in France. This is an ancient town and was formerly very strong being regarded as the key of Germany on the W. but its fortifications were dismantled in 1641. The only building in the town worthy of notice is the manoir of St. Stephen, remarkable for a beautiful altar-screen, carved in wood. The chief employments of the inhabitants are weaving agriculture and the rearing of cattle. Pop. 5200. The name of the same name has a pop. of 22 000 BREDEVOORT (New) See NEUR-BREDEVOORT

1653 was 2729, town. 845,046 and cleared 2696 vessels, ton. 3 529. A railway connects Bremen with E. N., and Central Germany on the one hand and with W. Germany, Belgium and France, on the other. Bremen was founded or at any rate, first rose into note in the year 787 or 788 when it was made the seat of a bishopric by Charlemagne, subsequently elevated to the dignity of an archbishopric, which at the treaty of Westphalia, in 1648, was secularized in favour of Sweden. After various political changes the city was taken by the French, in 1806 and from 1810 to 1813 it was the capital of the department of the Mouths of the Weser. In 1815 it was restored to its old franchises, by the Congress of Vienna. Bremen holds the chief rank amongst the free cities of the German Confederation, and with them holds the 17th rank in the Diet. Pop. (1842) 49,000. 2 TERRITORY a territory stretching along both sides of the Weser and is bounded, N. E. and S. by Hanover and W. and S. by Oldenburg area, 100 sq. m. The inhabitants are nearly all of the Protestant faith. The executive government of the republic of Bremen (city and territory) is vested in a senate, called the *Wiseheit* (the Wisdom) consisting of four burgomasters, two *senators*, and 14 councillors, and in the convention of burgesses, composed of all resident citizens who pay a certain amount of taxes, without regard to their religious opinions. Pop. ~ 890 including the city. 3 DUCRY a subdivision of the landreates or provinces of Saxe-Hanover occupying the portion of that kingdom between the Elbe and Weser area, 150 sq. m.

BRIMERHAFN a report at the mouth of the Weser formed on ground on its bank, purchased by Bremen from Hanover in 1931 and completed in 1830 lat. (Bremen or Weser Light) 53° 45' 30" N. lon. 6° 4' E. (a). It is 24 m. N. W. and is the proper port of Bremen. It consists of an outer harbour, a sluiced dock, and an inner harbour. The difference between the lowest ebb and the highest flood is 26 ft. but the average rise does not exceed 10 ft. Since the completion of the harbour Brimerhafen has grown up into a considerable village, but the narrow limits of the space of ground purchased and its sterile nature, give no promise of its ever becoming an important town. It is guarded by fortifications and defended by the *Ilsewerder battery*. Fort Wilhelm on the southern side of the river. Pop. 2360.

BRIMERVOED a tn. Hanover dist. of, and 18 m. S. W. Stade, duchy Brunen, on the Ouse with distilleries, machine-works dyeworks, and manufactures of cloth leather and paper, and some trade in turf and wood. Pop. 2481.

BRIMGARTEN a tn. Switzerland cant. Aargau cap. area of some name 14 m. S. E. of Aarau, r. bank. Rhine which is here crossed by a wooden bridge. On the S. bank of the river is a Capuchin cloister. It has a large church, a respectable townhouse and a paper-mill. The chief employment is agriculture. Bullinger the reformer was born in this town. Pop. 1692.

BRENN a populous vil. W. Africa, on the Senegal about 50 m. above its embouchure lat. 16° 25' N. lon. 16° W. built on two sides of a marsh.

BRENNÉ (La) [Latin, *Brenna Sylva*] a country France, in the ancient prov. of Touraine and Barri. The part of this country still retaining the name is marshy and filled with pools affluents of the Claise, and lies in dep. Indre, between L'Chazotte and La Blance. The inhabitants collect bees in the marshes.

BRENNER, a mountain of the Tyrol Alps, between the Inn the Ache, and the Adige height, 6777 ft. The road from Innsbruck to Verona, by Botzen and Trento traverses this mountain, at an elevation above the sea of 4668 ft. This is one of the lowest roads practicable for carriages over the main chain of the Alps and one also of the most ancient, having been made first by the Romans.

BRENO a tn. kingdom of Italy Lombardy prov. of and

85 m. N. E. Bergamo L. bank Oglio. It is well built and has a fine square townhouse, an ancient Gothic church, and a strong castle. In the vicinity is also a beautiful staididus grotto. Pop. 2406.

BRENT, five par. Eng. — 1 *Brent (Zeed)* par Somerset 2057 ac. Pop. 780 — 2 *Brent-leigh*, or *Elly* par Suffolk 1617 ac. Pop. 260 — 3, *Brent (South)* par Devon; 1974 ac. Pop. 1203 — 4, *Brent (South)* par Somerset 5426 ac. Pop. 937 — 5 *Brent-Tor* par Devon 1212 ac. Pop. 161.

BRENTA [anc. *Medonensis Major*] a river Austrian Italy. Its source is Lake Caldese in the Tyrol 8 m. S. E. Trent whence it flows S. E. with a winding course of 119 m. and falls into the Adriatic through the canal of Brionova or Brionetto at Brondolo. Formerly its embouchure was at Valsusa, opposite Venice. It has a rapid course, and is navigable for 46 m.

BRENTFORD a market in England, on Middlesex, 7 m. W. London on a slight acclivity on the Great Western Road, and at the junction of the Brent with the Thames the former divides up into Old and New Brentford. It consists chiefly of one long, wide street well kept and containing some good houses. There is a great deficiency of water in Old Brentford, but in New Brentford the supply is better. The former is lighted with gas, the latter only partially. The town is exceedingly ill drained and the poorer population filthy and wretched in the extreme. The townhall and market-house recently erected is a handsome structure. The churches are two—one in Old Brentford, and one in New. Three Baptist chapels, two Independent, and one Wesleyan and the schools two infant, a national and a British both for boys and girls. The charitable institutions are a dispensary and Old Brentford visiting society. A large distillery, a soap manufactory which makes between 2000 and 3000 tons annually and extensive sawing and planing mills, are the chief manufactures. The retail trade is considerable, especially on market days. Petty sessions are held every Saturday and the county court is held every month. Brentford is the county town for elections a market, and union town. Pop. 3870. — (Local Cor. respondents.)

BRENTONICO a tn. and com. Austria, Tyrol 8 m. S. Roveredo on the N. slope of Mount Isarco overlooked by a small castle. Vine-culture is the main occupation. Pop. 2661.

BRENTWOOD a market in England co. Essex on a commanding eminence, 11 m. S. W. Chelmsford consisting of one principal street with houses in general old and irregularly built. It has a chapel connected with the Established church, Independent meeting-house and free grammar-school open to all boys within 3 m. of the town, and a large ale and porter brewery. The weekly market is on Saturday and there are two annual fairs for horses and cattle. The Eastern Counties Railway has a station here. Pop. 4205.

BRENZETI par Eng. Kent 1802 ac. Pop. 231.

BREOCK (St.) par Eng. Cornwall 8387 ac. Pop. 1774.

BREKETON par Eng. Cheshire, 4601 ac. Pop. 648.

BRESCIA a deleg. ki. kingdom of Italy Lombardy bounded, N. by the Tyrol and Valaisine E. by Verona and Mantua, S. by Mantua and Cremona, and W. by Bergamo area 888 geo. sq. m. Towards the N. it is hilly, but in all other directions it is a fertile plain. The chief rivers are the Oglio and its tributaries Mella and Chiese. The air is mild and pleasant. The chief productions are grain, fax, hemp, grapes and olives. A good deal of silk is produced and manufactured. The principal mineral is iron, which is extensively mined and supplies numerous works. A great deal of paper also is made. Pop. 810,000.

BRESCIA [Latin *Brenna*, French *Brescia*] a city Italy Lombardy cap. of above delegation lat. 45° 56' N. lon. 10° 18' E. 40 m. N. W. Verona, and about the same distance S. E. Lake on a beautiful plain, 1. bank. Mella. It is a hard rock and flourishing city of a square form about 4 m. in circuit, and surrounded by walls its streets are spacious, and its public buildings numerous particularly its churches, which are further remarkable for the number and value of the paintings with which they are enriched. A few of them only however have much pretension to architectural beauty amongst those that have are the new cathedral, a handsome structure of white marble and the church of San Domenico. But however plain in exterior appearance most of the houses

churches may be they are richly decorated within with the most beautiful frescoes, and other creations of taste and art. The other buildings most worthy of notice are the Palazzo della Loggia, and the Eretoletto. The first was intended for the palace of the municipality or townhall; it is composed of the richest marbles and was worked upon by the first architects of the 16th and 18th centuries, successively. The Eretoletto, the ancient palace of the separate communes, the characters of forests and townhall, and is surrounded by a great tower whose deeply-etched Italian battlements produce a singularly grand effect. The whole is in a colossal style and marked by the peculiar characteristics of the age in which it rose—supposed to be about the end of the 13th and beginning of the 14th centuries. The city contains, also, a lyceum, two gymnasies, an atheneum, a college with a museum of antiquities, and a botanical garden. A public library with 80,000 volumes, a Geological museum, a handsome theatre, a corn exchange, an extensive hospital, two model-schools, a workhouse and several other educational and charitable establishments. There are 73 public fountains in the streets and squares besides some hundreds of private ones. Outside the town is a cemetery begun in 1815 designed by Venturi.

Bresla is a place of considerable trade and manufacturing industry. Year it is large ironworks and its fire-arms are esteemed the best that are made in Italy. It has also silk-loom and paper factories, tanneries and oil-mills and is an important market for raw silk. But it derives the greatest interest from its fine Roman remains having been at one time the seat of a Roman colony. These first attracted attention in the 17th century although as far as regards inscriptions, they had been objects of especial care to the citizens of Bresla for two centuries before that period but it was not till 1820 that any very earnest efforts were made to bring the buried remains of ancient buildings to light. Since that period some remarkable discoveries have been made, unwatering, besides numerous statues and inscriptions the beautiful marble temple of Vespasian, and a number of noble and magnificent Corinthian columns with numerous fragments of mouldings and ornaments, some gilt, and all of great elegance. Bresla was the seat of a school of painting, of great merit to which many eminent artists belonged, including Alessandro Benvenuto, commonly called il Moretto, who flourished in the 16th century and was remarkable for the deep devotional feeling which he threw into his sacred subjects, as well as for his excellence as a portrait painter. The city is of great antiquity having been the chief town of the Cretans, a Gallic tribe, who were subsequently conquered by the Romans, whom it became—but at what period is unknown—a Roman colony and afterwards a municipium. In the year 413 it was burned by the Goths, and was soon afterwards destroyed by Attila; but was rebuilt about the year 452. In 536 Otto I. of Saxony declared it a free city and it so remained for nearly three centuries, when it fell a prey to the factions of the Guelphs and Ghibellines, and ultimately put itself under the protection of Vienna. In 1793 it was taken by the French and was assigned to Austria by the general treaty signed at Vienna, on June 8 1815. In 1849 it was involved in the commotions by which so large a portion of continental Europe was disturbed in that year its streets were barricaded but the city was eventually carried at the point of the bayonet, by the Austrians under General Haynau. Bresla is the see of a bishop, suffragan to the Archbishop of Milan. Pop 80,551.

BRESLAU a rocky island, France dep. Herault, in the Mediterranean, 23 m. from Agde. It appears to be an extinct volcano and is crowned by a fort, which has batteries hewn out of the rock, and was formerly a state prison. On the fort is a lighthouse lat. 43 17 N lon 8 30 E. The light is visible 8 m. off.

BRESKONA, or **BRASKA**, a vil. Holland, prov Zealand, 5½ m. S Middelburg. In bank W Scheid. The Reformed church is evidently the church of St. E. Catholic church of which the nave is supposed to have been washed away by the sea. Breskna is a very thriving place, mainly owing to the steamboat ferry thence to Flushing, and its corn trade with Rotterdam and Antwerp. Pop 620.

BRESLAU a gov (*Regierungsbezirk*) Prussia, prov Silesia area, 8870 sq. m. The surface is the S

towards the borders of Bohemia and Moravia, is mountainous, some of the summits being about 4000 ft.; in other directions it is almost level. The chief rivers are the Oder and its tributaries the Stober and the Waide on the right, and the Vaux, Ohlau, Lobe and Weistritz on the left. There are no lakes of great extent. The climate varies with the surface being cold and severe among the mountains, but mild in the plains and also healthy except where swamps prevail. The valley of the Oder is generally fertile on the left bank but on the right bank inclines too much to sand and is extensively covered with forest. In addition to the ordinary cereals a good deal of flax madder hops and tobacco are grown. The minerals include gravel, lime, lead, iron, and copper and a little graphite. Precious stones particularly amethysts, carnelians, agates, opals, and garnets are frequently found. The manufactures of this government were at one time of very great importance, but have lately suffered much by foreign competition. Pop. 1,084,523.

BRESLAU the chief city of the Prussian dominions, and sixth of Germany cap. prov Silesia, and of gov of same name, at the confluence of the Ohlau and Oder situated on a spacious plain bounded N by the Trebous Mountains, and S, at a greater distance, by those of Zobten. It is divided by the Oder into old and new towns, which, with the various suburbs are

government for the province, and has various administrative establishments. It is also the seat of a royal mint and bank, with a royal office for mining productions. There is a theatre and opera-house in the city and a number of musical associations, both public and private. The fortifications with which Brest was formerly surrounded have been levelled and tastefully planted and laid out in gardens and pleasure grounds, the wile forming a delightful promenade. The manufactures of Brest are numerous, comprising gloves, plate jewellery silks, woolsens, cottons, linens, and stockings. Its lithographic and engraving presses amount to 24. It carries on, besides, an extensile trade in Siliman products and fabrics, the principal of which are corn, metals, and timber. The number of distilleries in the town amount to nearly 100. Brest is also the first market for wool on the Continent. It is altogether a bustling and thriving city and from its salubrity the cheapness of provisions and education the sociable dispositions of the people and the beauty of its environs, is a very desirable place of residence. By railway it communicates with Rennes on the one hand and with Berlin, Berlin and Hamburg on the other. Pop. (1710) only 41,000 (1846) 108,000 (1846) 112,134.

BRECKAY.—An isl. Scotland one of the Shetlands, opposite Lerwick united probably with Barra and Quarff lat. $60^{\circ} 10' N$ lon $1^{\circ} 10' W$ about 6 m in length and from 2 to 3 m in breadth. Its coast line is rocky and deeply excavated in many places by the action of the sea. The interior hilly but presenting some cultivated land sloping towards the shore. A usual look is a hill, covered with heath, stunted grass, and post moss, 724 ft. high called the Ward or Beacon Hill, rises near its E. extremity and another of 400 ft. called St. Andrew's or Ander Hill, on the E. side. On the N. are three bold headlands the Ord, the Bard, and Hammer (the first is 590 ft. high, and is habited by eagles the other two are about 200 ft. each). There are a number of small lakes in the island abundantly stored with excellent trout. Quarries of a coarse kind of slate have been wrought for many years. Culinary vegetables thrive well here, but trees make little progress, although it must have been otherwise at one time, as large trunks are frequently found buried in the mosses. Sea-fishing is the principal occupation of the inhabitants. To the long-fishing called the haaf or sea-fishing Breckay sends upwards of 13 boats, of 14 or 20 ft. keel and stores proper to enable in the cod and herring fishing. Kelp also, is manufactured here to a considerable extent. Herring-bones, and a little Shetland line cry. Several traces of Pictish buildings occur in the island, and some tumuli, in which human bones have been found. There are also two or three perpendicular standing-stones here one of which forms a landmark for vessels entering Breckay Sound. 1 m from Breckay Barra, and Quarff 1812—2 **BRECKAY MOUNT** between the isl of Breckay and Mainland is well known as a safe harbour from about 1 m to 1½ m average breadth depth about 1½ fathoms at high water fall of tide about 8 ft. Two centuries ago Breckay Sound was much frequented by foreign vessels during the fishing season. It is still resorted to by numbers of English and Dutch boats, and is a rendezvous for whale ships on their voyage to Greenland and Davis Straits. The entrance is the sea always taken by vessels of a large draught the N. being narrow with a rapid current and only 18 ft. water at its deepest point, even at spring tides. At the N. entrance is a shallow rock seen at low water called the Unicorn, from the circumstance of a war vessel of that name sent in pursuit of the Earl of Bothwell having been wrecked on it.

BRESCHE LA, a dist. France, which formerly belonged to prov Burgundy and had Bourges for its capital. It took its name from an extensive forest which stretched from the Rhone to Chalons and was called *Bresche Selve*. It now forms the greater part of dep. Ain.

BRECHINGHAM a par. England, co. Norfolk 2354

BRESCHEURE, a. in FRANCE, dep. Deux Sevres, 86 m. N. by W. Niort. It was formerly strongly fortified, but was ruined by wars, especially that of La Vendée, when it was refused to surrender, with exception of one house and the church. It is now improving, and has some manufactures of flannel and cotton. Granite quarries are worked in the neighbourhood, and the parish church is built entirely of that material. Pop. 2320.

BREST the principal naval port in France, dep. Finistère, situated about at the W. extremity of the kingdom, near the mouth of the English channel, 820 m. W. by S. Paris lat. (observatory) $48^{\circ} 29' 36'' N$ lon. $4^{\circ} 29' 16'' W$. (a.) The town stands on the N. side of a superb roadstead,

at a short distance from the mouth of the Elorn and on both banks of the Penfeld which divides it into two parts. On the N. bank is Brest Proper and on the S. is a suburb called Recouvrance. Its circumference is about 3 m. The upper part of the town stands on the slope of a hill with a declivity so abrupt that the streets leading to the lower town are in some cases provided with flights of steps. The upper town is built with tolerable regularity and has some fine edifices. The lower town is well and substantially built and clean in the vicinity of the port, but some quarters are confused and dirty. Recouvrance has one or two good streets, but the greater portion are very inferior to those on the other side of the river and very dirty. Brest is encircled by ramparts, which being planted form agreeable promenades, and afford a fine view of the port and shipping. From its natural advantages, the extent of its various establishments, and its means of defence, the port of Brest is considered one of the finest in the world, and although surpassed in extent by those of Constantinople and Rio de Janeiro it is surpassed by none in the safety and excellence of its anchorage. It communicates with the ocean by a single passage called the Goulet, 1750 yards broad. In the middle of this channel rise the Mingar Rocks, which contract the entrance still more, and oblige ships to pass immediately under the batteries. From this entrance to the mouth of the Elorn, the roadstead is about 3 m. in length. Its diameter varies considerably from the irregularity of the shores but in some places it is 3 m., so that the port could contain all the navies in Europe. The Goulet is so completely defended that no hostile ship could enter it without being knocked to pieces. There are about 400 pieces of cannon and mortars in the various batteries that command the channel and the anchorage inside is well further protected by the guns that face the shore. Outside of the Goulet is the fort of St. Matthew and the new light-house. The inner port or harbour of Brest is formed at the mouth of the Penfeld. It is narrow but has depth of water for ships of war 40 or 50 of which might lie here in single file. The mouth of the harbour is closed by a boom. It is defended by several tiers of batteries rising from the water edge. Near the entrance to the harbour is the old castle which belonged to the Dukes of Brittany and was partially transformed into a modern fortification by Vauban, in 1698. The horn-battery is on the water level, and has every convenience for heating ships. In addition to all these defences the town is protected by numerous batteries, mounting several hundred pieces of cannon. On the summit of the hill behind it is the powder magazine, where ships that enter the port deposit their powder. The celebrated dockyard of Brest is situated on both sides of a narrow but deep inlet of the sea. It contains the building slips, dry docks, sail house, general repository, ropery, cannon-foundry (begun in 1841) the mullers' barracks, where seamen are lodged while in port in the same manner as

soldiers and the *bagne* or convict station, a building 500 yards long. There are also timber-yards and boat-sheds, and fine building-yards. The retailing-office contains 24 ovens and a slaughter-house, granary, &c. In the year 1858 when the French and Spanish fleets were here, it supplied 50 000 rations daily. Outside the dockyard is the naval hospital. The town has also a naval library containing 20 000 volumes a cabinet of national history a botanical garden, a marine observatory theatre, Hotel de Ville, and naval schools of medicine, surgery pharmacy artillery hydrography and seamanship. The communal college is attended by more than 300 students.

Brest has little trade excepting for the supply of the naval department, and its manufactures scarcely extend beyond glass hats and tarpaulins for the seamen. The merchant shipping is small in extent, bringing principally timber building materials wine, grain and flour malt, iron, hemp tar, &c. Although Brest has been alleged to occupy a Roman site, no mention of it occurs in history till the year 1240 at which period its castle was ceded to John, first Duke of Brittany. This castle had a small town in its vicinity and was several times besieged by the English. French and Spaniards Cardinal Richelieu was the first to take advantage of the natural capabilities of the port for a naval station, and, in 1681 commenced the fortifications which were improved and extended by Vauban. In 1694, it was attacked by an English fleet under Admiral Berkeley but the expedition failed and 900 men who landed were cut to pieces, as the tide had receded and left the boats dry. In 1778 the line of fortifications was considerably extended, and the town soon became as populous as it is at present. Pop. (1846) 88 153 besides which the barracks can accommodate nearly 10 000 military.

BREST LITOV *so* to Russia, gov. of and 110 m. S. Grodno, *r* bank Bug. It stands in a marshy district, and is a place of some strength, being both walled and defended by a castle seated on a rock. Outside the town is an imperial palace with gardens. Both the Greeks and R. Catholics have churches and schools here, and there is a famous synagogue held in high regard and much visited by Jews from every quarter of Europe. The trade is in grain hemp flax and honey. Pop. (1840) 18 048.

BRETAGNE (English *Brittany*) one of the 83 provinces into which France was divided before the revolution of 1789. It is now distributed among the five departments of Ille-et-Vilaine, Loire Inferieure Côtes du Nord, Morbihan and Finistère. Its inhabitants still retain their ancient language, which is closely allied to the Welsh and is extensively used by the peasantry in the W. part of the province. Brittany is principally remarkable for its people, who are a country or two behind in costume manners and customs, agriculture, &c. and for the prodigious number of Celtic remains it contains scattered over its heath. It is supposed to have been peopled by natives of Great Britain partly during the Roman dominion and partly after the invasion of the Saxons.

BRETEUIL two tns. France.—1 In dep Eure 16 in S.W. *Verreux-on-the-Iton* near an extensive forest of same name, in a district abounding in iron mines. It has a church erected in the 11th century and the remains of a castle built by William the Conqueror. The inhabitants are principally engaged in the ironworks, foundries, pin and nail works, which are extensive. Pop. 1487.—2 In dep Oise, 16 m. N.E. Beauvais near the source of the Oise, with remains of ancient walls. The only remarkable building is the extensive abbey of St. Mary built 1228. The town produces large quantities of shawls, sergeen woolen goods, paper leather brassware and earthenware. Pop. 2474.

BRELBOROUGH *par* Eng. Worcester 1663 *as* P 575.

BRETHERTON in Eng. Lancaster 1360 *as* P 818.

BRETIGNY *a* vil. France, dep. Eure-et-Loire, 5 m. S.E. Chartres, remarkable for the treaty of 1260 which bears its name, by which Edward III. in 1260 it is said, by a vow made during a violent thunderstorm, renounced his claim to the crown of France, and John II. of France, who had been made prisoner at Poitiers, obtained his liberty after four years captivity on agreeing to pay a ransom of three millions of crowns of gold, and delivering the first persons of his kingdom as hostages—among others two of his sons, and his brother the Duke of Orleans.

BRETTON BAY *N* Australia, co. Twaen, about 16 m. N. Perth, the cap. of the colony. The river Garban discharges itself into the bay.

BREZOWA *a* market in Hungary co. Neutra on a river of same name, about 18 m. N.W. Leopoldstadt. It contains two churches, a R. Catholic and a Protestant and has some manufactures of leather and several distilleries. 1 *op* 6157.

BRIANÇON (Latin *Brigantium*) *a* *in* France, dep. Hautes Alpes *r* bank Durance, 85 m. N.E. Gap near the Italian frontier a fortified place of the first class formerly a kind of Alpine Gibraltar. It stands on an eminence at the foot of the Col de Gendève, at the point where two small rivers unite and form the Durance. It is 4284 ft. above the level of the sea, and is the highest town in France. The fortifications consist of a triple line of walls encircling the town, with seven forts commanding the approaches. The road to

BRIANÇON.—From *Voyageur dans l'Est de France*.

Italy is commanded by several redoubts and half moon batteries. The principal works are on the bank of the Urdre whose deep gorge is crossed by a bridge of a single arch. All the heights in the vicinity are converted into points of defence, and the position is considered impregnable. Briançon is the French arsenal of the Alps and the central point of attack and defence from which troops can be marched on the passes of Mont Cenis, St. Bernard the Simplon, and the Col de Tenda. From the town itself there is a practicable passage into Italy by Mont Gendève. There is only one tolerable street. Briançon manufactures cotton goods, homery scythes sickles hemp hackles, and other small articles, and has some trade in mules and sheep reared in the vicinity which grows, verjus, lavender water and madder. Pop. 1419.

BRIANSK *a* m. Russia, cap. dist. of same name gov. of and 70 m. W.W. Orel, *r* bank Dniep. It is surrounded with an earthen rampart, contains 16 churches, a monastery with a seminary and two porchouses and has a considerable

out of the town, is a plain building of no architectural pretensions. St. John's is an elegant modern Gothic edifice, with a well-designed tower to the W end. The other places of worship are eight in number belonging to Wesleyan and Primitive Methodist, Baptists, Independents, Unitarians, Society of Friends and R Catholics. About a quarter of a mile from the town is a recently laid off cemetery. There are two endowed schools within the borough—the free grammar-school founded by King James I., and a school for the sons of decayed gentlemen and tradespeople residing within the town; also, two national and Unitarian infant schools. There is one literary and scientific institution indifferently supported, and an infirmary a plain building, established in 1814. The market-house, a modern building is large and commodious, and forms a prominent object in the centre of the town. The townhall is a large, plain, modern building, containing apartments for the local law courts, and for the meetings of the town-council. The union-house, and hospital attached is a large brick edifice, on the N side of the town capable of containing 866 paupers. Situated still further N are the docks and warehouses, erected within the last few years, the former consisting of an outer and inner dock. The docks, which were made legal under July 20 1850 comprise an area of 8 ac., and are capable of accommodating 60 or 90 vessels of ordinary size the highest register entered was for 558 tons vessels drawing 19 ft. can enter readily. In 1845 the number of vessels that entered inwards was 2907 tons. 222 880—outwards 768 tons. 80 000 Bricks &c. not liable to enter at the custom house, and not including the above as exports from this place, amount to about 20 000 tons annually. The trade of the port may be averaged at about 200 000 tons. About 10 000 tons of timber are annually imported from the Delta and Amazon. One hundred and three vessels entered the docks from foreign ports in 1848 ton 12 220 The principal imports are timber, corn, coal, flax, divi-divi, tallow and exports—bricks (sourcing and building) lime, timber, bay, beans, potatoes, &c. The borough returns two members to the House of Commons registered electors (1849) 5 9 The corporation consists of a mayor six aldermen 18 council men, recorder, town-clerk, and coroner. Bridgewater has chiefly a trading port, has few manufactures, the principal being brick making including a kind of scouring-brick, composed of a mixture of clay and sand from the river and called Bath or Plimsditch brick. There are also two corn mills. It was the birthplace of the celebrated Admiral Blake, who was born there in 1659 and received his early education in King James's grammar-school in that town. Bridgewater obtained its ancient name, *Burgh Walles* from its having belonged to Walter de Douay son of William the Conqueror's followers, to whom it was given by that monarch. In the civil wars of the 17th century the inhabitants embraced the royal cause, and defended the town resolutely against the Parliamentarians but were subdued by Fairfax, who carried off a large booty and 1000 prisoners. The town again suffered severely for supporting the pretensions of the Duke of Monmouth who was here received with great pomp, and proclaimed King. Pop. 10 817

BRIDGTOWN a port vill port of entry U States, New Jersey on the sides of Cobleskill creek 20 m. from its mouth into the Delaware Bay. It lies on the W side of the creek, a court-house, jail and public offices on the E side, a Presbyterian church and a Methodist church, a bank an academy a public library and various manufactures. Thirty vessels, of from 50 to 80 tons, sail from the place. On the W side of the creek are very extensive farmworks which employ about 122 persons. Tonnage of the port (1840) 14,171 tons.

BRIDGLINGTON or BRIDGWORTH—1 A market tn. and par England, co. York. The town is agreeably situated about 1 m. from the sea, 87 m. N.E. York, on the railway from Hull to Scarborough, and consists of one principal and several smaller streets narrow and irregular houses, in general ancient, but having a respectable appearance lighted with gas. The parish church forms part of an ancient priory of elegant architecture, but now much decayed. There are places of worship for Independents, Baptists, Primitive and Wesleyan Methodists, the Society of Friends, and R Catholics, together with a free grammar-school. A considerable trade is carried on in corn. Market-day Saturday and two

times annually Area of par 12 410 ac. Pop. 6070.—**3 Bridlington Quay** a handsome modern little tn. about 1 m. S.E. Bridlington, on the sea-coast, is the recess of Bridlington Bay. It consists of one spacious street, and several smaller is lighted with gas and abundantly supplied with water. It contains a handsome new district church in the English style, besides places of worship for Wesleyans and Primitive Methodists, national schools and an infant school. There is here an excellent harbour enclosed by two substantial stone piers which afford a safe retreat to coasting vessels during contrary winds, while the bay which is protected from the N.W. winds by the coast and the N. winds by Flamborough Head, offers safe anchorage to all fine gales of wind. Bridlington Quay is much frequented during the bathing season for which a beach of fine hard sand peculiarly adapted to the purpose, there are hot and cold baths and commodious rooms. At a short distance from the town, there is a chalybeate spring of reputed efficacy Area of par 13 286 ac. P 6948

BRIDPORT a seaport, bar market tn. and par England co. Dorset, 14 m. W by S. Dorchester in a fertile valley surrounded by hills, with the river Bride, whence the town is named, on the W and the Abber on the E. These streams, twin S. of the town and form a commodious harbour for small boats lat 50° 42' 7" N lon 2° 44' 5" W. Bridport consists chiefly of three spacious, clean and well paved streets, containing many well-built modern houses, mostly of brick, with a few of Portland stone. It is well lighted with gas, but the supply of water is not abundant. In the centre of the town is the market-house, a handsome building in the Grecian style, containing the townhall which occupy the second story. The church is a beautiful structure, and contains a fine organ. There are besides seven chapels for Wesleyans, Independents, Baptists, Unitarians, R. Catholics and a Quakers meeting-house. The educational and literary institutions are, one public and four private schools, with several excellent boarding-schools a mechanics' institute, young men's mutual improvement society and a young men's Christian association. The principal manufactures are hempen goods, sailcloth weaving, and shoe-thread, which are carried on to a considerable extent. The harbour is safe and can accommodate for vessels not exceeding 200 tons. The principal imports are coal, timber, hemp, and flax exports variously assorted hempen goods and sail goods, chiefly for New Zealand and Holland. The number of vessels registered at the port in 1847 was 21; ton. 310. The number entered for the same year was 255 ton. 19 767—cleared 147 ton. 85 0 In 1845 the former was 224 ton. 1647—the latter 139 ton. 5018 showing an increase of several thousand tons in both cases in favour of 1847. Shipbuilding is carried on to some extent. Market days Wednesday and Saturday and three fairs annually. Bridport returns two members to the House of Commons constituency (1850) 588 Area of par 62 ac. Pop 4653.—(Local Correspondent.)

BRIDSTOW par Eng Hereford 2199 ac. Pop 704 **BRIE** a dist. France which formed part of Champagne and Isle-de-France and had Meaux for its capital. Its name was derived from a large forest called *Salix Drageus* still in part existing. It is now included in depts. Seine-et-Marne, Aisne, and Marne.

BRIG a dist. France, prov. Alsace, 1 bank, Oder cap. m. of same name 86 m. S.E. Breslau, a thriving place, with well-built houses and broad and straight streets. It is surrounded by fortifications, which, however are not very formidable, and some of which have been converted into promenades. It has five gates, two Lutheran and two R Catholic churches a synagogue several hospitals, and other charitable institutions a gymnasium, with a good library attached and a lunatic asylum. Its manufactures consist of linen, woollen, leather gloves, and stockings cotton, ribbons, lace, leather tobacco, &c. Its trade has gained much by the completion of the Vienna and Breslau Railway

BRIGG a tn. France, prov. Alsace, 1 bank, Oder cap. m. of same name 86 m. S.E. Breslau, a thriving place, with well-built houses and broad and straight streets. It is surrounded by fortifications, which, however are not very formidable, and some of which have been converted into promenades. It has five gates, two Lutheran and two R Catholic churches a synagogue several hospitals, and other charitable institutions a gymnasium, with a good library attached and a lunatic asylum. Its manufactures consist of linen, woollen, leather gloves, and stockings cotton, ribbons, lace, leather tobacco, &c. Its trade has gained much by the completion of the Vienna and Breslau Railway

on which the town lies. It is the seat of a head office for the royal Salsician mine of a royal salt-factory and of district courts of justice. The Ode is crossed here by a substantial wooden bridge. Pop. (1948) 12,015.—The *crucis*, area 174 sq. m. *concessio* almost entirely of an extensive fertile plain. It is traversed by the Ode on the l. bank of which the soil is generally a strong loam, while on the r. it is rather of a sandy nature. The principal crops are wheat and barley. On d. is a left of the Oder German, on the right Polish in general spoken. Pop. 46,781 of whom nearly nine-tenths are Protestants.

BRIELLE, or THE BRIST, a tn. and fortress, Holland, prov. R. Holland, h. bank, Maas, and near its mouth 14 m. S.W. Rotterdam lat. 51° 54' 15" N lon 4° 10' E. (s.) An outer haven connects its two inner havens with the Biefelle-diep at the narrowing of the Maas, by the island of Lozenburg. As Brielle commands the mouth of an important river it is well fortified, particularly towards the sea. It has a water and three land gates, is intersected by several canals, has three market-places, a horsehouse prison, arsenal, and look-out house for the use of pilots. The *reformed* have two churches. The larger is remarkable for the height of its tower which forms a characteristic feature of the place when seen from the sea and a chime of two octa of bells. The R. Cath also have also a church and the Jews a synagogue. Brielle has an orphan house, two hospitals for the old. It also serves a military hospital a savings bank, and several benevolent societies, a department of the public utility society a Latin, a Dutch and French, a Dutch and a poor school.

Brielle was a flourishing town early in the 15th century when it had a large trade with the Baltic and Scotland. The cutting of the Tonné Canal and the transference of the English steam-packet station to Helvoet-alus, have diverted business to other channels. But it will ever bear a conspicuous place in history as the first place in which the standard of Dutch independence was raised in the 16th century and the first fortified town in H. land, in which the hero, here, without the slightest aid from without, rose against and overpowered the French garrison 1913 in both instances verifying the words, *Libertas prima* inscribed in front of the town house. Pop. 410

BRIENNE LE CHATEAU a tn. and com France, dep. Aube, 14 m. W. Sar-sur-Aube, at the foot of a high hill. The town consists of two streets, behind which is situated the chateau a magnificent edifice, erected in the last century by Louis de Lamoignon, last Count of Brienne. In 1760, a military school was established here, which Napoleon Bonaparte visited as a pupil April 20 1778 being then 10 years of age and unable to speak any language but Italian. He left the school October 1. 1784 after an attendance of five and a half years. Brienne, which saw the first dawn of Napoleon's career had almost seen its termination 17 years after for as he was about to enter the town after dr. ing Blücher out of it, a band of Cossacks charged his staff and one of them, who had enquired his name at the Emperor was only arrested by a bullet from the pistol of a Cossack, when so near Napoleon that the bullet fell at his feet. The town had been almost destroyed in the contest and Napoleon promised to rebuild it, and found a military school in place of the old one which had been suppressed in 1800. His projects were never realized, but he bequeathed a million of francs to the town and 200 000 to the inhabitants who had suffered most severely. Pop. 1930

BRIENON or BRIGNON L'ANCIENNE a tn. France, dep. Yonne, 10 m. E. Joigny. It is well built, clean, and agreeably situated on the Burgundy Canal which separates it from a suburb called the Port. It manufactures coarse cloth and has woollen mills and tanneries, and carries on a large trade in dressed, charcoal, and grain. Pop. 681

BRIENZ, a tn. Switzerland, can. Bern, beautifully situated on the N.E. shore of the lake of same name on a narrow ledge, at the foot of the Bernese Alps, and in the immediate vicinity of the Gschwend Falls. The shore of the lake is lined by the gardens of the town, enclosed by a wall 8 ft high to protect them from inundation. The church, with some old ruins, and a handsome school, stand on a height, and have a very picturesque appearance. The chief article of traffic is cheese, which bears the name of Brienz, and is celebrated. Pop. 2102

BRIENZ (Lake or) [German Brünensee] a lake, Switzerland, can. of, and 80 m. S.E. Bern 8 m. long N.E. to S.W., and on an average about 3 m. broad. It receives the Aar at its E. extremity, and at its W. empties its surplus water by a continuation of the same river into the Lake of Thun. It is surrounded by high mountains, the chain of which the Bernese commands magnificent view of the whole range of the Bernese Alps. The lake is 850 ft. above the level of the sea, and varies in depth from 80 to 200 fathoms. A small steamer now plies upon it. The principal fish is the *Lota* a fish in some respects resembling herring which is esteemed a great delicacy.

BRIERLY HILL, a vill. England co. Stafford, 2½ m. N.N.E. Stourbridge. It has several streets, a large chapel a national school for 500 children and a handsome infant school. There are numerous collieries, large ironworks, glassworks and potteries in the vicinity and the manufacture of steam-boilers, and other heavy articles of iron is extensively carried on.

BRIES BRONN or BRUNN-BANNA a royal free tn. Hungary co. Szolnok on the Gran, 22 m. S.W. N. Szolnok. It stands on a plain, surrounded by hills and forests, and contains a parish church, a gymnasium, and a grammar-school. The inhabitants live chiefly by agriculture, the rearing of cattle, and the timber trade and make an excellent cheese which is known by the name of the town and extensively exported. Pop. 3500

BRIE C (or) a seaport in France dep. of dep. Côté-d'Azur lat. (cathedral) 49° 50' 54" N lon 2° 40' W (s) on the coast, about 1 m. from its mouth in the Bay of St. Eustache. The port, properly speaking is the hamlet of League, at the mouth of the river with quays accessible to vessels of 800 or 400 tons. The intermediate space is partially occupied by buildings which have rapidly increased of late years. The town is badly built with old tortuous streets, and has several public fountains bridges and a cathedral erected in the 13th century. On the top of a promontory commanding the entrance to the river are the remains of the tower of Cosca, which Henry IV attempted to blow up after the wars of the League. It now serves as a landmark visible 16 m. at sea. The town is a bishop's see and has courts of first resort and of commerce an agricultural society communal college, diocesan seminary school of hydrography and a public library with 24 000 volumes. Linsey woolenry drabs and molinsins serges, paper leather gilt buttons and lancers are manufactured here, and a tolerable trade is carried on in agricultural produce. Vessels are equipped for the Newfoundland cod-fishing, in which the inhabitants were at one time largely engaged, but it has now fallen much off. Races are annually held on the sands below the tower of Cosca for three days, during the first fortnight of July. Pop. 9840

BRIG or BRIGO a tn. Switzerland can. Valais, between 1 bank, Rhone, and the small tributary the Val d'Aoste, and at the commencement of the ascent over the Simplon 47 m. N.E. Martigny. It is well built and the houses are covered with a white plate which shines like silver. During the last European war it carried on an extensive and guarded traffic, but since the peace it has lost all its importance has no manufactures, and scarcely any trade. The most conspicuous building is the Jesuits college and church attached. There is also an Ursuline convent. Pop. 751

BRIGA a vil Italy prov. Port Maurice, 25 m. S. by E. Cuneo on the Livenza with a castle and collegiate church and made in cattle wax and honey. Pop. 8000

BRIGHTLINGSEA, par Reg Essex 5060 as. P 1852
BRIGHTON [formerly *Brighthelmston*] a pari hor
 maritima in watering-place and par Regland, co. Sussex
 at the junction of the London and Brighton with the S. coast
 Railway. The town is 47 m S. London or by railway
 504 m lat (polar high) 50° 49' N; lon 8° W (n) on a slope
 near the centre of the curved line of coast, between Beachy
 Head and Worthing Point, and stretching along the shore for
 nearly 3 m. It is divided into two nearly equal parts by an
 open space of ground called the *Steyne* or *Stine*, surrounded
 by elegant houses. The high land of the S. Downs immedi-
 ately behind the town protects it from the N winds.

Brighton comprises upwards of 500 streets, of all descrip-
 tions with numerous handsome terraces, squares, and cres-
 cents. The principal streets have a slight curve in conformity
 with the shore line, and contain many shops fitted up in the
 most splendid style. In front of the town is a stupendous sea
 wall extending nearly 2 m. and supporting a spacious drive
 and promenade constructed at a cost of £100,000. The
 houses are mostly of brick and flint-stone and some of those
 of modern erection 6 or 7 stories in height many of them
 are covered with cement, painted and finished in a tasteful
 and ornamental style. The town is abundantly supplied with
 water and well lighted with gas. The buildings of any note,
 exclusive of the churches, are few. The most remarkable

dional institutions comprise the Brighton College opened in
 1847 for the education of the sons of noblemen and gentle-
 men the St. Mary's Hall institution, for the education of
 the daughters of poor clergy a diocesan school, for training
 schoolmistresses several national schools, British schools,
 ragged schools, numerous private schools, &c. The bene-
 volent institutions are the county hospital already named
 containing about 80 rooms some of them large enough to hold
 20 beds a dispensary an infirmary for diseases of the eye
 typhoid dispensary self-supporting dispensary orphan asy-
 lum 1 airy almshouse, and Swan Diver's school for girls.
 Literary institutions—the royal literary and scientific insti-
 tution schism and young men's literary union working
 men's institute, &c. At a short distance F from Brighton
 on a piece of sloping ground a cemetery having an area of
 18 ac. was laid off in 1850.

Brighton has no manufactures the greater portion of the
 inhabitants being almost exclusively engaged in providing for
 the accommodation and comfort of the numerous visitors who
 resort to the town. Some idea of the extent to which this
 prevails may be inferred from the fact, that there are no fewer
 than 500 regular lodging-house keepers, besides a large amount
 of hotel and private accommodation and 346 licensed bar-
 ney coachmen. Building is the chief source of employment
 to the mechanics and labourers resident in the town but
 mackerel and herring fishing are also exten-
 sively prosecuted there being about 400 per-
 sons so employed.

Races are held here in the beginning of
 August. The race-course is situated on the
 summit of the Downs, to the N and N.E. of
 the town.

Brighton was anciently a fortified town
 of considerable importance but was gradu-
 ally annihilated by the sea, which has from
 time immemorial been encroaching on the
 coast of Sussex. In the reign of Elizabeth
 the town stood in the tract where the chain
 pier stands, but no traces of it are now per-
 ceptible and but for the sea wall recently
 erected the modern town would in all pro-
 bability have shared a similar fate. The
 town owes its prosperity to George IV. who
 made it his residence when Prince of Wales
 Brighton rose to two men here to the House
 of Commons. Registered electors (1849)
 776. Area of 19,230 ac. The increase
 of its population is remarkable in 1801 it
 was only 439 in 1811 442 in 1841 it
 had reached 48,601 and in now 1851

THE ROYAL PAVILION BRIGHTON. Engr. Cook.

is the pavilion built by George IV. but recently purchased
 by the commissioners of Brighton, an edifice in the Oriental
 style of architecture, with numerous cupolas, spires and
 minarets, on the model of the Kremlin at Moscow. It has
 a handsome stone front, 300 ft. in length with a large
 Oriental dome 120 ft. high, nearly in the centre. The whole
 structure with its stables, out buildings, and gardens, which
 are open to the public as pleasure-grounds occupies 9 ac.
 Opposite the palace front within a raised area, stands a bronze
 statue of George IV. by Chantrey. The other buildings
 worthy of notice are the townhall a large massive building
 of recent erection, containing with other accommodations,
 a spacious ballroom the market-house, opposite the town-
 hall a commodious edifice the Sussex county hospital the
 theatre the Brighton College and the chain pier an object
 of great utility and ornament, 1134 ft. long and 18 ft. wide,
 erected at a cost of £250,000. Several of the hotels also,
 are very handsome buildings. Brighton has 13 churches
 and chapels belonging to the Establishment, five independ-
 ent chapels, four Baptist two Wesleyan and one Primitive
 Methodist, one Congregational of Huntington connection two Cal-
 vinist, one Scotch Presbyterian, one Unitarian one R. Cath-
 olic, one Society of Friends meeting house, one Bible Chris-
 tians, one Latter day Saints one Plymouth Brethren and
 one Jewish synagogue. The church of
 St. Nicholas stands upon elevated ground and forms an ex-
 cellent sea mark. St. Peter's situated at the N end of the
 town, is a beautiful Gothic structure, said to be one of the
 best modern specimens of the kind in England. The edifice

is 505 (Trans. Correspondent L)

BRIGHTON (New) a watering-place, England, co. Ches-
 ter 8 m. N.W. by R. Liverpool. It forms the N.E. corner
 of the peninsula of Wirral, between the Mersey and the Irish
 Sea. It possesses excellent natural advantages for sea bath-
 ing having a bracing atmosphere a smooth and firm sandy
 beach and clear water. It has communication with Liver-
 pool by steamers every hour. On the black rock at the
 confluence of the Mersey with the Irish Channel is a strong
 fort, mounting 16 large guns.

 Draguignan pleasantly situated in a fertile valley surrounded
 by wooded hills, and watered by a small stream called the
 Colan. It is well built, and has several squares planted with
 trees, and ornamented with handsome fountains. It is the seat
 of courts of first resort and of commerce, and has a normal
 school for the department. It has long been celebrated for
 its salubrity and formerly was the summer residence of the
 Counts of Provence. R. manufactures common cloth silk,
 crockery soap, wax candles glass, and has distilleries, several

hall public hall Colston a almshouses, the royal infirmary the general hospital the working men's hall the railway terminus, &c.

CHURCH OF ST. MARY REDCLIFFE, BRISTOL.

Schools.—Bristol possesses numerous endowed schools, some of which, besides educating board scholars, and apprentices the pupils, or a certain number of them. Among these the principal are the city grammar-school educating 900 boys in classics and general education and possessing five exhibitions and two fellowships at Oxford, Queen Elizabeth's hospital, where 200 boys are educated and maintained, Queen Elizabeth's free grammar-school Colston's hospital Colston's school Red Mand's school Pill Street free school &c.

THE NEW GUILDHALL, BRISTOL.

Besides these there are above seventy other schools maintained by voluntary contributions government grants &c. educating about 12,000 children and likewise ragged industrial and reformatory schools. Private schools and academies are numerous, and there are also a medical school affiliated to London university a Baptist college for candidates for the ministry and literary scientific and philosophical societies and institutions.

Charities.—There are in Bristol 22 hospitals and almshouses containing 320 inmates, who receive above £2300 per annum 21 annual gifts to the poor amounting to above

£1000; several marriage portions 41 societies established for various benevolent purposes and 31 societies and associations for the promotion of Christianity. Besides these there are two establishments for the reception of the sick and the Bristol royal infirmary and the Bristol general hospital.

The former which was established in 1766, has 224 beds, and in 1864 relieved 2962 in patients and 21 105 out-patients, the latter founded in 1832 and subsequently rebuilt has 180 beds and in 1864 gave relief to about 1900 in-patients and 16,000 out-patients. Besides these there are the Bristol Maternity Asylum at Clifton the general dispensary for children the institution for deaf and dumb the institution for diseases of the ear and of the eye maternity hospital &c. There are likewise two private asylums—one at Clifton and the other at Clifton, the other at Ashley Down open to patients of all Protestant denominations. The latter is a fine quadrangular pile of buildings, erected between 1855 and 1861 at a cost of £26 000 and intended to accommodate 1100 children. It is immense establishment was founded by and is contained under the immediate superintendence of Mr. George Miller at an expense of about £20 000 per annum derived from voluntary contributions and transmitted from all over part of the habitable globe.

Manufactures.—Bristol has numerous glassworks and potteries and has long been famous for its glass and pottery ware. There are also brass copper zinc lead iron, and tin works chain cable, and anchor factories paper millinery locomotive and other steam engine works. The latter series multi-houses, chemical works soda soap leather ropes, sail cloth, saddlery patent sheet sparker floor cloth pins hats, tobacco and snuff &c. are also extensively manufactured and a cotton factory employing several hundred has been erected in 1840.

On the banks of the Avon are several dockyards in which shipbuilding to a very considerable extent, both in wood and iron is carried on Bristol having been for centuries celebrated for this art and having built some of the first frigates used in the late wars and a corsair used in the royal mail service.

Commerce.—The commerce of Bristol is principally with the West India the Mediterranean, Havana, Venezuela the East India China, Canada, and the United States carried on in vessels varying from 500 to above 1000 tons. There is also an extensive trade with the Mediterranean and the Azores, and considerable commercial intercourse with Russia America France and the African coast. Bristol formerly possessed a large trade with Spain in wool, but this has long since fallen into decay Spanish wool having been superseded by the merino of Australia Germany the Cape, &c. With America, on the other hand, the trade is principally in emigration iron or coals for ballast this trade is rapidly increasing as

are also the imports from the United States and Canada consisting of cotton timber flour provisions tobacco, and hardware. The chief articles imported from other places are sugar rum wine, brandy coffee, timber tax, wax, palm oil hides and tallow. The tobacco trade of Bristol is considerable and the manufacture of snuff extensive. The quantity of leaf tobacco entered in 1864 amounted to 1 656 907 lbs. From the period of the establishment of the floating harbour up to 1846 owing to heavy dues being charged by the dock company the trade of Bristol did not increase correspondingly with other ports but in that year the enormous dues were

reduced and the trade has been improving ever since. On December 31, 1894, the number of sailing vessels registered at the port of Bristol was 393, tonnage 11 steam vessels 46, tonnage 1890.

The following figures give a general view of the shipping trade at intervals over the last six centuries—

Year	Number of vessels	Tonnage	Year	Number of vessels	Tonnage
1384	146	1,114	1641	28	14,351
1430	141	1,044	1641	1	83
1461	141	1,044	1641	9	596
1461	141	1,044	1641	9	596
1461	141	1,044	1641	9	596
1461	141	1,044	1641	9	596

It is also possesses a very considerable Irish and coasting trade, while in 1894 employed 403,264 tons of shipping. The inland commerce of Bristol, much promoted by various railways, of which it is a great centre and by the extensive internal water communication afforded by the Severn, the Avon, the Lak, the Avon, the Parret, the Lugg, and the numerous canals connected with them.

Its political government—Bristol received from Henry II a partial charter which was confirmed and extended by John and Henry III. Edward III constituted it a city and county in 1344, and Henry VIII after the general dissolution of the religious houses made it the seat of a bishopric. In 1542 the city was extended to the east by the charter of Elizabeth I, and in 1562 a new charter for Charles II, which was confirmed by Queen Anne. By the Municipal Act of 1835 it was divided into 11 wards and its population in 1894 was 148,000.

a recorder. It holds its own sessions. Bristol has returned two members to Parliament since the 24th of Edward I. In 1293 number of electors (1840) 11,082. In 1733 great riots took place here on account of the high price of bread. In 1792 efforts for the abolition of the slave trade, and others again in October, 1831, which lasted for several days when the custom house the excise office the bishop's palace, the public jails and more than 40 private houses were burned down and many lives were lost. The pretext for the riots was the attempt of Sir Charles Wetherill, who had rendered himself very unpopular by his opposition to the Reform Bill to make a public entry into the city as recorder previous to his taking the oaths. Bristol confers the title of Earl and Marquis on the noble family of Mervyn and Baron in Fitz hardup. It has three principal market places, and a daily market which is well supplied. Two annual fairs for two days each are held March 1 and September 1. They used to be frequented by dealers from all parts of the country but of late has been declining. The suburb of Clifton, the locality of the celebrated Bristol waters lies about 1 m N the city on the summit of

lofty cliffs whence its name, and contains some elegant squares, terraces, arcades and numerous handsome mansions and villas, extending from the city to the Durkham Downs and also to Rodland, a suburban hamlet in the parish of Westbury. The streets are well paved and lighted with gas, and contain some elegant shops. Clifton has 7 churches and chapels of ease, and there are 4 handsomely constructed dissenting chapels and a Catholic cathedral. It possesses likewise 3 national schools, 1 female training institution for domestic purposes, 2 infant schools, a recently erected educational establishment called Clifton College at which a university education is given, and several academies for the education of the higher classes, both male and female. Clifton has besides its pump rooms, tepid baths at the Hotwell House and a bathing establishment, 2 branch banks and public subscription rooms, an observatory under which is the grant a crane and zoological gardens tastefully laid out, and containing a good selection of animals. Clifton is now connected with Leigh Woods on the Bournemouth side of the Avon by a suspension bridge across that immense chain known as St. Vincent's Rocks, at the foot of which the Avon winds its way to the Bristol Channel, erected at a cost of about £35,000. The chains of the Hungerford Bridge in London were purchased for the purpose, and the necessary additions were made to render them suitable for their new destination. The bridge has a length from pier to pier of 1,021 ft, height above high-water mark 245 ft, breadth of way 31 ft, strength 7,000 tons. The scenery of the contiguous Downs and the salubrity of its atmosphere render Clifton a favourite resort. Resident population about 25,000.

Bristol was a fortified city in the fifth century but was not otherwise of any consideration until the beginning of the 12th century when it was called *Breoc* or *Breocet* as it had become a place of some importance. In the reign of Edward III it contributed to the service of that monarch against France as many ships as 1 nearly as many as London, and in 1346 a fleet of 100 ships. In 1346 it had sold one small barque. With exception of some occasional visitations it continued from this period to the present time a thriving trade with America and the West Indies, not the least active or profitable part of which was shipping kidnapped persons for the colonies—a traffic in which the first magistrates of the city were extensively engaged and from which some of them derived large fortunes. The Bristol of these days, however, was a very different place from the Bristol of the present time, as may be learned by reference to *Murray's History of England* (vol. 1, p. 535, et seq.) where amongst other curious particulars it will be found that the streets were then so narrow that if a coach or car ventured into them, there was no small danger of its being wedged between the houses, that goods were conveyed about the town on trucks drawn by dogs, and that the richest inhabitants exhibited their wealth not by riding in gilded carriages but by walking the streets with trains of serants in rich liveries, and by keeping tables loaded with good cheer. Amongst the more curious natives of Bristol were William of Worcester, the topographer, William Grey, an eminent Greek professor at Oxford, the celebrated discoverer of Newfoundland, Sebastian Cabot, son of a prominent Venetian, the ill-fated Chatterton, Bayly, the sculptor, Bowditch, the African traveller, and the poet Southey. Pop (1851) 137,378. 1861, 154,093. (Local Correspondent.)

BRISTOL, a seaport town and port, 11 miles, Rhode Island, 10 m N. by R. Providence, on E side Narragansett Bay, in (Episcopal church) 41, 40' N. lon. 1, 17, 15' W. It has a townhouse, and 2 churches, Baptist, Christian Congregational, Episcopal and Methodist, and two banks. It has a good harbor and is extensively engaged in the coasting trade and the fisheries. Pop. 2400.

BRISTOL BAY N America, Russian territory S W coast, having the promontory of Alaska on the S. and Cape Newenham on the N. lat. 58° N lon. 158° W

BRISTOL CHANNEL England an arm of the Irish Sea, extending between the S shores of Wales and the coast of Somerset and the N coast of Devon and terminating in the estuary of the Severn remarkable for its high tides, and for the rapidity with which they rise. Outside the channel the spring tides rise from 22 to 24 and 96 ft. at the mouth of the Lower Avon to 48 ft. and at Chusseton to 60 ft. Taking Lundy Island, lat. 51. 10' 6" N lon. 4 40' 15" W (n.) as the W extremity of the channel and meridian S W as the E extremity it will be about 50 m long by a breadth varying from about 40 to 14 m

BRITAIN (Great) See **BRITISH EMPIRE** (Title)

BRITAIN (New) the name of two large and several small islands, in the E Pacific Ocean, lying between the parallels of 4 and 6 30' N, from near the N E point of New Guinea, to the S.W. part of New Ireland and having Dundee Strait to the W and St George Channel to the E. The two larger islands contain mountains of great elevation and at the N.E. extremity of the most northerly is a volcano in active operation. Latent volcanic plains of great fertility stretch along the shores of both islands which produce coconuts, mango, breadfruit tree, and other kinds of palms also bananas yams guinea sugar-cane, bamboo, &c. Flgs, turtles, and fish are also plentiful. The islands of New Britain have a large population a stout and well made race, of very dark complexion, and bearing altogether a strong resemblance to the natives of Papua. These islands were believed to form part of the latter till the discovery of Dundee Strait in 1699 or 1700 by the celebrated navigator of that name, who established their insular character.

BRITANNIA ISLAND (native name, *Utoe*) in the E. Pacific, off N.W. extremity of New Caledonia lat. 21 28' N lon. 168° 10' E (n.) is about 30 m in length of coral formation elevated on the S.E. part to about 250 ft. and quite level on the top. The other parts are not quite so high, and the whole of it is thickly wooded. The coast on the S.E. part is composed of perpendicular cliffs and no soundings within 100 yards of the breakers on the W side the land is low thickly wooded with coconut trees, and having a white sandy beach stretched along its margin which gives the shore a beautiful appearance. From the E. side to the centre of the island, the ground is rocky and destitute of soil but on the W side, around and a little inland from the villages, the soil is good and capable of producing every variety of tropical fruits and vegetables. Its well cultivated fields abundantly crops of sweet potatoes, bananas, and sugar-cane. The climate is salubrious and well adapted to a European constitution. The island is inhabited by two distinct tribes, who live in a constant state of warfare. They are generally above the middle size, and their complexion between black and copper colour. They are treacherous, and are accused of cannibalism. Pop. estimated at about 4000.

BRITFORD par Eng Wilt 8148 ne. 1 op. 938.

BRITISH AMERICA comprises, with exception of the Russian possessions, the whole of N America north of parallel 49° together with some irregular portions, including New Brunswick and Nova Scotia, stretching S to lat. 43 30' N and the triangular portion of which the Canadian form the base, the apex extending S to lat. 41 56' N. This vast territory is thus bounded E. by the Atlantic, Davis Strait, and Baffin's Bay N. by the Arctic Ocean N.W. by Hansen America, W. by the Pacific, and S. by the U. States. It comprehends the Canadian (Upper and Lower) New Brunswick, Nova Scotia, Cape Breton, Prince Edward's Island, Newfoundland N.W. Territory, and Hudson's Bay Territory. British N America is generally speaking a level country. It contains few hills and those, for the most part, of inconsiderable height, with exception of the Rocky Mountains. The climate in the N parts is so extremely rigorous that the hardest forest trees cannot withstand it. It is covered with lakes and rivers, all of which abound with fish of various kinds. Wild fowl are also numerous especially geese wild geese and ducks. The animals hunted for food are deer of five different kinds, buffaloes, rabbits, and porcupines. The principal objects of

traffic, in the more N parts are the skins of fur-clad animals, of which there are here a great variety. The chief tribes inhabiting these N regions are the Chipewians the Assinibonians, the Crees, the Slave Indians, and the Esquimaux. Of all these tribes the Crees have the best character being active, honest, and hospitable kind to their women, and fondly attached to their children. The others are cruel treacherous, and unprincipled.

BRITISH EMPIRE See **ENGLISH CHANNEL**.

BRITISH EMPIRE (Title) in many respects the greatest now existing or that has ever existed in the world and remarkable not more for the magnitude to which it has attained, than for its comparatively humble origin—no empire which though apparently destined, by geographical position to occupy only an archipelago in the N.W. corner of Europe so remote as to have been at one time deemed beyond the limits of civilization, now stretches out its arms in every quarter in a manner enriching the globe and raising its destinies pre-eminent alike in wealth and population manners and religion law literature and arts—an empire, in short, in which the great problems of human government is practically solved and the power of the sovereign so happily reconciled with true freedom in the subject, that other States, in reforming themselves look to the British Constitution as their most perfect model and the humbler as well as the most illustrious of other lands when driven into exile hasten to the British shores as their safest asylum.

It is obvious, both from the extent of the subject, and the narrow limits here necessarily assigned to it, that little more than a general sketch of this magnificent empire can now be attempted. Its numerous subdivisions will of course be described under their different names.

The British empire comprehends two great divisions.—1. The **BRITISH ISLES**, or what is commonly called, 2. THE **EMPIRE OF GREAT BRITAIN AND IRELAND** and 3. **COLONIES AND DEPENDENCIES**.

General Description.—The British Isles occupy a kind of archipelago in the W of Europe, and consist of the two principal islands of Great Britain and Irel and a great number of smaller islands, which sometimes singly but more frequently in groups, line the shores of the others or lie in the surrounding seas at great distances from them. On the N.W. and S.W. they lie in great degree on the verge of the Atlantic, on the E. they are washed by the N Sea, or German Ocean and on the S. by the Atlantic and the English Channel. Taking the most N point of Irel, in the Shetland Isles (lat. 60° 49' N) as the most S. point of England Lizard Point (lat. 49° 5' 30" N) as their extremities Y and S and Lowestoft (lon. 1 46' E.) and Dunmore Head (lon. 10° 2' W) as their extremities E and W, straight lines drawn through these four points, will include a space extending over nearly 11. of latitude, and rather more than 12. of longitude. Hence at the summer solstice, the longest day at the N will exceed that at the S. extremity by 2 h 40 m being 13 h 48 m at the former and only 1 h 8 m. at the latter while at all seasons there will be a difference between the E. and W. extremities of nearly 49 m of time. The United Kingdom formed by the union of what were formerly 4 or three independent kingdoms of Scotland, England, and Ireland still remain subdivided for administrative purposes. The principal subdivision of the kingdom is into counties, of which England with Wales, has 53 Scotland 32 and Ireland also 32.

The **COLONIES** and **DEPENDENCIES** are not confined to any particular quarter of the world, but are scattered over its surface, often at immense distances some of them forming the very antipodes of the mother country while others stretch over the globe in succession from E to W and make that which was once feebly and of the Spanish superiority to be emphatically true of the British empire—that the sun never sets upon it. It is singular however that with all these vast dominions, Britain possesses not one colony and has only one dependency on the continent of Europe. On the accession of her present Majesty the kingdom of Hanover previously included in the empire, passed from it, under the operation of the Salic law and the only continental spot now remaining as the impregnable fortress of Gibraltar. To this may be added, in the same quarter the strong island of Malta, possessed in absolute right, and the Ionian Isles, held under the name of a protectorate and off the estuary of the Elbe, the rock of Helig-

ground, which had great commercial importance during the ascendancy of Napoleon, but lost it on 11th lawful. Leaving the European, and proceeding S to the African coast, on reaching the coast of Senegambia nearly in the parallel of 15° N. we find a series of British settlements skirting the coast, and extending with interruptions, for 1000 m. almost to the equator. These settlements are of little commercial value, but they have done more than any other part of the empire to raise the British name, and place it on the proud canonic which it now occupies among the nations. There with a hope of pecuniary return, and in the deadliest climates to which European constitutions can be exposed Britain pursues a life of love—both keeping up her settlements, though at fearful sacrifices, and at securing the coast with her ships, in order to put down an African traffic. Crossing the equator and still proceeding S the first British possession reached is the island of Ascension and after it, at a long distance the more famous island of St. Helena, of some importance as a point of rendezvous on the voyage to India, as it still long to be remembered as the ocean sea where Napoleon, by just retribution, found a prison and a grave. The next British settlement is the important one of Cape Colony occupying the peninsular extremity of S Africa and possessing with great intrinsic still greater artificial value, from its admirable position in regard both to the mother country and her possessions in the E. On the S. and W. it is washed by the ocean while in the N. its natural limits are determined by bleak elevated tracts, called Drakens, or Drakens, and seldom visited by rain, that vegetation is almost extinct, but a large space of fertile promise stretches far eastward and being sheltered by British protection must at no distant period merge into the colonies. Indeed, the work of incorporation has already begun and promises to make rapid progress by means of the recent settlement of Natal which, for the present may be regarded as the limit of British possession in this quarter. To Africa however properly belong the groups of the Ammirante and Seychelles, forming a small archipelago on the N.E. of Madagascar and also, though far to the E. of the African coast, the valuable dependency of the Mauritius, the importance recently given to the navigation of the Red Sea, now one of the great highways to the E. has already led to negotiations for the acquisition of Socatra, and the actual purchase of the islands of Muscat and the Gulf of Aden. The passage across this gulf brings us from Africa to Asia and places us in the town of Aden, which since it became a British dependency has made such rapid progress as to justify the belief that it is the nucleus from which other important settlements are destined to radiate. From this point E. the Asiatic coast is skirted by the Arabian desert, where notwithstanding the perfumed gales, poets call it to be wafted from its shores neither the enterprise nor caprice of Europeans has yet found anything to tempt the formation of a settlement, but, once across the Arabian Sea, and the scene alters. There are immense peninsular tracts reached commencing in the S. at a mere point, but gradually swelling out on both sides as it ascends towards the N. till length and breadth have become almost equal, having a stretch of nearly 2000 m. while a mountain-range of an equal height and grandeur crowns the N. frontier and forms the appropriate barrier of this great territory. The whole, with a few insignificant exceptions, belongs in property or in trust to Great Britain, and is unquestionably her most vast and useful foreign possession—a possession in extent so vast in resources so rich, and in people, tongues and nations so multitudinous, that there is no extravagance in the language which declares it from other dependencies and speaks of it as a our Indian Empire. At the S.E. of Hindustan, and is closely connected with it by the islets of Manar and Ram certain that no properly navigable passages intervene, is the large and beautiful spice and coffee island of Ceylon, in which British supremacy has long been established. Proceeding S. across the Bay of Bengal we arrive at Aracan and considerably to the S.E. on the same coast, at the Tenasserim Provinces, both once belonging to Burmah, and ceded to Britain in 1826 and both now included in India E. of the Ganges. Considerably to the W. are the Andaman and Nicobar Islands, some other island groups, nominally the property, but not actually in the possession of Great Britain. Leaving these, we reach the peninsula of Malacca and turning into its Straits,

find several British trading settlements—first, Prince of Wales Island or Penang then Malacca of much larger extent, but as yet far inferior in trade and busy on emerging from the straits and rounding the peninsula, the most important of all the flourishing settlement of Singapore, placed at the entrance of the Chinese Sea, and forming the great depot for its traffic. In the lower portion of this Bay, the only British settlement is that of the island of Labuan with the accompanying relationship of Sarawak, both now regarded with deep interest by the British public, not so much on account of the results which they have actually produced as of those which are singularly anticipated from them. The number of British settlements in the Chinese Sea, bears no proportion to the magnitude of the British interests connected with it. Not another is met with on this side of the coast of China, and even it is the only possession which British sails bear own is the paltry island of Hong-Kong. Turning out of the Chinese Sea by the S. of the Philippine Isles and proceeding into the vast archipelago, to which on account of its numerous islands the name of Polynesia is perhaps the most appropriate that could be given we reach New Holland or Australia, the largest island of the world and only a fifth less than the continent of Europe. This island Great Britain as yet possesses undivided, and is apparently converting into a new empire. Wherever favourable localities could be found colonies have been placed and appear to prosper, however to the serious drawback of being partly peopled by convicts, and their immediate descendants. On the S.E. of Australia is the short narrow colony of Van Diemen's Land, and a westerly further S.E. first the Auckland Islands, granted by Government to the Endeavour, their discoverers, as a whaling station and then Campbell Island. To the N. of these islands are 12 recently formed and hopeful colonies of New Zealand consisting mainly of two islands which though the antipodes of Great Britain in respect of position bear some resemblance to it in shape and, from the thousands of respectable emigrants who have crowded to their shores, promise soon to resemble it in more important features. To the N.W. of New Zealand is a small settlement of Norfolk Island. Beyond it the bosom of the Pacific is dotted over with islands, of which several nominally belong to Great Britain while many others are possessed all the right which both priority of discovery and of possession by her subjects, can give. It would seem, however from recent circumstances, that this title is either incomplete or has been voluntarily abandoned. These islands interesting as they must always be to the true philanthropist as the scenes where civilization with religion for its hand, early gained some of its most pleasing triumphs, have little political or commercial importance and their inhabitants, therefore, still live at the mercy of any unprincipled power which under the alternate guile of mildness and bigotry chooses to force its protection upon them. Turning then from Tahiti and the other islands of the same Sea, our course now lies S. over a long expanse, then round Cape Horn and N. to the Falkland Isles which Britain early acquired but chiefly values as a station in connection with the fisheries of the South Sea. Almost the whole coast of S. America must now be covered N. by another British settlement as reached. The first which occurs is British Guiana, the N.W. extremity of which is almost lost in the embouchure of the Orinoco. In common with the other parts of the extensive tract almost encircled by this river and the Amazon it is chiefly remarkable for the rank luxuriance of its vegetation, and the large supplies which it raises of all kinds of colonial produce. In this latter respect, it may be considered as belonging to the series of settlements which lie principally in and around the Caribbean Sea, it now forming the West India Islands, the management of which presents with many of the difficulties of the brightest spots in British annals. Before leaving this quarter mention should be made of Honduras, a settlement from which Britain has long continued to derive some of her finest ornamental timber. Proceeding N. past the Bermudas, now a penal station, we reach the last great division of our settlements—a division included under the general name of British America and originally almost of boundless extent, as may be estimated from the fact, that though its S. portion is nearly constituted a vast mass of independent sovereignties, it still stretches from the Atlantic to the Pacific Ocean and from the parallel of 42° to the North Pole. The

area and population of the different countries of which the British Empire is composed is exhibited in the following Table—

The rapid sketch now given must suffice for the British colonies and dependencies, but the geography of the United Kingdom requires a fuller description, and it is, therefore, we now return.

UNITED KINGDOM—Geography.—As already observed it consists of a number of islands, the principal of which are Great Britain and Ireland, separated from each other by the Irish Sea, which, now the centre, attains its greatest width of about 130 m. but between Holyhead in Wales, and Howth Head in Ireland in the tract taken by the English packets, is not wider than 60 m. and between the Mull of Cantyre in Scotland, and Fair Head in Ireland, narrows to about 12 m. Great Britain, the larger and by far the more important of the two islands is situated between lat. 49° 57' 42" and 55° 40' 24" N. It is the largest island in Europe, and the seventh largest in the world, the only island ranking before it, in this respect being Australia, Borneo, Japan, Sumatra, Nippon and Madagascar. Its nearest approach to the continent of Europe is at its S.E. extremity where the Strait of Dover separating it from France, is only 21 m. broad. On both as far as the Strait the distance is rapidly increased. To the W. the English Channel widens out till the extremities of England and France are 100 m. asunder. On the E. the German Ocean, where it separates England from Belgium and Holland is also about 100 m. across, but a little N. it suddenly gains three times that width, and retains it so as to place the E. shore of Great Britain at the average distance of 350 m. from the W. shores of Denmark and Norway. The contour of Great Britain is so very irregular that it seems vain to compare it to any mathematical figure. It has sometimes been described as a triangle with its vertex in the N. and its base resting on the S. and it is no doubt, true that the island narrows much in the former and attains nearly its greatest breadth in the latter direction, but the B. and W. coasts, which to complete the figure must represent the sides of the triangle, cannot, by any force of imagination be made to assume the form of straight lines. The N. part of the island in particular exhibits on its E. coast a succession of large salient angles, while the W. coast is broken and ragged in the extreme the land ever and anon putting out into the sea, and the sea making deep inroads into the land, so that the two elements had not yet ascertained their boundaries, and were contending the mastery. The greatest length of Great Britain measured on

a line bearing N. by W. from Rye to Dunnet Head, is 608 m. The breadth, necessarily modified by the numerous indentations of the coast, varies exceedingly. The longest line which can be drawn across the island, in a straight direction is W. S.W. to E. N.E. 567 m. from Land's End to Lowestoft, but the longest line, measured from the W. to the E. coast on a parallel of latitude between St. David's Head in Pembrokeshire, and the Ness, in Essex, is only 280 m. The breadth is least in the N. parts of the island. Between the Clyde at Dumbarton, and the Forth at Alloa, it is only 33 m. in the Orkney which falls into Dornoch Firth, the three ascends all within 18 m. of the W. coast and the remarkable chain of lochs between the Moray Firth and Loch Lomond leaves so little land intervene up between the opposite coasts that the communication left unfinished by nature has been completed by art, and now forms the Caledonian Canal. The area of Great Britain including the groups of the Orkneys, Shetlands, and Hebrides is about 88,051 sq. m. Of these, England and Wales occupy 58,122 sq. m. and Scotland 26,014 sq. m.

Ireland, as already mentioned, lies to the W. of Great Britain being separated from it by the Irish Sea and surrounded on all other sides by the Atlantic Ocean. It nowhere extends so far as either the N. or S. extremities of Great Britain, but occupies an intermediate space between lat. 51° 4' and 53° 3' N. its N. extremity being on the same parallel with the central part of Arran, and the town of Ayr in Northumberland, and its S. extremity being opposite to Bristol Channel nearly in the latitude of London. E. and W. it lies between lon. 6 and 11 W. Its shape is much more regular than that of Great Britain, and bears a considerable resemblance to a rhomboid, two sides of which are nearly due N. and S. while the other two take a slanting direction, between W. S.W. and E. N.E. The greatest diagonal of the rhomboid is between Mizen Head, in Cork, and Fair Head in Antrim about 800 m. the greatest length, measured as a meridian (nearly that of S. W.) is 280 m. and the greatest breadth measured on a parallel (about 4° 25' N.) is 180 m. The breadth across the centre is nearly 165 m. Owing to the compactness of the form Ireland does not exhibit much variation of breadth as we have seen to exist in Great Britain, but the breadth from Galway Bay to Dublin is not 110 m., and the shortest breadth of all between Ballyvaughan and Dunstaffnage, is only 85 m. One remarkable fact is that, notwithstanding the general compactness of Ireland, the opposite coasts and arms of the sea are so conveniently situated in regard to each other that there is not a spot on its surface which is not, in some direction or other within 50 m. of the ocean. The area of Ireland is about 20,913 sq. m.

AREA OF THE BRITISH ISLES.

Physical Features.—We are so much accustomed to think and speak of the two kingdoms of England and Scotland that we are apt to imagine, not merely a political but also some great physical distinction between them. In fact however there is no such physical distinction. Their frontiers, in part at least, merge insensibly in each other and the whole must be viewed as one island which in regard even to physical features is among the most interesting islands in the world. Though of comparatively limited extent, all varieties of scenery are exhibited in such profusion on its surface, and all forms of geological structure lie within its bosom. The N. part of Great Britain is, for the most part, rugged, mountainous, and barren. To the W. of a line drawn from the Firth of Clyde on the N. to Stonehaven on the E. coast,

the whole country is composed of primary rocks. Gneiss, and mica slate with numerous outbursts of granite form lofty mountain chains, whose lower slopes are usually covered with beds of conglomerate and old red sandstone. These mountain chains maintain a remarkable degree of parallelism throughout the island. The principal chain is the Grampians, but though its summits are the loftiest in the island, they are by no means of the first class. Their culminations, Ben Nevis and Ben Alder, are respectively 4150 and 4305 ft. From their N side snow scarcely ever disappears. These mountains, from the nature of the materials of which they are composed frequently assume the form of peaks and howling precipices, which, as they descend, instead of terminating at the general level of the base are continued downwards, and become the romantic barriers of deep extensive lakes presenting scenes in which sublimity and beauty strangely intermingle. The first range within the line already mentioned is that of the Ochil, which are much less elevated than the Grampians, and exhibit scenery of a much tamer description. They consist chiefly of porphyry and sandstone in which numerous nodules of quartz and mica are found. Instead of towering up in sterile peaks they are generally rounded and clothed to their summits with verdant or heady pastures. On their S slopes a new geological formation appears. The carboniferous system, at first with its strata almost turned on edge, and thrown into confusion by contact with masses and veins of trap soon becomes fully developed and stretches with occasional interruption from N to E to the W coast, over the base of both the Firth and Clyde. The mineral treasures of this district make it one of the most important in Great Britain. To the S immediately beyond the limits of this coal field the country assumes an alpine character and mountains, which for the most part are composed of rocks of great waste and coarse slate, rise with heights varying from 2000 to 3000 ft above the level of the sea. A considerable part of this district is occupied by the Lead Hills, so called from the rich veins of lead by which its strata of graywacke are intersected. In earlier times their alluvial covering embedded a more precious metal, and the mere washing of the soil is said to have yielded gold to the value of £100,000 still further to the S several large masses of granite occur. Coal also again appears, and forms two minor coal fields. Towards the N E the most conspicuous feature is formed by the Cheviot Hills a porphyritic range, which once formed part of its boundary between two independent kingdoms and sends its ramifications into both. Those which pass into England may be regarded as the commencement of a line of a long chain of mountains and hills, which extends with scarcely a single interruption along the W side of that division of the island forming its most important water-shed and throwing out numerous branches particularly those which penetrate into Cumberland and Wales, and give a somewhat modified but scarcely less attractive reputation of the magnificent scenery to which reference has been made. In the N part of this chain, or that part to which the name of Cumbrian range is sometimes given, the most striking feature is formed by the series of romantic lakes so well known to tourists from all countries. Here granite and a species of basalt are occasionally seen but the prevailing rocks are slates and sandstones, belonging to the Silurian series. In other parts of this range, trap-porphyry occurs. It forms the very summit of Ben Bulbin, and is seen in still more interesting circumstances, at Boddale in Borrowdale, where, at its contact with a bed of red unctuous clay and ironstone occurs the celebrated vein of graphite, which has long furnished the finest black lead pencils in the world. Another largely developed rock of the same range is the mountain limestone, which if anywhere, here truly deserves the name; inasmuch as it forms lofty mountain masses—Ingleborough, Wharfedale, Pen-y-fent, and Cross Fell being almost entirely composed of it. This limestone is often intersected by rich veins of lead. In the long-extended chain already referred to, and to the S and W of it the Cumbrian range spreads over the great part of Wales and contains a group among others, the highest mountain of S. Britain—Snowdon 5571 ft. The rocks, like those of the Cumbrian range, lie low in the geological series, and consist almost entirely of slate and different varieties of trap and porphyry. The great exception is towards the S.

limits of the range where the Silurian rocks are overlain by an extensive tract of old red sandstone, overlain in its turn by the mountain limestones, which like a girdle encircle the most extensive if not the most valuable of the British coal fields.

To the S of the Cumbrian is the Devonian range stretching from the Bristol to the British Channel and though lofty enough, when viewed from the level of the sea to present a coast of remarkable boldness, too low to deserve the name of mountains. Here granite is extensively developed, and often possessing the property of decomposing rapidly furnishes the white clay called kaolin, of which our finest porcelain is made. The granite is overlain by the old red sandstone, or rather by a slate which is considered to be its equivalent and prevails to such an extent particularly in Devonshire as to have given its name to a geological formation hence termed the Devonian series or system. Here the mineral treasures are tin and copper veins of which, generally at a high angle, and in a direction from E. to W intersect the slate and granite, and vary in width from a few inches to several feet. Not infrequently a vein commencing with tin is converted into a vein of copper after a considerable depth has been reached. Tin, too, occurs in the sands of rivers and valleys in the form of grains and pebbles which are known by the name of streamers—the rocky walls which once enclosed it having evidently been decomposed and washed away. The different ranges now described as occupying the W side of England and stretching from its N to its S. extremity are composed entirely of primary rocks, or at least of rocks which with the exception of the great Welsh coal field and another of limited dimensions on the N coast of Cumberland, never stand higher in the geological series than the lowest strata of the carboniferous system. On proceeding E the case is reversed and the oldest strata which occur are identical with those which were formerly the most recent. Here secondary formations predominate beginning with the mountain limestone or corozo quartzite sandstone, known by the name of millstone grit, on which our coal fields are usually based and ascending by regular gradations up to the more recent tertiary deposits. The coal fields, notwithstanding their innumerable economical value, occupy a comparatively limited extent of surface—an extent certainly not underestimated at one-twentieth of the whole. A line drawn from Lyme Regis to Bath thence to Gloucester Warwick London Nottingham and Leicester and from Tadcaster to Stockton on Tees has on its E side nearly two-thirds of the whole surface of England. In the whole of this space no coal is worked. If it is a series of strata are regular there can be no doubt that coal exists but probably at a depth far beyond the reach of any known means of excavation. Immediately above it the immense beds of red marl sands, sandstones, and conglomerates composing the new red sandstone series and remarkable for the saline springs and rock salt with which it abounds. This series from its proximity to the coal is usually at no great distance from the coal fields, and its lower strata must often be sunk through to great depths in order to reach them. It occupies a considerable portion of surface, but its saliferous deposit now are appear so rich as in the neighbourhood of Chester. Above the new red sandstone is the colic series composed of numerous beds of limestone, clay schists and sandstones, and stretching with partial interruption, from the S. of England into York shire. It is rich in fossils and beds of fireclay and furnishes much of the finest building stone in the kingdom. Passing the walden series, so called from having its chief development in the W side of Sussex we reach the chalk which occupies the uppermost place in the secondary formation and which though confined to a few patches of N., constitutes a marked feature in the geology of S. Britain where they not only compose the prevailing strata of extensive undulating tracts, but form in many places, both on the E and S coasts bold and giddy cliffs from whose white colour the ancient name of Albion is said to be derived. The tertiary formation which includes all the rocks above the chalk is of comparatively limited extent, and is succeeded by immense beds of diluvial gravelly sands, and clays in which are found remains of the larger existing quadrupeds, several of them like the elephant and rhinoceros belonging to genera which now exist only in much hotter climates. Above these diluvial beds lie

alluvium and other superficial deposits, the constituents of which, mainly depending on the rocks from which they have been disintegrated, determines the natural properties of the soil. Consequently, it is almost inexhaustible fertility and sometimes denoting it to perpetual barrenness.

Turning from Great Britain to Ireland one of the most marked features which meets our view is the dreary expanse of bog which stretches over its interior. The surface, as might hence be inferred, is much flatter than that of Great Britain. It is not, however, by any means destitute of mountains. Of these no fewer than 24 exceed 2000 ft., and four exceed 3000 ft. Carr Tuil, the culminating point of the island is 3404 ft. It belongs to a great range called the mountains of Kerry which, in connection with the lakes of Killarney placed in the very heart of them, furnish scenes of grandeur which few countries can surpass. The great mountain groups consist of primary and transition rocks, and are generally situated near the coast, which accordingly becomes of the boldest description. Inland behind these lofty barriers lies a vast undulating plain occasionally penetrated and broken up by masses of primary rocks but occupied almost throughout its whole extent by secondary formations. Of these, for the most largely developed is mountain limestone, much of it so fine-grained and compact as to furnish quarries of marble, both black and variegated, but seldom containing the rich veins of lead which usually accompany the same formation in England. The limestone is succeeded in regular gradation by the upper strata of the carboniferous system, and coal has been found to a greater or less extent in no fewer than 17 Irish counties. In general, however, its quality is inferior. Much of it is in the form of anthracite, of which seams of remarkable purity almost entirely composed of carbon occur in the vicinity of Kilmoney; but the greater part of the coal raised is more dreary or culm scarcely fit to be employed for any more important purpose than burning limestone. Still higher in the series above the coal the upper strata of the secondary formation are considerably developed in the N. where they are capped by numerous masses of volcanic origin. The most magnificent specimen of these is the range of basaltic columns which forms the celebrated Giant's Causeway.

Rivers and Ports.—The mountain-chains which constitute the principal water-sheds of Great Britain are generally at no great distance from the W. coast, and hence the rivers which descend from them in that direction have a short course and are comparatively unimportant. The two great exceptions to this rule are the Clyde and the Severn. Both of them have their mouths on the W. coast, but they owe both their volume and the length of their course to a series of longitudinal valleys, which, instead of opening directly to the coast take an opposite or parallel direction, and thus suffer along the water-shed then flowing from it, obtain much larger supplies of water than a direct course could have given them. The former of these rivers though of vast commercial importance as is indicated by its far less to its natural channel than to the immense sums judiciously expended through a long series of years, in improving and almost creating its navigation. Considered merely as a river it is comparatively insignificant, the whole length of its course in Dumfriesshire where the Firth properly commences being not more, including windings, than 73 m. The Severn is a much longer stream, and carries along with it a much mightier flood which commencing in the mountains of N. Wales, proceeds S. through long valleys, opened up by others which add their tributary streams, till the immense accumulated volume is poured into the Bristol Channel. To counterbalance these, the only rivers of any considerable volume of which the W. coast can boast, though it also possesses the Mersey, commercial importance the second river of the empire, the E. coast proceeding from N. to S. receives the Spey, Don, Ouse, Tyne, Forth, Tweed, Tyne, Ouse, Trent, and Thames. That last contains the Tyne in volume the first river of Great Britain, and the Thames not much less in volume, and in navigable importance the greatest river of the world. It is remarkable that no river of import any empties itself either on the N. or S. coast. Owing to the great central flat of Ireland, its rivers usually flow on in a gently winding course, and, little interrupted by natural obstructions, are admirably fitted for navigation. Three of its importance are not very numerous, but one of them the Shannon, is understood to be the largest river of the British

Isles. Within 7 m. of its source it enters Lough Allen which is itself navigable, and after passing out of the Lough pursues a S.W. course of 214 m., the whole of which is available for transport by smaller vessels, while from its mouth up to Limerick, a distance of 70 m., it fleet vessels of 400 tons. In numerous features this noble river bears a remarkable resemblance to the Severn. We have seen that in Great Britain the E. coast receives the greater part of its rivers. In Ireland the rule is reversed. The Liffey more important from having the capital on its banks, than from its own magnitude, is the only river on that coast deserving of notice. While both Great Britain and Ireland are thus provided with numerous streams, which render every part of the country and are either themselves navigable, or when they cease to be so furnish the means of continued navigation by acting as the feeders of canals, the coasts are scooped out into deep and sheltered bays, in some of which whole fleets of the largest ships can float and ride in safety. It is true however that the number of ocean harbours, properly so called, is not great, and that the E. coast of Britain in particular is so scantily provided as to make the construction of a great harbor of refuge at some central point a work of prime necessity which must sooner or later be performed. The best of these harbours are situated on the S. coast, and most providentially at the very points where the proximity of the Continent, and the presence of a mighty rival animated by a deadly hate and ever on the watch to strike a blow made it of most importance to possess them. Within these harbours lie the wooden walls which form the true defences of the British Empire.

Climate.—Among the many advantages which the British Isles derive from their geographical position, one of the best effects of which cannot easily be over-rated, is the peculiar kind of climate conferred by that position—a climate in which the natural rigours of a comparatively high latitude are so modified, that at no season is either cold or heat in extreme and the mean temperature maintained in one of the most favorable to the full and healthy development both of animal and vegetable life. The peculiar excellencies of it as climate cannot be more accurately or happily expressed than in the words which according to Sir William Temple were used by Charles II. when, in answer to some courtesies who were disparaging the British climate, and landing that of Italy and France, he said: "His thought that was the best climate where he could be abroad in the air with pleasure, or at least without trouble or inconvenience, the most days of the year and the most hours of the day and thus he thought he could be a Englishman more than any other country of Europe." The accuracy of this opinion is undeniable and the ground on which it rests might easily be explained and our limits admit of detail. The British Isles being nearly in the centre of the temperate zone, have, in common with all countries so situated four different seasons, which merge almost insensibly into each other but exhibit a wide range of temperature between their opposite extremes, as determined by the sun's elevation above, or his depression below the equator. The central latitude of the United Kingdom is nearly 53° N. and the latitudinal line which passes through it indicates a mean annual temperature of 50°. Did this isothermal line, when continued E. across the continents of Europe and Asia, or W. across that of America, pursue the same parallel it would prove that the climate of all countries on that parallel was uniform and that the British Isles, if they had nothing to complicate, had also nothing to boast of. In point of fact, however the deviation is very great, and it is wholly in their favour. The isothermal line on crossing the German Ocean and approaching the coast of Holland is deflected S. and this deflection continues to increase in the same direction till it reaches lat. 45° on the E. side of the Sea of Azov. From this point it pursues its course with great uniformity skirting the N. shores of the Caspian, and passing onward through Mongolia and Manchouria on the N. of China, to the Sea of Japan. The fact thus established is, that in respect of mean temperature, the British Isles have the advantage of all countries of the same latitude to the E. of them and that on the continent of Asia this advantage is so marked, as to amount to a difference of 10° of latitude: the British latitude of 53° enjoying as much annual heat as the Asiatic latitude of 43°. But this is by no means the whole

amount of the advantage. A mean temperature is an average obtained by adding temperatures of different seasons together and then dividing them. Hence it follows, that the same mean temperature may exist when the climates are of a different and almost of an opposite description. A winter of 10° and a summer of 90° fit in the same mean temperature as a winter of 40° and a summer of 60° but how unlike the climates! The former gives a range of temperature equal to 80° the latter a range equal only to 20° . In other words the inhabitants living under the one climate are alternately humiliated by piercing cold and exalted by scorching heat whereas those living under the other are blessed with a kind of perpetual spring. Now it is precisely in regard to range of temperature, that the superiority of the British climate becomes most apparent. The range of the temperature between the coldest and the warmest months, is, at Paris, 40° at London, only 26° . In the S.W. and S.E. of France it is respectively 31° and 29° and in Italy 32° 50° in England generally only 24° 30° . The range of Edinburgh is 25° 37° that of St. Petersburg, no less than 55° . The mean winter temperature of Dublin only 39° 8° is 1° higher than that of Milan Paris, Padua, or the whole of Lombardy. In the N.E. of Ireland, the myrtle grows in the open air as in Portugal and in the S.E. of Cornwall, the mean temperature is only 2° 4° less than that of Montpellier and Florence. The chief agent in moderating the natural climate of the British Isles, is the Atlantic Ocean. Its temperature, no 10° below the freezing point and rarely by the heat of the Gulf Stream is communicated to the winds and vapours which are wafted along its surface, and hence, these winds and vapours, on reaching our country combine with the colder temperature of the atmosphere and surface in forming one of a medium and mitigated description. A continual struggle is carried on between the low current of dense and intensely cold air which comes from the frozen regions of the N. and the downward current of warm air which is expanded and driven N. by the vertical axis of the V. trades. In this struggle the warm air is generally proved victorious, and hence the general use of the S.W. winds. While they blow frost is of rare occurrence, and never of long duration in the British Isles. When the wind blows from the N. after it has passed over a immense fields of ice or from the E., where, from the limited expanse of the German Ocean its temperature continues nearly as low as that which it had acquired in passing over the Continent, our atmosphere is rapidly cooled down, and frosts are occasionally severe. These considerations explain the only disadvantages under which the British climate labours. South west winds charged with vapour bring deluges of rain and N. and E. winds are accompanied with considerable and too often sudden accessions of cold. East winds, in particular prevail in spring and not only check vegetation, but tend to produce, or at all events greatly aggravate pulmonary complaints. Still the advantages already enumerated far more than counterbalance the disadvantages and the cloud less skies of S. Europe accompanied as they are with scorching heats which wither up the fields, and often make what should be the best and the longest and the most fertile season of the year, partly compensates for the magnificent foliage and rich verdure which at the same season give a peculiar charm to the British Isles.

INDUSTRY—Great Britain though somewhat late on entering on the career of improvement, and hence indebted to foreigners for the first establishment of more than one flourishing manufacture ultimately succeeded in outstripping her competitors, and now confidently leads the world in all the great branches of industry. This unexpected success is owing, partly to physical and partly to moral causes. To the former belongs the vast resources of the country itself—the fertility of its soil sufficiently great to reward industry but not to foster indolence, the comparative mildness of its climate and the mould treasures deposited beneath its surface to the latter belong the spirit of activity enterprise, and independence, engendered by free institutions and the perfect security of property guarded from foreign aggression by inviolable fleets and eventually maintained at home by good laws, ability and vigor only administered. Another great cause of industrial progress may be found in the obstacles which have been removed, and the facilities afforded by introducing all the parts of the United Kingdom into easy communica-

tion with each other by means of roads canals, and railways. On all of these arms of almost fabulous amount have been expended and the proportion which their united lengths bear to the whole area, far exceeds that of any other country. Before proceeding to give a sketch of the leading industrial interests, the following Table of the lines of communication to which all these interests are essentially indebted, may be appropriately introduced:—

LENGTH IN MILES, OF ROADS, CANALS AND RAILWAYS, IN THE UNITED KINGDOM

	Roads.	Canals.	Railways.
England and Wales	118,861	8460	4235
Scotland	16,948	113	70
Ireland		303	476
Total		8776	5447

Agriculture—Of all branches of industry this unquestionably demands precedence both because the produce which it yields is greater in aggregate value than that of any other branch and is also, by its very nature, not merely conducive to the well being, but essential to the very existence of society. But though agriculture is at once the most useful and the earliest of arts, there is none in which improvements advance so by sluggish a pace. A routine once established becomes almost immovable and not unfrequently when everything else has yielded to the force of improvement the husbandman continues in the ancient tract, performing all rural operations after the fashion, but with the rude implements, of centuries before. Even yet, traces may be found of the wretched farming which reserved all the manure for the fields around the homestead and kept unavailingly securing those at a greater distance till as if resuming the injury they refused to repay the expense of seed and labour and in some parts near the very heart of England a long line of horses is still attached to an ordinary plough to move along in solemn state under the guidance of drivers and do the work which is elsewhere better performed by a single pair. Such things however are not now the rule, but rare exceptions to it, and in almost every district in Great Britain where the plough can move, farming of a superior description may be seen. Instead of the slovenly manner in which not a century ago all operations upon the soil were performed now implements many of them of recent and ingenious contrivance now execute the work in the most efficient manner and with the least waste of draught. Draining, not confined as formerly to swampy spots is extended systematically to whole farms and every field of them not a single furrow being left without its artificial drain of tiles or stones, into which the surplus water may percolate freely and yet so gradually as not to carry off nutriment along with it. Science, too has been called in to act as the handmaid of art. The organism of plants, the primary elements of which they are composed, and the food on which they live, have been assiduously and skilfully investigated and most important results obtained, particularly in regard to manures and rotations. These results, instead of renewing a dead letter have passed from books into the hands of practical farmers and the farmyard, though still justly retaining its pre-eminence, has ceased to be the sole source from which the soil derives its nourishment, and becomes capable of producing heavy crops. Artificial manures, in great variety have come into common use not only increasing the produce of lands previously cultivated but extending the limits of cultivation itself. Steeps which from the impossibility of carrying up the requisite weight of farmyard dung could not be brought under a regular course of cropping, are easily supplied with a few ewts of bone-dust, or of some substance chemically prepared. This application itself secures a crop of turnips, sheep and then where they grow and thus supply the soil with additional nourishment of the richest kind a grain crop of wheat or barley sown with grain seeds, follows, and the succeeding year shows a rich clothing of the finest grass, where all previously was weeds and barrenness. Thus grass allowed to lie, becomes for years a feeding pasture or cut for hay is broken up at the close of the year for another grass crop. The rotation is now complete, and the process as described again begins. The effects produced by such means are truly astonishing. Under an improved system of management, the produce of a farm has at least been doubled, and, over the whole kingdom, has no greatly

increased that the territory which once with difficulty supported ten millions, finds no difficulty in supporting twenty. Part of the result, no doubt, is to be ascribed to additional lands which formerly possessed as common, or lying as unimproved wastes, have been brought under cultivation. But the far greater part is undoubtedly derived, not from new but from the increased productivity of old lands.

The following Table gives a good general idea of the state of land in the British Empire—

	Arable and Pasture.	Wooded, Pasture, and Barren.	Waste and Uncultivated.	Water and Inland.	Sea-water.
England...	10,325,800	15,879,300	8,661,000	8,255,800	85,324,400
Wales...	880,270	3,258,430	530,000	1,104,000	4,718,000
Scotland...	2,012,800	2,771,000	5,860,000	5,671,900	19,738,000
Ireland...	5,288,000	6,758,500	4,900,000	8,412,600	19,461,500
Brit. Isles...	109,600	974,000	300,100	609,400	1,110,100
	19,126,880	29,685,900	14,900,000	15,871,400	79,074,400

One of the most striking facts apparent from the above Table is the proportion which the available land of England and Wales bears to its whole area, compared with the same proportion in Scotland. In England and Wales excluding wastes of all kinds unimprovable and unimprovable, and including only the two first heads of the table, that proportion is seven-eighths. In Scotland it is little more than one-fourth proving, that while the former is agriculturally one of the most favoured portions of the world the latter is among the poorest. Ireland is in a middle state, having more than one-half of its surface available. The land under the plough in Great Britain is generally cultivated on systematic principles, according to one or other of the following rotations—

First Rotation.—1 Fallow often not mowed. 2 Wheat 3 Hay, heavily manured. 4 Barley with grass seeds 5 Hay 6 Oats.

Second Rotation.—1 Potatoes or Turnips generally sown off by sheep. 2 Barley with grass seeds 3 Hay or pasture 4 Wheat or Oats.

Third Rotation.—1 Part fallow mowed part potatoes or turnips 2 Wheat or Barley with grass seeds 3 Hay once cut, then pastured 4 Pasture 5 Oats.

The first of these rotations is particularly adapted to rich alluvial clays which have originally formed the beds of lakes or flooded banks of rivers, and have gained either by the spontaneous retirement of the water, or the exclusion of it and subsequent elevation of the surface by the well-known process of warping. The finest specimens of these soils are seen near the mouth of the Humber and in the rich cage lands of Scotland. The second rotation constitutes the celebrated Norfolk husbandry so called from its having first come into most extensive use in that country particularly under the auspices of Mr Coke. It is generally used on light sandy loams, on which heavy crops of turnips can be raised and then eaten off by sheep. It is a severe rotation, keeping the land almost constantly under the plough, and repeating clover at such short intervals as are scarcely consistent with its growth. A great improvement of the rotation has been made, by extending it to five or six years, by means of two or more additional years of pasture between the barley and wheat. This makes it almost identical with the third rotation, than which perhaps no better can be adopted on two-thirds of the soils of this country. In addition to the crops above mentioned several others are occasionally introduced. The most important of these are rye, oats or rape, beet-root, hops, and flax. At the present low price of grain the culture of the last will probably be greatly extended. It already forms almost a staple crop in Ireland. From the above Table of the state of the employment of the land it will be seen that the quantity under the plough in England is about five millions of acres less than that in meadow and pasture. The produce of the latter is consumed to a considerable extent in feeding farm horses still a vast surplus remains, and exhibits, both in the mode in which it is raised and the uses to which it is applied a peculiar feature of England, as distinguished from Scotch husbandry. In Scotland, there is not much arable land kept permanently in grass, except that which is intended for ornament, in the neighbourhood of country seats. Meadows artificially formed for irrigation, by a kind of catch-water, exist on an extensive

scale, in particular localities, but nowhere, in the sense in which an Englishman understands the term are so widely known. The meadows of England are permanent hay fields which are annually cut, and maintained in fertility by regular and heavy doses of farmyard manure. Much of the land thus employed is naturally of poor quality having only a thin covering of soil over a hungry gravel or ferruginous sandstone clay, but by the careful management of perhaps a century has become covered with a close sward of the richest grass, and of admirable feeding quality. The attention paid to this kind of land is sometimes in excess, and has led, in several districts, to a comparatively neglect of the labours of the plough—a circumstance which accounts in some degree, for the alleged superiority of the best Scotch, to the general average of English farming. Taking the turn in its widest sense, as including not merely the raising of crops of grain, or roots, but the rearing and fattening, of stock the improving of breeds, and dairy management, there is no country in the world that can be compared to several of the S. districts of Great Britain. It is sufficient to mention among horses the race-owes the finest type and the parent of the best existing breeds of that animal among cattle the short horns of Durham and among sheep, the celebrated South Downs and Leicesters. Industry produces several districts are equally pre-eminent. Aston pigs have sometimes been made to specify the extent of acres devoted to each particular kind of crop, and from this, on a supposed average yield per acre to estimate the gross value of the agricultural produce of the United Kingdom. Such calculations being for the most part founded on data which have no official authority can only be regarded as very distant approximations to the truth and therefore, instead of entering into details it seems sufficient here to mention the general results from Mr M'Culloch's *Account of the British Empire*, Ed 1847.

	Produce of Land under crop.	Value of stock raised.	Total.
England and Wales.	79,099,857	61,842,000	1,110,806,887
Scotland.	12,744,848	9,000,000	5,744,356
Ireland.	28,000,000	30,000,000	68,000,000
	119,844,705	100,842,000	217,551,978

The above Table is common with all others yet published on the same subject, labours under the serious defect of assuming an enormous average of price. In the Table for instance, the price of wheat is taken at 50s. whereas at present (1851) it does not exceed 40s.

MINERALS.—Such is the mineral wealth of the British Isles, that, with exception of quicksilver and gold, which though found both in Scotland and Ireland, are too limited in quantity to repay the labour of searching for it, it is scarcely possible to mention a metal or mineral product, of economical value, which is not worked to a greater or less extent beneath their surface. Among these, the first place is unquestionably due to

Coal.—It claims precedence not merely because the annual output of it, in regard both to quantity and aggregate value exceeds that of any other mineral product, but because with out it the other natural resources of the country and the industry of its inhabitants, must have for ever remained in a great measure undeveloped. The coal fields are not confined to one particular district, but occupy a series of basins which come touching but more frequently at a considerable distance from each other and extending, in an irregular curve, from the S. slopes of the Ochil Hills to the Bristol Channel. Under the head of *Physical Features*, reference has already been made to the carboniferous formation both of Great Britain and Ireland and little more can now be done than glance at the localities of particular fields, and append a few important statistics. Beginning with the N. Hunt, we find a field commencing in the W. by great outcrops of trap, of which Strath-Castle crosses the most prominent summit, skirting the foot of the Ochils, and passing onward to the German Ocean near St Andrews then turning round into the strath of the Forth, and continuing up the L. bank of that river occupying great part of Fifeshire, a small isolated portion of Perthshire, and almost the whole of Clackmannanshire. The coal of this field is of several kinds; but the most important seams are splint, part of it of a free, open burning quality greatly

in demand for steam navigation from its not corroding the furnaces and boilers, and part of it admirably adapted for the blast furnace. Part of this field, immediately to the W of Dunfermline contains a coal which, in its richness and quality of making leaves a resemblance to that of Newcastle, and has been worked, as ancient records prove, for at least five centuries.
